tone arm motion, without, no charge is being released and no actual case betterment is observed, 329, 413
- checkouts must consult student's understanding, 480, 488
- checksheets, 227
- chronic somatics; *see* somatics, chronic
- circuits key out with knowingness, 6
- circuits, valences are circuits are valences, 6
- Class II Model Session [1964], 398, 428
- Class VI auditor, things he should know, 412
- clay, causes and handling of a pc just doodling in clay, 496, 497
- clay demos, how to make, 452, 453; *see also* clay table
- clay, physical handling of, 455
- clay table,  
any part of mind or any term in Scientology can be demonstrated on a, 452  
construction of clay tables, 451  
goofs, 476  
IQ increased by HGC use of ~, 454  
label each clay object, 452, 477, 509  
mass parts are done by clay, significance or thought parts by label, 452  
thin-edged ring of clay with a large hole in it is usually used to signify a pure significance, 452  
use, 452, 487  
work,  
in training and processing, 451, 453  
is Level III, 466  
is not for cases who get no TA in general, 486  
on definitions, 451  
pc *must* label *everything* made in ~, 509  
what clay table work handles, 466
- Clay Table Auditing, importance of getting auditing questions answered in ~, 490
- Clay Table Auditing, two activities of, 456
- Clay Table Auditing, who may use, 487
- Clay Table Clearing, 456, 457, 475, 483, 484  
auditing cycle vital in ~, 497  
auditor is handling chief urges of pc, not trying to teach pc, 457
- Clay Table Healing and ~ are different, 472
- direct style auditing, 502
- does not go into physical ills, 458
- errors, 475, 476, 477, 483, 493, 496
- is Level IV, 487
- is used to achieve pc's rehabilitation and raised IQ in various fields, 456
- pc should have TAaction onlowerlevels first, 486
- process of clearing words and symbols, 474
- representing the word, 496
- steps of Clay Table Clearing, 458
- was called Clay Table IQ Processing, 454, 456
- Clay Table Healing, 453, 472  
abridged style auditing, 501  
Clay Table Clearing and ~ are different, 472

## SUBJECT INDEX— 1962/1964

- Clay Table Healing (*cont.*)  
don'ts, 473  
is Level III, 487  
steps, 472  
used to get rid of physical discomfort of psychosomatic origin, 457, 474
- Table IQ Processing, 454, 456; *see also* Clay Table Clearing
- cleaning deans; *see* E-Meter, cleaning cleans
- clean needle,  
*defn*, responsive to instant reads only, 84  
*defn*, one which flows, producing no pattern or erratic motions of smallest kind with auditor
- looking at it and doing nothing; not just something that doesn't react to particular question; a lovely slow flow, usually a rise, most beautifully expressed on a Mark V at 64 sensitivity, 224
- in order to null a list, 224  
medium clean needle, *defn*, offers many prior and latent reads, but reads instantly when a question is asked, 84
- Clear, *defn.*, somebody with no "held down fives" in this lifetime (*see Evolution of a Science*), 353  
don't try to make an OT before you make a Clear, 260  
"first goal clear", state of, 112, 316  
state of high cause is also keyed-out Clear, 435  
steps to make a Clear [1963], 354  
test [1963], 259, 353  
theta clear, *defn*, a Case Level 2 that is exterior, 317  
Operating Thetan and theta clear, road to, 213  
various roads to it described, 275
- clearing, 316  
altered goal wording prevents clearing, 150
- line, 153  
assessment for clearing intensive, 166  
completing clearing, 355  
difficulty of clearing, 317  
free needles and clearing, 112  
HGC clearing [1962], 152  
why it works, 493
- Clearing Success Congress in Washington, 137
- coaches, coaching, coachless,  
Coaches' Drill [1963], 272  
coachless training, use of a doll, 103  
theory coaching is not examining, 489  
TRs done solo in absence of good coaches, except TR 04, 103  
what coaches should look for, 194
- co-audit, co-auditor,  
ARC Break Process, 319  
husband-wife co-auditor team, unlucky as a general rule, 37  
listen style co-audit, 511, 521  
O/W dropped on Co-Audit, 25
- "coffee shop auditing" described, 505
- cognite, no ~ soon becomes overwhelm, 401  
cognite, pc who doesn't cognite, cause of, 36
- cognition, invalidation of pc's, 418
- combined terminal, *defn*, an item or identity pc has both been and opposed produces therefore both pain and sensation when it is "late on the track", 176  
item turns on both pain and sensation, it is a comClay bination terminal, 177  
most PT terminals and oppterminals look more like coterminals than clean terminals or opposition terminals when first contacted, 230
- command(s),  
auditor's ~ restimulates charge in pc; only way this charge can be blown is by pc telling auditor, 335, 415  
dangerous auditor misses withholds and refuses to permit pc to execute auditing ~, 33  
effect of accusative auditing commands, 442  
give them crisply and definitely and get them executed, 501, 502  
its a line, don't use new commands to cut, 338  
no auditing ~ is ever let go of until that actual ~ is answered by pc, 490, 501  
words not to use in auditing commands, 439
- communication; *see also* ARC  
auditing comm cycle; *see* auditing comm cycle  
auditor has to assume responsibility for all comm breakdowns in session, 161, 414  
dirty needle phenomena usually traced to auditor having cut pc's ~, 364, 447  
failure keys in by-passed charge, 417  
itsa isn't a comm line; it's what travels on a comm line from pc to auditor, if that which travels is saying with certainty "It IS", 370
- compartmenting the question, 77, 78
- complete list; *see* list, complete
- condensation, tendency of physical universe is con assembly densation and solidification, 276
- confidence, ability to predict equals, 93  
confidence, auditor confidence, importance of, 326
- confront(ed)(ing),  
CCHs are "familiarization" processes that permit pc to confront control and duplication, 43
- charge prevents pc from ~ time track, 290  
havingness is proportional to pc's ability to confront in session, 225  
pc who makes no gain is pc who will not as-is, who will not confront, 36  
TA "drift up", pc's refusal to confront, 48  
time track, unavailability, cause of, 275
- confusion, prior ~ to self-determined change, 116  
confusion, TA motion is caused by energy contained in confusions blowing off case; ~ is held in place by aberrated stable data, 375
- constructive and destructive people, difference between, 408
- control factor, asking for missed withholds is a totally acceptable ~, 59
- coterm; *see* combined terminal
- Create CDEI Scale, goals listing using, 143
- criminality, why punishment doesn't cure, 439

## SUBJECT INDEX— 1962/1964

- critical, criticisms,  
critical thought is a symptom of overt, not the overt itself, 469  
pc becomes critical of anything outside engram, it is an ARC break, 293  
pc ~ of or angry at auditor, organizations or people of Scientology equals missed withhold, 59  
there are no criticisms in absence of overts committed earlier by pc, 464, 468  
C/S; *see* Case Supervisor  
cycle of action is redefined as start—continue—complete, 410
- D**
- “dangerous auditor”; *see* auditor, dangerous  
dating,  
argument with pc can group track, 293  
how to date, 288  
pc’s contrary data unspoken and untaken can give you a completely wrong date, 293  
use meter to date and verify date only after pc has been unable to come up with date, 334  
dead horse, *defn.*, list which even with good auditing failed to produce a reliable item, 203  
death: ARC broken: incapable of affinity for, reality about and communication with environment, 347  
death, cause of desire for, 252  
decided and protested used to get pc easier in session, 447  
defensive person, 321  
definition(s),  
clay table work on definitions, 451  
cycle of mis-definition, 508  
wrong definitions cause stupidity or circuits, followed by overts and motivators, 489  
Definition Processes are not clay table processes, 505  
Definitions Processes, when used as remedies are normally processed by guiding secondary style, 506  
Definitions Processing, purpose of, 507  
demonstrate, glib students can’t demonstrate, 488  
demos; *see* clay demos  
denyer obscures a part of track by implying it is not there or elsewhere (a mis-director) or should not be viewed, 275  
destructive actions are not necessarily overts, 321  
destructive people and constructive people, 408  
dictionaries, 489  
difficulty stems from no responsibility, 9  
Director of Processing’s case handling, 357  
Director of Processing’s view on R2 & R3 ARC break, 253  
direct style auditing; *see* auditing, direct style  
dirty needle(s), 119, 236, 335, 364, 384, 414, 447  
*defn.*, agitated throughout check, making reading difficult; pc’s attention obviously dispersed, 84  
*defn.*, a small rock slam, 129  
dirty needle(s) (*cont.*)  
*defn.*, a quarter of an inch agitation of needle as an instant response, 141  
*defn.*, that erratic agitation of needle which covers less than a quarter of an inch of E-Meter dial and tends to be persistent, 177  
*defn.*, one that jerks, tips, dances, halts, is stuck or has any random action on it with auditor sitting looking at it doing nothing, 224  
ARC break assessment often has to be done through a dirty needle, 306  
can be cleaned both with auditing (like rrid ruds) and with Routine 2, 224  
causes of dirty needles, 93, 384  
auditor failing to hear all pc had to say, 335, 414  
basic auditing not technique errors, 384, 414  
cut itsa, 364, 384, 414, 447  
cutting pc off, getting in more actions than pc is allowed to answer, 419  
earlier item is wrong [3DXX], 57  
incomplete lists [3GAXX], 180, 181  
missed withholds, not withholds, 57, 59, 129  
no-confidence induces a sort of auto-control in session which induces a dirty needle, 93  
don’t ever try to nul a list with ~, 224  
how to get rid of, 93, 364, 447  
jitters all the time, different from a dirty read, 384  
medium dirty needle, *defn.*, agitated throughout check but with periods of no agitation when a read can be obtained easily; reacts to checker’s voice, 84  
persistent and always recurring, handling of, 129  
rock slams and dirty needles, 129  
what a ~ means on an oppose list, 232  
dirty read, *defn.*, that more or less instant response of needle which is agitated by a major thought; it is an instant tiny (less than quarter of an inch) agitation of needle and is in fact a very small cousin of rock slam, but is not a rock slam; it does not persist, 177  
dirty read, different from a dirty needle, 384  
dirty read, rocket read is superior in value to an RS; RS is superior in value to a DR; DR is superior in value to a fall, 212  
dissemination, broad ~ depends upon technical quality, 324  
dissemination failures, 59  
dizziness, *defn.*, feeling of disorientation and includes a spinniness, as well as an out-of-balance feeling, 175  
oppterm produces dizziness or “winds of space” sensation, 5  
DN; *see* dirty needle  
D of P; *see* Director of Processing  
doingness, Prehav Scale gives degrees of ~, 173  
doll, use of a doll in coachless training, 103  
dope-off [R2-12], 237  
double questioning, changing because pc changes, and following pc’s instructions, 74

## SUBJECT INDEX— 1962/1964

DR; *see* dirty read  
dramatizing pc may not be a tough pc, 36  
dub-in, *defn.*, any unknowingly created mental picture that appears to have been a record of physical universe but is in fact only an altered copy of time track, 274  
dub-in case, run ARC Processes as case is over-charged for engrams, 293  
duplication, CCHs are “familiarization” processes that permit pc to confront control and , 43  
Dynamic Assessment by Rock Slam, 131, 135, 138, 142  
demonstration of, 137

### E

echo invalidation; *see* invalidation, echo  
E-Meter(ing); *see also* needle characteristics by name  
ARC breaks and E-Meter; *see* ARC break, E-Meter and  
body motion vs. bank’s reaction, 394  
can operate on last word (thought minor) only of question, whereas question (thought major) is actually null, 102, 362  
charge, how it reacts on needle and TA, 290  
checking needle in rudiments checks, 84  
cleaning cleans, 335, 415  
asking pc for something that isn’t there develops a withhold of nothing, 102, 104, 335, 415  
howto prevent, 439  
never clean a clean needle, never miss a read, 105  
overt acts, commonest cause of failure in running overt acts is cleaning cleans, 438  
clean needle; *see* clean needle  
between pc and meter, take pc’s data, reason why, 335  
dangerous to audit without a meter, 22  
dating; *see* dating  
dependence, how it is created, 334, 416  
minimize dependence, 293, 415  
dirty needle; *see* dirty needle  
dirty read; *see* dirty read  
operate on an ARC broken pc, 96, 102, 362  
drills must stress only meaningful and significant instant reads coming at end of full question, 79  
echo E-Metering, 285, 415  
end words reading by themselves, cause of, 102  
everything reading, 402-03  
on a gradient scale of misses by auditor;  
the more misses the less the meter reads, 105  
how to smooth out needles, 93  
to clean up needle is biggest hole in student auditing, 214  
instant reads; *see* instant reads  
invalidation, 73, 335, 415  
latent reads; *see* latent reads  
lists, needle gets stiffer on wrong way oppose;  
needle looks looser on right way oppose, 233

E-Meter(ing) (*cont.*)  
locates charged areas below awareness of pc, verifies that charge has been removed, 290, 334, 416  
missed withholds, fruitful source is poor metering, 105  
miss on needle reaction is basis of all unsuccessful sessions, 105  
needle characteristics defined, 84  
needle reaction, *defn.*, rise, fall, speeded rise, speeded fall, double tick (dirty needle), theta bop or any other action, 264  
never ask ~ after pc volunteers button, 285, 415  
out rudiments, meter can go gradiently dull in presence of, 73, 96, 361  
perfection means only accurate reading of needle on instant reads, 104, 105  
prior reads; *see* prior reads  
reacts on reactive mind, never on analytical mind, 78  
reading; *see also* reads  
ability to read an E-Meter, 369, 402  
if pc is in session E-Meter will read, 96  
inability to read ~ is state of case, remedy of, 214  
RIs and use of E-Meter, 334  
rocket reads; *see* rocket reads  
sensitivity is vital to get rudiments in, 91  
standards, 91  
steering, 60, 63, 78  
tone arm action, that which moves only needle seldom gives good TA, 369  
TR 20—Reach and Withdraw on ~, 264  
TR 21—Reading E-Meter accurately, 265  
emotion and misemotion include all levels of complete Tone Scale except pain, 175  
emotionlessness, pc has to come up to emotion on Tone Scale, 286  
end rudiments; *see* rudiments, end  
end words of rudiments questions; *see* rudiments, end words  
energy,  
charge is stored ~ or stored or recreatable poten does not tials of ~, 289, 290, 416  
flow is progress of energy between two points, 16  
motion is matter with energy in space, 330  
TA motion is caused by contained in confusions blowing off case, 375  
will not flow in absence of time, 330  
engram(s), *defn.*, those parts of time track that con goes null tain moments of pain and unconsciousness, 274  
assessment, development of, 301  
contains heaviest ARC break with a thetan’s en inability vironment and other beings, 291  
contains moments when it was necessary to have moved and degrading to hold a position in space, 291  
mid ruds will mush an engram, 296  
missed withholds, do not pull until chain is flat or engram will mush, 296

## SUBJECT INDEX— 1962/1964

### engram(s) (*cont.*)

pc is stuck not just in ~ but in past identities, 50  
postulate sometimes lies ahead of actual ~, 349  
running, 273, 287, 292, 299; *see also* R3R  
    auditor must know basic laws and mechanics of  
    time track and engram character and behav-  
    ior in order to run engrams, 273  
    case level to run on engrams, 289  
    later the incident is (further from basic), the  
    more lightly it is run, 290  
    perceptions aren't there—wrong time or wrong  
    duration or both or it's a GPM or it's false  
    track, 329  
    prime source of ARC break in engram running  
    sessions is by-passing charge by time mis-  
    handling by auditor, 287  
    purpose, to release charge from case, 290, 291  
    reasons pc can't run engrams, 329  
    reasons why some cannot run engrams on pcs,  
    273, 287  
    R3R, don't mix with earlier data on engram  
    running, 294; *see also* R3R  
    simplified, 273  
    why engram running by chains is designated  
    Routine 3-R, 294  
    thetan has engrams being automatically (involun-  
    tarily) created by him, 301  
entrapment, main method of causing aberration and  
~ is found in actions which create or confuse  
time track, 277  
erasure, auditing theory of charge ~, 291  
evaluation, accidental evaluation may occur when  
    auditor repeats what pc said, 161, 414  
evaluation, auditor never says what overt is, 464  
evil, being at different lifetimes is good and evil, 408  
evil, man is basically good, but reactive mind tends to  
    force him into evil actions, 439  
evil, may not be evil people, but there are people  
    currently devoted to doing evil actions, 408  
examination, correct, is done by asking for meanings  
    of words and demonstrating how the data is  
    used, 481  
examination, instruction and ~, raising the standard  
    of, 478  
examining, coaching is not ~, 489  
exhausted pc equals missed withhold, 59  
eye pouches, used as an indicator in R2-12, 235

### F

facsimile, *defn.*, any mental picture that is unknow-  
    ingly created and part of the time track,  
    whether an engram, secondary, lock or pleas-  
    ure moment, 274; *see also* mental image  
    picture  
“failed to reveal” [R3GA], 119  
fast checking on rudiments; *see* rudiments, fast  
    checking,  
field auditor targets, central org and, 432

floating needle, free needle is not a stage 4 needle or  
    an inverted stage 4; it is floating and free, 112  
flow(s),  
    basic, 14, 16  
    basic aberration is withheld flow, 16  
    is a progress of energy between two points, 16  
    running too long on one flow is conducive to with-  
    holds developing, 66  
    self-determined flows can be aberrative, 14  
    withhold ~, reverse of is “afraid to find out”, 33  
Flow Process, commands of, 15  
forbidden words, 439  
free needle; *see* floating needle  
free track, *defn.*, that part of time track that is free of  
    pain and misadventure; pc doesn't freeze up on  
    it, 274

### G

GAEs; *see* gross auditing errors  
gain(s),  
    cleaning up an old session will give all the latent  
    gain in that session, 21  
no gain(s),  
    handling of auditor or student who has trouble  
    with an ARC breaky pc or no gain, 58  
    lack of TA action means no gain for pc, 325  
    occur in presence of PTPs or overts, 468, 470  
    pc who makes no gain is pc who will not as-is,  
    who will not confront, 36  
    rock slammer is a slow-gain or non-gain case,  
    185, 187  
pc gains measured in terms of charge discharged,  
    325  
pc's gain is directly proportional to TA action, 367  
game, degrees of responsibility for, 8  
General Overt/Withhold before session, 101  
glib students can't demonstrate, 488  
goal(s),  
    abandoned item or ~ makes everything read, 403  
    accidental goal finding, 154  
    allow no self listing of goals [R2-12], 238  
    altered goal wording prevents clearing, 150  
    below Level VI one is striving to complete his  
    goals, 456  
    check, 246  
    constructive and destructive people, depending on  
    their goals, 408  
    don't use repeater technique any more on lists of  
    goals [3GA], 121  
    fast goals check [3GA], 115, 165  
    find a goal [R3 or 3G], 64, 66  
    finding, designation of Routines, 262  
    finding goals [R3-21], 170  
    first goal clear; *see* Clear  
    formulae [3GA], 132  
    gains, goals and, in Model Sessions, 280, 383, 399,  
    422, 429, 450  
    Goal Finder's Model Session, 157

## SUBJECT INDEX— 1962/1964

- goal(s) (*cont.*)
- how a goal is checked [3G], 54
  - if a goal is a real GPM it will read with great, intermittent, inconsistent slashes, 396
  - line plot, rule: put any item ever found on pc by any process on line plot; every one will add up to a goal, 250
  - list(s),
    - how to do [3GA], 118
    - length of [3GA], 92
    - lost, how to reconstruct [3G], 55
    - pc must be warned not to read list back to himself [3GA], 118
    - things which cause “everything to read” on, 402
  - listing a bum goal results in a pc’s getting sick and dizzy [3GA], 92
  - listing, using Create CDEI Scale, 143
  - never set agoal for apc, 463
  - nulling by mid ruds [3GA], 1 18
  - opposition goal or wrong goal can get pc in real trouble [3GA], 118
  - pc’s actual goals and GPMs are more aberrative and important than implants, 366
  - Prepcheck Form [3GA], 106
  - Prepchecking and goals, 201
  - presented in Problems Intensive, how to handle, 201
  - reliable items and goals found on students, staff or HGC pcs must be checked out, 246
  - reliable iterns, too many found without finding pc’s goal turns off a pc’s rocket read or rock slam [R2-10, R2-12, R2-12A], 249
  - rocket read is the read of goal or rock itself, 213
  - rock, just below the rock lies pc’s goal [R2-10, R2-12, 3GAXX], 213
  - rock slam channel, what it is, 213
  - symptoms of a right goal listed wrongly, 167
  - symptoms of a right goal unlisted, 169
  - things that hide a goal or make one read falsely [3GA], 119
  - “to be” goals line listing [3GA], 139
  - which is an overt against Scientology, 140
  - will go null if the middle ruds are out, 83
  - wrong goals, 404
    - importance of repair of, 167
    - symptoms of a wrong goal listed, 168
  - wrong wording of item or goal [R2, R3], 257
  - 24 line listing for a beingness type goal, 139
- Goals Problem Mass(es),
- defn.*, made up of past selves or “valences”, 8
  - defn.*, black masses of the reactive mind, 175
  - defn.*, consists of items (valences) in opposition to one another; any pair of these items, in opposition to each other, constitute a specific problem, 185
  - application of Twenty-Ten Procedure to ~, 7
  - at Level VI GPMs are run out, but before that can be achieved, one is thrust into the GPMs by effort to accomplish, 456
  - best locator of ~ is from goals, 53
- Goals Problem Mass(es) (*cont.*)
- charge in GPM, what it consists of, 349
  - common denominator of GPM is “no responsibility”, 8
  - curved out of shape, cause of, 7, 213
  - failing to fully clear each GPM, result of, 260
  - getting cases to RR on GPMs, 332
    - GPM item in present time constitutes a PTP, 185
  - how a real goal reads, 396
  - how to restore ability of pc to RR or RS, 250
  - implant GPM, how its goal reads, 402
  - is full of pairs of terms and oppterns, 179
  - item from another GPM, 258
  - item that RSeS was part of GPM and has another item in opposition to it, 212
  - left uncleaned gives liabilities, 261
    - List L4, 308-09
  - lock valences are appended to a real GPM 3-D item, 7
  - lock words found and destimulated, effect on ~, 493
  - more advanced the GPM, more careful you have to be of the body, 256
  - non-gain or slow-gain cases have a GPM item in their present time environment, 185
  - one does have wishes-to-do of his own having nothing to do with ~ but only being blocked by them, 456
  - partial anatomy of ~, identification in auditing and behavior of E-Metertowardsit, 178
  - pc’s actual goals and ~ are more aberrative and important than implants, 366
  - pc who rock slams on a PT ~ item in his or her immediate environment is a rock slammer, 186
  - postulates, treat them like ~ items whether in a ~ or an engram [R3R, R3N], 349
  - reactive mind, basis of, is actual GPMs, 493
  - realization of actions done will key out a ~, 435
  - rock and opposition rock, basic items of ~, 182
  - rock slam channel is pathway through pairs of items that compose a cycle of ~ and lead to rock and goal, 212, 213
  - R4MTA process withdrawn, 376
  - terminals are identities in ~ producing pain, 175
  - will key back in by finding modifier to a goal, 4
- good indicators; *see* indicators
- good, is man good or evil, 407
- GPM; *see* Goals Problem Mass
- grades; *see* levels
- grind case is an afraid to find out case, 37
- gross auditing errors (GAEs), 509
- groupier, *defn.*, anything which pulls the time track into a bunch at one or more points, 275
- groupiers, bouncers and deniers are material (matter, energy, space and time in the form of effort, force, mass, delusion, etc.) or command phrases (statements that group, bounce or deny), 276
- guiding secondary style; *see* auditing, guiding secondary style
- guiding style auditing; *see* auditing, guiding style

## SUBJECT INDEX— 1962/1964

### H

half-acknowledgement, *defn.*, ways of keeping pc talking by giving pc feeling he is being heard and yet not chopping with overdone TR 2, 501  
Hand Space Mimicry; *see* CCH 3  
HAS Course curriculum and requirements [1964], 514  
have, havingness, *defn.*, concept of being able to reach, 6  
dropped havingness equals missed withhold, 59  
is proportional to pc's ability to confront in session, 225  
rough auditing reduces havingness, 225  
way not to have is to ignore, combat or withdraw from, 8  
withholds cut havingness down, 6  
Havingness Processing,  
"Look around here and find something you would permit to appear", basic Havingness Process using suppressor mechanism, 37  
Model Session [1964], 422, 450  
rudiment, 101  
R-3 Havingness, 280, 383  
Security Checking and ~, 20-10 Theory, 6  
suppression is overcome when you run ~ on a pc, 37  
TA action on indicates CCHs will move case, 44  
Tactile Havingness is a CCH type of process, 43  
use of in 3DXX, 10  
withholds, ~ must be run together benefit of pulling most withholds, 6  
HCO WW Form G3, R3GA, Fast Goals Check, 115, 165  
"held down fives", jammed thinking because of misunderstood or misapplied datums, 507  
HGC clearing [1962], 152  
HGC gains, what they depend on, 324  
HGC processes, [1962] 51, 116, 141, [1964] 406  
hidden standard mechanism, 456  
hidden standard, person with hidden standard won't go clear, 185  
Course, purpose of, [1964], 461  
Hubbard Guidance Center; *see* HGC  
Hubbard, L. Ron, auditors who couldn't audit him, 36  
husband-wife co-auditor team, unlucky as a general rule, 37  
hysterical, more hysterical pc is about getting advanced processes or case gain, less strenuous process administered must be, 516

### I

identification (A=A=A), most easily present when time sense is awry, 330  
ill or misemotional before session beginning, handling of, 101

impingement, auditor with out TRs and no ~ gets no reads, 82  
implants; *see also* Goals Problem Mass; reliable items between lives, 333  
pc's actual goals and GPMs are more aberrative, 366  
inactive and lazy, how a person becomes, 439  
incident(s), *defn.*, recording of experience, simple or complex, related by same subject, location or people, understood to take place in a short and finite time period such as minutes or hours or days, 274; *see also* chain  
failure to handle time in incidents, 273  
"grinding out", 290  
pc's postulates made at time of incident contained charge, 349  
unknown incident pins chains, 41  
indicator(s),  
every bad indicator is precise, easily observed and has an exact counter-action, 391  
good indicators [GIs] on R6, 390  
go on with routine actions as long as GIs are present, 391  
list of good indicators at lower levels, 445  
inflow and outflow, accelerated and restrained, CDEI Scale on, 16  
inflow and restrained inflow can be self-determined actions, 14  
insanity eradicator, 37  
in session; *see* session, in  
instant read(s),  
*defn.*, any change of characteristic providing it occurs instantly, 77  
*defn.*, that reaction of the needle which occurs at the precise end of any major thought voiced by the auditor, 77  
*defn.*, read that occurs instantly after last syllable of the major thought without lag, 78  
anticipated on rudiments, 113  
clean needle is responsive to instant read only, 84  
drills must be used which stress only meaningful and significant ~ coming at end of full question, 79  
if you miss an instant read, you hang pc with a missed withhold, 104  
instant rudiment read, *defn.*, 264  
instruction; *see* training  
intelligence quotient (or relative brightness of individual) can be rocketed out of sight with HGC use of a clay table, 454, 456  
intensive(s),  
assessment for clearing intensive, 166  
auditing sold by intensives, 153  
clean up M/W/H before ending, 60  
Problems Intensive, 116  
TA amount per intensive, 367  
interest is absorbed attention and desire to talk about it [R3R], 301  
interest, pc interest as a method of assessment, 325

## SUBJECT INDEX— 1962/1964

invalidation, invalidates, 414

avoid use of “you” to pc, 161

can make wrong goal read or steal read from right goal, 119

continuing ARC break assessment after pc has cog-nitedinvalidatespc’s cognition, 418

echo invalidation, 415

E-Meter dependence is created by invalidation by auditor, 334

E-Meter invalidation, 335, 415

IQ; *see* intelligence quotient

IRS; *see* rock slam, instant

item (It) *defn.*, any terminal, opposition terminal combination terminal, significance or idea (but not a doingness, which is called “a level”) appearing on a hst derived from pc 176

characteristics of terminal, opposition terminal, combination terminal~ 177

charge piled up on pc, pc ceases to be capable of clear thought and will reject even right items, 400

check the item, how to, [3DXX] ,12

complete list, in theory, just fades away and leaves an item [3G], 55

dirty needle in listing 3D Criss Cross means an earlier item is wrong, 57

from another GPM [R2, R3], 258

if the right item or goal on a list has been read and abandoned, all its locks will begin to read like real items or goals [Level VI], 403

is unburdened by making represent list [R2-10, R2-12, 3GAXX], 210

line plot, rule: put any item ever found on pc by any process on line plot; every one will add up to agoal, 250

list, things which cause “everything to read”, 402

opposition items, each line is an independent zig-zag of opposition items [3DXX] ,10

reliable item; *see* reliable item

rock slamming items [R3-21] ,172

that R/Ses, what it is [R2-12], 212

itsa,

dirty needle and itsa; *see* dirty needle

is action of pc saying, “It’s a this” or “It’s a that”, 374, 375, 498

isn’t a comm line; it’s what travels on a comm line from pc to auditor, if that which travels is say-certainty “It IS”, 370

line, don’t use metering, ARC break assessments, dating, or incomprehensible or new commands to cut itsa line, 338

line, when cut, auditing ceases to work, 337

Project 80-itsa line and tone arm, 351

silent auditor invites itsa, 370

slow assessment means letting pc itsa while assessing, 373

TA action slows down when pc goes into more

charge than he can itsa easily, 374, 413

whatsit and itsa, relation to TA, 334, 370 378

## J

justice contains hidden error regarding rightness, 322

justifications, list of Scientology ~, 437

justifications, reasons overts are overts to people is justifications, 436

## K

keyed-out Clear, state of high cause is also ~, 435

key-ins, *defn.*, those parts of time track which contain first moment an earher engram is restimulated 274

It is pc who mostly keys his bank back in, 354

knowledge, what it is to average person, 26

Know to Mystery Processing Check 1

Know to Mystery Scale, everything above pc finds pc at effect 286

## L

lassitude, cause of a feeling of lassitude, 261

latent reads, *defn.*, reads which occur later than completion of major thought, 264

prior reads and ~ are ignored, 77

steering the pc is only use of latent or random reads, 60, 78

laudatory withholds, 1

lazyandinactive,howapersonbecomes,439

level(s),

auditing levels of using overts [1964], 438

auditing skills by levels [1964], 41 1

each level of auditing controls pc’s attention a little more than last, 371

pc will feel accused if run above his level, 441

reads are bigger on higher levels, 396

tone arm action is higher on higher levels, 397

Level 0, curriculum for, [1964], 514

Level 0, purpose and end phenomena, 516, 517

Levels 1 to 8, state of case, 289

Level III, clay table work is, 466

Level VI, drawbacks of, 433

Level VI, reads on ~, difference between, 403

life, Scientology in direct application to life, 491

line, *defn.*, a list of found 3D items each in opposition to the last item on that line [3DXX], 12 each line is an independent zig-zag of opposition items, 10

3GA line wording; *see* Routine 3GA

line plot, 25, *defn.* ,12

described, 178

put every item ever found on pc by any process on line plot; every one will add up to a goal, 250

list (s), listing, *defn.*, auditor’s action in writing down items said by pc in response to a question by

auditor, 203; *see also* assessment

appearances [R2-12], 207

Auditing by Lists, 423

## SUBJECT INDEX— 1962/1964

- list(s), listing (*cont.*)  
beyond last rock slam [R2-12A], 233  
by Prehav [3GA], 163, 164  
by Tiger buttons [3GA], 147, 148  
complete list, *defn.*, any list listed for assessment that does not produce a dirty needle while nulling or Tiger Drilling [1962], 181  
discovery of, [3G], 53, 55  
in 3DXX, 17  
rules of a complete list for R2 or R3, 241, 242  
dead horse is list which even with good auditing, failed for any other reason to produce a reliable item [R2-10, R2-12, 3GAXX, R3-21], 203  
differentiate the list [3DXX], 11  
difficulties [R2, R3], 255  
cause of poor list [3DXX], 17  
getting pc to answer the auditing question [R2-12], 238  
handling of pc who gets dopey or drowsy during listing and nulling [3DXX], 10  
how ~ a wrong item can happen [R2, R3], 256  
if right item or goal on a list has been read and abandoned, all its locks will begin to read like real items or goals [Level VI], 403  
long long lists [R2-10, R2-12], 223  
lost list, how to reconstruct, 55  
overlisting, dangersignof, [R2-12, 3GAXX], 204  
pc who "can't quite say exactly what it is" [3DXX], 10, 17  
right goal listed wrongly, symptoms of, 167  
wrong goal listed, symptoms of, 168  
wrong way to symptoms [R2, R3], 255  
goals; *see* goals  
handling of mid ruds [3GAXX], 180  
incomplete lists [R2-12], 221  
dirty needles stem from incomplete lists or missed items [3GAXX], 180  
is always derived from pc [3DXX], 10  
is auditing [3G], 53  
is not Prepchecking [3GA], 159  
is slightly contrary to early auditing philosophy [3GA], 160  
nulling,  
clean needle is vital in order to null a list [R2-10, R2-12], 224  
never null lists taken from wrong sources, just abandon [R2-12], 232  
nullable is a condition a list must be in in order to have an item found on it [R2-10, R2-12, 3GAXX, R3-21], 203  
null the list [3DXX], 11  
to get a list to differentiate and null rapidly, the list must be complete [3DXX], 17  
oppose, opposition,  
done on R/Sing items [R2-12], 221  
minimize goal oppose lists [R2, R3], 258  
right and wrong oppose [R2-12], 230  
right way and wrong way oppose indications [R2], 231, 233  
what a dirty needle means [R2], 232
- list(s), listing (*cont.*)  
random listing [R3N], 394  
represent list, item is unburdened by making represent list [R2-10, R2-12, 3GAXX], 210  
rules,  
allow no self listing of goals [R2-12], 238  
auditor has no business with significances of items [R2-1 2A], 235  
don't Tone 40 ack items or goals a pc gives you [3G], 56  
never force pc to list [R2-12, R3M], 255  
run all TA action out of listing; list at least 50 items beyond point tone arm became motionless [R2-12A], 233  
test list both ways [R2], 233  
session [3GA], 130  
source list, 239  
to a still tone arm, what it takes [R2, R3], 241  
wording [3GA], 114  
writing the list [R2-10, R2-1 2, 3GAXX, R3-21 ], 204  
wrong way list [R2-1 2A], 234, 236  
listen style auditing; *see* auditing, listen style  
listen style co-audit; *see* co-audit, listen style  
Listing Prepcheck, HCO WW R-3GA Form 1, 109  
List L-1, General ARC Break Assessment, 307, 423  
List L-2, assessment sessions, listing sessions, preliminary step R3R, the ARC break for assessments list, 307  
List L-3 and L4, add "Have we by-passed any postulates?", 349  
List L-3, R3R engram running by chains, 308  
List L4, 309, 423  
used on Routine 3N—GPMs, all goals sessions, 308  
List One—the Scientology List [R2-12], 191, 195, 202, 215  
living, two conditions of, ARC broken, not ARC broken, 347  
location, one of three methods to handle time track, 288  
location, TA change requires two locations—location of pc and location of mass, 49  
lock(s), *defn.*, those parts of time track which contain moments pc associates with key-ins, 274  
chronically tired pc who is not eating won't get TA for there's no as-is of locks, 434  
finding and handling lock words of GPMs, 493  
valences; *see* valences, lock  
LRH; *see* Hubbard, L. Ron
- ### M
- major thought, *defn.*, complete thought being expressed in words by auditor, 77, 264; *see also* minor thought  
E-Meter can operate on last word (thought minor) only of a question, whereas the question (thought major) is actually null, 102, 362  
how to groove in, 78

## SUBJECT INDEX— 1962/1964

- “make it”, avoid using, because it’s a GPM word [Clay Table Processing], 455
- man is basically good, but reactive mind tends to force him into evil actions, 439
- man, two dominant behavior patterns of, 407
- mass(es),  
are released off body and out of thetan’s bank in auditing, 256  
as-ness of, 49  
“bank is beefing up”, sensation of increasing solidity of masses in the mind, 175  
body discolors when mass from bank is brought in on it, 255  
Goals Problem Mass; *see* Goals Problem Mass  
how a being is hung with persistent masses, 8  
tone arm moves because mass is changing, 48, 49
- master process, *defn*, one which ran out all other processes and processing, 67
- matter, motion is matter with energy in space, 330
- MD’s diagnosis, cause of antipathy toward, 463
- medicine, operational shock, cause of, 464
- mental image picture, protest is basically responsible for making ~, 301; *see also* facsimile
- mest and time track, 276, 291
- mest universe, intention of, 277, 417
- meter; *see* E-Meter
- middle rudiments; *see* rudiments, middle
- minor thought, *defn*, subsidiary thoughts expressed by words within the major thought; they are caused by reactivity of individual words within the full words; they are ignored, 77, 264; *see also* major thought
- E-Meter can operate on last word (thought minor) only of a question, whereas question (thought major) is actually null, 102, 362
- misemotion and emotion include all levels of complete Tone Scale except pain, 175
- missed withhold(s), 20, 42, 285; *see also* rudiments  
*defn*, a withhold that existed, could have been picked up and was missed, 20  
*defn*, is a should have known, 27  
*defn*, an undisclosed contra-survival act which has been restimulated by another but not disclosed, 58
- ARC breaks and missed withholds; *see* ARC breaks, missed withholds and
- asking for ~ does not upset dictum of using no O/W processes in rudiments, 60
- asking for is a totally acceptable control factor, 59
- auditing rundown-missed withholds, 318, 328
- auditor can ask if another auditor has missed a withhold, 42
- by-passed charge is explanation for violence of ~, 285
- by-passed charge is in some degree a ~, missed by both auditor and pc, 306, 417
- cleaning up, don’t ask for withholds, 61
- clean up at once if auditor doesn’t ask leading questions, 60
- missed withhold(s) (*cont.*)  
co-audit and missed withholds, 25  
command, use “done” not “missed a withhold” in all ~ questions, 71  
commonest questions to get ~, 60  
dangerous auditor is afraid to find out, thus causing ~ on pc, 33  
dirty needle is caused by ~, 57, 59, 129  
don’t be reasonable about pc’s complaints, with holds have been missed, 61  
don’t have to clean up all withholds if kept cleaned up, 61  
help pc by guiding his attention against needle, 63  
how to audit missed withholds, 21, 23  
indicators of, 59, 66  
intensives, do not conclude without cleaning up ~, 60  
missing a withhold or not getting all of it is sole source of ARC break, 23  
motivator response to ~ question, how to avoid, 71  
natterings, upsets, ARC breaks, critical tirades, are restimulated but missed or partially, 26  
never ask pc if you’ve missed a withhold on him or her with pc off a meter, 67  
of nothingness, 102, 104, 362  
partial and missed withholds, 26  
pc dissatisfied, caused by ~, 20  
pcs go groggy, lose interest and refuse to list only when session withholds are missed, 66  
poor E-Metering is most fruitful source of ~, 104, 105  
Prepchecking, don’t ask for ~ while prepchecking, 63  
Prepcheck system, do not use in cleaning ~, 61  
pulled clean up sessions, 21  
pulling ~ [Model Session], 279, 382, 421, 449  
rough, angry ARC breaky session, auditor has failed to pick up ~, 20, 58  
rudiment, 101  
R3R, don’t use mid ruds or ask for ~, 296  
sessions go wrong, ask for ~, 58, 61  
source of all upset is ~, 105  
wild animal reaction, 26
- “mistake been made” is a combination of auditor or pc asserting and other denying that it is or is not the goal; it is a conflict of positive-negative opinion and forms a ridge impossible to dispel unless auditor asks for “mistake”, 119
- misunderstood, “held down fives”, jammed thinking because of ~ or misapplied datums, 507
- misunderstood word, 1st and 2nd phenomena of, 480
- misunderstood words and overts, 471
- mock-up(s), *defn*, any knowingly created mental picture that is not part of a time track, 274  
earlier in bank the “power” of the thetan’s mock ups is greater, 256
- Model Session; *see also* session  
assist not done in Model Session, 505  
changes [1962], 72, 85, 101  
Class II Model Session, 398, 428

## SUBJECT INDEX— 1962/1964

Model Session (*cont.*)

- Goal Finder's Model Session, 157
- Levels III to VI [1964], 420, 448
- R2 and R3 Model Session, 243
- R3 Model Session, 278, 381
- modifier is part of oppterm so its use is dropped, 57
- modifier to a goal, GPM will always key back in by finding the ~, 4
- morale, apparent bad morale, 285
- mores, each valence has its own social ~, 40
- motion,
  - is matter with energy in space, 330
  - overt is forward ~, withhold coming after it is inward~, 14
  - sensation of, a feeling of being in motion when one is not; motion includes the "winds of space", a feeling of being blown upon, especially from in front of the face, 175
  - time is measured by ~, 330
- motivator(s); *see also* overt-motivator sequence
  - missed withhold question, ~ response to, 71
  - persons looking for overt to explain ~, 440
  - wrong definitions cause stupidity or circuits, followed by overts and motivators, 489
- muzzled auditing; *see* auditing, muzzled
- M/W/H; *see* missed withhold

### N

- natterings, upsets, ARC breaks, critical tirades, are restimulated but missed or partially missed withholds, 26
- natter is handled by ARC break assessments, 332
- natter, recognize by pc's natter, or lack of previous gain that pc has overts, 468
- natural auditor and dangerous auditor described, 32
- needle; *see* E-Meter; needle characteristics by name newness, urge for, is a deadly disease, 432
- no-change, pc trying to prove himself right and auditor wrong gets no-change sessions, 323
- no-confidence induces a sort of auto-control in session which induces a dirty needle, 93
- no-havingness, *defn.*, concept of not being able to reach, 6
- suppress used to get item to read, 447
- nullable, *defn.*, condition a list must be in in order to have an item found on it, 203
- nulling, [R2-12] 206, [R2-12A] 235, *defn.*, auditor's action in saying items from a list to pc and noting reaction of pc by use of E-Meter [R2-10, R2-12, 3GAXX, R3-21], 203
  - by mid ruds [R3GA] ,118, 119
  - clean needle is vital in order to null a list [R2-10, R2-12], 224
  - done in a brisk, business-like, staccato fashion [3DXX assessment] ,1 1
  - drill on new nulling procedure, [3GA Tiger Drill] 122, [R2-12, R3-21, 3GAXX] 196
  - null eachlist [R3, 3G], 66
  - pc is expected to be silent during ~ [3DXX] ,11
- observation, auditor's observation of pc, 360
- observe, being who is something, cannot ~ it, 50
- Opening Procedure by Duplication (Book and Bottle),
  - CCHs confused with Op Pro by Dup, 45
  - is test of endurance in duplication, 68
  - unflat, remedy for, 68
  - used to develop ability to do repetitive processes, 316
- Opening Procedure by Rock Slam, R2-12, an HPA/HCA skill, 185
- Operating Thetan, *defn.*, a Case Level 1 complete with skills rehabilitated, 317
  - don't try to make an OT before you make a Clear, 260
  - theta clear and Operating Thetan, road to, 213
  - to make an ~ one has to clear time track, 329
- operational shock, cause of, 464
- oppose [opposition] list; *see* list, oppose
- opposition goal; *see* goal, opposition
- opposition item; *see* item, opposition
- opposition rock and rock, two basic items of GPM, 182
- opposition terminal(s) (oppterm), *defn.*, an item or identity pc has actually opposed (fought, been an enemy of) sometime in past (or present), 176
  - GPM is full of pairs of terms and oppterm, 179
  - modifier is part of ~ so its use is dropped, 57
  - most PT terminals and ~ look more like coterminals than clean terminals or ~ when first contacted, 230
  - produces dizziness or "winds of space" sensation, 5
  - rock slam is response of E-Meter to conflict between terminals and ~, 176
  - R2-12A package must have two terminals and two ~, opposing and cross opposing, 235
  - terminals and ~, difference between, 5, 12, 175, 176, 177, 230, 231
  - ways of asking for terminal and ~, 177
- Op Pro by Dup; *see* Opening Procedure by Duplication-not-ised and tion
- organization,
  - against organization, *defn.*, against ~ or posts and protesting at org behavior existence, 347
  - with organization, *defn.*, interested in org or post and willing to communicate with or about org, 347
  - field or orgs do badly if they are not doing one technical thing well and not keeping people's attention directed at it and nothing else, 432
- OT; *see* Operating Thetan
- other-determinism, no responsibility for other side of game, 8
- outflow, CDEI Scale on inflow and outflow, 16
- outflow, compulsive ~ and obsessive withhold are alike aberrated, 14

## SUBJECT INDEX— 1962/1964

- outflow, overt act is ~; withhold is restrained ~, 14  
 out of session; *see* session, out of  
 overlisting, danger sign of, 204  
 over-restimulation, 371  
 overt(s); *see also* Security Checking; overt/withhold  
*defn*, an act of omission or commission which  
 does the least good for the least number of  
 dynamics or the most harm to the greatest  
 number of dynamics, 321; *see also* BCR  
 auditing level of fusing overts [1964], 438  
 auditor never says what the overt is for that's  
 evaluation, 464  
 "cleaning cleans", commonest cause of failure in  
 running ~, 438  
 cleaning up, ask frequently, "Have I missed any  
 withhold on you?", 60  
 critical thought is a symptom of overt, not the  
 overt itself, 464, 469  
 cycle of an overt, 471  
 demanding overt is not confined to just running  
 O/W, 465  
 depend on social mores, 40  
 destructive actions are not necessarily overts, 321  
 don't fail to pull the real overts or ARC break pc  
 in getting overts off, 468  
 if pc can't conceive of ~, use "didn't know", 21  
 is forward motion, withhold coming after it is in-  
 ward motion, 14  
 is something that harms broadly; a beneficial act is  
 something that helps broadly; it can be a bene-  
 ficial act to harm something that would be  
 harmful to greater number of dynamics, 321  
 leaving an ~ touched on case and calling it clean  
 will cause future ARC break with auditor, 439  
 misunderstood words and ~, 471  
 -motivator sequence; *see* overt-motivator sequence  
 motivators, looking for overt to explain motiva-  
 tors, 440  
 no gains occur in presence of PTPs or ~, 468, 470  
 not knowing the full definition—misunderstanding  
 —overt—motivator cycle, 476  
 order of effectiveness in processing, 438  
 pc ARC breaks on auditor demanding more than is  
 there or leaving an overt undisclosed, 439  
 pc who dives into past lives when asked for ~, 440  
 persons with heavy overts on Scientology make no  
 case progress, 185  
 Prepchecking, 39, 62  
   ask What question after getting single specific ~  
   to expose and clean a chain of ~, 39, 89  
   going earlier similar, 39  
   working with no TA is a profitless chain, 40  
 reasons overts are overts, 436  
 responsibility for below Level IV, degree of,  
 438, 517  
 rock slam is sign of overt, 129  
 Routine 2-12 removes unwanted valences that  
 commit overts, 190  
 running ~ raises cause level of pc, 438, 439  
 why overts work, 439
- overt(s) (*cont.*)  
 withholds, coming after confusion of ~ hang up  
 on track and tend to stop pc in time, 14; *see*  
*also* overt/withhold  
 wrong definitions cause stupidity or circuits, fol-  
 lowed by overts and motivators, 489  
 overt-motivator sequence, auditor must make a state-  
 ment to pc and assume initiative in ~, 464  
 overt-motivator sequence, when somebody has com-  
 mitted an overt, he has to claim existence of  
 motivators, 469  
 Overt Process: "In this lifetime what overt have  
 you committed?" "How have you justified it?",  
 436  
 overt/withhold (O/W),  
   assist, O/W is best repetitive process for, 99  
   demanding overt is not confined to just running  
   O/W, 465  
   don't use O/W to clean rudiments for Prepcheck  
   session, 30, 42  
   dropped on Co-Audit, 25  
   General Overt/Withhold before session, 101  
   Its Processes for O/W are almost unlimited, 441  
   justifications, running off, is further south process  
   than any earlier version of O/W, 436  
   missed withholds, asking for, does not upset dic-  
   tum of not using ~ Processes in rudiments, 60  
   Model Sessions and O/W, 244, 279, 382, 398, 420,  
   428, 448  
 overwhelm(s)(ed),  
   consequences of pc being overwhelmed, 400  
   it is charge that overwhelms, 401  
   time track overwhelms pc when charge present in  
   huge amounts, 416  
   violations of auditing cycle can bring about ~, 400

## P

- package, *defn*, always consists of two RIs that are  
 terminals and two RIs that are op terms  
 [R2-12A], 234  
 pain, *defn*, is composed of heat, cold, electrical, and  
 combined effect of sharp hurting, 175  
 person could feel pain only as himself (thetan plus  
 body), 176  
 terminal gives pain, 5, 12, 175, 177  
 tone scale, pcs come up to feeling pain; that is a  
 gain, 286  
 pan-determinism, full responsibility for both sides of  
 game, 8  
 past lives, why they are forgotten, 9  
 pc; *see* preclear  
 people, two types of people, 407  
 perceptions, no ~ in engram running, cause of, 329  
 physical universe; *see* mest universe  
 picture; *see* facsimile  
 PN; *see* pain  
 points, fixedness of points and their opposition pro-  
 duce phenomena of flows, 16

## SUBJECT INDEX— 1962/1964

- postulate-counter-postulate is problem, 185  
postulates, the pc's postulates [R3N, R3R], 349  
practical training goes through the simple motions, theory covers why one goes through the motions, 482  
preclear(s)('s); *see also* case; *BCR*  
ailing from what pc is ailing from, not from what auditor selects, 464  
all pc actions have an exact auditor response, 59  
attempting to leave session equals M/W/H, 59  
being mass means no TA action, 49  
boiling off equals missed withhold, 59  
can say whatever else they please, but must answer auditing question or no auditing occurs, 490, 501  
case improving, pc becomes more independent of meter, 416  
charge piled up on pc, pc ceases to be capable of clear thought and will reject even right items, 400  
chronically tired pc who is not eating won't get TA for there's no as-is of locks, 434  
confronting ability being driven down by auditor unfrontability [R2-10, R2-12], 225  
critical, always a symptom of overts, 464  
critical of organizations or people of Scientology equals missed withhold, 59  
dating, pc's contrary data unspoken and untaken can give you a completely wrong date, 293  
demanding redress of wrongs equals M/W/Hs, 59  
dissatisfied pc caused by missed withholds, 20  
doodling in clay, cause and resolutions of, 496, 497  
dramatizing pc may not be a tough pc, 36  
exhausted pc equals missed withhold, 59  
failing to make progress equals M/W/H, 59  
feels accused if he is run above his level, 441  
foggy at session end equals missed withhold, 59  
gain is directly proportional to TA action, 367  
gains measured in terms of charge discharged, 325  
get pc trained into what auditing cycle is and get question or command that was asked or given answered, 490  
go groggy, lose interest and refuse to list only when session withholds are missed, 66  
has something to hide, wants auditor to find rudiments in, 82  
havingness is proportional to pc's ability to confront in session, 225  
ill or misemotional before session beginning, handling of, 101  
influencing agencies for pc are time track and present time, 275  
in grief or apathy, cause and remedy of [R2, R3], 251  
insufficiently cause in their daily lives cannot as-is bank, 433  
interest and TA action tell programming is right, 325  
it is pc who mostly keys his bank back in, 354  
preclear(s)('s) (*cont.*)  
less pc cognites the more charge is accumulated, 401  
lower grades raise pc's cause level, 434  
makes no gain, is the pc who will not as-is, who will not confront, 36  
more hysterical pc is about getting advanced processes or case gain, less strenuous process administered must be, 516  
new, starting to audit, 491; *see also* case supervising, Dianetic C/S 1 [in full index]  
not desirous of being audited equals M/W/H, 59  
not looking at auditor, don't take auditing actions, 336  
overwhelmed, consequences of, 400  
past identities, pc is stuck not just in engrams but in past identities, 50  
postulates, 349  
protest against a question, how it is demonstrated, 439  
refusing to talk to auditor equals M/W/H, 59  
responsibility, no reason to expect any great pc responsibility for his own overts below Level IV, 438  
R-factor to new pcs, 490  
rough pc, 36  
R6, why pcs can't run at once, 493  
self-auditing pc due to lack of auditor control, 74  
stuck in a past session, clean up the W/Hs, 21  
subjective reality on gain will not compare to TA action, if charge by-passed, until BPC located, 368  
telling others auditor is no good equals M/W/H, 59  
that quits; *see Book of Case Remedies*  
"thought has no effect on his or her bank", cause of, 36  
thrown out of session by having responsibility hung on him, 414  
time, pc's regard for or attitude about time can make it difficult to run R3R or R3N, 330  
time track does not obey a preclear (early in auditing), 274  
tone arm conscious body-moving pc, how to cure, 373  
trying to prove himself right and auditor wrong, gets no-change sessions, 323  
Type A and Type B pcs, handling of, 434  
when pc is talking and no TA, you already have an ARC break or are about to get one, 336  
who dives into past lives when asked for overts, 440  
who doesn't cognite, cause of, 36  
will win if run so as to obtain good TA action, 327  
withdrawn or misemotional in life after Prepchecking, cause and remedy of, 67  
withhold depends utterly on pc's idea of what is an overt, 40  
with ruds out blows nothing, 18  
pre-clearing intensive [1962], 166  
predict, confidence is ability to predict, 93

## SUBJECT INDEX— 1962/1964

- Prehav assessment, *defn.*, any method of discovering a level on scale for a given pc, 173  
how to do “Roll Your Own” Prehav, 173, 174  
you get a wrong assessment if pc has suppressed, invalidated or protested a button, 173
- Prehav level, *defn.*, any doingness or not doingness on scale; any word in scale itself, 173  
3GA—listing by Prehav, 163, 164
- Prehav read, *defn.*, any reaction of needle different from its regular action for pc, occurring during or slightly after a level has been called, 173
- Prehav Scale, *defn.*, any scale giving degrees of doingness or not doingness, 173
- Prepcheck(ing), 28, 88  
administration of Prepchecking, 29  
auditor fault in is going too shallow, 62  
buttons, order of, 133, 363, 446, 447  
CCHs run alternated with ~ [1962], 51, 127  
developed to handle auditor’s difficulty in “varying the question” in pulling withholds, 28  
earlier similar, 29  
goals and Prepchecking, 201  
Goals Prepcheck Form—Routine 3GA, 106  
limitations of use of ~ and 3D Criss Cross, 52  
listing is not Prepchecking, 159  
Listing Prepcheck, HCO WW R-3GA Form 1, 109  
magic phrase of Prepchecking, 29  
mechanics of Prepchecking, 28  
middle ruds, 83, 99  
missed withhold cleaning, do not use ~ system, 61  
missed withhold, don’t ask for while ~, 63  
pc withdrawn or misemotional in life after ~, cause and remedy of, 67  
procedure [ 1962 ], 88  
purpose of, is to set up a pc’s rudiments so they will stay in during further clearing of bank, 31  
Q and A is a serious thing in Prepchecking, 40  
question, target of, is a chain of withholds, 28  
repair, 67  
Repetitive Prepchecking, 98, 361  
on Problems Intensive, 116  
replaces ~ by the Withhold System, 98  
repetitive rudiments, don’t use on end ruds of ~ or R3 session, 96  
rudiments in Prepchecking, 42, 63  
rudiments, you can get nice gains by ~ all rudiments, 70  
rule of, always work specific incidents, 41  
Sec Checking combined with ~ [1962], 62  
session, when getting rudiments in avoid any O/W questions, one exception, 42  
What question(s),  
asked to expose and clean a chain of overts, 89  
ask for M/W/Hs only after a What question is null, 63  
asking the What question, 31  
ask What question after getting single specific overt, 39  
formulation of the What question, 89  
testing What questions, 90
- Prepcheck(ing) (*cont.*)  
Withhold System used in Prepchecking, 28  
Zero question(s), 34, 60  
list of Prepchecking Zero questions, 83  
Zeros and Zero A questions, how to derive, 30  
3DXX or ~, if no TA action shift to CCHs [1962], 43
- Prepclearing, preparatory to clearing, use of, 24
- present time, *defn.*, response to continuous rhythm of physical universe, resulting in a hereness in nowness, 276  
rhythm is source of present time, 276  
thetan’s continuous presence in ~, possible explanation of, 276
- present time problem(s); *see also* problem; rudiments  
how to handle present time problems [1964], 468  
is exactly and only what pc thinks or says it is, 463  
no gains occur in presence of, 468, 470  
overts, ARC breaks and PTPs, 468; *see also* BCR  
person with PTP will get no graph change, 185  
to tell pc what his PTP is and then audit what auditor said it was will inevitably ARC break pc, 463  
when a GPM item exists in PT it constitutes a ~, 185
- pressure, bank solidity is a form of ~, 175  
prior confusion to self-determined change, 116  
prior reads, *defn.*, reads which occur prior to completion of major thought, 264  
compartmenting the question, exploring ~, 77
- problem, *defn.*, postulate-counter-postulate, 185; *see also* present time problem
- Problems Intensive,  
goals presented in ~ should not be given vast importance or suppressed, 201  
pattern for a new Problems Intensive, 116  
Recall a Terminal and ~, alternated with R-2H, 406  
Repetitive Prepchecking on, 116  
what Problems Intensive does for pc, 146
- process(es),  
auditing discipline, Auditor’s Code, TRs are needed to make processes work, 263  
auditor has to be skilled on one ~ at least and know all about it before he can do two, 432  
commands, one doesn’t necessarily give every auditing command the process has in its run down, 501  
cycle is selecting a ~ to be run on pc, running TA action into it (if necessary) and running TA action out of it, 410  
don’t only deliver “the latest” ~, 324  
don’t run a process that makes pc feel accused, 441  
end of process [Model Session], 86, 87, 399  
flatten a process before you change, 76  
master process, *defn.*, one which ran out all other processes and processing, 67  
remedy is an auditing ~ designed to handle a non routine situation, 517

## SUBJECT INDEX— 1962/1964

### process(es) (*cont.*)

- repairing unflat processes, 67
- routine is a standard ~, designed for best steady gain of pc at that level, 517
- start of process [Model Session], 86, 399
- that turns something on turns it off, 126
- processing; *see* auditing
- Processing Check, Know to Mystery, 1
- program, programming, *defn.*, consecutive techniques
  - or actions a case should have to get adequate tone arm action and achieve a new plateau of ability, 386
- cases [1963], 325, 331
- cycle is selecting an action to be performed, performing that action and completing it, 410
- pc interest and TA action tell you ~ is right, 325
- pcs, 324
- Project 80—itsa line and tone arm, 351
- prompters, 512
- protest(s)(ed),
  - decided and ~ used to get pc easier in session, 447
  - how pc's ~ against a question is demonstrated, 439
  - in a conflict between pc and meter, take pc's data, because ~ and assert and mistake will also read on meter, 335
  - is basically responsible for making a mental image picture, 301
- psychoanalytic patients, 517
- psychosomatic, Clay Table Healing used to get rid of physical discomfort of ~ origin, 457
- psychotics, proper handling of, 516
- PT; *see* present time
- PTP; *see* present time problem
- public, if they don't hear same thing being said at least three times, they believe it is impermanent, 432
- public incredulity is an accidental protection, 332
- punishment is supposed to bring about inaction, 439
- punishment, why it doesn't work, 322, 439

## Q

### Q and A, 74, 410

- defn.*, asking a question about a pc's answer, 74
- defn.*, means that the exact answer to a question is the question, a factual principle; came to mean that auditor did what the pc did, 74
- defn.*, a failure to complete a cycle of action on a preclear, 410
- ARC broken pc, never discipline or ~ with, 286
- auditor Q and A-ing is giving session control over to the pc, 74
- causes ARC breaks by by-passing charge, 283, 285, 419
- dangerous ~ is that action of auditor which corresponds to pc's avoidance of a hot subject or item, 37
- examples of Q and A, 74, 292

### Q and A (*cont.*)

- interrupting or changing an auditing comm cycle before it is complete, 410
- is a serious thing in Prepchecking, 40
- origin of term comes from "changing when pc changes", 410
- types: double questioning, changing because pc changes, and following pc's instructions, 74

## R

- Reach and Withdraw on E-Meter, TR 20, 264
- reactive mind,
  - auditor is in absolute control of bank; it always does what you tell it to do, 413
  - bank beefing up, *defn.*, sensation of increasing solidity of masses in the mind, 175
  - bank belongs to thetan, not to body, 255
  - bank is a demon for exactness; mind is not a confusion, 404
  - basis of, is actual GPMs, 493
  - composed of timelessness, unknownness, survival, 78
  - earlier in the ~ the "power" of the thetan's mock ups is greater, 256
  - E-Meter reacts on ~, never on analytical mind, 78
  - GPM, black masses of the reactive mind, 175
  - mechanics of the reactive bank, 493
  - there are valences, circuits and machinery in ~, as well as reliable items and goals, 275
- read(s)(ing); *see also* E-Meter
  - auditor with out TRs and no impingement gets no ~, 82
  - bigger on higher levels, 396
  - dirty read; *see* dirty read
  - everything reading, 402, 403
  - instant reads; *see* instant reads
  - latent reads; *see* latent reads
  - never clean a clean needle and never miss a ~, 105
  - on Level VI, difference between, 403
  - prior reads; *see* prior reads
  - questions to handle missed meter reads, 73
  - rocket reads; *see* rocket reads
  - steering pc by needle reads, 60, 63, 78
- Recall Process, don't accept only "yes" as an answer, 95
- release, definition of, 338
- reliable item(s), *defn.*, any item that rock slams well on being found and at session end and which was last item still in after assessing list; can be terminal, opposition terminal, combination terminal or significance, provided only that it was *the* item found on a list and rock slammed, 176; *see also* combined terminal; opposition terminal; terminal
  - always in pairs [R3-2 1 ], 182
  - dead horse is a list which even with good auditing, failed for any other reason to produce a reliable item, 203
  - E-Meter and RIs, 334

## SUBJECT INDEX— 1962/1964

- reliable item(s) (*cont.*)  
goals and ~ found on students, staff or HGC pcs  
must be checked out, 246  
GPMs, three types of charge existed in GPMs:  
charge as an engram, charge as RIs, charge as  
postulates, 349  
implant RIs, 394  
never audit an RI in any way but listing for  
another RI [R2-12A], 237  
Oppose RIs [R2-10, R2-12], 221  
potential miscalling a reliable item [R2], 230  
stray RI is an RI from a GPM of another goal than  
the one being worked [R2-12A], 258  
too many found without finding pc's goal turns  
off a pc's RR or RS [R2-10, R2-12, R2-12A],  
249
- remedy, remedies, 506; *see also* BCR  
*defn.*, something you do to get pc into condition  
for routine auditing, 485  
*defn.*, auditing process which is designed to handle  
non-routine situation, 517
- Remedy A, 506; *see also* Book of Case Remedies  
handles immediate subject under discussion or  
study, 507
- Remedy B seeks out and handles a former subject,  
conceived to be similar to immediate subject or  
condition, in order to clear up misunderstand-  
ings in immediate subject or condition, 507; *see  
also* BCR
- remedy for the dangerous auditor, 34
- repair, case, 67
- repair, general, you can get nice gains by prepcheck-  
ing all rudiments, 70
- repeating what pc says is evaluation, 161, 414
- Repetitive Prepchecking; *see* Prepchecking, Repetitive  
repetitive rudiment; *see* rudiment, repetitive
- represent list, item is unburdened by making ~  
[R2- 10, R2-12 , 3GAXX], 210
- responsibility, 438, *defn.*, concept of being able to  
care for, to reach or to be, 8  
common denominator of the Goals Problem Mass  
is "no responsibility", 8  
determinism and degrees of ~, 8  
difficulty stems from no responsibility, 9  
increased will unflatten Zeros, 90  
no great pc ~ for his own overts below Level IV,  
438  
pc is thrown out of session by having ~ hung on  
him, 414  
realization that one has really done something is a  
return of ~ and this gain is best obtained only  
by indirect approach, 438  
Security Checking increases responsibility, 9
- restimulate(s)(ed), restimulation (*cont.*)  
auditing selectively ~, locates charge and dis-  
charges it, 290, 335, 347, 416  
mechanism of permanent ~ consists of opposing  
forces of comparable magnitude which cause a  
balance which does not respond to current time  
and remains "timeless", 276, 416
- restimulate(s)(ed), restimulation (*cont.*)  
over-restimulation, 371, 413  
sources of restimulation, 372  
under-restimulation, 371  
when prior charge is ~ but not located so that it  
can be blown, we get ARC breaks, 290, 416
- Revelation Process X1, 34  
Revelation Process X2, commands of, 38  
review, Scientology review, 332  
R-factor to new pcs, 490  
rhythm is source of present time, 276  
RI; *see* reliable item
- right, rightness, 323  
asserted rightness, 322, 327  
how to get another less compulsive on their "right  
ness", 323  
no absolute rights or absolute wrongs, 321  
rehabilitating the ability to be right, 322
- rock, 129; *see also* rock slam  
just below the rock lies pc's goal, 213  
opposition rock and rock, two basic items of GPM,  
182
- rocket read(s); *see also* rock slam  
always goes to the right with a fast spurt which  
rapidly decays, 212  
how to make RRs appear on implant RIs, 394  
how to restore ability of pc to RR or R/S, 250  
implant GPMs read with a long clean enthusiastic  
RR, actual GPM chugs, 402  
is superior in value to an R/S; R/S is superior in  
value to a DR; DR is superior in value to a fall,  
212  
is the read of goal or rock itself, 213  
rock slam and rocket read, relationship, 249  
traveling rocket read [R2, R3], 257  
what makes RRs and R/Ses vanish [R2-10, R2-12],  
249
- rock slam (s) (ing); *see also* rock; rocket read  
*defn.*, called a rock slam as found on many pcs in  
effort to locate rock, 129  
*defn.*, convulsion of the mind and can reflect as a  
convulsion of the body, 142  
*defn.*, response of E-Meter to conflict between  
terminals and opposition terminals, 176  
*defn.*, repetitive slashing of needle of any width,  
205  
*defn.*, read of rock vs. opposition rock and every  
pair above them on the cycle of GPM; it marks  
path to rock, 213  
case progress marked by rock slams, 212  
depend on reality level of pc, 176  
dirty needles and R/Ses, 129  
Dynamic Assessment by Rock Slam [3GA], 131,  
135, 137, 138  
everyone alive rock slams on something, 178, 212  
instant rock slam, *defn.*, that rock slam which  
begins at end of major thought of any item,  
176  
item, never represent it, always oppose it, 172,  
216, 221, 237

## SUBJECT INDEX— 1962/1964

- rock slam(s)(ing) (*cont.*)
- item that R/Ses was part of GPM and has another item in opposition to it, 212
  - List One, R/S, 210, 216, 220
  - marks path of interest of pc; R/S = interest = cognitions, 213
  - matching [R2-12], 236
  - minute rock slam, 119
  - most difficult needle response to find or attain or preserve, 176
  - “never R/Sing” pcs, 212
  - only package wide ones in R2-12A, 240
  - Opening Procedure by Rock Slam [R2-12], 185
  - persons who ~ on Scientology or associated items are security risks, 185
  - person who ~ on Scientology or auditors can’t audit well, why, 161
  - reliable item and R/Ses; *see* reliable item
  - restoring the RR and R/S, 249, 250
  - rocket reads and R/Ses, relationship, 212, 249
  - scale of, 212
  - Security Check by rock slam, 140
  - sign of overt, 129
  - slash of an R/S is all of the same velocity and doesn’t decay, it just ceases, 212
  - vanished, cause of, 234, 249
  - wide ~ is a quarter of a dial ~ to a full dial ~, 140
- rock slam channel is pathway through pairs of items that compose a cycle of GPM and lead to rock and goal, 176, 213
- rock slammer(s), 161
- defn*, preclear who rock slams on a present time GPM item in his or her immediate environment, 186
  - defn*, one who produces a rock slam during the nulling of Scientology List on that list; persons who produce rock slam reactions on other lists are not rock slammers, 203
  - is a slow-gain or non-gain case, 187
  - persons who rock slam on Scientology or associated items are security risks, 185
  - skills required to accomplish a 3GAXX for ~, 189
  - slow student is always a rock slammer, 185
  - we’re probably all somewhere on List One, 218
- “Roll Your Own” Prehav, 173, 174
- Ron; *see* Hubbard, L. Ron
- rote style auditing; *see* auditing, rote style
- routine (s), *defn*, a standard process designed for best steady gain of pc at that level, 517
- designation of routines, 262
  - is for normal case advance, 485
- Routine Three, Service Facsimile Clear (R3SC), 353
- slow assessment, 379
  - steps of, 354
- Routine 0-A, 518
- (Expanded), steps of, 520
- Routine 0-B, 0-0, 518
- Routine 0-C, 519
- Routine 1a, 67
- Routine 2, 68, 218, 219; *see also* Routine ~ and/or Routine 3 [avoid R2-12, R3 type processes, 406]
- opposition lists, right and wrong oppose, 230
- Routine 2 and/or Routine 3; *see also* Routine 2; Routine 3 [avoid R2-12, R3 type processes, 406]
- ARC break; *see* ARC break, R2 and R3 ARC breaks
  - Clear test, 259
  - don’t force the pc, 255
  - Drill One, 254
  - item from another GPM, 258
  - listing difficulties, cause and remedy of, 255, 256
  - listing rules, 241, 242
  - midrule, 251
  - minimize goal oppose lists, 258
  - Model Session, 243
  - pc in grief or apathy, cause and remedy of, 251
  - rule: completing R2 or R3 package will not turn on the RR or R/S, 249
  - sad effect, 251, 252
  - TA position for the list must be motionless, 241
  - traveling rocket read, 257
  - upsets, how to prevent, 254
  - wrong wording of item or goal, 257
- Routine 2-G, designation of R2-GPH, R2-GI, R2-G2, R2-G3, R2-G4, R2-G5, 262 [avoid R2-12 type processes, 406]
- Routine 2H, ARC Breaks by Assessment, 297
- lecture graphs, 343, 344
- Routine 2-10, 247, 249, 262, *defn*, R2-12 short form for beginners, 208; *see also* Routine 2-12 [avoid R2-12 type processes, 406]
- cease to use Routine 2-10, 2-12 and 2-12A in HGC and Academy and on staff clearing, with two exceptions, 247
  - target of, is fast result in pc and greater reality for auditor, 213
- Routine 2-12, 186; *see also* Routine 2-10; Routine 2-12A [avoid R2-12 type processes, 406]
- assessments, 208
  - what assessment is prevented by, 203
  - auditor responsibility, 219
  - avoid R2-12, R-3 and R4 type processes [1964], 406
  - basic auditing skills needed to audit with ~, 193
  - case errors, points of greatest importance, 217
  - case remedy, 226
  - cease to use Routine 2-10, 2-12 and 2-12A in HGC and Academy and on staff clearing, with two exceptions, 247
  - coaching notes, 194
  - danger of, 263
  - definitions of important terms, 203
  - duration of process, 219
  - eye pouches used as an indicator, 235
  - failure to save records, 220
  - fast step resume, 190
  - fatal error, 216

## SUBJECT INDEX— 1962/1964

- Routine 2-12 (*cont.*)  
list(s)(ing), 188  
appearances, 207  
incomplete lists, 221  
item can appear anywhere on a source list so  
  long as 2 items do not R/S or RR, 239  
never force pc to list, 255  
never null lists taken from wrong sources, just  
  abandon, 232  
overlisting, danger sign of, is pc invalidating or  
  questioning items as he or she says them,  
  204  
that won't complete, 223  
writing the list, 204  
wrong way oppose, tests for, 222  
List One, the Scientology List, 191,195, 202, 215  
  failing to find R/Ses on List One, 220  
never represent a rock slam item, 221  
"never R/Sing" pcs, 212  
Opening Procedure by Rock Slam—an HPA/HCA  
  skill, 185  
practical drills, 193  
removes unwanted valences that commit overts  
  rather than endlessly sec checking pc, 190  
rocket reads vs. R/Ses, 212  
target of, is packages in present time which bend  
  GPM out of shape and give pc PTPs and hidden  
  standards, 213  
Tiger Drill for nulling by mid ruds, 196  
vanished R/S or RR, 249  
when to abandon R2-12 and begin R3M, 250  
Zero list questions or R2-12, 211  
Routine 2-12A, 240, 247; *see also* Routine 2-10;  
  Routine 2-12 [avoid R2-12 type processes,  
  406]  
allow no self listing of goals, 238  
ARC break always equals wrong Routine 2, hand-  
  ling of, 237  
case repair, 237  
ceased to be used, 247  
danger of, 263  
dope-off, 237  
four item packages, 234  
listing, auditor has no business with significances  
  of items, 235  
listing, run all TA action out of listing; list at least  
  50 items beyond point TA became motionless,  
  233  
list is wrong way to, indicators, 234, 236  
never steer items, 238  
nulling, 235  
reliable items, you never audit an RI in any way  
  but listing for another RI, 237  
right item signs, 236  
rock slam handling, 235, 236, 240  
source list is what you choose to get your first list  
  from or List One, 239  
tone arm is used, 233  
vanished R/S or RR, 249  
wrong item signs, 236  
Routine 3; *see also* Routine 2 and/or Routine 3  
  [avoid R2-12, R3 type processes, 406]  
case repair, 69  
difficulties and liabilities in a ~ process, 64  
  Model Session, 278, 381  
Routine 3A, repair of, 69 [avoid R3 type processes,  
  406]  
Routine 3D, [avoid R3 type processes, 406]  
  lock valences are appended to a real GPM 3D item,  
  7  
  repair of, 69  
  terminal, produces a painful somatic, 5  
Routine 3DXX (3D Criss Cross), 4, 34 [avoid R3  
  type processes, 406]  
assessment, 10, 11, 17, 19  
  cautions regarding Routine 3G and ~, 57  
  CCHs, Prepchecking and ~ combination, 43, 51,  
  52  
  complete list in 3DXX, 17

 present time problem  
 beginning rudiments [Model Session], 85, 398,  
 428  
 beginning rudiments withhold question change, 72  
 check(ing), 81, 82  
 needle characteristics in ~ checks, 84  
 check sheet, 81  
 cleaning a ~ that has already registered null gives  
 pc a M/W/H of nothingness, 102, 362  
 don't let pc use ~ to avoid body of session, 76  
 double question is primary source of ARC breaks  
 and out rudiments, 74  
 E-Meter sensitivity is vital to get ~ in, 91  
 end of session rudiment for withholds, 27  
 end rudiments [Model Session], 86, 399, 429  
 end words of questions, checking pc on, 102,  
 362  
 fast checking, never say, "That still reads", 97,  
 361  
 handling [1962], 75  
 Havingness rud, 101  
 how to get the rudiments in, 361  
 instant read anticipated on rudiments, 113  
 instant rudiment read, *defn.*, 264  
 Levels III to VI Model Session ~, 420, 448  
 middle rudiments, 99, 173  
 big mid ruds, 446  
 goal will go null if big mid ruds are out, 83  
 use of big mid ruds, 248  
 Model Session, 86, 244, 279, 382, 399, 421,  
 449  
 prepchecking the middle rudiments, 83, 99  
 use of, 97  
 willmushanegram, 296  
 missed withholds, asking for, does not upset dic-  
 tum of using no O/W Processes in ~, 60
- rudiment(s) (*cont.*)  
 missed withholds rudiment, 101  
 miss on one and the next, even if really hot, can  
 seem to be null by reason of ARC break, 105  
 never ask a question about an answer in cleaning  
 any rudiment, 75  
 out rudiments, E-Meter can go gradually dull in  
 presence of out rudiments, 96, 361  
 pc who has something to hide wants auditor to  
 find rudiments in, 82  
 pc with ruds out blows nothing, 18  
 Prepchecking, rudiments in, 42, 63  
 Prepchecking ~, you can get nice gains by, 70  
 random rudiment [Model Session], 244  
 repetitive rudiment cycle, 96, 361  
 repetitive rudiments and Repetitive Prepchecking,  
 361  
 repetitive rudiments, don't use on end ruds of  
 Prepcheck or R3 session, 96  
 room rudiment dropped from Model Session in  
 beginning, remains in end, 101  
 R2 and R3 Model Session, rudiments, mid ruds,  
 random rudiment, 244  
 R3 Model Session, rudiments in, 278, 381  
 steer by repeated meter reaction, 63  
 TA action ignored when a rudiment is used as a  
 rudiment, 76  
 TA action, lots of, on auditor rud, use CCHs, 44  
 TR 1, if it is poor, you'U miss rudiment's outness  
 and there goes your session, 96, 361  
 why rudiments are detested by some pcs, 284  
 won't register when pc is not in session, 96
- R (number); *see* Routine (number), except R3R and  
 R6 [below]
- R3R, 294; *see also* engram running  
 ARC breaks, handling of in R3R, 293  
 assessment [1963], 300, 302  
 basic problem in starting a case, 299  
 causes for failure, 294  
 chain once assessed must be fully run, 299  
 don't mix with earlier data on engram running,  
 294  
 don't use mid ruds or ask for M/W/Hs, 296  
 interest is only absorbed attention and a desire to  
 talk about it, 301  
 it does not matter if pc stays within this lifetime  
 or goes whole track so long as assessed chain is  
 followed and a basic eventually discovered for  
 it, 299
- List L-3, 308  
 pc's postulates, 349  
 pc's regard for or attitude about time can make it  
 difficult for auditor to run R3R or R3N, 330  
 significance and story content have no bearing on  
 rightness or wrongness of chain selected, 302  
 steps, 294  
 Preliminary Step [1963], 299  
 all rules of listing as developed in R2-12  
 apply to R3R Preliminary Step, 300  
 TA action exists on the correct chain, 299, 300

## SUBJECT INDEX— 1962/1964

- R3R (*cont.*)  
visible factors in R3R are: pc's interest, TA action,  
ability of pc to run incidents, 301  
which cases can run, 331
- R6,  
ARC breaks, 418  
auditor musts, 392  
don't use Clay Table Clearing after R6 begun, 493  
list of good indicators on R6, 390  
why pcs can't run at once, 493

slow-gain, no-gain cases, 185  
“social conduct”, “suppressor” is often considered ~, 37  
unchangsocialmores, overts depend on~,40  
somatic(s), *defn*, general word for uncomfortable physical perceptions coming from reactive mind, 175  
CCHs, take a ~ or twitch or any pc reaction as an origin by pc and call pc’s attention to it, 49  
chronic somatics are contained in valences, 9  
3D terminal produces a painful somatic, 5  
source list; *see* list, source  
squirrels are Case Levels 7 or 6 dramatizing alter-is on Scientology instead of their track, 327  
Start—Change—Stop, unflat, remedy for, 68  
start-continue—complete, cycle of action redefined as , 410  
steer, how to ~ pc by repeated meter reaction, 63, 78  
steer, never steer items [R2-12], 238  
student(s)('s); *see also* training  
auditing assignments, 431  
“bright” students, 488  
glib students can’t demonstrate, 488  
in trouble, Remedy A & B, 506, 507  
quick student who somehow never applies what he learns, 480  
service facsimile may contest instruction, how to handle, 358  
slow or blows, reason for, 431, 451  
slow ~, as well as slow gainer, is always a rock slammer, 185  
theory checkouts must consult student’s understanding, 480  
stupidity, wrong definitions cause ~, 489  
“suggested” is evaluation, what it does, 119  
suicide, cause of, 252, 517  
Supervisor’s remedies; *see* BCR  
suppress and not-used used to get item to read, 447  
“suppressed” can keep a goal or invalidation, suggestion, mistake, assertion or M/W/H on goal from reading, 119  
suppression is overcome when you run havingness on a pc, 37  
suppressors, *defn*, impulse to forbid revelation in another, 37  
survival, rightness is stuff of which is made, 322  
symbols, Clay Table Clearing is a process of clearing words and symbols, 474
- ### T
- TA; *see* tone arm  
Tactile Havingness is a CCH type of process, 43  
tape lectures are necessary to get the meaning and ethic of Scientology, 229  
tape recording sessions, points to look for, 378  
technical quality, staff morale, the unit, broad disslow semination depend basically upon ~, 324  
technique,  
*defn*, process or some action that is done by auditor and pc under auditor’s direction, 385  
*defn*, a patterned action, invariable and ing, composed of certain steps or actions calculated to bring about tone arm action and thus better or free a thetan, 386  
basic auditing is necessary for ~ to work, 385  
dirty needle, its cause lies in basic auditing not in technique errors, 384, 414  
technology, auditing session is 50% ~ and 50% application, 58  
terminal (term.), *defn*, an item or identity pc has actually been sometime in past (or present); it is “the pc’s own valence” at that time, 175  
combined terminal; *see* combined terminal  
GPM is full of pairs of terms and oppters, 179  
identities in GPM producing pain, 175  
most PT ~ and oppters look more like coters than clean ~ or opposition terminals when first contacted, 230  
opposition terminal; *see* opposition terminal  
Recall a Terminal and Problems Intensive, alternated with R-2H, 406  
R2-12A package, 235  
turns on pain in pc’s body, it is a ~, 12, 177  
ways of asking for ~ and oppterm, 177, 230  
3DXX, finding terminal and oppterm, 5  
theory,  
checkouts must consult student’s understanding, 480  
checkout system, 488  
practical goes through the simple motions, ~ covers why one goes through the motions, 482  
theory coaching, *defn*, getting student to define all words, give all rules, demonstrate things in bulletin with his hands or bits of things, and also may include doing Clay Table Definitions of Scientology terms, 489  
theta clear; *see* Clear, theta

## SUBJECT INDEX— 1962/1964

- thetan(s)(‘s),  
 body vs. thetan, 255  
 continuous presence in PT, possible explanation of, 276  
 earlier in bank the “power” of thetan’s mock-ups is greater, 256  
 engrams are being automatically created by , 301  
 fight of ~ is to remain unsolid, mobile or immobile at will, and capable of decision, 277, 417  
 person could feel pain only as himself (thetan plus body), 176  
 things which can deteriorate thetan, 277  
 time track and thetan; *see* time track  
 tries to be right and fights being wrong, 322
- thought,  
 critical thought is a symptom of overt, not the overt itself, 469  
 major thought; *see* major thought  
 minor thought; *see* minor thought  
 pc whose “thought has no effect on his or her bank”, cause of, 36
- ticks, not asking right question gives you ~, 396
- Tiger Drill(ing), 122, 150, *defn.*, series of buttons which are capable of preventing a right goal or level from reading or making a wrong level read, combined in an appropriate exercise, 173
- Big Tiger Drill, 196  
 buttons, 148  
 mid ruds (Tiger Drill), 129
- time, 330  
 failure to handle time in incidents, 273  
 handling time on pc’s time track, 287, 288  
 is actual but is also an apparency, 330; *see also Dn 55*  
 mechanics of time, 330  
 sense, compared to case level, 330  
 single source of aberration is time, 287  
 “timeless”, cause of, 276  
 tone arm and time, 325, 329, 330  
 Zero questions time limiter, 99
- timelessness, unknownness, survival, reactive mind is composed of, 78
- time track, 273, 287, 292, 299; *see also* whole track  
*defn.*, a very accurate record of pc’s past, very accurately timed, very obedient to auditor, at least 350,000,000,000,000 years long, probably much longer, with a scene about every 1/25 of a second, 274  
*defn.*, endless record, complete with 52 perceptions, of pc’s entire past, 274  
 argument with pc during dating can group track, 293  
 auditor must know basic laws and mechanics of ~ in order to run engrams, 273, 288  
 charge and the time track, 289, 416  
 charge prevents pc from confronting ~ and submerges ~ from view, 290, 416  
 creation of the time track, 275, 276, 291  
 earlier on ~ pc had stronger postulates, 349
- time track (*cont.*)  
 engram running by chains and the time track bulletins, 273, 287, 292, 299  
 exceeds a trillion, trillion, trillion years, 296  
 faults, there are no faults in recording of ~; there are only snarls caused by groupers, and unavailability and lack of perception of , 275  
 free track, that part of time track that is free of pain and misadventure, 274  
 grouping of time track, causes of, 293, 329  
 influencing agencies for pc are ~ and PT, 275  
 mechanism of, 277  
 move a ~ by any one of these three methods: significance, location, time, 287, 288  
 move only the track; don’t mix it and also move pc, 288  
 obeys auditor; time track does not obey a preclear (early in auditing), 274  
 origin of the time track, 276  
 some parts are permanently in a state of creation, majority becoming created when thetan’s attention is directed to them, 276  
 unavailability, cause of, 275
- tired, chronically tired pc who is not eating won’t get TA for there’s no as-is of locks, 434
- tone arm, 233  
 action; *see* tone arm action  
 body motion and TA, 241, 373, 397, 443  
 “fragile TA”, 329  
 listing to a still tone arm, what it takes, 241  
 motion; *see* tone arm action  
 moving signals auditor not to act; TA not moving signals auditor to act, 373, 413  
 Project 80—the itsa line and tone arm, 351  
 stuck TA, cause of, 350, 419  
 time and the tone arm, 329
- tone arm action; *see also* tone arm  
 as indicator of what to run, 44, 48  
 blowdown of tone arm is meter reaction of having found correct by-passed charge, 346  
 body motion and TA; *see* body motion  
 case must not be run without TA action or with minimal TA action, 331, 413  
 cause of, 370  
 energy contained in confusions blowing off case, 375  
 TA change requires two locations—location of pc and location of mass, 49  
 TA moves because mass is changing, 48  
 that which moves the tone arm down will give tone arm action; that which moves only the needle seldom gives good TA, 369  
 what produces ~ and what doesn’t, 375  
 CCHs produced ~ while higher level processes did not, 43  
 charge and TA action, 290  
 without TA motion no charge is being released, 329, 413  
 continue the process so long as you have tone arm motion, 40, 75

## SUBJECT INDEX— 1962/1964

- tone arm action (*cont.*)  
correct track significances run but without will  
not change but can deteriorate a case, 335  
“drift down” and “drift up”, 48  
how it is measured, 367  
how often one reads and notes TA action, 443, 444  
how to get, 324, 369, 374, 377, 397  
inhibitors of,  
chronically tired pc who is not eating, 434  
less active the TA the more over-restimulation  
is present (though restimulation can also be  
absent), 371, 413  
slows down as soon as pc goes into more charge  
than he can itsa easily, 374  
small if any when pc has a PTP, 468  
TA action has to have been prevented; it  
doesn't just not occur, 370  
whatsit reduces TA action, 334, 370, 378  
when pc is talking and you're getting no TA  
you already have an ARC break or are about  
to get one, 336  
is best index of case levels, 330  
itsa and whatsit, relation to TA, 334, 370, 378  
list to assess for TAMotion, 372  
pc interest and tell you programming is right,  
325  
pc's gain is directly proportional to ~, 325, 327,  
367, 368  
quantity of,  
amount per session and intensive, 44, 367  
auditor skill measured by amount of TA he can  
get, 327, 373, 413  
greater on higher levels, 397, 504  
lots of TA = bright pc, small TA=dullpc, 373  
reacts on things that will give TA, 369  
R3R and TA action, 299, 300  
superior to what is run, 336  
time concept of pc and TA action, 325, 330  
when a rudiment is used as a rudiment, ignore TA  
action, 76  
tone arm counters, use of, 443  
tone scale, pc comes up to degradation, up to apathy,  
286, 419 ,  
Tone 40, don't ~ ack items or goals pc gives you, 56  
Tone 40 8-C, CCH2, 311  
track; *see* time track  
training; *see also* Academy; student  
case level and sanity, relationship to ~, 316, 327  
clay table work in training and processing, 451  
coachless training—use of a doll, 103  
don't demand things student has not yet reached,  
479  
former training not wasted, 316  
HGC processes and training, 324  
instruction and examination: raising standard of,  
478  
instruction is done on gradient scale, 479  
instructor directs student auditor's attention  
toward Scientology body of data in order to get  
effective auditing done, 357  
training (*cont.*)  
level of skill at Saint Hill, 51  
practical goes through the simple motions, theory  
covers why one goes through the motions,  
482  
stress basic auditing skill, 326  
student auditor training [1964], 431  
student's or auditor's service fac may contest in  
struction, how to handle, 358  
why it fails, 359  
wrong definitions cause stupidity or circuits, fol  
lowed by overts and motivators, 489  
X unit, 214  
training drills or routines; *see* TRs  
TRs,  
are important, why, 266  
are just learned with no other consideration, 461  
done solo in absence of good coaches, except  
TRs 0-4, 103  
invalid TR is one which gives a wrong impression  
of auditing, 80  
meter reading TRs, 264  
must contain correct data of auditing, 79  
out TRs and no impingement gets no reads,  
82  
processes do not work without skillfully practiced  
TRs, 263  
TR 0, Confronting Preclear, 266  
TR 0 (A), 0 (B), 0 (C), 0 (D) [1963], 267  
TR 1, Dear Alice [1963], 268  
if poor you'll miss the rudiment's outness, 96,  
361  
weak TR 1, end words of rudiments reading by  
themselves occurs mainly in presence of  
weak TR 1, 102, 362  
TR 2, Acknowledgements [1963], 269; *see also*  
acknowledgement  
TR 3, Duplicative Question [1963], 269  
TR 4, Preclear Originations [1963], 271  
be sure it is excellent in that you understand  
(really, no fake) what pc is saying and  
acknowledge it (really, so pc gets it) and  
return pc to session, 362  
TRs 6-9 are scrapped [1962], 79  
truth is built by those who have the breadth and  
balance to see also where they're wrong, 322  
Twenty-Ten, application to Goals Problem Mass, 7  
Twenty-Ten, for every twenty minutes of Security  
Checking run ten minutes of Havingness, 6  
Type A and Type B pcs, 434
- ### U
- understand, auditor fails to ~ what pc said or meant,  
correct response for, 161, 414  
understanding, 508  
unknown incident pins chains, 41  
unknownness, reactive mind is composed of timeless  
ness, unknownness, survival, 78

## SUBJECT INDEX— 1962/1964

“unusual solutions” is a phrase describing actions taken by auditor or case or auditing supervisor when he has not spotted the GAE; it seldom resolves any case because data on which it is based (observation or report) is incomplete or inaccurate, 509

Upper Indoc attitude makes CCHs grim, 47  
upset, source of all is M/W/H, 27,1 05

### V

valence(s),

are circuits are valences, 6  
chronic somatics and behavior patterns are contained in valences, 9  
GPM is made up of past selves or “~”, 8,185  
least desirable valences persist, 8  
lock valences, 17,18  
are appended to a real GPM 3-D item, 7  
no responsibility for game, for either side of game or for a former self, 8  
Routine 2-12 removes unwanted ~ that commit overts rather than endlessly sec checking pc, 190  
withholds, each ~ has its own social mores, 40  
V unit Class 0, first phase, 227

### W

What question(s), Prepchecking; *see* Prepchecking, What question

whatsit and itsa, relation to TA, 334, 370, 378

whole track, 41; *see also* time track  
occlusion, cause and remedy of, 9

R3R, pc going whole track, 299

winds of space, *defn.*, pc is getting his or her face pushed in, 65

*defn.*, feeling of being blown upon, especially from in front of the face, 175

withdrawn, pc looking ~ after Prepchecking, cause and remedy of, 67

withheld flow, basic aberration is ~,16

withhold(s), *defn.*, an undisclosed contra-survival act, 58

beginning rudiments withhold question, 60, 72

chain behaves exactly like any chain, 28

cleaning a clean develops a “withhold of nothing”~ 335, 415

coming after confusion of overt, hang up on track and tend to stop pc in time, 14

compulsive outflow and obsessive withhold are alike aberrated, 14

depends utterly on pc’s idea of what is an overt, 40

dirty needle is caused by M/W/Hs, not ~, 59

don’t have to clean up all withholds if missed with holds kept cleaned up, 61

end of session rudiments for ~, 27

withhold(s) (*cont.*)

flows, running too long on one flow is conducive to withholds developing, 66

havingness must be run to get benefit of having pulled most withholds, 6

how to clear withholds and missed withholds, 23

knowledge to the average person is only this: a knowledge of his or her withholds, 26

laudatory withholds, 1

level below withholding that an auditor should be alert to in some pcs, for these “have no with holds” and “have done nothing”, 440

makes one feel he or she cannot reach, 6

missed and partial, 26

missed withhold; *see* missed withhold

overt is forward motion, withhold coming after it is inward motion, 14

overts are biggest reason why a person restrains himself and withholds self from action, 439

pc in session will always tell withholds, 23, 63

pcs go groggy, lose interest and refuse to list only when session withholds are missed, 66

pc stuck in a past session, clean up the ~, 21

Prepchecking was developed to handle auditor’s difficulty in “varying the question” in pulling withholds, 28

recurring, cause of, 41

restrained outflow is ~,14

reverse of ~ flow is “afraid to find out”, 33

Security Check based on withhold, make guilty and prevent, 1

since last session,42

suppressors and ~ are opposite, 37

Withhold System,

add “appear, not appear” after “all” in ~, 41

difficulty, what, when, all, who, 23, 24

don’t ask it on any late incidents, 89

Prepchecking uses the Withhold System, 28

Repetitive Prepchecking replaces Prepchecking by the Withhold System, 98

W, X, Y and Z units, 227-28

### Z

Zero list questions or R2-12, 211

Zero question(s)

don’t forget “guilty” in Zero questions, 40

Prepcheck(ing) Zero question 34 60

list of Prepchecking Zero questions 83

time limiter 99

Zeros and Zero A questions, how to derive, 30

Zeros, responsibility increased will unflatten ~ 90

## Numerals

3D; 3GA; etc.; *see* Routine 3D; Routine 3GA; etc.

8-C, one of HGC allowed processes [1964], 406

## ALPHABETICAL LIST OF TITLES

Academy Curriculum—How to Teach		Clay Table Work Covering Clay Table Clearing	
Auditing and Routine 2	227	in Detail	456
Academy Taught Processes	<i>OEC Vol 4-339</i>	Clay Table Work in Training and Processing	451

**Technical Bulletins**  
*of*  
**Dianetics and Scientology**

*by*  
**L. Ron Hubbard**

FOUNDER OF DIANETICS AND SCIENTOLOGY

**Volume**  
**VI**  
**1965-1969**

---

*I will not always be here on guard.  
The stars twinkle in the Milky Way  
And the wind sighs for songs  
Across the empty fields of a planet  
A Galaxy away.*

*You won't always be here.  
But before you go,  
Whisper this to your sons  
And their sons —  
“The work was free.  
Keep it so. “*

**L. RON HUBBARD**

**L. Ron Hubbard**  
*Founder of Dianetics and Scientology*

## EDITORS' NOTE

“A chronological study of materials is necessary for the complete training of a truly top grade expert in these lines. He can see how the subject progressed and so is able to see which are the highest levels of development. Not the least advantage in this is the defining of words and terms for each, when originally used, was defined, in most cases, with considerable exactitude, and one is not left with any misunderstandings.”

—L. Ron Hubbard

The first eight volumes of the *Technical Bulletins of Dianetics and Scientology* contain, exclusively, issues written by L. Ron Hubbard, thus providing a chronological time track of the development of Dianetics and Scientology. Volume IX, The Auditing Series, and Volume X, The Case Supervisor Series, contain Board Technical Bulletins that are part of the series. They are LRH data even though compiled or written by another.

So that the time track of the subject may be studied in its entirety, all HCO Bs have been included, excluding only those upper level materials which will be found on courses to which they apply. If an issue has been revised, replaced, or cancelled, this has been indicated in the upper right-hand corner along with the page number of the issue which should be referred to.

The points at which Ron gave tape recorded lectures have been indicated as they occurred. Where they were given as part of an event or course, information is given on that event or course on the page in the chronological volumes which corresponds to the date. The symbol “\*\*\*” preceding a tape title means that copies are available from both Publications Organizations. A tape preceded by “\*” means that it will soon be available. No asterisk (\*) means that neither Publications Organization nor Flag has a master copy of that lecture. If you have, or know anyone who has, copies of *these* tapes, please contact the Flag Audio Chief, P.O. Box 23751, Tampa, Florida, 33623, U.S.A. The number in the tape title is a code for the date; example: 5505C07—55 = year, 1955; 05 = month, May; C = copy; 07 = day, 7th; 7 May 1955. The abbreviation tells what group the tape is a part of. For an explanation of the abbreviations see Volume X, page 539.

At the back of this volume is a Subject Index covering only the material in this volume. Use the index to locate the LRH source material in context, don't just get data from the index. This index has been combined with indexes from other volumes to form the Cumulative Index which is in Volume X, starting on page 287.

# TECHNICAL BULLETINS 1965-1969

13-3	Mar. 1966	What Is Greatness?	154

# LONG CONTENTS

## **ca. 1965 MY PHILOSOPHY, 1**

First principle is that wisdom is meant for anyone who wishes to reach for it, 1  
Second principle is that it must be capable of being applied, 1  
Third principle is that any philosophic knowledge is only valuable if it is true or if it works,  
1  
LRH's travels, 2  
LRH cured himself from war injuries, 2

## **HCO PL 7 Feb. 1965 KEEPING SCIENTOLOGY WORKING, 4**

Ten points to get the correct technology applied, 4  
A group can't evolve truth, 5  
Scientology in its formative stages was not discovered by a group, 6  
Why the early Scientology organizations failed, 6  
Group vs. individuals, 6  
Examples of failures in keeping the ten points in, 7  
Importance of tough training, 8  
Turn "open-minded" people into dedicated ones, 8  
Proper attitude to Scientology, 9

## **HCO PL 14 Feb. 1965 SAFEGUARDING TECHNOLOGY, 10**

Why "squirreling" exists, 10  
Scientology is a workable system, 10

## **HCO B 5 Mar. 1965 BOOK OF CASE REMEDIES—APPLICATION OF TECH, 13**

*Book of Case Remedies* used by person himself to spot by-passed charge, 13

## **HCO B 10 Mar. 1965 WORDS, MISUNDERSTOOD GOOFS, 14**

Don't substitute synonyms for words, 14

## **HCO B 29 Mar. 1965 ARC BREAKS, 16**

How to identify and handle ARC breaks, 16  
An ARC break occurs on a generality or a not there, 16  
Case manifestation of generality and handling, 17  
Formula to handle ARC break using generalities, 17  
Generality and Not There, 18  
Level VI ARC breaks, 18

## **HCO B 2 Apr. 1965 THE ROAD TO CLEAR, 19**

Release was called "keyed out clear", 19  
Level VI, 19  
Liability of the reactive mind, 20  
The states of being, 20

## **HCO B 4 Apr. 1965 ARC BREAKS AND MISSED WITHHOLDS, 22**

ARC break procedure doesn't work when pc really has a missed withhold, 22  
The bottom of ARC breaks is a missed withhold, 22  
"Withholdy pc that ARC breaks a lot", 22  
Continuous overt case, 23

## **HCO B 5 Apr. 1965 A CONDITIONS TEST PROCESS I—X—REGISTRARS, 25**

Process I—X, 25

**HCO B 7 Apr. 1965 PREMATURE ACKNOWLEDGEMENTS, 26**

Premature acknowledgement leads to inadvertent withholds, 26

**HCO B 18 Apr. 1965 HOW TO APPLY LEVEL PROCESSING, 27**

Only alter-is of routine auditing can cause case failure, 27  
Levels are designed for *all* cases, 27

**HCO B 27 Apr. 1965 CLAY TABLE HEALING GOOF, 29**

Handling of “What should be near (body part)?” question, 29

**HCO B 5 May 1965 APPLICATION—MORE ON THE APPLICATION OF  
SCIENTOLOGY TO CHILDREN, 30**

Processes for children, 30  
Process Zero-Zero on children, 31  
Much time is used to flatten things on children, 32

**HCO PL 5 May 1965 CLASSIFICATION, GRADATION AND AWARENESS  
CHART, 33**

Awareness scale and auditing, 33  
The bridge, 34  
Auditor classifications, 34

**HCO PL 10 May 1965 RELEASES—VITAL DATA, 38**

What Grade Vs and VAs can be audited on, 38  
Next step for a Grade VA Release in auditing is R6 EW, 38  
Release’s increased abilities regarding training, 39

**HCO PL 17 May 1965 CCHs, 40**

CCHs are processes, not drills, 40  
Processes vs. drills, 40

**HCO B 22 May 1965 AUDITING BY LISTS, 41 [REPLACED]**

**HCO PL 27 May 1965 PROCESSING, 43**

Auditing rules: get the pc through it; what turns it on will turn it off; the way out is the way through, 43

**HCO B 4 June 1965 CLASS II MODEL SESSION, 44 [CANCELLED]**

Session preliminaries, 44  
Start of session, 44  
Beginning rudiments, 44  
Running O/W, 44  
Start of process, 45  
Middle rudiments, 45  
End of process non-cyclical, 45  
End of process cyclical, 45  
End rudiments, 45  
Goals and gains, 45  
Havingness, 46  
End of session, 46

**HCO B 14 June 1965 SUMMARY REPORT, 47**

What information to put on the Summary Report, 47

**HCO PL 17 June 1965 STAFF AUDITOR ADVICES, 49**

Comm cycle and Ethics, 49  
Case Supervisor puzzle, 49

Auditor to Ethics, 50  
When to report withholds, 50  
D of P work is completely textbook, 50

**HCO B 18 June 1965 CLEAR AND OT BEHAVIOUR, 51**

Clear vs. keyed-out Clear, 51  
OT vs. keyed-out OT, 51

**HCO PL 26 June 1965 HGC PC REVIEW AUDITING FORM, 52 [REVISED]**

Green Form, 52

**HCO B 28 June 1965 RELEASES, DIFFERENT KINDS, 56**

First Stage Release, 56  
Second Stage Release or a Power Release, 56  
Third Stage Release, 56  
Keyed-out Operating Thetan, 56  
Clear and OT, 56

**HCO B 30 June 1965 RELEASE, REHABILITATION OF FORMER RELEASES  
AND THETAN EXTERIORS, 57**

Rehab procedure, 57  
Rehab theory, 58  
Liability of rehab, 58

**HCO PL 1 July 1965 COMM CYCLE ADDITIVES, 59**

There are *no* additives permitted on the auditing comm cycle, 59  
Mannerism additives, 59

**HCO B 3 July 1965 MODEL SESSION REVISED, 60 [CANCELLED]**

What to do when Release is reached, 60

**HCO B 12 July 1965 STATES OF BEING ATTAINED BY PROCESSING, 61**

Types of Releases, 61  
Locks, 61 Secondaries and engrams, 61  
The whole track, 61 Exterior, 61  
Processes that make 1st, 2nd and 3rd Stage Releases, 62  
Clear—the R6 bank, 62  
Operating Thetan, 62

**HCO B 21 July 1965 RELEASE REHABILITATION, 63**

Rehab procedure amplification, 63

**HCO B 27 July 1965 AUDITING BY LISTS, 64 [CANCELLED]**

How to use List 1, 64

**HCO B 2 Aug. 1965 RELEASE GOOFS, 66**

Overrun, 66  
Rehabilitation goof, 66  
Rough comm cycle, 66  
Meter misuse, 66  
E-Meter dating on rehab, 66  
Not recognizing a floating needle, 67  
Not getting all releases, 67  
Pc's own purposes, 67  
Declare errors, 67  
Unalert org, 68

**HCO B 3 Aug. 1965 AUDITING GOOFS—BLOWDOWN INTERRUPTION, 69**

Auditor must not speak or move during a blowdown, 69  
Floating needle cannot be observed during a blowdown, 69  
Basic auditing, 69

**HCO B 5 Aug. 1965 RELEASE STAGES, 70**

Release Stages 1 to 5 described, 70  
How to obtain Release Stages 1 to 5, 71

**HCO B 6 Aug. 1965 QUALIFICATIONS TECHNICAL ACTIONS, 73**

Review's standard procedure: don't audit the case, audit the procedure, 73  
Former Release check, 73  
Case Supervisor request for Review, 74  
Review to repair, 74  
Student assists, 75  
Declare? for Release, 75  
Basis of Qual actions, 75  
HGC uses of Qual tools, 76  
The eight big rules of auditing, 76  
Don't mistake a PTP or withhold for an ARC break, 77  
Handling of SPs and PTSes, 77

**HCO B 19 Aug. 1965 MODEL SESSION REVISED, 78**

**HCO B 23 Aug. 1965 ABBREVIATIONS AND SYMBOLS OF DIANETICS AND SCIENTOLOGY, 79**

**HCO B 30 Aug. 1965 ART, 83**

The fundamentals of art, 83  
Art is a word which summarizes the quality of communication, 83  
Perfection vs. communication, 84  
An artist's relation to his audience, 85  
Decline of art forms, 85

**HCO B 30 Aug. 1965 RELEASE STAGES, 86**

Release—Clear—OT, 86  
Release Stages 1 to 5, 86  
Locks, 86  
Secondaries and engrams, 86  
The whole track, 87  
The reactive mind, 87  
Operating Thetan, 87

**Sept. 1965 THE AIMS OF SCIENTOLOGY, 88**

**HCO B 13 Sept. 1965 OUT TECH AND HOW TO GET IT IN, 89**

Meaning of out tech and tech, 89  
Difference between theory and practice, 89  
The need for practice, 90  
Evaluation of importances, 90  
Condition of "can't-apply" is handled by drills, 90  
The important data in a session, 91  
Six reasons a case does not advance, 91  
Assessment to find the "why" for failed auditors and bogged cases, 92

**HCO B 21 Sept. 1965 OUT TECH, 93**

The five gross auditing errors, 93  
The six things that can be wrong with a pc, 93  
Getting in tech, 93

**HCO PL 21 Sept. 1965 E-METER DRILLS, 94**

Imperative that E-Meter drills be done well, 94

**HCO B 22 Sept. 1965 RELEASE GRADATION—NEW LEVELS OF RELEASE, 95**

Grades of Release and type of process run, 95

Subjects of each grade, 96

Training levels, 97

Gradation Chart modernized, 97

**HCO B 27 Sept. 1965 RELEASE GRADATION—ADDITIONAL DATA, 98**

Table of Grades of Release, 98

Rehabilitation of Former Release, 99

Error in rehabilitation, 99

Don't underrun or overrun processes, 100

**HCO B 29 Sept. 1965 CYCLICAL AND NON-CYCLICAL PROCESS  
CONCLUSIONS, 101**

**HCO B 29 Sept. 1965 THE CONTINUING OVERT ACT, 102**

Criminals get no case gain, 102

Continuous overts means no case gain, 102

Discipline vs. reactive mind, 102

Fast, slow and no gain case, 103

**HCO B 1 Oct. 1965 MUTTER TR, 104 [REVISED]**

Purpose, commands, position and training stress of Mutter TR, 104

**HCO PL 11 Aug. 1971 SECURITY OF DATA, 105**

Reason for confidential materials, 105

Safeguarding Scientology materials, 105

From Power Processing on up the data is confidential, 105

**HCO B 5 Nov. 1965 FIVE WAY BRACKET ON HELP, 106**

Commands and how to run, 106

**HCO B 5 Nov. 1965 LECTURE GRAPHS, 106**

**HCO B 7 Nov. 1965 RELEASE REHABILITATION ERROR, 107**

There are no release points prior to auditing, 107

Only auditing keys out bank, 107

**HCO B 8 Nov. 1965 SUPPRESSIVES AND HIDDEN STANDARDS, 109**

Data on what a hidden standard means, 109

PTS handling, 109

**HCO B 14 Nov. 1965 CLEARING COMMANDS, 110**

Example of how to clear commands, 110

**HCO B 16 Nov. 1965 E-METER SENSITIVITY SETTING, 110**

**HCO B 16 Nov. 1965 COMMANDS FOR UPPER INDOCTRINATION  
—TR 6, TR 7, TR9, 111**

**HCO B 19 Nov. 1965 PROBLEMS PROCESS, 111**

Commands and how to run Level I Problem Process, 111

**HCO PL 19 Nov. 1965 AUDITING REPORTS, 112**

What the auditing report should contain, 112

**HCO B 24 Nov. 1965 SEARCH AND DISCOVERY, 113**

Three types of PTS, 113  
PTS Type One handling, 113  
PTS Type Two handling, 114  
Search and Discovery, 114  
Actual SP vs. apparent SP, 114  
PTS Type Three handling, 115

**HCO B 26 Nov. 1965 INFORMATION ON REHABILITATION, 117**

Incorrect rehab procedure, 117

**HCO B 1 Dec. 1965 CCHs, 118**

CCH 1, command and how to run, 118  
CCH 2, commands and how to run, 119  
CCH 3, commands and how to run, 119  
CCH 4, commands and how to run, 120

**HCO B 6 Dec. 1965 LOW TA CASES, 121**

Power Processing and low TA cases, 121

**HCO B 10 Dec. 1965 E-METER DRILL COACHING, 122**

List of E-Meter Drill outnesses and what they mean, 122

**HCO B 27 Dec. 1965 VITAMINS, 123**

Vitamin E assists auditing, 123  
Vitamin E data, 123  
“Guk Bomb” and Vitamin E, 123  
Effect of Vitamin E on body, 124

**HCO B 19 Jan. 1966 DANGER CONDITIONS—TECHNICAL DATA FOR REVIEW  
AUDITORS, 126**

How to cure a disagreement, 126  
How to handle compulsive by-passing, 126

**HCO B 21 Jan. 1966 SEARCH AND DISCOVERY (ETHICS TYPE CASES, PTSs)  
—S & D ERRORS, 127**

Causes of S & D failure, 127  
Golden rule of S & D, 127

**HCO B 28 Jan. 1966 SEARCH AND DISCOVERY DATA—HOW A  
SUPPRESSIVE BECOMES ONE, 128**

Getting “myself” as item in Search and Discovery, 128  
The main trouble in S & D, 128  
S & D listing, 129  
S & D listing rules, 129  
Review action, 129

**Certainty Vol. 13, No. 2, Feb. 1966 PSYCHOTICS, 131**

Insanity statistic is growing, 131  
Inadequate definition of psychosis, 131  
Why psychosis is becoming more widespread, 132  
Psychosis classification has become relatively meaningless, 132  
Source of psychosis, 132  
Apparent and actual psychotic, 133

Characteristics of a psychotic, 133  
Psychotics and help, 133  
Handling the actual psychotic, 134  
Handling of institutional psychosis, 134  
Answer to doubt about sanity, 135

**HCO B 5 Feb. 1966 S AND D WARNING, 136**

Listing and nulling errors in S & Ds, 136  
Actions of SPs, 136

**HCO B 5 Feb. 1966 “LETTING THE PC ITSA”  
—THE PROPERLY TRAINED AUDITOR, 138**

What Itsa is, 138  
Cure for auditor who is “letting the pc itsa”, 139  
Tech savvy, 139  
Cure for auditor who can’t control pc, 140

**HCO B 9 Feb. 1966 RELEASE GRADES, 141**

Release—Clear—OT, 141  
Locks, 141  
Secondaries and engrams, 141  
The whole track, 142  
The reactive mind, 142  
Operating Thetan, 142

**HCO PL 10 Feb. 1966 TECH RECOVERY, 143**

Rehabbing lower grades, 143  
Overrunning free needle, 143  
Rehab by rehab procedure, don’t use another process, 144  
Don’t use unusual solutions, 144  
When SP is discovered, give an S & D to his associates, 144  
After SP is removed, if stats are still down, look for another SP, 144  
Case Supervisor lives in an ivory tower, 145  
Primary indicator of the presence of an SP, 146

**HCO B 11 Feb. 1966 FREE NEEDLES, HOW TO GET THEM ON A PC, 147**

Rehabbing several overruns, 147  
Free needle and sensitivity setting, 147  
Pcs are most apt to go free needle after a big cog, 147

**HCO B 12 Feb. 1966 THE “DANGEROUS AUDITOR”, 149**

Actions of “dangerous auditor”, 149  
Bad auditor vs. dangerous auditor, 149

**HCO B 21 Feb. 1966 DEFINITION PROCESSES, 150**

Assists, 150 Primary and secondary auditing styles, 150  
Remedies, 150  
Guiding style, 151  
Guiding secondary style, 151  
Definitions Processing, 151  
Remedy A patter, 151  
Remedy B patter, 152  
Purpose of Definitions Processing, 152  
Cycle of mis-definition, 153  
Overts and misunderstood words, 153

**Certainty Vol. 13, No. 3, Mar. 1966 WHAT IS GREATNESS?, 154**

**HCO PL 8 Mar. 1966 HIGH CRIME, 156**

Highest crime in Tech and Qual, 156

Star-rated checkouts of processes are required before application, 156  
Failure to check out, star-rated, the Tech and Qual HCO Bs results in crashed stats, 157

**HCO B 3 Apr. 1966 DIANETIC AUDITING COURSE, 158**

Dianetic auditor instructions, 158  
Dianetics is the entrance way for an auditor, 159  
Dianetics vs. Scientology, 160  
Dianetic auditing procedure, 161

**HCO B 10 June 1966 S & D COMMANDS, 164**

If you find a *group* on an S & D do a represent list, 164

**HCO B 10 June 1966 S & D—THE MISSED ITEM, 165**

Illness = only PTS; only PTS = illness, 165  
What it means if a person who has had an S & D gets sick, 165

**HCO B 20 July 1966 THE TYPE TWO PTS, 166**

S & D and disconnection letters, 166

**HCO PL 21 July 1966 TECH vs. QUAL, 167**

When to send pcs to Review, 167

**HCO B 27 July 1966 METER TRIM CHECK, 168 [REPLACED]**

**HCO B 10 Aug. 1966 ERRORS OF STUDENTS, 169**

Common errors on Level 0, I, II, III, IV, VI and Solo Audit, 169

**HCO B 16 Aug. 1966 LIST L-4 S & D, 171 [CANCELLED]**

List used to assess an ARC break on Search and Discovery, 171

**HCO B 22 Aug. 1966 FLOATING NEEDLES, LISTING PROCESSES, 172**

F/N during listing means no charge left and no item, 172

**HCO B 23 Aug. 1966 SERVICE FACSIMILE, 173**

Service facsimile is a computation generated by the being not the bank, 173  
Pc giving a doingness, 173

**HCO B 20 Sept. 1966 MINUS SCALE RELEASES: ARC STRAIGHT WIRE  
—DIANETIC, 175**

Three specific grades of Release below Zero, 175  
Straight Wire Release, 175  
Dianetic Secondary Release, 175  
Dianetic Engram Release, 175  
Overruns that can require repair, 176

**HCO B 21 Sept. 1966 ARC BREAK NEEDLE, 176**

**HCO B 27 Sept. 1966 THE ANTI-SOCIAL PERSONALITY  
—THE ANTI-SCIENTOLOGIST, 177**

Crime and criminal acts are perpetuated by anti-social personalities, 177  
Attributes of anti-social personality, 177  
Basic reason for anti-social behavior, 179  
Relief when anti-social persons are found, 179  
The social personality, 180  
Primary characteristics of the social personality, 181  
Basic motivation of the social personality, 182  
Social vs. anti-social personality, 183

**HCO PL 13 Oct. 1966 HGC PC REVIEW AUDITING FORM, 184 [REVISED]**

**HCO B 18 Nov. 1966 REHAB ON SELF ANALYSIS, 188**

How rehab on *Self Analysis* lists was done, 188

**HCO B 30 Nov. 1966 ASSESSMENT FOR SERVICE FACSIMILES, 189**

Methods to find service facsimile, 189

**HCO B 2 Jan. 1967 SUB ZERO RELEASES—EXAMINER’S SAFEGUARD, 190**

Assessing the awareness levels on pc, 190

**HCO B 2 Jan. 1967 DATING—FORBIDDEN WORDS, 191**

In dating don’t use “more”—“less”, use “greater than”—“lesser than”, 191

**HCO B 19 Jan. 1967 MANIFESTATIONS OF ENGRAMS AND SECONDARIES  
FURTHER DEFINED, 192**

Somatics defined, 192

Pain defined, 192

Sensation defined, 192

**HCO B 22 Mar. 1967 ADMIN KNOW-HOW—ALTER-IS AND DEGRADED  
BEINGS, 193**

Very degraded beings alter-is, 193

Data on degraded beings, 193

**HCO B 18 Apr. 1967 RELIGIOUS PHILOSOPHY AND RELIGIOUS PRACTICE,  
195**

Scientology as a religious philosophy and practice, 195

Out ruds, 306  
Old pcs, 306  
Tight C/Sing, 306  
Invalidated auditors, 306

**HCO B 3 Feb. 1969 TRIPLE GRADES—FLOWS, 307**

Flows used in Triples Grades, 307

**HCO B 3 Feb. 1969 TRIPLE GRADES, 308 [CANCELLED]**

Class IV, 308  
Class V, 308  
Advantage of Triple Grades, 309

**HCO B 28 Feb. 1969 MEDICAL DOCTORS, 309**

Training medical doctors in orgs, 309

**HCO B 3 Mar. 1969 CASE GAIN—COMPLETING LEVELS, 310**

Any level is capable of giving a stable case gain, 310  
To solve an earlier out tech situation one does *not* "give the next level", 310

**HCO B 12 Mar. 1969 AUDITOR'S REPORT—TRIPLE GRADES, 311 [CANCELLED]**

Don't copy off the processes onto the Auditor's Report Form, 311  
Worksheet, 311  
Reason for admin, 311

**HCO B 12 Mar. 1969 PHYSICALLY ILL PCS AND PRE OTS, 312**

Mental illness vs. physical illness, 312  
Reduce time of healing by auditing, 312  
Medical examination, 313  
"Failed cases" are medically ill or injured cases, 313  
Insanity can be suppressed pain, 314  
Handling of insane, 314  
"Hereditary insanity" is an apparency, 315  
If pc wants illness cured send him to medical doctor first, 315

**HCO B 17 Mar. 1969 POLITICS, 317**

Political philosophies placed against the Tone Scale, 317

**HCO B 2 Apr. 1969 DIANETIC ASSISTS, 318**

Touch Assist, 318  
Contact Assist, 318  
Auditing Assist, 318  
Handling of illness, 319  
Dianetic auditing speeds up healing from illness or injury, 320  
First research on Dianetics, 320

**HCO B 5 Apr. 1969 NEW PRECLEARS—THE WORKABILITY OF  
SCIENTOLOGY, 321**

Conditions of a new preclear, 321  
Poster type pictures defining basic auditing terms, 321  
Persons on drugs, 322  
Examples of "no auditing", 323  
Outnesses in an area that thinks Dianetics and Scientology don't work, 323

**HCO B 6 Apr. 1969 FUNDAMENTAL AUDITING, 325**

Difference between Dianetics and Scientology, 325  
Dianetic auditor is the natural inheritor of all mental healing, 325  
Pc must be well to start on Scientology auditing, 325

**HCO B 6 Apr. 1969 DIANETICS COURSE AUDITING REQUIREMENTS, 327**

Ill pcs need Dianetics, not Scientology, 328

**HCO B 16 Apr. 1969 HEALTH FORM, USE OF, 329 [REVISED]**

Preclear's illness or upset has more than one source; it is a composite, 329  
Health Form procedure, 330  
Dianetic Health Form, 332

**HCO B 17 Apr. 1969 DIANETIC CASE SUPERVISION, 336**

Dianetic auditors are not expected to do Scientology actions, 336

**HCO B 17 Apr. 1969 DIANETIC CASE FAILURES, 337**

Foremost failure is a failure to *do* Dianetics, 337  
Illnesses are composed of several symptoms; each must be run, 337

**HCO B 22 Apr. 1969 DIANETICS vs. SCIENTOLOGY, 338**

Dianetics addresses the body; Scientology addresses the thetan, 338

**HCO B 22 Apr. 1969 SOMATICS AND OTS, 339**

Pc with physical difficulties needs Dianetics, 339  
Scientology = thetan rehabilitation; Dianetics = body improvement, 339

**HCO B 23 Apr. 1969 DIANETICS—BASIC DEFINITIONS, 340**

Erasure, lock, secondary and engram defined, 340  
Cause of psychosomatic ills, 340  
Somatic and misemotion defined, 341  
Pc who is ill needs Dianetics, 341  
Run what is offered, don't force the pc, 341  
Time track, pleasure moment, black field and invisible field defined, 342  
Key out vs. erasure, 342  
Multiple illness, 342  
Chain, automatic bank, basic, unburdening, basic basic, valence and ally defined, 343  
What assess means in Dianetics, 343

**HCO B 23 Apr. 1969 DIANETICS—ERASURE—HOW TO ATTAIN, 344**

Run the somatic, not the narrative content, 344

**HCO B 23 Apr. 1969 PAST LIVES, 345**

Failures from not running past lives, 345  
Don't question data, run what comes up, 345  
Valences of famous figures, 345

**BTB 24 Apr. 1969RA PRECLEAR ASSESSMENT SHEET, 346A**

Who does assessment, 346A  
When is assessment done, 346A  
Purpose of preclear assessment sheet, 346A  
The assessment sheet, 346A

**HCO B 24 Apr. 1969 DIANETIC USE, 347**

Illegal to cure illness, 347  
Dianetics used for pastoral counseling is completely legal, 347

Correct procedure for ill pcs wanting auditing, 347  
Examples of use of Dianetics, 348  
Dianetics and Scientology, 349

**HCO B 24 Apr. 1969 DIANETIC RESULTS, 351**

Dianetics vs. Scientology, 351  
Dianetic results are a well body and a being happy with it, 351  
Scientology results are a free, powerful and immortal being, 351

**HCO B 26 Apr. 1969 SOMATICS, 352**

Narrative vs. somatic, 352  
Never assess medical terms or symptoms, 352  
On Health Form run the feeling not the physical disability, 352

**HCO B 27 Apr. 1969 R-3-R RESTATED—COMMANDS ON SECOND  
RUN ON AN INCIDENT, 354**

Erasure or going solid, 354  
Pc interest, 354  
Erasing last incident found, 354  
Completing chains, 354  
F/Ns vs. erasure, 354  
Ending sessions, 355  
Ending Dianetics, 355

**HCO B 27 Apr. 1969 DIANETIC FAILURES, 355**

Ways to make Dianetics difficult, 355

**HCO B 28 Apr. 1969 HIGH TA IN DIANETICS, 356**

High TA in Dianetics means an engram too late on the chain to erase is in restimulation, 356  
TA behavior on engram chains, 356

**HCO B 29 Apr. 1969 ASSESSMENT AND INTEREST, 357**

Assessment for Longest Read, 357  
Symbols of reads, 357  
Why assessment is done, 357  
E-Meter measures the awareness depth of the pc, 358

**HCO B 30 Apr. 1969 AUDITOR TRUST, 359**

Pc tends to be able to confront to the degree that he or she feels safe, 359  
Auditor plus pc is greater than the bank, auditor plus bank is greater than the pc, pc minus  
auditor is less than the bank, 359

**HCO B 1 May 1969 GRINDING OUT ENGRAMS, 360**

OTs and Dianetics, 360  
Not following somatic, 360  
Through only once, 361  
No past lives, 361

# My Philosophy

by

**L. Ron Hubbard**

The subject of philosophy is very ancient. The word means: “The love, study or pursuit of wisdom, or of knowledge of things and their causes, whether theoretical or practical.”

All we know of science or of religion comes from philosophy. It lies behind and above all other knowledge we have or use.

For long regarded as a subject reserved for halls of learning and the intellectual, the subject, to a remarkable degree, has been denied the man in the street.

Surrounded by protective coatings of impenetrable scholarliness, philosophy has been reserved to the privileged few.

The first principle of my own philosophy is that wisdom is meant for anyone who wishes to reach for it. It is the servant of commoner and king alike and should never be regarded with awe.

Selfish scholars seldom forgive anyone who seeks to break down the walls of mystery and let the people in. Will Durant, the modern American philosopher, was relegated to the scrap heap by his fellow scholars when he wrote a popular book on the subject, *The Outline of Philosophy*. Thus brickbats come the way of any who seek to bring wisdom to the people over the objections of the “inner circle.”

The second principle of my own philosophy is that it must be capable of being applied.

Learning locked in mildewed books is of little use to anyone and therefore of no value unless it can be used.

The third principle is that any philosophic knowledge is only valuable if it is true or if it works.

These three principles are so strange to the field of philosophy, that I have given my philosophy a name: SCIENTOLOGY. This means only “knowing how to know.”

A philosophy can only be a *route* to knowledge. It cannot be crammed down one’s throat. If one has a route, he can then find what is true for him. And that is Scientology.

Know Thyself . . . and the truth shall set you free.

Therefore, in Scientology, we are not concerned with individual actions and differences. We are only concerned with how to show Man how he can set himself free.

This, of course, is not very popular with those who depend upon the slavery of others for their living or power. But it happens to be the only way I have found that really improves an individual’s life.

Suppression and oppression are the basic causes of depression. If you relieve those a person can lift his head, become well, become happy with life.

And though it may be unpopular with the slave master, it is very popular with the people.

Common man likes to be happy and well. He likes to be able to understand things, and he knows his route to freedom lies through knowledge.

Therefore, for 15 years I have had Mankind knocking on my door. It has not mattered where I have lived or how remote, since I first published a book on the subject, my life has no longer been my own.

I like to help others and count it as my greatest pleasure in life to see a person free himself of the shadows which darken his days.

These shadows look so thick to him, and weigh him down so, that when he finds they *are* shadows and that he can see through them, walk through them and be again in the sun, he is enormously delighted. And I am afraid I am just as delighted as he is.

I have seen much human misery. As a very young man I wandered through Asia and saw the agony and misery of overpopulated and underdeveloped lands. I have seen people uncaring and stepping over dying men in the streets. I have seen children less than rags and bones. And amongst this poverty and degradation I found holy places where wisdom was great, but where it was carefully hidden and given out only as superstition. Later, in Western universities, I saw Man obsessed with materiality and with all his cunning, I saw him hide what little wisdom he really had in forbidding halls and make it inaccessible to the common and less favored man. I have been through a terrible war and saw its terror and pain un eased by a single word of decency or humanity.

I have lived no cloistered life and hold in contempt the wise man who has not *lived* and the scholar who will not share.

There have been many wiser men than I, but few have travelled as much road.

I have seen life from the top down and the bottom up. I know how it looks both ways. And I know there *is* wisdom and that there is hope.

Blinded with injured optic nerves, and lame with physical injuries to hip and back, at the end of World War II, I faced an almost nonexistent future. My Service record stated: "This officer has no neurotic or psychotic tendencies of any kind whatsoever," but it also stated "permanently disabled physically."

And so there came a further blow . . . I was abandoned by family and friends as a supposedly hopeless cripple and a probable burden upon them for the rest of my days. I yet worked my way back to fitness and strength in less than two years, using only what I knew and could determine about Man and his relationship to the universe. I had no one to help me; what I had to know I had to find out. And it's quite a trick studying when you cannot see.

I became used to being told it was all impossible, that there was no way, no hope. Yet I came to see again and walk again, and I built an entirely new life. It is a happy life, a busy one and I hope a useful one. My only moments of sadness are those which come when bigoted men tell others all is bad and there is no route anywhere, no hope anywhere, nothing but sadness and sameness and desolation, and that every effort to help others is false. I know it is not true.

So my own philosophy is that one should share what wisdom he has, one should help others to help themselves, and one should keep going despite heavy weather for there is always a calm ahead. One should also ignore catcalls from the selfish intellectual who cries: "Don't expose the mystery. Keep it all for ourselves. The people cannot understand."

But as I have never seen wisdom do any good kept to oneself, and as I like to see others happy, and as I find the vast majority of the people can and *do* understand, I will keep on writing and working and teaching so long as I exist.

For I know no man who has any monopoly upon the wisdom of this universe. It belongs to those who *can* use it to help themselves and others.

If things were a little better known and understood, we would all lead happier

And there is a way to know them and there is a way to freedom.

The old must give way to the new, falsehood must become exposed by truth, and truth, though fought, always in the end prevails.

A handwritten signature in black ink, appearing to be "J. Edgar Hoover", written in a cursive style.

HCO POLICY LETTER OF 7 FEBRUARY 1965

Remimeo  
Sthil Students  
Assn/Org Sec Hat  
HCO Sec Hat  
Case Sup Hat  
Ds of P Hat  
Ds of T Hat  
Staff Member Hat  
Franchise  
(issued May 1965)

REISSUED 15 JUNE 1970

*(Reissued 28.1. 73 to correct a word [page 8,  
para 5/. Change in this type style.)*

*Note.* Neglect of this Pol Ltr has caused great hardship on staffs, has cost countless millions and made it necessary in 1970 to engage in an all-out International effort to restore basic Scientology over the world. Within 5 years after the issue of this PL with me off the lines, violation had almost destroyed orgs. "Quickie grades" entered in and denied gain to tens of thousands of cases. Therefore actions which neglect or violate this Policy Letter are HIGH CRIMES resulting in Comm Evs on ADMINISTRATORS and EXECUTIVES. It is not "entirely a tech matter" as its neglect destroys orgs and caused a 2-year slump. IT IS THE BUSINESS OF EVERY STAFF MEMBER to enforce it.

*ALL LEVELS*

**KEEPING SCIENTOLOGY WORKING**

HCO Sec or Communicator Hat Check on all  
personnel and new personnel as taken on.

We have some time since passed the point of achieving uniformly workable technology.

The only thing now is getting the technology applied.

If you can't get the technology applied then you can't deliver what's promised. It's as simple as that. If you can get the technology applied, you *can* deliver what's promised.

The only thing you can be upbraided for by students or pcs is "no results". Trouble spots occur only where there are "no results". Attacks from governments or monopolies occur only where there are "no results" or "bad results".

Therefore the road before Scientology is clear and its ultimate success is assured if the technology is applied.

So it is the task of the Assn or Org Sec, the HCO Sec, the Case Supervisor, the D of P, the D of T and all staff members to get the correct technology applied.

Getting the correct technology applied consists of:

- One: Having the correct technology.
- Two: Knowing the technology.
- Three: Knowing it is correct.
- Four: Teaching correctly the correct technology.
- Five: Applying the technology.
- Six: Seeing that the technology is correctly applied.

- Seven: Hammering out of existence incorrect technology.  
Eight: Knocking out incorrect applications.  
Nine: Closing the door on any possibility of incorrect technology.  
Ten: Closing the door on incorrect application.

One above has been done.

Two has been achieved by many.

Three is achieved by the individual applying the correct technology in a proper manner and observing that it works that way.

Four is being done daily successfully in most parts of the world.

Five is consistently accomplished daily.

Six is achieved by instructors and supervisors consistently.

Seven is done by a few but is a weak point.

Eight is not worked on hard enough.

Nine is impeded by the “reasonable” attitude of the not quite bright.

Ten is seldom done with enough ferocity.

Seven, Eight, Nine and Ten are the only places Scientology can bog down in any area.

The reasons for this are not hard to find. (a) A weak certainty that it works in Three above can lead to weakness in Seven, Eight, Nine and Ten. (b) Further, the not-too-bright have a bad point on the button Self-Importance. (c) The lower the IQ, the more the individual is shut off from the fruits of observation. (d) The service facs of people make them defend themselves against anything they confront, good or bad, and seek to make it wrong. (e) The bank seeks to knock out the good and perpetuate the bad.

Thus, we as Scientologists and as an organization must be very alert to Seven, Eight, Nine and Ten.

In all the years I have been engaged in research I have kept my comm lines wide open for research data. I once had the idea that a group could evolve truth. A third of a century has thoroughly disabused me of that idea. Willing as I was to accept suggestions and data, only a handful of suggestions (less than twenty) had long-run value and *none* were major or basic; and when I did accept major or basic suggestions and used them, we went astray and I repented and eventually had to “eat crow”.

On the other hand there have been thousands and thousands of suggestions and writings which, if accepted and acted upon, would have resulted in the complete destruction of all our work as well as the sanity of pcs. So I know what a group of people will do and how insane they will go in accepting unworkable “technology”. By actual record the percentages are about twenty to 100,000 that a group of human beings will dream up bad technology to destroy good technology. As we could have gotten along without suggestions, then, we had better steel ourselves to continue to do so now that we have made it. This point will, of course, be attacked as “unpopular”, “egotistical” and “undemocratic”. It very well may be. But it is also a survival point. And I don’t see that popular measures, self-abnegation and democracy have done anything for Man but push him further into the mud. Currently, popularity endorses degraded novels, self-abnegation has filled the South East Asian jungles with stone idols and corpses, and democracy has given us inflation and income tax.

Our technology has not been discovered by a group. True, if the group had not supported me in many ways I could not have discovered it either. But it remains that if in its formative stages it was not discovered by a group, then group efforts, one can safely assume, will not add to it or successfully alter it in the future. I can only say this now that it is done. There remains, of course, group tabulation or co-ordination of what has been done, which will be valuable—only so long as it does not seek to alter basic principles and successful applications.

The contributions that were worthwhile in this period of forming the technology were help in the form of friendship, of defence, of organization, of dissemination, of application, of advices on results and of finance. These were great contributions and were, and are, appreciated. Many thousands contributed in this way and made us what we are. Discovery contribution was not however part of the broad picture.

We will not speculate here on why this was so or how I came to rise above the bank. We are dealing only in facts and the above is a fact—the group left to its own devices would not have evolved Scientology but with wild dramatization of the bank called “new ideas” would have wiped it out. Supporting this is the fact that Man has never before evolved workable mental technology and emphasizing it is the vicious technology he *did* evolve—psychiatry, psychology, surgery, shock treatment, whips, duress, punishment, etc, ad infinitum.

So realize that we have climbed out of the mud by whatever good luck and good sense, and *refuse* to sink back into it again. See that Seven, Eight, Nine and Ten above are ruthlessly followed and we will never be stopped. Relax them, get reasonable about it and we will perish.

So far, while keeping myself in complete communication with all suggestions, I have not failed on Seven, Eight, Nine and Ten in areas I could supervise closely. But it's not good enough for just myself and a few others to work at this.

Whenever this control as per Seven, Eight, Nine and Ten has been relaxed the whole organizational area has failed. Witness Elizabeth, N.J., Wichita, the early organizations and groups. They crashed only because I no longer did Seven, Eight, Nine and Ten. Then, when they were all messed up, you saw the obvious “reasons” for failure. But ahead of that they ceased to deliver and *that* involved them in other reasons.

The common denominator of a group is the reactive bank. Thetans without banks have different responses. They only have their banks in common. They agree then only on bank principles. Person to person the bank is identical. So constructive ideas are *individual* and seldom get broad agreement in a human group. An individual must rise *above* an avid craving for agreement from a humanoid group to get anything decent done. The bank-agreement has been what has made Earth a Hell—and if you were looking for Hell and found Earth, it would certainly serve. War, famine, agony and disease has been the lot of Man. Right now the great governments of Earth have developed the means of frying every Man, Woman and Child on the planet. That is Bank. That is the result of Collective Thought Agreement. The decent, pleasant things on this planet come from *individual* actions and ideas that have somehow gotten by the Group Idea. For that matter, look how we ourselves are attacked by “public opinion” media. Yet there is no more ethical group on this planet than ourselves.

Thus each one of us can rise above the domination of the bank and then, as a group of freed beings, achieve freedom and reason. It is only the aberrated group, the mob, that is destructive.

When you don't do Seven, Eight, Nine and Ten actively, you are working for the Bank dominated mob. For it will surely, surely (a) introduce incorrect technology and swear by it, (b) apply technology as incorrectly as possible, (c) open the door to any destructive idea, and (d) encourage incorrect application. It's the Bank that says the group is all and the individual nothing. It's the Bank that says we must fail.

So just don't play that game. Do Seven, Eight, Nine and Ten and you will knock out of your road all the future thorns.

Here's an actual example in which a senior executive had to interfere because of a pc spin: A Case Supervisor told Instructor A to have Auditor B run Process X on Preclear C. Auditor B afterwards told Instructor A that "It didn't work." Instructor A was weak on Three above and didn't really believe in Seven, Eight, Nine and Ten. So Instructor A told the Case Supervisor "Process X didn't work on Preclear C." Now *this* strikes directly at each of One to Six above in Preclear C, Auditor B, Instructor A *and* the Case Supervisor. It opens the door to the introduction of "new technology" and to failure.

What happened here? Instructor A didn't jump down Auditor B's throat, that's all that happened. This is what he *should* have done: grabbed the auditor's report and looked it over. When a higher executive on this case did so she found what the Case Supervisor and the rest missed: that Process X *increased* Preclear C's TA to 25 TA divisions for the session but that near session end Auditor B Qed and Aed with a cognition and abandoned Process X while it still gave high TA and went off running one of Auditor B's own manufacture, which nearly spun Preclear C. Auditor B's IQ on examination turned out to be about 75. Instructor A was found to have huge ideas of how you must never invalidate anyone, even a lunatic. The Case Supervisor was found to be "too busy with admin to have any time for actual cases".

All right, there's an all too typical example. The *Instructor* should have done Seven, Eight, Nine and Ten. This would have begun this way. Auditor B: "That Process X didn't work." Instructor A: "What exactly did you do wrong?" Instant attack. "Where's your auditor's report for the session? Good. Look here, you were getting a lot of TA when you stopped Process X. What did you do?" Then the Pc wouldn't have come close to a spin and all four of these would have retained certainty.

In a year, I had four instances in *one* small group where the correct process recommended was reported not to have worked. But on review found that each one (a) had increased the TA, (b) had been abandoned, and (c) had been falsely reported as unworkable. Also, despite this abuse, in each of these four cases the recommended, correct process cracked the case. Yet they were reported as *not having worked!*

Similar examples exist in instruction and these are all the more deadly as every time instruction in correct technology is flubbed, then the resulting error, uncorrected in the auditor, is perpetuated on every pc that auditor audits thereafter. So Seven, Eight, Nine and Ten are even more important in a course than in supervision of cases.

Here's an example: A rave recommendation is given a graduating student "because he gets more TA on pcs than any other student on the course!" Figures of 435 TA divisions a session are reported. "Of course his model session is poor but it's just a knack he has" is also included in the recommendation. A careful review is undertaken because *nobody* at Levels 0 to IV is going to get that much TA on pcs. It is found that this student was never taught to read an E-Meter TA dial! And no instructor observed his handling of a meter and it was not discovered that he "overcompensated" nervously, swinging the TA 2 or 3 divisions beyond where it needed to go to place the needle at "set". So everyone was about to throw away standard processes and model session because this one student "got such remarkable TA". They only read the reports and listened to the brags and never *looked* at this student. The pcs in actual fact were making slightly less than average gain, impeded by a rough model session and misworded processes. Thus, what was making the pcs win (actual Scientology) was hidden under a lot of departures and errors.

I recall one student who was squirreling on an Academy course and running a lot of off-beat whole track on other students after course hours. The Academy students were in a state of electrification on all these new experiences and weren't quickly brought under control and the student himself never was given the works on Seven, Eight, Nine and Ten so they stuck. Subsequently, this student prevented another squirrel from being straightened out and his wife died of cancer resulting from

physical abuse. A hard, tough Instructor at that moment could have salvaged two squirrels and saved the life of a girl. But no, students had a right to do whatever they pleased.

Squirreling (going off into weird practices or altering Scientology) only comes about from non-comprehension. Usually the non-comprehension is not of Scientology but some earlier contact with an off-beat humanoid practice which in its turn was not understood.

When people can't get results from *what they think is* standard practice, they can be counted upon to squirrel to some degree. The most trouble in the past two years came from orgs where an executive in each *could not* assimilate straight Scientology. Under instruction in Scientology they were unable to define terms or demonstrate examples of principles. And the orgs where they were got into plenty of trouble. And worse, it could not be straightened out easily because neither one of these people could or would duplicate instructions. Hence, a debacle resulted in two places, directly traced to failures of instruction earlier. So proper instruction is vital. The D of T and his Instructors and all Scientology Instructors must be merciless in getting Four, Seven, Eight, Nine and Ten into effective action. That one student, dumb and impossible though he may seem and of no use to anyone, may yet some day be the cause of untold upset because nobody was interested enough to make *sure* Scientology got home to him.

With what we know now, there is no student we enrol who cannot be properly trained. As an Instructor, one should be very alert to slow progress and should turn the sluggards inside out personally. No *system* will do it, only you or me with our sleeves rolled up can crack the back of bad studenting and we can only do it on an individual student, never on a whole class only. He's slow = something is awful wrong. Take *fast* action to correct it. Don't wait until next week. By then he's got other messes stuck to him. If you can't graduate them with their good sense appealed to and wisdom shining, graduate them in such a state of shock they'll have nightmares if they contemplate squirreling. Then experience will gradually bring about Three in them and they'll *know* better than to chase butterflies when they should be auditing.

When somebody enrolls, consider he or she has joined up for the duration of the universe—never permit an “open-minded” approach. If they're going to quit let them quit fast. If they enrolled, they're aboard, and if they're aboard, they're here on the same terms as the rest of us—win or die in the attempt. Never let them be half-minded about being Scientologists. The finest organizations in history have been tough, dedicated organizations. Not one *namby-pamby* bunch of panty-waist dilettantes have ever made anything. It's a tough universe. The social veneer makes it seem mild. But only the tigers survive—and even *they* have a hard time. We'll survive because we are tough and are dedicated. When we *do* instruct somebody properly he becomes more and more tiger. When we instruct half-mindedly and are afraid to offend, scared to enforce, we don't make students into good Scientologists and that lets everybody down. When Mrs. Pattycake comes to us to be taught, turn that wandering doubt in her eye into a fixed, dedicated glare and she'll win and we'll all win. Humour her and we all die a little. The proper instruction attitude is, “You're here so you're a Scientologist. Now we're going to make you into an expert auditor no matter what happens. We'd rather have you dead than incapable.”

Fit that into the economics of the situation and lack of adequate time and you see the cross we have to bear.

But we won't have to bear it forever. The bigger we get the more economics and time we will have to do our job. And the only things which can prevent us from getting that big fast are areas in from One to Ten. Keep those in mind and we'll be able to grow. Fast. And as we grow our shackles will be less and less. Failing to keep One to Ten, will make us grow less.

So the ogre which might eat us up is not the government or the High Priests. It's our possible failure to retain and practise our technology.

An Instructor or Supervisor or Executive must challenge with ferocity instances of “unworkability”. They must uncover what *did* happen, what *was* run and what *was* done or not done.

If you have One and Two, you can only acquire Three for all by making sure of all the rest.

We’re not playing some minor game in Scientology. It isn’t cute or something to do for lack of something better.

The whole agonized future of this planet, every Man, Woman and Child on it, and your own destiny for the next endless trillions of years depend on what you do here and now with and in Scientology.

This is a deadly serious activity. And if we miss getting out of the trap now, we may never again have another chance.

Remember, this is our first chance to do so in all the endless trillions of years of the past. Don’t muff it now because it seems unpleasant or unsocial to do Seven, Eight, Nine and Ten.

Do them and we’ll win.

### SAFEGUARDING TECHNOLOGY

For some years we have had a word “squirreling”. It means altering Scientology, off-beat practices. It is a bad thing. I have found a way to explain why.

Scientology is a *workable system*. This does not mean it is the best possible system or a perfect system. Remember and use that definition. Scientology is a *workable system*.

In fifty thousand years of history on this planet alone, Man never evolved a workable system. It is doubtful if, in foreseeable history, he will ever evolve another.

Man is caught in a huge and complex labyrinth. To get out of it requires that he follow the closely taped path of Scientology.

Scientology will take him out of the labyrinth. But only if he follows the exact markings in the tunnels.

It has taken me a third of a century in this lifetime to tape this route out.

It has been proven that efforts by Man to find different routes came to nothing. It is also a clear fact that the route called Scientology *does* lead out of the labyrinth. Therefore it is a workable system, a route that can be travelled.

What would you think of a guide who, because his party said it was dark and the road rough and who said another tunnel looked better, abandoned the route he knew would lead out and led his party to a lost nowhere in the dark. You’d think he was a pretty wishy-washy guide.

What would you think of a supervisor who let a student depart from procedure the supervisor knew worked. You’d think he was a pretty wishy-washy supervisor.

What would happen in a labyrinth if the guide let some girl stop in a pretty canyon and left her there forever to contemplate the rocks? You’d think he was a pretty heartless guide. You’d expect him to say at least, “Miss, those rocks may be pretty, but the road out doesn’t go that way.”

All right, how about an auditor who abandons the procedure which will make his preclear eventually clear just because the preclear had a cognition?

People have following the route mixed up with “the right to have their own ideas.” Anyone is certainly entitled to have opinions and ideas and cognitions—so long as these do not bar the route out for self and others.

Scientology is a workable system. It white tapes the road out of the labyrinth. If there were no white tapes marking the right tunnels, Man would just go on wandering around and around the way he has for eons, darting off on wrong roads, going in circles, ending up in the sticky dark, alone.

Scientology, exactly and correctly followed, takes the person up and out of the mess.

So when you see somebody having a ball getting everyone to take peyote because it restimulates prenataals, know he is pulling people off the route. Realize he is squirreling. He isn't following the route.

Scientology is a new thing—it *is* a road out. There has not been one. Not all the salesmanship in the world can make a bad route a proper route. And an awful lot of bad routes are being sold. Their end product is further slavery, more darkness, more misery.

Scientology is the only workable system Man has. It has already taken people toward higher I.Q., better lives and all that. No other system has. So realize that it has no competitor.

Scientology is a workable system. It has the route taped. The search is done. Now the route only needs to be walked.

So put the feet of students and preclears on that route. Don't let them off of it no matter how fascinating the side roads seem to them. And move them on up and out.

Squirreling is today destructive of a workable system.

Don't let your party down. By whatever means, keep them on the route. And they'll be free. If you don't, they won't.

# THE BOOK OF E-METER DRILLS

**Published February 1965**

The Book of E-Meter Drills, Volume III of the Clearing Series booklets, consists of twenty seven E-Meter drills developed by L. Ron Hubbard and compiled by Mary Sue Hubbard. It was first published at Saint Hill Manor, East Grinstead, Sussex, England.

In the Foreword which Ron wrote for this book, he says, "This present booklet contains all the standard E-Meter drills used in training in Scientology.

"There are no other drills. Many have been developed from time to time and have proven less workable or useless. These drills have been of the greatest possible value.

"There are many ways of using drills, but the recommended way is using the standard Scientology coach and student auditor arrangement, where the coach does the training and the student auditor the actions required.

"A drill should be done until the student auditor is letter-perfect before going on to the next drill.

"These drills cover levels as indicated. Do not do the drills of a higher level until the student auditor is perfect at a lower level and has been classed or certified for that level. Then go on to the higher level.

"Metering is a very precise activity and requires much familiarity and expertise.

"Even small meter errors are considered Gross Auditing Errors at any level."

This booklet has a plastic comb binding, which makes it easy to lay flat on a table while doing the drills contained therein. It is used today on every auditing course which includes the use of the E-Meter.

76 pages, 1 photograph, soft-cover. Translation available in German. Available from your nearest Scientology Organization or Mission, or direct from the publishers: Scientology Publications Organization, Jernbanegade 6, 1608 Copenhagen V, Denmark; or Church of Scientology Publications Organization U.S., 2723 West Temple Street, Los Angeles, California, 90026, U.S.A.

**BOOK OF CASE REMEDIES  
APPLICATION OF TECH**

A sure road to award and glory is to find a new application for an existing Scientology process or principle or book.

The period of the discovery of principles, processes or original works is surely over as we have everything between the snake's stomach and the high sky by way of natural laws. Inventing and using new processes is a sure way to slow down the advance. There were only so many anyway and it's been done.

But new ways to *apply* or disseminate what we've got are welcome, welcome, welcome. We've not nearly enough of those and we'll be inventing or seeing them for the next umpty trillion years.

So my hat is off to Beth Fordyce, HCO Area Sec Detroit, U.S.A., who informed us via U.S. Continental of a new use for *The Book of Case Remedies* for which she'll receive a bow and appropriate award, to wit her DScn.

Here is her report.

"At the January D.C. Congress, I had some interesting data about *The Book of Case Remedies* that you (HCO Cont Sec U.S.) thought I ought to write up for Ron because you felt he'd be interested in it. Here it is.

"We've had several instances where people have read the remedies and come in to tell me that certain ones 'fit' them. Then when they started to tell me which ones specifically, they couldn't remember them—or they would be able to remember *only one*. The book obviously indicates by-passed charge, and handles most of the problems. They find out what their problem actually is.

"One fellow who has been ARC broken with Scientology for years (even before I heard of Scn), came in and I asked him to find himself in the remedies. He started reading them, and each one seemed to fit him (except about 3 or 4 of them). I noted them down one by one, as he called them to me. When he finished, I said no more about it.

"Later on—about 15 minutes—he decided he'd better look through those again because he 'was sure that they didn't all fit—maybe some of them have changed'. So he went through them again, one by one, and only 3 still seemed to apply—and only ONE of them was strongest, he felt. The other two seemed to have lost their punch.

"He was quite different after that. I also did what the remedy called for, which cleaned it up. The last time I saw him—at our Congress—he not once mentioned the problem he's always had with eye-spots. (And, frankly, I was afraid at that point to say 'eye-spots' to him for fear he'd key it back in again, so I just settled for HIS not mentioning it !)

"As soon as we get our next batch of Remedies, I intend to send at least 4 of them as gifts to people who are badly ARC broken with us. If they actually read them, I know exactly what will happen—they *can't* stay ARC broken.

Best,  
Beth"

So there's a wide open door. Try it out on "rough cases" and demand ARC Broken ones do it and write you back or tell you which one it is.

## WORDS, MISUNDERSTOOD GOOFS

It has come to my attention that words a student misunderstands and looks up can yet remain troublesome. And that R6 materials are suffering from the same fate when meter activity lessens.

It's this way: The student runs across a word he or she doesn't understand. He or she looks it up in a dictionary, finds a substitute word and uses that.

Of course the first word is still misunderstood and remains a bother.

Example: (Line in text) "The size was Gargantuan." Student looks up Gargantuan, finds "Like Gargantua, huge." Student uses "huge" as a synonym and reads the text line "The size was 'huge'." A short while later is found still incapable of understanding the paragraph below "Gargantuan" in the text. Conclusion the student makes—"Well it doesn't work."

The principle is that one goes dull after passing over a word one does not understand and brightens up the moment he spots the word that wasn't grasped. In actual fact, the brightening up occurs whether one defines the word or not.

But to put *another* word in the place of the existing word, whether in Level 0 or Level VI is to mess it all up.

Take the above example. "Huge" is not "Gargantuan". These are synonyms. The sentence is "The size was Gargantuan." The sentence was *not* "The size was huge." You can't really substitute one word for another at Level 0 *or* Level VI and get anything but an alteration. So something remains not understood at Level 0 and the meter stops at Level VI. It just isn't what was said or thought.

The *correct* procedure is to look over, get defined well and understand *the* word that was used.

In this case the word was "Gargantuan". Very well, what's that? It means "Like Gargantua" according to the dictionary.

*Who* or *what* was Gargantua? The dictionary says it was the name of a gigantic King in a book written by the author Rabelais. Cheers, the student thinks, the sentence meant "The size was a gigantic king." Oops! That's the same goof again, like "huge". But we're nearer.

So what to do? Use Gargantuan in a few sentences you make up and bingo! You suddenly understand *the* word that was used.

Now you read it right. "The size was Gargantuan." And what does that mean? It means "The size was Gargantuan." And *nothing* else.

Get it?

There's no hope for it mate. You'll have to learn real English, not the 600 word basic English of the college kid, in which a few synonyms are substituted for all the big words.

-----

And as an "aside" (like they use on the stage), may I say that golly some people have to reach a long way to find goofs.

(The data in this HCO B was given to me by Mary Sue Hubbard and called to attention by Ian Tampion.)

## **ARC BREAKS**

Great News!

I've found the basis of ARC Breaks!

As you know, only a PTP (Present Time Problem) can hold a graph unchanging and only an ARC Break can lower one. Therefore the Anatomy of an ARC Break is more vital to know, as it can worsen, than the anatomy of a PTP. But both are very important and with the overt act and misunderstood words in study form the vital four things anyone should know in auditing Pcs.

The average student has a hard time getting rid of ARC Breaks in others, mostly because he never really finds the ARC Break. One Auditor was sure a Pc had been ARC Broken by "the last few inches of a lecture tape" and was madly calling Washington to borrow the tape so the poor Pc could "listen to it again to cure his ARC Break"! Well I don't mind being cause, but my tape never ARC Broke the Pc. The Auditor just didn't locate the Charge.

The whole trick is to keep cleaning up the ARC Break until the Pc is *happy* again and then quit. When you find it, that's it. You don't find it and still have an ARC Broken Pc! No, the terribly simple truth is that

1. The Pc is ARC Broken because something happened.
2. The Pc will continue to be ARC Broken until the thing is found.
3. The ARC Break will *vanish* magically when the source is found.

Finding the ARC Break and indicating it clears the ARC Break. If it *doesn't* clear on what you find, then you haven't found it!

You must not continue to run a Pc on some process when the Pc is ARC Broken. You must find the ARC Break and clear it.

The Pc will go into a sad effect if you don't find the ARC Break but instead, continue the process. If you *think you* have found the ARC Break (and haven't) and then go on auditing, the Pc will go into a sad effect.

ARC Broken Pcs are easy to identify. They gloom and mis-emote. They criticise and snarl. Sometimes they scream. They blow, they refuse auditing.

If you can read a lighted neon sign at 10 feet on a dark night, you can detect a Pc who has an ARC Break. Some Auditors can detect them sooner than others. I can see one coming in a Pc 1<sup>1</sup>/<sub>2</sub> hours of auditing before the Pc starts to get misemotional in earnest. Some newcomer in the business might not detect one until the Pc wraps a chair around the auditor's head. As I say, the ability to perceive one varies. The better you are the sooner you see one. If an auditor's Pc isn't bright and happy, there's an ARC Break there with life or the bank or the session.

The thing to do is find it and clean it up.

And now all is revealed: This is what makes an ARC Break occur:

**AN ARC BREAK OCCURS ON A GENERALITY OR A NOT THERE.**

## The Generality

### Example of a Generality

“They say you are cold-hearted.” “Everybody thinks you are too young.” “The People Versus Sam Jones.” “The will of the masses.”

### Case Manifestation

Example: Little boy screaming in rage when he makes a mistake in drawing. Auditor observes little boy is upset. Auditor: “What are you upset about?” Little Boy: (howling) “My drawing is no good!” Auditor: “Who said your drawing is no good?” Little Boy: (crying) “The teachers at school (plural).” Auditor: “What teacher (singular)?” Little Boy: (sobbing) “Not the teachers, the other children (plural)!” Auditor: “Which *one* of the other children?” Little Boy: (suddenly quiet) “Sammy.” Auditor: “How do you feel now?” Little Boy: (cheerfully) “Can I have some ice cream?”

### The Formula

1. Ask what the Pc is upset about.
2. Ask who thought so.
3. Repeat the generality the Pc used and
4. Ask for the singular.
5. Keep 3 and 4 going until the Pc is happy.

As it’s a near Q and A it should be awfully easy. They name prunes, you say what prune is prunes.

### Result

It’s quite magical done barehanded or on a meter.

### Errors

You can miss in English sometimes on YOU. The Pc says YOU are mean. We have no plural or singular signal in the word YOU. Therefore a statement that “YOU are ARC Breaking me” or “YOU ARE MEAN” may not mean, as an egocentric auditor may take it, the auditor but YOU may be being used as THE WHOLE WORLD. The above formula holds 1 to 5. Just find out “Which person is meant by the word you?”

Our old “Look at me, who am I?” was not too wrong.

So next time your Pc says, “The Instructors are mean,” don’t be goofy enough to indicate the charge with “OK, you are ARC Broken because the Instructors are mean.” And then be amazed when the ARC Break continues. You didn’t find out “What Instructor is Instructors?” If you ask a bit further you’ll find it probably wasn’t “the Instructors” but somebody else. And that somebody will be a unit, not a group.

A less workable but interesting approach is “Who uses the word ‘everybody’ frequently?” It’s of interest only because “everybody” makes a dispersal which the Pc can’t see through. It will take quite a while sometimes for a Pc to spot such a person!

How many people have died heartbroken because “they” were mean to him. And it was just one vicious being who had been blown up to “they”.

The Not There is also a generality because it can be anywhere. But it is a special case.

When something becomes unlocatable it can cause an ARC Break.

The cure for this one is to find out what's gone.

If you see somebody with a cold, ask "Who's gone?" and you'll be amazed at the recovery *if you* pursue the matter.

One concludes it's less the loss than not knowing where something has gotten to, making a one into a generality.

The common response to sudden loss is to feel everything is gone or going.

This is the state of anxiety explained.

The beaten and downtrodden respond well on this (when brought up through normal levels to the Level of Remedies).

A very sneaky question is "Who (or what) was everything to you?"

But use it sparingly. The Pc will go whole track like a flash if overworked.

Remarkably (at *this* late date to find it!) that's why he rather fancies his pictures! At least he has a picture of it!

Dreams follow a sudden loss. It's an effort to orient oneself and get something back.

### **Level VI ARC Breaks**

Of course, there's nothing wrong really with a thetan but his reactive bank. He can recover from the rest. And his reactive bank is *full* of generalities which explains the hard ARC Breaks of Level VI. But don't tamper with Level VI if the Pc belongs at II. You can get enough locks off any day from normal life to cure the ARC Breaks you'll encounter getting up to VI.

Main thing to know is: AN ARC BREAK OCCURS BECAUSE OF A GENERALITY OR A NOT THERE.

Fortunately it doesn't always occur. Only sometimes. And when it does: Find the singular form of the generality.

In Admin particularly you save more executives that way. And in auditing you just don't have failed cases or blows if you *know* it.

*ALL SCIENTOLOGY*

**THE ROAD TO CLEAR**

I have just made a breakthrough in finding what a clear really is.

And we can certainly make it now.

The ROAD TO CLEAR is very definite and the state is very attainable today.

*A clear has no vicious Reactive Mind and operates at total mental capacity just like the first book ("Dianetics: The Modern Science of Mental Health") said. In fact every early definition of CLEAR is found to be correct.*

People have been unable to define *release* to their own satisfaction. I find now a RELEASE is a person who has been able to back out of his "bank". The bank is still there but the person isn't sunk into it with all its somatics and depressions. The E-Meter reads at the Clear read! The needle of the meter is floppy. This is a simulated clear. We called it a "keyed out clear" quite properly. But it *isn't* a clear I know now, it's a RELEASE. The person has been *released* from his reactive mind. He still has that reactive mind but he's not *in* it. He is just released from it. He may go into it again but it feels good to be out of it. His IQ and ability rise and he is far more effective in changing his environment into a better one. The state is beyond homo sapiens by considerable.

This happens today before or at LEVEL V in most cases if the preclear has followed the grades and levels properly.

Just one level up from there, a rather long level and a rough one, is the state of CLEAR.

This is LEVEL VI. This level consists of several processes. The preclear (*still* a preclear) has to be able to audit to make it. It *can't* be done for him, that was the hitch. All the lower levels can be done for him but not Level VI. That's a technical fact. The preclear has to be able to handle Scientology technology to handle his own bank.

Level VI requires several months to audit through even with expert training.

But at its end, MAGIC. *There's* the state of clear we've sought for all these years. It fits *all* definitions ever given for clear.

The state at the end of Level VI is *not* Operating Thetan any more than a baby is a Man.

Operating Thetan is several levels *above* clear. The bridge from clear to OT already exists and is found in Route I, in the book "The Creation of Human Ability".

The reactive mind (and a rotten mess it is, too!) prevented pcs from doing Route I drills. It stood like a huge black spider between the person and his realizing his full potential. Trying to do Route I as given years ago with a Reactive Mind still in place was, to be blunt, not possible for a human.

Some people also get frightened of ridding themselves of a Reactive Mind. Having looked it *all* over now I can state that it is as much use as a sewer in the living room. It says the bad is good and the good is bad! It's a slave maker and "stupidifier" and a body killer. Any time you think it has value, imagine trying to swim in the city dump or trying to fly with an anvil in each pocket, all the while saying, "This is exactly the right thing to do."

-----

What's happened that caused the blunder is that a "keyed out clear" looked like a clear but was only a *release*. And one had to have a *very* precise map and the skill to walk through the still present dark barriers that existed unsuspected between "keyed out clear" and the *real* state of clear.

So CLEAR CAN BE ATTAINED. And further it is being attained right this minute by dozens of Class VI preclears. It will take them months to get there but they are soaring and will tell you so. One session on it sends them the equivalent distance that ten intensives did in their early auditing. Why? Because they *did* the earlier auditing.

The road was just a longer road. Man looks for the quick way, the one-shot way, the needle and the rocket to sudden glory. CLEAR takes now an exact progress over exact levels. And the way is not long really. But it could be a few years for some.

But what's a few years if one is bargaining for Eternity?

The point here is that I've finally been able to tell you what it is and where it is and exactly how to get there. Sorry I couldn't sooner. It took some time to find the way for you and communicate how to do it.

I always tell you as soon as I know. I tell you when I've goofed and where. Well here it is. That's what a CLEAR is.

And it's a road you can travel.

THE STATES OF BEING

A RELEASE is at the top of Level V.

A CLEAR is at the top of Level VI.

A THETA CLEAR is at Level IX.

An OPERATING THETAN is at Level XVIII.

Above Level VI there are no "mental auditing processes" as we know them. There are only various drill and familiarization processes like those in the "Creation of Human Ability" processes and the regaining of abilities one supposed one couldn't ever attain.

That's the road and road map.

The only real error I made was in believing the road was a bit shorter than it was.

The plan of going on to clear is to get processed up to Grade IV or V. Then, being a RELEASE and quite beyond the top range of most IQ tests, get trained rapidly up through from Level 0 to Level VI. And then audit up to *Grade VI* which is CLEAR.

("Grade" and "Level" are the same but when one is a *pc* one has a *grade* and when one has a *Level* one is studying its data.)

There are about 3 or 4 intensives to a Grade (pc) up to Grade V. That's perhaps 15 to 20 25-hour intensives. (15 to 20 weeks.) Then *training* as a student of the same material one was audited on from Level I to Level V. That's six separate months worth of training. Then to Level VI (that's only as a student at Saint Hill) which takes about 2-3 months usually. Then a year or less depending on how hard you work and at no further cost, to CLEAR.

The total of this is about two years and two months of continuous processing and training time.

The total *elapsed* time might be longer even up to 5 or 10 years depending on one's own economics and all that.

The *fact is* that economics aren't a real factor, contrary to what one might be thinking. For *today* the increase in ability at *one* grade of processing is capable of delivering an economic boost adequate to earn or obtain much more *extra* wherewithal than the auditing or training cost. Economic increase because of auditing and training is a sure thing today.

A faster route (but not quite as secure as you might think as one isn't already a Release while studying) is to train from Level 0 on up only. I myself wouldn't like to do that as it would be rougher and *could* be even slower than the Grade I to V pc then Level I to VI auditor route. But it could be done.

We've had 15 years of experience now. We had to feel our way, as Man has never had a road to clear. It's been through totally new territory never before viewed by Man. Even the wise Tibetan only achieved Release and only after he invested 20 years of hard work at it at that.

From Release as a case on up to Level VI as an auditor is pretty easy. In fact the Grade-Level roadway is like walking in a pleasant countryside now. Oh, one has a few stumbles even on a gravel path but that's part of it. The pioneer times are all over and the pioneer always has it rough.

The 49ers left a freeway to follow! So have we. It just took a while to build.

*So that's clear!*

## ARC BREAKS AND MISSED WITHHOLDS

The primary error one can make in ARC Break handling is to handle the pc with ARC Break procedure when the pc really has a missed withhold.

As some auditors dislike pulling withholds (because they run into pcs who use it to carve the auditor up such as “I have a withhold that everybody thinks you are awful —”) it is easier to confront the idea that a pc has an ARC Break than the idea that the pc has a withhold.

In case of doubt one meter checks on a withhold to see if it is non-existent (“Am I demanding a withhold you haven’t got?”). If this *is* the case the TA will blow down. If it isn’t the case the needle and TA remain unchanged. If the pc’s nattery or ARC Breaky condition continues *despite* finding by-passed charge, then of course it is obviously a withhold.

ARC Break finding *does* work. When the pc doesn’t change despite skillful ARC Break handling, locating and indicating, it was a withhold in the first place.

The hardest pc to handle is the missed withhold pc. They ARC Break but you can’t get the pc out of it. The answer is, the pc had a withhold all the time that is at the *bottom* of all these ARC Breaks.

Scientology auditing does not leave the pc in poor condition unless one goofs on ARC Breaks.

ARC Breaks occur most frequently on people with missed withholds. \-

Therefore if a pc can’t be patched up easily or won’t stay patched up on ARC Breaks, there *must* be basic withholds on the case. One then works hard on withholds with any and all the tools that we’ve got.

ARC Breaks don’t cause blows. Missed withholds do. When you won’t hear what the pc is saying, then you have *made* him have a withhold and it responds as a missed withhold.

In short, the bottom of ARC Breaks is a missed withhold.

But an anti-social act done and then withheld sets the pc up to become “an ARC Breaky pc”. It isn’t an accurate remark really since one has a pc with withholds who on being audited ARC Breaks easily. So the accurate statement is “the pc is a withholdy type pc that ARC Breaks a lot”. Now *that* type exists. And they sure have lots of *subsequent* ARC Breaks and are regularly being patched up.

If you have a pc, then, who seems to have a lot of ARC Breaks, the pc is a “withholdy pc” *not* an “ARC Breaky pc”. Any auditor miss causes a pc blow-up. The auditor by calling this pc an “ARC Breaky pc” is not using a description which leads to a resolution of the case as thousands of ARC Break assessments leave the case still liable to ARC Break. If you call such a case that ARC Breaks a lot a “withholdy pc that ARC Breaks a lot” then you can solve the case. For all you have to do is work on withholds.

The actual way to handle a “withholdy pc that ARC Breaks a lot” after you’ve cooled off the last of his many ARC Breaks is:

1. Get the pc to look at what's going on with his sessions.
2. Get the pc in comm.
3. Get the pc to look at what's really bugging him.
4. Get the pc's willingness to give withholds up on a gradient.
5. Bring the pc to an understanding of what he's doing.
6. Get the pc's purpose in being audited in plain view to him or her.

Those are of course the names of the first six grades. However, low down, these six things are all crushed together and you could really pursue that cycle in one session just to get the pc up a bit without even touching the next grade up.

Whenever I see a sour-faced person who has been "trained" or is being "trained" I know one thing—there goes a pc with *lots* of withholds. I also know, there is a pc who ARC Breaks a lot in session. And I *also* know his co-auditor is weak and flabby as an auditor. And I also know his auditing supervisor doesn't shove the student auditor into doing the process correctly.

One sour-faced student, one glance and I know *all* the above things, bang!

So why can't somebody else notice it?

Auditing is a pleasure. But not when an auditor can't tell a withhold from an ARC Break and doesn't know that continual ARC Breaks are caused by missed withholds on the bottom of the chain.

I never miss on this. Why should you?

The only case that will *really* "bug you" is the CONTINUOUS OVERT case. Here's one that commits anti-social acts daily during auditing. He's a nut. He'll never get better, case always hangs up.

Unless you treat his continual overts as a solution to a PTP. And find what PTP he's trying to solve with these crazy overt acts.

You see, we can even solve *that* case.

BUT, don't go believing Scientology doesn't work when it meets an *unchanging* or continually *misemotional* pc. Both of these people are foul balls who are loaded with withholds.

We've cracked them for years and years now.

But not by playing patty-cake or "slap my wrist".

Takes an *auditor*, not a lady finger.

"Mister, you've been wasting my time for three sessions. You have withholds. Give!" "Mister, you refuse just once more to answer my question and you're for it. I've checked this meter. It's not a withhold of nothing. You have withholds. Give!" "Mister, that's it. I am asking the D of P to ask the Tech Sec for a Comm Ev on you from HCO for no report."

If skill couldn't do it, demand may. If demand couldn't do it, a Comm Ev sure will.

For it's a no report!

How can you make a man well when he's got a sewer full of slimy acts.

Show me *any* person who is critical of us and I'll show you crimes and *intended* crimes that would stand a magistrate's hair on end.

Why not try it? Don't buy "I once stole a paper clip from the HASI" as an overt or "You're a lousy auditor" as a withhold. Hell, man, people who tell you those things just stole your lunch or intend to empty the till.

Get clever, auditor. Thetans are basically good. Them that Scientology doesn't change are good—but down underneath a pile of crimes you couldn't get into a Confession Story Magazine.

Okay. *Please* don't go on making this error. It grieves me.

*LEVEL I*

**PREMATURE ACKNOWLEDGEMENTS**

Here's a *new* discovery. Imagine my making one on the Comm Formula after all these years.

Do people ever explain to you long after you have understood?

Do people get cross with you when they are trying to tell you something?

If so, you are suffering from Premature Acknowledgement.

Like body odor and bad breath, it is not conducive to social happiness. But you don't use Life buoy soap or Listerine to cure it, you use a proper comm formula.

When you "coax" a person to talk after he has begun with a nod or a low "yes" you ack, make him forget, then make him believe you haven't got it and then make him tell you at GREAT length. He feels bad and doesn't cognite and may ARC Break.

Try it out. Have somebody tell you about something and then encourage before he has completely told you all.

THAT'S why pcs Itsa on and on and on and on with no gain. The auditor prematurely acknowledged. THAT'S why pcs get cross "for no reason". The auditor has prematurely and unwittingly acknowledged. THAT'S why one feels dull when talking to certain people. They prematurely acknowledge. That's why one thinks another is stupid—that person prematurely acknowledges.

The quickest way to become a social pariah (dog) is to prematurely acknowledge. One can do it in *many* ways.

The quickest way to start the longest conversation is to prematurely acknowledge for the person believes he has not been understood and so begins to explain at greater and greater length.

So this was the hidden ARC Break maker, the cognition wrecker, the stupidifier, the Itsa prolonger in sessions.

And why some people believe others are stupid or don't understand.

Any habit of agreeable noises and nods can be mistaken for acknowledgement, ends cycle on the speaker, causes him to forget, feel dull, believe the listener is stupid, get cross, get exhausted explaining and ARC Break. The missed withhold is inadvertent. One didn't get a chance to say what one was going to say because one was stopped by premature acknowledgement. Result, missed w/h in the speaker, with all its consequences.

This can be counted on to make you feel frightened of being "agreeable with noises or gestures" for a bit and then you'll get it straight.

What a piece of tech to remain incompletely explained. Fair scares one it does. And in the Comm Formula too!

## HOW TO APPLY LEVEL PROCESSING

(FOR HGCs AND ACADEMIES AND  
COURSES)

*HCO Secs, Org Secs, Assn Secs  
take notice!*

The advent of levels and their final forms now being released bring us into a new phase in auditing.

You no longer have to “audit the pc in front of you” but need now only audit with the process next in line.

Level processes *must* be audited in sequence in the level itself.

Levels must be audited in sequence.

Therefore all that is required of the auditor is to do a good technical job of auditing, avoiding Q and A and alter-is like the plague.

Your Comm Course and Upper Indoc TRs and your meter drills from *The Book of E-Meter Drills* are now the *only* drills permitted.

Only alter-is of routine auditing can cause case failure.

Directors of Processing *must-must-must* be alert for departures from standard level processing and stamp it out quickly. If they do not do so they will have case trouble.

The Levels are designed for all cases from psycho to OT. It now *does not matter* what condition a case is in. You just start at the lowest process of the lowest level on *all* cases begun. Flatten that. Go to the next process of the level. Flatten that. When all processes of that level are flat the pc is examined and given a GRADE CERTIFICATE for the level completed and may go to the next level. And the first process of that level is flattened and so on.

Even *The Book of Case Remedies* is handled at its *own* place in its *own* level and is not used below or above that place.

Our technical reach is now so effective that you need no analysis of the case. You just run the levels.

You do not estimate a pc’s level. You ask for his Grade Certificate and if he hasn’t one, just start at the lowest level, skip any level already run and do on up.

You’ll not only catch all cases. You will get maximum TA on each pc in that fashion.

One must *not* skip around within the level or amongst levels.

Screwy application such as giving the first command of an alternate command process and then “getting the TA out of the second command”, or any departure from good old standard auditing must be jumped all over hard.

Rewording a process given in the levels can be catastrophic. It’s worded that way for a reason. Clear the command well with the pc but *never* vary the given wording.

These actions with the new levels will be found magical.

Directors of Processing must not tolerate any slightest goof, any Q and A, any variation of any kind whatever and must be very severe with anyone who messes these processes up. They are violently strong processes from bottom to top and they must be handled with exact duplication and skill.

In Academies this injunction is particularly urgent. Standard student auditing can work wonders with these processes *unless* an Instructor advises or permits alter-is.

The processes developed are too powerful to admit of goofs and departures and unusual solutions. If anyone reports "it didn't work" you had better get in there fast as that auditor *really* goofed and didn't run the process the way it was given in the HCO B.

The most banal, routine, grind auditing will produce results splendidly. The flighty, undisciplined, Q and Aed, alter-ised fooling about will rapidly ditch the pc.

I am putting strong tools in your hands. Don't play about with them. They might explode on you. Give them the respect they deserve and every case will come up bright and progress rapidly.

Something new is here. Just follow the new map even dully and the pc will arrive. Louse it up and it will get awful.

-----

All auditors at a higher meter class run all lower level processes with a meter providing only that they can get the pc to hold the cans.

For a meter classed auditor there are no unmetered processes except ones like 8C and even then the pc is checked on a meter.

It does not matter how low on the levels an auditor begins to use a meter as a student. Just don't ask him to do much with it until the training level calls for meter training.

-----

Ds of T and Ds of P and Examiners must be very careful of false reports in case folders regarding what was run. They should regard an illegible report as a no report. They must also be alert for false attestations concerning grade requests for a pc and for training check sheet completion. It is a false attestation to declare an incomplete grade or check sheet complete or done when it is not.

-----

New ethics policies are levelled primarily at making auditing and training honest and flawless.

I can give you all the processes. It is however necessary that they be honestly run and honestly reported.

Only in that way can you make releases and clears.

-----

The renumbering of levels and grades will be released in Auditor 8. They make it easier to audit and train.

The materials for each level will shortly be released in HCO Bs.

From Academies and courses I want auditors who are trained *not to alter-is* technical materials.

In HGCs I want auditing exactly by the book.

It's easier to do training and processing that way.

And you will get all the results you could ever use—but only if it's by the book, unaltered in application.

It will be the easiest auditing you ever did.

### CLAY TABLE HEALING GOOF

The following letter from Ian Tampion outlines a common trouble with CTH. The pc doesn't answer the question!

This comes really from running it on a pc who isn't that high in grades. The pc can't yet hear and answer a question.

L.R.H. Assoc Sec Perth

Dear Ron, *re Clay Table Healing*

I have heard something "on the grapevine" about CTH which if correct (as it sounds) will be something that is pretty uniformly being goofed, at least in Australia.

It comes with the question "What should be near (body part)?"—as I understand it you want what *should* be near it, that is, the guy has a headache, body part "head", should be near it is "no headache". In other words, is the "should be near part" the absence of or reverse to, the condition being healed?

I was formerly taking anything that seemed to make sense to the pc so I bet plenty of other people have too—amazingly enough it's even worked quite well too!

## APPLICATION

### MORE ON THE APPLICATION OF SCIENTOLOGY TO CHILDREN

The following observations and experiences on the processing and training of children were written up and sent in to me by Founding Scientologist Marcia Townsend.

It is an excellent application of standard procedure to children and is released for general interest. It is especially noteworthy to see that standard 0-0 runs just as wonderfully on children as it does on older preclears.

These are all standard Scientology procedures.

April 5, 1965

Dear Ron:

As you may know, I have given my children several Scientology Courses. Vern and I started when Davy was 3, Denise 4<sup>1/2</sup> and Dane 5<sup>1/2</sup> and they were given a rigorous Academy Course. Surprisingly, it went well-but never flattened—even after a number of hours.

Next about 6 months later they received a shorter course based on the child's version of "Watch Him" etc written by Rusty Wright then HCO Area Sec.\* This was easier but still did not flatten completely.

In Phoenix a year and a half later I ran CCHs on all three children—again they *would not* flatten. The gains were very good-but signs of unflat processes appeared months afterward (despite gains like a body growth for all three children of 4 clothing sizes in 2<sup>1/2</sup> months) during this time, etc.

When we moved to Los Angeles the McKees and we set up a children's co-audit. I had been giving mine a co-audit for a few months previously so they had both an HAS Comm Course and a child's co-audit at this time.

My observations on the use of the processes and training of children follow:

S-C-S run on the group of children as a whole outdoors with a "goon" to help.

Excellent gains—however we had to handle several "can't stop" ones individually and it became more and more unflat after several hours. I found running a "follow the leader" type S-C-S easier and only 2 or 3 children at one time on this and you need to be on your *toes!*

On the smaller children mimic processes on the group and follow the leader type stuff with each one getting a turn at leading and winning at it before sitting down worked well. For example:

One child stands up and claps hands once in front-group follows. She being

[\*For a full explanation of "Watch Him", see BTB 5 November 1959R, Revised and Reissued 8 August 1974, *Scientology Games for Children.*]

shy at first, then claps twice—group follows (adult acts as a goon and makes sure the group does it). When she's happily clapping over her head and back of her and smiling you then tell her "thank you" and she sits down and the other children do a job as leader one by one. Nearly all group process commands can be introduced in a child's version like instead of "Look at the front wall"—the Leader (and the adult gets a turn too) points at the front wall—use: Pointing at the front wall—or touching it, etc. Almost any basic process can be made simple for children. The liability is it must be repeated often and long—the harder it is the longer it takes to flatten so only *very* simple ones can be used—the younger the child the simpler the process or motion must be run over and over to flatten it.

The participation of the group works very well—for instance you have each give an example of:

A time they won at something or some such and does the interest *ever* rise. Keep to *one* subject *only!*

The Comm Course works if very simply given. Confronting is used over and over with no invalidation smirks—comments, etc allowed. If a child is a real problem just watching until he feels he wants to participate sometimes helps. The main job of an adult teaching or supervising children is to see they do not invalidate or evaluate for one another. Also when a large group, switch teams occasionally and make sure no-one gets "cheated". It seems children always elect one or two "most popular" and everyone wants them! Well, just switch every so often when it seems advisable and make sure everyone gets a chance. This way you can put 8 year olds with teenagers and still succeed.

"Itsa" ran well on the group in L.A. All but one or two did it very well and tone rose accordingly. Too detailed an "itsa" or too limited a subject however ran into some difficulties.

Later I tried to flatten S-C-S on my 3 children and did somewhat and got gains but again it didn't flatten totally. I think anyone will find if one level isn't flattened as "itsa" before going on to the next level that the next level *will* only partially flatten—if at all! Unless run forever with very good wins and then by that time the level beneath it would have run and flattened anyway—right?

So the best method to use on children is the one I am currently using I feel. It is as follows:

Comm Course: Only confronting (which my children have had hours and hours of), no coach, no auditor.

PE Course: Only words to define like

auditor preclear

session etc

very simple ones done old PE style and "hours" spent on each one with more than a few cognitions per child on each and every word—going back over each word again and again to be sure each is completed!

And the real meat:

Each running the same commands: zero-zero

"What are you willing to talk to me about?"

"What would you like to tell me about that?"

And altho' we've only had a few sessions (we run 3 sessions [2 in session and one observer] 10 minutes each—5 min breaks or a total of 45 min) 2 or 3 times a week.

This zero-zero is fabulous! It is even flattening unflat processes. For instance my older boy has had some auditing on o/w! He will run a few answers like o/w and come off a withhold then something a bit lighter and etc. Runs wonderfully well. My daughter has trouble usually talking to her "brothers". She is running real well on this. She's telling them all about her boyfriends and her feminine things-her room, etc.

My smallest has trouble keeping an itsa going but on this he starts to run present time objects and it leads right into an itsa every time!

What I like is that it seems to be flattening some unflat processes in a funny sort of way. And I won't need to go to a different command for ages as it seems to be running what can *be* run on the higher levels just using this one command!

### SUMMARY

People nearly always overestimate what needs to be done to a child for good gains.

And they nearly always underestimate how long it takes to really flatten just one thing! (Hours and hours.)

Any really simple process could be adapted but would not flatten totally unless the itsa was in totally. That's a tall order.

I feel zero-zero run flat on a child is the biggest gift a parent can give him.

### TIPS

Do not try to squash their enthusiasm. Instead channel it! If they goof running sessions take them aside after and tell them and let them know that you *know* they can do better. *Never* use auditing or training as a punishment or as a last resort.

Auditing should be a "prize", a "gift"! It helps to make them earn it—doing chores or helping out ! I've even gone so far as to make 'em pay money ! It's valuable! Be sure they understand this!

**CLASSIFICATION, GRADATION AND  
AWARENESS CHART**

You will find a chart enclosed in *The Auditor* Issue 8. It covers many things.

There are about 52 levels of awareness from Unexistence up to the state of CLEAR.

By "Level of Awareness" is meant that of which a being is aware.

A being who is at a level on this scale is aware only of that level and the others below it.

To get a case gain such a person must become aware of the level next above him. And so on up in orderly sequence, level by level.

If you skip a person on one level several levels up, he or she will experience only an unreality and will not react. This is expressed as "no-case-gain". On the E-Meter it registers as "No Tone Arm Action" meaning there is no meter registry of change on the meter control lever (tone arm).

A person audited a bit below or at his level of awareness gets "Tone Arm Action", Case Gain and has cognitions (new concepts of life).

A principal contribution of Scientology is the technology necessary to change people so that they progress into higher states of ability when processed on the exact processes required by an auditor qualified by training to apply the processes expertly.

It is not only general ability that increases, but IQ, renewed livingness and the skill and ability to better self and conditions.

The state of homo sapiens runs from around - 4 down to the bottom. Normal is probably much lower.

As you study the chart you will see it is a road map upward.

On the left we see the Class of the Auditor necessary to take the person up as well as the Grade the preclear reaches.

In the next column we see his certificate name, obtained through his training at an Academy and, later, Saint Hill.

Then we see a very general description of the processes used on that grade.

The next column shows what pcs a classified auditor can audit. He can audit anyone at his Class numeral or below. He cannot audit pcs higher because of course he has not been trained to do so and is likely to have upset pcs.

The final column shows where the certificate and class is obtained.

## THE BRIDGE

This is the famous bridge mentioned at the end of *Dianetics: The Modern Science of Mental Health*.

It is now complete and is functioning. The being enters it from somewhere in the minus regions as a Beginning Scientologist and moves on up. At about Grade II he has definitely reached Homo Novis. He becomes a RELEASE somewhere between II and V. And he becomes CLEAR at the top of VI. The state of Operating Thetan is attained above VI and is a Grade VII.

For Man to have this at all is quite remarkable. He never had it before since we find him improving but still, on the average, well below - 4.

By following this chart one can make RELEASE and then CLEAR.

Up to Grade V one of course has help. But above that technical limitations bar completely the idea of CO-auditing. Some auditors will attempt it, themselves very far from there case-wise, and some have tried to show untrained pcs how to "solo audit" with a meter. The common result is that the pcs eventually collapse in a total overwhelm as they are not trained to handle such forces and so it is a cruel thing to do.

The preclear moves safely on the proper bridge and somewhere along the line must be trained in the classifications that match his Grade. Then (and *only* then) can he make it all the way.

One can be audited quite a ways. Then he had better get trained from zero on up.

You see here some new certificates. These were made necessary by the gap which existed between the higher-toned public person (- 5) and the beginning of the span. We had to have a longer approach on the bridge. And so we put a certificate ladder there.

Beginning Scientologist is given for a PE and so on up as the chart shows.

The Class material has *not* been changed. If anyone has a Class Zero he is still a Class Zero but we will give him a new certificate to replace his old one. And so on. There is no change in Grades and Certificates from Class II up. Class V has been blank for years. Thus there is a proper certificate there, the HUBBARD VALIDATED AUDITOR. It says this auditor has been through a review of all his lower skills plus new ones and can jump off now for Solo and CLEAR.

Previously we not only did not reach into the average homo sapiens awareness but we also had no means of touching cases much below - 4.

You are probably intrigued by Class VII. These Power Processes are what the CLEAR (or Auditor almost there) audits on low level pcs. Auditors below that case level can of course run them a bit but the processes shortly cave him in. These processes are only available at Saint Hill as they have just recently been perfected and an auditor to do them without danger to himself or the pc has to have *interned* at Saint Hill as a Saint Hill HGC staff auditor, not the same as a Class VI Saint Hiller.

The thing to do is start in your local Academy at Zero on the chart and move on up.

Today that is faster and less expensive than you would think.

There are *two* courses to one class. First one does the Certificate Course (Theory) and gets his certificate. This takes the average student about two weeks. Then one takes the Classification Course (Practical) for that class and gets his Provisional Classification. Every auditor must be classified now. This again takes the average student about two weeks. All the courses from Class 0 up to IV are arranged that way.

The material has been streamlined. Class V, obtained at Saint Hill, is longer (and remains the same price as always) as it reviews all the classes and retrains where necessary and awards permanent classification for all the lower certificates as well as Class V.

Some auditing occurs in the Classification Course and group auditing occurs daily.

An unclassified auditor cannot charge a fee for auditing a grade he is not classed for and if he is turned in to HCO because of it the pc can regain all the fee from him. We must make it a safe bridge. Our entire Ethics system is formed just to make it a safe passage for the pc and to hold the bridge together so it can be crossed by Man.

Auditors routinely make Releases with Academy courses today.

Auditors graduated from the Saint Hill course can then take the final steps to make themselves Clear and Saint Hill Interns are trained to make Releases of the lowest cases.

Training fees are uniform in the U.S. now at \$100 for each course. In all Commonwealth countries the cost is £28 a course *sterling* (convert to local currency). There is one course for Certificate, followed by another for Classification.

Field auditors can charge anything they like for HAS and Beginning Scientologist courses. And Hubbard Book Auditors can become HQS through extension courses. Your org may possibly give the lowest course free and charge very little for the HAS.

-----

My job is to give you the materials to make Releases and the skill to make Clear. I have done and will do everything I can to help anyone attain these hitherto unreachable heights of life and ability.

The bridge is not only *in*, it is functioning every hour right now. Book early. The traffic is heavy already. And auditors are the scarcest and most valued beings on this planet.

**RELEASES**  
**VITAL DATA**

Persons who have attained Grade V and VA Release may not be audited on any processes except assists, By Passed Charge Assessments, Present Time Problems, and missed withholds until they are trained up to Level VI and started on R6 processes unless a lower level including Dianetic Release was later found to be missed.

Although the training of the Release is necessary, and auditing knowledge of lower level process is vital, the Release's case as a case must be left alone except as above.

The only thing left is the R6 bank itself and low level auditing becomes unworkable on a person already Released up to Grade V.

When we called a Release a "Keyed out Clear" we erred in giving any further casual auditing. It was this which made the state of Release look unstable when it seemed so—the person was further audited to relieve him or her of locks, secondaries and engrams which had ceased to exist.

Withholds may be pulled, present time problems may be lightly handled, even By Passed Charge Assessments may be run, touch assists and ordinary brief repair processes may be used on a Release.

The Release can audit lower level processes than V with complete safety.

Auditing a Release on repetitive Comm processes, etc., etc., or doing any continued sessioning will only key in the only thing left—the R6 bank.

A Release is stable as long as he or she is not pushed into the R6 bank.

The next step for a Grade VA Release in auditing is R6 EW. However the Release may not begin this until auditing skill is acquired by coming up the levels.

It will now become quite common for a student to be Released by a Clear and then study and audit his way up the grades to VII.

Nobody can do the VII clearing job for him but himself, and fragmentary auditing training will only lead him to mess up his case when he comes to Grade VI and VII auditing.

On the other hand a Release with his high IQ and ability can scoot up the Classes at considerable speed if not stopped by having to be audited as part of his training.

There is no special concession made to a Release by way of checksheets or a different kind of Course. The Release must move on up through the Classes Course by Course like any other student.

There are two saving graces to being a Release as far as training is concerned:

1. The Release ordinarily experiences a heightened ability to put his life to rights economically; and
2. The heightened IQ and ability reflects in speed of study and comprehension.

A person does not have more Scientology data just because he or she is a Release. The Release simply acquires it much faster and exhibits more skill doing it.

For example, a student able before Release, to get only one or two passes a week on a Course should be able, when Released, to get ten times that.

The Release is cautioned not to fool about with the R6 materials until fully trained and to pay no attention to suppressive persons who “seek to show him in an hour or two how to audit and run R6 and be clear.”

The safe way is the correct way. Leave the Reactive mind alone until one is fully trained as an auditor. *Then* go on to Clear.

A Release is also warned that he becomes a particular target for suppressive persons who seek to invalidate his auditing and gains and to report them promptly to the nearest Hubbard Communications Office. Such people become afraid when they see another get better and are usually psychotic.

-----

The next action for a person who has attained Release is to take the next Course in Scientology and move on through to Clear properly. This is shown on the Gradation Chart issued in May 1965, and later issues. There is no other way to Clear.

**CCHs**

(Cancels HCO Pol Ltr 15 May 62)

The CCHs are PROCESSES. They are not drills.

HCO Pol Ltr of 15 May 1962 (replacing 2 Nov 61 HCO Pol Ltr) was written by staff. It is CANCELLED. Processes are not drills. Nobody may convert hereafter a process to a drill.

The Upper Indoc TRs *are* the drills that teach the CCHs.

The CCHs are then run on pcs.

*S-C-S processes* may not be drills.

*Processes* are done on pcs.

*Drills* are done by students to accustom them to the actions that will be necessary in doing processes.

Upper Indoc contains TRs 5 to 9. These are done as the ONLY practical actions leading to the student being able to run the *processes* called the CCHs.

To use a PROCESS as a DRILL leaves it unflat on students and is one of the many reasons why auditing has been taken out of Academies.

During the past few years, unbeknownst to me, a whole sphere of action built up which made students *drill* processes. I swear, there has been a "practical drill" made out of half the processes we have.

These were *all* abolished as DRILLS in HCO Pol Ltr 16 April AD15.

Drills are just actions the student has to become familiar with before doing processes. The actual process is NEVER used as a drill. Because it is left unflat. A drill takes the action the auditor will use when doing a process and gets him familiar with it. That's all.

*SCIENTOLOGY III*

**AUDITING BY LISTS**

The earlier genus of this process was Sec Checking on the Joburg. With no reference to these, I recently developed for Level III a process called Auditing by Lists. Any list can be used.

As a preview to the process I asked staff member Roger Biddell to use List One. The questions were generalized. Instead of "Have I \_\_\_\_\_", "Has there been \_\_\_\_\_" was used. Otherwise the question remained the same as given in the HCO Bulletin for L. 1. He ran the process for some hours on a preclear with excellent results and summarized my verbal and written instructions as applied.

**AUDITING BY LISTS**  
L. 1.

Use meter at sensitivity 16.

Use ARC Break assessment List 1. The questions asked are generalized and without time limiters.

i.e. Has a withhold been missed?  
Have you been given a wrong goal? etc.

Begin with List 1. Ask the first line of this list while watching the meter for an instant read.

If the line does not read, say, "That's clean" and move on to the next line of the list and do the same action with this new line.

If the pc has something to say about a line that is clean, let him say it, acknowledge it and then you ask the next line. Don't Q and A.

If the line when asked has an instant read say, "That reads" then, "What do you consider this could be?" or, "What considerations do you have about this?"

Let the pc answer all he wants to. While he is giving his considerations, mark down any blowdowns of the TA and what he was talking of at the moment of the blowdown.

When the pc has given all his considerations say, "Thank you. I'll check the line on the meter" and call the line again. If it instant reads say, "There's another read here" then again ask for considerations, etc.

Continue these actions until the line goes clean.

When clean say, "That's clean" then—

"Of what you have told me on this line, what do you consider the main thing to be here?"

When pc has answered say, "Thank you."

Then, "I want to indicate that the meter gave us our biggest blowdown \_\_\_\_\_ on (Indicate charge to the pc by repeating the charge named in the question, not the charge announced by the preclear) and that charge had been bypassed on this. "

Then move on to the next line.

When List 1 is completed, and then List 1, then List 1 and so on.

If running correctly, the TA total should increase from session to session. The pc should get more and more blowdowns on his considerations. Then he should get blowdowns on what he considers the main thing is and finally get blowdowns on your indication of the bypassed charge.

Don't Q and A. Don't take up or do anything with the pc's considerations. Don't ever say, "That *still* reads." It's always "Another read" as "It *still* reads" makes the pc feel he has not answered the question.

This process gets charge off the case.

**PROCESSING**

Since 1950 we have had an ironbound rule that we didn't leave pcs in trouble just to end a session.

For fifteen years we have always continued a session that found the pc in trouble and I myself have audited a pc for nine *additional hours*, all night long in fact, just to get the pc through.

Newer auditors, not trained in the stern school of running engrams, must learn this all over again.

It doesn't matter whether the auditor has had a policy on this or not—one would think that common decency would be enough—as to leave a pc in the middle of a secondary or an engram and just coolly end the session is pretty cruel. Some do it because they are startled or afraid and “Rabbit” (run away by ending the session). Auditors who end a process or change it when it has turned on a heavy somatic are likewise ignorant.

WHAT TURNS IT ON WILL TURN IT OFF.

This is the oldest rule in auditing.

Of course people get into secondaries and engrams, go through misemotion and heavy somatics. This happens because things are running *out*. To end off a process or a session because of the clock is to ignore the real purpose of auditing.

The oldest rules we have are

- (a) GET THE PC THROUGH IT.
- (b) WHAT TURNS IT ON WILL TURN IT OFF.
- (c) THE WAY OUT IS THE WAY THROUGH.

These now are expressed as POLICY. A falsified auditor's report is also subject to a Court of Ethics. Any auditor violating this policy letter is liable to an immediate Court of Ethics convened within 24 hours of the offence or as soon as is urgently possible.

Auditing at all levels works *well* when it is done by the book.

The purpose of Ethics is to open the way for and get in Tech. Then we can do our job.

THERE IS NO MODERN PROCESS THAT WILL NOT WORK WHEN EXACTLY APPLIED.

Therefore in the eyes of Ethics all auditing failures are Ethics failures—PTS, Suppressive Persons as pcs, or non-compliance with tech for auditors.

And the first offence an auditor can commit is ceasing to audit when he is most needed by his pc.

Hence it is the first most important consideration of Ethics to prevent such occurrences.

Then we'll make happy pcs, Releases and Clears.

**CLASS II MODEL SESSION**

(Amends and cancels HCO Bulletin of May 19, 1964)

The Class II Model Session has the benefit of requiring no other Rudiments process (except in the Havingness Questions) than the question itself. There are, therefore, no additional processes except Havingness.

Beware of *any* Q and A in using this script (HCO Bulletin May 24, 1962 [ 1 ]).

Don't stray off Model Session into unusual questions or processes. Use Model Session as the surround for processes to be run on the pc. Don't use it as a process.

Questions are asked of the pc and not checked on the needle. Auditor watches meter and records TA.

**SESSION PRELIMINARIES**

All auditing sessions have the following preliminaries done in this order.

1. Seat the pc and adjust his or her chair.
2. Clear the Auditing room with "Is it all right to audit in this room?" (not metered).
3. Can squeeze, "Put your hands in your lap." "Squeeze the cans, please." And note that pc registers on the meter by the squeeze read on the meter, and note the level of the pc's havingness. (Don't run hav here.)
4. Put in R Factor by telling pc briefly what you are going to do in the session. (What you intend to run.)

***START OF SESSION:***

"Is it all right with you if I begin this session now?"

"START OF SESSION."

"Has this session started for you?" (If pc says, "No," say again, "START OF SESSION. Now has this session started for you?")

***BEGINNING RUDIMENTS:***

*GLL:* "What goals would you like to set for this session?"

O/W: One would run General O/W if the pc was emotionally upset at the beginning of the session or if the session did not start for the pc, the latter being simply another indication of the pc's being upset or ARC broken, but these symptoms must be present, as sometimes the session hasn't started merely because of poor Tone 40 or because the pc had something he wanted to say before the auditor started the session.

***RUNNING O/W:***

"If it is all right with you, I am going to run a short general process. The process is: 'What have you done?', 'What have you not done?' " (The process is run very

permissively until the needle looks smooth and the pc is no longer emotionally disturbed. )

“Where are you now on the time track?”

“If it is all right with you, I will continue this process until you are close to present time and then end this process.” (After each command ask, “When?”)

“That was the last command. Is there anything you would care to ask or say before I end this process?”

“End of process.”

*Aud:* “Are you willing to talk to me about your troubles?” “What trouble aren’t you willing to talk to me about?”

*W/h.* “Since the last time I audited you, have you done anything you are withholding?” (If pc says, “Yes”) “What was it?”

*PTP.* “Do you have a present time problem?” “What is the problem?”

### ***START OF PROCESS:***

“Now I would like to run this process on you (name it). What would you say to that?” (Get pc’s agreement; if not obtainable, choose another process unless old process is not complete.)

### ***MIDDLE RUDIMENTS:***

“In this session is there anything you have suppressed, not-ised, failed to reveal, or been careful of?” “What was it?”

### ***END OF PROCESS NON-CYCLICAL:***

“If it is all right with you, I will give this command two more times and then end this process.” (Gives command two more times.)

“Is there anything you would care to ask or say before I end this process?” “End of process.”

### ***END OF PROCESS CYCLICAL:***

“Where are you now on the time track?”

“If it is all right with you, I will continue this process until you are close to present time and then end this process.” (After each command ask, “When?”)

“That was the last command. Is there anything you would care to ask or say before I end this process?”

“End of process.”

### ***END RUDIMENTS:***

*1/2-Un T.* “In this session, have you told me any half-truth, untruth, or said something only to impress me, or tried to damage anyone?” “What was it?”

*? or C:* “In this session, have you failed to answer any question or command?” “What question or command did you fail to answer?”

*Dec:* “In this session, is there anything you have decided?” “What was it?”

*W/h:* “In this session, have you thought, said, or done anything I have failed to find out?” “What was it?”

*Aud:* “In this session, has anything been misunderstood?” “What was it?”

### ***GOALS & GAINS:***

“Have you made any of these goals for this session?” “Thank you for making these goals for this session,” or “Thank you for making some of these goals for this session. I’m sorry you didn’t make all of them,” or “I’m sorry you didn’t make these goals for this session.”

“Have you made any gains in this session that you would care to mention?” “Thank you for making these gains for this session,” or “I’m sorry you didn’t make any gains for this session.”

**HAVINGNESS:**

(After adjusting the meter) “Put your hands in your lap. Please squeeze the cans.”  
(If the squeeze test was not all right, the Auditor would run the pc’s Havingness process until the can squeeze gives an adequate response.)

**END OF SESSION:**

“Is there anything you would care to ask or say before I end this session?”

“Is it all right with you if I end this session now?”

“END OF SESSION. Has this session ended for you?” (If pc says, “No,” repeat, “END OF SESSION.” If session still not ended, say, “The session has been ended. “)

Most flagrant errors that can be made:

1. Fumbling with script, not knowing Model Session.
2. Failing to get in the R Factor by telling pc what you are going to do at each new step.
3. Doing only what the pc suggests.
4. Adding unusual questions or remarks or making sudden irrelevant statements.
5. Using parts of Model Session as repetitive processes which deter the completion of auditing cycles already begun.
6. Failure to complete the Auditing Comm Cycle on any part of Model Session.

**SUMMARY REPORT**

In order to expedite the handling and review of case folders and in order to teach Auditors how to quickly and concisely analyze and report on a case, the following is the summary form to be used:

1. The date of the summary report is in the upper right-hand corner.
2. On the top line is PC: \_\_\_\_\_ AUDITOR: \_\_\_\_\_

The preclear's name is written in and underscored and the auditor's name is written in and underscored.

3. Indent for the beginning paragraph and write the following:

*PROCESS RUN:* \_\_\_\_\_ *TA:* \_\_\_\_\_ *TIME:* \_\_\_\_\_

The above will be printed in BLOCK letters. The auditor gives the process run, the total tone arm action for the session and the length of the session in hours and minutes.

4. Indent again for the next paragraph and write the following:

*GOALS & GAINS.*

The auditor should now note whether the preclear made his goals and gains for the session or whether the goals and gains were sour. Any highly unrealistic goal should be noted down by the auditor also.

5. Indent for the next paragraph and write the following:

*ASPECTS OF RUNNING PROCESS:*

Here write down briefly what the preclear was doing in the session. Do not write opinions with regard to what was happening or how the preclear was running the process. Here we are interested in the aspects of the case in relationship to the process or processes being run.

We are interested in the following:

How the preclear is doing on the process in relation to what is being run.  
Any signs indicating whether or not the process is near to the desired flat point or at the desired flat point.  
Emotional tone of the preclear and whether this improved.  
Discharges of misemotion.  
Absence or appearance of communication lags.  
Preclear appearance.

Any difficulty in session.  
Whether or not the preclear is cogniting.  
General needle behaviour.  
Somatics turning on and blowing.

6. Indent for the next paragraph and write the following:

*ETHICS REPORT:*

Here you must note any action you have taken as regards reports to Ethics. So far any Ethics report has been undertaken for the auditor, when it is the auditor's responsibility to turn in an Ethics report on anyone invalidating or suppressing your preclear's auditing and on your preclear if you find your preclear to be *engaging* in any action which requires reporting. Further, if you think your preclear may be a Potential Trouble Source or a Suppressive Person, you must ask for this to be reviewed by the Case Officer in the Department of Review.

7. Indent for the next paragraph and write the following:

*SUGGEST:*

Here briefly suggest what is required—the process to be continued, the next process to be run, or the preclear to be reviewed by the Case Officer.

This summary should be done for the auditing session given the preclear for the day and put in front of the preclear's folder, but not stapled to the auditing report form or worksheets. Two sessions in one day calls for only one summary report with the TA and data of each session. It should be LEGIBLE and READABLE. If an auditor's handwriting is poor, it should be printed out by the auditor.

Writing the reports should only take the auditor about 15 minutes to do at the most. Having just audited the preclear, you should quite easily fill the report out. Do these reports on the proper paper for the Division, 8 x 10 [inches] and leave enough space for directions to be given.

ALL TECH DIV  
ALL QUAL DIV  
ETHICS SECTION  
CLASS VII INTERNES

**STAFF AUDITOR ADVICES**

No Staff Auditor or Interne or organization auditor or any auditor on a Staff Co-audit may seek advices on what to do from any person except the officially appointed person doing the auditing folders.

Seeking advice on cases verbally or in writing from the person not doing the folders is OFF LINE except in Ethics matters when Ethics may be consulted or Saint Hill advised.

When an auditor seeks advice off-line and accepts it, unbeknownst to the official supervising the auditing via the folders, a random factor is introduced into the running of cases that can be quite fatal.

At Saint Hill, on Power Processes, such an action is a crime as the consequences can be so catastrophic to cases run on Power Processes.

The proper sources of instruction are tapes and HCOBs. *Adding* bits to these that aren't there is the commonest auditor error.

Asking for unusual solutions from a case supervisor who is doing the folders is a sure sign that the last directives have not been followed; giving instructions that are unusual is useless because they won't be complied with either.

The Dev-T situation of asking for advice off-line burdens lines and fouls up cases.

**COMM CYCLE AND ETHICS**

When an auditor has a fractured comm cycle very often processing still works on the average pc.

When an auditor has a fractured comm cycle and the pc is an Ethics type case (SP, PTS, W/Hs) a mess ensues. One can always tell if an auditor's comm cycle is poor or if the Code is being broken because when put on an Ethics type pc, things collapse.

When a pc won't run, one can be sure that

1. The Auditor's Comm Cycle is out and
2. The pc is an Ethics type case.

When both these are present, no results can possibly occur.

When only one is present, usually the auditing works somewhat.

## CASE SUPERVISOR PUZZLE

When a Case Supervisor doing folders sees a process going wrong, he should not blame the process or his own advice if these are even faintly educated.

Instead the pc is an Ethics type or the Auditor's Comm Cycle is out.

If neither of these seem to be the case and things still go wrong then the auditor just isn't running what he says he is or running what he is supposed to run.

If all the above seems not to be the case, then the auditor is seeking off-line advices and some screwball interpretation has been added to the process.

A clever Case Supervisor marking folders, goes by the text—case running well, continue the standard approach. Case not running well, send to Review for analysis REGARDLESS OF ANY AUDITING TIME LOST.

When a pc goes to Review, it is clever to send the auditor to the Review Cramming Section to check over his Auditor's Code and Comm Cycle with TRs.

If when auditor and pc *still* don't run well, send the pc to Ethics. (Review may already have done so.)

## ETHICS

If the Case Supervisor ever finds an auditor not following instructions or seeking or taking off-line directions he must at once send the auditor to Ethics. It is usually an Ethics Hearing and a minor suspension.

If a Case Supervisor doing the folders finds a false report has been made, he *must* send the offender to Ethics.

## WITHHOLDS

A pc is not sent to Ethics because of withholds gotten off in a session. However, on the Invalidation button one commonly finds suppressive persons around the pc and the auditor must send the pc to Ethics at session end to get the matter disconnected or handled.

Sometimes one finds another person's offences than the pc's in getting off withholds. These are reported to Ethics for investigation.

## TEXT BOOK

D of P work is completely text book. PC doing okay—get on with it as per the process, the next process to be run, or the next grade.

PC not doing okay—to Review to find out why.

If Review finds pc is an Ethics type, sends pc to Ethics.

It's all text book. It is so easy.

*CLASS III AND UP  
CLASS VII CHECK SHEET*

**CLEAR AND OT BEHAVIOUR**

We know all the attributes of Clear and Operating Thetans.

In the history of this universe there has never been a true Clear or true OT.

Every Clear ever encountered in this universe was a Keyed-out Clear—a *Release*. He still had all his bank, GPMs and engrams. They were simply keyed out and not influencing him.

We have known that for some time. But here is a new one.

Every Operating Thetan in the history of this universe was only a KEYED-OUT OT!

This is startling. It accounts for the wild conduct of some OTs. They still had a complete bank (all their GPMs and engrams, secondaries, the lot). This bank could be restimulated causing them to indulge in bad conduct. When it was restimulated too much they suddenly ceased to be OT and became powerless and human or animal.

Thus there has not only never been a real Clear in this universe, also there has never been a real Operating Thetan! Every one contacted on the track or history had an R6 bank, momentarily keyed out.

This is then the Roller Coaster effect one encounters in one's own history—OT—aberree—Clear—aberree—OT—aberree, etc, depending on *accidental* key-outs and keyins of the bank.

We are for the first time in the history of the universe making *real* Clears and *real* OTs, no bank.

You may accidentally make a keyed-out OT as well as a Release.

And if you *don't* go on auditing even in that session he or she will stay that way.

I have good subjective reality on making keyed-out Clear and keyed-out OT in auditing. And also on being overrun.

Auditors must be trying for a *result* not a number of hours. Then they'll see some of these phenomena.

The trick is *stopping* when the result is obtained !

It can be fatal even to conclude the session in which keyed-out Clear (Release) or keyed-out OT were attained. Just say, "Oh! That's it!" And STOP. This is true for *all* attainable phenomena, even getting well. An overrun brings it back.

HCO BULLETIN OF 28 JUNE AD15

**RELEASES, DIFFERENT KINDS**

There are different kinds of Releases.

They all have the similar meter phenomena: floating needle and on or near clear read on a calibrated Mark IV or Mark V.

There is the plain First Stage Release. This occurs in auditing up to Grade IV. It is not very stable. The person is *very* well off and definitely a Release. But he or she can now postulate and in postulating sometimes gets into the R6 Bank. The First Stage Release is eased out of the bank but subject to call-back.

Then there is the Power Process Release. This is *very* stable and should be called a Second Stage Release or a Power Release to be technically exact. You can run only Power Processes on a First Stage Release. These knock out all factors of the *track* that force a person back into the R6 Bank and leave the person able to go into or get out of the R6 Bank easily. This Second Stage Release is definitely Homo Novis. The person ceases to respond like a homo sapiens and has fantastic capability to learn and act.

The Third Stage Release (called for a few days a Second Stage before terminology was firm) is an improved Second Stage Release in that *selective* areas of learning are handled to return special skills to the person. The case state does not necessarily improve but certain zones of knowledge have been polished up.

There is another state near that of Release. This is a Keyed-Out-Operating Thetan. At this time it occurs sometimes by accident in Power Processing, but I think I will be able to process a Second Stage Release to it directly some day. The pc is still a *pre* clear though a Keyed-Out-OT. This really isn't a Thetan Exterior. The Thetan Exterior is quite unstable and can be attained below an ordinary First Stage Release.

A real Clear is of course on the other side of the Reactive Bank and above all these states. It is completely stable. One needs to know how to audit to get there.

A real Operating Thetan is of course a Clear who has been familiarized with his environment to a point of total cause over Matter, Energy, Space, Time and Thought.

This accounts for all states of being discussed in Dianetics or Scientology. They are all attainable and only one, Keyed-Out-OT, is not done by routine auditing, being an offshoot of it that happens sometimes. The First Stage Release is as high as we got in Dianetics, so you can see we are five states of being above where we first arrived.

We are doing these today on a routine assembly line basis on all cases. Orgs do a lot of First Stage Releases. Saint Hill is doing Power Releases and moving people up to Clear through Academy and Saint Hill training.

A lot of cases would have to spend a lot more time in Power Processing if they weren't already successfully processed in Grades 0 to IV.

The majority of cases even when trained, will not be able to go Clear without being Released.

And of course nobody is going to go OT before they have been Audited, Released, trained and cleared, all of which are currently standard actions in Scientology today.

We are definitely on our way.

**RELEASE, REHABILITATION OF  
FORMER RELEASES AND  
THETAN EXTERIORS**

There are probably a great many processes that will recover the state of First Stage Release or First Stage Thetan Exterior or Released OT.

Poorest but easiest of these is plain Itsa. Itsa probably will not recover a floating needle but will pull down the TA. When it's down, stop—don't press your luck too far.

The real technical job (other than Itsa) requires expert metering and a thorough knowledge of dating on a meter and a smooth comm cycle.

Best at it would be an auditor who himself was a Former Release and who had himself (or herself) recovered the state.

The technically correct procedure is unfortunately a delicate one which requires good command of tech on the subject of the Time Track and perception of the pc and meter alert enough to stop exactly when Re-Release occurs and say "That's It!" (Never say "End" in such sessions.)

Remember *all* recovery must be by Key-out, not erasure. Key-outs are done by finding Key-ins. It is de-stimulation, not re-stimulation. Therefore all must be smooth and jolly with no forcing or overrun.

The exact tech follows:

To regain a Former Release (or Thetan Exterior or Keyed-Out OT [Released OT]):

1. Loosely locate the session or time in which it occurred.
2. Get in Suppress, Invalidate buttons on the session or time.
3. Get in "Unacknowledged" or "What was unacknowledged".
4. Indicate anything found to the pc, as By-Passed Charge.
5. Find the *Key-in* that was *Keyed out* in that time or session (the person went release because something keyed out in that time or session).
6. When *this is* found and recognized by the pc, the pc will then return to Release or Released OT.
7. If this does not happen, find what keyed in that ended the state and repeat (1) to (6) on it.

This is all rough to communicate to the pc who is not well trained.

This datum will help (a standard datum of early Dianetics): The analytical mind when it becomes aware of a point in the Reactive Mind, makes it vanish. In other

words one needs but become aware of the *actual* cause of an aberration to have it vanish.

We see this mainly in Cognitions. But it is the backbone of all auditing.

When the person was originally released he had become aware of something that caused the reactive mind to de-stimulate at that point or become weak. And so he Released. You have to find that point of sudden awareness again as in ( I ) to (6) above and if you miss it you can at least find (7). You *could* find both and in a lot of cases will probably do so. But if you win on ( I ) to (6), for heaven's sakes don't go on to (7). If you do (7) you may suddenly turn up with (5).

When you've done it realize you've done it and come off of it. Don't overrun.

When you *have* done it, tell the person to get trained so he or she can go on to actual Clear.

#### LIABILITY

The Liability in all this is finding the *original* thing that was keyed in (which when keyed out gave Release).

If this happens you have a *new key-in* in the session you are running right now. It is a new key-in and is handled as one.

#### TECH COMMENT

This tells us that finding and running out key-ins will make a First Stage Release out of someone who has never been one. Standard Grade Processing does this.

**COMM CYCLE ADDITIVES**

There are *no* additives permitted on the Auditing Comm Cycle.

Example: Getting the pc to state the problem after the pc has said what the problem is.

Example: Asking a pc if that is the answer.

Example: Telling pc "it didn't react" on the meter.

Example: Querying the answer.

This is the WORST kind of auditing.

Processes run best MUZZLED. By muzzled is meant using ONLY TR 0, 1, 2, 3 and 4 by the text.

A pc's results will go to HELL on an additive comm cycle.

There are a hundred thousand tricks that could be added to the Auditing Comm Cycle. EVERY ONE of them is a GOOF.

The ONLY time you ever ask for a repeat is when you couldn't hear it.

Since 1950, I've known that all auditors talk too much in a session. The maximum talk is the standard model session and the TR 0 to 4 Auditing Comm Cycle ONLY.

It is a serious matter to get a pc to "clarify his answer". It is in fact an Ethics matter and if done habitually is a Suppressive Act, for it will wipe out all gains. There are mannerism additives also.

Example: Waiting for the pc to look at you before you give the next command. (Pcs who won't look at you are ARC Broken. You don't then twist this to mean the pc has to look at you before you give the next command.)

Example: A lifted eyebrow at an answer.

Example: A questioning sort of ack.

The Whole Message is

**GOOD AUDITING OCCURS WHEN THE COMM CYCLE ALONE IS USED AND IS MUZZLED.**

Additives on the Auditing Comm Cycle are ANY ACTION, STATEMENT, QUESTION OR EXPRESSION GIVEN IN ADDITION TO TRs 0-4.

They are Gross Auditing Errors. And should be regarded as such.

Auditors who add to the Auditing Comm Cycle never make Releases. So, that's Suppressive.

Don't do it!

**MODEL SESSION REVISED**

It is important for reasons of preventing restimulation to cancel and discard all issues and forms of Model Session and use only the following, particularly for Releasing.

The auditor examines the room to make sure it is all right to audit in, adjusts the pc's chair and checks his E-Meter for battery up and set, gives the pc the cans and states "THIS IS THE SESSION." Tone 40.

(The following rudiments are used only in metered sessions.)

"What gains have you had from your last session?" (Omitted on a pc's very first session but not from the first session of an intensive: written in the right-hand column at the top.)

"Is there an ARC Break?" (On raw meat, "Are you upset by anything?")

"Is there any current problem that will interfere with auditing?"

"Should you have told me anything you didn't?"

"Has anything been suppressed?"

"Has anything been denied?"

"Has anything been rushed?"

"This is the process: (states process)." (If a new process, clear the commands.)

Body of session

"I will give you two more commands of this process."

"That was the body of the session."

"Are there any comments on the session?"

"That's It."

This is the totality of Model Session used. To add words to the patter is to risk restimulation and it is expressly forbidden to do so.

**RELEASE REACHED**

It is VITAL when the proper phenomenon of a process occurs that the process be promptly concluded.

It is VITAL on lower level auditing if a needle floats and TA comes down to between 2 and 3 that the process *and* the session be unobtrusively ended with a soft "That's It" and the preclear sent to the Qualifications Division to be declared a Release. It is a Gross Auditing Error to run one command more.

With this Model Session, Releases will be more stable and sessions run better.

**STATES OF BEING  
ATTAINED BY PROCESSING**

**Types of Releases**

The states of Release differ in that one is more stable than another.

The Reactive Mind (known also as the R6 Bank) can only be audited out by someone who is trained up to Class VI. When the Reactive Mind is fully audited out (erased completely) one has a Clear.

When a Clear has been refamiliarized with his capabilities you have an Operating Thetan (an OT).

A Release then is pulled OUT of his Reactive Mind.

A Clear has fully erased his Reactive Mind.

An Operating Thetan is one who is Cause over Matter Energy Space and Time and is not in a body.

The degree and relative permanence of being pulled out of the Reactive Mind determines the state of Release.

There are numerous things that can pull one back into the Reactive Mind.

These are (1) Locks (2) Secondaries (3) Engrams (4) The Whole Time Track.

**Locks**

By reducing locks as in Levels 0 to IV we then remove the ability of locks to pull the being back into his R6 Bank.

Locks are mental image pictures of non-painful but disturbing experiences the person has experienced. They depend for their force on secondaries and engrams.

Thus one who has had his locks reduced is a FIRST STAGE RELEASE.

**Secondaries and Engrams**

When a being has had the secondaries and engrams reduced he is far less likely to be pulled into the Reactive Mind than if he has just had their locks reduced.

Secondaries are mental image pictures containing misemotion (grief, anger, apathy, etc.). They contain no pain. They are moments of shock and stress and depend for their force on underlying engrams.

Engrams are mental image pictures of pain and unconsciousness the person has experienced.

When these are reduced one has a SECOND STAGE RELEASE.

**The Whole Track**

Bits and pieces of the whole track remain after the locks, secondaries and engrams are reduced. These bits inhibit the being from recovering knowledge.

The Whole Track is the moment to moment record of a person's existence in this universe in picture and impression form.

When these bits are cleaned up, a being is a THIRD STAGE RELEASE.

## **Exterior**

If a being is a 1st, 2nd or 3rd Stage Release and has also become exterior to his body in the process, we simply add "OT" to the state of Release. It is secondary in importance to the fact of being a Release. As soon as the being seeks to exert his "OT" powers he tends to restimulate his R6 bank and so goes back into his body.

This is all that is meant when a person is called a First Stage Released OT. The person has not only come out of his bank but also out of his body.

## **Processes**

Many processes, all below Class V, make 1st Stage Releases. We have been making them for 15 years. When audited on low level grades after being released by them, the person goes into his secondaries and engrams. He can be fished back out again by modem technology and can easily regain the state of First Stage Release.

Power Processes alone can be run on a First Stage Release. These vanquish the secondaries and engrams. This requires very expert Class VII auditors as it is touchy work. These make a Second Stage Release.

In doing the earlier Power Processes the preclear often attains First Stage Release or First Stage Released OT. Only doing all the basic Power Processes (including one called Pr Pr 6) makes a Second Stage Release.

Certain Advanced Power Processes make a Third Stage Release. These mainly recover knowledge and smooth out one's understanding of the awareness of the environment achieved by Second Stage Release on Power Processing.

## **Clear**

### **The R6 Bank**

When a being has been trained up to Class VI and has been given the materials of the basic Reactive Mind to audit out (they took years to find and are too complex to be tackled without training and the actual patterns), he can then attain the state of Clear.

The Reactive Mind is composed of significance and masses as old as the Universe itself and is the basic cause of the decline of the individual. Each person has his own basic bank but they are all exactly alike. The materials are quite useless and inhibiting.

A Clear is not under the great stress of this bank and so can be free. He uses his own basic purposes and is for the first time wholly himself.

## **Operating Thetan**

This state of being is attained by drills and familiarity after the state of Clear has been obtained.

A real OT has no Reactive Bank, is cause over Matter, Energy, Space, Time and Thought and is completely free.

## **Summary**

This HCOB contains a brief description of each of the States of Being one can recover by processing.

This is the first time they have ever been isolated and crisply defined.

These are all the states there are except for homo sapiens and animal and we know too much about those already.

**RELEASE REHABILITATION**

Refers to and amplifies  
HCOB 30 June 1965

In doing a Former Release rehabilitation, if you find the point of key-out of the moment the pc was formerly released, and then the moment of key-in afterwards and then get the pc to Itsa these alternate points, one after the other, with a bit of guiding when you see a fall (telling the pc [who is thinking] the needle fell by saying, "What's that?"), and then if you get off any unacknowledgment by the auditor in the rehabilitation session, and if you handle all such moments in the pc's auditing history, recent or distant, you will get the TA down and momentary floats of the needle.

Then if you end it with the pc happy and all well in the release rehabilitation session, the pc will feel terrific and you will probably have regained the floating needle.

Remember it isn't a repetitive alternate question, "What was keyed out then?" "What was keyed in then?" but a use of these and any such wording one after the other as Itsa invitations, until you get the TA off it and the TA down (and not up again on session comm cycle goofs).

By hitting the key-out, then the key-in in that former session where the pc went release, he or she really gets the charge off it and you've regained it.

I daresay you could take a stuck TA at 5 on an old-time pc and by locating the moments when he or she felt good in sessions and handling each one in turn until you get the pc happy he or she has "got it", you would eventually get the TA to clear read and a momentary or continuously floating needle.

It's gentle.

The only goof you can really make, aside from comm cycle and code breaks, is not to quit when the needle floats in your rehabilitation session.

The rule of ALL processing is NEVER RUN A PROCESS FURTHER THAN IT PRODUCES A FLOATING NEEDLE WITH THE TA BETWEEN 2 AND 3.

This applies to former release rehabilitating session as well. When that needle floats again, if it does, you have to gently "That's it" and desist and send to Declare? To go on is to overaudit.

Good hunting.

HCO BULLETIN OF 27 JULY 1965

Replaces HCO Bulletin of 22 May 1965 which  
replaced HCO Bulletin of 23 April 1964.

Remimeo  
Sthil Students

HCO Bulletin of 23 April 1964 was written by  
Roger Biddell and is corrected by this Bulletin.

*SCIENTOLOGY III*

**AUDITING BY LISTS**

The earlier genus of this process was Sec Checking on the Joburg. With no reference to these, I recently developed for Level III a process called Auditing by Lists. Any list can be used.

As a preview to the process I asked staff member Roger Biddell to use List One. The questions were generalized. Instead of "Have I \_\_\_?", "Has there been \_\_\_?" was used. Otherwise the question remained the same as given in the HCO Bulletin for L. 1. He ran the process for some hours on a preclear with excellent results and summarized my verbal and written instructions as applied.

**AUDITING BY LISTS**

**L.1.**

Use meter at sensitivity 16.

Use ARC Break assessment List 1. The questions asked are generalized and without time limiters.

i.e. Has a withhold been missed?

Have you been given a wrong goal? etc.

Begin with List 1. Ask the first line of this List while watching the meter for an instant read.

If the line does not read, say, "That's clean" and move on to the next line of the List and do the same action with this new line.

If the pc has something to say about a line that is clean, let him say it, acknowledge it and then you ask the next line. Don't Q and A.

If the line when asked has an instant read say, "That reads" then, "What do you consider this could be?" or, "What considerations do you have about this?"

Let the pc answer all he wants to. While he is giving his considerations, mark down any blowdowns of the TA.

When the pc has given all his considerations say, "Thank you. I'll check the line on the meter" and call the line again. If it instant reads say, "There's another read here" then again ask for considerations, etc.

Continue these actions until the line goes clean.

When clean say, "That's clean."

Then move on to the next line.

When List 1 is completed, and then List 1, then List 1 and so on.

If running correctly, the TA total should increase from session to session. The pc should get more and more blowdowns on his considerations. Then he should get blowdowns on what he considers the main thing is.

Don't Q and A. Don't take up or do anything with the pc's considerations. Don't ever say, "That *still* reads." It's always "Another read" as "It *still* reads" makes the pc feel he has not answered the question.

This process gets charge off the case.

If pc still wonders what the main charge on a line was, tell him according to what gave the most TA action.

## **RELEASE GOOFS**

### **1. Overrun**

The first goof relating to Releases is the one done for 15 years—running past a free, floating needle on any type of process. THIS is the goof that held back all Scientology. And if it continues to be done, known as well as it is now that you mustn't, one can only consider it suppressive—not just ignorant—as who now doesn't know you wreck a Release by running past the floating needle?

### **2. Rehabilitation Goof**

Not doing a Rehabilitation by the book, HCOB 30 June 1965, HCOB 21 July AD15 and now this one would constitute a breach of tech.

To say you are “Rehabilitating a Former Release” and yet do only current rudiments is, of course, a lie.

Rehabilitation is an exact series of actions covered in the above HCOBs and NOTHING ELSE.

I have seen a case being given an assist on PTPs and current ARC Breaks and had the auditor say, “Oh yes, I'm following orders. I'm rehabilitating a former release.”

Rehabilitation of a Former Release is a PRECISE SET OF ACTIONS covered only in the above HCOBs and this one.

One only does THOSE actions given in these HCOBs.

### **3. Rough Comm Cycle**

The roughness of the Auditor's Comm Cycle can prevent, not only a Release from occurring but can prevent rehabilitation.

All auditing is best done muzzled with the auditor drilled on Mutter TRs.

### **4. Meter Misuse**

In Step I of HCOB 30 June 65 it says, “Loosely locate the session or time in which it (Release) occurred.”

This means a METER DATING.

By “loosely” is meant to the year, month and day, not the minute. You can of course locate to the hour.

*ADD AS THE PRIMARY STEP TO HCOB 30 JUNE 65*

1. LIST AND EXACTLY DATE BY METER EACH AND EVERY TIME THE PC HAS ATTAINED A STATE OF RELEASE IN THIS LIFETIME.

That should dispel any doubts about what rehabilitation of former release is aiming to do.

ADD ALSO AS A PARAGRAPH IN HCOB 30 JUNE 1965:

IF THE PC'S NEEDLE GOES FREE WITH THE TONE ARM BETWEEN 2 AND 3 ON A CALIBRATED METER, *CEASE* REHABILITATION AT THAT *INSTANT* AND DECLARE. DO NOT CONTINUE BEYOND THE FLOATING NEEDLE ON A REHABILITATION EITHER.

IF A PC'S NEEDLE FLOATS DOING THE HCO POLICY LETTER FORM 26 JUNE 65 CEASE AT THAT INSTANT AND SEND TO GET THE STATE DECLARED. DO NOT KEEP ON DOING THE FORM PAST FLOATING NEEDLE EITHER.

IN FACT DON'T CONTINUE ANY PROCESS OR AUDITING BEYOND A FLOATING NEEDLE. YOU CAN SHIFT FROM PROCESS TO PROCESS, A FREE NEEDLE ATTAINED ON EACH *ONLY* IN POWER PROCESSING AND ONLY ON R6-GPMI.

An auditor must also realize that handling current matters and all on a former release in a rehabilitation is violating further the rule DON'T AUDIT PAST A FLOATING NEEDLE. The whole trouble with the pc was auditing beyond Release. Therefore in rehabilitation even ruds are just more auditing aren't they? You can only do HCOB 30 June 65 and its further HCOBs.

### **5. Not Recognizing a Floating Needle**

Floating needle, free needle are the same thing. What does one look like? Once you've seen one you'll never make a mistake on one again. For it *floats*. It ceases to register on the pc's bank. It just idly floats about or won't stand up even at low sensitivity.

The TA goes to any place between 2 and 3 and the needle floats.

Differences in cans used as electrodes and not keeping the meter calibrated with 5,000 ohm and 12,500 ohm resistors clipped between the two cans and setting the TA to (F) and (M) can lead an auditor to "find" a floating needle at TA 3.8 but ignore it because the meter is out.

Also, *two* meters used can both be out. Particularly if the wrong cans are used.

Steel cans, chromium plated or tin plated (like ordinary vegetable soup tin cans) are the best electrodes.

### **6. Not Getting Them All**

Not getting *every* time the pc has been a Release in this lifetime can be a big goof.

Sometimes the last one is just yesterday, but omitting it can halt rehabilitation.

Getting whole track (before this lifetime) former release periods is of questionable benefit but cannot be ruled out.

### **7. Pc's Own Purposes**

The leader in making a high state of being collapse (given an R6 bank) is the pc's *own* purposes.

A person shot up scale can postulate. Postulating going down scale or an attack on something can collapse a state of release.

Protest, wanting to get even, revenge are some things that a pc postulated that made him go back into the bank.

It's a goof for a pc to postulate himself down scale or to postulate himself right by showing another he is wrong.

This is why Class IV processing (Service Fac) can so easily make a 1st Stage Release.

### **8. Declare Errors**

Sometimes a pc is not rehabilitated yet is so declared. This causes a serious upset.

Sometimes the Examiner fails to detect the flaw that the pc doesn't think he was released and passes the pc.

Sometimes the Examiner challenges and fiddles about too much. This is a withhold of acknowledgment of the state and will cause an upset before it can be awarded.

### **9. Unalert Org**

An org which is not alert to the way SPs go for new releases when the release is still finding his or her "feet" will make very few that remain stable.

If an org develops a lazy attitude toward auditor and personnel discipline then two things happen:

- (a) Auditors and execs alike think it is all right to audit *past* a floating needle on a form, action or process or
- (b) Start declaring people who aren't released.

Either way is catastrophe. The middle road of honest and precise tech is vital.

Auditors with sloppy comm cycles almost never release anyone to floating needle. Such begin to believe it is "all gas" so it doesn't matter what they do.

An org not alert to what a bad comm cycle can do to prevent release is "for it" as tech will fade.

### **Summary**

For fifteen years auditors have made and then undone keyed-out-clearing all over the world.

We can then assume that, as they had the data about floating needles in 1958 and did not heed it, we will have this battle with us from here on.

The end product of all auditing right up to clear is a floating needle.

There is no other end product from the auditors' viewpoint.

So, shall we get on with it, see it when it occurs and declare it?

Please?

## **AUDITING GOOFS BLOWDOWN INTERRUPTION**

It is a serious goof for the auditor to speak or move during a blowdown of the Tone Arm.

When a Tone Arm has to be moved rapidly down, the needle *appears* to float to some but it is just falling.

To see if a needle is floating the TA must have stopped moving down.

A Blowdown is a period of relief and cognition to a pc while it is occurring and for a moment after it stops.

Therefore it is a serious goof for an auditor to speak or move during the blowdown or for a moment afterwards.

This was noted years ago and is given in early materials on goals.

**AN AUDITOR MUST NOT SPEAK OR MOVE DURING A BLOWDOWN.**

When the auditor has to move the TA from right to left to keep the needle on the dial and the movement is .1 divisions or more then a blowdown is occurring. The needle of course is falling to the right.

That is a period of charge blowing off the bank. It is accompanied by realizations for the pc. Sometimes the pc does not voice them aloud. They nevertheless happen.

If the auditor speaks or moves beyond adjusting the TA quietly with his thumb the pc may suppress the cognitions and stop the blowdown.

To see if a needle floats the TA must be halted for the moment between 2 and 3 on a calibrated meter. A floating needle cannot be observed during a blowdown.

For an auditor to sit up suddenly and look surprised or pleased, or for an auditor to say the next command or "That's It" during a blowdown, can jolly well wreck a pc's case. So it's a real goof to do so.

To get auditing results one must audit with a good comm cycle, accept the pc's answers, handle the pc's originations, be unobtrusive with his auditing actions, not hold the pc up while he writes, not develop tricks like waiting for the pc to look at him before giving the next command, not prematurely ack and so start compulsive Itsa, and be very quiet during and just after a blowdown.

Issue to all new  
Releases

### RELEASE STAGES

Once a pc has begun to come out of his bank, he either continues to come out or goes back in a bit.

He (or she) does not remain in status quo (unchanging state) while a Release.

A First Stage Release often pulls further out to First Stage Released OT after processing.

Similarly a Second Stage Release may become a Second Stage Released OT.

In their understandable enthusiasm—they feel so *much* better and bigger and stronger—a release sometimes seeks additional acknowledgment by requesting a further release check.

A pc who has attained a *First Stage* can go First Stage Released OT but cannot possibly go Second Stage without Power Processing. In short, one can't upgrade *Stages 1 to 2*, etc, without the actual processing.

Why? Because a key out is just that, a key out. Just because one no longer has a tiger in his lap does not mean the tiger has vanished. He's merely stepped out into the hall. In the course of life somebody is going to leave the door open. The tiger won't come back into one's lap but he'll sure sit on the rug and sneer. Key out means there's still a tiger. Release means he's *away*. One First Stage can be more released than another First Stage. The tiger is further off.

But when you start upgrading numbers (1st, 2nd, 3rd, etc) you are talking about *less* tiger.

There's less *bank*.

First Stage removes a few tiger whiskers and the sneer. That's the locks going. The tiger is near or far—that means more or less 1st Stage, it doesn't mean there's less tiger.

Second Stage *removes* the tiger's misemotion and his *front* claws. The tiger can now be near or far but he is that much tiger. He can be so far away one is *sure* he has vanished. But he's just far. He remains that much tiger (minus whiskers, sneer, temper and front claws), he just isn't evident.

Third Stage pulls the tiger's ability to paralyze one's wits. In effect Third Stage removes impediments to one's ability to know. The tiger, though now minus whiskers, sneer, temper, front claws, and the ability to paralyze, is still about. He may at this stage walk off so far that one is positive there is no more tiger. But it's early to break out the champagne. Maybe he won't be back for years, even centuries, but he still exists.

Fourth Stage Release removes the tiger's claws all about and blunts his teeth. And causes him to hide in closets. But though he hasn't whiskers, sneer, claws, or his frightening effect, or the old sharpness, he is still a tiger. One can gambol about in the sun cheerily, feeling quite sure there is no tiger at all. Only the *locks* on the R6 bank are gone. That R6 bank is still there.

At this stage the pc feels he can move mountains single-handed and is given to chest thumping. That he still depends upon a body gets overlooked.

But ahead of him is the BIG job. There is still a tiger. This tiger if not vanished utterly will sooner or later creep up and eat up the goodies.

So one has to handle Mr. Tiger once and for all, run the total R6 bank and become a 5th Stage Release.

Now, and only now, with a bit of reorientation can one be CLEAR. No more tiger. He is not near or far. He doesn't exist. And one can go on for the trillions.

Early on my pcs went keyed out clear and went away. They stayed that way a long time.

They were sure they had attained the zenith.

Today we are going to have the *same* problem.

A Release is going to feel *sure* he has gone up in number of Release when it's only the tiger out for lunch.

I am the last one to throw cool water over anyone's head about Release. But I have a passion for stating truth as I know it when I know it. You can always depend on that. It's not always popular but it's honest.

Therefore these are the only ways to go up in number as a Release.

To obtain FIRST STAGE RELEASE, one must have had lower grade auditing of some sort. This removes the *locks* (the distressful moments of life) off the Reactive Mind. As these pinned one to it, one can now get out of it.

To obtain SECOND STAGE RELEASE one must have been run on the highest of the Power Processes. This gets rid of the secondaries (misemotions and upsets) and the engrams (moments of pain and unconsciousness). And as these pinned one to the Reactive Mind one can now move out of it and isn't so likely to go back into it as he has no secondaries and engrams to call him back.

To obtain THIRD STAGE RELEASE one has to tackle the beings, places and subjects one has long detested. And when these are gone one isn't likely to be called back into the Reactive Mind very soon as bits of his daily life don't remind him of beings, places and subjects he once detested.

To obtain FOURTH STAGE RELEASE one has to take the lock end words off the R6 bank. He has to be an R6 Auditor himself to do this properly. With these gone, the R6 bank is left on its naked basics and one can be very free of it for quite a while.

But now we are down to the concrete and bedrock.

To obtain a FIFTH STAGE RELEASE, one has to have run out the whole remaining Reactive Mind. We are awfully lucky to have the combination to the vault as it's been shut thoroughly for the trillions. That's done by a process known as R6-GPMI-or GPMs by Items. And I assure you

1. It can be done and

2. It was pure hell going it blind when I was trying to find it. It took several years and thousands of hours of research auditing to just find the *pattern* of it. This is the longest job (R6-GPMI) and requires now at least 14 months of daily solo auditing. And then one is 5th Stage and ready for a polish and Clear.

Now understand, at each of these stages one has to go unrelease to make it to the next stage of release. This requires guts—and faith. One is feeling GRAND. The world is beautiful. The unbrave get nervous at the thought of diving back into the asphalt or, to keep our metaphor, about deliberately whistling up the Tiger—”Here Tiger! Here Tiger! Come out wherever you are!” So a way that is cooked up to avoid this further combat is to pretend an upgrade in *number* of release without the hard work and scratches necessary to honestly achieve it.

Add to all this that one has a present time, and a body to receive the slings and arrows and one sees that it is a complex picture.

But we have the way. It is the way.

Many will come along selling the frightened the idea one can leap up through the numbers without pain or toil or auditing by flexing one’s chest or eating Wheaties or praying. But that isn’t the WAY. There’s no bridge there.

The main point that will be stumbled on is this: Nobody has any real reality on how high up these states are or how utterly tall Clear really is.

-----

Well, that’s the score. Does it help?

All Qual Hats  
All Staff Auditor Hats  
Tech Executives  
Ethics  
HCO Sec  
Div 7

**QUALIFICATIONS TECHNICAL ACTIONS**

THIS IS A STAR RATED TECHNICAL HAT  
FOR EXAMINERS, REVIEW AUDITORS AND  
QUAL EXECUTIVES AND IS THE STANDARD  
GUIDE FOR THEIR TECHNICAL ACTIONS

All cases that come to the Qual Division are unusual.

The solution to ALL cases that come to the Qual Division is to do the USUAL.

If you don't hold on to that datum hard, all the "unusual" cases will soon have Review doing the unusual. And the only salvation for any Qual situation is to do the USUAL.

Don't go into a dispersal because of the unusual nature of the Review cases. If they were standard they would not be in Review.

But Review *has* a standard procedure. It is an Always, invariable standard procedure. Don't audit the case, audit the procedure. If you do so YOU WILL NEVER MISS. You will only miss if you get wrapped up in how unusual it all is.

Today Case Supervision and Review actions are all very, very standard. And very, very workable. You only get in a mess with a case when you don't use standard actions.

It took more than a third of a century to find the keys to all cases. None is going to repeat all that research in the 20 minutes given to handle a case, so the best solution is to do what's known.

**FORMER RELEASE CHECK**

When someone buys a Former Release Rehabilitation, he first goes to Review to get a check. This *must* be a perfunctory check. If you *audit* the pc you may float a needle on the check. The Review Auditor merely puts the pc who wants a Former Release check on a meter and asks: "Have you been Released earlier?" If it reads, THAT'S the end of the check. One says, "Yes you evidently were," and adds, "Go to the Registrar and get a Former Release Rehabilitation." If it doesn't read it doesn't mean, not Former Release. THE PC MAY BE ARC BROKEN, and the meter of an ARC Broken pc may not read for the auditor. In fact an inexperienced auditor sometimes calls an ARC Broken needle a "floating needle" merely because it doesn't react to the auditor. So if the meter *doesn't* react on the question of was the pc a Former Release, all you do in Review is say, "There may be ARC Breaks around Former Release. It therefore doesn't read right now. It may read if the ARC Breaks are picked up," and sends the pc to the Registrar for Rehabilitation just the same.

In short *two* things can happen in a Former Release check. It reads. It doesn't read. In both cases send the pc to the Registrar for a Former Release Rehabilitation.

So that action is real simple.

What the *pc* says and does has nothing to do with it. Say what you have to to get the pc to the Registrar, but encourage no Itsa or you'll be tied up for an hour or two, working for nothing.

If the pc has already been to the Registrar and bought a Former Release Rehabilitation then after the above check send the pc to the HGC Admin.

That's *all* there is to it. You do anything else and you'll goof up everything. Start to audit the pc, invite the pc to Itsa, start picking up times or ARC Breaks and you've had it. You'll be wearing the HGC hat and costing the org money and slowing your own lines.

Believe me, do just the above and NO MORE on a "Former Release check" in Review.

Don't get all wound up in the guy's case. They're ALL different and unusual. That's no reason why a Former Release check should be unusual.

Get it?

#### CASE SUPERVISOR CHECK

When the Case Supervisor sends a pc already in the HGC to Review there is only ONE standard action:

Form 26 June 1965 is done like an *assessment*, fast, no excessive Itsa.

Further, it's done NOW. The Case Supervisor wants it right away. NEVER have a "backlog" of Reviews on Case Supervisor request for Review.

Pc comes in, gets the Form done BANG. Right now. Takes 10-15 minutes. No more than that.

One puts down under recommendations what has been found on the assessment. "Pick up Cleaned Cleans" or "Auditor's Comm Cycle out, do ARC Break List I Auditing by List". Whatever you found you recommend it be done. Former Release gave a big read and BD. All right, put "Do Former Release Rehab," as the recommendation.

When the Case Supervisor asks for a Review of the case one ONLY does the form and does it only as an *assessment*. One does not handle any part of that form on a Case Supervisor request. And one does it straightaway. A Review "Backlog" is a disgrace. One day wait is too many. It's done *at once*. Why? Because it only takes a few minutes.

Do the form, send the pc to the Examiner and the Examiner returns the pc at once to the HGC or *at once* sends to Ethics if a Roller Coaster is found or no case change.

Honest, it's too easy.

If it takes anyone longer than that then it's because an *assessment* isn't being done. The form is being used for auditing! When all that's needed is an assessment.

#### REVIEW TO REPAIR

When a pc is to be handled or finished off by Review, we now have a different matter.

The Review Auditor sees "Review to handle" on the slip or "Review to complete case".

This is his signal to do Form 26 June 1965 AS AN AUDITING ACTION.

Same form, different use. One now doesn't assess with the Form. One *Audits* with the Form.

This means one cleans it all up, section by section as one goes along.

ARC Break reads. Find out if it's a session ARC Break or a process ARC Break, and do the appropriate list, find it (or them) and indicate the By-Passed Charge (don't audit it by list).

If it's an environment ARC Break adapt List I to the environment. Locate and indicate the By-Passed Charge.

DON'T go on with ARC Break reading when Review is *handling* the pc. Clean it up.

Clean everything else up.

Polish up the entire Form 26 June 65 and leave it all beaming.

*Now* do what's indicated with the case such as Former Release Rehab or flatten unflat processes.

If the case turns out on the Form to be an Ethics type, have the Examiner send to Ethics and don't do anything else after finding the pc is an Ethics type. No Case Gain in the past = SP. Roller Coaster = PTS. Leave it to Ethics to find out why. When (and if) the pc gets a clean "bill of health" from Ethics (has disconnected or whatever) Review can get the pc back again and finish up the incomplete actions outlined in this section.

In short, in "Review to handle" one handles the whole case and finishes it off.

The same form (Form 26 June 1965) can be used in two different ways: as an assessment and as an auditing list of things to handle.

### STUDENT ASSISTS

On a student assist the Review Auditor uses Form 26 June 65 as an assessment form and handles what is found on the form. The Review Auditor does not fail to do the form and also does not fail to handle what *was found during assessment* after it is done. Note, one assesses, then handles what was found. He doesn't audit the whole form. And also Review doesn't complete the case as a case. It's just an assist.

Public assists are done the same way in Review.

### DECLARE? FOR RELEASE

When the Examiner does *not* declare a pc and does not send the pc to Certs and Awards, he sends the pc to Review. (He can also, instead, send the pc to Ethics.)

When the Examiner sends a Declare? to Review, instead of Declaring, the Review Auditor does Form 26 June 65 as an assessment, locates the trouble and after the assessment is done handles what was found or indicates it's an Ethics matter.

In either case (audits or sends to Ethics) the Review Auditor hands the pc back to the Examiner. The Examiner may now send the pc to Certs and Awards to get the Release award, or to Ethics to handle the indicated Ethics matter (usually PTS situation).

But the Examiner must not send the pc back to the HGC after the Case Supervisor has said Declare? (except when the Declare? is for an earlier stage than the pc is being audited for). If anything else has to be done, Review does it.

### BASIS OF QUAL ACTIONS

You see Qual Div handles the flat ball bearings that didn't roll on the assembly line of the HGC. Qual is wholly in the flat ball bearing business. The HGC and Academy are wholly in the assembly line business, dealing in fairly round ball bearings.

So when the HGC or Academy has said that's it (either, "We can't handle" or "Declare?" or "Graduate") it's now up to Qual. If the pc or student is *not* a Release or not well skilled or the pc doesn't think he or she is a Release or the student feels he can't make it, then it's all up to Review.

Qual's tools for the student are the Assist and Cramming Section and for the pc are:

1. 26 June 65 Form.

2. Any standard process or auditing action.
3. HCO B 30 June 65 and any other Former Release Rehabilitation HCO B.

### HGC USES OF QUAL TOOLS

The HGC also uses these same tools. The Case Supervisor commonly orders one of his or her auditors to do 26 June 1965 Form.

On Power Processing and Former Release Rehab, an HGC Intensive on a pc always starts with:

1. The old pc assessment form from Dianetic days (if not already done and in hand on the pc).
2. 26 June 65 Form (if the pc has ever been audited before).

It cuts down the clutter and keeps auditors calmer and makes assignment easier when the HGC uses the Qual tools routinely and only squawks when baffled. Qual takes over on a pc if the HGC has really goofed or has mis-Declared?

The HGC assembly line considers all pcs a bit dented and runs an assembly line on the basis of "some dents in ball bearings must be handled in the HGC". When the ball bearing just *won't* roll at all in the HGC, the Case Supervisor throws in the chips and says, "To Review to Handle." If the Case Supervisor wants a check on his auditor, he says, "To Review for check." And the HGC gets the pc back.

Students and public wanting assists are sent straight to Review by the Registrar, by-passing the HGC as this is bit and piece auditing.

### THE EIGHT BIG RULES

Qual (and the HGC) are not exempt from handling the Eight Big Rules of auditing:

1. A pc must never be audited while ARC Broken. (Assessment of a list is not auditing unless one is Auditing by List meaning cleaning up each line, not looking for *the* thing on the List.)
2. A pc will make no case progress while suffering from a Present Time Problem which fixes his attention on the environment.
3. A pc with withholds will be critical, natter or blow and is out of comm.
4. A pc will worsen after auditing if connected to a Suppressive Person (and *only* worsens when so connected).
5. A pc who makes no case gains is Suppressive (and can only be handled by Power Processes and a Class VII Auditor).
6. Auditing a pc past a state of Release on the processes of that stage can make the pc's tone arm rise and bar further case gain even at upper stages of Release. (If you don't rehabilitate at least in part a 1st Stage Release that was overrun, you won't get results at the 2nd Stage or any higher stage. If you don't rehab an overrun on 2nd Stage you won't get results on Third Stage, etc. Also, a pc who went 1st Stage on R6EW won't run on 2nd Stage until the 1st Stage is found. In some cases the pc won't now run on 2nd Stage if he went 4th Stage, by-passing the lot. In short you can't by-pass free needles.)
7. A pc whose needle doesn't react to the auditor even at TA 2 or 3 may be ARC Broken, not Released.
8. An auditor's fractured Comm Cycle, unseen additives, lack of skill on a meter, attitude or false report can make a standard process not seem to work, and only these may make one work toward unusual solutions and get unreal about standard tech.

There are other rules. They are important but not as important as each of the EIGHT BIG RULES.

Therefore, the only unusual solution you ever have to take in auditing is to straighten up one of the Eight Big Rules when it's out on the pc. It is rare but can happen. Example: Pc's ARC Break is too bad to get a read on any of the lower lines of Form 26 June 65. Obviously, then, to assess Form 26 June 65 at all on a few cases you have to locate and indicate the By-Passed Charge.

In checking a free needle, finding it doesn't respond at all, one has to know by looking at the pc whether the pc is Keyed Out or ARC Broken. The only other bug here is "Dead Thetan" wherein the old "Stage 4" needle so called has *never* responded to anyone (this is obvious as the pc never got any TA in auditing either).

A pc can have such a withhold that he just chops the auditor or the course or the org. It's always a withhold that makes him chop or blow. Don't be reasonable about it-it's a technical fact.

If an auditor really knows his Eight Big Rules, he can work then very easily with a form and know what he is looking at. The eight are on Form 26 June 65, too, you know. Only Rule 7 may prevent a straightforward assessment, as the ARC Break may have to be handled before one can get on down the list with reads.

### COMMON MISTAKE

The Common Mistake of Review is to mistake a PTP or Withhold for an ARC Break.

This is easy to do. Supervisors are prone to say "Pc ARC Broken" when a pc looks natty or gloomy.

Review, although it takes no instructions on tech from Tech, can get mixed up on this too, prompted by the Supervisor's error or the pc's own statement. SPs commonly start a Review session with "I'm ARC Broken ..." when, fact is, the SP has a big withhold or PTP.

### REPORTS

When a Review Auditor or an Examiner finds a tech mess like alter-is or the fractured comm cycle of an HGC auditor, they MUST report it to Qual Sec who MUST send in an Ethics chit on it. The chit is written by the Examiner or the Review Auditor and sent to Qual Sec for forwarding to Ethics.

ONLY in this way will Examiners or Review ever hold onto their own activities. If they don't chit gross auditing errors found in pcs or in auditing instructions then their whole larger purpose is defeated. Qual is the technical cop. Handle flat ball bearings, yes. But *also* proof up the Tech Division against having so many by reporting its goofs.

This applies to any student received also. Qual, getting a student or pc who has then to be sent to Ethics MUST chit to Ethics whoever overlooked it in Tech. When Qual finds a student who is SP or PTS who has been on course a while, Qual must chit the student's Course Supervisor for a big goof in having the student on course at all. Similarly, Qual chits an auditor whose pc, sent to Review, turns out to be PTS or SP. The Academy or HGC must have gone stupid to be auditing or training such a student or pc. For they bring total chaos to the assembly line. Supervisors and auditors who don't send pcs who are PTS or SP to Ethics deserve Psychiatric Awards. For they are *wrecking* the org by continuing to train or process such a person. So that's Qual's hat, too.

When Ethics won't handle a Roller Coaster or an SP and pushes the being back into the Org Qual must cable or despatch the Office of LRH Saint Hill. We have the tech on PTS and SP. We mustn't train or audit them until the condition is handled properly in Ethics (and even then we train and process them with a cynical squint in the left eye, alert for further messes from them.)

## SUMMARY

The technical activities of Qual are all standard, all laid out neatly. There are no unusual solutions if one does the usual as above.

No need to get in a panic about a case. Do the usual. If THAT doesn't work, it was done in an unusual way, wasn't it?

Qual can win all the way.

Just do the usual Qual actions on the standard Qual internal routing lines, and UP go tech standards and results.

And that's what we want, don't we?

All Students  
Saint Hill  
Courses  
All Staff

*Clarification of HCO Bulletin*  
3 July 1965—

### MODEL SESSION REVISED

Pertaining to Level 0 training, whereas the student is to use a meter in order to familiarize himself with it and with using it in a session, he is not trained in the fine points of metering until Level II. Therefore during the training of Level 0 the Model Session as per HCOB 3 July 1965 is to be used, but the questions are actually unmetred (the student does not follow up needle reads), except for the fact that the student has a meter in front of him.

Any auditor from Class II up would, of course, meter such questions in running Level 0 processes on a preclear.

At Level 0 the student MUST know the parts of the meter and be able to recognize a floating needle and be able to record tone arm action.

174. 6408C11 SH Spec  
-35 "Study-  
Evaluation of  
Information"

Example of Tape Lecture number and Title. The first two numbers (64) give the year, 1964. The second two (08) give the month, August, the eighth month. C stands for Copy. The third two numbers (11) give the day, the 11th. SH Spec gives the course, the Saint Hill Special Briefing Course, and then the title. From all this you know the lecture was given on 11 August 1964, that the 35 is one of consecutive numbers assigned for record purposes.

### SYMBOLS IN SCIENTOLOGY

175.

Scientology Symbol. The S simply stands for Scientology which is derived from "SCIO" (Knowing in the fullest sense). The upper triangle is the K-R-C Triangle. The points are K for KNOWLEDGE, R for RESPONSIBILITY and C for CONTROL. The lower triangle is the A-R-C Triangle—its points being AFFINITY—REALITY and COMMUNICATION.

176.

Symbol of Dianetics.

177.

Symbol for theta. 8th letter of the Greek alphabet. Ancient Greeks used this to represent spirit or thought.

178.

"Theta to the nth degree" meaning unlimited or vast.

179.

ARC Triangle—  
Affinity, Reality, Communication (the component parts of understanding).

180.

Symbol of infinity ( $\infty$ ) stood upright, as seen in some Scientology books.

*Art Series 1*

**A R T**

For some fifteen years I have been studying, amongst other branches of philosophy, the subject of ART.

The reason for this is: Art is the least codified of human endeavors and the most misunderstood. *What is Art?* is one of the least answered of human questions.

Art abounds with authorities. It was chosen because "that field containing the most authorities contains the least codified knowledge." The obvious invitation is to answer the question and codify the subject. This has now been done.

The subject was originally brought up in a conversation with Donald H. Rogers at 42 Aberdeen Road, Elizabeth, New Jersey, in 1950.

As this zone of human activity seemed to stand outside the field of Dianetics and Scientology, I thereafter worked with it on a casual basis.

Having published 15,000,000 words between 1929 and 1941, I was not unacquainted with the arts. Since 1950 I have worked with other arts than that of literature in order to make an advance on the general subject of ART.

I have made a breakthrough at last in this matter. And I find it is applicable to what we are doing and therefore also has practical value.

To make it a matter of record rather than a filed sheaf of notes, I am publishing these findings as an HCO B. I also feel they will be of some assistance in forwarding Scientology.

As in the case of all "pure research" (by which is meant study without thought of possible application) there is a sudden pay-off in these answers including the better dissemination of Scientology and the rehabilitation of the artist.

My incidental studies in the fields of photography and music materially assisted these discoveries.

Approaching the state of Clear has also assisted in comprehending this rather vast subject of ART. It is adventurous to state one has *solved* such a sweeping subject but here at least are the fundamentals and basics.

The following are rough notes but are in fact the basis of that branch of activity we call ART.

*THE FUNDAMENTALS OF ART*

*BASIC DEFINITION*

ART is a word which summarizes THE QUALITY OF COMMUNICATION.

It therefore follows the laws of communication.

Too much originality throws the audience into unfamiliarity and therefore disagreement, as communication contains duplication and "originality" is the foe of duplication.

TECHNIQUE should not rise above the level of workability for the purpose of communication.

PERFECTION cannot be attained at the expense of communication.

Seeking *perfection* is a wrong target in art. One should primarily seek communication with it and *then* perfect it as far as reasonable. One attempts *communication* within the framework of applicable skill. If perfection greater than that which can be attained for communication is sought, one will not communicate.

Example: A camera that shoots perfectly but is not mobile enough to get pictures. One must settle for the highest level of technical perfection obtainable *below* the ability to obtain the picture.

The order of importance in art is:

1. The resultant communication,
2. The technical rendition.

2 is always subordinate to 1. 2 may be as high as possible but never so high as to injure 1.

The communication is the primary target. The technical quality of it is the secondary consideration. A person pushes 2 as high as possible within the reality of 1.

A being can take a lot of trouble with 2 to achieve 1 but there is a point where attempting 2 prevents 1.

If the arduousness of 2 prevents 1, then modify 2, don't modify 1.

Perfection is defined as the quality obtainable which still permits the delivery of the communication.

Too much time on 2 of course prevents 1.

It is usually necessary to lower a standard from absolute perfection to achieve communication. The test of the artist is how little it is lowered not how high it is pushed.

A professional in the arts is one who obtains communication with the art form at the minimum sacrifice of technical quality. There is always some sacrifice of quality to communicate at all.

The reduction of mass or time or impedimenta or facilities toward the ability to render a result is the exact measurement of how much technical perfection can be attempted. The rule is if one is being too perfectionistic to actually achieve a communication, reduce the mass, time, impedimenta or facilities sufficiently low to accomplish the communication but maintain the technique and perfection as high as is reconcilable with the result to be achieved and within one's power to act.

No communication is no art. To not do the communication for lack of technical perfection is the primary error. It is also an error not to push up the technical aspects of the result as high as possible.

One measures the degree of perfection to be achieved by the degree of communication that will be accomplished.

This is seen even in a workman and tools. The workman who cannot accomplish anything but must have tools is an *artistic* failure.

"Art for art's sake" is a complete paradox as a remark. "Art for the sake of communication" and "Attempted perfection without communicating" are the plus and minus of it all.

One can of course communicate to oneself, if one wishes to be both cause and effect.

One studies art only if one wishes to communicate and the search for artistic perfection is the result of past failures to communicate.

Self-improvement is based entirely on earlier lack of communicating.

Living itself can be an art.

The search for freedom is either the retreat from past failures to communicate or the effort to attain new communication. To that degree then the search for freedom is a sick or well impulse.

Searching for and discovering one's past failures to communicate an art form or idea about it will therefore inevitably rehabilitate the artist.

However, due to the nature of the Reactive Mind, full rehabilitation is achieved only through releasing and clearing.

How much art is enough art? The amount necessary to produce an approximation of the desired effect on its receiver or beholder, within the reality of the possibility of doing so.

A concept of the beholder and some understanding of his or her acceptance level is necessary to the formulation of a successful art form or presentation. This includes an approximation of what is familiar to him and is associated with the desired effect.

All Art depends for its success upon the former experience and associations of the beholder. There is no pure general form since it must assume a sweeping generality of former experiences in the beholder.

Artists all, to a greater or lesser degree, need comprehension of the minds and viewpoints of others in order to have their work accepted; since the acceptability of a communication depends upon the mental composition of the receiver. Scientology then is a must for any artist if he would succeed without heartbreak.

In any art form or activity one must conceive of the beholder (if only himself). To fail to do so is to invite disappointment and eventual dissatisfaction with one's own creations.

An artist who disagrees thoroughly with the "taste" of his potential audience cannot of course communicate with that audience easily. His disagreement is actually not based on the audience but on former inability to communicate with such audiences or rejections by a vaguely similar audience.

The lack of desire to communicate with an art form may stem from an entirely different inability than the one supposed to exist.

Professionals often get into such disputes on *how* to present the art form that the entirety becomes a technology, not an art, and, lacking progress and newness of acceptance, dies. This is probably the genus of all decline or vanishment of art forms. The idea of contemporary communication is lost. All old forms become beset by technical musts and must nots and so cease to communicate. The art is the form that communicates not the technology of how, the last contributing to the ease of creating the effect and preservation of the steps used in doing it. A form's reach, blunted, becomes involved with the perfection alone, and ceases to be an art form in its proper definition.

A communication can be blunted by suppressing its art form: Example, bad tape reproduction, scratched film, releasing bits not authorized. This then is the primary suppression.

On the other hand, failing continuously to permit a non-destructive communication on the grounds of its lack of art is also suppressive.

Between these two extremes there is communication and the task is to attain the highest art form possible that can be maintained in the act of communicating. To do otherwise is inartistic and objectionable.

These, therefore, are the fundamentals of ART.

## RELEASE STAGES

There are five stages of Release. When one of these is attained the next one up can be run.

A preclear who has attained a stage of Release may not be run further on the processes of that stage or below or he will go back into his Reactive Mind.

All Releases however can have their problems handled, their withholds pulled, their ARC Breaks repaired *and* any Release at *any* stage can be audited on the exact processes of Release Rehabilitation.

The states of Release differ in that one is more stable than another.

The Reactive Mind (known also as the R6 Bank) can only be audited out by someone who is trained up to Class VI. When the Reactive Mind is fully audited out (erased completely), one has a Clear.

When a Clear has been refamiliarized with his capabilities, you have an Operating Thetan (an OT).

A Release, then, is pulled OUT of his Reactive Mind.

A Clear has fully erased his Reactive Mind.

An Operating Thetan is one who is Cause over Matter, Energy, Space and Time and is not in a body.

The degree and relative permanence of being pulled out of the Reactive Mind determines the state of Release.

There are numerous things that can pull one back into the Reactive Mind.

These are (1) Locks (2) Secondaries (3) Engrams (4) The Whole Time Track.

### LOCKS

By reducing locks as in Levels 0 to IV, we then remove the ability of locks to pull the being back into his R6 Bank.

Locks are mental image pictures of non-painful, but disturbing, experiences the person has experienced. They depend for their force on secondaries and engrams.

Thus, one who has had his locks reduced is a FIRST STAGE RELEASE.

### SECONDARIES and ENGRAMS

When a being has had the secondaries and engrams reduced, he is far less likely to be pulled into the Reactive Mind than if he has just had their locks reduced.

Secondaries are mental image pictures containing misemotion (grief, anger, apathy, etc). They contain no pain. They are moments of shock and stress and depend for their force on underlying engrams.

Engrams are mental image pictures of pain and unconsciousness the person has experienced.

When these are reduced, one has a **SECOND STAGE RELEASE**.

#### THE WHOLE TRACK

Bits and pieces of the whole track remain after the locks, secondaries and engrams are reduced. These bits inhibit the being from recovering knowledge.

The Whole Track is the moment to moment record of a person's existence in this universe in picture and impression form.

When these bits are cleaned up, a being is a **THIRD STAGE RELEASE**.

#### THE REACTIVE MIND

When the pc has taken the locks off the Reactive Mind itself, using R6EW, he attains Fourth Stage Release.

#### THE REACTIVE MIND

When the entire Reactive Mind has been erased and the person is again wholly himself, one could call it a Fifth Stage Release.

But that is really **CLEAR**.

#### OPERATING THETAN

When a being once more has recovered his full abilities and freedom, a state much higher than Man ever before envisioned is attained. This state is called *OPERATING THETAN*.

# The Aims of Scientology

by

L. Ron Hubbard

*A civilization without insanity, without criminals and without war, where the able can prosper and honest beings can have rights, and where Man is free to rise to greater heights, are the aims of Scientology.*

*First announced to an enturbulated world fifteen years ago, these aims are well within the grasp of our technology.*

*Non-political in nature, Scientology welcomes any individual of any creed, race or nation.*

*We seek no revolution. We seek only evolution to higher states of being for the individual and for Society.*

*We are achieving our aims.*

*After endless millenia of ignorance about himself, his mind and the Universe, a breakthrough has been made for Man.*

*Other efforts Man has made have been surpassed.*

*The combined truths of Fifty Thousand years of thinking men, distilled and amplified by new discoveries about Man, have made for this success.*

*We welcome you to Scientology. We only expect of you your help in achieving our aims and helping others. We expect you to be helped.*

*Scientology is the most vital movement on Earth today.*

*In a turbulent world, the job is not easy. But then, if it were, we wouldn't have to be doing it.*

*We respect Man and believe he is worthy of help. We respect you and believe you, too, can help.*

*Scientology does not owe its help. We have done nothing to cause us to propitiate. Had we done so, we would not now be bright enough to do what we are doing.*

*Man suspects all offers of help. He has often been betrayed, his confidence shattered. Too frequently he has given his trust and been betrayed. We may err, for we build a world with broken straws. But we will never betray your faith in us so long as you are one of us.*

*The sun never sets on Scientology.*

*And may a new day dawn for you, for those you love and for Man.*

*Our aims are simple, if great.*

*And we will succeed, and are succeeding at each new revolution of the Earth.*

*Your help is acceptable to us.*

*Our help is yours.*

**OUT TECH  
AND HOW TO GET IT IN**

The term “OUT TECH” means that Scientology is not being applied or is not being correctly applied. When Tech is IN we mean that Scientology is being applied and is being correctly applied. By TECH is meant *technology*, referring of course to the application of the precise scientific drills and processes of Scientology. *Technology* means the methods of application of an art or science as opposed to mere knowledge of the science or art itself. One could know all about the theory of motor cars and the science of building them and the art of designing them and still not be able to build, plan or drive one. The *practices* of building, planning or driving a motor car are quite distinct from the theory, science and art of motor cars.

An auditor is not just a Scientologist. He or she is one who *can apply* it. Thus the technology of Scientology is its actual application to oneself, a preclear or the situations one encounters in life.

Tech implies USE. There is a wide gap between mere knowledge and the application of that knowledge.

When we say tech is out, we might also say, “While that unit or person may *know* all about Scientology, that person does not actually apply it.”

A skilled auditor knows not only Scientology but how to *apply* the technology to self, pcs and life.

Many persons auditing have not yet crossed over from “knowing about” to “applying”. Thus you see them fooling about with pcs. When a *skilled* auditor sees a critical pc he knows BANG—pc has a withhold and pulls it. That’s because this auditor’s tech is *in*. Meaning he knows what to do with his data.

Some other person who *knows* a lot of Scientology, has had courses and all that, yet sees a critical pc and then tries to add up everything he knows about pcs and stumbles about and then decides on a Zero pc it’s a new thing that’s wrong that’s never been seen before.

What’s the difference here? It’s the difference between a person who knows but cannot apply and a skilled technician who can apply the knowledge.

Most golfers know that you have to keep your eye on the ball just before, during and after you hit it. That’s the basic datum of powerful, long drives down the fairway. So if this is so well known then why do so few golfers do it? They have arrived at a point of *knowing* they must. They have not yet arrived at a point of being able to. Then their heads get so scrambled, seeing all their bad drives which *didn’t* go down the fairway, that they buy rabbits feet or new clubs or study ballistics. In short, not being able to *do* it, they disperse and do something else.

All auditors go through this. All of them, once trained, *know* the right processes. Then they have to graduate up to *doing* the right processes.

Observation plays an enormous role in this. The auditor is so all thumbs with his meter and unfamiliar tools he has no time or attention to see what goes on with the pc. So for 15 years lots of auditors made releases *without ever noticing it*. They were so

involved in knowing and so unskilled in applying, they never saw the ball go down the fairway for a 200 yard drive!

So they began to do something else and squirrel. There was the pc going release, but the auditor, unskilled as a technician for all his knowledge of the science, never saw the auditing work even though even the auditing done that badly *did* work.

Do you get the point?

You have to know your tools *very very* well to see past them! An auditor who squirrels, who fools about with a pc, who fumbles around and seldom gets results just isn't sufficiently familiar with a session, its patter, his meter and the mind to see *past* them to the pc.

Drill overcomes this. The keynote of the skilled technician is that he is a product of practice. He has to know what he is trying to do and what elements he is handling. *Then* he can produce a result.

I'll give you an example: I told an auditor to look over a past session of known date on a pc and find what was *missed in that session*. Something *must* have been missed as the pc's tone arm action collapsed in that session and ever afterwards was nil. So this auditor looked for a "missed withhold from the auditor in that session". The ordered repair was a complete dud. Why? This auditor did not know that anything could be missed except a withhold of the hidden overt type. He didn't know there could be an inadvertent withhold wherein the pc thinks he is withholding because the auditor didn't hear or acknowledge. This auditor didn't know that an item on a list could be missed and tie up TA. But if he did know these things he didn't *know* them well enough to *do* them. A second more skilled auditor took over and bang! the missed item on the list was quickly found. The more skilled auditor simply asked, "In that session what was missed?" and promptly got it. The former auditor had taken a simple order, "Find what was missed in that session," and turned it into something else: "What withhold was missed in that session?" His *skill* did not include applying a simple direct order as auditing looked *very* complex to him as he had so much trouble with doing it.

You can train somebody in all the data and not have an auditor. A real auditor has to be able to *apply* the data to the pc.

Importances play a huge part in this. I had a newly graduated darkroom photographic technician at work. It was pathetic to see the inability to apply important data. The virtues of ancient equipment and strange tricks to get seldom required effects were all at his fingertips. *But* he did not know that you wiped developer off your hands before loading fresh film. Consequently he ruined every picture taken with any film he loaded. He did not know you washed chemicals out of bottles before you put different chemicals in them. Yet he could quote by the yard formulas not in use for 50 years! He *knew* photography. He could not apply what he knew. Soon he was straying all over the place trying to find new developers and papers and new methods. Whereas all he had to do was learn how to wash his hands and dry them before handling new film.

I also recall a 90-day wonder in World War II who came aboard in fresh new gold braid and with popped eyes stared at the wheel and compass. He said he'd studied all about them but had never seen any before and had often wondered if they really were used. How he imagined ships were steered and guided beyond the sight of land is a mystery. Maybe he thought it was all done by telepathy or an order from the Bureau of Navigation!

Alter-is and poor results do not really come from not-know. They come from can't-apply.

Drills, drills, drills and the continual repetition of the *important* data handle this condition of can't-apply. If you drill auditors hard and repeat often enough basic auditing facts, they eventually disentangle themselves and begin to do a job of application.

## IMPORTANT DATA

The truly important data in an auditing session are so few that one could easily memorize them in a few minutes.

From case supervisor or auditor viewpoint:

1. If an auditor isn't getting results either he or the pc is doing something else.
2. There is no substitute for knowing how to run and read a meter perfectly.
3. An auditor must be able to read, comprehend and apply HCO Bs and instructions.
4. An auditor must be familiar enough with what he's doing and the mechanics of the mind to be able to observe what is happening with the pc.
5. There is no substitute for perfect TRs.
6. An auditor must be able to duplicate the auditing command and observe what is happening and continue or end processes according to their results on the pc.
7. An auditor must be able to see when he's released the pc and end off quickly and easily with no shock or overrun.
8. An auditor must have observed results of his standard auditing and have confidence in it.

## CASE REACTION

The auditor and the Case Supervisor must know the *only six* reasons a case does not advance. They are:

1. Pc is Suppressive.
2. Pc is ALWAYS a Potential Trouble Source if he Roller Coasters and only finding the RIGHT suppressive will clean it up. No other action will. There are *no* other reasons for a Roller Coaster (loss of gain obtained in auditing).
3. One must *never* audit an ARC Broken pc for a minute even but must locate and indicate the by-passed charge *at once*. To do otherwise will injure the pc's case.
4. A present time problem of long duration prevents good gain and sends the pc into the back track.
5. The *only* reasons a pc is critical are a withhold or a misunderstood word and there is NO reason other than those. And in trying to locate a withhold it is not a motivator done to the pc but something the pc has done.
6. Continuing overts hidden from view are the cause of no case gain (see number 1, Suppressive).

The *only* other possible reason a pc does not gain on standard processing is the pc or the auditor failed to appear for the session.

Now honestly, aren't those easy?

But a trainee fumbling about with meter and what he learned in a bog of unfamiliarity will *always* tell you it is something else than the above. Such pull motivators, audit ARC Broken pcs who won't even look at them, think Roller Coaster is caused by eating the wrong cereal and remedy it all with some new wonderful action that collapses the lot.

## ASSESSMENT

You could meter assess the first group 1 to 8 on an auditor and the right one would fall and you could fix it up.

You could meter assess the second group 1 to 6 on a pc and get the right answer every time that would remedy the case.

You have a list in the HCO Pol Ltr Form of 26 June 1965 done for Review. That covers the whole of any errors that can be made on a pc scouting both the auditor's application and the pc's reaction to the auditing.

When I tell you these *are* the answers, I mean it. I don't use anything else. And I catch my sinning auditor or bogged down pc every time.

To give you an idea of the simplicity of it, a pc says she is "tired" and therefore has a somatic. Well, that can't be it because it's still there. So I ask for a problem and after a few given the pc hasn't changed so it's not a problem. I ask for an ARC Break and bang! I find one. Knowing the principles of the mind, and as I observe-pcs, I see it's better but not gone and ask for a previous one like it. Bang! That's the one and it blows completely. I know that if the pc says it's A and it doesn't blow, it must be something else. I know that it's one of six things. I assess by starting down the list. I know when I've got it by looking at the pc's reactions (or the meter's). And I handle it accordingly.

Also, quite vitally, I know it's a limited number of things. And even more vitally I know by long experience as a technician that I can handle it fully and proceed to do so.

There is no "magic" touch in auditing like the psychiatrist believes. There is only skilled touch, using known data and applying it.

Until you have an auditor familiar with his tools, cases and results you don't have an auditor. You have a collected confusion of hope and despair rampant amongst non-stable data.

Study, drill and familiarity overcome these things. A skilled technician knows what gets results and gets them.

So drill them. Drill into them the above data until they chant them in their sleep. And finally comes the dawn. They observe the pc before them, they apply standard tech. And wonderful to behold *there* are the results of Scientology, complete. Tech is IN.

**OUT TECH**

(Additional Data on HCO Bulletin  
of 13 September 1965)

ALL THIS DATA COVERED AND EXPLAINED  
IN THE SAINT HILL SPECIAL BRIEFING  
COURSE TAPE OF 21 SEPTEMBER 1965

Note the 5 GAEs are also covered in Tape Lecture of 10 July 1963  
See also HCO Pol Ltr 21 September 1965, Issue II, "Auditor Estimation Test"

The five Gross Auditing Errors (GAEs) are:

1. Can't handle and read an E-Meter.
2. Doesn't know and can't apply Technical data.
3. Can't get and keep a pc in session.
4. Can't complete an auditing cycle.
5. Can't complete a repetitive auditing cycle. (Including repeating a command long enough to flatten a process.)

These are the only errors one looks for in straightening up the auditing of an Auditor.

The six things that can be wrong with a pc are:

1. Pc is Suppressive.
2. Pc is ALWAYS a Potential Trouble Source if he Roller Coasters and only finding the RIGHT suppressive will clean it up. No other action will. There are *no* other reasons for a Roller Coaster (loss of gain obtained in auditing).
3. One must *never* audit an ARC Broken pc for a minute even but must locate and indicate the by-passed charge at *once*. To do otherwise will injure the pc's case.
4. A present time problem of long duration prevents good gain and sends the pc into the back track.
5. The *only* reasons a pc is critical are a withhold or a misunderstood word and there is NO reason other than those. And in trying to locate a withhold it is not a motivator done to the pc but something the pc has done.
6. Continuing overts hidden from view are the cause of no case gain (see number 1, Suppressive).

**IN TECH**

In getting in Tech one need only locate in the auditor (or self as an auditor) which of the 5 GAEs are being committed and, in the pc, which of the above six is out.

There are *no* reasons exterior to the 11 given. To get Tech In, requires getting the 5 in for auditors and the six in for pcs and after that, watching the 5 for auditors and 6 for pcs, running standard processes.

If you look for other reasons, this is itself a gross goof. There are no others.

**E-METER DRILLS**

Having the data that Out-technology is the result of a lack of study, drill and familiarity, it is imperative that meter drills be done well.

As it is the Academy's purpose to train auditors, students must do the required meter drills for each level and must not resort to the use of a pen to represent the needle of an E-Meter.

Irrespective of whether a student is or is not a Release, these drills must be done. If a student should have a coach whose needle only floats, that student should request of the Supervisor another coach.

The state of Release can always be rehabilitated, so the Academy should not be overly concerned with the protection of Releases. Studying the mind and spirit of Man may be restimulative, but it is the only way through and out.

A real Roller Coaster of processing results is never because of restimulation caused by training, it is always the sole result of association with a Suppressive Person.

Don't back off in the training of auditors. Only a well trained auditor will eventually make it all the way to Clear.

*URGENT URGENT URGENT*

**RELEASE GRADATION  
NEW LEVELS OF RELEASE**

Further research has revealed additional data concerning Releases which makes it necessary to re-name the types of Release, or else deny preclears all the benefits available from states of Release.

As mentioned in earlier lectures there are several intermediate stages of Release between Level Zero and Level Five. I have finally isolated these and they agree with the Gradation Chart of Levels.

This changes also in some degree the upper levels of Academy training materials without actually adding any but only reassigning the same materials to different levels.

This discovery came out of a survey of the only things that could balk a case. These also are the main things an auditor has to be careful about in pcs. Further study revealed the state of Release to be available on each of these points and therefore, both to make Releases and better trained auditors, these were fitted in to the Gradation Chart in natural sequence as the dominant points stressed on each level.

The points are the same as those covered in the current "Out Tech" Bulletins and lecture.

They are:

Communication  
ARC Breaks  
PTPs  
O/Ws  
Continuous Overts

So as to minimize any upset in introducing these additional levels of Release we will cease to call Release by *stages* and call them by *Grades*. In earlier material and lectures the terms "1st Stage Release" indicated a person released anywhere between Level Zero and Level IV, a "Second Stage Release" indicated a Power Process Release, a "Third Stage Release" was one made by orientation processes and a "Fourth Stage Release" meant one made by R6 EW. This was before I found that the additional levels were important or obtainable. Without wiping out the meaning of these "stages", we will simply cease to use them to designate Releases and designate by GRADES. We will then use the exact processes of the grades that obtain the state of Release for the preclear and thus keep things straight.

This then is the new Grading:

<i>Type of Release</i>		<i>Type of Process</i>
Grade VII	—	CLEAR
Grade VI Release	—	R6 EW
Grade V Release	—	Power Processes
Grade IV Release	—	Service Facsimiles
Grade III Release	—	ARC Break Processes (old R-4-H renamed R-3-H)
Grade II Release	—	O/W Processes (including the "Joburg")
Grade I Release	—	Problems Processes (such as Probs Intensive or CCHs)
Grade 0 Release	—	Communication Processes

Any one of the above group of processes can (and should be) run to a Floating Needle (and not one command beyond it).

With auditors warned of the consequences of running beyond the state of Release and people easily rehabilitated to the state even if it is overrun, it will be found that the state is attainable at each level with smooth auditing.

This ties smoothly into training as a class of auditor is capable of making a class of Release.

Knowing why people Roller Coaster (Potential Trouble Source) and what an SP (Suppressive Person) is and by carefully handling training of auditors in accordance with the “Out Tech” materials we can easily attain these states for preclears.

The discovery is actually contained in the first material issued that calls attention to not further auditing Releases. They could have their ARC Breaks, PTPs and Overts handled. This when I followed it up showed that additional Release states existed for these types of phenomena.

There are some additional processes that can be run at certain levels and as these are proven out they will be added as alternate processes to the level. However, it will be found that when a preclear goes Release at a Grade, it will not be advisable to further audit him or her in that grade on an additional process once the phenomena of Release has been attained for that grade. It may be that if a pc fails to go Release on the recommended process for that grade, another process for *that grade* included under the type of process for that grade may be used. For instance, on Problems, the pc does not go Grade I Release in the regular buttons of a Problems Intensive. Other buttons may be found and used. Or the preclear may be run on “Rising Scale Processes” or another process listed for that grade, *all* toward the goal of making the pc a *Release from Problems*. You don’t run a pc on the next grade just because you couldn’t Release him on the lower grade. You run the additional processes of a grade until he releases at that grade.

At Grade Zero you run Comm Processes of whatever kind until you have a Grade O Release. That means a “Communication Release”. Then you do the same at Grade I and run *any* version of problems, that affects the person’s problems until you have a Grade I Release, a “Problems Release”.

Therefore you are releasing the person on certain *subjects* at each grade. The scale can then be written like this.

- Grade VII CLEAR — Bank Erased
- Grade VI Release — Whole Track Release
- Grade V Release — Power Release
- Grade IV Release — Habit Release
- Grade III Release — ARC Release
- Grade II Release — Overt Release
- Grade I Release — Problems Release
- Grade 0 Release — Communication Release

You can readily spot that under each of these headings we have several effective processes in addition to a principal process.

The most indicated processes for these levels are listed in the first list of grades above.

If a former Release went Release on, let us say, Problems, he can be rehabilitated on the Problems Release and then audited on any of the other Grades from IV down. In short, anyone who went Release on one of these Grades from IV down may not be audited further on that Grade but can be released on any one of the other Grades 0 to IV omitting only Grade I Release, Problems.

Of course from V (Power Processes) on up it becomes improbable to run a lower grade but it possibly could be done on some cases. However, a Grade VI Release (R6 EW) can't possibly be run below Grade VI. And on a Clear, there's no bank at all, only freedom.

It's also noteworthy that it's all but impossible to do Grade V, Power Processes, on a former Release that has not been fully rehabilitated on the lower grade.

In training it is therefore necessary to put a Meter in the hands of a student at Zero and have him able to clean Tone Arm action well at Level I, be able to detect and clean reads at II and not clean cleans, be able to assess at III and find Service Facs at IV.

This means also that at Zero you teach the student all about Communication, its formula and the Comm Cycle and TRs. At I you teach repetitive commands, Problems Intensives (assessed by an upper class auditor as we used to do) and the CCHs (which pull the person out of problems and into PT). At II you teach a student all about STUDY (the genus of overts is the *misunderstood*) and O/Ws. At III you teach the student *all* about ARC and ARC Breaks and assessment and how to do old R-4-H in full and expertly. And at IV you teach the student all about "Deds" and "Dedexes" (*History of Man*) and justified O/Ws and Suppressives and PTSs and how to find and run Service Facs. And at V you review the student and classify fully all lower grades. And at VI you teach the student all about R6 and how to do R6 EW and as the student moves to VII you teach Power Processing and give the student the final materials to go on to Clear himself.

As I promised to do some time ago, that neats up all training into a form that can be firm, finally published in eventual book form, and which puts the stress on the most important data in auditing.

Parts of the mind, Codes, scales, other background data can be woven into the proper levels without overloading any.

Obviously then, you teach the student the theory in the Certification course and the drills and key processes for the grade in the Classification course of the proper level.

This neats up both training and processing, releasing and clearing.

This does *not* prohibit one from handling ARC Breaks or PTPs or overts in rudiments at any level, really. Handling a rudiment is just getting the pc going. It puts the heavy processes that handle ARC Breaks in life and the past, the problems, etc each in its proper level.

The rule applies that you must not overrun one of these heavy grade processes and must halt it the moment a free needle appears on it. Or if the TA goes out of it and it hasn't released the pc and hasn't been overrun another process can be run for that grade to handle the subject of that grade.

But I think you will find that the primary process of the grade will do it uniformly if well audited.

Here then is the additional data that belongs on your Gradation Chart and modernizes it.

**RELEASE GRADATION**

**ADDITIONAL DATA**

(Supplements HCOB 22 Sept 65)

The Grades of Release as covered in HCOB 22 Sept 65 have been named and will be found, with auditor classes, in the ROUTING CHART of 26 Sept 65 being issued with "Auditor 10" in October 65.

These Grades and names are final, and they designate what is to be run on the pc to obtain the various states of Release.

A table follows:

<i>Grade</i>	<i>Name</i>	<i>Materials</i>	<i>Former Name</i>	<i>Where Done</i>
Grade VIII	Operating Thetan	R1 Drills	Operating Thetan	Saint Hill
Grade VII	CLEAR	Clearing Course	Clear	Saint Hill Solo
Grade VI Release	Whole Track Release	R6 EW	Stage 4 Release	Saint Hill Solo
Grade VA Release	Power Plus Release	Added Power Process	Stage 3 Release	Saint Hill by Class VII Auditor
Grade V Release	Power Release	Power Processes	2nd Stage Release	Saint Hill by Class VIIs
Grade IV Release	Ability Release	Service Facsimiles	None	Saint Hill or HGCs—Any Class IV or above
Grade III Release	Freedom Release	R3H ARC Breaks	None	SH or HGCs—Any Class III or above
Grade II Release	Relief Release	O/W Processes Missed w/hs Joburg	None	SH or HGCs—Any Class II or above
Grade I Release	Problems Release	Probs Intensive Any Problems Process Hidden Standards Book of Case Remedies	None	SH or HGCs—Any Class I or above
Grade 0 Release	Communications Release	Level 0 Processes (0-0, 0-A, etc)	Keyed-Out Clear Book I Clear	SH or HGCs—Any Class 0 or above
Ungraded	Scientologist	Assists of all types	None	Anywhere—any Qualified auditor or Scientologist

It is obvious then that GRADE CERTIFICATES FOR PRECLEARS lapse and are no longer issued and are replaced by Release awards, awarding "Grade \_\_\_\_ Release" when attained.

It is also obvious that as these states all existed before they were discovered then REHABILITATION OF FORMER RELEASE is addressed to rehabilitating these grades. When rehabilitation is done and the state recovered for the pc a "Grade\_ Release" *for the Grade actually recovered is issued.*

The SAME rehabilitation processes as issued are used for every type of Release.

Preclears were sometimes released in more than one grade and *Former Release is* rehabilitated (and sold) for each grade the pc was formerly released on.

All grades formerly attained must each one in turn be found and rehabilitated and each one is separately declared by Certs & Awards. Therefore a pc going release on a simple Qual Division check-out *must* be urged to get a rehabilitation *as there may be* other former release states there and for anyone rehabilitated as a former Release many other grades (as per chart above) are available to be audited up to.

-----  
REHABILITATION OF FORMER RELEASE

Technically you will find just these phenomena as given in the Routing Chart of Auditor 10 and the 22 Sept HCOB were the subjects of release.

Sometimes a pc was according to him released formerly on some other process or subject than those given on the Chart. You will however find that it relates to one of the Grade Subjects (Comm, Problems, O/W, ARC Brks, Service Facs, as the total of the Grades up to IV).

Example: Pc reads as Released on CCHs. OK, that was a Problems or a Comm Release. Why? It was because pc came to PT away from his problems of the past or because pc got into comm with the universe. Just decide which.

Example: Pc checks as Released on the button "Importance", run in brackets or concepts. This wasn't any Grade VI Release! It was probably Problems that were cleaned up or even O/Ws; therefore it was a Grade I or II.

You have to see which Release Grade it was and that's easy since the pc will tell you even without your asking that he "got over his ARC Breaks" or "His problems didn't worry him".

On old-time processes, R2-12, Rising Scale, even Engram Running, the point where Release was attained was because a Comm block, a Problem, an O/W, an ARC Break cleaned up. It wasn't the old process that determines the Grade the pc was formerly released at so much as *which* of the Grade subjects were relieved at the time.

ERROR

The biggest error you can make in rehabilitation of a former release is to grade him too high and by-pass available charge for further releasing.

In the earlier grades you can go from Grade IV Release to Grade 0 Release to Grade II, etc.

They are not entirely consecutive from 0 to IV. They are from V up.

For instance you rehabilitate a pc as Grade II Release (overts and withholds) by standard rehab approach. He is then declared a Grade II Release of course. However he can be run on Comm Processes to obtain Grade 0 Release or on Problems to obtain Grade I Release and better had be.

As we have formerly released so many on so many different processes the background for rehabilitation is ragged at this time.

New people can be moved up smoothly from Zero to IV. Older Scientologists will go up and down from Zero to IV.

You will find at times that somebody you are trying to audit to a certain Grade suddenly recalls being released at that Grade. The proper action then is rehabilitation of the Grade, not continuing to run the Grade.

All this is really quite simple.

The BIGGEST error is and will continue to be not noticing a state of Release occurring while running a process and then overrunning it and engulfing it. You don't always see the free, floating needle—it is at times brief.

## NERVES

For a while auditors will be very nery and err by underrunning processes and failing to flatten them. Some auditors will see a floating needle everywhere. Some will remain blind to them and grind on and on.

The thing to do is eventually find the happy medium. Don't underrun or overrun. Just notice when the process has produced a floating needle and carry on when it has not. And listen for those big pc upsurges in tone and halt there. And watch for the rising Tone Arm that goes to 5. Mostly it's an overrun. But some pcs who always were at 5 weren't ever formerly released and will need Power Processes to get them started. Power Processing also combines a lot of lower grade results. But it is hard to Power Process pcs who have never had lower grade releasing. The Power Processing becomes *very* lengthy. However, real tough cases can't attain lower grade release states and so have to be Power Processed at once instead of after properly attaining the lower grades. These "at once" Power Process cases, who have had no former release grade, are pretty Suppressive. However, some pcs' Tone Arms can be at 5 and the pc can act Suppressive if it all stems from unnoticed lower Grade releasing that was never observed or rehabilitated .

It is interesting that a Grade V Release (Power Process) cannot thereafter be processed below his Grade. But this is a new set of processes. You won't find any Former Release Grade Vs. They just never made Grade V before, even by accident.

Grade VI Releases (R6 EW) don't easily respond thereafter to Power Processes. But remember, that's a Grade VI *Release*, not somebody who came up with a few bits of R6 EW.

You can't run a Grade VII (Clear) on anything but he can be drilled on getting about the universe and getting familiar with himself and what he can do.

Grades VI and VII really cannot be successfully audited except by oneself—solo. If somebody else *did* audit them on a pc, the pc would not prosper. He'd be a fool and quite confused. These Grades (VI and VII) require knowledge. Without it it's pitiful. Auditors who have tried to audit raw meat pcs on these Grades have gotten into serious messes not with us but in their own activities all stemming from trying to make a baby be vice president in six easy lessons. Two such auditors blew Scientology—they themselves had no real data or release grade or even case gain yet they tried to use VI materials on raw meat and it all went wrong and the pcs today mostly snarl and natter. Their way is barred by their antagonism.

It takes a real thetan to stand up to VI and VII. Ask somebody who has been there.

I trust these new Grades I found will help straighten out a lot of things.

**CYCLICAL AND NON-CYCLICAL PROCESS  
CONCLUSIONS**

A Non-Cyclical Process (i.e. a repetitive process which does not cause the preclear to cycle on the Time Track) is concluded precisely as stated in HCO Bulletin 3 July 1 965.

A Cyclic Process—a repetitive process which *does* cause the preclear to cycle on the Time Track as in Recall type processes—must be concluded in Model Session as follows

“Where are you now on the Time Track?”

“I will continue this process until you are close to present time.” (After each command ask “When?”) When the pc is in PT, “That was the body of the session.”

### THE CONTINUING OVERT ACT

Pity the poor fellow who commits daily harmful acts.

He'll never make it.

A criminal pilfering the cash box once a week has himself stopped cold as far as case gains are concerned.

In 1954 I counted some noses. I checked up on 21 cases who had never had any gains since 1950. 17 turned out to be criminals! The other 4 were beyond the reach of investigation.

That gave me my first clue.

For some years then, I watched for no-gain cases and carefully followed up those that I could. They had major or minor criminal backgrounds.

This gave the 1959 breakthrough on the meter checks (Sec Checking).

Following it further since 1959 I have finally amassed enough histories to state:

THE PERSON WHO IS NOT GETTING CASE GAINS IS COMMITTING CONTINUING OVERTS.

While this sounds like a very good "out" for us, we assume that the auditor at least tried *something* sensible.

Today—the running of a pc by grades is a saving grace for merely "tough cases". Directors of Processing are doing well with the modern graded process approach, level by level, and the D of P Washington has just told me they were cracking cases with the lowest grade processes DC had never been able to handle well before.

So, given processing by Grades (the best case approach we've ever had), we crack the rough ones.

But will that be *all* cases?

There's still one. The case who continually commits overt before, during and after processing.

He won't make it.

One thing helps this, however.

You have seen the Ethics Codes appear.

By putting a bit of control in the Scientology environment we have enough threat to restrain dramatization.

The phenomena is this: The reactive bank can exert stress on the pc if it is not obeyed. Discipline must exert just a shade more stress *against* dramatization than the bank does. This checks the performance of the continual overt long enough to let processing bite.

Not everyone is a continuous overt committer by a thousand to one. But this phenomenon is not confined to the no-gain case.

The *slow* gain case is also committing overts the auditor doesn't see.

Therefore a little discipline in the environment speeds the *slow* gain case, the one we're more interested in.

The no-gain case, frankly, is one I am not panting to solve. If a fellow wants to sell his next hundred trillion for the sake of the broken toy he stole, I'm afraid I can't be bothered. I have no contract with any Big Thetan to save the world complete.

It is enough for me to know:

1. Where bottom is, and
2. How to help speed slow gain cases.

Bottom is the chap who eats your lunch apple and says the children did it. Bottom is the fellow who sows the environment with secret suppressive acts and vicious generalities.

The slow gain case responds to a bit of "keep your nose clean, please, while I apply the thetan-booster."

The fast gain case does his job and doesn't give a hoot about threatened discipline if it's fair. And the fast gain case helps out and the fast gain case can be helped by a more orderly environment. The good worker works more happily when bad workers see the pitfalls and desist from distracting him.

So we all win.

The no-gain case? Well, he sure doesn't deserve any gain. One pc in a thousand. And he yaps and groans and says "Prove it works" and blames us and raises hell. He makes us think we fail.

Look down in our Stihl files. There are actually thousands upon thousands of Scientologists there who each one comment on how wonderful it is and how good they feel. There are a few dozen or so who howl they haven't been helped! What a ratio! Yet I believe some on staff think we have a *lot* of dissatisfied people. These no-gain characters strew so much entheta around that we think we fail. Look in the Saint Hill files sometime! Those many thousands of reports continue to pour in from around the world with hurrah! Only the few dozen groan.

But long ago I closed my book on the no-gain case. Each of those few dozen no-gains tell frightening lies to little children, pour ink on shoes, say how abused they are while tearing the guts out of those unlucky enough to be around them. They are suppressive persons, every one. I know. I've seen them all the way down to the little clinker they call their soul. And I don't like what I saw.

The people who come to you with wild discreditable rumours, who seek to tear people's attention off Scientology, who chew up orgs, are suppressive persons.

Well, give them a good rock and let them suppress it!

I can't end this HCO B without a confession. I know how to cure them rather easily.

Maybe I'll never let it be done.

For had they had their way we would have lost our chance. It's too near to think about.

After all, we have to earn our freedom. I don't care much for those who didn't help.

The rest of us had to sweat a lot harder than was necessary to make it come true.

**MUTTER TR**

NAME: Mutter TR.

PURPOSE: To perfect muzzled auditing comm cycle.

COMMANDS: "Do fish swim?" "Do birds fly?"

POSITION: Student and coach sit facing each other a comfortable distance apart.

TRAINING STRESS:

1. Coach has student give command.
2. Coach mutters an unintelligible answer at different times.
3. Student acknowledges.
4. Coach flunks if student does *anything* else but acknowledge.

(Note: This is the *entirety* of this Drill. It is not to be confused with any other Training Drill.)

Course Packs

Issue V  
(Taken from and replaces  
HCO PL 10 November 1966)  
(Amended and reissued  
28 March 1974)

**SECURITY OF DATA**

Issued with a small amount of R6 data in 1964, three or four persons promptly used it on pcs knowing well it was forbidden. The pcs became ill or misemotional toward us. And just the day I write this (original writing 4 October 1965) I myself encountered a pc, very ill, who had had some original R6 data misused on her and did not suspect why her case and health worsened. She was not ready for it at all.

The issue earlier was a trial balloon, in a sense. I found certain persons (a small minority) were not up to responsibility for the material of April 1964.

Therefore our firm action will be that the moment we find the material of the Clearing Course or OT Course has escaped or been misused we will quickly trace the person who was insecure and cut off all further or any future Clearing or OT data issue to that person. The likelihood of independent discovery even with clues has proven to be nonexistent by actual review of auditors trying to find pieces of it when they had over half of the answers already.

You must realize that we suffer, all of us, from the misuse of knowledge concerning the mind at a very early period. To place this data near such people as psychiatrists or even states places them in a position to enslave people or repeat the original action and cave people in. A very small minority, receiving incorrect data, *did* promptly use it harmfully on others after April 1964.

Until we ourselves have climbed well out of the hole, we must safeguard the materials. Our case gains depend on it. And others could make our salvage of people impossible.

We do *not* safeguard these materials from any commercial consideration. Our futures, those of each of us and those of all Scientologists, depend on our keeping this material under lock and safeguarded from abuse until we are well away as a group and can handle things better as individuals as well as a group.

The road is wide open to anyone to come up the grades and obtain them. But it is shut to any who misuse them or injure their security.

Students of the Advanced Courses, the Advanced Course C/S and Supervisor, Ethics Officers and all HCO and Org staff have it in their personal interest to enforce security of materials to the limit.

These restrictions apply to no data up to Grade V.

From Power Processing on up the data is confidential. Up to there, you can release Scientology data as you always have—freely and to everyone. But this last bit is dangerous in unskilled or uneducated or unscrupulous hands and it is purely ours. It belongs to the Scientologists who keep the show on the road and must be available to them when they are ready.

**RELEASE REHABILITATION ERROR**

The most laughable error commonly being made in Release Rehabilitation is one in which the auditor discounts the value of his own auditing, keys out a lock in a pre-Scientology period and tells the pc he was a Release sometime before he was audited.

Auditors have declared pcs released when 9 days old or in 1942 or almost any earlier time. All through non-comprehension of the phenomenon of Release. It leaves some pretty puzzled pcs too !

“When you fell on your head when you were five you were a former Release because I now have a floating needle.” This auditor statement betrays a lack of comprehension of the phenomenon of Release.

Of *course* if you key out a major lock you may *today* get a Release State.

Because the needle floats today does *not* mean it was floating just before the pc fell on his head at the age of 5.

The pc today, with better understanding through auditing, can attain Release by keying out an incident which made him *worse* than normal.

His needle was *not* floating before he gagged on his bottle at the age of two. Blowing the lock of gagging on his bottle may now, added to his new study, the auditor’s interest and the *very powerful* technology of just basic auditing, make him go Release.

An auditor doing this is downgrading his own presence, skill and comm cycle. These, *added* to blowing a lock, make a Release today—it does not make a Release years before the pc was ever audited.

I’ve never seen a “natural floating needle” in the absence of auditing. I never expect to.

People are normal, worried, neurotic or psychotic. Hobby therapy, a change of surroundings, taking up tapestry can move a person upscale toward normal. They never moved anyone up to Release. Becoming happier doesn’t key out bank. It causes a person to occlude keyed-in bank—to “forget it”.

Only auditing keys out bank.

And an auditor doing rehabilitation, using a meter, using a comm cycle, using his knowledge of the mind is doing something that was not done before. And he makes Releases. He makes them *today* by keying out yesterday. He does not make them years ago. He is not auditing years ago. He is auditing today’s pc today and making today’s Release today.

Life keys out no locks. Trillions of years of living never undid a moment of it. Come off the mystic mystic kick that one can if he lives long enough experience himself to Release or Clear. That's trap.

Do not unduly complicate your actions in Release Rehabilitation by misassigning the pc's period of Release. If you do he'll be confused as the datum given him is false.

If you find in asking for a period of Release that you get pre-Scientology times, realize the pc has found something which if released would cause him to go Release today. You'd get the same response if you asked "What period would I have to contact to get you Released?" or "Give me a major time of key-in." Or "Give me a major time of change." Or do a Problems Intensive Assessment. Or do an ARC Break of former times assessment. You'll come up with the *same* date for it. Treat that period with rehab processes (or any of many other processes) and you'll get the phenomenon of Release right before your eyes.

So don't be telling pcs "You were a Release before you were ever audited. I see here you were a Release just before you fell in the garbage can at two." Both statements are false.

Lasting results are based on Truth alone.

Do what you're doing in rehabs. Just don't make a false assertion about it. Your auditing is pretty powerful. Don't discount it.

### SUPPRESSIVES AND HIDDEN STANDARDS

If you find a Suppressive on a case you will also find a chronic problem.

A problem is postulate—counter-postulate.

When a person is faced with suppression he is facing a counter-postulate.

A hidden standard is a problem a person thinks must be resolved before auditing can be seen to have worked. It's a standard by which to judge Scientology or auditing or the auditor.

This hidden standard is always an old problem of long duration. It is a postulate—counter-postulate situation—the source of the counter-postulate was suppressive to the pc.

Therefore you can always find a Suppressive by finding a pc's hidden standard and following it back to when it began. You will find there a Suppressive to the pc.

Similarly if you trace back the persons and groups who have been suppressive of the pc you will find a hidden standard popping into view.

The datum is—a case that betters then worsens (a “Roller Coaster Case” or a “Roller Coaster”) is always connected to a suppressive person.

The Roller Coaster is *caused* by the hidden standard going into action. “My eyesight didn't get better.” Locate a present time Suppressive on the case and trace that suppressive back to others earlier and you suddenly see the pc brighten up and (apparently for no reason) state his eyesight suddenly improved.

A case that betters and worsens (a Roller Coaster) is *always* connected to a suppressive person and will not get steady gain until the Suppressive is found on the case or the *basic* suppressive person earlier.

Because the case doesn't get well he or she is a Potential Trouble Source. To us, to others, to himself. You can't successfully audit that pc because there is a *hidden standard*. It makes the pc think he is no better. Suppressives also suppress the pc just like that so long as a hidden standard is present.

Find the Suppressive, make the pc handle or disconnect. Then audit the pc up to Problems Release by getting rid of the hidden standard *and* the basic suppressive.

Never audit a pc who is a Potential Trouble Source other than on the infallible, never varied datum, a Roller Coaster is always a PTS connected to an SP.

Note also that a person going clear is now a thetan with a new view of life and has *new* hidden standards (requiring the location of suppressives) which he had no reality on as a Man or later as a Release.

### CLEARING COMMANDS

Always have a dictionary in the auditing room with you. When running a process newly or whenever the preclear is confused about the meaning of the commands, clear the commands with the preclear, using the dictionary, if necessary.

It could take a long time to clear the command. The worse off the pc, the longer it takes.

Example:

Auditor is going to run 0-0 on the pc. Auditor reads the commands one at a time to the pc and asks the pc "What does this command mean to you?" From the pc's answer the auditor realizes that the pc has a confusion on the words "willing" and "talk". He tells the pc to look them up in a dictionary. The pc now understands "talk", but still seems slightly puzzled about "willing". Now the auditor could tell the pc to use the word "willing" in a few sentences. When the pc understands it, the auditor again gets the pc to tell him what the whole command means to him.

If necessary, the auditor could get the pc to define each word of the command to be used.

UNDER NO CIRCUMSTANCES IS THE AUDITOR TO EVALUATE FOR THE PC AND TELL HIM WHAT THE WORD OR COMMAND MEANS.

The worst fault is the pc using a new set of words in place of the actual word and answering the alter-ised word, not the word itself, (see HCOB 10 March 1965, "Words, Misunderstood Goofs").

### E-METER SENSITIVITY SETTING

When preparing for a session, an auditor sets up his E-Meter as per E-Meter Drill #4.

Rudiments are run at Sensitivity 16.

Lower level processes are run at Sensitivity 16.

Above Grade V sensitivity is run at 5.

*LEVEL I*

**PROBLEMS PROCESS**

This is an extremely fast process for use at Level I to handle problems. The process commands are simply:

“What is the problem?”

“What solutions have you had for that problem?”

One gets the pc to give his problem then runs TA off solutions. Then a new statement of the problem and more questions about solutions.

These commands are run in very strict muzzled style—no additives or diversions whatsoever.

L. RON HUBBARD

HCO POLICY LETTER OF 19 NOVEMBER 1965

Remimeo  
Students SH & Academies  
All Auditors

**AUDITING REPORTS**

An auditing report is the report *of a session given*, written during the session, on the session.

It is not a *copy* of the report of a session given. Or a report drawn from notes taken on a session given.

Auditing reports and worksheets should be neat as possible under the circumstances of a session.

They *must* contain pertinent data of the session given, i.e. BDs noted, TA and time notations, etc. These should be entered on the worksheet *at the time they occur*.

Later entries done to clarify bad writing where one was rushed or where a shorthand was done that is not clear to the D of P or Examiner, should be indicated as a later entry by using a different colored pen, etc.

A made-up report, or one done later to obtain neatness or completeness by an auditor who failed to keep a good session report *at the time of the session*, will be disqualified as evidence of auditor ability when presented to the Examiner and chitted by the D of P when turned in by an HGC auditor.

The whole idea of requiring an auditor report of a session is to have a record *of the session* for the D of P or Examiner, upon which to adjudicate what is going on with a PC. And a report done later is NOT a report of *the session* given.

The Summary Report, done after the session, should be a 15-minute or so summary and should be done immediately after the session, not a day later, and should be done as per policy on Summary Reports. A Summary cannot be substituted for the actual auditing report.

*LEVEL IV*

**SEARCH AND DISCOVERY**

Prerequisite: A Knowledge of Ethics  
Definitions and Purposes.

The process called Search and Discovery requires as well a good knowledge of Ethics.

One must know what a SUPPRESSIVE PERSON is, what a POTENTIAL TROUBLE SOURCE is and the mechanism of how and why a case Roller Coasters and what that is. All this data exists in Ethics policy letters and should be studied well before one attempts a "Search and Discovery" or further study of this HCOB. Ethics is not merely a legal action—it handles the whole phenomena of case worsening (Roller Coaster) after processing and without this technology an auditor easily becomes baffled and tends to plunge and squirrel. The *only* reason a case Roller Coasters after good standard auditing is the PTS phenomena and a Suppressive is present.

THREE TYPES

There are Three Types of PTS.

Type One is the easy one. The SP on the case is right in present time, actively suppressing the person.

Type Two is harder for the *apparent* Suppressive Person in present time is only a restimulator for the actual suppressive.

Type Three is beyond the facilities of orgs not equipped with hospitals as these are entirely psychotic.

HANDLING TYPE ONE PTS

The Type One is normally handled by an Ethics Officer in the course of a hearing.

The person is asked if anyone is invalidating him or his gains or Scientology and if the pc answers with a name and is then told to handle or disconnect from that person the *good indicators* come in promptly and the person is *quite* satisfied.

If however there is no success in finding the SP on the case or if the person starts naming Org personnel or other unlikely persons as SP the Ethics Officer must realize that he is handling a Type Two PTS and, because the Auditing will consume time, sends the person to Tech or Qual for a Search and Discovery.

It is easy to tell a Type One PTS from a Type Two. The Type One brightens up at once and ceases to Roller Coaster the moment the present time SP is spotted. The pc ceases to Roller Coaster. The pc does not go back on it and begin to beg off. The pc does not begin to worry about the consequences of disconnection. If the pc does any of these things, then the pc is a Type Two.

It can be seen that Ethics handles the majority of PTSs in a fast manner. There is no trouble about it. All goes smoothly.

It can also be seen that Ethics cannot afford the time to handle a Type Two PTS and there is no reason the Type Two should not pay well for the Auditing.

Therefore, when Ethics finds its Type One approach does not work quickly, Ethics must send the person to the proper division that is handling Search and Discovery.

## TYPE TWO

The pc who isn't sure, won't disconnect, or still Roller Coasters, or who doesn't brighten up, can't name any SP at all, is a Type Two.

Only Search and Discovery will help.

## SEARCH AND DISCOVERY

The first thing to know is that CASE WORSENING IS CAUSED ONLY BY A PTS SITUATION.

There never will be any other reason.

As soon as you doubt this datum and think about "other causes" or try to explain it some other way you no longer prevent cases from worsening and no longer rescue those who have worsened.

The second thing to know is that A SUPPRESSIVE IS ALWAYS A PERSON, A BEING OR A GROUP OF BEINGS. A suppressive is *not* a condition, a problem, a postulate. Problems and Counter-Postulates come into the matter but the SP as a being or group must always be located as a being or a group, not as merely an idea. As the technology is close to and similar to that of a service facsimile, a poorly trained auditor can get confused between them and produce a condition he says is the cause. Persons who cannot confront and who therefore see persons as ideas not people are the ones most likely to fail in doing Search and Discovery.

The third thing to know is that there can be an actual SP and another person or being similar to the actual one who is only an apparent SP.

An *actual SP* actually suppresses another.

An *apparent SP* only reminds the pc of the actual one and so is restimulated into being a PTS.

The *actual SP* can be in present time (Type One PTS) or is in the past or distant (Type Two PTS).

The Type Two always has an *apparent SP* who is not *the SP* on the case, is confusing the two and is acting PTS only because of restimulation, not because of suppression.

Search and Discovery as a process is done exactly by the general rules of listing. One lists for persons or groups who are or have suppressed the pc. The list is complete when only one item reads on nulling and this is the item.

If the item turns out to be a group, one does a second list of who or what would represent that group, gets the list long enough to leave on nulling only one item reading, and that is the SP.

An *incident* is not a person or a group.

A condition is not a person or a group. And a group is not a person, what you want is one being.

The E-Meter signs are unmistakable and the good indicators come in strongly when the actual SP is found.

This is the entire action. It is liable to the various ills and errors of writing and nulling a list, such as overlisting, underlisting, ARC Breaking the pc by by-passing the item or getting an incomplete list. These are avoided by knowing one's business as an Auditor and being able to handle an E-Meter with skill and confidence.

When one goofs on a Search and Discovery and finds the wrong actual SP the signs are the same as those where a Type Two is handled as a Type One—not sure, no good indicators, Roller Coasters again, etc.

The actual SP can be back track but it is seldom vital to go far out of PT and usual for a lifetime person to turn up.

Done correctly the pc's good indicators come in at once, the pc cognites, the meter reacts *very* well with Blowdowns and repeated long falls, and the pc ceases to Roller Coaster.

Care should be taken not to get too enthusiastic in going far back track on the pc as you run into whole track implants etc, easily handleable only at Level V. The pc can get "over whumped" if you go too far back and you'll wish you hadn't. This normally happens however, only when the pc has been ARC Broken by the Auditor, when the right item has been by-passed and the list is overlong, or when 2 or 3 items are still reading on the list (incomplete list).

Locating a Service Facsimile is quite similar to Search and Discovery but they are different processes entirely.

Only the doingness is similar. In Search and Discovery the end product is a *being*. In Service Facsimile the end product is an item or concept or idea. Don't get the two mixed.

### HANDLING TYPE THREE

The Type Three PTS is mostly in institutions or would be.

In this case the Type Two's *apparent SP* is spread all over the world and is often more than all the people there are—for the person sometimes has ghosts about him or demons and they are just more apparent SPs but imaginary as beings as well.

*All* institutional cases are PTSs. The whole of insanity is wrapped up in this one fact.

The insane is not just a bad off being, the insane is a being who has been overwhelmed by an actual SP until too many persons are apparent SPs. This makes the person Roller Coaster continually in life. The Roller Coaster is even cyclic (repetitive as a cycle).

Handling an insane person as a Type Two might work but probably not case for case. One might get enough wins on a few to make one fail completely by so many loses on the many.

Just as you tell a Type Two to disconnect from the actual SP (wherever found on the track) you must disconnect the person from the environment.

Putting the person in a current institution puts him in a Bedlam. And when also "treated" it may finish him. *For he will Roller Coaster from any treatment given, until made into a Type Two and given a Search and Discovery.*

The task with a Type Three is *not* treatment as such. It is to provide a relatively safe environment and quiet and rest and no treatment of a mental nature at all. Giving him a quiet court with a motionless object in it might do the trick if he is permitted to sit there unmolested. Medical care of a very unbrutal nature is necessary as intravenous feeding and soporifics (sleeping and quietening drugs) may be necessary, such persons are sometimes also physically ill from an illness with a known medical cure.

*Treatment* with drugs, shock, operation is just more suppression. The person will not really get well, will relapse, etc.

Standard Auditing on such a person is subject to the Roller Coaster phenomena. They get worse after getting better. "Successes" are sporadic, enough to lead one on, and usually worsen again since these people are PTS.

But removed from apparent SPs, kept in a quiet surroundings, not pestered or threatened or put in fear, the person comes up to Type Two and a Search and Discovery should end the matter. But there will always be some failures as the insane sometimes withdraw into rigid unawareness as a final defense, sometimes can't be kept alive and sometimes are too hectic and distraught to ever become quiet, the extremes of too quiet and never quiet have a number of psychiatric names such as "catatonia" (withdrawn totally) and "manic" (too hectic).

Classification is interesting but non-productive since they are all PTS, all will Roller Coaster and none can be trained or processed with any idea of lasting result no matter the temporary miracle.

Remove a Type Three PTS from the environment, give him or her rest and quiet, do a Search and Discovery when rest and quiet have made the person Type Two.

(Note: These paragraphs on the Type Three make good a promise given in *Dianetics: The Modern Science of Mental Health* to develop "Institutional Dianetics".)

The modern mental hospital with its brutality and suppressive treatments is not the way to give a psychotic quiet and rest. Before anything effective can be done in this field a proper institution would have to be provided, offering only rest, quiet and medical assistance for intravenous feedings and sleeping draughts where necessary but not as "treatment" and where *no* treatment is attempted until the person looks recovered and only then a Search and Discovery as above under Type Two.

**INFORMATION ON REHABILITATION**

The following despatch was sent to me by Len Small, Legal Officer WW:

“After reading SEC ED 212SH, I have realized that in London when I was CERTS & AWARDS, we were doing something grossly wrong which was responsible to some extent for our low income and probably ‘created’ missed withholds and by-passed charge, by false declares.

“The facts are that an old-timer would buy 5 hrs rehab and after having former release check and passed on to TECH, all the levels would be rehabbed at *once* using a Form 26 June. The auditor would e.g. ‘suggest declare 0-IV’, or ‘0, II-IV’. Most rehabs were done in under two hours. The pc would be declared if TA position OK, good indicators in, and pc agreeing that he had been rehabbed on those levels.

“On occasion, a pc would say ‘What about the release point I reached on 3M?’ ‘I went release on whole track processes. What does that make me?’

“If they knew how rehabs were done here at SH, and followed procedure, it would be a great boost to their statistic.

“I suggest that an HCOB stating explicitly how Rehabs must be done and declared will put stable data on line.

“From my own personal experience as a preclear, if a level has been left un-rehabilitated, the mass on that level tends to key in and make life uncomfortable. It was only when the auditor started listing the processes I had been run on that I really felt good and that I was getting somewhere.

“If all release points obtained in past processing were rehabbed, pcs would be a lot happier and less likely to key in subsequently.”

**CCHs**

(Replaces HCO Bulletin of July 5th, 1963, "CCHs Rewritten")

As per HCO Pol Ltr May 17th, 65, the CCHs are processes. They are *not* drills. The following revised rundown on the CCHs is to be used by all Auditors.

**CONTROL—COMMUNICATION—HAVINGNESS PROCESSES**

The following rundown of CCH 1, 2, 3 and 4 has been slightly amended. CCHs are run as follows:

CCH 1 to a flat point then CCH 2 to a flat point then CCH 3 to a flat point then CCH 4 to a flat point then CCH I to a flat point, etc.

-----

***No: CCH 1.***

**NAME:** GIVE ME THAT HAND. Tone 40.

**AUDITING COMMANDS:** GIVE ME THAT HAND.

Physical action of taking hand when not given and then replacing it in the PC's lap. Making physical contact with the PC's hand if PC resists. THANK YOU ending each cycle.

All Tone 40 with clear intention, one command in one unit of time. Take up *each new physical* change manifested *as though it were an origin* by the PC, when it happens, and querying it by asking "What's happening?" This two-way comm is *not* Tone 40. Run only on the right hand.

**AUDITING POSITION:** Auditor and PC seated in chairs without arms. Auditor's knees on outside of both PC's knees.

**PROCESS PURPOSE:** To demonstrate to PC that control of PC's body is possible, despite revolt of circuits, and inviting PC to directly control it. Absolute control by auditor then passes over towards absolute control of his own body by PC.

Never stop process until a flat place is reached. Freezes may be introduced at end of cycle, this being after the THANK YOU and before the next command, maintaining a solid comm line, to ascertain information from the PC or to bridge from the process. This is done between two commands, holding the PC's hand after acknowledgement. PC's hand should be clasped with exactly correct pressure. Make every command and cycle separate. Maintain Tone 40, stress on intention from Auditor to PC with each command. To leave an instant for PC to do it by own will before Auditor decides to take hand or make contact with it. Auditor indicates hand by nod of head.

Tone 40 Command = Intention without reservation. Change is any physical, observed manifestation.

**No: CCH 2.**

**NAME:** TONE 40 8c

**AUDITING COMMANDS:** YOU LOOK AT THAT WALL. THANK YOU.  
YOU WALK OVER TO THAT WALL. THANK YOU.  
YOU TOUCH THAT WALL. THANK YOU.  
TURN AROUND. THANK YOU.

Take up *each new physical change manifested as though it were an origin* by the PC, when it happens, and querying it by asking "What's happening?" This two-way comm is *not* Tone 40. Commands smoothly enforced physically when necessary. Tone 40, full intention.

**AUDITING POSITION:** Auditor and PC ambulant, Auditor in physical contact with PC as needed.

**PROCESS PURPOSE:** To demonstrate to PC that his body can be controlled and thus inviting him to control it. To orient him in his present time Environment. To increase his ability to duplicate and thusly increase his Havingness.

Absolute Auditor precision. No drops from Tone 40. No flubs. Total present time. Auditor on PC's right side. Auditor body acts as block to forward motion when PC turns. Auditor gives command, gives PC a moment to obey, then enforces command with physical contact of exactly correct force to get command executed. Auditor does not block PC from executing commands. Method of introduction as in CCH 1. Freezes may be introduced at the end of cycle, this being after the THANK YOU and before the next command, maintaining a solid comm line, to ascertain information from the PC or to bridge from the process, this being the acknowledgement "THANK YOU" after the command "TURN AROUND".

CCH 1 and CCH 2 were developed by L. RON HUBBARD in Washington, D.C., in 1957 for the 19th ACC.

**No: CCH 3.**

**NAME:** HAND SPACE MIMICRY

**AUDITING COMMANDS:** Auditor raises 2 hands palms facing PC's about an equal distance between the Auditor and PC and says "PUT YOUR HANDS AGAINST MINE, FOLLOW THEM AND CONTRIBUTE TO THEIR MOTION". He then makes a simple motion with right hand then left. "DID YOU CONTRIBUTE TO THEIR MOTION?" Acknowledge answer. Auditor allows PC to break solid comm line. When this is flat, the Auditor does this same with a half inch of space between his and the PC's palms. The command being "PUT YOUR HANDS FACING MINE ABOUT 1/2 INCH AWAY, FOLLOW THEM AND CONTRIBUTE TO THEIR MOTION". "DID YOU CONTRIBUTE TO THEIR MOTION?" Acknowledge. When this is flat, Auditor does it with a wider space and so on until PC is able to follow motions a yard away.

**AUDITING POSITION:** Auditor and PC seated, close together facing each other, PC's knees between Auditor's knees.

**PROCESS PURPOSE:** To develop reality on the auditor using the reality scale (solid communication line). To get PC into communication by control and duplication. To find Auditor.

Auditor should be gentle and accurate in his motions, all motions being Tone 40, giving PC wins. To be free in 2-way communication. Process is introduced and run as a formal process. If PC dopes off in this process Auditor may take PC's wrist and help him execute the command one hand at a time. If PC does not answer during anaten to

question “DID YOU CONTRIBUTE TO THEIR MOTION?” Auditor may wait for normal comm lag of that PC, acknowledge and continue process.

TONE 40 Motion = Intention without Reservation. Two-Way Communication = One Question—The Right One.

*HISTORY.* Developed by L. Ron Hubbard in Washington, D.C., 1956 as a therapeutic version of Dummy Hand Mimicry. Something was needed to supplant “Look at me. Who am I?” and “Find the auditor” part of rudiments.

*No: CCH 4.*

*NAME:* BOOK MIMICRY

*AUDITING COMMANDS:* THERE ARE NO SET VERBAL COMMANDS.

Auditor makes simple motions with a book. Hands book to the PC. PC makes motion, duplicating Auditor’s mirror-image-wise. Auditor asks PC if he is satisfied that the PC duplicated the motion. If PC is and Auditor is also fully satisfied, Auditor takes back the book and goes to next command. If PC is not sure that he duplicated any command, Auditor repeats it for him and gives him back the book. If PC is sure he did and Auditor can see duplication is pretty wrong, Auditor accepts PC’s answer and continues on a gradient scale of motion either with the left or right hand till PC can do original command correctly. This ensures no invalidation of the PC. Tone 40, only in motions, verbal 2-way quite free.

*AUDITING POSITION:* Auditor and PC seated facing each other, a comfortable distance apart.

*PROCESS PURPOSE:* To bring up PC’s communication with control and duplication (control and duplication = communication).

Give PC wins. It is necessary for Auditor to duplicate his own commands. Circular motions are more complex than straight lines. Tolerance of plus or minus randomness is apparent here and the Auditor should probably begin on the PC with motions that begin in the same place each time and are neither very fast nor very slow, nor very complex. Introduced by the Auditor seeing that PC understands what is to be done, as there is no verbal command, formal process.

*HISTORY.* Developed by LRH for the 16th ACC in Washington, D.C., 1957. Based on duplication. Developed by LRH in London, 1952.

**LOW TA CASES**

Low TA Cases (who go below 2.0) will not react to any processing but Power Processing.

The last power process is *all* that has ever been known to improve the low TA case.

Don't be optimistic if a case is found to go below 2.0, the **ONLY** remedy I have ever known is Power Processing flattened.

**E-METER DRILL COACHING**

The following was submitted by Malcolm Cheminais, Supervisor on the Saint Hill Special Briefing Course.

Here are some observations I have made on the coaching of E-Meter drills, which I feel could be of use:

1. The coach's needle is dirty. The student's out comm cycle has cut his comm in some way, but PRIOR to that the coach failed to flunk the part of the comm cycle that went out. Correct flunking by coaches equals students with no dirty needles.
2. If a coach's TA starts climbing on a drill and the needle gets sticky, it means that the student's comm cycle has dispersed him and pushed him out of PT. The coach is either ( 1 ) not flunking at all (2) flunking the incorrect thing.
3. The correct flunking by the coach of an out comm cycle, which has dispersed him and pushed his TA up, will always result in a TA blowdown. If there is no blowdown, the coach has flunked the wrong thing.
4. Needle not responding well and sensitively on assessment drills, although the needle clean. Coach has failed to flunk TR I (or TR0) for lack of impingement and reach.
5. Coach reaching forward and leaning on the table, means TR I is out with the student.
6. Student asking coach for considerations to get TA down, but TA climbing on the considerations—the coach is cleaning a clean, instead of flunking the out comm cycle, which occurred earlier and pushed his TA up.
7. Student getting coach's considerations off to clean the needle, but needle remaining dirty—student is cutting the coach's comm while getting the considerations off and the coach is not picking this up.
8. Students shouting or talking very loudly on assessment drills to try and get the Meter to read by overwhelm. The reason for this is invariably—"but I'm assessing the bank!" They haven't realized that *banks* don't read, only thetans impinged upon by the bank—therefore the TR1 must be addressed to the thetan. The meter responds proportionately to the amount of ARC in the Session.

**VITAMINS**

I have found that 600 milligrams of Vitamin E (minimum) per day assists Scientology processing very markedly.

Data on Vitamin E applied to other fields is available from Webber Pharmaceuticals, Ltd, 14 Ronson Drive, Rexdale, Ontario, Canada. An excellent popular book on Vitamin E in its various uses is available from booksellers. It is *Your Key to a Healthy Heart: The suppressed record of Vitamin E* by Herbert Bailey, published by the Shilton Company, Philadelphia. The Shute Foundation for Medical Research, London, Ontario, Canada, pioneered the subject and will give general advice.

In Johannesburg due to high altitude, no pc may be processed who is not taking at least 600 mg per day of Vitamin E.

The apparent action of this Vitamin is to oxygenate the blood and inhibit the body from pulling in mental masses due to oxygen-energy starvation.

In areas where it is against the law to recommend vitamins this HCO B does not apply.

Vitamin E, according to Bailey, is suppressed because it cures heart disease which furnishes 50% of the revenue of the U.S. medical doctor.

I read the book by Bailey and did some experimental work with Vitamin E with interesting success. Webber Pharmaceuticals has airmailed me further literature.

It is useless, I believe, to take less than 600 mg per day and lesser doses have little or no reaction on processing. One has to take it for two or three days before it begins to have any effect.

The most direct result is quite measurable on an E-Meter. Reads of the needle become longer. Tone Arm action increases.

It works by itself but is best taken with an old-time "Guk Bomb". The formula of the "bomb" is variable but is basically 100 mg of Vitamin B1, 15 gr of calcium, 500 mg of Vitamin C. If you add 100 mg of old-time nicotinic acid (not niacinamide) and take it daily it becomes "Dianazene" for radiation prevention. Don't include nicotinic acid in the formula with Vitamin E unless you are trying to get rid of radiation or radiation sickness. The nicotinic acid is not necessary to smother processing and will not assist it. 100 mg of Vitamin B1 lasts for only 47 minutes so far as processing is concerned. But it helps in general tone. Vitamin E does not have a quick reaction so far as processing is concerned, one merely takes it and as the days go by processing is easier to do. It doesn't wear out in a session, but you have to keep on taking it daily. 600 mg is the minimum. There is no maximum but some heart cases take up to 1,250. Shutes in treatment of disease recommend 400-600 mg per day for the average sized woman and 600-800 mg per day for the average sized male.

It doesn't seem to matter to processing whether the Vitamin E is "Alpha Tocopherol", synthetic or what. Just any Vitamin E apparently works.

Vitamin E assists a great many ills including diabetes and may have some effect on many others.

It, even with "Guk", will not by itself release or clear anyone. When dosage is discontinued what it "cured" might relapse. But while it is being taken one feels fine and there's no reason to stop taking it.

To get the best results one should probably take 600 mg and a Guk bomb each day, preferably after eating.

One person in a million is said to get an adverse “side effect” from taking Vitamin E but it is not fatal and this may not even be true. The “side effect” is said to be temporarily raised blood pressure.

If anyone makes this up into a single tablet be *sure* that the tablet is not pressed so hard that it won't dissolve easily in the stomach.

Dianazene (for radiation) fails utterly when all ingredients are pressed together into one tablet.

Vitamin E is generally available but sometimes has to be specially ordered. It is useless to buy it in less than 100 mg tablets. Preferably 200 mg tablets of it should be bought. However it is bought, just be sure there's enough of it (300 to 600 mg). Small quantities don't produce any effect at all, which is why the medicos earlier missed its value.

Anyone's auditing can benefit from it but at Levels VI and VII it becomes quite vital.

Oxygen causes the body to attract mental image pictures less. Carbon dioxide pulls mental images hard in on the body.

Vitamin E, oxygenating the body, acts mentally like taking oxygen. The body can go longer on less oxygen and becomes less exhausted when taking Vitamin E in sufficient quantity.

The body is of course a carbon-oxygen engine running at a temperature of 98.6 degrees F. There is possibly less oxygen in Earth's atmosphere than there was and the body runs better when it can better utilize what oxygen there is. Vitamin E assists it to do this and so it doesn't pull in mental masses. At least that's the theory I've been able to work out to account for the observed increase in E-Meter action in the preclear who is daily taking sufficient Vitamin E. When the vitamin is no longer administered, in about 24 hours the preclear begins to run less easily (same as before Vitamin E plus any auditing gain) and the needle read size returns to what it was before Vitamin E was used. When Vitamin E is again daily administered, in two days, meter behavior improves again.

I have not had time to do many series but the observational data is so marked that it's like proving stones are solid. One doesn't feel like repeating the experiment endlessly—it is so obvious.

A mental subject addressed reads *longer* (more reads) in the presence of Vitamin E than in its absence but clears more thoroughly, leaving less mental mass.

I only insist that persons in England on the Level VI and VII Courses should use Vitamin E and that Saint Hill preclears for Grade V be put on it and only forbid pcs to be processed without it in high altitude Johannesburg.

The cost of it is the pc's. No org is to supply it. Webber Pharmaceuticals, Ltd can probably direct one to better supplies or brands of it.

We are not in the Vitamin business or even in the health business. Anyone else using it in processing does so at his or her own choice. This HCO B is a release of scientific data.

Vitamins are food. They are not drugs. Processing under drugs is very bad. Some vitamins, however, help. And Vitamin E is a wonder.

# SCIENTOLOGY: A NEW SLANT ON LIFE

by L. Ron Hubbard

**Published  
December 1965**

Scientology: A New Slant on Life has been a steady best seller since it was first published at Saint Hill Manor. Here are twenty-eight of the best-loved essays written by L. Ron Hubbard between 1950 and 1959. Some were originally magazine articles, some were lectures, and some are favorite chapters from some of his books.

This is an excellent book for newcomers, for advanced Scientologists—for just anybody.

There is a wide range of subjects, as, for instance:

Two Rules for Happy Living	On Human Character
What Is Knowledge?	Playing the Game
How to Live with Children	Freedom versus Entrapment
On Marriage	Justice
The Man Who Succeeds	The Vocabularies of Science
Accent on Ability	How to Study a Science
Honest People Have Rights, Too	The Human Mind
On Bringing Order	Communication

Each one is food for thought and observation—an uncommonly pleasant way to attain new understandings.

160 pages, hardcover with dust jacket. Available from your nearest Scientology Organization or Mission, or direct from the publishers: Scientology Publications Organization, Jernbanegade 6, 1608 Copenhagen V, Denmark; or Church of Scientology Publications Organization U.S., 2723 West Temple Street, Los Angeles, California, 90026, U.S.A.

HCO BULLETIN OF 19 JANUARY 1966

Review Auditors  
Level III Students

**DANGER CONDITIONS**  
**TECHNICAL DATA FOR REVIEW AUDITORS**

To cure a disagreement one can:

1. Locate disagreements on certain subjects by listing a question such as "On .....what do you disagree with?" and locating the item with assessment and blowing it by inspection (itsa).
2. Locate former similar subjects the person disagreed with.
3. Locate things on the subject the person has not understood and get them clarified.
4. Locate earlier similar subjects the person has not understood and get them clarified.

IMPORTANT—if a person's attitude does not change after doing one of the above, do another or find another item using same process (listed above) as before.

A whole case will fall apart this way.

Compulsive by-passing can be handled by:

1. Doing disagreements as above.
2. Doing misunderstandings as above.
3. Finding persons similar to the person being by-passed, using standard listing and assessing as in all these.
4. Flattening a question "Who shouldn't be ignored?" (Don't run "Who has by-passed you?" or "Who should be ignored?" as these are out-of-ARC processes.)

Ordinary Comm processes also help of course and a good Grade 0 release helps. Higher Release Grades help. And Clearing, naturally takes care of the lot of course.

There is direct co-ordination between the state of a case (state of meter also) and the ability to follow a command line. The worse off the case (or meter) the less the person can follow a comm line. A person with a very high or very low TA and/or a stuck needle or an ARC Broke needle (floats but never responds and lots of bad indicators) should not only never be an executive but also will raise havoc in an org.

It is a standard review action in an org to handle such cases sent to Review by reason of having been part of Danger Condition assignments. In such cases, aside from usual Review actions, the above should be done.

**SEARCH AND DISCOVERY**  
**(ETHICS TYPE CASES, PTSs)**  
**S & D ERRORS**  
(Handling PTSs with S & D)

When you have a failed Search and Discovery, the following are incorrect or have been omitted:

1. Incorrect item (errors in listing or assessment, over or under listing, bad metering, poor question).
2. Person has not actually been made to disconnect from the SP by declaration in writing.
3. It was really an ARC Break, not an SP and ARC Breaks should have been looked for instead of SPs.
4. The SP found was refused by the Auditor or Ethics.

The golden rule of S & D also applies—if it isn't the correct person or group that was "found" the good indicators won't come in.

*So any* incorrectly done S & D (as above) will not result in a pc bright-eyed and bushy tailed. All S & Ds correctly done on a pc that is PTS result in remarkable recoveries magical to see. So don't blame S & D if it "fails". Blame the lack of skill in using it and the person who ordered it or did it should be retrained.

**SEARCH AND DISCOVERY DATA  
HOW A SUPPRESSIVE BECOMES ONE**

Search and Discovery is being made and auditors are finding on one person and another “Myself”. Well, just amongst us girls, of course, you are going to find it. One of the best reasons you are going to find it is that it is part of the R6 bank. The other reason you are going to find it is that after a person is totally overwhelmed by a Suppressive he assumes the valence of the Suppressive. And a person you would find that on has actually been pretty suppressive.

What you’re doing is, you are pushing S & D to a point where you are clearing suppression. It wasn’t intended to go that far.

If you were to ask the listing question however, “Name ‘Myself’“ or “Give ‘Myself’ a name”, you would then get the Suppressive.

But this is getting very adventurous, because it is part of the R6 bank. It is getting very adventurous to do anything about it. We seem to be happy about having “Myself”. I would just let them go right on being happy about it. With skill you probably could bring out the identity of this person whose valence had come over them. It would all depend on the auditor who is doing it. If I were doing it, I’d go ahead and break it down. But not a Class III auditor who is not sure what he is going up against, who is repeating the word several times, repeating the question, trying to check it to make sure the listing question is clean. Don’t you see, you are never going to get that listing question clean. That I assure you. That question can’t be listed out.

That is the mechanism of suppression overwhelming a person. Oddly enough you will only find it on persons who are suppressive and of course you’ve walked into the real mechanism of how does a Suppressive become a Suppressive? He becomes a Suppressive by taking over the valence of a Suppressive.

Then when you list it out you get “Myself” and this is compounded by the fact that it’s part of the R6 bank so you don’t dare do much with it but it will let a bunch of steam off the case.

With some very, very, very, very upstage auditing, very careful indeed, give them the auditing question once, then say, “Go on and answer the question” but never repeat it, never check the thing to find out if it’s a clean list—you probably would get at least one recent SP out of that combination. How we do that at that stage when I’ve not worked with it technically I would not be able to tell you, but I just know that it would be very risky. It makes me feel like maybe I shouldn’t do anything about it at all because it’s too risky, but I can see somebody getting messed up.

**THE MAIN TROUBLE IN S & D**

Your main trouble in S & D is much worse than that—it is simply an inability to assess. And auditors since time immemorial have had trouble assessing. They have two troubles in assessing. They underlist and they overlist. It’s almost an accident that an

auditor ever lists the right lists the right way. I'm not saying that sarcastically but it has been my experience in teaching auditors to assess that they have two faults, they underlist and they overlist.

If they do either one of these things, they are going to ARC Break the pc and then the list isn't going to be nullable because the pc is not responding to the auditor's voice as well, and it quite often was the first one on the list which is where they never looked. More fundamental than that is simply the problem of reading an E-Meter. Those technical facts are in the road of S & D.

### ASSESSING AN S & D

Actually an auditor who can assess can pass off an S & D so fast it would be like dealing cards done by a Monte Carlo Vingt-et-Un player; he could just roll them off left, right and centre. There's no real trouble in it. It's a very fast action. It all depends on how much you want to keep the pc under tension in the action, because an assessment isn't auditing to begin with.

You would start Session with, "Sit down, I'm going to assess you now. Do you have some answers to this question. Brr. Brr. Brr." And the pc says, "I want to tell you about ...." "All right, good, I'm glad you're going to tell me about that but right now I want some answers to this question." See? Then "brrrrr" on down and then you'll notice your needle relax. Then you say, "All right, now I'm going through this list." Ratatat, etc. "That's it, all right. Thanks very much." Pc cognites 10 minutes. Pc cognites and the Meter blows up and good indicators come in, and you've done an S & D. There is nothing more complicated than that.

You've got auditors who were trying to do an S & D in a session. You got them that are afraid the pc has already given it on the list. You got them that haven't learned how the Meter reacts when you've got a complete list. (A Meter just falls flat when you've got a complete list. The needle goes clean.) And you've got them that aren't sure that they've got any SP, and they just didn't see that the Meter did a surge on one of them. Then you get somebody who has overlisted and he's just ploughed the guy in, so he can't assess it back easily.

Then you get the fellow who had four of them fall. Certainly if you've got four falling there's two things that can be wrong at this point which makes it very difficult to run back. In one you have passed it. It's above the four which are falling. You've missed it, and the pc is simply discharging on it. And actually you can ask the pc which one was it and he'll say, "Well, it was Joe, of course." That's above the four. Practically every one after the right one will read, because it's actually blowing down all the time. He's no longer paying any attention to the auditor.

Then the other thing is you just haven't completed the list.

You have to make an opinion as to whether or not you've overlisted or underlisted. You can also pick up a dirty needle and an ARC Broken pc or protesty pc if you've gone by the right one.

Here are the evils of listing, and here are the evils of assessment showing up on S & D. They are simply auditor goofs—it's just lack of experience on the part of the auditor and lack of understanding of what he's supposed to be doing. But an auditor who can really assess can knock these things off. I'd spot what auditors can assess reliably, and I'd give them specialized jobs of that character that require listing. This is a very, very highly skilled action. You save a lot of time by pulling such an auditor back into specialty.

### REVIEW ACTION

In Review you have to do it sometimes when it's been done. So you have the additional answer of "How do you patch up an assessment that's already been goofed?" And "Where is the list that was lost?" You've got the problem of the list that

was completed out of session. “And I got home and was lying in bed . . .” and so forth. So in Review you always assume the pc continued the list after the session. If the pc is there as a flat ball bearing, you just automatically assume the pc thought of it afterwards or something. It isn't that the Tech auditor always got it.

I'll give you a tip in Qual. If you assume automatically that standard technology has not been applied, as your first gambit, in anybody that you're putting back together again, you'll about 99% be right. Somehow or other it slipped by in Tech. It slipped by. Somebody thought he did it. Somebody thought it was on the report. And therefore it looked like it didn't work or something. Something was there. And in all of my D of Ping I have not found it possible to detect all departures from tech by auditors. I've never been able to bat 1000 on that. Naturally, it's nearly impossible.

Technically, what you have to do doesn't mean that you have to invent technology because there are very standard answers to all these things.

## Psychotics

**L. Ron Hubbard**

In a footnote early in the book *DIANETICS: THE MODERN SCIENCE OF MENTAL HEALTH* I promised to publish material someday on the subject of institutional psychosis.

Recently I was fortunate enough to make a breakthrough on this subject. I had supposed that it would be necessary to undertake a considerable amount of research work in institutions to complete that which I began so many years ago. Researching recently on the reasons cases worsen after they become better, the answer tumbled out all unexpectedly and shed an entirely new light on the whole subject of insanity.

We are confronted in our modern society with a growing statistic for insanity. The number of psychotics is increasing, apparently, faster than the population growth. This could mean many things. It could mean that the psychiatrist was inept in applying what he knew, it could mean that there were insufficient numbers of psychiatrists, as they state, or it could mean, as they tell the legislators, that insufficient funds are being appropriated for the handling of psychosis. But the answer is apparently none of these.

If one wished to halt an epidemic it would be necessary to isolate the germ or virus which was causing it. This has become accepted procedure in the field of public health and is intensely effective. However, scientific methodology has never really been applied to the field of psychosis. It is such a frantic and desperate field that anyone associated with it has little time for careful consideration. The patients are in such dangerous condition, their families and friends are so desperate, that no-one could be expected to look for the actual cause of the situation. Thus the true facts concerning psychosis have been masked.

If you want to know why people are having trouble with something it is a good thing to look at the something. There you will find that things have not been defined. There is no true, acceptable definition of psychosis. The root word "PSYCH" refers only to a being or soul and the "OSIS" could loosely be defined as "the condition of". Therefore, in actual fact, it is not much of a word and if we look it up in the larger dictionaries we will find some long, complex dissertation or a sweeping generality which, frankly, would never be accepted in the physical sciences as a definition for anything, reflecting as it does wholly opinion. The word "psychosis" is not, however, completely inept as it at least indicates that it is something about a spirit or soul or its quality of animation.

Thus we can suspect, if the thing has never adequately been defined, that a great many misconceptions exist concerning it and furthermore, it would seem pretty obvious that if man had not defined what it was then he was very far from being able to identify the source of it.

We all have some idea of what we mean when we say “insane” or “crazy” or “nutty” but half the time we only mean that we don’t agree with the action. Things which are unreasonable to us or not understood we commonly refer to as “insane” or “crazy” or “nutty”. Thus man does not make a differentiation between what he disagrees with and an actual deteriorated mental state dangerous to the society and the individual.

So the first thing we can know about Psychosis is that it is becoming more widespread for two reasons:

1. Man has not adequately or workably defined it, and
2. The true source of it has not been identified.

There follows, naturally, a third fact that it has not been cured, quite obviously, because it is getting worse.

The whole subject has been so wrapped up in untested opinion that the ordinary scientist has found it quite unapproachable. The whole field bristles with authoritarian differences of view and bitter arguments.

The number of types of “psychoses” which have been listed over the years have become so great that classification has become relatively meaningless. Further, the names given mean different things to different schools of psychiatry.

Examining this sea of turmoil, human misery, mistreatment and failure, one would not ordinarily expect to find any ready solution. If one intended to find a solution, one could have expected to search for some years amongst the institutional population observing and taking notes until at last one had identified some common denominator of the illness which might lead to relief.

The orderly mind of a research scientist would, however, begin to take the problem itself apart on the basis of excluding those things which had not led to a ready solution, and the fact I am about to give you here should have been realized a long time ago.

Psychosis has not been solved because it has been studied in the wrong place. This is the first observation which might lead to a resolution of the problem. The source of psychosis is rarely to be found in the artificial atmosphere of an institution, therefore the problem was not earlier solved. After all, it didn’t occur *in* the institution. The person was sent there *after* it occurred. So the source of psychosis is obviously *outside* institutions. Further, a psychotic patient is seldom able to discuss accurately his life outside, so the institution would only give one evidence on the *results* of the source of psychosis; the source would be elsewhere.

The true psychotic is not always found in an institution. Behind those grey walls you mainly discover his victims. The true psychotic is one who causes hysteria, apathy, misconceptions and the reactions of stress in others. That is the identity of the being that is the source of psychosis.

He is, by and large, rather unfrontable as a being, talking in the widest generalities, and sounds quite sane unless you listen to him closely. Then it will be found that the reasons he gives do not quite make sense, but are all directed toward the necessity

of smashing or brutalizing anyone and everyone or selected groups, or material objects.

The actual psychotic is covertly or overtly destructive of anything the rest of us consider good or decent or worthwhile.

Sometimes such a being is “successful” in life, but the end result of his activities are what you would expect—total smash. Some notable examples were Hitler and Napoleon. Not even historians are quite brave enough to state that these two beings were totally, completely and incomprehensibly separated from reality and acted without good cause, reason or justification other than an obsession to destroy, ruin and bring misery to millions.

How Napoleon, for instance, justified beginning an attack on Russia too late in the year for his troops to operate there at all is very hard to see. Why Hitler had to destroy the Jewish people in Germany as a “necessary act in prosecuting his war against the world outside of Germany” has no other answer other than madness.

The true psychotic brings about an hysterical, apathetic, or deranged mental condition in others. He or she does it for “many good reasons”, does it for no reason at all, or doesn’t even notice that he is doing it.

The true psychotic worships destruction and abhors reasonable, decent or helpful actions.

Although history affords us innumerable examples, they are so common in the society around us that one does not have to go into a study of mass murderers to find them. The phenomenon is by no means rare and at the absolute minimum is 21/2% of the population.

This individual fills the institutions with victims, the hospitals with the sick and the graveyards with the dead. The statistics of psychosis are not going to lessen in the society until this type of personality is completely isolated and understood.

The first problem one confronts in identifying the true psychotic is that anyone detecting in himself, or herself, some destructive urge is likely to believe that he or she is psychotic. This is definitely not the case. One of the primary characteristics of the true psychotic is a total lack of introspection, a total irresponsibility to the pain or suffering of others, coupled with a logic which explains it all away but uses reasons which are not sensible to any of the rest of us.

An actual psychotic never for a moment suspects his madness. You and I have often wondered about our own sanity, particularly since nobody could define it, but a psychotic never does.

Further, he would not help his fellow man if his own life depended upon it—he would rather perish.

This being is difficult to spot because he does not, ordinarily, fling himself about and make scenes. He is often entirely emotionless, completely cold-blooded and apparently perfectly controlled. The control, however, is only apparent, as this being is in the grip of a force far more powerful than himself and is a thoroughly controlled being. He or she must destroy and must not help or assist in any way. Such a case is almost impossible to treat even when identified. They do not easily respond to therapy since their level of responsibility is too low to experience even hope or despair about themselves. Thus they never assist anyone seeking to help them, and indeed are far more likely to turn on any benefactor than to permit assistance by them.

Therefore, under the subject of psychosis, we have the actual psychotic and the victims of the psychotic. As long as we only studied the *symptoms* of the victims we could not discover the source of their difficulty.

Any theory is only as good as it can be proven or as it works. Theories are not good because they are appealing or because they are uttered by a famous name, but are only good if they are useful. The question is—do they lead to a resolution of the problem?

Therefore, does the theory that the psychotic is ordinarily not in the institution and that the institution contains mainly his victims open the door to a solution of psychosis?

One could be charged with “oversimplification”, or “total ignorance of the subject”, or “lack of experience”, but none of this would alter the fact that a solution which worked was the true solution to the problem.

I never promised to resolve the whole field of psychosis. I was only interested in institutional psychosis, for I do not think that an actual psychotic, by the above definitions, is likely to be salvaged even if one were able to apply the solution to his case.

-----

There are several reasons for this. The first and foremost is that he wouldn't sit still or stand still long enough. Another is that he isn't likely to be caught very easily and the third and most powerful is that he usually cannot be persuaded to forego his destructive actions long enough to receive any benefit from treatment.

Another reason is that when people are able to identify him, they do not wish to help him.

With those reservations the actual psychotic probably could be handled so far as technical actions are concerned, but these need to be applied before they can hope to work and the application of them in this particular case is prevented by nearly insurmountable difficulties of non-cooperation, disdain, contempt and a total lack of desire on the part of the actual psychotic to salvage himself.

Last and not least, any true psychotic can be counted upon to attack or attempt to destroy Scientology groups or activities as these help people. The source of such attacks traces back usually to pretty dangerous psychotics who aren't in institutions or even suspected, some in public places where not only Scientology groups suffer from their actions. Thus it isn't likely that Scientologists will do much to help cure them even if Scientology was in the business, which it is not.

It is easy to handle a large number of those persons who are the victims of actual psychotics. These are found in a majority in institutions as well as other places. Once again one has the problem of accessibility and communication but with those limitations institutional psychotics can be helped.

As I have said, the proof of any theory is its workability and it will take a considerable number of case histories to display the success of the observations. But if a person were sick from a certain germ and one knew what that germ was and one killed that germ and then that person became well, one would have to conclude that he had located the source of the illness.

The total indicated therapy cure for an institutional psychotic who is, after all, only the victim of an actual psychotic is to locate the actual psychotic in that person's life. There is a very magic response to this action. The technology now exists. It is called “Search and Discovery”.

It is commonly observed that whole families will exhibit psychotic tendencies. This is too great a generality. In such a case it should be stated “the whole family except *one*” exhibit very obvious traces of insanity. The actual psychotic is most probably that one. This person is continually performing acts, often hidden, atrocious in nature, which destroy the confidence and reality of those about him. The others exhibit the hysteria or apathy commonly associated with the illness Psychosis. They never once locate, until it is done for them, the actual source of their obsessions and confusions.

Whether or not a victim exhibits one or another symptom depends largely upon what has been done to the person. To catalogue these is not easy and indeed is not helpful. In each of the cases it is only necessary to find the source of menace (an actual psychotic) which has made them as they are.

I have not tried to give you this as a learned paper. It is rather a discussion of a subject into which man has made almost no inroad. Today a Class III Auditor could expect some success in the field of Institutional Psychosis providing they were well trained, and we permitted him to practice in that field.

Today in institutions the treatment of the psychotic differs from that administered in Bedlam centuries past in that today they have cleaner beds. Otherwise there is no real change. Instead of whips, they use electricity; instead of chains they use brain surgery to incapacitate the person.

A great deal could be done in the field of Institutional Psychosis and being able to isolate the germ in the society which causes Psychosis is only a small step in the direction of lessening the degree of psychosis in the society but it is at least a step in a definite direction.

And if this leaves you wondering whether or not you are insane, all you have to do is ask yourself the questions:

1. Have I ever helped anybody or wanted to?
2. Am I violently opposed to those who help others?

If you can answer “Yes” to 1 and “No” to 2 there is no slightest doubt about your sanity. You are quite sane and those times in your life when you have wondered about your own wits you were only in connection with an actual psychotic somewhere in your environment.

The actual psychotic sometimes climbs to high places in the society, as witness Napoleon and Hitler. But even so he can be identified. Those who advocate violent measures as the only means of solving problems—such as advocating war—those who are violently opposed to organizations which help others are easily identified.

And in the smaller world when you see a cold, indifferent smile to the agony of another, you have seen an actual psychotic.

We do not consider psychosis a field of practice in Scientology and Scientology was not researched or designed as a cure for psychosis or “substitute for psychiatry”. But in the course of research, I have discovered these things and found them to be workable. I trust they may be of some use to you who, who knows, may someday become involved with an actual psychotic or his victim and need the data.

**S AND D WARNING**

Search and Discovery, done incorrectly (incorrect SP found) can make a preclear ill within a week or two after.

Assessment is a very proper skill. There is a great deal written on it and many tapes.

The common errors of assessment (aside from the usual Gross Auditing Errors) are:

1. Too short a list
2. Too long a list
3. Clumsy or improper meter handling
4. List getting suppressed
5. Item getting invalidated
6. Pc being allowed too much Itsa
7. Pc getting ARC Broken by under or over-listing
8. Auditor not letting the pc have his item
9. Whole list going live because the item was by-passed earlier on the list
10. Auditor not looking for good and bad indicators to see if he was correct in his assessment.

When the right SP is found the good indicators flood in *and* the pc does not cave in in 36 to 72 hours.

The bug in S & D is that one can *almost* get the right item. An item can be found that is *nearly* the right one. If the nearly right one is accepted the pc will be doubtfully more cheerful and may insist this is *it*. The pc however is still not quite sure. Inevitably that is the sign of a *nearly* right item.

The real reaction to the correct person is an "Of Course!" no doubt about it reaction.

It is the action of *nearly* finding the right one that may make the pc ill in the next few days or a week. One has restimulated the by-passed charge of the right one without finding it.

Remember that the real Suppressive Person (SP) was the one that wove a dangerous environment around the pc. To find that person is to open up the pc's present time perception or space. It's like pulling a wrapping of wool off the pc.

The SP persuaded or caused the pc to believe the environment was dangerous and that it was *always* dangerous and so made the pc pull in and occupy less space and reach less.

When the SP is really located and indicated the pc feels this impulse not to reach diminish and so his space opens up.

The difference between a *safe* environment and a *dangerous* environment is only that a person is willing to reach and expand in a safe environment and reaches less and contracts in a dangerous environment.

An SP wants the other person to reach less. Sometimes this is done by forcing the person to reach into danger and get hurt so that the person will thereafter reach less.

The SP wants smaller, less powerful beings. The SP thinks that if another became powerful that one would attack the SP.

The SP is totally insecure and is battling constantly in covert ways to make others less powerful and less able.

Scientology flies into the teeth of an SP. One will go to the most extraordinary lengths to try to injure Scientologists or an organization or a staff member.

But SPs existed long before Scientology and finding the basic SP around the pc just because of Scientology or the pc is a Scientologist is in actual fact unlikely.

Childhood is the most fertile area in which to locate *the SP* on the case. A child is weak and at the mercy of adults. It is this fact alone that gave *all* the cures Freud ever stumbled onto. The analyst accidentally located an SP when his work was successful. But then he proceeded to overrun and restimulate the patient without erasing. In other words he would not let the patient have his item. An hour with a meter in the hands of an expert auditor who *can* assess correctly will produce everything the analyst or Freud ever hoped to achieve and will do it invariably compared to the small results analysts did achieve.

But if you get one *almost* right, and not get the really correct SP, then you get the same phenomena that dogged the analyst—the pc gets better for a moment and collapses.

I am not saying you can permanently injure persons. The analyst techniques operated far more restimulatively than our S & D. They made the person talk about it for years!

But you can still give a pc a nasty cold if you miss on an S & D.

So don't miss.

Do it correctly.

Find the correct SP.

It's all correct if you assess by the book—complete list, not too long or too short. Correct item on the list. Good indicators then in. And no relapse for at least 2 weeks.

That's how a *real* S & D is done.

*LEVEL 0*

**“LETTING THE PC ITSA”  
THE PROPERLY TRAINED AUDITOR**

The most painful thing I ever hope to see is an auditor “letting a pc Itsa”.

I have seen auditors let a pc talk and talk and talk and talk and run down and talk and run down and talk again until one wondered where if anywhere that auditor had been trained.

In the first place such an auditor could not know the meaning of the word ITSA.

The word means “It is a .....

Now how an auditor letting a pc talk believes he is getting a pc to spot what IT is is quite beyond me.

This pc has been talking all his life. He isn't well. Analysts had people talk for five years and they seldom got well.

So how is it supposed to happen today that a pc, let talk enough, will get well.

It won't.

The auditor does not know the very basics of auditing skills. That's all. These are the TRs.

An auditor who can't do his TRs can't audit. Period.

Instead he says he is “letting the pc Itsa”.

If by this he means he is letting the pc drive all over the road and in both ditches, then this isn't auditing.

In auditing an auditor guides. He gives the pc something to answer. When the pc answers the pc has said “IT IS A .....

If the pc answers and the auditor acknowledges too soon the pc tends to go into an anxiety—he has been chopped. So he talks more than he wanted.

If the pc answers and the auditor does not acknowledge, then the pc talks on and on, hoping for an acknowledgement that doesn't come, “runs dry”, tries again, etc.

So premature or late-or-never acks result in the same thing—the pc running on and on and on.

And they *call* it “letting the pc Itsa”. Bah! If a pc talks too much in session he either is getting cut off too fast by the auditor or hasn't got an auditor at all. It isn't

“Itsa”. It’s lousy TRs. (The one single exception is the pc who had years in analysis but even he begins to get better with proper TRs used on him.)

The proper cure is to drill the auditor until the auditor realizes:

1. The *auditor* asks the questions.
2. The pc says what is the answer, “It’s a .....
3. The auditor acks when the pc has said it to the pc’s satisfaction and
4. The auditor acks when the pc has finished saying “It’s a .....

And that’s Itsa.

Scientology auditing is a precision skill, not a gag blip goo slup guck blah.

1. The auditor wants to know .....
  2. The pc says it is .....
- 1.2.1.2.1.2. etc.

#### TECH SAVVY

Now an auditor who doesn’t know his technology about the mind and his processes of course never knows what to ask. So he or she simply sits like a lump of sacking hoping the pc will say something that makes the pc feel better.

A sure sign that an auditor doesn’t know an engram from a cow about processes is seeing a pc “Itsa” on and on and on.

In Scientology we *do* know what the mind is, what a being is, what goes wrong in the mind and how to correct it.

We aren’t psychoanalysts or psychiatrists or Harley Street witch doctors. We do *know*

The data about beings and life is there in Scientology to be learned.

It isn’t “our idea” of how things are, or “our opinion of” ....

Scientology is a precision subject. It has axioms. Like geometry. Two equilateral triangles aren’t similar because Euclid said so. They’re similar because they are. If you don’t believe it, look at them.

There isn’t a single datum in Scientology that can’t be proven as precisely as teacups are teacups and not saucepans.

Now if we get a person fresh out of the study of “the mystical metaphysics of Cuffbah” he’s going to have trouble. His pcs are going to “Itsa” their heads off and never get well or better or anything. Because that person doesn’t know Scientology but thinks it’s all imprecise opinion.

The *news* about Scientology is that it put the study of the mind into the precise exact sciences. If one doesn’t know that, one’s pcs “Itsa” by the hour for one doesn’t know what he is handling that he is calling “a pc”.

By my definition, an auditor is a real auditor when his or her pcs DON’T overtalk or undertalk but answer the auditing question and happily now and then originate.

So how to tell an auditor, how to determine if you have trained one at last, is DO HIS PCS ANSWER UP OR DO THEY TALK ON AND ON.

If I had an auditor in an HGC whose pcs yapped and yapped and ran dry and yapped while the auditor just sat there like a Chinese pilot frozen on the controls, I would do the following to that “auditor”:

1. Remedy A, *Book of Case Remedies*.
2. Remedy B, *Book of Case Remedies*.
3. Disagreements with Scientology, technology and orgs and Scientology personalities all found and traced to basic and blown.
4. A grind study assignment of the Scientology Axioms until the “auditor” could DO THEM IN CLAY.
5. A memorization of the Logics, Qs (Prelogics) and Axioms of Dianetics *and* Scientology.
6. TRs 0 to 4 until they ran out of his or her ears.
7. TRs 5 to 9.
8. Op Pro by Dup until FLAT.
9. A hard long study of the Meter.
10. The ARC triangle and other scales.
11. The Processes of Level 0.
12. Some wins.

And I’d have an *auditor*. I’d have one that could make a Grade Zero Release *every* time.

And it’s lack of the above that causes an “auditor” to say “I let the pc Itsa” with the pc talking on and on and on.

Scientology *is* the breakthrough that made the indefinite subject of Philosophy into a precision tool.

And pcs get well and go Release when it is applied.

**RELEASE GRADES**

(Replaces HCO Bulletin of 30 Aug 1965,  
"Release Stages")

There are five grades of Release. When one of these is attained the next one up can be run.

A preclear who has attained a grade of Release may not be run further on the processes of that grade or below or he will go back into his Reactive Mind.

All Releases however can have their problems handled, their withholds pulled, their ARC Breaks repaired *and* any Release at *any* grade can be audited on the exact processes of Release Rehabilitation.

The states of Release differ in that one is more stable than another.

The Reactive Mind (known also as the R6 Bank) can only be audited out by someone who is trained up to Class VI. When the Reactive Mind is fully audited out (erased completely), one has a Clear.

When a Clear has been refamiliarized with his capabilities, you have an Operating Thetan (an OT).

A Release, then, is pulled OUT of his Reactive Mind.

A Clear has fully erased his Reactive Mind.

An Operating Thetan is one who is Cause over Matter, Energy, Space and Time and is not in a body.

The degree and relative permanence of being pulled out of the Reactive Mind determines the state of Release.

There are numerous things that can pull one back into the Reactive Mind.

These are (1) Locks (2) Secondaries (3) Engrams (4) The Whole Time Track.

**LOCKS**

By reducing locks as in Levels 0 to IV, we then remove the ability of locks to pull the being back into his R6 Bank.

Locks are mental image pictures of non-painful, but disturbing, experiences the person has experienced. They depend for their force on secondaries and engrams.

Thus, one who has had his locks reduced is a **GRADE 0-IV RELEASE**.

**SECONDARIES AND ENGRAMS**

When a being has had the secondaries and engrams reduced, he is far less likely to be pulled into the Reactive Mind than if he has just had their locks reduced.

Secondaries are mental image pictures containing misemotion (grief, anger, apathy, etc). They contain no pain. They are moments of shock and stress and depend for their force on underlying engrams.

Engrams are mental image pictures of pain and unconsciousness the person has experienced.

When these are reduced, one has a GRADE V RELEASE.

#### THE WHOLE TRACK

Bits and pieces of the whole track remain after the locks, secondaries and engrams are reduced. These bits inhibit the being from recovering knowledge.

The Whole Track is the moment to moment record of a person's existence in this universe in picture and impression form.

When these bits are cleaned up a being is a GRADE VA RELEASE.

#### THE REACTIVE MIND

When the pc has taken the locks off the Reactive Mind itself, using R6EW, he attains GRADE VI RELEASE.

#### THE REACTIVE MIND

When the entire Reactive Mind has been erased and the person is again wholly himself, one could call it a GRADE VII RELEASE.

But that is really CLEAR.

#### OPERATING THETAN

When a being once more has recovered his full abilities and freedom, a state much higher than Man ever before envisioned is attained. This state is called *OPERATING THETAN*.

HCO POLICY LETTER OF 10 FEBRUARY 1966  
Issue II

Remimeo  
Tech Hats  
Qual Hats  
Ethics Hats

**TECH RECOVERY**

My study of a Nov 1965 plummeting HGC Completion Statistic indicates certain policies are necessary in all HGCs and Qual Divisions.

The following errors were found:

1. The HGC ceased to look for former release grades to rehabilitate and ignored opportunities to do so on the basis that “outer orgs have rehabbed them all already”. This came out in the Comm Ev held on a D of P of that period. Of course, if the HGC failed to rehab earlier grades (or earlier life overruns) it could achieve no later grades or Grade V. This alone would have ended completions promptly on all grades and wiped out the graph.

2. Invalidation of the appearance of a free needle and invalidating any auditor who “thought he saw one”. This wiped out all release attainments and made for total overrun of all pcs of all grades. This error existed for 15 years so it is not surprising that it got back in again.

3. Whenever an overrun occurred, “rehabilitation of it” was done by running *different* new processes instead of standard rehab routine as in HCO Bs, i.e. doing ARC Break, PTPs, Rudiments, anything but a real rehab of that process that was overrun.

4. Abandonment of standard tech in favor of unusual solutions. This is always present when a collapse of Tech occurs.

5. One SP was found in the middle of all this but after his departure the statistic did not recover so one can assume another SP was in the middle of it still or that the HGC remained PTS and didn’t separate from the SP found because he was so convincing, so reasonable and so persuasive as to why a Tech statistic must remain down.

-----

It is interesting that (1) above—Ceasing to rehab lower grades—would be absolutely fatal to any upper grades. Therefore this becomes policy:

**NO UPPER GRADE OF RELEASE MAY BE BEGUN NEWLY ON A PC UNTIL ALL LOWER GRADES ARE FULLY REHABBED TO FREE NEEDLE. THIS APPLIES TO ALL GRADES 0 TO VII.**

Regarding (2)—Invalidation of what a free needle is—and thus running past all free needles, let it be noted that this is an Auditor’s Code Break—continuing a process that has ceased to produce change—and is therefore a crime. This was wrong too long to be allowed to go wrong again. Thus we get the policy:

**AN AUDITOR WHO HAS BEEN FOUND TO HAVE OVERRUN A FREE NEEDLE ON A PRECLEAR MUST BE GIVEN AN ETHICS CHIT; AND IF THE ACTION IS SEVERAL TIMES REPEATED, ETHICS MUST ORDER A FULL REVIEW OF THE AUDITOR’S CASE INCLUDING AN EYESIGHT TEST AND CONDUCT A THOROUGH ETHICS INVESTIGATION AND HEARING.**

Note that a Mark V Meter run with too high a sensitivity does not give a marked change when a needle floats. Thus sensitivity must be reduced in ordinary running and increased only to get in rudiments. Then a free needle becomes more visible. A Mark V cranked up to 128 sensitivity looks like a floating needle all the time at a casual glance on most pcs. Sensitivity 5 is ample.

Also, meters go out of 5,000 ohm calibration and don't read on the M and F "Clear" reads and change of electrodes can change M and F "Clear" reads.

A free needle, if a process is overrun, vanishes with just one extra command so an auditor must be *alert*.

Please *also* note that this has been part of the Auditor's Code for ages—running past a flat point of a process has been forbidden since the first formulations of the Auditor's Code.

-----

Regarding (3)—Rehabilitation by using other processes—the HCO Bs on rehabs are very explicit. To run *another* process would clobber the pc. Thus we get the policy:

REHABILITATIONS MUST BE DONE BY REHABILITATING THE PC ONLY ON THE PROCESS OVERRUN AND ONLY BY STANDARD HCO BS ON REHAB PROCEDURE.

Re (4)—Unusual solutions—we get the policy:

ANY AUDITOR ACCEPTING AN UNUSUAL SOLUTION WITHOUT FILING A JOB ENDANGERMENT CHIT OR FOUND USING AN UNUSUAL SOLUTION MUST BE CHARGED WITH A CRIME AND GIVEN AN ETHICS HEARING. FAILING TO REPORT AN UNUSUAL SOLUTION ADVISED OR USED IS ALSO SO HANDLED. AN UNUSUAL SOLUTION IS ONE EVOLVED TO REMEDY AN ABUSE OF EXISTING TECHNOLOGY.

On (5)—Statistic failing to recover after an SP is spotted in a department gives us the 2 policies:

WHENEVER AN SP IS DISCOVERED AND DECLARED IN AN ORGANIZATION ALL HIS ASSOCIATES IN THAT PORTION OF THE ORG MUST BE CHECKED OUT FOR OR GIVEN AN S & D.

And

WHEN AN SP IS DISCOVERED IN AN ORGANIZATION, IS DISMISSED OR REMOVED AND THE STATISTIC DOES NOT RECOVER, ANOTHER SP MUST BE LOOKED FOR.

-----

It is noted that the general condition of the Completion Statistic of Dec 65 to Jan 66 could be attributed to the above gross errors.

It is now certain that (1) Rehabilitation of earlier grades, (2) Free Needle and (3) Rehabilitation by standard practice are primary targets in our technology for anyone seeking to mess it up and that unwitting tampering with these three things and lack of HCO Enforcement on them will reduce HGC statistics and prevent their recovery.

Of course one could also go mad in the opposite direction—( 1 ) rehabilitate earlier grades endlessly on a pc regardless of how many times a free needle had been obtained, (2) call any loosening up of a needle a free needle and (3) refuse to even 2-way comm with a pc under repair for overrun for fear it violates standard procedure for rehab.

The middle course is the correct course in this case. Relax and just be *very* sure the pc has been *properly* rehabbed to free needle on each grade up to the one one is

going to start by demanding the awards of release that were granted and if these weren't ever awarded, then do the rehabs necessary grade by grade. The only sticky point in this is that if a pc had ever been run on a higher grade without rehab of a lower, one must rehab "from the top down" at times, tackling the highest overrun first, but nevertheless doing all of them that were by-passed eventually.

The way to recognize a free needle is watch for one. When it happens you will see one. Then you will never afterwards wonder. The free needles available on a case can *all* be swallowed up by a failure to rehab all grades ever by-passed or overrun. If no free needles show up on a case at all then partially rehab any grade available for rehab back and forth until one has one of them go free needle and then get a free needle on the remainder. Life can also be an overrun and a pc never audited will respond to a rehab of "something overdone". This doesn't mean the pc *went* release before Scientology—it means that *purpose* overrun then jams—rehab of life situations of overrun consists of hitting the *purpose* that was overrun and when this is hit, the pc goes release in PT and was not a release in the past. An example is an overrun located in 20 AD when the person, alert to Christianity, decided to be good, made it and then *overran* it for 1945 years. When the *purpose* was found (to be good) and dated and the overrun spotted the needle went free. Rough auditing, bad TRs, "letting the pc Itsa", etc, can swallow up free needles. Also a totally ARC Broke meter that won't read at all with bad indicators all over the place won't record a read, looks sometimes like a floating needle, the difference being the pc has total bad indicators—sour, mean, sad, etc. A free needle occurs most often after a big cognition and the unskilled auditor looks *at the pc* who is being bright and interesting and just doesn't see the needle float, asks more questions and overruns, and the free needle vanishes—when a pc is cogniting, *look at the meter* not the pc. And the instant the TA starts up and the needle goes sticky suspect an overrun and check.

As for doing something else rather than Standard Procedure for rehab, plain ignorance can cause it. The auditor's desire to help the pc if unaccompanied by solid tech background leads to wild efforts, new processes and anything but cool standard procedure.

When the person checking out pcs is also the Case Supervisor, unusual solutions creep in. The most errors I've seen made by a Case Supervisor were made after he had seen the pc or talked with the auditor. Cases have to be run by report only and auditors have to be supervised and their sessions listened to by somebody else besides the Case Supervisor. Tech is Tech. There is such a thing as Standard Tech. Pc wild tales and hollow eyes and auditor hobbyhorses have to be kept off Case Supervisor lines. So there must be a person who checks out pcs and supervises auditors *and* their auditing *performance* but who never opens his or her face to suggest instructions about the pc and only writes down that the auditor is rough or the process is flat or the process is overrun. The Case Supervisor lives in an Ivory Tower. Sounds strange but unless it's done that way, wild departures from Standard Rehab Procedure and from Standard Tech in general will occur. Hell, all psychiatry went down that drain—the desperate patient, the desperate measures. Squirrelling stems from the Case Supervisor being the auditor supervisor and the pc interviewer. Oil, water, being in two divisions, Commies and Fascists, dogs and cats, won't mix. Neither will the personal contactor of auditors and pcs and the Case Supervisor ever successfully stay crossed. The individual practitioner breaks down only because he does both auditing and Case Supervision. Auditing is an organization action which is why today we have Field Staff Members and HGCs.

-----

Additional notes of things discovered in the investigation of the plummeted statistic on Completions were:

1. Auditors rabbiting out of uncertainty and so stumbling past End Phenomena and floating needles.
2. Case Supervisor getting auditors to ask leading questions on Pr Pr 2—"Ask the pc if he is interested in Medical Practices."

3. D of P: "Find out what the needle is floating on."
4. Case Supervisor: Told auditor that a floating needle was not the End Phenomenon of a Process in which "the TA had to be run out".
5. Lack of knowledge and understanding of the Technology and not knowing the difference between such things as Anaten, Secondaries and Engrams by Case Supervisor, D of P, and so confusing auditors.

-----

Of course the one thing one can't technically overcome is an SP keeping an area messed up. His case doesn't improve because of his intentions and overts and fear of people getting better or being bigger than he. When an SP dominates an area, only Ethics actions can handle.

The *primary* indicator of the presence of an SP in an org is a plummeting statistic immediately after he starts handling a portion of it.

Indifferent leadership, even inaction, can't drive a statistic down. Only active suppression can.

So watch the statistics and don't get reasonable when they fall. Either outside the org suppression has been brought down on that portion of the org, making it PTS or there is an SP there. The final answer is what happened just before the statistic fell. If a new appointment was made and it fell, unappoint it *fast*. If nothing cures the down statistic find the SP or handle the PTS situation because one or the other is *there*.

Completions stayed down for 15 years. Then we found auditors never noticed free needles. Now for Heaven's sakes, 15 years was enough. Don't repeat the error!

It *does* work you know.

## FREE NEEDLES, HOW TO GET THEM ON A PC

Free needles can be obscured *only* by overruns and auditor goofs in the rehab session and ARC Breaks in past auditing.

When a TA goes up or is up it means an overrun in life or on a process or grade of release.

The only place you can't get an overrun is at Grade VII. All grades below that are subject to overrun.

Life subjects are subject to overrun before Scientology. The mechanism is this: one conceived a purpose. He or she succeeded in it, then kept on and overran it. In auditing one hits the purpose and the overrun of it and gets a free needle on it. That doesn't mean the person was a release then. It means that the spotting of the purpose and the overrun by auditing produces a free needle *today*.

It may be necessary to find whole track overruns on some pcs in rehabilitation of grades. If a lot of levels have been run past free needle it may be necessary to take apart the mess like a bundle of yarn to get the first free needle. In such a case one rehabs any grade *the pc has been run on* that the pc can remember. One handles this briefly until the pc is happy but not necessarily to free needle. One then finds another overrun, does the same. One goes on and on looking for moments the pc felt good about processing at one or another time. If you keep this up, suddenly you will see a free needle on the pc! Establish what grade it is free on, then quickly get the needle free on the remaining overrun grades (but not grades pc was never run on). It may be necessary to take into account a whole track overrun of a purpose or even the purpose to get release, clear or OT.

It is all very quick, deft auditing, very much *on* procedure using standard rehab tech—but no repetitive grind.

-----

You won't see a *freeing up* of a needle unless you set your sensitivity on a Mark V to a stiff needle for the pc. You can increase sensitivity or decrease it as the pc progresses but by setting the sensitivity so the needle is pretty still and stiff you *will see easily* a freeing up of the needle and *then* a free needle. Using sensitivity 128 will obscure every free needle as the needle is too loose already for the auditor to see any change.

-----

Pcs are most apt to go free needle after a big cog. So don't be so engrossed in looking at the pc during cognitions. Keep an eye on that needle. And if it goes free, don't ask anything else. Just gently give the pc a "That's it" and *without a chop* of comm, ease the pc off to "Declare?" in Qual. (Or if a field auditor, start the next grade. )

-----

Gently, gently, smooth TRs get you free needles.

A dirty needle is *always* caused by auditor chops, flubs, etc. You can always trace a dirty needle right back to a TR error by the auditor. If a needle goes dirty in a rehab session, get the List 1 out right now and quickly find why. It's always an auditor goof on the TRs or tech procedure.

-----

Rehabs are not a substitute for processes. If a grade hasn't been *run*, *you* can't rehab it of course.

In rehab, never use a new process to cure an overrun. Rehab the process that was overrun, not new ruds.

And see HCO Pol Ltr 10 Feb 1966 on this subject.

-----

You can get free needles on pcs. It just requires standard TRs, standard tech, standard rehab *and wanting to get one* and letting a pc have one.

**THE "DANGEROUS AUDITOR"**

We long have had a term for an auditor who consistently did things that were upsetting to a pc's case. We call this a "dangerous auditor".

There are certain exact specific actions or omissions that make such an auditor dangerous.

These are:

1. Breaks the Auditor's Code or ignores it as "only applying in certain cases".
2. Audits past floating needles or directs additional auditing on that process when a floating needle has occurred.
3. Ceases to audit a process before the needle has gone free.
4. Starts a new grade of release without rehabilitation or making sure at least by record that an earlier grade has been rehabbed and was not overrun.
5. Does not locate the right SP on S & D but over or under lists or misses while assessing.
6. Goes on auditing the pc after an ARC Break without caring for the ARC Break (and believes it possible or usual to continue past one).
7. Consistently has hostile and derogatory opinions about his pcs.

These are the really dangerous points that make an auditor who does them dangerous.

(This list is composed by tracing back upset cases to the errors which made the upset.)

An auditor who merely makes the five Gross Auditing Errors is just a bad auditor. (See HCO B 21 Sept 65 "Out Tech".)

A dangerous auditor often seems to be quite accomplished, but does the above. On some pcs he seems to get away with it and so will argue the virtue of his approach or violations. But on the next pc he doesn't and has a mess on his hands.

A "careful" auditor is not necessarily not dangerous. One doesn't audit carefully. One audits with a relaxed competence that follows the rules and avoids the errors listed above.

There is no compromise for knowing one's business.

Most auditors, when they are trained and no longer make the 5 Gross Auditing Errors, become very excellent auditors and do a fine job and I am proud of them.

*SCIENTOLOGY II*

*PC LEVEL O—IV*

**DEFINITION PROCESSES**

The first thing to know about DEFINITION PROCESSES is that they are separate and distinct and stand by themselves as processes.

In *The Book of Case Remedies* we find on page 25 REMEDY A and REMEDY B.

These two remedies *are* A and B because they handle a primary source of worry to supervisors *and* auditors.

**AUDITING STYLE**

Each level has its own basic auditing style.

The Auditing Style of Level II is Guiding Style. The Secondary Style is GUIDING SECONDARY STYLE or Guiding S Style.

**ASSISTS**

An assist is different from auditing as such in that it lacks any model session. Assists are normally short periods of auditing but not always. I have seen a touch assist go on for months at the rate of 15 minutes a day, two or three days a week. And it may take hours to do a touch assist on an accident victim. What characterizes an assist is that it is done rapidly and informally and anywhere.

“Coffee Shop Auditing” isn’t really an assist as it is usually done over coffee too casually to be dignified by the name of auditing. The pc is never informed at all of the existence of a session.

The pc, in an assist, is however informed of the fact and the assist is begun by “This is the Assist” and ended by a “That’s it”, so an assist, like a session, has a beginning and an end.

The Auditor’s Code is observed in giving an Assist and the Auditing Comm Cycle is used.

As an Auditor one sets out in an Assist to accomplish a specific thing for the pc like relieve the snivels or make the ache in the leg better. So an Assist also has a very finite purpose.

**SECONDARY STYLES**

Every level has a different primary STYLE OF AUDITING. But sometimes in actual sessions or particularly in Assists this Style is altered slightly for special purposes. The Style altered for assists is called a SECONDARY STYLE. It doesn’t mean that the primary style of the level is merely loosely done. It means that it is done a precise but different way to accomplish assists. This variation is called the SECONDARY STYLE of that level.

**REMEDIES**

A Remedy is not necessarily an Assist and is often done in regular session. It is the Remedy itself which determines what auditing style is used to administer it. Some Remedies, as well as being used in regular sessions, can also be used as Assists.

In short, that a process exists as a Remedy has no bearing on whether it is used in an Assist or a Model Session.

## GUIDING STYLE

The essence of Guiding Style is:

1. Locate what's awry with the pc.
2. Run a Repetitive Process to handle what's found in 1.

In essence—steer the pc into disclosing something that needs auditing and then audit it.

## GUIDING SECONDARY STYLE

Guiding Secondary Style differs from proper Guiding Style and is done by:

1. Steering-the pc toward revealing something or something revealed;
2. Handling it with Itsa.

Guiding Secondary Style differs from Guiding Style only in that Guiding Secondary Style handles the matter by Steer + Itsa. Guiding Style Proper handles the matter with Steer + Repetitive Process.

## DEFINITIONS PROCESSING

Definitions Processes, when used as Remedies, are normally processed by Guiding Secondary Style.

Both Remedies of *The Book of Case Remedies A* and *B* are Guiding Secondary Style in their normal application.

One would expect them to be used by a Class II Auditor.

One would expect the Assist to last 10 or 15 minutes, perhaps more, but less than a regular session would take.

One would expect that any case in a PE class, any student that was getting nowhere, would be handled by the Instructor with Guiding Secondary Style using Remedies A and B as precision processes.

## REMEDY A PATTERN

One would *not* expect the person or student in trouble to be turned over to another student for handling. It's too fast, sharp and easy to handle that trouble oneself if one is Class II or above and far more certain. You can do it while you'd be finding another student to do the auditing. It would be uneconomical in terms of time not to just do it right then—no meter—leaning up against a desk.

The auditor's patter would be something like what follows. The pc's responses and Itsa are omitted in this example.

"I am going to give you a short assist." "All right, what word haven't you understood in Scientology?" "Okay, it's pre-clear. Explain what it means." "Okay, I see you are having trouble, so what does *pre* mean?" "Fine. Now what does *clear* mean?" "Good. I'm glad you realize you had it mixed up with *patient* and see that they're different." "Thank you. That's it."

In between the above total of auditing patter, the student may have hemmed and hawed and argued and cognited. But one just steered the pc straight along the subject selected and got it audited and cleaned up. *If* the student gave a glib text book definition after challenging the word preclear, we wouldn't buy it, but would give the student a piece of paper or a rubber band and say "Demonstrate that." And then carry on as it developed.

And that would be Remedy A.

You see it is precision auditing and is a process and does have an Auditing Style. *And* it works like a dream.

You see this is Steer + Itsa as to its style. And that it addressed the *immediate subject*.

What makes A Remedy A is not that it handles Scientology definitions, but that it handles the immediate subject under discussion or study.

## REMEDY B

What makes Remedy B Remedy B is that it seeks out and handles a *former* subject, conceived to be similar to the immediate subject, in order to clear up misunderstandings in the immediate subject or condition.

Remedy B, run on some person or student, would simply be a bit more complex than Remedy A as it looks into the past.

A person has a *continuous* confusion with policy or auditors, etc. So one runs B like this (the following is auditor patter only):

“I’m going to give you an Assist. Okay?” “All right. What subject were you mixed up with before Scientology?” “I’m sure there is one.” “Okay. Spiritualism. Fine. What word in Spiritualism didn’t you understand?” “You can think of it.” “Good. Ectoplasm. Fine. What was the definition of that?” “All right, there’s a dictionary over there, look it up.” “I’m sorry it doesn’t give the spiritualist definition. But you say it says *Ecto* means *outside*. What’s *plasm*?” “Well, look it up.” “All right. I see, *Ecto* means *outside* and *plasm* means *mould* or *covering*.” (Note: You don’t always break up words into parts for definition in A & B Remedies.) “Yes, I’ve got that. Now what do you think spiritualists meant by it?” “All right, I’m glad you realize that sheets over people make ghosts ghosts.” “Fine, glad you recalled being scared as a child.” “All right, what did the spiritualist mean then?” “Okay. Glad you see thetans don’t need to be cased in goo.” “All right. Fine. Good. You had Ectoplasm mixed up with engrams and you now realize thetans don’t have to have a bank and can be naked. Fine. That’s it.” (Note: You don’t always repeat after him what the pc said, but sometimes it helps.)

Student departs still cogniting. Enters Scientology now having left Spiritualism on the back track. Doesn’t keep on trying to make every HCO Bulletin studied solve “Ectoplasm”, the buried misunderstood word that kept him stuck in Spiritualism.

## DEFINITIONS PURPOSE

The purpose of definitions processing is fast clearing of “held down fives” (jammed thinking because of a misunderstood or misapplied datums) *preventing someone getting on with auditing or Scientology*.

Remedies A and B are not always used as Assists. They are also used in regular sessions. But when so used they are always used with Guiding Secondary Style—Steer + Itsa.

As a comment, people who seek to liken Scientology to something, “Oh, like Christian Science,” are stuck in Christian Science. Don’t say, “Oh no! It isn’t like Christian Science!” Just nod and mark them for a fast assist or a session the moment the chance offers *if they seem very disinterested or aloof* when asked to a PE Course.

There’s weapons in that arsenal, auditor. Use them.

As Remedies A and B stand as the first and second given in *The Book of Case Remedies*, so before a large number of *potential* Scientologists stands the confusion of definitions.

We have made Scientology definitions easy for them by compiling a dictionary, using words new to people only when useful.

But those that don’t come along at all, are so wound up in some past subject they can’t hear or think when that earlier subject is restimulated. And that earlier subject is held down *only* by some word or phrase they didn’t grasp.

Some poor pawn howling for the blood of Scientologists isn’t mad at Scientology at all. But at some earlier practice he got stuck in with mis-definition of *its* terms.

You see, we inherit some of the effects of the whole dullness of Man when we seek to open the prison door and say, “Look. Sunshine in the fields. Walk out.” Some, who need Remedy B say: “Oh no! The last time somebody scratched the wall that way

I got stupider.” Why say, “Hey. I’m not scratching the wall. I’m opening the gate”? Why bother. He can’t *hear you*. But he can hear Remedy B as an assist. *That’s* the channel to his comprehension.

## UNDERSTANDING

When a person can’t understand something and yet goes on facing up to it, he gets into a “problems situation” with it. There it is over there, yet he can’t make it out.

Infrequently (fortunately for us) the being halts time right there. Anything he conceives to be similar presented to his view is *the* puzzle itself (A=A=A). And he goes stupid. This happens rarely in the life of one being, but it happens to *many* people.

Thus there aren’t many such messes in one person in one lifetime that have to be cleaned up. But there are a few in many people.

The cycle of Mis-definition is:

1. didn’t grasp a word, then
2. didn’t understand a principle or theory, then
3. became different from it, commits and committed overts against it, then
4. restrained himself or was restrained from committing those overts, then
5. being on a withhold (inflow) pulled in a motivator.

Not every word somebody didn’t grasp was followed by a principle or theory. An overt was not committed every time this happened. Not every overt committed was restrained. So no motivator was pulled in.

But when it *did* happen, it raised havoc with the mentality of the being when trying to think about what seem to be *similar subjects*.

You see, you are looking at the basic incident + its locks as in a chain of incidents. The charge that is apparently on the lock in present time is actually only in the basic incident. The locks borrow the charge of the basic incident and are not themselves causing anything. So you have a basic misunderstood word which then charges up the whole subject as a lock; then a subject charging up similar subjects as locks.

Every nattery or non-progressing student or pc is hung up in the above 1, 2, 3, 4, 5 cycle. And *every* such student or pc has a misdefined word at the bottom of that pile. If the condition is new and temporary it’s a Scientology word that’s awry. If natter, no progress, etc, is *continuous* and doesn’t cease when all is explained in Scientology or when attempts to straighten up Scientology words fail, then it’s an earlier subject at fault. Hence, Remedies A and B. Hence Guiding Secondary Style. Hence, the fact that Definitions Processes *are* processes. And VITAL processes they are if one wants a smooth organization, a smooth PE, a smooth record of wins on all pcs. And if one wants to bring people into Scientology who seem to want to stay out.

Of course these Remedies A and B are early-on processes, to be audited by a Class II or above on a Level 0 or I pc or student. However, some in Scientology, as of this date, are studying slowly or progressing poorly because A and B haven’t been applied.

One expects that very soon, now that auditors have this data, there will be nobody at upper levels with his definitions dangling.

## What Is Greatness?

**L. Ron Hubbard**

The hardest task one can have is to continue to love one's fellows despite all reasons he should not.

And the true sign of sanity and greatness is to so continue.

For the one who can achieve this, there is abundant hope. For those who cannot, there is only sorrow, hatred and despair, and these are not the things of which greatness or sanity or happiness are made.

A primary trap is to succumb to invitations to hate. There are those who appoint one their executioners. Sometimes for the sake of the safety of others, it is necessary to act, but it is not necessary also to hate them.

To do one's task without becoming furious at others who seek to prevent one is a mark of greatness—and sanity. And only then can one be happy.

Seeking to achieve any single desirable quality in life is a noble thing. The one most difficult and most necessary to achieve is to love one's fellows despite all invitations to do otherwise.

If there is any saintly quality, it is not to forgive. "Forgiveness" is a much lower level action and is rather censorious.

True greatness merely refuses to change in the face of bad actions against one—and a truly great person loves his fellows because he understands them.

After all, they are all in the same trap. Some are oblivious of it, some have gone mad because of it, some act like those who betrayed them. But all, all are in the same trap—the generals, the street sweepers, the presidents, the insane. They act the way they do because they are all subject to the same cruel pressures of this universe.

Some of us are subject to those pressures and still go on doing our jobs. Others have long since succumbed and rave and torture and strut like the demented souls they are.

To re-save some of them is a dangerous undertaking. Were you to approach many ruling heads in the world and offer to set them free (as only a Scientologist can) they

would go berserk, cry up their private police and generally cause unpleasantness. Indeed, one did—he was later assassinated by no desire of ours but because of the incompetence of his own fellows about him. He could have used Scientology. Instead, he promptly tried to shoot it down by ordering raids and various berserk actions on Scientology organizations. That he was then shot had nothing to do with us, but only demonstrated how incompetent and how mortal he really was.

As we become stronger, we can be completely openhanded with our help. Until we do, we can at least understand the one fact that greatness does not stem from savage wars or being known. It stems from being true to one's own decency, from going on helping others whatever they do or think or say and despite all savage acts against one; to persevere without changing one's basic attitude toward Man.

A fully trained Scientologist is in a far better position to understand than a partly trained one. For the Scientologist who really knows is able not only to retain confidence in himself and what he can do, but also can understand why others do what they do and so knowing, does not become baffled or dismayed by small defeats. To that degree, true greatness depends on total wisdom. They act as they do because they are what they are—trapped beings, crushed beneath an intolerable burden. And if they have gone mad for it and command the devastation of whole nations in errors of explanation, still one can understand why and can understand as well the extent of their madness. Why should one change and begin to hate just because others have lost themselves and their own destinies are too cruel for them to face.

Justice, mercy, forgiveness, all are unimportant beside the ability not to change because of provocation or demands to do so.

One must act, one must preserve order and decency, but one need not hate or seek vengeance.

It is true that beings are frail and commit wrongs. Man is basically good but can act badly.

He only acts badly when his acts done for order and the safety of others are done with hatred. Or when his disciplines are founded only upon safety for himself regardless of all others; or worse, when he acts only out of a taste for cruelty.

To preserve no order at all is an insane act. One need only look at the possessions and environment of the insane to realize this. The able keep good order.

When cruelty in the name of discipline dominates a race, that race has been taught to hate. And that race is doomed.

The real lesson is to learn to love.

He who would walk scatheless through his day must learn this.

Never use what is done to one as a basis for hatred. Never desire revenge.

It requires real strength to love Man. And to love him despite all invitations to do otherwise, all provocations and all reasons why one should not.

Happiness and strength endure only in the absence of hate. To hate alone is the road to disaster. To love is the road to strength. To love in spite of all is the secret of greatness. And may very well be the greatest secret in this universe.

HCO POLICY LETTER OF 8 MARCH 1966

Exec Secs' Hats  
ES Comm Qual Hat  
HCO Sec Hat  
Dir 1 & R Hat  
Ethics Hat  
Tech & Qual Hats  
LRH Comm Hat

Exec—HCO—Tech—Qual  
Ethics

U R G E N T

**HIGH CRIME**

Effective 1 June 1966

In any instance of a heavily falling statistic in Tech or Qual or a chronically low statistic in Tech or Qual in an org or in any org which has chronically low statistics in all divisions:

The Ethics Officer must look for this policy violation which is the highest crime in Tech and Qual:

TOLERATING THE ABSENCE OF, OR NOT INSISTING UPON STAR-RATED CHECK OUTS ON ALL PROCESSES AND THEIR IMMEDIATE TECHNOLOGY AND ON RELEVANT POLICY LETTERS ON HGC INTERNES OR STAFF AUDITORS IN THE TECH DIV OR STAFF AUDITORS OR INTERNES IN THE QUAL DIV FOR THE LEVELS AND ACTIONS THEY WILL USE BEFORE PERMITTING THEM TO AUDIT ORG PCS AND ON SUPERVISORS IN TECH AND QUAL WHO INSTRUCT OR EXAMINE OR FAILING TO INSIST UPON THIS POLICY OR PREVENTING THIS POLICY FROM GOING INTO EFFECT OR MINIMIZING THE CHECK OUTS OR LISTS.

If an Ethics Officer or any person in HCO Dept 3 discovers this high crime to exist he must report it at once to the HCO Area Secretary.

The HCO Area Secretary must at once order a thorough investigation into any and all persons who might have instigated this high crime and report the matter to the HCO Exec Sec.

The HCO Exec Sec must then convene a Committee of Evidence with the persons accused as interested parties and must locate amongst them the suppressive or suppressives by the "reasonableness" of their defence, state of case and other signs.

The Committee of Evidence must declare the located S.P. suppressive by HCO Ethics Order and dismiss.

If any Ethics Officer, Director of I & R or HCO Area Secretary fails to obtain co-operation by superiors in carrying out this Policy Letter quickly then he or she must inform the LRH Communicator.

The LRH Communicator must then cable full particulars to Worldwide.

The Worldwide AdCouncil must then carry out this policy letter expeditiously and at any cost.

If the HCO personnel making this discovery cannot obtain action in any other way he or she must go outside the org and cable LRH Comm WW and his actions and costs in so cabling will be reimbursed on claim to WW and his post will be fully protected.

If the AdCouncil WW suspects this policy not to be in full force in any org despite assurances an HCO WW personnel must be sent to that org to investigate and may be deputized to remove either or both Exec Secs of that org by Comm Ev on the spot or at WW.

-----

It has been discovered that failure to check out, Star-Rated, the Tech and Qual HCO Bs applying to levels being audited or taught or examined and their processes and the data used in Review and relevant policy on those using the material in orgs results in a crashed Division 4 completion statistic, crashed income and low statistics throughout and a failing org and was the reason through 1965 for struggling orgs—the public would not pay more for service than it was worth to them and with this policy out, the service was not worth very much.

It has been found that a suppressive person will discourage this check out policy as one of his first actions.

-----

This policy applies whether an auditor has been trained or not with star-rated check outs. Staff and Review auditor and Supervisor are special technical status grades and one cannot consider this double training.

-----

“Star-Rated” means = 100 percent letter perfect in knowing and understanding, demonstrating and being able to repeat back the material with no comm lag.

Org Exec Sec Communicator for Qual WW is the final authority for any check sheets on this matter and is responsible for preparing and standardizing them from time to time. But the lack of a check sheet from ES Comm Qual WW does not set aside any provision or penalty of this policy letter.

-----

This policy letter is issued in the complete knowledge that the absence of this policy in full effect is the primary reason for orgs not growing and is based on actual experience.

-----

The only higher crime I could think of would be to pretend to have an org but have no technical personnel on staff in Tech or Qual. That is suppressive also and will crash an org. Handle it similarly to the above.

### DIANETIC AUDITING COURSE

The first requisite of any auditor trainee is to find and run secondaries and engrams on a preclear, preferably a fellow student, and to have secondaries and engrams run on self.

Due to the fantastic speed of results today it is not possible for a student to get enough auditing experience using the standard tech of 0 to VI.

To remedy this we use dolls for model session practice and learning the processes.

But even further training is needed, using live preclears.

The tech used is that of Book I, *Dianetics. The Modern Science of Mental Health*, but omitting the countdown and canceller, this not being necessary today and using instead a simple "Start of Session" and "End of Session" and then running the engram.

Do not try to use past track incidents. The preclear may eventually fall into these but try instead for current lifetime.

Try first for secondaries (moments of misemotion) particularly loss. Try to find these on a gradient, first trying for minor losses and eventually locating the death of a loved one.

Certain pcs (Black Vs they used to be called) are not able to run track incidents but try to coax them through incidents of loss on a gradient (small losses first) and then get on with it. They usually will get visio on incidents turned on if this is done.

There is a complete method of running engrams on anyone, developed by me about three years ago whereby the date is found then the duration of the incident. This always permits an incident to be run with visio.

Don't try for sonic.

Get the pc to regress to the moment of the incident.

Don't try to run them conceptually with the pc in present time.

Emphasize getting the pc to start at the beginning and go through to the end several times. Don't be too keen on repeater technique to get phrases. They show up if you get the pc to run through the incident a few times.

When the pc can run secondaries successfully try for actual engrams.

Once again try for light incidents like a pinprick and graduate up to real engrams—moments of real pain and unconsciousness.

Most students shy off actual secondaries and engrams and try to run conceptual blah that could never have affected anyone's life with the pc in PT. This alone is the cause for failure of case gain running secondaries and engrams.

Don't try to pull withholds, etc, or handle present time problems but send the pc who ARC Breaks *with the auditor* (not with life) to Qual at once for an ARC Break assessment. DON'T CONTINUE TO AUDIT AN ARC BROKEN PC who has ARC Broken with an auditor.

All Ethics data applies—don't audit a Potential Trouble Source. If you encounter an SP (no case gain no matter what you do) send to Ethics. Lack of Ethics facilities and Ethics know-how was the primary reason Dianetics occasionally didn't work. So the new student has to be gened in on:

1. If pc starts chopping auditor send to Qual *at once*.
2. Suppressives.
3. Potential Trouble Sources.
4. The org pattern showing Tech Div and Qual.

E-Meters must be used and regardless of whether the student knows anything about them or not the pc "must be on the cans". We don't care if the student learns much or little about meters at this stage but a bright student will catch on fast. There is no E-Meter training at this stage.

The texts supplied the student are those which cover I to 4 above, *Dianetics the Modern Science of Mental Health* which he must buy or own and an E-Meter he must buy or borrow but may not be lent by the school.

There is real magic in running secondaries and engrams. I have seen the most fantastic recoveries from running merely a secondary (most spectacular recoveries with secondaries were obtained from running the death of an ally). I have seen severe physical ailments—heart disease, arthritis, malfunction, allergies, impotency, frigidity, lameness, etc, through the catalogue of human ills—vanish or reduce on properly running engrams to erasure. We are *not* in healing but we have a fantastic success with Dianetics in this activity.

No auditor will ever be worth very much unless he has come in the right way—through Dianetics. The concept of physical and mental difficulty stemming from a mental image picture was a great discovery and the technology of erasing such pictures as developed must not be lost in our trained Scientologists. This very instant I know of 3 cases with whom I am in daily contact whose whole lives would be changed by finding and running the incident necessary to solve the case. I have seen a woman who looked 60 appear 20 after 9 hours of auditing out a single secondary (the recent death of her husband).

When we originally tried to teach this technology (running of secondaries and engrams, 1950-1952) we had no Ethics, we were at that time already drowned with SPs. Auditors weren't duplicating tech. They often couldn't even state the basic definitions of "secondary" or "engram". They steered the pc all over the track or let him wander like a lost soul. They tried to force the pc to run the auditor's aberrations. And it was a jolly old mess ! But those few I taught personally and simply had, as any old-timer will tell you, the most fantastic successes with incredibly low effort by the auditor.

It's just a picture, secondary or engram. The whole of the technique is just finding the incident the pc is "in", running the pc through the incident, beginning to end, several times and not letting him digress and letting him come up the tone scale *past* boredom to enthusiasm by doing so. When I think of the millions of words I have had to speak or write just to get that terrible simplicity across, I see it can be bent as technology in a thousand thousand ways.

The student has today guides he never had in 1950-52. He has the Auditor's Code, the actual responses of the E-Meter, Ethics and the final solution of how to turn on visio even in SPs as per three years ago.

The startling gains of the exact tech of 0-VII of course overawe the old plodder of 1950. But there is a sting here as far as training goes. No understanding of the mind is complete without a thorough grasp of secondaries and engrams and running them. I have seen a person trained up to a high level who suddenly flopped at V because he had no faintest notion of *what* he was auditing.

The budding psycho-analyst gets the shock of his life when he sees there IS SOMETHING THERE. Before us, people thought the brain had short circuits in it (psychologists and psychiatrists) or that a beast called a Censor lived in a dungeon in it (Freud), or that evil spirits haunted one (Christianity).

The whole answer to the mind is mental pictures and masses created by the thetan. There is no other source or cause of aberration. Unless a student knows this he will never make a good auditor and Scientologist. The only early way to get a reality on it is to audit secondaries and engrams and be audited through them. One does encounter all this phenomena by the time one is a Grade VII even though not audited on Dianetics. BUT students beginning their training are not Grade VII. And unless they have actually audited or been audited on secondaries and engrams they will never, even though Grade VII, really have a reality on why people act as they do or the complex nature of the bank.

*Dianetics the Modern Science of Mental Health* was written before whole track was known. It made releases like mad but they were then overrun like mad. It failed only on SPs and PTSs. It was and is the answer to psycho-somatic ills and *human* aberration.

My results with Dianetics were not often duplicated because:

1. I stopped when the ability of the pc on any one subject was regained.
2. I audited smoothly.
3. I didn't use the subject to invalidate the pc (see *Original Thesis* on why auditing works).

Many auditors *did* duplicate my results and made "clears" which we now call releases due to *total* Clear being so much higher.

That we are today making a TOTAL Clear as well as Operating Thetans is completely out of comparison with what Dianetics was trying to do.

Scientology is the route from human being to total freedom and total beingness. Dianetics was the route from aberrated or aberrated and ill human to capable human. This step had never before been achieved in Man's history.

Oddly, the step from human being to a spirit had been achieved, if rarely, but was not generally credited (Buddhism, other spiritual practices, even Christianity). Scientology *really* achieves it and for the first time with TOTAL stability, no relapse and invariably one for one. Nevertheless Man had an inkling of the goals of Scientology even though he considered them almost beyond God.

But Man had no inkling whatever of Dianetics. None. This was the bolt from the blue. Man was hacking and sawing and shocking and injecting and teaching and moralizing and counselling and hanging and jailing men with enthusiasm without any idea at all of what caused Man to behave as he did or what made him sick or well.

THE answer was and still is Dianetics.

As we can now go directly toward total freedom on a precise and narrow roadway without any IFs and as it can be done by a human being in about a year minimum time due to my discarding of all non-essentials, by developing the *exact* steps and techniques of administration, and as the result is so hugely startling grade to grade compared to anything anybody had ever even dreamed of and as the final result was never before known in this universe, we tend to turn up our noses at poor little old Dianetics.

But it was the grandpa, the ancestor, the basic discovery which led to and the reason for Scientology.

AND we have the gigantic problem amongst us that Scientology works too fast in an auditor's hands and forbids him to overrun a result. Therefore HOW CAN HE EVER LEARN TO AUDIT? He can't, running Scientology, as he'll never get enough practice on live pcs.

Dianetics, however, has a virtue we never would have called one in 1950. It is slow. You can grind away on a secondary for hours. You can one by one whittle down a chain of related engrams for days, even weeks. You can audit a pc for a long, long time. And you *can* get auditing practice.

Now just one change—have the pc sit in a chair in Dianetic sessions. No reason to use a couch. Thus the auditor has the same set-up as in grade auditing. The same approach and patter he will use in his standard Scientology grade auditing **MUST** be used in this Dianetic auditing or the practice will not train one to do Scientology auditing. (Yes, I know the pcs will roll up in a ball or leap into the air, but this is a hazard of the trade! Put such a pc seated on the floor after one roll off from a chair.)

And one Supervisor caution: Tell such students to watch that tone arm for reading at clear read and watch the needle for a float and if they see the release phenomena occur to *gently ease off* the session without even one more command “to go on” or any other command. Unless you watch this you will overrun some pc on a release grade. (Also tell him what to do in case of a pc refusing to co-operate or chopping the auditor—send to Qual quick.)

Dianetics is easy to do.

1. You say, “Start of Session.”
2. You locate an incident (an actual past happening).
3. You tell the pc to GO to the beginning of it.
4. When the pc says he's there the auditor tells the pc to go through it to the end and say what is happening as he goes along.
5. When the pc reaches the end of it, the auditor tells the pc to go to the beginning of the *same* incident.
6. When the pc has, the auditor tells him to GO through it (not “again”) and say what is happening.
7. Repeat 5 and 6. Repeat 5 and 6. Repeat 5 and 6.
8. When the pc is up to tone 4.0 (cheerful) on it, repeat 2.
9. On the new incident repeat 3 to 7.
10. When the new incident has come up to tone 4.0, repeat 2.
11. Repeat 3 to 7.
12. When the new incident has come up to tone 4.0, repeat 2.

13. At end of the body of the session tell the pc to spot the environment a few times.
14. End the session by saying, "End of Session."

That's Dianetic auditing.

Refined, one can handle "bouncers" or "denyers", etc. But frankly, I found the pc would only reach to these when he was in over his head and the gradient of incident selected had not been followed. If you choose incidents IN THE PC'S CONSCIOUS RECALL not by flash answer or meter the refinements aren't necessary. You just do 1 to 12.

The ORIGINAL version of Dianetic auditing was all done on a gradient. One searched nothing out by meters or trick questions or tests or flash answers. One got what the pc could comfortably face and audited it. If the auditing was smoothly done, the next incident was tougher *but* the pc was comfortable in facing it. In that way the incidents (secondaries or engrams) become progressively more horrifying but the pc is quite comfortable facing each one in turn. This is what is meant by "gradient"—it is a steepening or an increasing from the slight to the heavy. But you see the pc *smoothly audited is* gaining ability and confidence all the time and so can face more and more violence in his past. It's all there in pictures. Blackness is either his unwillingness to face things or his basic bank. It cures (vanishes) if you do it by gradients. And the pc soon can see pictures very well.

Therefore IF your student is becoming a good auditor all you need to do is look at his pc. If the pc is more confident and cheerful, then the auditor is learning and doing well. If the pc isn't, the auditor has a rough spot and should go to cramming. If this doesn't work, training being good, then the auditor is probably an SP who has no idea of helping the pc at all but is using "auditing" to bust somebody up.

Dianetics is too easy, really, for the student to conceive that his minimum mild actions will produce such fabulous results. So the auditor feels called upon to *add*. Additives are what checked Dianetic results in the vast majority of cases that were checked.

The pc who wants to "psycho-analyze" (talk) by the hour isn't getting audited and isn't going to get any better. This pc simply isn't under auditor control so the auditor's control *and* TRs are at fault. (Pcs explain this sometimes by saying they're "cogniting" whereas a cognition is rather quick, not an hour's maundering.)

The pc has to be told what is expected of him. "We're going to find an incident in your life of which you have an exact record. Then by sending you through it at the moment it happened several times we're going to erase it. Just do what I tell you and all will be well. Do you have any questions about that?" That *exact* quote must be made to the pc who has not been Dianetically audited (which includes many Scientology pcs too) and the pc must understand it and be satisfied he does before locating and running incidents.

Very bad off pcs jump about on the "time track" and really need only grade auditing. Such pcs should be rejected for the purposes of this Dianetic auditing and sent to any Hubbard Guidance Centre.

Some pcs just won't get the idea and just won't run incidents. Simply reject for these purposes and send to the HGC.

Some pcs are so snarly and choppy even before meeting the auditor, they have to be sent to Qual and afterwards only to the HGC as they're no good for this. They'll make it, but are not easy enough to afford any training to a student.

Some pcs are simply Ethics cases (SPs and PTS) and these too should be rejected for this purpose. The PTS is known by "roller coastering" (Coney Island fast up and down quarter-mile of aerial railway). They slump. So they're Ethics cases.

If a pc ARC Breaks suddenly or seems very sad after auditing it's an ARC Break with the auditor and needs Qual attention—and the student auditor should be looked over very carefully as a possible Ethics case.

-----

Engrams are hard to run in a room full of auditing teams. So if possible one should assign the auditing to be done after class hours in their lodgings.

-----

The way to fit this programme of Dianetic auditing into training in general must be worked out and is left to the Org Exec Sec WW who may from time to time issue, through the Org Executive Secretary's Communicator for Tech, Sec Eds covering its arrangements and materials to study (check sheets). In the absence of such Sec Eds an Academy may make up its own. It is possible to make it a whole new course with an equivalent of the old Hubbard Dianetic Auditor certificate. And one recalls that a course not even vaguely as good as this one can be was the course on which all others have been based since 1954. The course outlined herein is a smoothed version of the course I personally taught in 1950 to thousands.

-----

“Secondary” in its original use meant “a moment of loss” and incidents should be chosen on that basis.

A secondary derives all its power from an underlying engram (containing real pain and unconsciousness).

Therefore many, many secondaries (which bury engrams) must be taken off the case first and the job thoroughly done before engrams should be approached in auditing. Secondaries may again be approached when engrams seem to have been “all cleaned up”.

This alternation of:

1. Take off a lot of secondaries
2. Take off a lot of engrams—should be followed one after the other.

Past life incidents are handled just like any other secondaries and engrams. A “past life” and memory of it is buried under the terrific loss of possessions and body and natural recall can be restored by just general Dianetic auditing as given in this HCO B. No special attention is required.

Do not run prenatal or birth engrams unless they come up naturally. The pc must run only consciously recalled incidents. He need not recall the details consciously. Only that the incident happened.

-----

The state of release attained by Dianetic auditing is probably below Grade 0 and should be regarded as such and is declared by Qual as “Dianetic Release”—no grade number being given.

THE MATERIAL IN THIS HCO B TAKES PRECEDENCE OVER ANY DIANETIC MATERIAL, BOOKS OR TAPES INCLUDING *DIANETICS THE MODERN SCIENCE OF MENTAL HEALTH* WHERE A CONFLICT MAY OR MAY SEEM TO EXIST.

**S & D COMMANDS**

WHAT PERSON OR GROUP HAS SUPPRESSED YOU?

The above is the listing question to be used when running an S & D.

Note: If you find a *group* on the list be sure to then do a represent list of that group.

Note: Do not do new lists where old lists exist. Use old lists.

**S & D—THE MISSED ITEM**

There are four points I want to get across to you.

1. ILLNESS = ONLY PTS
2. ONLY PTS = ILLNESS
3. ONLY A PTS CONDITION CAN MAKE A GRADE V (or any grade) SICK
4. A BAD S & D MAKES A PERSON SICK

Get it? GOOD!!

Now, if a person who has had an S & D gets sick, what do you know? You know that:

- (a) They are a PTS
- (b) The S & D was not properly done
- (c) An item was missed

NOTE: The missed item may be on a list that was made 2 or 3 years ago.

On the HCO B 5th February 1966 “S & D WARNING”, I *clearly* stated that “It is the action of *nearly* finding the right one that may make the pc ill”. One has restimulated the charge of the RIGHT item, but, has found and okayed the WRONG item.

A bad S&D is DEADLY.

A bad S & D can cause a dangerous physical condition. A bad S & D can land a pc in hospital (I know of two such cases where it did).

So please! PLEASE!! get this, it is so very important. Always, repeat, ALWAYS look for the MISSED item on a priorly done list when the pc gets sick.

Know your S & D bulletins, know your listing and nulling bulletin—THOROUGHLY—and you won't go wrong.

Let's fix up roller coasters, not help keep them roller coasting.

IT'S VERY EASY.

Required for  
Level IV Students  
TO REVIEW AUDITORS  
TO ETHICS OFFICERS

**THE TYPE TWO PTS**

It has been revealed at Saint Hill that HGC auditors and Review auditors are permitting their preclears to be sent through to Ethics for writing disconnection letters to any person or group which the preclear thinks to have been suppressive of him and then continuing the Search and Discovery to find the SP on the list.

This is improper. The auditor should continue the proper auditing of an S and D until the proper item on the list is found.

An Ethics Officer should only accept from a Type Two PTS, the proper SP found upon the completion of an S and D properly listed and nulled to one SP.

**TECH vs. QUAL**

The general rule is laid down that, except for Declaration of Grade, Certificate or Class, Tech shall attempt to handle all it can on all cases and students and only when Tech personnel consider it hopeless (or the student or pc is ready for Declare, Cert or Grade) shall the student or pc be sent to Qual.

“Review flat” is not now to be considered mandatory. The pc previously has been sent to the D of P and then to Qual to verify that a flat point has been reached. This routing is ended. If the *auditor* or Case Supervisor, either one, wants a check for the flatness of a process, only then is the pc sent to the D of P (not to Qual also). If the flatness indicates a grade has been attained the usual action is just send from auditor to Examiner in Qual.

To routinely and always send a pc for a flatness of process check is actually a violation of the Fast Flow Management System. It checks things which may be all right.

Review, when it finds a rehab incomplete, should quickly route the pc back to Tech. As a general rule, only when Tech is utterly at a loss does Review take over and audit the pc.

The Case Supervisor should keep and post HGC auditor “statistics” announcing goofs and wins. The Case Supervisor must require a retrain of an HGC auditor whenever a pc winds up being audited in Review. I always send the auditor to Interne Training for retrain whenever I have to send a pc to Review.

Processing today is very simple but very exact. The data is all there. That’s the only data. Don’t add any. Just do what the HCO Bs say. There are no exceptional cases.

HGC auditors who over-run just don’t know what a free needle is. They should ask a Clear to hold the cans so they can see one.

When you check for flatness on a process gone to free needle you may overrun it. For the auditor, the D of P and the Examiner and Review to check, each one, for flatness, will goof up a flat point every time.

For the Case Supervisor to neglect ordering retraining of his auditors when he finds pcs not doing well is a grave omission.

For Tech not to carry on trying and limply turn all bits and pieces over to Qual is to train Tech into weakness.

Two rules:

In Tech, when all else fails, *then* hand it over to Review.

In any difficulty, when all else fails, do what Ron says.

**METER TRIM CHECK**

E-Meters can go out of trim during a session because of temperature changes.

Thus even if the meter is properly calibrated and reads at 2.0 with a 5,000 ohm resistor across the leads and 3.0 with 12,500 ohms, by the end of the session a pc can be apparently reading below 2.0 because the meter is off trim.

Low TA cases are not cracked by lower level auditing, and have to be handled with Power Processing. Erroneously calling a pc a "low TA case" could thus deny him lower level processes that he could win on.

The following meter procedure is therefore to be followed AT THE END OF EACH SESSION (AFTER GIVING "THAT'S IT"):

1. DON'T MOVE THE TRIM KNOB
2. PULL OUT THE JACK PLUG
3. MOVE THE TA UNTIL THE NEEDLE IS ON "SET" AT THE SENSITIVITY YOU WERE USING IN THE SESSION
4. RECORD THE TA POSITION AT THE BOTTOM OF THE AUDITOR'S REPORT FORM AS: "Trim check—TA = . . ."
5. IF YOUR METER IS KNOWN TO BE OUT OF CALIBRATION (as in Para 2 above) RECORD ALSO: "Calibration error — .....on meter= 2.0 actual" at the bottom of the form.

## ERRORS OF STUDENTS

The following list of common errors causing student flunks in the Saint Hill Special Briefing Course has been obtained from the Student Examiner by the Guardian WW:

### *Level 0*

*Theory*—Not knowing commands—model session.

*Written*—Not fully understanding what a Q & A is.  
The symptoms of Premature Acknowledgement.  
What a PTS is.

*Practical*—Poor TR 0.

*Auditing*—By-passing floating needles.  
Auditing PTS.  
Saying the needle floated below 2.0 on the Tone Arm.

### *Level I*

*Theory*—Not knowing what makes a meter read (female students mostly).  
Not knowing the various scales.

*Written*—Not understanding how an auditor can prevent a Pc from coming into PT in the CCHs.  
Q & A—not recognizing it in an auditing situation, (most students pass this written exam).

*Practical*—TR 9, not running TR 9 with fine clear intention.  
Too much force being applied when not necessary.

*Auditing*—Over-running—under-running.  
Saying Pc went Problems Release on Grade 0 Processes.  
Auditing over unflat ruds.  
By-passing FN.

### *Level II*

*Theory*—Missed W/Hs—understanding of. Model session.  
ARC Breaks and their relationship to overts and M/W/Hs.  
How to do Auditing by List.

*Written*—M/W/Hs and W/Hs—critical thoughts—ARC Breaks and what caused which.  
Study material—appreciation of.

*Practical*—Not knowing and understanding how to do Auditing by List.  
Reading meter through a D/N.  
Long comm lags with admin and asking next question.  
Bad TR 0.

*Auditing*—Additives to process—not stopping at floating needle or under-running.

### ***Level III***

*Theory*—How to do an ARC Break Assessment.  
Difference between By-passed Charge Assessment and ARC Break Assessment.  
When to stop doing ARC Break Assessment.

*Written*—The primary error in handling ARC Breaks.  
How to do listing and nulling.  
Confusing ARC Breaks with by-passed charge.

*Practical*—Goofing up nulling a list.  
Doing nulling through D/N.  
Turning the sensitivity up in the assessment.  
Not being able to clean the needle on the Pc.

*Auditing*—Not knowing what to do with CDEI Scale or method of running R3H.  
Over-running—under-running.  
Not handling an ARC Break properly.

### ***Level IV***

*Theory*—Definition of Service Fac. Rehab procedure. Understanding what PTS is.

*Written*—Recognizing a PTS situation. Details on rehabbing. Listing & Nulling rules. Recognizing when a new key-in has occurred in a rehab session. Knowing the rules on when to run a grade or when to rehab.

*Practical*—Slow nulling of a list—not doing it slickly and with certainty and with good TRs. Correct procedure on Listing and Nulling. Correct procedure on Auditing by List. Reading through D/N.

### ***Level VI***

Very few flunks—occasionally over confusions on R6EW running—either shows in Theory or Written Exam.

### ***Solo Audit***

Lots of flunks—model session, scales, basics, what makes a meter read, comm cycle, admin, how to do a worksheet.  
Sometimes running process—R6EW—usually basics are weak.

***Dangerous Auditor's Exam***—No flunks!

**LIST L-4 S & D**

The following list may be used to assess an ARC Break on Search and Discovery:

1. An incorrect item been found?
2. A withhold been missed?
3. An item been by-passed?
4. An item been abandoned?
5. An item been suppressed?
6. An item been invalidated?
7. An item been protested?
8. An item been asserted?
9. An item been decided about?
10. You not given items you thought of?
11. The item on another list?
12. The item already been given?
13. The item been refused?
14. The list not been completed?
15. The item been found?
16. You already volunteered the item?
17. You thought of an item and not put it on the list?
18. An item been misworded?
19. An item been mispronounced?
20. An item not been understood?
21. Is there another name for any person on the list?
22. An item been forced on you?
23. An item been evaluated?
24. An item been suggested?
25. Earlier listing been restimulated?
26. Earlier wrong items been restimulated?
27. Earlier listing ARC Breaks been restimulated?
28. An ARC Break on having an S and D?
29. Some other kind of by-passed charge?
30. Nothing wrong in the first place?
31. The upset been handled?
32. An overt been committed by listing someone?

**FLOATING NEEDLES, LISTING PROCESSES**

In sessions where the process being run on a pc involves a listing question (including S & D), please note that after the listing question has been thoroughly cleared with the preclear and then given to the pc that the process *is* being run.

Should it happen, then, that while the pc is actually listing off the question (and has not gone momentarily out of session), the needle floats, this is the flat point or end phenomenon of the process and the whole subject and all further steps of it are dropped at once.

Whatever charge was on the listing question has blown, either with or without the preclear being analytically aware of it.

To continue the process beyond this point is Out Tech by the process being overrun and is also a violation of our basic Fast Flow System.

Please note that whether there is a second leg to the process or not, like fitting an item found off a list into a bracket of commands, has no bearing on the fact that the process is flat.

If the needle floats while the pc is in session listing off a question, then there is no charge left on that question and there will be no item to fit into the second leg of the process.

The process has served its purpose.

With training as immaculately precise as it is and auditors' comm cycles becoming effortlessly superlative, the gradients of our technology are so fine that the results of each process on each level will be achieved faster and faster.

Sometimes the velocity of the processing is such that the end phenomenon will occur on the process without the preclear being aware of what has happened. Ending the process at this point then gives the preclear the chance to move into the velocity of the process.

Please then acknowledge the power of our technology and keep winning.

**SERVICE FACSIMILE**

A Service Facsimile is a computation generated by the being not the bank. An example of this is:

“All horses sleep in beds.”

Such a computation locked away in the mind will obviously precipitate many compulsive doingnesses, beingnesses and havingnesses.

An example of a doingness precipitated by the above computation would be:

“Making beds for horses.”

If on assessing for a Service Facsimile you get “Making beds for horses” as the service facsimile please note that it is a doingness and not a computation, so if you fit the doingness into the bracket of Service Fac Commands, i.e.:

How does “Making beds for horses” make you right?

How does “Making beds for horses” make others wrong? etc.,

then observe very carefully exactly what the preclear says, because he might give the EXACT WORDS OF THE ACTUAL SERVICE FACSIMILE—”ALL HORSES SLEEP IN BEDS”. And observe very carefully and note all meter reaction to what he or she says.

Note all of this, remembering that you were *NOT* running a real Service Facsimile in the first place, and that in order to really flatten all the compulsive doingnesses, beingnesses and havingnesses precipitated by the basic computation you will have to run the exact computation in the Service Fac bracket.

If the *doingness* you run is a basic one then it is possible that the preclear will blow all the charge on the Service Fac and this you will assess by pc indicators and meter phenomena (i.e. free needle).

It is obviously best to get a real Service Fac (computation) and taking beingnesses, doingnesses and havingnesses as Service Facsimiles if done by auditors must be thoroughly understood.

Service Facsimile auditing can give great gains, so understand what you are doing with the technology and have many wins.

# **THE BOOK INTRODUCING THE E METER**

**Photographed and compiled  
from the lectures and  
demonstrations  
of  
L. Ron Hubbard**

**Published  
September 1966**

The Book Introducing the E-Meter, Volume IV of the Clearing Series, was published at Saint Hill Manor. A new revised edition was published in May, 1975, at Los Angeles.

It contains pictures and explanations of all parts of the E-Meter, inside as well as outside; pictures of how to set it up, how to recharge it, what happens when you move the various knobs in different directions. Tone arm positions and needle actions are illustrated and explained very graphically.

In the latest edition two HCO Bulletins ("False TA" of 24 October 1971, and "False TA Addition" of 12 November 1971 R) have been added, and these give additional valuable data to any auditor who uses an E-Meter—and today that is any student or graduate of any course from the Dianetics Courses upward.

58 pages, 45 photographs, soft-cover with plastic comb binding. Translation available in German. Available from your nearest Scientology Organization or Mission, or direct from the publishers: Scientology Publications Organization, Jernbanegade 6, 1608 Copenhagen V, Denmark; or Church of Scientology Publications Organization U.S., 2723 West Temple Street, Los Angeles, California, 90026, U.S.A.

Remimeo

**MINUS SCALE RELEASES:  
ARC STRAIGHT WIRE  
DIANETIC**

There are several grades of Release below Zero, in the minus scale of the original complete Gradation Chart.

Many of the minus scale can be attained by simple assessment. (And ceasing to assess the moment the release occurs is vital—don't keep on assessing as the same session auditing action.)

There are three specific grades of Release below Zero and above the lower minus scale. These are, from lowest:

Straight Wire Release

Dianetic Secondary Release

Dianetic Engram Release

Old ARC Straight Wire is not at Grade Zero or Grade III but way down below the Dianetic Releases. The original purpose still holds—to make a person able to run secondaries and engrams. (Our Tech is still valid, you know, despite the 1950 origin of ARC Straight Wire.)

ARC Straight Wire was fantastically effective in moving a person from “neurotic” to “normal”.

But in running ARC Straight Wire one must use a meter and cease to audit the pc the moment the needle goes free. Don't keep making the blunder of the '50s and early '60s.

The pc released by ARC Straight Wire can now have secondaries run. When a needle goes free on a secondary, one again must cease to audit secondaries.

The Dianetic Secondary Release can be run on engrams. When the needle goes free while running engrams, one ceases to audit the pc at once.

Declares for these lower release grades can be confirmed by Qual and even declared by Certs and Awards by a small note from the Director of Certs and Awards.

Thus you can possibly get a Release on the minus scale by assessment of the minus scale, a higher Release by running ARC Straight Wire, an even higher one by running Dianetic Secondaries, and yet a higher one by running Dianetic Engrams. And then, by good TRs and standard tech as usual, get a Grade 0.

As many people go Grade 0 Release easily, these lower bands get overlooked. But those who don't go Grade 0 Release easily (unless it is overrun as the reason for “no Release”) they can be begun by a Minus Scale assessment, then ARC Straight Wire, etc, back up to Zero for another try there.

All pcs could be started on the minus scale with no harm.

## QUAL NOTE

Remember, there are several overruns that can require repair. These are:

Life (overrun in a past life on some subject).

Straight Wire (including Self Analysis).

Earlier Repetitive Processing (Locational, etc).

Dianetic Secondaries.

Dianetic Engrams.

Some cases hang and won't go Release at Grade 0 unless the above are rehabbed or (if never run) actually audited on the pc.

ARC Breaks can cause a failure to go Release on Grade Zero or any other level and can prevent rehabs. And poor TRs can block the lot.

### ARC BREAK NEEDLE

The needle of a preclear with an ARC Break may be dirty, stuck or sticky, but may *also* give the appearance of FLOATING. This is *not* a Release point however, as the pc will be upset and out of comm at the same time. The auditor must observe the preclear and determine which it is.

## **THE ANTI-SOCIAL PERSONALITY THE ANTI-SCIENTOLOGIST**

There are certain characteristics and mental attitudes which cause about 20% of a race to oppose violently any betterment activity or group.

Such people are known to have anti-social tendencies.

When the legal or political structure of a country becomes such as to favor such personalities in positions of trust, then all the civilizing organizations of the country become suppressed and a barbarism of criminality and economic duress ensues.

Crime and criminal acts are perpetuated by anti-social personalities. Inmates of institutions commonly trace their state back to contact with such personalities.

Thus, in the fields of government, police activities and mental health, to name a few, we see that it is important to be able to detect and isolate this personality type so as to protect society and individuals from the destructive consequences attendant upon letting such have free rein to injure others.

As they only comprise 20% of the population and as only 21/2% of this 20% are truly dangerous, we see that with a very small amount of effort we could considerably better the state of society.

Well-known, even stellar, examples of such a personality are, of course, Napoleon and Hitler. Dillinger, Pretty Boy Floyd, Christie and other famous criminals were wellknown examples of the anti-social personality. But with such a cast of characters in history we neglect the less stellar examples and do not perceive that such personalities exist in current life, very common, often undetected.

When we trace the cause of a failing business, we will inevitably discover somewhere in its ranks the anti-social personality hard at work.

In families which are breaking up we commonly find one or the other of the persons involved to have such a personality.

Where life has become rough and is failing, a careful review of the area by a trained observer will detect one or more such personalities at work.

As there are 80% of us trying to get along and only 20% trying to prevent us, our lives would be much easier to live were we well-informed as to the exact manifestations of such a personality. Thus we could detect it and save ourselves much failure and heartbreak.

It is important then to examine and list the attributes of the anti-social personality. Influencing as it does the daily lives of so many, it well behooves decent people to become better informed on this subject.

### **ATTRIBUTES**

The anti-social personality has the following attributes:

1. He or she speaks only in very broad generalities. "*They say ...*" "Everybody thinks..." "Everyone knows..." and such expressions are in continual use,

particularly when imparting rumor. When asked, "Who is everybody . . ." it normally turns out to be one source and from this source the anti-social person has manufactured what he or she pretends is the whole opinion of the whole society.

This is natural to them since to them all society is a large hostile generality, against the anti-social in particular.

2. Such a person deals mainly in bad news, critical or hostile remarks, invalidation and general suppression.

"Gossip" or "harbinger of evil tidings" or "rumormonger" once described such persons.

It is notable that there is no good news or complimentary remark passed on by such a person.

3. The anti-social personality alters, to worsen, communication when he or she relays a message or news. Good news is stopped and only bad news, often embellished, is passed along.

Such a person also pretends to pass on "bad news" which is in actual fact invented.

4. A characteristic, and one of the sad things about an anti-social personality, is that it does not respond to treatment or reform or psychotherapy.

5. Surrounding such a personality we find cowed or ill associates or friends who, when not driven actually insane, are yet behaving in a crippled manner in life, failing, not succeeding.

Such people make trouble for others.

When treated or educated, the near associate of the anti-social personality has no stability of gain but promptly relapses or loses his advantages of knowledge, being under the suppressive influence of the other.

Physically treated, such associates commonly do not recover in the expected time but worsen and have poor convalescences.

It is quite useless to treat or help or train such persons so long as they remain under the influence of the anti-social connection.

The largest number of insane are insane because of such anti-social connections and do not recover easily for the same reason.

Unjustly we seldom see the anti-social personality actually in an institution. Only his "friends" and family are there.

6. The anti-social personality habitually selects the wrong target.

If a tyre is flat from driving over nails, he or she curses a companion or a non-causative source of the trouble. If the radio next door is too loud, he or she kicks the cat.

If A is the obvious cause, the anti-social personality inevitably blames B, or C or D.

7. The anti-social cannot finish a cycle of action.

Such become surrounded with incomplete projects.

8. Many anti-social persons will freely confess to the most alarming crimes when forced to do so, but will have no faintest sense of responsibility for them.

Their actions have little or nothing to do with their own volition. Things “just happened”.

They have no sense of correct causation and particularly cannot feel any sense of remorse or shame therefore.

9. The anti-social personality supports only destructive groups and rages against and attacks any constructive or betterment group.

10. This type of personality approves only of destructive actions and fights against constructive or helpful actions or activities.

The artist in particular is often found as a magnet for persons with anti-social personalities who see in his art something which must be destroyed and covertly, “as a friend”, proceed to try.

11. Helping others is an activity which drives the anti-social personality nearly berserk. Activities, however, which destroy in the name of help are closely supported.

12. The anti-social personality has a bad sense of property and conceives that the idea that anyone owns anything is a pretense made up to fool people. Nothing is ever really owned.

#### THE BASIC REASON

The basic reason the anti-social personality behaves as he or she does lies in a hidden terror of others.

To such a person every other being is an enemy, an enemy to be covertly or overtly destroyed.

The fixation is that survival itself depends on “keeping others down” or “keeping people ignorant”.

If anyone were to promise to make others stronger or brighter, the anti-social personality suffers the utmost agony of personal danger.

They reason that if they are in this much trouble with people around them weak or stupid, they would perish should anyone become strong or bright.

Such a person has no trust to a point of terror. This is usually masked and unrevealed.

When such a personality goes insane the world is full of Martians or the FBI and each person met is really a Martian or FBI agent.

But the bulk of such people exhibit no outward signs of insanity. They appear quite rational. They can be very convincing.

However, the list given above consists of things which such a personality cannot detect in himself or herself. This is so true that if you thought you found yourself in one of the above, you most certainly are not anti-social. Self-criticism is a luxury the anti-social cannot afford. They must be RIGHT because they are in continual danger in their own estimation. If you proved one WRONG, you might even send him or her into a severe illness.

Only the sane, well-balanced person tries to correct his conduct.

## RELIEF

If you were to weed out of your past by proper search and discovery those anti-social persons you have known and if you then disconnected, you might experience great relief.

Similarly, if society were to recognize this personality type as a sick being as they now isolate people with smallpox, both social and economic recoveries could occur.

Things are not likely to get much better so long as 20% of the population is permitted to dominate and injure the lives and enterprise of the remaining 80%.

As majority rule is the political manner of the day, so should majority sanity express itself in our daily lives without the interference and destruction of the socially unwell.

The pity of it is, they will not permit themselves to be helped and would not respond to treatment if help were attempted.

An understanding and ability to recognize such personalities could bring a major change in society and our lives.

## THE SOCIAL PERSONALITY

Man in his anxieties is prone to witch hunts.

All one has to do is designate “people wearing black caps” as the villains and one can start a slaughter of people in black caps.

This characteristic makes it very easy for the anti-social personality to bring about a chaotic or dangerous environment.

Man is not naturally brave or calm in his human state. And he is not necessarily villainous.

Even the anti-social personality, in his warped way, is quite certain that he is acting for the best and commonly sees himself as the only good person around, doing all for the good of everyone—the only flaw in his reasoning being that if one kills everyone else, none are left to be protected from the imagined evils. His *conduct* in his environment and toward his fellows is the only method of detecting either the antisocial or the social personalities. Their motives for self are similar—self-preservation and survival. They simply go about achieving these in different ways.

Thus, as Man is naturally neither calm nor brave, anyone to some degree tends to be alert to dangerous persons and hence, witch hunts can begin.

It is therefore even more important to identify the social personality than the anti-social personality. One then avoids shooting the innocent out of mere prejudice or dislike or because of some momentary misconduct.

The social personality can be defined most easily by comparison with his opposite, the anti-social personality.

This differentiation is easily done and no test should ever be constructed which isolates only the anti-social. On the same test must appear the upper as well as lower ranges of Man's actions.

A test that declares only anti-social personalities without also being able to identify the social personality would be itself a suppressive test. It would be like answering “Yes” or “No” to the question “Do you still beat your wife?” Anyone who

took it could be found guilty. While this mechanism might have suited the times of the Inquisition, it would not suit modern needs.

As the society runs, prospers and lives *solely* through the efforts of social personalities, one must know them as *they*, not the anti-social, are the worthwhile people. These are the people who must have rights and freedom. Attention is given to the antisocial solely to protect and assist the social personalities in the society.

All majority rules, civilizing intentions and even the human race will fail unless one can identify and thwart the anti-social personalities and help and forward the social personalities in the society. For the very word “society” implies social conduct and without it there is no society at all, only a barbarism with all men, good or bad, at risk.

The frailty of showing how the harmful people can be known is that these then apply the characteristics to decent people to get them hunted down and eradicated.

The swan song of every great civilization is the tune played by arrows, axes or bullets used by the anti-social to slay the last decent men.

Government is only dangerous when it can be employed by and for anti-social personalities. The end result is the eradication of all social personalities and the resultant collapse of Egypt, Babylon, Rome, Russia or the West.

You will note in the characteristics of the anti-social personality that intelligence is not a clue to the anti-social. They are bright or stupid or average. Thus those who are extremely intelligent can rise to considerable, even head-of-state heights.

Importance and ability or wish to rise above others are likewise not indexes to the anti-social. When they do become important or rise they are, however, rather visible by the broad consequences of their acts. But they are as likely to be unimportant people or hold very lowly stations and wish for nothing better.

Thus it is the twelve given characteristics alone which identify the anti-social personality. And these same twelve reversed are the sole criteria of the social personality if one wishes to be truthful about them.

The identification or labelling of an anti-social personality cannot be done honestly and accurately unless one *also*, in the same examination of the person, reviews the positive side of his life.

All persons under stress can react with momentary flashes of anti-social conduct. This does not make them anti-social personalities.

The true anti-social person has a majority of anti-social characteristics.

The social personality has a majority of social characteristics.

Thus one must examine the good with the bad before one can truly label the anti-social or the social.

In reviewing such matters, very broad testimony and evidence are best. One or two isolated instances determine nothing. One should search all twelve social and all twelve anti-social characteristics and decide on the basis of actual evidence, not opinion.

The twelve primary characteristics of the social personality are as follows:

1. The social personality is specific in relating circumstances. “Joe Jones said...” “The Star Newspaper reported...” and gives sources of data where important or possible.

He may use the generality of “they” or “people” but seldom in connection with attributing statements or opinions of an alarming nature.

2. The social personality is eager to relay good news and reluctant to relay bad.

He may not even bother to pass along criticism when it doesn't matter.

He is more interested in making another feel liked or wanted than disliked by others and tends to err toward reassurance rather than toward criticism.

3. A social personality passes communication without much alteration and if deleting anything tends to delete injurious matters.

He does not like to hurt people's feelings. He sometimes errs in holding back bad news or orders which seem critical or harsh.

4. Treatment, reform and psychotherapy particularly of a mild nature work very well on the social personality.

Whereas anti-social people sometimes promise to reform, they do not. Only the social personality can change or improve easily.

It is often enough to point out unwanted conduct to a social personality to completely alter it for the better.

Criminal codes and violent punishment are not needed to regulate social personalities.

5. The friends and associates of a social personality tend to be well, happy and of good morale.

A truly social personality quite often produces betterment in health or fortune by his mere presence on the scene.

At the very least he does not reduce the existing levels of health or morale in his associates.

When ill, the social personality heals or recovers in an expected manner, and is found open to successful treatment.

6. The social personality tends to select correct targets for correction. He fixes the tyre that is flat rather than attack the windscreen. In the mechanical arts he can therefore repair things and make them work.

7. Cycles of action begun are ordinarily completed by the social personality, if possible.

8. The social personality is ashamed of his misdeeds and reluctant to confess them. He takes responsibility for his errors.

9. The social personality supports constructive groups and tends to protest or resist destructive groups.

10. Destructive actions are protested by the social personality. He assists constructive or helpful actions.

11. The social personality helps others and actively resists acts which harm others.

12. Property is property of someone to the social personality and its theft or misuse is prevented or frowned upon.

## THE BASIC MOTIVATION

The social personality naturally operates on the basis of the greatest good.

He is not haunted by imagined enemies but he does recognize real enemies when they exist.

The social personality wants to survive and wants others to survive, whereas the anti-social personality really and covertly wants others to succumb.

Basically the social personality wants others to be happy and do well, whereas the anti-social personality is very clever in making others do very badly indeed.

A basic clue to the social personality is not really his successes but his motivations. The social personality when successful is often a target for the anti-social and by this reason he may fail. But his intentions included others in his success, whereas the anti-social only appreciate the doom of others.

Unless we can detect the social personality and hold him safe from undue restraint and detect also the anti-social and restrain him, our society will go on suffering from insanity, criminality and war, and Man and civilization will not endure.

Of all our technical skills, such differentiation ranks the highest since, failing, no other skill can continue, as the base on which it operates—civilization—will not be here to continue it.

Do not smash the social personality—and do not fail to render powerless the anti-social in their efforts to harm the rest of us.

Just because a man rises above his fellows or takes an important part does not make him an anti-social personality. Just because a man can control or dominate others does not make him an anti-social personality.

It is his motives in doing so and the consequences of his acts which distinguish the anti-social from the social.

Unless we realize and apply the true characteristics of the two types of personality, we will continue to live in a quandary of who our enemies are and, in doing so, victimize our friends.

All men have committed acts of violence or omission for which they could be censured. In all Mankind there is not one single perfect human being.

But there are those who try to do right and those who specialize in wrong and upon these facts and characteristics you can know them.

### REHAB ON SELF ANALYSIS

The following letter is of importance on rehab of pcs run on Straight Wire or Self Analysis:

“Dear Ron,

The following is an account of rehabbing an ARC Straight Wire Release; the info may be of use to other auditors.

I got a read on PC being Release on ‘Book of Self Analysis’ which several people had run on her. I checked on meter if PC had ‘Gone Release on (Name of Process).’ ‘Can you recall a time when (on General Incidents)?’ (List 1 in Book of Self Analysis.)

‘Did you go Release on “Can you recall an incident which happened on Time Orientation?”’ (List 2 in Book of Self Analysis.)

‘Did you go Release on “Can you recall a time when (on Orientation of Senses)?”’ (List 3 in Book of Self Analysis) etc.

PC had 6 of the Processes she had been Release on. I then dated the release points, all over a period of 2 years, then put Rehab steps in on each time until needle floated.

PC ended shining. I hope this will help other auditors rehabbing this level.

Very best,

Ron Pook.

P.S. Auditors need the book of Self Analysis with them when doing Rehabs at ARC Straight Wire level.”

**ASSESSMENT FOR SERVICE FACSIMILES**

The location of service facsimiles requires *a proper listing question*, the absence of which can lead to missing the actual service fac or overrunning a lower release grade.

Of the assessment methods, the following should probably be ruled out as an overrun of earlier grades or on the basis of getting a free needle on a previous grade:

1. Slow assessment with ITSA (overrun Grade 0)
2. Assessment by problems (overrun Grade 1)
3. Assessment by parts of existence (overrun Grade 0)

This leaves as acceptable methods:

1. "In this lifetime, what do you use to make others wrong?"
2. "In this lifetime, what do you think your service facsimile is?"

(for a Scientologist trained to Level IV)

3. "In this lifetime, what would be a safe solution to .....?" (the blank having been obtained by questions given on the tapes to find either a *hidden standard* or *hidden problem*).
4. Assessment of a prepared list, using level found, in "In this lifetime, what have you .....(prehav level)?"

The point being not to start out at the beginning by listing a question which **OBVIOUSLY WILL NOT RESULT IN FINDING A SERVICE FAC**, in which instance the rule of declaring the grade on a floating needle obtained on the list could not possibly apply.

### **SUB ZERO RELEASES EXAMINER'S SAFEGUARD**

The Pc Examiner in the Department of Examinations, employs the FAST FLOW SYSTEM in examining pcs sent for Release declare. If in doubt when faced with raw meat pc who seems to show nowhere near the expected awareness level for the grade of release he or she has come in for (Grades 0—IV), the Examiner simply tells the pc that he is going to assess a list and that the pc does not have to say anything unless he wants to.

THE AWARENESS LEVELS from the GRADATION CHART are then assessed from the bottom -34 up (to -52 when published).

When the pc's AWARENESS LEVEL is called the needle will float. This will be most real to the pc and he will probably comment on it.

The Examiner stops at that instant, indicates the floating needle. The Examiner notifies the Auditor that a Sub Zero Release has been obtained. The pc is now ready to receive auditing on the level on which he originally came for declare and will be returned to the Auditor.

This verifies that the indicators didn't justify the grade of Release being claimed prior to finding the Sub Zero Release.

NOTE: A good dictionary should be at hand. If no float is obtained, find out if the pc is hung up on any word, and clear it using the dictionary.

The Fast Flow System is observed, assess first, if any trouble arises from misunderstandings, clear it.

**DATING—FORBIDDEN WORDS**

THE WORDS “MORE”—”LESS” OCCUR IN THE BANK AND THEIR USE  
IN DATING IS FORBIDDEN.

In *The Book of E-Meter Drills* the patter for Track Dating, E-Meter Drill 25,  
containing the words “more”—”less”, has to be changed to “GREATER THAN”—  
“LESSER THAN”.

E-Meter Drill 22, E-Meter Hidden Date, This Life, remains unchanged.

Anyone who is using the words “earlier”—”later” in dating, words which are not  
to be found in any E-Meter Drill, is not only guilty of alter-ising Tech, but will grind  
his student or preclear into the Bank, since these words also occur in the Bank and are  
therefore forbidden.

**MANIFESTATIONS OF ENGRAMS AND  
SECONDARIES FURTHER DEFINED**

In order to provide a more accurate differentiation between the manifestations of an engram and a secondary, below are listed detailed definitions of Pain and Sensation.

Pain (in its various forms) is the indication of an Engram.

Sensation (in its various forms) is the indication of a Secondary, which precedes the actual Engram.

**DEFINITIONS**

**SOMATICS** = This is a general word for uncomfortable physical perceptions coming from the reactive mind. Its genus is early Dianetics and it is a general, common package word, used by Scientologists to denote "pain" or "sensation" with no difference made between them. To understand the source of these feelings, one should have a knowledge of engrams, ridges and other parts of the reactive bank. To the Scientologist anything is a SOMATIC if it emanates from the various parts of the reactive mind and produces an awareness of reactivity. Symbol SOM.

**PAIN** = PAIN is composed of heat, cold, electrical, and the combined effect of sharp hurting. If one stuck a fork in his arm, he would experience pain. When one uses PAIN in connection with clearing one means awareness of heat, cold, electrical or hurting stemming from the reactive mind. According to experiments done at Harvard, if one were to make a grid with heated tubes going vertically and chilled tubes going horizontally and were to place a small current of electricity through the lot, the device, touched to a body, would produce the feeling of PAIN. It need not be composed of anything very hot or cold or of any high voltage to produce a very intense feeling of pain. Therefore what we call PAIN is itself heat, cold and electrical. If a pc experiences one or more of these from his reactive mind, we say he is experiencing PAIN.

"Electrical" is the bridge between sensation and PAIN and is difficult to classify as either PAIN or sensation when it exists alone. Symbol PN.

**SENSATION** = All other uncomfortable perceptions stemming from the reactive mind are called SENSATION. These are basically "pressure", "motion", "dizziness", "sexual sensation", and "emotion and misemotion". There are others, definite in themselves but definable in these five general categories. If one took the fork in the pain definition above and pressed it against the arm, that would be "pressure". "Motion" is just that, a feeling of being in motion when one is not. "Motion" includes the "winds of space", a feeling of being blown upon especially from in front of the face. "Dizziness" is a feeling of disorientation and includes a spinniness, as well as an out-of-balance feeling. "Sexual sensation" means any feeling, pleasant or unpleasant, commonly experienced during sexual restimulation or action. "Emotion and Misemotion" include all levels of the complete tone scale except "pain"; emotion and misemotion are closely allied to "motion", being only a finer particle action. A bank solidity is a form of "pressure", and when the sensation of increasing solidity of masses in the mind occurs, we say "the bank is beefing up". All these are classified as SENSATION. Symbol SEN.

*IMPORTANT*

**ADMIN KNOW-HOW  
ALTER-IS AND DEGRADED BEINGS**

Alteration of orders and tech is worse than non-compliance.

Alter-is is a covert avoidance of an order. Although it is apparently often brought about by non-comprehension, the non-comprehension itself and failure to mention it, is an avoidance of orders.

Very degraded beings alter-is. Degraded ones refuse to comply without mentioning it. Beings in fair condition try to comply but remark their troubles to get help when needed. Competent higher toned beings understand orders and comply if possible but mainly do their jobs without needing lots of special orders.

Degraded beings find *any* instruction painful as they have been painfully indoctrinated with violent measures in the past. They therefore alter-is any order or don't comply.

Thus in auditing pcs or in org, where you find alter-is (covert non-compliance) and non-compliance, given sensible and correct tech or instructions, you are dealing with a degraded low level being and should act accordingly.

One uses very simple low level processes on a degraded being, gently.

In admin, orgs and especially the Tech Div where a staff member alter-ises, or fails to comply you are also dealing with a degraded being but one who is too much a pc to be a staff member. He cannot be at cause and staff members must be at cause. So he or she should not be on staff.

This is a primary senior datum regulating all handling of pcs and staff members.

A degraded being is not a suppressive as he can have case gain. But he is so PTS that he works for suppressives only. He is sort of a super-continual PTS beyond the reach really of a simple S & D and handled only at Sect 3 OT Course.

Degraded beings, taking a cue from SP associates, instinctively resent, hate and seek to obstruct any person in charge of anything or any Big Being.

Anyone issuing *sensible* orders is the first one resented by a degraded being.

A degraded being lies to his seniors, avoids orders covertly by alter-is, fails to comply, supplies only complex ideas that can't ever work (obstructive) and is a general area of enturbulence, often mild seeming or even "cooperative", often even flattering, sometimes merely dull but consistently alter-ising or non-complying.

This datum appeared during higher level research and is highly revelatory of earlier unexplained phenomena—the pc who changes commands or doesn't do them, the worker who can't get it straight or who is always on a tea break.

In an area where suppression has been very heavy for long periods people become degraded beings. However, they must have been so before already due to track incidents.

Some thetans are bigger than others. None are truly equal. But the degraded being is not necessarily a natively bad thetan. He is simply so PTS and has been for so long that it requires our highest level tech to finally undo it *after* he has scaled up all our grades.

Degraded beings are about 18 to 1 over Big Beings in the human race (minimum ratio). So those who keep things going are few. And those who will make it without the steam of the few in our orgs behind them are zero. At the same time, we can't have a world full of them and still make it. So we have no choice.

*And* we can handle them, even when they cannot serve, at higher levels.

This is really OT data but we need it at lower levels to get the job done.

## **RELIGIOUS PHILOSOPHY AND RELIGIOUS PRACTICE**

(HCOB of 21 June 1960, "Religious Philosophy  
and Religious Practice" Revised)

Scientology is a religion by its basic tenets, practice, historical background and by the definition of the word "religion" itself. The following will help clarify the philosophical and practical aspects of religion.

*Religious practice* implies ritual, faith-in, doctrine based on a catechism and a creed.

*Religious philosophy* implies study of spiritual manifestations; research on the nature of the spirit and study on the relationship of the spirit to the body; exercises devoted to the rehabilitation of abilities in a spirit.

Scientology is a Religious philosophy in its highest meaning as it brings man to Total Freedom and Truth. Our Confessional relieves the being of the encumbrances which keep his awareness as a being limited to the physical aspects of life.

Scientology is also a Religious practice in that the Church of Scientology conducts basic services such as Sermons at Church meetings, Christenings, Weddings and Funerals.

Scientology does not conflict with other Religions or Religious Practices as it clarifies them and brings understanding of the spiritual nature of man.

Scientology has amongst its members people of all the major faiths, including many priests, bishops and other ordained communicants of the major faiths.

Scientology's closest spiritual ties with any other religion are with Orthodox (Hinayana) Buddhism with which it shares an historical lineage. But even here the relationship is based mainly on friendship and the recognition of the Being as a Spirit rather than on any organizational ties.

### EVIDENCES OF AN ABERRATED AREA

1. Bad memory in that area.
2. Comes up with wrong answers for that area which give
3. PTPs on that subject (since one's answers are wrong).
4. ARC Breaks on that subject (as the trauma gives the opportunity for B P Chg).
5. Is emotional on the subject (continuous B P Chg).
6. Can't confront its subject matter (as represents painful experience).
7. Is ill in the body part or part of existence which was injured.
8. His mest in that area is "sick" (enmested), as degraded by trauma.
9. Is inattentive on that subject.
10. Has perception lapses on things similar to the objects in the traumatic area.
11. Detests or ignores or can't have the objects similar to those in the traumatic experience.
12. Acts irrationally on the subject that is uncleared.
13. Is regarded as odd on that subject (not normal behavior).
14. Resents any criticism of self regarding the subject or area.
15. Ridicules the subject or object.
16. Cannot understand similar objects or experiences.
17. Commits overts on the subject or object.
18. Justifies any overt committed.
19. Thinks critical thoughts of the subject or object.
20. Dwells on the subject or object continuously.
21. Desires to get subject or object out of mind.
22. Wants processing for the subject, area or object.
23. Reacts on the needle when any near subject word is mentioned.
24. Reacts on the Tone Arm when any close version of the word is mentioned.
25. Becomes ill when invalidating the subject or object.
26. Has withholds concerning subject or object.
27. Doesn't want to discuss subject or object.
28. Alters data about the subject or object.
29. Tells lies concerning the subject or object.
30. Subjects pc got low grades on, can't understand.
31. And most important of all, attempts to stop things in that area and uses innumerable methods, covert and overt to do so.

## THE SUPREME TEST

THE SUPREME TEST OF A THETAN IS HIS ABILITY TO MAKE THINGS GO RIGHT.

This of course is a rather savage and brutal datum for it thrusts aside all justification, reasonableness, excuses and even does not take into account the size or obstacles of the opposition.

But please note that the datum is not “are things all right around him” as this is a passive test and could mean only that he was simply sitting still.

Whether things are *currently* all right or not is beside the point. The thetan who is making things go right may be tackling a mountain of confusion and of course things are *not* all right because what he is attacking is mainly wrong. It is whether or not he is *making* things go right in spite of “hell or high water” that is the test.

Many beings live lives of quiet correctness without ever once making anything do anything. Things around them just happen to be orderly. The social system props them up. But someday—bang—the society gets into a turmoil which knocks out the props. THEN we see that there were too few present who could MAKE things go right and that is the end of the society. Thus died all old civilizations. Their people lived in a system correctness and things went right only so long as nothing was going wrong. Then one day things go wrong. These sophisticated but weak beings never were able to MAKE things go right and so the whole society collapses.

One might also ask, “What is meant by *right*?”

This would be forwarding a purpose not destructive to the majority of the dynamics.

-----

*Aberration* is by definition “a crooked line”. It is from the Latin *aberratio*, “a wandering from” and from the Latin *errare*, to wander or to *err*.

A sane person thinks, looks and sees in straight lines. Black is black, white is white. The aberrated person looks toward black and wanders off in his gaze to something else and makes the error of saying it is “grey”.

You can consider aberration in a passive way (supinely, of no force or action). A person is sane or not sane. He thinks straight or crookedly.

Now consider aberration in a forceful way. A person *looks*, then an opposing force to him pushes aside his gaze or distracts it. But the really sane, forceful person looks right on through and past the opposition and sees what is there anyway.

Let us take real action. Mr. Q rolls a ball from A toward B. En route Opposition X pushes the ball aside toward C. Mr. Q then shoves the ball toward C and says the reason he did not arrive properly at B was because .....

Mr. S rolls a ball from A toward B. Opposition X diverts the ball toward C. Mr. S pulls the ball back into line and despite, over and through Opposition X arrives at B anyway.

You can see that Mr. Q in the first example is willing to be aberrated or pushed aside or at least does not contest it enough. Mr. Q is aberrated.

Mr. S on the other hand was not willing to be diverted and went right on to B. Mr. S is not aberrated.

Now society, being mainly suppressive, observes that Mr. Q never has much commotion around him. True, he never arrives and gets nothing done, but he isn't noisy so he is "okay".

Mr. S on the other hand makes an awful row and bashes Opposition X on the head and snarls his way onward toward B. Society says he is a bad fellow because he has fusses. Of course he also gets something done. But in a decadent society men are measured by how *pleasant* they are, not how effective they are, so Mr. S is regarded as a bit "mad". YET when trouble comes it is only the Mr. Ss who will save the day while the Mr. Qs all give up and die.

There is another point here, however. That is *purpose*. The difference between one thetan's forward thrust and another's is PURPOSE, validity of.

A madman can also go from A *toward* B relentlessly where B is a totally undesirable and destructive point. But in actual practice, real madmen never really arrive at the B they wanted to arrive at. A madman only goes *toward* but never really arrives. So he only makes everything go *wrong*.

B must be a desirable point not destructive to a majority of the dynamics for rightness to occur.

So there is the savage and bare datum:

**THE SUPREME TEST OF A THETAN IS THE ABILITY TO MAKE THINGS GO RIGHT.**

People who explain how wrong it is all going and who have reasons why and WHO AREN'T PUTTING IT RIGHT are the real crazy people in the universe. The only ones crazier than they are are the ones who are quite happy to have everything fail and go wrong with no protest from them. And the only ones even worse are those who work endlessly to make things go wrong and prevent anything from going right and oppose all efforts instinctively.

Fortunately there are a few around who DO make things go right in spite of everything and anyone.

## REMEDY B

Remedy B in *The Book of Case Remedies* MUST NOT BE RUN TO LIMIT THE PC TO THIS LIFE.

The way to do this remedy is BY LISTING. It is a process of Level III.

One asks for *subjects or practices* similar to Scientology. He LISTS the answers. He makes a complete list, not too short, not too long, and the item on it. Usually the correct subject or practice gives a Blowdown.

The pc sometimes cognites at this point and good indicators come in strongly.

If this does not spectacularly occur, one asks for the *misunderstoods* (not the *misunderstood words*) the pc might have on this subject. This probably cleans it all up IF YOU GOT THE RIGHT ITEM ON THE LIST.

Remedy B has been run lately in a manner to limit it to this life. That is an error. The pc never has done anything in this life that aberrated him. The subject on which Scientology is hanging up is almost always in a past life. Hence it is reached only by generalized listing.

You don't ask, in Remedy B, for misunderstood WORDS in the found subject as these would be in Hottentot, Arabic, lingua spacia or some outlandish tongue the pc has no memory of.

As a comment, why can't people just understand a process and do it without goofing it. Remedy B has been rendered wholly ineffective by the misinterpretation it has received.

Remedy B is a vital process and if run and run *right* as above it cures the slow Academy student.

So let's do it do it do it and without goofs, huh?

**SCALES**

(HCO B 10 May 1960, "Scales" Revised)

Following is a list of some scales used in Scientology, including a table of reality-spotting by E-Meter.

**EMOTIONAL TONE SCALE**

	40.0	Serenity of Beingness	
	8.0	Exhilaration	
	4.0	Enthusiasm	
	3.0	Conservatism	
	2.5	Boredom	
	2.0	Antagonism	
	1.8	Pain	
	1.5	Anger	
	1.2	No Sympathy	
	1.1	Covert Hostility	
	1.0	Fear	
	0.9	Sympathy	
	0.8	Propitiation	
	0.5	Grief	
	0.375	Making Amends	
	0.05	Apathy	
	0.0	Being a Body (Death)	Failure
	-0.2	Being Other Bodies	<i>Shame</i>
	-1.0	Punishing Other Bodies	<i>Blame</i>
	-1.3	Responsibility as Blame	<i>Regret</i>
	-1.5	Controlling Bodies	
	-2.2	Protecting Bodies	
	-3.0	Owning Bodies	
	-3.5	Approval From Bodies	
	-4.0	Needing Bodies	
	-8.0	Hiding	

<p>THETAN SCALE RANGE</p> <p>Well below body death at "0" down to complete unbeingness as a thetan</p>	<p>THETAN PLUS BODY</p> <p>Social training and education sole guarantee of sane conduct</p>	<p>40.0</p> <p>8.0</p> <p>4.0</p> <p>3.0</p> <p>2.5</p> <p>2.0</p> <p>1.8</p> <p>1.5</p> <p>1.2</p> <p>1.1</p> <p>1.0</p> <p>0.9</p> <p>0.8</p> <p>0.5</p> <p>0.375</p> <p>0.05</p> <p>0.0</p> <p>-0.2</p> <p>-1.0</p> <p>-1.3</p> <p>-1.5</p> <p>-2.2</p> <p>-3.0</p> <p>-3.5</p> <p>-4.0</p> <p>-8.0</p>	<p>Serenity of Beingness</p> <p>Exhilaration</p> <p>Enthusiasm</p> <p>Conservatism</p> <p>Boredom</p> <p>Antagonism</p> <p>Pain</p> <p>Anger</p> <p>No Sympathy</p> <p>Covert Hostility</p> <p>Fear</p> <p>Sympathy</p> <p>Propitiation</p> <p>Grief</p> <p>Making Amends</p> <p>Apathy</p> <p>Being a Body (Death)</p> <p>Being Other Bodies</p> <p>Punishing Other Bodies</p> <p>Responsibility as Blame</p> <p>Controlling Bodies</p> <p>Protecting Bodies</p> <p>Owning Bodies</p> <p>Approval From Bodies</p> <p>Needing Bodies</p> <p>Hiding</p>	<p>Failure</p> <p><i>Shame</i></p> <p><i>Blame</i></p> <p><i>Regret</i></p>

**REALITY-SPOTTING BY E-METER**

Needle characteristics plotted on scale with numerical tone scale values, "old" Reality Scale and "new" Reality Scale.

<b>TONE</b>	<b>REALITY SCALE (OLD)</b>	<b>REALITY SCALE (NEW)</b>	<b>NEEDLE CHARACTER- ISTICS</b>
40 to 20	Postulates	PAN-DETERMINED ) CREATION )	Produces meter phenomena at will. Free needle.
20 to 4	Consideration	SELF-DETERMINED ) CREATION )	
4 to 2	Agreements	EXPERIENCE	Free needle, drop at will.
1.5	Solid terminals	CONFRONT	Drop.
1.1	Terminals too solid Lines solid	ELSEWHERENESS	Theta Bop.
1 to .5	No terminal Solid line	INVISIBILITY ) ) )	Stuck, sticky.
.5 to .1	No terminal Less solid line	BLACKNESS ) )	
.1	No real terminal No solid line  Substitute terminal	DUB-IN ) (no confront, not-iness) ) )	Rising needle.
0.0	No terminal No line	UNCONSCIOUSNESS	STUCK. Also stage four needle. (All machine—no pc.)

For complete description of human behaviour at the above tone levels, study **SCIENCE OF SURVIVAL** with the Chart of Human Evaluation by L. Ron Hubbard. Learn also the *Hubbard Chart of Attitudes*.

The above chart of correlations applies in two ways:

1. by the chronic standard reaction of the preclear
2. by type of material (facsimiles) contacted.

HCO BULLETIN OF 24 SEPTEMBER 1967

General  
Non Remimeo

The following report from Yvonne Gillham is of interest:

“Dear Ron,

Coming from Hull to here I found that when I started to feel sea-sick and when I indicated to myself that I was PTS and had some SP on my sea track restimulated, it completely blew, and I never had it again.

When I indicated this to Pooky, Thok and Craig it had the same effect on them. I gave the info to Haskell, who was doing review at the time, and he had similar success.

All sickness is PTS, etc, so it follows that sea-sickness would come under this too.

Love,

Yvonne.”

**CLEAR CHECKS AND RE-CLEAR CHECKS**

(Reference HCO PL 13 Sept 67)

“Clear Check or a Re-Clear Check is done exactly per HCOPL 13 Sept 67, “Clear Check Outs”.

The first step, CC materials to FN, is a *folder* inspection. If no FN was noted in the CC folder, the point is rehabbed if it exists. Standard Rehab—date time or times, etc. Materials not run to FN is a flunk.

The second step requires the TA between 2 and 3. Proper cans giving full hand contact must be used. Solo cans are NOT used. The meter and cans must be checked out before the check by placing a 5000 ohm resistor between the *cans*, and then a 12,500 ohm resistor. The resistor is clipped to the cans, not the leads.

Use sensitivity 5 on the Clear and Re-Clear Check.

In rehabbing the grades keep in mind HCO B 11 Feb 66, “Free Needles, How to Get Them on a Pc”. That is, if a grade does not rehab to FN, go on to the next grade, etc, until you have an FN. Then pick up those that you left. The one *really* keyed in will hold down the others.

You do HCO Bs 30 June 65, 21 July 65, 2 Aug 65, 21 Oct 65 exactly. Listing and dating each and every release on a grade. REMEMBER that a pc may have gone release more than once on a given process, so check for it. You get in all steps and do a proper job of it, getting the pc happy about it before leaving the grade. When you are done you will have isolated the out grades, if any. Such a pc goes to Review to get them put in.

You must have down that the grade was RUN. “Have you been run on ARC Breaks, yes, FN, that’s it”, is incorrect. See 21 Oct 65. What processes were run?—list them—find which went release on, etc. Standard tech.

*N.B.* Straight wire, secondaries, engrams, and Grade Va do not need to be run. Their absence does *not* constitute a flunk.

However, if they were run and the pc did not go release, they would naturally have to be completed. But, this is only done IF they were run *previously*.

Some pcs have not been run on Grade V due to ED on old SH grads. Point is, are they whole track engram releases? If not, handle any by-passed charge. DO NOT run Power. Do not run Power on anyone who has run the CC materials.

So, on such a pc as falls under this ED, when you get to where you would be rehabbing Grade V, you instead just locate his old track processes, like Helatrobus, Fac One, etc, and find out if he went release. You use your 27 Sept 65 bulletin here—what did the pc look at that got the release—what keyed out. This determines whether or not he’s whole track engram release.

For example, pc ran on old *Advanced Procedure and Axioms* process of go to a moment of occlusion in this lifetime. Bang, he went whole track, a picture of two anthropoids showed up in an electronics incident. The key-out gave the pc a release lasting 3<sup>1</sup>/<sub>2</sub> years. On rehab, when this electronic was spotted again, there was a great resurgence and FN.

During these grade rehabs the TA may go below 2 or above 3. This is OK, you continue the rehabs as you usually would.

After rehabs are *all* done, any out grade is run to FN in Review, excluding those listed above.

A person pending an S & D does not receive his check until the S & D has been completed on the person and Ethics clearance has been given on it.

A Clear who acquires an Ethics record of a Crime level obviously is a misdeclare, and must be put on the usual lines and get a Re-Clear Check, then a complete Review to get in the out grade or grades. This Ethics record must be accurate and proven, not just some chit written which may or may not be true. It is a PROVEN record resulting from a Hearing, Board of Investigation, or Comm Ev. If the record is in question, it must be cleared up before revoking a Clear Certificate.

Failure to pass a Re-Clear Check by TA position is meaningless technically because upper Levels key in after Clear and will move the TA all over the dial and can tighten the needle (tighten, not scratchy). So do not withdraw the Certificate. Continue the check, do rehabs, and get in any out grades in Review. Exams does the Check.

You get a person cleaned up on whatever you found out so that he can then pass a Check.

A person who flunks a Clear Check or Re-Clear Check does NOT run the CC materials to another FN before getting another check. If, however, the flunk was because the CC materials had not been run to FN, he would of course do so before another check.

### CLAY TABLE TRAINING

- PURPOSE:
1. To make the materials being studied real to the student by making him DEMONSTRATE them in clay.
  2. To give a proper balance of mass and significance.
  3. To teach the student to *apply*.

The student is given a word or auditing action or situation to demonstrate. He then does this in clay, labeling each part. The clay SHOWS the thing. It is *not* just a blob of clay with a label on it. Use small strips of paper for labels. The whole demonstration then has a label of what it is.

On the checkout, the student removes the overall label. The student must be silent. The examiner must not ask any questions.

The examiner just looks and figures out what it is. He then tells the student who then shows the examiner the label. If the examiner did not see what it was, it is a flunk.

Clay table must not be reduced to significance by the student explaining or answering questions. Nor is it reduced to significance by long-winded labels of individual parts. The clay *shows* it, not the label.

The clay demonstrates it. The student must learn the difference between mass and significance.

For example, the student has to demonstrate a pencil. He makes a thin roll of clay which is surrounded by another layer of clay—the thin roll sticking slightly out of one end. On the other end goes a small cylinder of clay. The roll is labeled “lead”. The outer layer is labeled “wood”. The small cylinder is labeled “rubber”. Then a label is made for the whole thing: “pencil”. On checkout, the student removes “pencil” before the examiner can see it. If the examiner can look at it and say, “It’s a pencil,” the student passes.

It might also be noted that checkouts on bulletins must also ask for demonstrations. Use paper-clips, rubber bands, etc. The examiner should ask questions that require an ability to *apply*. Give the student a situation and have him tell you how he would handle it.

Questions about what is rule “a” do not detect the glib student. Long-winded explanations on clay table put it back into significance, prevent the student from learning to *apply*, and prevent the student from getting the proper balance of mass, and do not blow confusion.

All checkouts must keep in mind that the purpose is application, not just getting a checksheet complete.

If clay table training is not brightening that student up, then the above is NOT being done. Someone is in such a rush that *real* learning is being put aside for the sake of speed.

This student has to *audit* with his materials. Don’t let him fall flat by lousy checkouts and lousy demonstrations. A well done clay demo, which actually does demonstrate, will produce a marvellous change in that student. And he will retain the data.

Remimeo

*REVIEW AUDITORS*  
*BOOK OF CASE REMEDIES*

**REVISION OF REMEDY A, REMEDY B, AND S AND Ds**

(Note: To be reprinted for insertion in every  
copy of *The Book of Case Remedies*.)

This bulletin is to be inserted in and changes *The Book of Case Remedies* PROCEDURES for Remedy A, Remedy B and S and Ds (Search for and Discovery of Suppressives).

Recent analyses made of Qualifications Divisions Departments of Review and of the flow of students and pcs through the Saint Hill org show:

1. The KEY processes so far as orgs are concerned are Remedy A, Remedy B and S&Ds.
2. Auditors need direct mechanical technology to do these three processes effectively.

REMEDY A

Remedy A locates the MISUNDERSTOODS a person has in Scientology. Originally it read "Misunderstood *words*". Words of course will emerge in the general run of misunderstands.

REMEDY A is done *only* by *LISTING*. It must not be done verbally alone. It is a Level III process.

The listing question is "In the subjects of Dianetics or Scientology who or what has been misunderstood?"

The item is found on the list and given to the student. That is all. There is no other step.

The rules of listing all apply.

If the student won't have the item it is not correct and the list must be straightened up with the general auditing rules that govern listing.

REMEDY B

The form of this process is changed. It is done by *three* lists. These three may only be done by formal LISTING and the general tech of listing as governed by Level III tech.

The lists make the form of an I

LIST 1B

This is done to locate what in the Scientology PT is giving trouble. It is done as a *list* and the item is found.

The listing question is

“In your studies of Dianetics and Scientology who or what are you having trouble with? “

The item is found and given to the student.

This step is governed by all the tech of listing.

#### LIST 2B

The item found on List 1B is now listed in order to find the past track subject similar to what is giving trouble in present time.

The listing question is

“In your past, who or what was similar to .....(item found in List 1B)?”

It is highly illegal to limit the question to this lifetime.

All the rules of listing apply.

The item is found and given to the student.

#### LIST 3B

The third list of the process is now done.

The listing question is

“Who or what was misunderstood in .....(the item found on list 2B)?”

The listing is covered by the general tech of listing as found in Level III.

The item is found and given to the student.

This completes the Remedy B.

If a floating needle occurs any time during the process with good indicators thoroughly visible in the student the process is concluded at that point.

The process is used on anyone having trouble studying Dianetics or Scientology. The trouble, as it doesn't clear up with Remedy A, is coming from some prior subject.

More than one of these can be done if all steps are done for each one.

#### S & D

Search and Discovery of Suppression is called an “S and D”. It locates the suppressives on the case.

I have several times undercut (gotten processes that reach deeper) on S & Ds.

The earliest process asked merely who might have been suppressive to the pc. This is still valid but I have found 2 flaws in it.

1. The auditor does not do a listing type S & D at all but just chattily brushes it off.
2. The list from this question contains an actual suppressive that is passed right over.

Therefore I undercut the question and obtained much better results because the new question reached deeper.

The new question was “Who or *what* might have suppressed you?”

Then I recalled an even deeper question. This was “What purpose has been suppressed?” This was given to Qual Div SH some time ago. It would have 2 lists. The first is for the purpose as above and the second would be “Who or what suppressed .....(purpose found)?”

For some reason, probably because no one did 2 lists, this undercut was neglected.

Therefore I researched further and developed what we will now use as an S & D.

It is one of these killer processes. It is VERY strong. So it isn't to be carelessly done.

If you get a wrong item on an S & D YOU CAN MAKE THE PC ILL. So one has to do an S & D right and follow all the rules of listing as given in Level III tech.

Also I find now that when a list item found is a generality (multiple subject, not specific such as “dogs” or “the public”) the list is simply not complete. One does not have to settle for a generality and then list the generality. He will find *that* the pc will eventually list the specific non-general item anyway. Of course one can also do a represent list of a general item found if that seems best.

The real question for an S & D was established only when I found a purpose all Suppressives have in common and is a very fundamental effort in suppressives. This effort by suppressives, when found, then permitted me to form the question.

The key S & D question is:

“Who or what has attempted to unmock you?”

*Unmocking* (an effort to reduce or make disappear) is the primary effort of suppressives.

Therefore the listing question on test delivers up items totally overlooked by the earlier types of S & D.

The question needs to be cleared carefully for non-Scientology. If it has to be rephrased, watch out as the meaning may vanish. “Tried to make nothing of you” might substitute but at this writing only unmock has been tested and a question for others than educated Scientologists will be developed and issued and made part of the enclosure for the book.

This S & D question must be done by LISTING only and with great care to follow Level III Listing tech as it, being powerful, will backfire on the pc if done carelessly and a wrong item is found.

The item is found by listing and given to the pc, which is the end of the process. If a generality results it may be represented. But listing continued will give the same result of a single item. A general item must not be given to the pc as the final result.

This process will now be standard review S & D.

**OUT TECH**

If at any time a supervisor or other person in an org gives you interpretations of HCOBs, Policy Letters or tells you, "That's old. Read it but disregard it," or gives you a chit for following HCOBs or tapes or alters tech on you or personally cancels HCOBs or Policy Letters without being able to show you an *HCOB* or Policy Letter that cancels it, **YOU MUST REPORT THE MATTER COMPLETE WITH NAMES AND ANY WITNESSES ON DIRECT LINES TO THE INTERNATIONAL ETHICS OFFICER AT WORLD WIDE.**

The only ways you can fail to get results on a pc are:

1. Not study your HCOBs and my books and tapes.
2. Not apply what you studied.
3. Follow "advice" contrary to what you find on HCOBs and Tapes.
4. Fail to obtain the HCOBs, books and tapes needed.

There is no hidden data line.

*All of Dianetics and Scientology works. Some of it works faster.*

The only real error auditors made over the years was to fail to stop a process the moment they saw a floating needle.

-----

Any supervisor or executive who interprets, alters or cancels tech is liable to the assignment of a Condition of Enemy. *All* the data is in HCOBs or Policy Letters or on tape.

-----

Failure to make this mimeo known to every student carries a \$10 fine for every student from which it is withheld.

**LIST HANDLING**

By using a list such as the Green Form Review of 13 October 1966 to handle a case, one handles each item that reads before going on with assessment.

There are two ways to use an assessment list.

- (a) Direct assessing of the whole list to obtain data and find what to do.
- (b) Assess down the list only until something reads, then handle that. Then when it's handled, continue on down from it to the next read, handle that, etc.

The pc's attention often hangs up when his trouble is by-passed by a full list assessment without handling.

If in handling an item you get an FN you don't then go on assessing the list.

**QUAL SENIOR DATUM**

The Senior datum of Qual is that:

**QUAL NEVER NEVER NEVER TAKES THE ORDER OR DIRECTION OF ANY OTHER DIVISION OR STAFF MEMBER ON WHAT TO DO TECHNICALLY WITH A STUDENT OR PC.**

Qual only really comes into action when other divisions and staff of other divisions have failed. So if they knew what to do the person would not be turning up in Qual for tech remedies. So if Qual takes *their* orders of what to do it will also fail.

This datum originated at SH when Qual, in a collapse, was found to be obediently doing what Div 4 and Dept 3 ordered on students and pcs. It was getting no results. I analyzed the situation and over a period of a couple of weeks worked on it. The result was the above datum and the GREEN FORM.

Qual always does its own analysis and its own internal routings independent of other directions. It can use any process ever released and a Review auditor must be able to do them.

The GREEN FORM must be added to from time to time as new difficulties are found due to advancing technology or new errors developed by poor training.

A student sent by Tech Sec for Cramming may be routed instead by Qual to case repair if that is what is needed.

The keynote of Qual is CORRECTION. This of course applicable to diagnosis as well.

**NO OTHER DIVISION MAY CHIT QUAL FOR REFUSING TO OBEY THEIR DIRECTIONS REGARDING WHAT TO DO WITH STUDENTS OR PCS.**

Other divisions are assembly lines. Qual is an individual approach. Qual's Review only gets flat ball bearings—which could not or would not roll on the assembly line of Div 4.

People can't be sent to Qual for "disagreements checks" "sec checks" or other stated actions as these are an attempted diagnosis and will normally be found to be the wrong process.

Qual is the students' and pcs' friend. A last refuge when other doors close.

**AND** cases must leave Qual and students must leave Qual **WITH THE WHOLE THING HANDLED** in a way that will **STAY HANDLED**. Qual has no Qual Div for the Qual Div. When it goes irresponsible and lets an unhandled case or student out, then that person **HAS NO PLACE TO TURN**.

I know how bad a failed Qual case can be because when I'm in an org, having no part of the org to go to (unless the Chaplain) they come to me. I usually find (a) that

some imaginary rule has stopped the person's progress or policy has been used to stop or (b) that Qual was obedient to some other division and (c) always that Qual has either not been approached or has failed when it was.

So the senior datum of Qual is important.

-----

There is another datum in Qual that is very important. And that is:

**NO AUDITOR MAY BE EMPLOYED IN QUAL WHO CANNOT SUCCESSFULLY LIST AND ASSESS FLAWLESSLY WITHOUT ANY ERRORS.**

All you have to do to wreck Qual is put an auditor in it who is not letter perfect in ALL the tech of listing and assessing. (Some isolated summary is not enough—all the original tapes and all the original HCOBs must be studied to make an auditor able in listing and assessing. It is the weakest applied point in our tech—too many can't or don't learn how to do it. But a Qual auditor MUST be a shark on it.)

One can say that the health of an org depends on Qual finally handling. The key processes which keep an org healthy are new (67) style Remedy A, Remedy B and S & Ds and the GREEN FORM. These are listing and assessing or assessing processes. Thus the vital tech is listing and assessing. So Qual auditors have to be carefully trained to do these perfectly.

At this writing Qual is being streamlined into a new fast flow pattern. This policy still applies and in 2068 will still apply and in 200068 as well.

**LIST L4A  
FOR ASSESSMENT OF ALL LISTING ERRORS,  
S & Ds, REMEDY A, REMEDY B, ETC**

1. DO YOU HAVE AN ARC BREAK? (ARE YOU UPSET?)  
(If this question reads establish if the upset is due to a break in Affinity, Communication or Reality and then having established which one by meter [A, R or C] locate by meter and indicate to the pc the by-passed charge.)  
(Do not go on further until the ARC Break has been vanished. The pc might also have a PTP, etc, so continue on when the ARC Break question is null or has been handled.)
2. DO YOU HAVE A PRESENT TIME PROBLEM?  
(If this reads, handle by any quick problems process.)
3. IS A LIST INCOMPLETE?  
(If this reads find out what list and handle.)
4. HAS A LIST BEEN TOO LONG?  
(If so, find what list and get the item off from it by nulling with "Suppress", the nulling question being "Has\_\_\_\_been suppressed?" for each item on the overlong list.)
5. HAVE WE TAKEN THE WRONG ITEM OFF A LIST?  
(If this reads put in Invalidate and Suppress on the list and null as in 4 above and find the right item.)
6. HAS AN ITEM ON A LIST BEEN DENIED YOU?  
(If this reads find what it was, clean it up with supp & inval and give it to the pc.)
7. HAS AN ITEM BEEN PUSHED OFF ON YOU YOU DIDN'T WANT?  
(If so, find it and get in supp & inval on it and tell the pc it wasn't his item and continue the original action to find the correct item.)
8. HAVE YOU INVALIDATED A CORRECT ITEM FOUND?  
(If so, rehab the item and find out why the pc invald it or if somebody else did, clean it up and give it to the pc again.)
9. HAVE YOU THOUGHT OF ITEMS THAT DID NOT GET PUT ON THE LIST?  
(If so, add them to the correct list.)

10. HAVE YOU BEEN LISTING TO YOURSELF OUT OF SESSION?  
(If so, find out on what question and try to write a list from recall and get an item and give it to the pc.)
11. HAVE YOU BEEN GIVEN SOMEBODY ELSE'S ITEM?  
(If so, indicate to pc that it was not his item. Don't try to find whose it was.)
12. HAS YOUR ITEM BEEN GIVEN TO SOMEBODY ELSE?  
(If so, find if possible what item it was and give it to the pc. Don't try to identify the "somebody else".)
13. HAS IT BEEN AN OVERT TO PUT AN ITEM ON A LIST?  
(If so, find out what item and why.)
14. HAVE YOU WITHHELD AN ITEM FROM A LIST?  
(If so, get it and add it to the list if that list available. If not, put item in the report.)
15. HAS A WITHHOLD BEEN MISSED?  
(If so, get it.)
16. HAS AN ITEM BEEN BY-PASSED?  
(Locate what one.)
17. HAS AN ITEM BEEN SUPPRESSED?  
(If so, null by use of the suppress button or just have pc tell you if he can.)
18. HAS AN ITEM BEEN ABANDONED?  
(If so, locate it and get it back for the pc and give it to him.)
19. HAS AN ITEM BEEN PROTESTED?  
(If so, locate it and get the protest button in on it.)
20. HAS AN ITEM BEEN ASSERTED?  
(If so, locate what item and get in assert button on it.)
21. HAS AN ITEM BEEN SUGGESTED TO YOU BY ANOTHER?  
(If so, get it named and the protest and refusal off.)
22. HAS AN ITEM BEEN VOLUNTEERED BY YOU AND NOT ACCEPTED?  
(If so, get off the charge and give it to the pc, or if he then changes his mind on it, go on with the listing operation.)
23. HAS THE ITEM ALREADY BEEN GIVEN?  
(If so, get it back and give it again.)
24. HAS THE ITEM BEEN FOUND PREVIOUSLY?  
(If so, find what it was again and give it to pc once more.)
25. HAS AN ITEM NOT BEEN UNDERSTOOD?  
(If so, work it over with buttons until pc understands it or accepts or rejects it and go on with listing.)
26. WAS NULLING CARRIED ON PAST THE FOUND ITEM?  
(If so, go back to it and get in suppress and protest.)
27. HAS AN ITEM BEEN FORCED ON YOU?  
(If so, get off the reject and suppress. And get the listing action completed to the right item if possible.)
28. HAS AN ITEM BEEN EVALUATED?  
(If so, get off the disagreement and protest.)

29. HAS EARLIER LISTING BEEN RESTIMULATED?  
(If so, locate when and indicate the by-passed charge.)
30. HAS AN EARLIER WRONG ITEM BEEN RESTIMULATED?  
(If so, find when and indicate the BPC.)
31. HAS AN EARLIER LISTING ARC BREAK BEEN RESTIMULATED?  
(If so, locate and indicate the fact.)
32. DO YOU HAVE AN ARC BREAK BECAUSE OF BEING MADE TO DO THIS?  
(If so, indicate it to pc.)
33. IS THERE SOME OTHER KIND OF BY-PASSED CHARGE?  
(If so, find what and indicate it to pc.)
34. WAS THERE NOTHING WRONG IN THE FIRST PLACE?  
(If so, indicate it to pc.)
35. HAS THE UPSET ALREADY BEEN HANDLED?  
(If so, indicate it to pc.)

### S & Ds

There are three types of S & D (Search and Discovery). These are used to nullify the influence of Suppressive persons or things on a case so the person will be able to be processed and will no longer be PTS (a Potential Trouble Source). People who are PTS became that way because of suppression by persons or objects. Insanity is also remediable by S & Ds where the person can be processed.

These are all LISTING processes and if the auditor is not well-trained and good at the technology of listing, not only will no good result occur but the pc (given a wrong item, overlisted or underlisted, or audited over an ARC Break or PTP) can be made ill.

Pcs who become ill are *always* to a greater or lesser degree PTS.

These questions should not be shown to a pc as they may start him self-listing.

The "type" is determined by the 1st letter of the key word in the listing question.

#### S & D TYPE U

"Who or what has attempted to unmock you?"

Where this does not communicate, use "Who or what has tried to make nothing out of you?" A very bad off case may respond best to "Who or what has unmocked you?"

This (above) is the standard and most used S & D.

#### S & D TYPE S

"Who or what are you trying to stop?"

This works on all cases to a greater or lesser degree. It is particularly useful on a case that is giving a great deal of trouble, gets small reads or is rather suppressive. This should work on the insane also as the point where a q<sup>n</sup> (thetan) becomes insane is the point where he begins to generally stop things. I looked for years for the exact point where a q<sup>n</sup> ceased to be sane and became insane on any given subject and finally found that it was the exact moment he became dedicated to trying to stop whatever it was.

#### S & D TYPE W

"Who or what are you trying to withdraw from?"

This is the action after a failure to stop has occurred.

In administering these, the best order would be Type W, Type S and then Type U, if you are going to give them all to the same pc in a row.

Any or all can be given to the same pc.

S & Ds can be given more than once to the same pc.

Properly listed the results are magical. If they are not magical, then listing tech is badly out and should be restudied from ALL materials and tapes on the subject.

Errors are located and repaired by the recent new L4A (HCOB of 9 January 1968).

### **STARTING OF PRECLEARS**

All raw meat Preclears (one who has never had Scientology processing), before being run on Level Zero, should be run on ARC S/W, Secondaries and ENGRAMS. This, then, gets their basic levels in.

On the Dianetic Courses running ARC S/W, Secondaries and ENGRAMS comes as the last requirement after the Course Supervisor is satisfied that the TRs 0 to 4 are in on the Student.

## S & Ds

### S & Ds BY BUTTON

The most certain way to handle a pc with an S & D is to assess for the type to give first.

With the pc on the meter, say, “Unmock” (or “Make nothing of”) “Stop” “Withdraw from” “Suppress” “Invalidate” (or any of the buttons used in old Problems Intensives). Then take the one that read largest and put it in the Question “Who or what has attempted to\_\_\_\_\_you?” or “Who or what are you trying to\_\_\_\_\_?”

When you have listed the question and found the item and given it to the pc, you can take the above list, with the one used omitted, and take the largest read now on the remaining words and put that in the question and get another item for it.

So long as you can get one of the buttons to read, you can get an item by doing an S & D with it.

CAUTION: Do not continue to do S & Ds beyond a floating needle.

CAUTION: Do not list an S & D button if the question for the list does not read.

### S & Ds BY ASSESSMENT FOR QUESTION

You can also do an S & D by assessing for a button to use in an S & D question.

This is done by asking the question:

“What are they trying to do to you?”

Get the pc to list it, find the item and then use it in an S & D question.

This works on any case but always works best on cases that haven’t responded to S & Ds previously.

Fit the resulting item in the question “Who or what is trying to\_\_\_\_\_you?”

### PURPOSE S & Ds

A Purpose S & D By Assessment for Question can be done by first listing “What are you trying to do?” or “What have you tried to do?” You test these two questions for the largest read, then you list the one that reads best.

When you have the item of “What are you trying to do” or “What have you tried to do” you fit it into the S & D Question “Who or what have you failed to\_\_\_\_\_ (item found)?” or “Who or what have you tried to\_\_\_\_\_?”, the two questions tested for largest read and then listed for an item.

CAUTION: The question must make sense and be answerable. Don’t change the wording of the item. Change the question into a sensible one.

This form of S & D can give an Effect question as the only possible question.

If the item found on the first list “ trying to do” won’t word causative, word it by effect—”Who or what has tried to you ?”

The whole attempt of this S & D is to find the person or thing that has blunted the purpose of the pc.

-----

All these S & Ds *do not set aside the standard S & D Types W, S and U*. “Type U” is the basic S & D. They are for use mainly when the pc has had a long Review history or a bad Ethics history, or is insane or suppressive. BUT using them does not evaluate the pc as down tone. They give rather magical effects on anyone.

The Purpose S & D is from earlier research and is very magical on Artists. It has the liability of having to be done sensibly, being a sort of goals assessment plus an S & D. Sometimes the goals assessment (“What are you trying to do”) is magical enough to produce a floating needle. If so, don’t ever go past it to the second question that uses the goal.

### NEEDLE REACTIONS ABOVE GRADE IV

In doing Green Forms or Analysis Lists on any Clears (but not in nulling) or doing them on most cases above 5 and some cases below it, there are 2 different E-Meter needle phenomena which have to be given attention:

1. As a Clear's postulates read as a surge, usually fairly long (over 1"), "No" can read if the pc says it to himself as an answer to a question asked.

A read, therefore, does not mean invariably "yes" or that the question is charged. All it means is that the Meter has read.

The Auditor must now find out what the read was before determining he should do something about that portion of the Green Form or List. One doesn't just assume the read was "yes".

One asks about the read as a general rule, not assuming at once the thing asked was charged.

Example—

Auditor: "Do you have a missed withhold?" Meter surges.  
Auditor: "What was that?"  
Pre OT: "I thought No I don't."  
Auditor: "Ok. Do you have a missed withhold?"  
Pre OT: "No."—Meter didn't read.  
Auditor: "Anything suppressed—asserted—protested—invalidated. Ok that's clean."

Ticks ( $1/8$  inch) often mean something is there. A Pre OT's postulates have greater length when they surge.

It is not important how you handle this phenomena of postulate or to-oneself comment by a high level case. It *is* important that the Auditor does not hang the case with a wrong adjudication of what's wrong by thinking every *surge* means "yes", or that the question is charged because it surges. A question is charged only if it won't clean up with buttons until the action itself is taken.

A Pre OT, unlike pcs below Grades I or II, usually recognizes what is wrong as soon as it is mentioned. He or she is more aware.

2. A response like a brief dirty needle on a Pre OT means "No" always.

So there *is* a certain and trustworthy negative to be had on a Pre OT.

A real dirty needle is constant and continues. The same small jerky needle action on a person Grade 5 or above means "No!" or that the question is negative.

On pcs below 5 it means a withhold or an ARC break or almost anything and is of course continuous.

[The earlier *HGC Pc Review Auditing Form*, HCO PL 13 October 1966, Issue III, page 184, was amended and reissued as HCO PL 26 January 1968 which made the following changes: the beginning explanatory text and Numbers 1, 3, 11 and 12 were changed to read the same as the above HCO PL; Items a-q were added to Number 10, which in the above issue became f, g, e, k, l, m, n, o, p, q, r, s, t, u, v, w, x, respectively.

The 26 January 1968 issue was amended by HCO PL 15 March 1968, same title, which changed Number 10 to read the same as the above HCO PL.

A further amendment was made by HCO PL 9 April 1968 which changed Numbers 7 and 6 (a) to the text in the above HCO PL.

An additional amendment, HCO PL 19 April 1968, added Number 4 (b) above.

The above issue was amended by HCO PLs dated 16 December 1968 (which changed the title to *Green Form*), 15 May 1969, 7 September 1969, 7 April 1970, and 8 August 1970, all of which were done by staff, not LRH.

A further revision was issued on 17 September 1974 which was revised by HCO PL 7 April 1970RA, Revised 29 September 1974, *Green Form*, which is in Volume VIII, page 321.]

**DIANETIC COURSES**  
**STUCK PICTURES**

A picture is stuck because of—

- (a) An effort to withdraw from it or something in it.
- (b) An effort to stop or stop something in it.
- (c) A stop-withdraw combination.
- (d) An effort to suppress the picture or something in it.
- (e) An effort to invalidate the picture or something in it.
- (f) A protest against the picture or its content.
- (g) An effort to hold on to the picture.
- (h) An ARC Break about the picture.
- (i) A Present Time Problem about the picture.
- (j) An overt picture of which the stuck one is the motivator.
- (k) Too late on the chain of similar pictures.

Long before one gets to (k) it should have blown.

One should have had good luck running engrams himself before being very expert on others.

The above also applies to secondaries.

Engrams which go solid when you try to run them are too late on the chain, really.

If you run too far back you get a preclear into masses he can't easily handle.

A pc should never be *forced* into or through engrams. If he has a struggle he should be running locks.

Reality on engrams increases in ratio to the charge taken off the case.

In handling the above (a) to (k) you use (a) to run through until the needle doesn't react, then (b) through. Then (c) through. And so on. One at a time.

Although I say *stuck* picture, you can use the above on any engram, particularly if one "hangs up" in some portion.

Good running.

Remimeo

**UPPER INDOC TRS**

Following are the Upper Indoc TRs 6 to 9 inclusive.

*Number:* TR 6

*Name:* 8—C (Body Control)

*Commands:* Non-verbal for first half of training session. First half of coaching session, the student silently steers the coach's body around the room, not touching the walls, quietly starting, changing and stopping the coach's body. When the student has fully mastered non-verbal 8—C, the student may commence verbal 8—C.

The commands to be used for 8—C are:

“Look at that wall.” “Thank you.”  
“Walk over to that wall.” “Thank you.”  
“Touch that wall.” “Thank you.”  
“Turn around.” “Thank you.”

*Position:* Student and coach walking side by side; student always on coach's right, except when turning.

*Purpose:* First part: To accustom student to moving another body than his own without verbal communication. Second part: To accustom student to moving another body, by and while giving commands, only, and to accustom student to proper commands of 8—C.

*Training Stress:* Complete, crisp precision of movement and commands. Student, as in any other TR, is flunked for current and preceding TRs. Thus, in this case, the coach flunks the student for every hesitation or nervousness in moving body, for every flub of command, for poor confronting, for bad communication of command, for poor acknowledgement, for poor repetition of command, and for failing to handle origination by coach. Stress that student learns to lead slightly in all the motions of walking around the room or across the room. This will be found to have a great deal to do with confronting. In the first part of the session student is not allowed to walk coach into walls, as walls then become automatic stops and the student is then not stopping the coach's body but allowing the wall to do it for him.

*History:* Developed by L. Ron Hubbard in Camden, New Jersey in October 1953, modified in July 1957 in Washington, D.C., and the commands were modified in HCO Bulletin of 16 November 1965, Issue II.

*Number:* TR 7

*Name:* High School Indoc.

*Commands:* Same as 8—C (control) but with student in physical contact with coach. Student enforcing commands by manual guiding. Coach has only three statements to which student must listen: “Start” to begin coaching session, “Flunk” to call attention to student error, and “That's it” to end the coaching session. No other remarks by the coach are valid on student. Coach tries in all possible ways, verbal, covert and physical, to stop student from running control on him. If the student falters, comm lags, fumbles a command, or fails to get execution on part of coach,

coach says “Flunk” and they start at the beginning of the command cycle in which the error occurred. Coach falldown is not allowed.

*Position:* Student and coach ambulant. Student handling coach physically.

*Purpose:* To train student never to be stopped by a person when he gives a command. To train him to run fine control in any circumstances. To teach him to handle rebellious people. To bring about his willingness to handle other people.

*Training Stress:* Stress is on accuracy of student performance and persistence by student. Start gradually to toughen up resistance of student on a gradient. Don’t kill him off all at once.

*History:* Developed by L. Ron Hubbard in London, England, in 1956.

*Number:* TR 8

*Name:* Tone 40 on an Object.

*Commands:* “Stand up.” “Thank you.” “Sit down on that chair.” “Thank you.” These are the only commands used.

*Position:* Student sitting in chair facing chair which has on it an ashtray. Coach sitting in chair facing chair occupied by student and chair occupied by ashtray.

*Purpose:* To make student clearly achieve Tone 40 commands. To clarify intentions as different from words. To start student on road to handling objects and people with postulates. To obtain obedience not wholly based on spoken commands.

*Training Stress:* TR 8 is begun with student holding the ashtray which he manually makes execute the commands he gives. Under the heading of training stress is included the various ways and means of getting the student to achieve the goals of this training step. During the early part of this drill, say in the first coaching session, the student should be coached in the basic parts of the drill, one at a time. First, locate the space which includes himself and the ashtray but not more than that much. Second, have him locate the object in that space. Third, have him command the object in the loudest possible voice he can muster. This is called shouting. The coach’s patter would run something like this: “Locate the space.” “Locate the object in that space.” “Command it as loudly as you can.” “Acknowledge it as loudly as you can.” “Command it as loudly as you can.” “Acknowledge it as loudly as you can.” That would complete two cycles of action. When shouting is completed, then have student use a normal tone of voice with a lot of coach attention on the student getting the intention into the object. Next, have the student do the drill while using the wrong commands—i.e., saying “Thank you” while placing in the object the intention to stand up, etc. Next, have the student do the drill silently, putting the intention in the object without even thinking the words of the command or the acknowledgement. The final step in this would be for the coach to say “Start” then anything else he said would not be valid on student with the exception of “Flunk” and “That’s it”. Here, the coach would attempt to distract the student, using any verbal means he could to knock the student off Tone 40. Physical heckling would not be greater than tapping the student on the knee or shoulder to get his attention. When the student can maintain Tone 40 and get a clean intention on the object for each command and for each acknowledgement, the drill is flat.

There are other ways to help the student along. The coach occasionally asks, “Are you willing to be in that ashtray?” When the student has answered, then, “Are you willing for a thought to be there instead of you?” Then continue the drill. The answers are not so important on these two questions as is the fact that the idea is brought to the student’s attention. Another question the coach asks the student is, “Did you really expect that ashtray to comply with that command?”

There is a drill which will greatly increase the student’s reality on what an intention is. The coach can use this drill three or four times during the training on Tone 40 on an Object. As follows: “Think the thought—I am a wild flower.” “Good.”

“Think the thought that you are sitting in a chair.” “Good.” “Imagine that thought being in that ashtray.” “Good.” “Imagine that ashtray containing that thought in its substance.” “Good.” “Now get the ashtray thinking that it is an ashtray.” “Good.” “Get the ashtray intending to go on being an ashtray.” “Good.” “Get the ashtray intending to remain where it is.” “Good.” “Have the ashtray end that cycle.” “Good.” “Put in the ashtray the intention to remain where it is.” “Good.” This also helps the student get a reality on placing an intention in something apart from himself. Stress that an intention has nothing to do with words and has nothing to do with the voice, nor is it dependent upon thinking certain words. An intention must be clear and have no counter-intention in it. This training drill, Tone 40 on an Object, usually takes the most time of any drill in Upper Indoc, and time on it is well spent. Objects to be used are ashtrays, preferably heavy, coloured glass ashtrays.

*History:* Developed by L. Ron Hubbard in Washington, D.C., in 1957 to train students to use intention when auditing.

*Number:* TR 9

*Name:* Tone 40 on a Person.

*Commands:* Same as 8—C (Control). Student runs fine, clear-cut intention and verbal orders on coach. Coach tries to break down Tone 40 of student. Coach commands that are valid are: “Start” to begin, “Flunk” to call attention to student error and that they must return to beginning of cycle, and “That’s it” to take a break or to end the training session. No other statement by coach is valid on student and is only an effort to make student come off Tone 40 or in general be stopped.

*Position:* Student and coach ambulant. Student in manual contact with coach as needed.

*Purpose:* To make student able to maintain Tone 40 under any stress or duress.

*Training Stress:* The exact amount of physical effort must be used by student plus a compelling, unspoken intention. No jerky struggles are allowed, since each jerk is a stop. Student must learn to smoothly increase effort quickly to amount needed to make coach execute. Stress is on *exact* intention, exact strength needed, exact force necessary, exact Tone 40. Even a slight smile by student can be a flunk. Too much force can be a flunk. Too little force definitely is a flunk. Anything not Tone 40 is a flunk. Here the coach should check very carefully on student’s ability to place an intention in the coach. This can be checked by the coach since the coach will find himself doing the command almost whether or not he wants to if the student is really getting the intention across. After the coach is satisfied with the student’s ability to get the intention across, the coach should then do all he can to break the student off Tone 40, mainly on the basis of surprise and change of pace. Thus the student will be brought to have a greater tolerance of surprise and a quick recovery from surprise.

*History:* Developed in Washington, D.C., in 1957 by L. Ron Hubbard.

Purpose of these four training drills, TR 6, 7, 8 and 9, is to bring about in the student the willingness and ability to handle and control other people’s bodies, and to cheerfully confront another person while giving that person commands. Also, to maintain a high level of control in any circumstances.

## OVERT-MOTIVATOR SEQUENCE

### DIANETICS COURSES LEVEL TWO SOLO AUDIT OT SECTIONS

There was an important discovery made in 1952 on the subject of engrams which did not get included in "Book One", *Dianetics: The Modern Science of Mental Health*.

This was the "Overt-Motivator sequence of ENGRAMS".

AN OVERT, in Dianetics and Scientology, is an aggressive or destructive ACT by the individual against one or another of the 8 dynamics (self, family, group, Mankind, animals or plants, MEST, Life or the Infinite).

A MOTIVATOR is an aggressive or destructive act received by the person or one of the dynamics.

The viewpoint from which the act is viewed resolves whether the act is an overt or a motivator.

The reason it is called a "Motivator" is because it tends to prompt that one pays it back—it "motivates" a new overt.

When one has done something bad to someone or something one tends to believe it must have been "motivated".

When one has received something bad, he also may tend to feel *he* must have done something to deserve it.

The above points are true. The actions and reactions of people on the subject are often very falsified.

People go about believing they were in an auto accident when in actual fact they caused one.

Also people may believe they caused an accident when they were only *in* one.

Some people, on hearing of a death, at once believe they must have killed the person even though they were far away.

Police in large cities have people turn up and confess to almost every murder as a routine.

One doesn't have to be crazy to be subject to the Overt-Motivator sequence. It is not only used on him continually by others, it also is a basic part of his own "case".

There are two extreme stages of Overt-Motivator phenomena. One is a person who gives up only motivators (always done to him) and the other is the person who "has done only overt" (done to others).

In running engrams you will find

1. All overt engrams that hang up (won't audit easily) have *also* a motivator engram as the same or different incident.
2. All motivator engrams that hang up have an overt engram in the same or different incident.

The two *types* of engrams then are OVERT Engrams and MOTIVATOR Engrams.

Example of Overt Engram—SHOOTING A DOG.

Example of Motivator Engram—BEING BITTEN BY A DOG.

The rule is that the SUBJECT MATTER MUST BE SIMILAR.

They can be in different points in time.

When you can't run out (erase) a dog bite engram, why then you find the "shoot dog" engram.

PSYCHOSOMATIC ILLS OR ABERRATIONS THAT DO NOT RESOLVE BY RUNNING ONE SIDE, USUALLY RESOLVE BY FINDING AND RUNNING THE OTHER.

When you can't erase an engram about shooting a dog, why then there's a bitten by dog.

It's all very simple really. There are always two sides to the coin. If one won't run, you try the other.

#### BASICS

Finding the basic engram on a chain also applies to finding the basic overt or basic motivator engram.

Engrams then hang up (won't run out) when

- (a) The other type needs to be run and
- (b) The one found has earlier engrams on it.

#### NONEXTANT ENGRAMS

An "engram" sometimes didn't exist. A pc can be trying to run being run over by a car when he never was. What needs to be done, when the incident won't run, is get the pc's incident of running over somebody. It also works in reverse. A pc can be trying to run an engram of running over somebody when he was in fact only run over himself and never did run over anyone.

So BOTH engrams can exist and be run or only one side exists and can be run or with a heavy foul-up on overts and motivators, one side can be non-factual and won't run because only the *other* side exists.

It is easy to visualize this as a matter of flows. An overt of course is an Outflow and a motivator is an Inflow.

#### SECONDARIES

It may never have been said that secondaries always sit squarely on incidents of actual pain and unconsciousness.

Also secondaries can exist on the overt-motivator sequence pattern just as in engrams.

This is the cause of frozen emotions or "unemotional" people. Also some people complain they can't feel anymore.

This works out by overt-motivator sequence. A person in grief over loss (grief is always loss) who then *can't* run it has *caused* grief and that overt-secondary can be run.

Also a person misemotional over causing grief has been caused grief. It works both ways with ALL POINTS ON THE TONE SCALE.

The last is a newer discovery and wasn't known to early Dianeticists.

The Overt-Motivator Engram phenomena did not receive adequate dissemination. The principle applied to secondaries has not before been released. It is basically Dianetic Engram running that resolves all cases in the end so one had better be pretty good at auditing Engrams and Secondaries, Motivator and Overt both.

## COACHING

In order to help you to do the best you possibly can in the course as far as being a coach is concerned, below you will find a few data that will assist you:

1. *Coach with a purpose.*
  - (a) Have for your goal when you are coaching that the student is going to get the training drill correct; be purposeful in working toward obtaining this goal. Whenever you correct the student as a coach just don't do it with no reason, with no purpose. Have the purpose in mind for the student to get a better understanding of the training drill and to do it to the best of his ability.
2. *Coach with reality.*
  - (a) Be realistic in your coaching. When you give an origination to a student really make it an origination, not just something that the sheet said you should say; so that it is as if the student was having to handle it exactly as you say under real conditions and circumstances. This does not mean, however, that you really feel the things that you are giving the student, such as saying to him, "My leg hurts." This does not mean that your leg should hurt, but you should say it in such a manner as to convey to the student that your leg hurts. Another thing about this is do not use any experiences from your past to coach with. Be inventive in present time.
3. *Coach with an intention.*
  - (a) Behind all your coaching should be your intention that by the end of the session your student will be aware that he is doing better at the end of it than he did at the beginning. The student must have a feeling that he has accomplished something in the training step, no matter how small it is. It is your intention and always should be while coaching that the student you are coaching be a more able person and have a greater understanding of that on which he is being coached.
4. *In coaching take up only one thing at a time.*
  - (a) For example: Using TR 4, if the student arrives at the goal set up for TR 4 then check over, one at a time, the earlier TRs. Is he confronting you? Does he originate the question to you each time as his own and did he really intend for you to receive it? Are his acknowledgements ending the cycles of communication, etc. But only coach these things one at a time; never two or more at a time. Make sure that the student does each thing you coach him on correctly before going on to the next training step. The better a student gets at a particular drill or a particular part of a drill you should demand, as a coach, a higher standard of ability. This does not mean that you should be "never satisfied". It does mean that a person can always get better and once you have reached a certain plateau of ability then work toward a new plateau.

As a coach you should always work in the direction of better and more precise coaching. Never allow yourself to do a sloppy job of coaching because you would be doing your student a disservice and we doubt that you would like the same disservice. If you are ever in doubt about the correctness of what he is doing or of what you are doing, then the best thing is to ask the supervisor. He will be very glad to assist you by referring you to the correct materials.

In coaching never give an opinion, as such, but always give your directions as a direct statement, rather than saying "I think" or "Well, maybe it might be this way," etc.

As a coach you are primarily responsible for the session and the results that are obtained on the student. This does not mean, of course, that you are totally responsible but that you do have a responsibility toward the student and the session. Make sure you always run good control on the student and give him good directions.

Once in a while the student will start to rationalise and justify what he is doing if he is doing something wrong. He will give you reasons why and because. Talking about such things at great length does not accomplish very much. The only thing that does accomplish the goals of the TR and resolves any differences is doing the training drill. You will get further by doing it than by talking about it.

In the training drills the coach should coach with the material given under "Training Stress" and "Purpose" on the training sheet.

These training drills occasionally have a tendency to upset the student. There is a possibility that during a drill a student may become angry or extremely upset or experience some misemotion. Should this occur the coach must not "back off". He should continue the training drill until he can do it without stress or duress and he feels "good about it". So, don't "back off" but push the student through whatever difficulty he may be having.

There is a small thing that most people forget to do and that is telling the student when he has gotten the drill right or he has done a good job on a particular step. Besides correcting wrongnesses there is also complimenting rightness.

You very definitely "flunk" the student for anything that amounts to "self-coaching". The reason for this is that the student will tend to introvert and will look too much at how he is doing and what he is doing rather than just doing it.

As a coach keep your attention on the student and how he is doing and don't become so interested in what you yourself are doing that you neglect the student and are unaware of his ability or inability to do the drill correctly. It is easy to become "interesting" to a student; to make him laugh and act up a bit. But your main job as a coach is to see how good he can get in each training drill and that is what you should have your attention on; that, and how well he is doing.

To a large degree the progress of the student is determined by the standard of coaching. Being a good coach produces auditors who will in turn produce good results on their preclears. Good results produce better people.

# **INTRODUCTION to SCIENTOLOGY ETHICS**

**by  
L. Ron Hubbard**

**Published July 1968**

Introduction to Scientology Ethics by L. Ron Hubbard was published at Saint Hill Manor in answer to a demand for a manual for learning and applying the Scientology Ethics system, which had proved to be so tremendously workable.

L. Ron Hubbard says, “All that Ethics is for—the totality of the reason for its existence and operation—is simply that additional tool necessary to make it possible to apply the technology of Scientology.

“Man does not have that purpose for his law or his justice. He wants to squash people who are giving him trouble.

“That is not the case with Scientology Ethics, which, having the above purpose, is a fabulously successful activity.”

In this manual Ron gives the principles and formulas of the Scientology Ethics system. He draws an easy-to-recognize picture of the person who can be trusted and the one who cannot be trusted. He gives the exact formulas to be used to better any condition (operating state) in which a person finds himself. He gives a Code of Offenses and Penalties; and then an essay on Rewards and Penalties in which he introduces a “seemingly obvious law” which explains “the whole decay of Western government”: “When you reward down statistics and penalize up statistics you get down statistics.” He goes on to show why and how to “reward the up statistic and damn the down”—a new and honest look. Finally, he shows how, once you get things going in the right direction, you maintain this upward trend.

This Ethics system can be applied in any area of your life—business, marriage, family, personal—with startlingly good results.

*CLASS III, SOLO VI & VII, ACADEMY AND SHSBC  
REQUIRED REVIEWED FOR SOLO AND VII*

(Compiled from earlier HCOBs and TAPES of  
the early 60's to give the exact stable data)

**THE LAWS OF LISTING AND NULLING**

(Star Rate. No attestations  
allowed, clay and demos required)

The following laws are the ONLY important rules of listing and nulling. If an auditor doesn't know these he will mess up pcs thoroughly and awfully. An auditor who doesn't know and can't apply these is not a Level III auditor.

LAWS

1. The definition of a complete list is a list which has only one reading item on list.
2. A TA rising means the list is being overlisted (too long).
3. A list can be underlisted in which case nothing can be found on nulling.
4. If after a session the TA is still high or goes up, a wrong item has been found.
5. If pc says it is a wrong item it is a wrong item.
6. The question must be checked and must read as a question before it is listed. An item listed from a non-reading question will give you a "Dead Horse" (no item).
7. If the item is on the list and nothing read on nulling, the item is suppressed or invalidated.
8. On a suppressed list, it must be nulled with suppressed. "On ....has anything been suppressed."
9. On an item that is suppressed or invalidated the read will transfer *exactly* from the item to the button and when the button is gotten in the item will again read.
10. An item from an overlisted list is often suppressed.
11. On occasion when you pass *the* item in nulling, all subsequent items will read to a point where everything on list will then read. In this case take the first which read on first nulling.
12. An underlisted and overlisted list will ARC break the pc and he may refuse to be audited until list is corrected, and may become furious with auditor and will remain so till it is corrected.

13. Listing and nulling or any auditing at all beyond an ARC Br without handling the ARC Break first such as correcting the list or otherwise locating it will put a pc into a "sad effect".
14. A pc whose attention is on something else won't list easily. (List and null only with the rudiments in on the pc.)
15. An auditor whose TRs are out has difficulty in listing and nulling and in finding items.
16. Listing and nulling errors in presence of Auditor's Code violations can destabilize a pc.
17. The lack of a specific listing question or an incorrect non-standard listing question which doesn't really call for item will give you more than one item reading on a list.
18. You cease listing and nulling actions when a floating needle appears.
19. Always give a pc his item and circle it plainly on the list.
20. Listing and nulling are highly precise auditing actions and if not done exactly by the laws may bring about a down tone and slow case gain, but if done correctly exactly by the laws and with good auditing in general will produce the highest gains attainable.

NOTE: There are no variations or exceptions to the above. (Does not alter 5A Power procedure.)

A failure to know and apply this bulletin will result in the assignment of very low conditions as these laws, if not known or followed, can halt case gain.

*LEVEL II*

**CHANGE OF COMMANDS  
OVERT-MOTIVATOR SEQUENCE**

***IMPORTANT***

(This HCOB takes precedence over all other  
tapes and HCOBs on overts)

Whereas it is workable to ask for “What have you done” and “What have you withheld”, it is NOT the Level II Grade II process any longer.

The original work on this used the overt-motivator sequence and the commands are

“What have you done?”

“What has been done to you?”

There is a third “leg” which is

“What has another done to another?”

which can be used and if not used may stick as a flow.

This *is* a problem in flows. (1) Inflow, (2) Outflow, (3) Cross Flow.

Therefore the only commands to be used to clean up overts are three in number. They are run one at a time to floating needle on the process (not F/N on each leg).

“What has been done to you?”

“What have you done?”

“What has another done to another?”

(By drawing three symbols

an auditor can put his pen on each as it is asked and so keep his place.)

*LEVEL III*  
IMPORTANT—STAR RATED

**R 3 H**

(Takes precedence over all other HCOBs & Tapes)

The way to handle the ARC Breaks of a case with R3H as the process for Level III is:

1. Locate a change in life by listing to a blowdown. Use that period. "What change has happened in your life" is a version of the question.
2. Get it dated.
3. Get some of the data of it (don't run as an engram) so you know what the change was.
4. Find out by assessment if this was a Break in

Affinity  
Reality  
Communication or  
Understanding

and have the pc examine that briefly.

5. Taking the one found in (4) find out by assessment if it was

Curious about \_\_\_\_\_  
Desired \_\_\_\_\_  
Enforced \_\_\_\_\_  
Inhibited \_\_\_\_\_

That is all there is to it.

That *was* the research process.

It works like a bomb.

To make sure it works well, get in the rudiments before you do it.

-----

It has been said that you can do this several times on a pc beyond a floating needle on one. I have not verified this.

-----

Doing Know—Unknown—Curious, etc. first is definitely wrong. ARC is dominant. ARC is done first as above. *Understanding* is the composite of ARC and so is added to ARC as U in (4) above.

# THE PHOENIX LECTURES

by  
**L. Ron Hubbard**

**Published August 1968**

The Phoenix Lectures is a selection of the celebrated lecture series given by L. Ron Hubbard in Phoenix, Arizona, between May and December, 1954, tapes of which became known as the "Professional Course of July, 1954."

It begins with a fascinating three chapter description of the philosophical and historical background of Scientology, followed by the considerations, theory and mechanics behind instruction. Seven chapters detail and thoroughly cover the Four Conditions of Existence (As-isness, Alter-isness, Isness and Not-isness).

The first fifty Axioms of Scientology, which any student of Scientology is expected to thoroughly absorb, are each individually described and explained. Although these Axioms are self-evident truths, they are not so thoroughly self-evident that they leap out of the page and introduce themselves to you. You have to introduce yourself to them, and the four chapters on the Axioms of Scientology greatly assist this process. In addition to the axioms on time, a whole chapter is devoted to this subject.

Of particular interest to auditors are the chapters on Two-Way Communication and the Present Time Problem, Opening Procedure of 8-C, Opening Procedure by Duplication, Viewpoint Straightwire, Remedy of Havingness and Spotting Spots in Space, Description Processing, and Group Processing. Ron ends off with an intriguing chapter on the application of Scientology to one's everyday life.

A companion work to these Professional Course Lectures was the August, 1954, *Auditor's Handbook* later expanded into *The Creation of Human Ability*).

336 pages, 2 drawings, hardcover with dust jacket, glossary. Available from your nearest Scientology Organization or Mission, or direct from the publishers: Scientology Publications Organization, Jernbanegade 6, 1608 Copenhagen V, Denmark; or Church of Scientology Publications Organization U.S., 2723 West Temple Street, Los Angeles, California, 90026, U.S.A.

*QUALS*

**REHAB & CORRECTION**

You can correct a pc or Pre OT half to death.

For instance the practice of rehabbing up to Grade II if it has been a week or two or more since the pc made Grade II in order to run III is a bit bonkers and serves as an Invalidation. You're going to get any upset anyway in the rudiments so why the rehab?

At SH lower grades are rehabbed before Power only when the pc had the lower grades elsewhere as the grades aren't to be trusted and that's for Power only. And only when there's no good report available.

Doing a Green Form "every day" on a pc or Pre OT may shove up Qual stats but it's actually an overrun of Green Forms. They go to F/N on the Green Form and to do another WITHOUT ANY REAL TROUBLE having occurred is asking for it.

Sec Checks can be overrun and overdone. By-passing 2 or 3 Floating Needles on a Sec Check is bad business.

Doing Disagreements Checks and S & Ds wholesale on pcs and Pre OTs eventually winds them up in a ball.

Outnesses can usually be spotted by folder inspection by a good Case Supervisor.

When Remedy Bs and S & Ds are done by auditors who haven't got the Laws of Listing recent HCOB down by heart and use it will generally mess up more pcs than they will help.

Qual corrects. But it can get into over-correction and then invalidate the pc's or Pre OT's levels, fill his folder with bad lists, etc.

If any organization, any Qual, at this writing had its folders fully gone over by a competent Case Supervisor who KNEW his Laws of Listing, knew his auditing, I guarantee that Org's stats would soar, not just Qual's. And having for once and all straightened out the folder then cease to correct things that would better be handled by the next Grade or Section.

When over-correction has been present YOU STRAIGHTEN OUT THE BLUNDERS IN THE FOLDER not just maul the pc around some more. And when you have the folder straight you mark it up to that point as remedied and after that only handle the pc when there's something really gone wrong with him.

At the present writing I am organizing the Class VIII Course to make Class VIII auditors. These are essentially Case Supervisors and crack standard tech people who can straighten out folders *and* pcs and Pre OTs. Looking over old Qual case folders I see they are desperately needed.

But keep the fact in view, don't correct a pc who needs no correction. Don't rehab and Remedy him to death. Get him onto the next level or section and let him have his wins.

HCO BULLETIN OF 28 AUGUST 1968

Remimeo  
Class VIII  
All Orgs

**OUT TECH**

After Standard Tech is out for just so long in an org, Scientology ceases to have any meaning.

Squirrel processes and repairs wind the staff up in a ball, enturbulate the field and cause a general lethargy and trouble.

Ethics then goes in hard or it all goes up in smoke.

There is only one Standard Tech! It contains only a few dozen processes and actions. It was not complete before 1966. Students study mainly the Research Line. Standard Tech consists of the exact grade processes and Case Repair.

Some still look for magic buttons that resolve a case all at once. Some can't duplicate what they read and hear.

They need the broad body of knowledge.

BUT the actual application of Dian & Scn today contains only a few dozen STANDARD INVARIABLE SIMPLE actions and processes.

When these are not used, when opinion enters, it's all gone.

STANDARD TECH ALONE RESOLVES ALL CASES.

No matter how bright, the *other* processes and new inventions of someone else (a) work only on a few and (b) are efforts to solve one's own case by auditing others.

To let Standard Tech go out is an act of Treason as Scientology then loses all meaning in an org.

This is why I am teaching a Class VIII Course.

## DRUGS

(Note: Drug taking has become very common  
in the West, pushed by psychiatrists.)

It is possible to come off drugs without convulsions.

Drugs essentially are poisons. The degree they are taken determines the effect. A small amount gives a stimulant. A greater amount acts as a sedative. A larger amount acts as a poison and can kill one dead.

This is true of any drug. Each has a different amount. Caffeine is a drug. So Coffee is an example. 100 cups of coffee would probably kill a person. 10 cups would probably put him to sleep. 2 or 3 cups stimulates. This is a very common drug. It is not very harmful as it takes so much of it to have an effect so it is known as a stimulant.

Arsenic is known as a poison. Yet a tiny amount of arsenic is a stimulant, a good sized dose puts one to sleep and a few grains kills one dead.

But there are some drugs which have another factor. They directly affect the reactive bank. Marijuana (pot), peyote, morphine, heroin, etc. turn on the pictures one is stuck in. And they turn them on too hard to audit out.

LSD-25 is a psychiatric drug designed to make schizophrenics out of normal people. It is evidently widely distributed by psychiatrists. It looks like cube sugar and is easily made.

Drugs are considered valuable by addicts to the degree that they produce some "desirable effect".

But they are dangerous to those around because a person on drugs

- (a) has blank periods
- (b) has unrealities and delusions that remove him from PT
- (c) is *very* hard to audit.

Thus a drug taker can be holding a boat alongside, go into one of his blanks, think he is on Venus and let go.

A drug taker left on watch may go blank and miss a menacing situation and not handle it because he is "somewhere else".

Giving an order to a drug taker can be grim as he may simply stand and stare at one. He ARC breaks anyone with it.

It takes about six weeks apparently for LSD to wear off. After that a person can be audited. But it ruins his case to a marked degree as it builds up ridges which don't as-is well.

A drug or alcohol *burns up* the Vitamin B1 in the system rapidly. This increased speed of burning up B1 adds to his "happy state". But now his system is out of B1 so he goes depressed.

To avoid convulsions take lots of B1 daily when coming off drugs.

And wait for six weeks before one is audited.

And then lay off. It's a pretty poor trick on those who are dependent on one and get let down.

HUBBARD COMMUNICATIONS OFFICE  
Saint Hill Manor, East Grinstead, Sussex

HCO BULLETIN OF 29 AUGUST 1968

Remimeo

(Corrected & reissued 10 June 1975  
as contained a misprint in para 4)

### DRUG DATA

LSD-25 is a colourless, odourless, tasteless and virtually undetectable derivative of a rye mould called ergot. The use of sugar cubes as a medium was discontinued several years ago. Dosage is fantastically small, 50 to 1000 *micrograms* per dose, so capsules and tablets are used to reduce evaporation. Price varies from 3 to 7 dollars and it is only sold on the black market. Prior to 1964 the drug was administered by psychologists and psychiatrists. However, it is now illegal for them to do so. Despite its illegal status, LSD is very popular among teenagers and college students. An entire sub-culture of psychedelic (mind-manifesting) posters, light shows, and electronic music has emerged on the West Coast. Most of the Pop music has hidden drug references. A recent survey indicated that over 50% of the students graduating from the Los Angeles City School System had tried either LSD or marijuana.

Marijuana is the most popular of the psychedelic drugs. One ounce may be readily purchased for \$10 and will furnish 30-50 cigarettes or "joints". A smoker quickly progresses from the one ounce "lids" to purchasing a "brick" or "kilo". This is a kilogram (2.2 lbs) and sells for \$75 to \$150. Marijuana may be easily identified. It has a strong characteristic odour which is similar to fresh hay or wet, freshly cut grass. Smoking some tea leaves, rolled up into a cigarette will give you a good stable datum for identifying marijuana odour. Marijuana may be physically identified as a green or greenish brown tobacco with varying amounts of brown stems and small round seeds.

Hashish, like marijuana, comes from the female hemp plant, *Cannabis sativa*. When matured, the plant is hung upside down and resins collect which are dried into hashish. One gram of hashish sells for \$10 and will supply 10 to 30 "hits" or periods of being "high". Hashish is brown, tan, or black and is usually kept in tin foil. Users of both hashish and marijuana will have bloodshot eyes while under the influence. Someone under LSD may be identified by very dilated pupils.

Peyote "buttons" are several inches in diameter and come from the peyote cactus of S.W. America. The pure *form of* the drug is a synthetic (*white*) or natural (*brown*) powder called *mescaline*. A beefed-up version of this drug was recently made available but was, as of June 1968, unnamed.

Another new drug is STP. This drug is much more powerful than even LSD. As of June 1968, STP was waning in use as people found its results too unpredictable.

One other drug worth mentioning is DMT. This drug is smoked or injected and has immediate effects which end in about an hour. It may be identified by an odour similar to moth balls and is either a white powder or soaked into a medium such as pot or tobacco.

Marijuana is basically a very mild drug which creates euphoria. Also it has the unpleasant consequence of distorting the senses of the user to the point that people on "trips" have been known to open the door of a car going 80 mph and step out "since they could walk faster".

The remaining psychedelic drugs are much more powerful and will strongly influence a pc.

It was found in L.A. that over a period of several months (4-6) every single income slump was traced to the accidental acceptance of one or more drug (LSD, etc)

users into the Academy and/or HGC and traced as well to the spreading waves of chaos in attempts to handle their “disagreements” with the tech, demands for special handling and no case gain.

The “trips” that a drug user goes on tend to produce stuck points on the track with much fixation of attention on that area. Bad “trips” tend to act like Super Engrams collapsing the track at that point.

Users of drugs cannot as-is, do not get TA, nor do they have cognitions.

Case Supervisor Hat

### WRITTEN C/S INSTRUCTIONS

It is a High Crime for a Case Supervisor not to *WRITE* in a preclear’s folder what the case supervised instructions are and a High Crime for an auditor to accept verbal C/S instructions.

To commit this crime causes:

1. Extreme difficulty when doing a folder error summary as there is no background of what was ordered and why.
2. Gives the auditor leave to do anything he likes as not in writing.
3. Is open to misduplication and can cause squirrel processes to be run and so mess up a preclear with Non-Standard Tech.

Any C/Supervisor found guilty of this from this date is to be removed as this could only be considered a deliberate attempt to mess up preclears.

**SUMMARY OF HOW TO WRITE AN AUDITOR'S REPORT,  
WORK SHEETS AND SUMMARY REPORT, WITH SOME  
ADDITIONAL INFORMATION**

*AUDITOR 'S REPORT*

An Auditor's Report should contain:

Date  
Name of Auditor  
Name of Pc  
Condition of Pc  
Length of Session  
Time Session started and ended  
T/A at beginning and end of Session  
Rudiments  
What process was run—LISTING THE EXACT COMMANDS (often forgotten  
by most Auditors)  
Time of Start and End of Process  
Whether Process is flat or not Any F/Ns

*WORK SHEETS*

A Work Sheet is supposed to be the complete running record of the session from beginning to end. The Auditor should not be skipping from one page to another but should just be writing page after page as the session goes along.

A Work Sheet is always foolscap, 8 x 13 inches, written on both sides and each page is numbered. Pc's name is written on each separate sheet.

A Work Sheet may be in 2 columns depending on how big the writing is of the Auditor.

When the session is completed, the Work Sheets are put in proper sequence and stapled with the Auditor Report Form on top from beginning to end of session.

T/A and time notations should be made at *regular* intervals throughout the session.

When making a list on a Pc:

1. Always mark a read as it reads—F. LF. BD.
2. Always circle the reading item. Mark if indicated to the Pc with IND.
3. Always when extending a list put in a line from where it has been extended, e.g.

Item	Joe Shoes Socks	
	_____	extended
	Sky Wax Pigs, etc, etc.	

NOTE: When you repair an old auditing session you *always* write on the old auditing report and W/sheets in a *different coloured pen* with the date of the report.

When running various processes in a session, mark each F/N clearly, noting time and TA.

### *SUMMARY REPORT*

A Summary Report is written exactly as per HCO B 14 June 1965—

Pc's Name  
Auditor's Name  
Process Run TA Time  
Goals and Gains  
Aspects of Running Process  
Ethics  
Suggestions.

Two gross goofs I have noticed since case supervising folders on the RSM is that Auditors have not been turning in Ethics cases to the MAA. In one instance, a Pc was audited by 2 Auditors in 2 different sessions, got a R/S on crimes against Scientologists and M/W/Hs and neither Auditor turned the Pc in to Ethics. This is not the only instance. The second thing is that Auditors are very evaluative of the Pc's case as indicated by their comments on the Summary Report. This is incorrect; this report is used simply as an exact record of what happened during the session. It is not up to the Auditor to evaluate the Pc's Case, this is the Case Supervisor's job. The Auditor may suggest what is to be run, at which time the Case Supervisor will review the session, what was run, how the Pc went in relation to what was being run and then give his directions.

-----

Auditor Report Forms or W/sheets are never re-copied. The Auditor should always read over his W/sheets before turning in folder to the Case Supervisor and, if any words or letters are missing or cannot be read, they should be written in with a different coloured pen.

If these rules are followed it will make the Case Supervisor's job much much easier and Auditor's Reports more valuable.

To add the obvious, it is a CRIME to give any session or assist without making an Auditor's Report or to copy the original actual report after the session and submit a copy instead of the real report. Assist Reports that use only contact or touch assists may be written after a session and sent to Qual.

Class VIII

**POINTS ON CASE SUPERVISION**

1. Check your orders to find out if auditor did them.
2. Check to see if commands correct and if pc's reaction was expected reaction for those commands.
3. Check any list and find out if there was mislisting.
4. Advise against a background of Standard Tech.
5. Order any errors corrected or get the case on further up the grades.
6. Beware of over-correction.
7. Beware of false, pessimistic or over-enthusiastic auditor reports. They are detected by whether the case responded to usual actions as they all do.
8. Beware of talking to the auditor or the pc.
9. Have implicit confidence in Standard Tech. If it is reported not working the auditor's report is false or the application terrible but not reported.
10. Above all else hold a standard and NEVER listen to or use unusual solutions.

HCO BULLETIN OF 4 SEPTEMBER 1968

Class VIII

Don't force a pc who is ill. The whole intention when auditing a pc who is sick is making him well.

If overts, or M/W/Hs don't read, even though he is nattering, then they are not available to be run right then.

A preclear who is not well cannot look, his havingness is down and he must be handled permissively—*always*.

The mechanism of RELEASE must be well understood to make an ill person well. They plunge down the track madly on any excuse. They require much lighter auditing than they stand up to when well.

HCO BULLETIN OF 10 SEPTEMBER 1968-1  
ADDITION OF 28 FEBRUARY 1975

Remimeo  
Class VIII

(This is an amendment of HCO B 10 Sept 68, "Green Form, S & D, Remedy B". *NOTE:* Original HCO B 10 Sept 68 is changed in distribution to Solo C/S Crse and is not cancelled as it contains vital data for the Solo C/S.)

**GREEN FORM, S & D**

It was found in C/Supervising aboard the RSM that the following additives had been entered and are not altogether correct.

1. "Green Form to Free Needle." Not necessarily correct. It may or may not. Each item on the Green Form is independent of the rest. However it can be a serious blunder to continue a GF past an F/N. I have seen TAs then rise.

The *only* time you would ever do this (go past an F/N on a Green Form) would be when GIs were not in and the pc still felt he was in trouble. In this case the F/N is probably an ARC Brk needle and an ARC Break should be checked.

2. "S & Ds to F/N" (WSU). Not necessarily true. You stop as per listing rules.

**FALSE READS**

False Reads are handled by checking back any that are false to when they were first "seen" by an auditor.

Sometimes a false read goes on and on, never cleans because there wasn't anything there in the first place.

Find when and where somebody thought it read when it didn't. Can ask, "Who said you had an \_\_\_\_\_ reading when you didn't have one?"

Also check Protest, Invalidate and Suppress to clean up a false read.

**CASE SUPERVISOR DATA**

A Case Supervisor should watch for Ethics record of pcs who have been C/Sed.

If they fall on their head, get into low conditions, the folder should be reviewed.

Most probably the auditor did not do what was ordered and, if folder looks okay, chances are the auditing report is false as *something is wrong* or pc would not be in trouble.

HCO BULLETIN OF 17 SEPTEMBER 1968

Class IV

**OVERRUN PROCESS**

The Process "What has been overrun?" is used when pc has a chronically high T/A.

It is run by taking each reading item and getting the time or times it was released. Run each to clean needle or F/N.

The item is taken up *as* it reads and the releases in it rehabbed. Then the next item is listed and handled the same way.

More than one F/N can be attained on the list as the items are different subjects.

Each item as rehabbed is taken as far as it will go. It does not necessarily F/N. It must not be over rehabbed.

The odd phenomena of high TA "F/Ns" must be looked for and tell you when an item is rehabbed enough. Eventually after many are rehabbed a real and normal F/N will occur with TA between 2 & 3. TA action will then have ceased.

HCO BULLETIN OF 17 SEPTEMBER 1968R  
REVISED 31 JANUARY 1975

Remimeo  
Class VIII

### SIX ZONES OF ACTION

There are 6 zones of action in Class VIII:

1. Auditing for Grades “obtains real case gain”.
2. Repair of misaudited Grades.
3. Setting up cases to run a Grade.
4. Case Supervising the auditing of Grades.
5. Case Supervising the repair of misaudited Grades.
6. Case Supervision of setting up cases to audit Grades.

Each of these is a separate skill and must be learned.

Each has its precise and invariable actions and these must be learned. There are no others.

A student’s reality must be able to embrace that there are no others. His grip on tech must be so exact that he doesn’t flub Standard Tech and so begin to look for unusual solutions in any of the six above actions.

A good C/S is bound by the Case Supervisor’s Code and a good C/S does not use 2 (two) or 5 (five) above as an excuse to give assists. Assists have no part in Class VIII skills which depend wholly on the grades for case advance.

A pc released at Zero will of course soon begin to have problems. He goes to the next grade, not to Review for an assist.

No one grade solves the whole case. That’s why there are grades.

Class VIII C/S

**ETHNICS**

A Case Supervisor must watch Ethnics (customs) oddities and changing fashions because one race has different mores than another and changing fashions bring in new methods of degradation, i.e. Drug Rehab was not necessary in 1950, but is vitally necessary in 1968.

Sex was not a button in Ancient Greece and is the total subject of Freudian analysis in 1894.

For the 1930 period, C/S would have to pay attention to rehabbing periods of time pc went "release" when drinking.

What you are looking for and what must be handled is euphoria caused by some external stimuli.

This not only may be but must be rehabbed in many cases before they even begin to move.

**GROSS CASE SUPERVISION ERRORS**

1. Ordering unnecessary repairs.
2. Trying to use repair processes to get case gain instead of getting the pc onto the next grade.
3. Not writing down C/S instructions, but giving them to an auditor verbally.
4. Talking to the auditor re the case.
5. Talking to pc re his case.
6. Falling to send pc to examiner if you're unsure why his folder has been sent up
7. Being reasonable.
8. Not having enough Ethics presence to get his orders followed.
9. Issuing involved repair orders.
10. BIGGEST GC/SE for C/S is not to read through the pc folder.

**GLEE**

When you see glee on some fellow on a post, realize it's because he doesn't understand what he's doing.

He's ignorant about something and *above* that is confusion and above the confusion you see glee.

People who make fun of a serious needful action or duty just don't dig it, that's all.

There are remedies. There's instruction or Remedy B. And these should be used.

But this glee is nevertheless a kind of insanity. Freud mentioned that people who couldn't understand something sometimes giggled in an embarrassed kind of way. I rarely take any data from him but in this case, he was right. It was a good observation.

However, he had no cure for it.

You can get a whole area into a kind of glee when they don't grasp what they are doing.

If you see somebody in glee, get a Remedy B run on them in Qual.

Glee is a special kind of embarrassed giggling. You'll know it when you see it.

## DRUGS & TRIPPERS

Any case that won't run or won't rehab is probably a "tripper", meaning somebody who has taken drugs.

Standard practice for anyone who has ever taken drugs or even alcohol is to rehabilitate the moments of releases in these.

Drugs (or alcohol) give an enforced moment or period of release. It is surrounded in mass.

LSD, marijuana (pot, hashish), peyote, opium, ether (in operations), nitrous oxide (laughing gas in dental operations), weird "biochemical" compounds used by "psychiatrists", Benzedrine, solid alcohol (canned heat), alcohol, turpentine, gasoline, witch herbs of various kinds, and even certain rays, in this lifetime and on the back track, could have caused a moment of release.

Death does also but it's a bit steep to rehab.

In a rehab session, or before such a this lifetime one is audited on grades, the moments of release should be rehabbed.

The C/S directs this to be done before a rehab of ARC Straight Wire.

Such releases usually need rehabbing only once.

Tough rehabbing and probably all "Black Vs" probably trace to these chemical "releases" .

They are deadly because they give the sensation of release while actually pulling in mass.

When "All black" reads on a GF one of these chemical release periods is probably in restim.

These "Chemical releases" give us a lot of trouble *unless* (a) detected and (b) rehabbed.

Such pcs often withhold the fact (non-acceptable or discreditable datum) quite madly and thus make detection difficult unless directly asked for on a hard to run case.

Such persons can also be a mess on III if the chemical period rehabs aren't done.

Delusory or dub-in cases also sometimes trace to chemical "releases".

Painkillers, tranquilizers or morphine can also be explored where no "drug taking" is traced.

All the above come under the heading of forceful exteriorization and can inhibit the act of exteriorization on V.

Such pcs are a bit blank, irresponsible or detached.

Each TYPE of chemical which produced "release" must be rehabbed and it is best to count how many times released on each type.

**NEW RUDIMENTS**

(This HCOB cancels HCOB 3 July 65)

The Class VIII technique is floating the needle on rudiments before doing a new grade, power or rehabs.

1. “Do you have an ARC Bk?”  
(If the question reads handle with ARCU and CDEI.)
2. “Do you have a present time problem?”  
(If this reads handle by any quick problems process.)
3. “Has a withhold been missed?”  
(If so, get it.)

Remember that on each of these questions, if they don't blow, they can be traced back to an earlier ARC Bk, problem or withhold.

If no F/N occurs, then the auditor uses a Green Form or a List (such as L4A) to produce one.

**CLASS VIII COURSE LECTURES**

Flagship *Apollo*  
24 September—15 October 1968

In 1968, in order to markedly upgrade the standard of application of Scientology Technology, L. Ron Hubbard called leading auditors to Flag from around the world, and personally trained them in *exact* standard practical application from ARC Straightwire through to OT processes.

Thus a higher level of application of Scientology Technology was heralded in by emphasizing that exact and invariable application of Standard Tech produces results on all cases.

**ARC STRAIGHT WIRE**

(Corrects HCO B 30 June 1962 and also  
in the HDA Course book. Corrects p. 102  
[soft-cover edition] of *Self Analysis*.)  
(Paste over HDA Course page 15.)  
(Corrects earlier HCO B of same date & title.)

The *correct* commands for ARC Straight Wire, as researched and as successful in test in cracking even neurotic cases, with one command added to modernize it, were and are:

Recall a time that was really real to you.

Recall a time you were in good communication with someone.

Recall a time you really felt affinity for someone.

Recall a time you knew you understood something.

Run ONLY on a Meter.

Run ONLY to Floating Needle and NOT beyond. (Don't abruptly cut pc's Comm.)

A true fact is that ARC always must precede an ARC *Break*.

Also ARC = Understanding and Time.

A = Space and the willingness to occupy the same space of.

R = Mass or agreement.

C = Energy or Recognition.

### DIANETICS

The most *incredible* part of the auditing period preceding Sept 1968 was that auditors, calling themselves such, actually could forget, mislay and abandon secondary and engram running as a skill.

A secondary or engram can key out or key in at will. They *don't* stay out, which makes a release a release. The very definition of Release is based on this fact. A *Clear* has nothing to key in again. A Release *does*.

When you only straight wire a secondary or engram THAT IS RECURRING (restims because of environment) you don't get a lasting result.

*This lifetime* secondaries and engrams should be nun to F/N, not coaxed to F/N by a recall process.

Anybody can run a secondary or engram. It's pie.

The only liability in running them in chains was omitted from the Dianetic Auditor's handbook for some reason. It's in Book One.

IF A SECONDARY OR ENGRAM GOES SOLID OR WON'T DISCHARGE, you find the earlier *similar* one and run it. Give it only two times through if it is going solid, then try earlier. Finally Basic will emerge and run cleanly.

Miracles are contained in this action. But a modern (pre Sept 68) auditor never thinks to check it even. They just straight wire or get it recalled to F/N. And think they've done it.

A recent death loss will not really resolve unless the secondary is *run* properly and completely.

There are 2 F/Ns available—one by key-out, one by erasure. Don't run a keying out process to F/N and *then* run it. Run it in the first place if it's a serious recent secondary or engram.

## LISTS

When doing a correction of lists in a folder to get the correct item and clean the folder up, these rules apply—

1. Get one F/N per type of list. Example: 3 S & Ds type U are in the folder—you get the item on the first S & D and an F/N—leave the other two.
2. You can get F/Ns on S & D types WSU, Rem Bs old, new and environment. But only on each type.
3. To go for any more on one type is dangerous and should not be done.

This whole procedure should be done only if ordered by the C/S.

Level 0 Students

**NEW RUDIMENTS QUESTIONS**

These questions are of interest to Dianetic and Level 0 Students. They were submitted by SO CI VI Students while studying Level 0 materials when the New Rudiments were issued cancelling Model Session HCO B 3 July 65.

Q. Are we allowed as Level 0 Auditors to audit a pc from ARC S/W through 0 in one session?

A. Yes. ARC Straight Wire, Secondaries to Engrams and Level 0. All in one session.

Q. Do we do new ruds at beginning of ARC S/W and again at Level 0?

A. Only when a break of session has intervened.

Q. Is the current Model Session—

1. This is the session
2. New Ruds 1, 2, 3
3. This is the process—clear commands
4. That's it / F/N?

A. Yes, pretty well.

Q. What are we permitted to use as Level 0 Auditors when doing the new rudiments to handle ARC breaks, PTPs, M/W/Hs?

A. Itsa and earlier similar Itsa—only.

**RUDS**

Pcs (and students) often don't know one rudiment from another. They call PTPs ARC Brks and all sorts of weird answers. ARC Brks become PTPs, etc.

They do NOT KNOW what the question is.

Therefore on a green pc or student it is best to clear the commands.

And it is VITAL to teach what these mean and do them in clay on an VIII Course.

\*\* 6810C07    SO    Class VIII-11:    Assessments and Listing Basics

HUBBARD COMMUNICATIONS OFFICE  
Saint Hill Manor, East Grinstead, Sussex

HCO BULLETIN OF 7 OCTOBER 1968

Class VIII  
(SH, ASHO)

**ASSESSMENT**

Assessment means the locating on a *prepared* list, one item.

Listing and Nulling means the pc lists.

The laws of listing and nulling apply only to LISTING and nulling. It IS auditing.

The actions of assessment do *not* apply to listing and nulling and never have.

Assessment is from a *prepared* list. It was done around 1960. It still is used. It has its own actions.

But as the prepared lists as in Pre-have become bulky, I then developed a NEW action where the pc listed.

DO NOT apply the rules of assessment as in the E-Meter book to Listing and Nulling.

These are two different actions entirely.

The key is that a list for assessment is always from a list *prepared* by the auditor or from an HCO B as in "7 resistive cases".

S & Ds, Remedy Bs, etc, are LISTED by the pc and follow the LAWS of listing and nulling.

This is assessment, a list prepared by the C/S or auditor, not the pc.

To get a clue to what happened, the C/S prepares a list:

Lions X  
Big Game / X  
Cats X  
Felines / X  
Tigers X  
Bearers X  
Trucks X  
Elephants X  
Killing F / LF BD  
Camping X

Then the auditor nulls it to ONE item.

This is then prepchecked or done on an L1 as a subject.

When you *list and null* the pc gives the list.

Who got shot?            Me X X  
                                 Joe X X  
                                 Bearers F // X  
                                 Elephants X X  
                                 Tigers LF BD / F X

The auditor nulls this (Xes and second action noted).

TWO items are now reading so the auditor EXTENDS the list-

Ext

---

IND                      The White Hunter F / LF BD  
                                    The Dog X

And then the auditor renulls the WHOLE list (second X, etc) and only one item stays in which is a complete list. That is the item. It is given to pc.

HUBBARD COMMUNICATIONS OFFICE  
Saint Hill Manor, East Grinstead, Sussex

HCO BULLETIN OF 8 OCTOBER 1968

Class VIII

### ASSESSMENT: LX1

When an item assesses out, it is assessed on the preclear's own definition.

You don't look up what assesses out, except when a preclear does not understand the item on a list. Then you clean the misunderstood and REASSESS as the misunderstood cooked the list.

Looking up an assessed item from an LX1 acts as an invalidation. LX1 items must not be invalidated as LX1 uncovers a sort of invalidation chain.

However, if you have assessed an item and then find that the preclear does not understand it, then get the word defined and renull the list.

In running any item found by assessing from a prepared list, never get the preclear to define it unless he does not understand it whereupon you have to clear the word and reassess the list. If you find it and the preclear does not query its meaning, do not then get the preclear to define it. If you do get him to define it, the process being used with the item will not work too well.

In running recall on an LX1 item, it is not necessary to have the preclear run it aloud if the preclear is doing the command. Running recall in this fashion is not a comm process.

## CASE SUPERVISOR—FOLDER HANDLING

### Analyzing Folders

Go back in the folder to the session where the Preclear was running well and come forward from it doing a folder error summary.

### Reviewing Folders

In reviewing a folder, the first thing to do is to look at the CS to see if it was done

Use the Summary Sheet to get the Auditor's attitude.

Use the Auditor's Report Form to get the time of processes.

Read and take all your data from Worksheets and compare it to and see that CS was complied with and ensure Standard Tech was applied.

If you can't read the reports, send it back to have the Auditor over-print illegible words. Never try to case supervise (CS) an illegible worksheet as you'll only run into headaches.

The After Session Examiner's Report gives you the first clue of how suspicious you should be in examining the folder and whether or not auditing reports contain falsities.

### Standard Tech

You're never led by anything into departing from Standard Tech. The *only* reason it doesn't work is that it hasn't been applied.

The main question of a Case Supervisor is:

WAS IT APPLIED?

If you follow this exactly, you'll never miss.

REVISED 1 JANUARY 1976

Remimeo  
Auditor 43  
Class VIII

**THE AUDITOR'S CODE**

In celebration of the 100% gains attainable by Standard Tech.

I hereby promise as an Auditor to follow the Auditor's Code.

1. I promise not to evaluate for the preclear or tell him what he should think about his case in session.
2. I promise not to invalidate the preclear's case or gains in or out of session.
3. I promise to administer only Standard Tech to a preclear in the standard way.
4. I promise to keep all auditing appointments once made.
5. I promise not to process a preclear who has not had sufficient rest and who is physically tired.
6. I promise not to process a preclear who is improperly fed or hungry.
7. I promise not to permit a frequent change of Auditors.
8. I promise not to sympathize with a preclear but to be effective.
9. I promise not to let the preclear end session on his own determinism but to finish off those cycles I have begun.
10. I promise never to walk off from a preclear in session.
11. I promise never to get angry with a preclear in session.
12. I promise to run every major case action to a floating needle.
13. I promise never to run any one action beyond its floating needle.
14. I promise to grant beingness to the preclear in session.
15. I promise not to mix the processes of Scientology with other practices except when the preclear is physically ill and only medical means will serve.
16. I promise to maintain Communication with the preclear and not to cut his comm or permit him to overrun in session.
17. I promise not to enter comments, expressions or enturbulence into a session that distract a preclear from his case.
18. I promise to continue to give the preclear the process or auditing command when needed in the session.
19. I promise not to let a preclear run a wrongly understood command.

20. I promise not to explain, justify or make excuses in session for any Auditor mistakes whether real or imagined.
21. I promise to estimate the current case state of a preclear only by Standard Case Supervision data and not to diverge because of some imagined difference in the case.
22. I promise never to use the secrets of a preclear divulged in session for punishment or personal gain.
23. I promise to see that any fee received for processing is refunded following the policies of the Claims Verification Board, if the preclear is dissatisfied and demands it within three months after the processing, the only condition being that he may not again be processed or trained.
24. I promise not to advocate Scientology only to cure illness or only to treat the insane, knowing well it was intended for spiritual gain.
25. I promise to cooperate fully with the legal organizations of Dianetics and Scientology as developed by L. Ron Hubbard in safeguarding the ethical use and practice of the subject according to the basics of Standard Tech.
26. I promise to refuse to permit any being to be physically injured, violently damaged, operated on or killed in the name of "mental treatment".
27. I promise not to permit sexual liberties or violation of the mentally unsound.
28. I promise to refuse to admit to the ranks of practitioners any being who is insane.

**METER POSITION**

YOU MUST NEVER NEVER NEVER HAVE YOUR METER IN A POSITION  
WHERE THE PRECLEAR CAN READ THE TA.

To do so can cause the pc worry about his TA position and take his attention off  
his case.

It violates Clause 17 of the Auditor's Code.

**DEFINITION OF RECALL**

The definition of Recall as given in the Scientology Dictionary is incorrect.

Recall means just that. It is for present time *remembering* something that  
happened in the past. It is *not* re-experiencing it, re-living it or re-running it.

Recall *does not mean* going back to when it happened. It simply means that you  
are in present time, thinking of, remembering, putting your attention on something that  
happened in the past—all done from PRESENT TIME.

*Returning is* the word used to go back and re-experience an incident.

Class VIII

### THE PURPOSE OF CLASS VIII

In Class VIII Tech no longer is hopefully applied. Auditing is no longer gauged only against result. There is no more “auditing is what you get away with” at VIII.

A flawless, invariable administration of processes with flawless TRs, using ONLY the basics, is Class VIII.

The purpose is to administer Tech without variables, using only highly standardized processes and actions, using only a flawless TR approach, all within the new Auditor’s Code.

The impact of this action produces 100% results. It produces fantastically fast results. And it produces more result than has ever before been attained.

Using the Class VIII standard C/S approach there are *no* bogged cases.

The first thing a student on Class VIII has to learn is that there IS an exact right way to do auditing, an exact right way to solve cases.

If he grasps this, can do this, can select the correct VIII C/S and get it exactly applied, the result can be achieved.

It is too simple for many to grasp at once.

The ultimate comedy is a student who arrives at course offering “improvements”. He is confessing that he’s never applied Scientology straight and has *often* failed on pcs.

The cycle of the decline of an auditor is: (a) he fails to apply the missing bit of Standard Tech, (b) he then has an “unsolvable” case before him, (c) he then dreams up some unusual solution, (d) every so often his unusual solution improves that one pc a bit, (e) he now tries to apply it to all pcs, (f) he thereafter consistently fails.

A student also has a cycle of decline: (a) he recognizes his basics, (b) someone invalidates his correct data, (c) he ceases to see what the basics are, (d) he muddles along.

In Class VIII we bring the basics back in and reinforce them until the auditor will do them and *nothing else*.

From this we get a “magical” high velocity case gain curve upwards on *all* cases.

The beginning Class VIII auditor often has the idea that the *result* of the session is what he will be gauged by. This is NOT true. We *know* what the result of Standard Tech will be when flawlessly administered. We are not “waiting to see”. We are not experimenting. There are no different or difficult pcs.

The student on VIII is gauged by the flawless handling of the session and his admin. If the pc does not arrive at the examiner in good shape then we know

- (a) The auditor goofed
- (b) The TRs stank

- (c) The Auditor's Code was probably not followed
- (d) The auditing report is probably false
- (e) The C/S was probably botched up in being given
- (f) The session control was bad.

You see we know what Standard Tech does. It's up to the auditor to learn to be UNCOMPROMISINGLY STANDARD.

When we have brought about this frame of mind and standard rendition in the auditor we have made a Class VIII. Until we do, we have not.

The purpose of the course, then, is to produce an uncompromising zealot for Standard Tech whose reality is such that he will not do or tolerate sloppy rendition.

This can be defeated by lousy beginning auditing on the course, by an incompetent Supervisor who invalidates the students' basics or by a C/S who fails to use Standard Tech C/S on a course.

To throw a Class VIII Course out of line and defeat its purpose while supervising or C/Sing gives an automatic Treason assignment.

People who really *don't* understand it are in a muddle of confusion anyway. This blows off as basics go in. You just keep putting basics in and they get unconfused.

There is something here in Standard Tech. It is the exact Auditor's Code, the exact TRs, the exact processes, the 100% result. It can be learned, it can be done.

### FLOATING NEEDLE

Floating needles (F/Ns) are the end phenomena for any process or action with the pc on two cans. It is one of the most important rediscoveries made in years. It was known but lost by auditors.

It is the idle uninfluenced movement of the needle on the dial without any patterns or reactions in it. It can be as small as 1" or as large as dial wide. It does not fall or drop to the right of the dial. It moves to the left at the same speed as it moves to the right. It is observed on a Mark V E-Meter calibrated with the TA between 2.0 and 3.0 with GIs in on the pc. It can occur after a cognition blowdown of the TA or just moves into floating. The pc may or may not voice the cognition.

It, by the nature of the E-Meter reading below the awareness of the thetan, occurs just before the pc is aware of it. So to give a "That's it" on the occurrence of the F/N can prevent the pc from getting the cognition.

A "floating needle" occurring above 3.0 or below 2.0 on a calibrated Mark V E-Meter with the pc on 2 cans is an ARC Broken Needle. Watch for the pc's indicators. An ARC Broken Needle can occur between 2.0 and 3.0 where bad indicators are apparent.

Pcs and pre-OTs OFTEN signal an F/N with a "POP" to the left and the needle can actually even describe a pattern much like a Rock Slam. Meters with lighter movements do "pop" to the left and R/S wildly for a moment.

One does not sit and study and be sure of an "F/N". It swings or pops, he lets the pc cognite and then indicates the F/N to the pc preventing overrun.

When one OVERRUNS an F/N or misses one, the TA will start to climb. The thing to do is briefly rehabilitate it (rehab it) by indicating it has been by-passed and so regain it.

The F/N does not last very long in releasing. The thing to do is end the process off NOW. Don't give another command.

It coincides with other "end phenomena" of processes but is senior to them.

An F/N can be in normal range and still be an ARC Brk Needle. The thing which determines a real F/N is Good Indicators. Bad Indicators always accompany an ARC Break Needle.

On an ARC Brk Needle, check for an ARC Brk. If the TA then climbs, it was a real F/N so you rehab it quickly.

A one hand electrode sometimes obscures an F/N and gives false TA. If used, use higher sensitivity and get the TA from 2 cans when needed.

**TEACHING THE CLASS VIII**

As the teaching of basic data restimulates confusions which are then dramatized by throwing the course off line, the teaching of the Class VIII as follows is hugely vital.

The teaching of the SO VIII is laid down on these simple principles.

1. The data on tapes and Bulletins is studied without alter-is, interpretation or addition by the SO VIII student.
2. Well done and other folders are studied by the individual student.
3. No lecturing or additional interpretation by Supervisors.
4. The student audits only when he has completely passed on 1. and 2. above. He is then given a rope and is permitted to audit. He must not audit before he has completed his checksheet at least once.
5. Things the student is weak on are done in clay.
6. The student is disciplined for bad auditing goofs. He may also be taken off auditing and made to do his checksheet again.
7. The student has to have well dones on sessions and 100% on his final in order to pass.
8. Any student question is answered by referring to the HCO B, folder or tape.
9. A rigid invariable schedule is precisely adhered to.
10. Checksheets and tapes and folders are gone through in the sequence laid down by the checksheet and not randomly out of sequence.

If this is made difficult then the programme must be cut back to the bare bones of the original above.

The teaching of standard tech must also be standard. Therefore the above **MUST** be adhered to completely.

### HIGH TA

There are TWO methods of taking a TA down that is HIGH. 4.0 is a high TA.

One is the routine process of “What has been overrun?”, HCOB 17 Sept ‘68. It is not used as a rudiment. It is for chronic high TAs.

There is another one also. It is quite different and is run differently. It is *not* a listing process.

It is the simple question “Has anything been overrun?”

It is used at session start or after a break when the TA is found to have risen mysteriously to 4.0 or above.

It requires a *clever* auditor. First, he notices the TA is at 4.0. Then he gets the pc to answer “Has anything been overrun?” If the pc says something and the TA comes down, that’s it. The TA may only come down to 3.5. But that’s it.

Then one puts in a rud. Unless of course the answer to “Has anything been O/R?” was “Ruds” or “Asking for ARC Brks”. One would then indicate this as BPC and the TA should come on down.

This action is just getting the TA down so one can audit.

Don’t expect ruds to pull down a 4.0 TA.

And NEVER start a main action with the TA high expecting the main action will get it down. The main action hasn’t got it up.

Overrun of the main action or of any action past F/N will cause the TA to rise. One knows why that is and simply indicates the by-pass of an F/N and down comes the TA.

Calling for “Has anything been overrun?” is VERY simple. You don’t ask “How many times, etc.” You just get it spotted and down comes the TA.

If the pc says something in answer and the TA doesn’t come down, the auditor says, “No”. The pc searches about and gives another. If it’s not that the auditor says “No”. The pc says something else and down comes the TA and the auditor says, “Good, that’s the overrun.” And then the auditor carries on with his session actions.

The commonest cause of a TA flying up in a break is the process went F/N out of session and the *intention* of the auditor to continue it sends it up.

Note a Real HOT Auditor who really knows his basics can float a needle on this with one shot.

[In the original issue, the second sentence of the second paragraph was: “It is a formal listing process.” This has been deleted per HCO B 10 December 1968, *Correction*, which also states, “ ‘What has been overrun?’ is used to handle the chronically high TA and is run as per HCO B Sept 17, 1968, *Overrun Process*.”—LRH. The only other text in HCO B 10 December 1968 adds “Class IV” to the distribution of both the above and HCO B 17 September 1968.]

Remimeo  
Class VIII

**CASE SUPERVISOR  
CLASS VIII  
THE BASIC PROCESSES**

There are several processes which are unlimited. These are very valuable to the Case Supervisor.

There are many processes which are limited. These must be traced as not having been done before the C/S orders them done.

**LIMITED PROCESSES**

The basic Grade Processes tend to produce Overrun if repeated once done. This is very true of Power and R6EW.

Rehab of Grade Processes can be done far too often. Rehab of Grades should be limited to once just before Power and once in the OT IV Rundown. And that's it.

S & Ds are more or less limited to one of each type.

About one Remedy B on Dianetics and Scientology and one New Style is about it.

In general a list question for listing and nulling is a one-shot affair. Lists are very fast actions requiring skilled auditing and should not be handed out carelessly.

As a rule any of the above are *limited* because when repeated they can drive the TA up into overrun.

**UNLIMITED ACTIONS**

The most unlimited action is the running of engrams. So long as one uses different subjects one has an unlimited *action*, the only limitation being the subject of the engrams. This should not be repeated. A Case Supervisor only has to be alert that the chain on the subject has not been run.

This is fortunate because running engrams also produces the most case gain.

Secondaries rank with engrams on this unlimited sphere except that secondaries depend for their force on the engrams underlying them and if you run too many secondaries the pc drops into engrams anyway.

Recall processes (where recall means only remembering) are unlimited, the only limitation being the subject. You can only run "recall Subject A" for each flow. Then you have to have *another* subject.

There are to be very exact three flows for each Recall subject, three flows for the same subject as secondaries, three flows for the same subject as engrams.

Let us take "eating" as a fictitious subject for example. Here is the practical list of obtainable F/Ns.

## RECALL

1. Recall yourself eating.
2. Recall another eating.
3. Recall another (watching, making) another eat.

## SECONDARY

1. Find and run a secondary or chain of being emotional about eating.
2. Find and run a secondary or chain of another being emotional about eating.
3. Find and run a secondary or chain of another being emotional about another eating.

## ENGRAM

1. Find and run an engram (moment of pain and unconsciousness) or chain of being eaten.
2. Find and run an engram (moment of pain and unconsciousness) or chain of eating another.
3. Find and run an engram (moment of pain and unconsciousness) or chain of another eating another.

You could order or do all these on one pc. (Providing “eating” read well on the meter in the first place.)

But to run a new “Recall” or “Secondary” or “Engram” you would have to avoid the subject already run. You’d have to find a new subject.

These three flows and three actions are possible on any one subject that reads. Each is taken to floating needle. The TA would only rise if you overran any of the one actions or if you again tried to get it done on a new C/S action.

The use of this is interesting. We can find that the pc in some old C/S was run through his operation and still has a somatic. A skilled Case Supervisor knows he can get rid of the somatic by running the remaining flows. It is common to run the motivator engram and find the pc still has a somatic. So you run the overt on the same subject. If he *still* has it you can run the third flow of another doing it to another.

These lingering somatics used to be a bad thing, and were often a mystery. The engram (or recall) went to F/N but the pc still had a somatic. The answer is of course to order the other flow run. And the somatic will vanish.

The dub-in case has a wholly one-sided flow and is trying to run the other side! He will obsessively seek to run the opposite flow to the one he should be running. He can have too heavy a “motivator” and be seeking wildly to run false overts to explain having been hit so hard. So he dubs in overts.

Or he has committed some wild overt, intentional or unintentional and is trying to get false motivators. This can even go into the third flow where a person sees a man hit and tries to run being hit or hitting whereas he wasn’t a party to either.

(You solve this by assessment when you spot dub-in, or just by observing which side is dubbed. You order the other flows run or at least checked to see where the *real* charge lies.)

These actions, then, are limited only by subject.

This does not mean that you can't get a high TA suddenly on them. You can accidentally order the same subject as was ordered once before.

Or wrong ownership can cause the TA to act up in a peculiar way that looks like an overrun. However, earlier incidents of a similar kind usually get this handled on down to F/N. In fact this crops up and is handled on lower grade pcs more often than you think.

The PREPCHECK is another unlimited action. Once more it is the subject that limits it.

Not in practice but in *theory*, on one subject you could Prepcheck, run 3 recalls, three secondaries and three engrams each to F/N. However it gets dicey in practice as the pc protests sometimes.

And it is protest of doing it too often after all that pushes the TA up.

Havingness is probably not limited.

The ruds questions if not done in the same day tend to be unlimited. The TA going up on ruds is pc protest coming from cleaned cleans or false reads. Or he gave you his ARC Brks and now you're asking for more. Ruds, therefore are handled in moderation always. You don't for instance "fly a rud" when the pc comes into session with an F/N. The TA will go up in protest or down in overwhelm.

If you put in all ruds to F/N, waited an hour and put in all ruds to F/N again the TA would either soar or drop below 2.0, depending on how the pc looked at it.

Assessing prepared lists is unlimited so long as the items are varied.

Doing L1C or L4BR or other such lists is unlimited SO LONG AS YOU DON'T BYPASS THE FIRST F/N ON THAT LIST IN ANY ONE SESSION.

The GREEN FORM is of this nature. You can do a large number of "GFs" on pcs providing they are each time done to the first F/N. And providing you don't permit any listing and nulling. And providing enough time has gone by to let new data be available. 2 GFs in one day would be fatal. Two in a week risky.

The Itsa Earlier Itsa approach to ruds and GF is safe and in general Itsa Earlier Itsa is unlimited.

As soon as you let an auditor introduce any other process than Itsa Earlier Itsa on a form you get problems as he is stacking up potential overruns on limited processes. If each time an auditor had a Problem reading on a pc he ran a *process*, you'd soon have an overrun situation going. Itsa Earlier Itsa is unlimited.

ARCU, CDEINR appears to be unlimited for ARC Brks.

"WHO nearly found out" is unlimited for Missed W/Hs. But have a care here. In the OT sections pre-OTs often have plain withholds that have no overt connected with them, so *withholds* is always okay to use especially "In the last session\_\_\_\_\_" or "In Auditing\_\_\_\_\_".

The approach here is:

"In auditing has there been an ARC Brk?" ARCU CDEINR.

"In auditing has there been a problem?" (not "PTP") Itsa Earlier Itsa.

"In auditing has there been a withhold?" Itsa Earlier Itsa.

Suppress and "Has anyone said you had a\_\_\_\_\_when you didn't" are always used in Rudiments, past sessions or current.

You can only fly all ruds with the use of Suppress and False reads (“Has anybody said\_\_\_\_\_”).

Auditors who have to get into GFs in “flying a rud” either don’t know an F/N when they see one or haven’t any skill in using Suppress and False.

These are all unlimited actions with the reservations as noted.

### THE PROBLEM OF THE C/S

The main problem of a C/S comes about in trying to use the key law:

“Reality is proportional to the amount of charge off.”

A fat review folder, a rollercoaster case, a pc who never gets out of this life, a pc who runs stubbing his toe yesterday as an engram, a pc who dubs in, are alike overcharged cases.

To “send” one over the top requires lots of light charge off.

The worse off the case, the lighter you handle it. Older practices matched a violent case with violence and never did win at all. They wound up with murder as the “best possible solution”.

The problem is to get off *lots* of charge without going very deep on heavily charged cases. Then they eventually come out right.

You hold off main actions as long as you can and just work to get charge off. Then you eventually get deep enough to really shove a major action at them.

For instance, by carefully preparing a case for a “full IV rundown” with lots of preparatory actions you get an OT every time.

It seldom occurs to people that a *lot* of cases get the highest gains on the TRs of auditing only and the lower grade processes are far too steep and when run on them the pc on Communication Grade Zero does not stop stammering or doesn’t cease to be shy. Zero was run on him too soon.

You see a fabulous gain on some person doing TR 0. Or “just talking to an auditor to F/N”.

Study blows charge.

Some persons (the insane) would have to rest for a week or two to stand up to a mild chat.

Some other person could start at Grade IV and do just fine.

So the only variable a C/S has is how charged up is a case. The cases all react to the same things, the same actions. But they differ in the amount of “charge”.

Determining and lightening the charge is the problem of the C/S.

There are Personality, IQ and E-Meter tests that give an idea of how charged up the case may be.

The thick folder, the times in Review, the thickness of a single session report are of great use.

These things only say that some cases are more charged up than others.

So the C/S has the actually infinite variety of ways he can apply the FEW actions described above in unlimited processes.

Then he has the QUALITY of the charge he can remove. He can do 7 cases over and over so long as he removes the last one run from the new list to be assessed (as the list would F/N on the item just handled).

He can comb the area of a pc's environ and with a synonym dictionary compile dozens of different lists. It isn't hard to find what *recurring* problems a pc has. These can go into lists for assessment and Prepcheck or II or each to F/N of 3 recalls or even 3 engrams on higher level cases.

Think processes are also unlimited. And have 3 flows.

There may be other such unlimited actions.

A C/S is also limited by what his auditors can do. And is wise to stay within their training framework.

So you see what's standard. The ACTIONS, the Auditing. The subjects used in these ways can be very wide.

All you really have to be sure of is that the subject reads on the meter and that the way it's handled on the pc doesn't overwhelm the pc and that's the size of it.

The Grades are already laid out like a carpet.

You set up the case to run them.

If the case is set up for the Grades then you really get wins wins wins.

Some Case Supervisor, dazzled by the vast scope you can get from a pc being set up for OT IV overlooks the fact that he can set up pcs for wins on ARC Straight Wire that will look very dazzling to the pc.

If the auditor flunks a C/S and can't get it going, the repair action would be (for non-rud sessions) one of the following—

1. Assess Upset, Problem, Not disclosing something, Unable to say something, Ignored, Didn't understand. (Be careful not to get an item because pc couldn't dig it.)

2. Handle what read with Itsa Earlier Itsa

or

1. Assess Auditors, Auditing, Dianetics, Scientology, Sessions, Organization, Books.

2. Prepcheck

or

1. Have pc explain why he doesn't want auditing and gently slide into Itsa Earlier Itsa

or

1. Assess 7 cases in an expanded list of each rud, omit grades or 1. Green Form to 1st F/N.

Be sure questions phrased so pc understands them.

So far as Sub-Zeroes go, you have to be very ready to send the pc to Review for the remedies. And you have to be ready to realize that each of these Sub-Zeroes is a *grade* and that some pcs just aren't set up for them.

So you do your review actions before the pc gets in over his head.

This is where the Personality Analysis, IQ, and meter test are invaluable.

The worse off these come out, the more you work to set the pc up.

It even goes down as low as:

1. Pc to handle environment before auditing  
or
1. Pc to eat better for a week  
or
1. Pc to rest a week before first session or
1. Pc to take care of physical illness or injury before auditing followed by, some time later, 1. Notice that object to F/N, or 1. Have pc find something in room that is really real to him to F/N.

-----

So you see that all auditing is built of the same stuff—the Code, the Actions, the smooth TRs.

*Standard C/Sing* is the use of these actions. Setting pc up for the Grades.

A C/S can appear *very* clever indeed. His cleverness is composed of just the things you find here and in the way he finds ways to use them.

He orders auditing in accordance with where the pc is on the grades. He hoards his grades until he is sure they fly the pc. And that is good C/Sing.

HUBBARD COMMUNICATIONS OFFICE  
Saint Hill Manor, East Grinstead, Sussex

HCO BULLETIN OF 10 DECEMBER 1968

Class IV  
Class VIII

**CORRECTION**

HCO B 1 Nov 1968, *High TA*, and HCO B 17 Sept 1968, *Overrun Process*—  
Mimeo Distribution is to be corrected to read:

Class IV  
Class VIII.

HCO B 1 Nov 1968, *High TA*, para 2, 2nd sentence "It is a formal listing process" is to be deleted.

"What has been overrun?" is used to handle the chronically high TA and is run as per HCO B 17 Sept 1968, *Overrun Process*.

HCO BULLETIN OF 15 DECEMBER 1968

Remimeo

(Amends HCO Bulletin of 9 January 1968, "List L4A")  
(ITEM 6 CORRECTED 12 FEBRUARY 1969)

**L4A**  
**FOR ASSESSMENT OF ALL LISTING ERRORS**

PC's NAME \_\_\_\_\_ AUDITOR \_\_\_\_\_ DATE \_\_\_\_\_

1. DO YOU HAVE AN ARC BREAK? (ARE YOU UPSET)  
(If the question reads, establish if the upset is due to a break in AFFINITY, REALITY, COMMUNICATION or UNDERSTANDING, by assessment. Indicate what read to the Pc. Take the one found and fit into the following buttons, C U R I O U S A B O U T \_\_\_\_\_, D E S I R E D \_\_\_\_\_, ENFORCED \_\_\_\_\_ INHIBITED \_\_\_\_\_. Indicate the by-passed charge to the Pc. Check ARC Break question, if reads, ask for earlier similar ARC Break.)
2. DO YOU HAVE A PRESENT TIME PROBLEM?  
(If this reads, handle with Itsa earlier similar Itsa.)
3. IS A LIST INCOMPLETE?  
(If reads, find out what list and complete it, give the Pc his item.)
4. HAS A LIST BEEN LISTED TOO LONG?  
(If so, find what list and get the item off from it by nulling with suppress, the nulling question being: "On \_\_\_\_\_ has anything been suppressed?", for each item on the overlong list. Give the Pc his item.)
5. HAVE WE TAKEN THE WRONG ITEM OFF A LIST?  
(If this reads, put in Suppress and Invalidated on the list and null as in 4. above and find the right item and give to the Pc.)
6. HAS A RIGHT ITEM BEEN DENIED YOU?  
(If this reads, find out what it was and clean it up with Suppress and Invalidate and give it to the Pc.)
7. HAS AN ITEM BEEN PUSHED OFF ON YOU YOU DIDN'T WANT?  
(If so, find it and get in Suppress and Invalidate on it and tell Pc it wasn't his item and continue the original action to find the correct item.)
8. HAD AN ITEM NOT BEEN GIVEN YOU?  
(If reads handle as in 6.)
9. HAVE YOU INVALIDATED A CORRECT ITEM FOUND?  
(If so rehab the item and find out why the Pc invalidated it or if somebody else did it, clean it up and give it to Pc again.)
10. HAVE YOU THOUGHT OF ITEMS THAT YOU DID NOT PUT ON THE LIST?  
(If so, add them to the correct list. Renull the whole list and give the Pc the item.)

11. HAVE YOU BEEN LISTING TO YOURSELF OUT OF SESSION?  
(If so, find out what question and try to write a list from recall and get an item and give it to the Pc.)
12. HAVE YOU BEEN GIVEN SOMEBODY ELSE'S ITEM?  
(If so, indicate to the Pc this was not his item. Don't TRY to find whose it was.)
13. HAS YOUR ITEM BEEN GIVEN TO SOMEONE ELSE?  
(If so, find if possible what item it was and give it to the Pc. Don't try to identify the "somebody else".)
14. HAS A RELEASE POINT BEEN BY-PASSED ON LISTING?  
(If so, indicate the overrun to the Pc, rehab back.)
15. HAS A RELEASE POINT BEEN BY-PASSED ON THE QUESTION ONLY?  
(If so, indicate the overrun to the Pc and rehab back.)
16. HAS IT BEEN AN OVERT TO PUT AN ITEM ON A LIST?  
(If so, find out what item and why.)
17. HAVE YOU WITHHELD AN ITEM FROM A LIST?  
(If so, get it and add it to the list if that list is available. If not put item in the report. )
18. HAS A WITHHOLD BEEN MISSED?  
(If so, get it, if descreditable ask "Who nearly found out?")
19. HAS AN ITEM BEEN BY-PASSED?  
(Locate which one.)
20. WAS A LISTING QUESTION MEANINGLESS?  
(If so, find out which one and indicate to the Pc.)
21. HAS AN ITEM BEEN ABANDONED?  
(If so, locate it and get it back for the Pc and give it to him.)
22. HAS AN ITEM BEEN PROTESTED?  
(If so, locate it and get the protest button in on it.)
23. HAS AN ITEM BEEN ASSERTED?  
(If so, locate it and get in the assert button on it.)
24. HAS AN ITEM BEEN SUGGESTED TO YOU BY ANOTHER?  
(If so, get it named and the protest and refusal off.)
25. HAS AN ITEM BEEN VOLUNTEERED BY YOU AND NOT ACCEPTED?  
(If so, get off the charge and give it to the Pc, or if he then changes his mind on it, go on with the listing operation.)
26. HAS THE ITEM ALREADY BEEN GIVEN?  
(If so, get it back and give it again.)
27. HAS AN ITEM BEEN FOUND PREVIOUSLY?  
(If so, find what it was again and give it to Pc once more.)
28. HAS AN ITEM NOT BEEN UNDERSTOOD?  
(If so, work it over with buttons until Pc understands it or accepts or rejects it and go on with listing.)
29. WAS AN ITEM DIFFERENT WHEN SAID BY THE AUDITOR?  
(If so, find out what the item was and give it to the Pc correctly. )

30. WAS NULLING CARRIED ON PAST THE FOUND ITEM?  
(If so, go back to it and get in Suppress and Protest.)
31. HAS AN ITEM BEEN FORCED ON YOU?  
(If so, get off the reject and Suppress and get the listing action completed to the right item if possible.)
32. HAS AN ITEM BEEN EVALUATED?  
(If so, get off the disagreement and Protest.)
33. HAD EARLIER LISTING BEEN RESTIMULATED?  
(If so, locate when and indicate the by-passed charge.)
34. HAS AN EARLIER WRONG ITEM BEEN RESTIMULATED?  
(If so, find when and indicate the by-passed charge.)
35. HAS AN EARLIER ARC BREAK BEEN RESTIMULATED?  
(If so, locate and indicate the fact by Itsa earlier similar Itsa.)
36. DO YOU HAVE AN ARC BREAK BECAUSE OF BEING MADE TO DO THIS?  
(If so, indicate it to the Pc, check the question if reads. Get earlier similar Itsa.)
37. IS THERE SOME OTHER KIND OF BY-PASSED CHARGE?  
(If so, find what and indicate it to Pc.)
38. WAS THERE NOTHING WRONG IN THE FIRST PLACE?  
(If so, indicate it to Pc.)
39. HAS THE UPSET BEEN HANDLED?  
(If so, indicate it to the Pc.)

[The correction of 12 February 1969 was to change the word “WRONG” to “RIGHT” in Item 6.

The above Bulletin was amended on 8 August 1970, Volume VII, page 119, and the title changed to *L4B-For Assessment of All Listing Errors*. This amendment changed Item 1 to “WAS THE LIST UNNECESSARY?” and Item 2 to “WAS THE ACTION DONE UNDER PROTEST?”. It also added the following: after Number 15, “16. HAVE YOU GONE EXTERIOR WHILE LISTING?”; after Number 36, “38. HAS THIS LIST CORRECTION BEEN OVERRUN?”; and as a last item after Number 39, “42. HAS A LIST PROCESS BEEN OVERRUN?”. The items from 16 on were renumbered to accommodate the additional items.

This List was further amended on 18 March 1971, Volume VII, page 200, with no change in the title. This amendment added an item at the beginning: “1. DID YOU FAIL TO ANSWER THE LISTING QUESTION?”. All the previous items remained unchanged except for their numbers being increased by one. The handlings for these added items were the same as is given for them in HCO B 15 December 1968 *REVISED*, Revised 2 June 1972, *L4BR-For Assessment of All Listing Errors*, which can be found in Volume VIII, page 138.

The first issue of L4 was contained in HCO B 5 July 1963, *ARC Break Assessments*, Volume V, page 306.]

Remimeo

(Note: This data is turned out as an HCO B *and* a Pol Ltr [issued as each one] as may apply very broadly in both the OEC and Level IV or above Courses.)

### **THE THIRD PARTY LAW**

I have for a very long time studied the causes of violence and conflict amongst individuals and nations.

If Chaldea could vanish, if Babylon turn to dust, if Egypt could become a badlands, if Sicily could have 160 prosperous cities and be a looted ruin before the year zero and a near desert ever since—and all this in SPITE of all the work and wisdom and good wishes and intent of human beings, then it must follow as the dark follows sunset that something must be unknown to Man concerning all his works and ways. And that this something must be so deadly and so pervasive as to destroy all his ambitions and his chances long before their time.

Such a thing would have to be some natural law unguessed at by himself.

And there *is* such a law, apparently, that answers these conditions of being deadly, unknown and embracing all activities.

The law would seem to be:

**A THIRD PARTY MUST BE PRESENT AND UNKNOWN IN EVERY QUARREL FOR A CONFLICT TO EXIST.**

or

**FOR A QUARREL TO OCCUR, AN UNKNOWN THIRD PARTY MUST BE ACTIVE IN PRODUCING IT BETWEEN TWO POTENTIAL OPPONENTS.**

or

**WHILE IT IS COMMONLY BELIEVED TO TAKE TWO TO MAKE A FIGHT, A THIRD PARTY MUST EXIST AND MUST DEVELOP IT FOR ACTUAL CONFLICT TO OCCUR.**

It is very easy to see that two in conflict are fighting. They are very visible. What is harder to see or suspect is that a third party existed and actively promoted the quarrel.

The usually unsuspected and “reasonable” third party, the bystander who denies any part of it is the one that brought the conflict into existence in the first place.

The hidden third party, seeming at times to be a supporter of only one side, is to be found as the instigator.

This is a useful law on many dynamics.

It is the cause of war.

-----

One sees two fellows shouting bad names at each other, sees them come to blows. No one else is around. So *they*, of course, “caused the fight”. But there *was* a third party.

Tracing these down, one comes upon incredible data. That is the trouble. The incredible is too easily rejected. One way to hide things is to make them incredible.

Clerk A and Messenger B have been arguing. They blaze into direct conflict. Each blames the other. NEITHER ONE IS CORRECT AND SO THE QUARREL DOES NOT RESOLVE SINCE ITS TRUE CAUSE IS NOT ESTABLISHED.

One looks into such a case THOROUGHLY. He finds the incredible. The wife of Clerk A has been sleeping with Messenger B and complaining alike to both about the other.

Farmer J and Rancher K have been tearing each other to pieces for years in continual conflict. There are obvious, logical reasons for the fight. Yet it continues and does not resolve. A close search finds Banker L who, due to their losses in the fighting, is able to loan each side money, while keeping the quarrel going, and who will get their lands completely if both lose.

It goes larger. The revolutionary forces and the Russian government were in conflict in 1917. The reasons are so many the attention easily sticks on them. But only when Germany’s official state papers were captured in World War II was it revealed that *Germany* had promoted the revolt and financed LENIN to spark it off, even sending him into Russia in a blacked out train!

One looks over “personal” quarrels, group conflicts, national battles and one finds, if he searches, the third party, unsuspected by both combatants or if suspected at all, brushed off as “fantastic”. Yet careful documentation finally affirms it.

-----

This datum is fabulously useful.

In marital quarrels the *correct* approach of anyone counseling, is to get both parties to carefully search out the *third* party. They may come to many *reasons* at first. These *reasons* are not beings. One is looking for a third *party*, an actual *being*. When both find the third party and establish proof, that will be the end of the quarrel.

Sometimes two parties, quarreling, suddenly decide to elect a being to blame. This stops the quarrel. Sometimes it is not the right being and more quarrels thereafter occur.

Two nations at each other’s throats should each seek conference with the other to sift out and locate the actual third party. They will always find one if they look, and they *can* find the right one. As it will be found to exist in fact.

-----

There are probably many technical approaches one could develop and outline in this matter.

There are many odd phenomena connected with it. An accurately spotted third party is usually not fought at all by either party but only shunned.

Marital conflicts are common. Marriages can be saved by both parties really sorting out *who* caused the conflicts. There may have been, in the whole history of the marriage, several, but only one at a time.

Quarrels between an individual and an organization are nearly always caused by an individual third party or a third group. The organization and the individual should

get together and isolate the third party by displaying to each other all the data they each have been fed.

Rioters and governments alike could be brought back to agreement could one get representatives of both to give each other what they have been told by *whom*.

SUCH CONFERENCES HAVE TENDED TO DEAL ONLY IN RECRIMINATIONS OR CONDITIONS OR ABUSES. THEY MUST DEAL IN BEINGS ONLY IN ORDER TO SUCCEED.

This theory might be thought to assert also that there are no bad conditions that cause conflict. There are. But these are usually REMEDIAL BY CONFERENCE UNLESS A THIRD PARTY IS PROMOTING CONFLICT.

In history we have a very foul opinion of the past because it is related by recriminations of two opponents and has not spotted the third party.

“Underlying causes” of war should read “hidden promoters”.

There are no conflicts which cannot be resolved unless the true promoters of them remain hidden.

-----

This is the natural law the ancients and moderns alike did not know.

And not knowing it, being led off into “reasons”, whole civilizations have died.

It is worth knowing.

It is worth working with in any situation where one is trying to bring peace.

HCO BULLETIN OF 8 JANUARY 1969

Remimeo

**DRUGS AND “INSANITY”  
NON-COMPLIANCE AND ALTER-IS**

I have been doing some research on drug cases and takers which has shed some interesting light on this and also insanity.

The basic equation is apparently:

WHEN THREATENED WITH UNMOCKING A THETAN MOCKS UP  
OBSESSIVELY.

Actually the datum is a small bit from OT VIII data, being part of energy creation.

It applies too well at lower levels, however, to leave it in such a stratosphere.

It explains for instance why a pc, challenged by an “auditor” who is breaking the Auditor’s Code, gets such a solid reaction in the reactive bank.

Threatened by an apparent effort to destroy him instead of letting him find the truth, the pc reacts by mocking up hard below his awareness level. This does not, of course, make him insane. It just sticks him a bit in the session.

Drugs (LSD, marijuana, alcohol, whatever) produce a threat to the body like any other poison. The threat is to the *body*. The thetan reacts by mocking up.

Of course what he mocks up is some engram, secondary or combination of fancy and fact. He can do this in some cases, so hard that it becomes more real (and safer) than present time.

Thus, under threat, he goes out of present time.

Now comes the next bit which is important as a new discovery:

HIS TIME TRACK IS NOT THEN BEING MADE UP WHOLLY OF  
PRESENT TIME EVENTS. IT IS A COMPOSITE OF PAST TRACK,  
IMAGINATION AND PRESENT EVENTS.

Thus, right there before your eyes he, apparently in the same room as you are, doing the same things, is really only partially there and partially in some past events.

He *seems* to be there. Really he isn’t “tracking” fully with present time.

What is going on to a rational observation is *not* what is going on to him.

Thus he does not duplicate statements made by another but tries to fit them into his composite reality. In order to fit them in, he has to alter them.

We therefore have the real basis of *alter-is*.

He may be *sure* he is helping one REPAIR the floor but in actual fact he is hindering the actual operation in progress which really consists of CLEANING the floor. So when he “helps one” mop the floor he introduces chaos into the activity. Since *he is* REPAIRING the floor a request to “give me the mop” has to be reinterpreted as “hand me the hammer”. But the mop handle is larger than a hammer handle so the bucket gets upset.

As a thetan can mock up an infinity of combinations, there would be an infinity of types of reactions to drugs. There would also be an infinity of types of insanity.

What is constant is that he is NOT RUNNING IN THE SAME SERIES OF EVENTS as others.

This can be slight, wherein the person is seen to make occasional mistakes. It can be as serious as total insanity where the events apparent to him are *completely* different than those apparent to anyone else. And it can be all grades in between.

It isn't that he doesn't know what's going on. It's that he perceives *something else* going on instead of the Present Time sequence of events.

Thus others appear to him to be stupid or unreasonable or insane. As *they* don't agree in their actions and orders with what he *plainly sees is* in progress "they" aren't sensible. Example: A group is moving furniture. To all but one they are simply moving furniture. This one perceives himself to be "moving geometric shapes into a cloud". Thus this one "makes mistakes" "alter-ises" "non-complies". As the group doesn't see inside him and only sees another like themselves, they can't figure out why he "balls things up so".

Such persons as drug takers and the insane are thus slightly or wholly on an apparently different time track of "present time" events.

A drug may be taken to drive a person out of an unbearable PT or out of consciousness altogether.

In some persons they do not afterwards return wholly to Present Time.

A thetan can also escape an unbearable PT by dropping into the past, even without drugs.

The penalty is running into obsessive mocking up to counter the threat of being unmocked.

The answer is to erase the engrams and reactive mechanisms.

As all this out-of-PT is unknowing, it is aberrative. Things one is doing that one knows one is doing are not aberrative.

The drug taker and the insane alike have not recovered present time, to a greater or lesser degree. Thus they think they are running on a different time track than they are, which, unknowingly and out of the past, they are, to a greater or lesser degree, mocking up.

These are the underlying facts in odd human behaviour.

## ENTURBULATION

Thus we get an explanation of enturbulation as well.

As what is going on according to the perception and subjective reality of such a person is varied in greater or lesser degree from the objective reality of others, such a person enturbulates the actual environment.

What is really going on is not what is going on for them.

Orders, then, are not complied with, other things happen and people around such a person have their own consecutive events disrupted. This causes enturbulation.

The non-compliance, alter-is and upsets from a person who is out of present time

and (what is new about this) who is running on a different series of events than those going on for the rest cause general enturbulation.

This is why it takes two additional staff members to handle the routine goofs of such a person. They are forcing events to run more or less normally against the counter effort of a person with a delusory time track.

We have all known such a person, many more than one, so it is not uncommon in the current civilization. The sudden non sequitur remark, out of context. The blank stare when given an order or a remark—behind these lies a whole imaginary time track which we jar into and accidentally disrupt.

### EXTERIORIZATION

In OT sections we sometimes hear of a person who is “exterior” and so can’t be audited any more.

The symptoms of the person have not changed. So he still has aberrations.

The answer is to clear the word *exteriorization* with them. They often are exterior into a never-never non-extant universe. Or exterior in a past death.

When the word is cleared with them, they often don’t really say what was going on. They experience a strange reaction and change.

If one then runs a bit of objective havingness, they come into present time.

This applies only to exteriorized cases who can’t be audited because they are “exterior”. And yet aren’t all right casewise.

The usual course is to just handle the case by Standard Tech. They eventually come right.

### DANGEROUS ENVIRONMENT

Anyone forced into a dangerous environment tends to either go fully into PT or retreat from PT.

The only ones who suffer from it afterwards are those who don’t move on up the track as life goes on but stay there, retreated from a long gone present time or stuck in a moment of the past.

This is done, of course, because of pictures mocked up obsessively under the threat of unmock.

When you understand the condition you can’t be fooled by it and think such people are there with you when they are not.

Auditing of course resolves this.

Class IV

**SUB-ZEROS—TRIPLE GRADES**  
**LOWER LEVELS—TRIPLE GRADES**

-----  
Auditor

-----  
Pc Name

-----  
Case Supervisor

-----  
Date

Note: This HCOB is to be used ONE FOR EACH PC as a check sheet for that pc and belongs in his/her folder. IT IS DONE DURING session, not filled in after.

Triple Grades depends upon the three primary flows: Out-Flow, In-Flow, and Cross-Flow. These are designated respectively: F1, F2, and F3.

Each Grade is now followed by a Havingness process. Processing deletes unwanted mass. Havingness restores the mass "desired" and eventually brings one up to not needing it. Each grade is complete when its Havingness processes have been run to FN after all flows of all processes here listed for that grade have been run each to FN.

-----  
TRIPLE RUDS RUN  
in earlier session

Havingness: (1 process) SRH Notice that\_\_\_\_\_. To FN\_\_\_\_\_

**INCIDENT STEPS:**

- IS F1: "Locate an incident where you lost something."
1. Date the incident.
  2. Move pc to the incident with the exact command "Move to (date)."
  3. "What is the duration of the incident?"
  4. "Move to the beginning of the incident at (date)." Wait until meter Flicks.
  5. "What do you see?" (If pc's eyes are open, tell pc first, "Close your eyes.")
  6. "Move through the incident to a point (duration) later."
  7. Ask nothing, say nothing, do nothing (except observe meter or make *quiet* notes) while pc is going through the incident. If the pc says anything at all, just acknowledge and let him continue, using this exact command softly "Okay, continue."
  8. When the pc reaches the end of the incident say *only* "What happened?" When pc has finished talking, give a final acknowledgement.
  9. Repeat exactly and only 2 through 8.
  10. After the second and subsequent runs through an incident check "Has the incident become more solid?" with the pc.

11. Continue the above until:
  - a. The pc spots an earlier incident, or
  - b. The pc gets no change on a run through the incident from the run just before, or
  - c. The incident becomes more solid or fails to discharge.
12. If a, b, or c above occurs: "Locate an earlier similar incident."
13. Then 1 through 9. To FN\_\_\_\_\_

IS F2: "Locate an incident of you causing another loss and misemotion."

1. Date the incident.
2. Move pc to the incident with the exact command "Move to (date)."
3. "What is the duration of the incident?"
4. "Move to the beginning of the incident at (date)." Wait until meter Flicks.
5. "What do you see?" (If pc's eyes are open, tell pc first, "Close your eyes.")
6. "Move through the incident to a point (duration) later."
7. Ask nothing, say nothing, do nothing (except observe meter or make *quiet* notes) while pc is going through the incident.  
  
If the pc says anything at all, just acknowledge and let him continue, using this exact command softly "Okay, continue."
8. When the pc reaches the end of the incident say *only* "What happened?" When pc has finished talking, give a final acknowledgement.
9. Repeat exactly and only 2 through 8.
10. After the second and subsequent runs through an incident check "Has the incident become more solid?" with the pc.
11. Continue the above until:
  - a. The pc spots an earlier incident, or
  - b. The pc gets no change on a run through the incident from the run just before, or
  - c. The incident becomes more solid or fails to discharge.
12. If a, b, or c above occurs: "Locate an earlier similar incident."
13. Then 1 through 9. To FN\_\_\_\_\_

IS F3: "Locate an incident of another causing others loss and misemotion. "

1. Date the incident.
2. Move pc to the incident with the exact command "Move to (date)."
3. "What is the duration of the incident?"

4. "Move to the beginning of the incident at (date)." Wait until meter Flicks.
5. "What do you see?" (If pc's eyes are open, tell pc first, "Close your eyes.")
6. "Move through the incident to a point (duration) later."
7. Ask nothing, say nothing, do nothing (except observe meter or make *quiet* notes) while pc is going through the incident.  
  
If the pc says anything at all, just acknowledge and let him continue, using this exact command softly "Okay, continue."
8. When the pc reaches the end of the incident say *only* "What happened?" When pc has finished talking, give a final acknowledgement.
9. Repeat exactly and only 2 through 8.
10. After the second and subsequent runs through an incident check "Has the incident become more solid?" with the pc.
11. Continue the above until:
  - a. The pc spots an earlier incident, or
  - b. The pc gets no change on a run through the incident from the run just before, or
  - c. The incident becomes more solid or fails to discharge.
12. If a, b, or c above occurs: "Locate an earlier similar incident."
13. Then 1 through 9. To FN\_\_\_\_\_

If the pc drops into the underlying engram chain on any secondary Flow being run, before FN on the chain, continue down the *engram* chain to FN and note the fact on this check sheet so that that engram Flow will not be run again in error. After FN on that engram chain, take up the next remaining secondary Flow.

Havingness:

- |         |  |            |
|---------|--|------------|
| ISH F1: | Tell me something you could touch.                   | To FN_____ |
| ISH F2: | Tell me something another could touch.               | To FN_____ |
| ISH F3: | Tell me something another could get others to touch. | To FN_____ |

**DIANETIC ENGRAMS TRIPLE**

NO RECALL STEP

INCIDENT STEPS:

- E F1: "Locate an incident containing pain and unconsciousness."
1. Date the incident.
  2. Move pc to the incident with the exact command "Move to (date)."
  3. "What is the duration of the incident?"
  4. "Move to the beginning of the incident at (date)." Wait until meter Flicks.

5. "What do you see?" (If pc's eyes are open, tell pc first, "Close your eyes.")
6. "Move through the incident to a point (duration) later."
7. Ask nothing, say nothing, do nothing (except observe meter or make *quiet* notes) while pc is going through the incident.  
  
If the pc says anything at all, just acknowledge and let him continue, using this exact command softly "Okay, continue."
8. When the pc reaches the end of the incident say *only* "What happened?" When pc has finished talking, give a final acknowledgement.
9. Repeat exactly and only 2 through 8.
10. After the second and subsequent runs through an incident check "Has the incident become more solid?" with the pc.
11. Continue the above until:

  - b. The pc gets no change on a run through the incident from the run just before, or
  - c. The incident becomes more solid or fails to discharge.
12. If a, b, or c above occurs: "Locate an earlier similar incident."
13. Then 1 through 9. To FN\_\_\_\_\_

E F2: "Locate an incident of you causing another pain and unconsciousness. "

1. Date the incident.
2. Move pc to the incident with the exact command "Move to (date)."
3. "What is the duration of the incident?"
4. "Move to the beginning of the incident at (date)." Wait until meter Flicks.
5. "What do you see?" (If pc's eyes are open, tell pc first, "Close your eyes.")
6. "Move through the incident to a point (duration) later."
7. Ask nothing, say nothing, do nothing (except observe meter or make *quiet* notes) while pc is going through the incident.  
  
If the pc says anything at all, just acknowledge and let him continue, using this exact command softly "Okay, continue."
8. When the pc reaches the end of the incident say *only* "What happened?" When pc has finished talking, give a final acknowledgement.
9. Repeat exactly and only 2 through 8.
10. After the second and subsequent runs through an incident check "Has the incident become more solid?" with the pc.

11. Continue the above until:
  - a. The pc spots an earlier incident, or
  - b. The pc gets no change on a run through the incident from the run just before, or
  - c. The incident becomes more solid or fails to discharge.
12. If a, b, or c above occurs: "Locate an earlier similar incident."
13. Then 1 through 9. To FN\_\_\_\_\_

E F3: "Locate an incident of another causing others pain and unconsciousness. "

1. Date the incident.
2. Move pc to the incident with the exact command "Move to (date)."
3. "What is the duration of the incident?"
4. "Move to the beginning of the incident at (date)." Wait until meter Flicks.
5. "What do you see?" (If pc's eyes are open, tell pc first, "Close your eyes.")
6. "Move through the incident to a point (duration) later."
7. Ask nothing, say nothing, do nothing (except observe meter or make *quiet* notes) while pc is going through the incident.  
  
If the pc says anything at all, just acknowledge and let him continue, using this exact command softly "Okay, continue."
8. When the pc reaches the end of the incident say *only* "What happened?" When pc has finished talking, give a final acknowledgement.
9. Repeat exactly and only 2 through 8.
10. After the second and subsequent runs through an incident check "Has the incident become more solid?" with the pc.
11. Continue the above until:
  - a. The pc spots an earlier incident, or
  - b. The pc gets no change on a run through the incident from the run just before, or
  - c. The incident becomes more solid or fails to discharge.
12. If a, b, or c above occurs: "Locate an earlier similar incident."
13. Then 1 through 9. To FN\_\_\_\_\_

Issue III  
(Hold and send with 24 Jan 1969)

### **TRIPLE LOWER GRADES**

(Corrected Issue)

#### **Running Them**

Providing certain actions are done, Triple Grades are easy to run.

Triple Grades means handling 3 of available flows, the 3 major ones, self to another, another to self, another to others.

The HCOB 24 Jan 69 is written to be used as part of the C/S and pc's folder.

It is checked off and used DURING the session. An HCOB goes in each pc's folder for *use*.

The main danger is auditing a pc who has no clue what auditing is and letting him get all butchered up too far up the grades before it is caught.

Therefore the pc really ought to get a brief indoctrination by attending a Comm Course for TRs and get an idea of it.

Also only Triple Ruds should be run on him AND NO MORE in the second session.

Then the C/S can see how it is going and do Triple Grades in the 3rd session.

You can *even* order simply the Triple Rud of an ARC Break in the second session.

You should just order 2 way comm in the *first* session plus White Form anyway.

YOU DON'T SIMPLY LET A GREEN PC AND GREEN AUDITOR or a green pc and a good auditor loose on triple grades in the first session.

#### **Auditor Confusion**

An auditor can get lost trying to follow triple grades (first thing I learned about auditors and triple grades). He misses flows.

Example: Pc on secondaries flow I drops into engrams. Auditor audits out engram. Now the auditor can goof by running the other two flows as engrams too. He would thus skip 2 processes—the other two secondary flows. It is correct to finish the engram he dropped into and THEN run the other two secondary flows. And then the other 2 engram flows.

MAKE THE AUDITOR USE THE HCOB for that pc on every process *as he runs* it. He should not be reading the Commands to the pc from it however.

#### **Clearing Commands**

Don't clear the Commands of all ruds and then run them, or of all processes and then run them. You'll miss F/Ns.

Commands of one process are cleared just before *that* process is run.

### **Don't Overrun**

It can be fatal to overrun a leg of triple grades and then not clean it up before going on.

So order your auditors to stop if an overrun looks suspicious (TA going up) and check it. And then if still not sure to send it back for C/S.

Don't let the auditor go on and butcher up all the grades above the goof.

### **Listing**

The laws of Listing are a MUST. If a list goes oddly—too long or TA rises—make the auditor check with C/S. And don't let him go on.

### **Out Ruds**

Be sure ruds are cleanly in on Triple Grades before letting an auditor take off and run them.

### **Old Pcs**

Any pc, or pre OT, can be run on the missing legs of the lower grades. But not Power after clear.

There is not yet Triple Power. There aren't triple OT sections. There are just Triple grades.

### **Tight C/Sing**

Small errors must be caught by C/Ses, not let go by.

Keep a tight, exact control.

### **Invalidated Auditors**

An auditor (or a C/S for that matter) who begins to goof has collided with a stop on his purpose to help people and set them free.

Therefore all you have to do is two way comm his earlier purpose into view and the stop usually blows.

If it doesn't, a routine patch up session remedies it.

In Triple grades there are more chances for goofs that then go on and more chances for gain.

So up your precision.

### TRIPLE GRADES FLOWS

There are a great many potential flows. These are covered in greater detail in earlier work.

In Triple Grades the following are the only flows used:

1. Self ~~Another~~ 
  2. Self  Another
  3. Others  Another
- Or

In an introverted (going into) type process

1 A for Self

1 B for Another

1 C for Others

Or

A mix of the two.

As the patterns of an individual are in actual fact the same in all cases, it is the type of process rather than the type of pc which regulates the flows.

*Intensity* of one or more "legs" of the flow will be found to vary from pc to pc. One pc has a strong inflow, weak outflow and very weak others flow. Another has a strong outflow. Another is all wrapped up in others with no real attention to self.

The wording of the STANDARD commands of Triple Grades (Subzero and Lower Levels) takes care of these imbalances. No further attention is necessary by the auditor.

The auditor will find that all this reflects on his work sheet by different lengths of time to run different flows.

By FLOW is meant an impulse or direction of energy particles or thought or masses between terminals.

It is essentially a 3 terminal universe in actual fact. The discovery of this led to Triple Grades.

There is more data on the 3 terminal universe in material on the THIRD PARTY LAW. This is not necessarily important—either the 3rd Party Law or that it's a 3 terminal universe—to the auditor in running the processes of Triple Grades. He should however have some idea of flows. Very intricate and numerous flows can be isolated. Triple is the fundamental and what is used in normal auditing.

**TRIPLE GRADES**

Firm Policy on Triple Grades  
NOT to be violated

Triple Grades when released will be run on HGC pcs and Qual only by HGC and Qual Auditors under Class VIII supervision.

Triple Grades are NOT taught in the Dianetics Course. They are NOT run by Dianetic students on pcs. Triple Grades do NOT change the Dianetics Course. Dianetic Course auditors are forbidden to run Triple Grades. They change NO checksheet on Dianetics Course.

Triple Grades are NOT taught on Levels Zero, I, II or III. They are NOT run by students on these levels. Triple Grades do NOT change Level 0, I, II, III checksheets. Auditors of these classes (0, I, II, III) do not use and are forbidden to use Triple Grades on their own pcs.

CLASS IV

Triple Grades are taught and are added to the checksheet of Level IV. They may be audited by Class IV auditors on their pcs only under the direct supervision of a Class VIII auditor.

HGC auditors and Qual auditors traditionally have been understood to have a right to audit any authorized process under proper supervision. Therefore when auditing under the *direct* supervision of a Class VIII auditor HGC and Qual auditors briefed on Triple Grades starrate can run them.

CLASS V

A Saint Hill Level V checksheet must have all data on flows added to it and all Triple Grade data.

A Saint Hill Class V may audit, when trained on the new checksheet, Triple Grades on his own pcs or without further supervision. In an org he would of course get Class VIII supervision.

-----

Note therefore that Lower Level auditors and Lower Level courses continue as always with single sub-zeroes and single grades both as to training and practical up to but not including Level IV.

-----

Note that the remaining *two flows* of the sub-zeroes and lower grades CAN BE PUT IN on a pc before or even after Power.

You rehab the single grade (by counting times released) and then run its other two flows.

You rehab the next single grade and run its other two flows. The sequence is

rehab the grade, run its other two flows. Don't rehab *all* grades and then put in each other two. This also applies to sub-zeroes.

The best time to do this is BEFORE POWER.

The advantage of Triple Grades is

1. Greatly increased gain per level.
2. Enormously increased *stability* for the gains of lower grades.

If and when Triple Power is worked out if it is ever issued, this HCOB still applies.

The exact commands of Triple Grades and the form used on each pc for them are the subject of another HCOB.

Policy is firm that a separate Triple Grade form is used for each separate pc and included in his folder.

### **MEDICAL DOCTORS**

LRH ED 86 INT 22/2/69

If orgs train any medical doctors they must be trained on the following basis:

1. They are NOT twinned with a layman but only with another medical doctor.
2. They are enrolled in a DIANETICS course only and told to perfect the use of that in their work.
3. They are courteously treated.

### **SEMINARS**

In addressing any group of medical doctors keep it in the field of DIANETICS.

Discuss Dianetics from the viewpoint of Communication with body areas to assist circulation and the mental image picture as a means of continuing shocking experiences.

Any lecturer to medical doctors should do a fast review first of *Dianetics: The Modern Science of Mental Health* and stick with it only.

## CASE GAIN

### COMPLETING LEVELS

Anyone who interprets "the real gains of a case consist of going up the levels" (which is true and was stated in order to prevent over-review) as meaning that the level a case is on is not to be conclusive or put the pc into good case condition, has a tech alter-is going.

The registrar can use "You need the next level" but when Tech or Qual buy this as an excuse not to run levels right or to get gains on any given level it's time to look this fact over HARD.

ANY LEVEL IS ITSELF CAPABLE OF STABLE CASE GAIN. If a level does not THEN THE CASE IS LOUSED UP ON EARLIER LEVELS and is a standard case of someone with a lower level out! This is all covered in Class VIII.

This is true of ARC Straight Wire and OT VI alike. The rule holds.

Any level is capable of giving a stable case gain and if it does not THERE IS SOMETHING VERY WRONG with the way it or an earlier level was run.

To chase a pc on up the levels to cure an outness on earlier levels is idiocy. It is WASTING AUDITING. It is a shabby excuse for not setting a case up to be audited or auditing badly.

To solve an earlier out tech situation one does *not* "give the next level".

If a pc ends up at Level II (or OT II) without a stable gain attained then the set-up of the case or the handling of it is SOUR.

This is the most elementary situation in case repair.

ANY LEVEL is capable of case gain and of being stable, the pc feeling good, etc. The drive to get the next level is very natural but when it becomes obsessive to get a case gain then it isn't the next level that's needed.

ARC Straight Wire is more tech than Man ever had before. It produces a stable gain. This is true of every level on up.

We have just had a PreOT whose case at every level "was going to be solved by the next level". People kept saying he "needed the next level" to solve his case. Bull. He got all the way to OT II before I caught wind of it. He "had to have OT III" to solve his case according to the Qual Sec.

That case probably never made ARC Straight Wire! One or more earlier levels or ruds or 7 cases are out. *That's* the trouble with that case.

If you now let him go on to OT III he'd cop it.

The tech you are handling is capable of giving spectacular gains at *every level*. If it does not then the case has missed somewhere, comes under 7 resistive cases or out ruds or one or more missed or overrun levels.

This is one of those things which seems to have been going around ("needs the next level to solve his case") for some time without my finding out about it. Sure they need their next level. But do they have their levels up to where they are? If they aren't in good shape at the end of any one level then there's a miss on the case and it must be repaired by standard tech.

Class VI

**AUDITOR'S REPORT**  
**TRIPLE GRADES**

The Administration in Triple Grades does *not* require that one copy off all the processes onto the Auditor's Report Form.

One uses HCO B of 30 Jan 69, "Triple Ruds" and HCO B 24 Jan 69, Sub-Zeroes and Lower Levels Triple Grades. The F/N obtained on each is marked on these HCO Bs. The fact is noted on the Auditor's Report Form that one has marked on the HCO Bs. "See TG HCO B" and "Done up to ISF2".

One then puts in the comments appropriate to the Auditor's Report Form.

One makes up a Summary Sheet, usually as it applies.

During auditing one keeps his worksheet in PT as the session progresses with comments, time and TA.

One does not put the command on the W/S. One puts the number of the process as taken from the HCO Bs such as "SWF 1".

One NEVER writes up the worksheet *after* the session from notes. One never copies the worksheet into "more readable form" from "notes taken in session". A worksheet is the worksheet.

If the W/S has illegible words, one does two things:

1. After the session prints in in red the illegible word just above it.
2. Learns how to write more clearly faster.

Admin must not be used to stop or slow a pc.

The reason for Admin is so a Case Supervisor can read the *whole* session and so be able to handle or get repaired any outness, so that another auditor can pick up where the last one ended off and so that at some future time any early goof can be traced.

Be fully honest in an auditing report. Don't try to look good, by covering up goofs. You can bar a pc from repair by a false auditing report.

An evaluative auditing report is one which gives color to a session rather than facts.

Do a good informative report that can be used to C/S or review sessions.

**PHYSICALLY ILL PCS  
AND PRE OTS**

(with a note on Drugs)

One can very easily go to extremes on mental illness vs physical illness.

One school says all trouble comes from physical illness.

Another says it all comes from mental illness.

The psychiatrist mixes the two and says all mental illness is physical.

It is time every auditor, particularly Class VIIIs, took a hard look at this area.

The *body is* capable of having physical illness, acute (momentary) or chronic (continual). Broken bones, pinched nerves, diseases can any of them occur to a body *independent* of any mental or spiritual action.

The mind or spirit can predispose the illness or injury. By this is meant a person can be distraught and have an accident, or decide to die and get a disease.

But the disease or injury when he's got it is a body circumstance and responds best to skilled medical (ordinary usual, put on a tourniquet, set a bone, give a shot) treatment.

On a sick or injured person, you can reduce the time of healing or recovery by removing the spiritual or mental upset, providing the person can be audited, but usually after effective physical treatment. The facts are real enough. Auditing a person with a broken leg *after* it is set and he is comfortable, to remove the engram of the accident or treatment and the earlier "reason" he or she was distraught or had the accident, can improve the bone knitting time by as much as 2/3rds by actual test. This would be six weeks down to two weeks.

But the bone has to be set!

A body is a biological object. It has all manner of internal communication systems and organized interrelated functions.

Now if you tried to audit a preclear when he was acutely ill, you would find him hard to audit, confused and distracted and unable to follow commands. He may become overwhelmed easily. He certainly is not likely to respond properly. Because the *body is* sending all sorts of pain or discomfort messages and confusions, it is very much in his way. Two things are going on at the same time—his case as a spiritual being, his body as a distracting pain or sensation object.

The pc assigns the body to his case or his case to his body.

You have to get the body out of the attention area to some degree before anything helpful usually occurs by way of auditing.

Now let us take the pc with a *long term* illness. He has been sick with something since the age of 8. He really doesn't know he's sick physically. He blames it all on his own case.

In a lot of cases we audit him and he has enough relief to then get physically well. For he was mentally or spiritually suppressing his body.

These successes (and they are numerous) could cause us to do an *all mental* concentration and lead some to insist all illness was from the mind. This makes some make the mistake of omitting physical examination and treatment in all cases. Certain schools of healing in the past got the entire field in disrepute by assuming and stating and acting on just that.

When you find a pc who does not easily respond, whether he answers up to 7 cases "Physically ill" or not, you sure better get him to the nearest clinic for a thorough physical examination including head and spine X-rays and get him examined pathologically. For you will usually find he is physically ill, in suppressed pain or discomfort. There are cures for a lot of these things now and not requiring "exploratory" operations either.

*Don't* throw away all the grades of auditing on him. He's sick. Physically.

That's why you do a White Form. A long history of accident and illness should prepare you to be alert and to send him to a clinic if his response to auditing is the least bit poor.

*Then* when you have the physical side of it in hand, audit him at assist level.

*When* he is *well* give him his grades.

*Don't* force auditing into physical healing. It works much of the time. Special types of auditing (running out injuries, etc) assist healing markedly. That doesn't mean you should avoid all medical treatment!

"Failed cases" are medically ill or injured cases. Without exception. So why fail. There *are* medical doctors and clinics. There are standard, usual treatments. You don't have to buy "exploratories" and questionable actions. These are done only when the medical doctor can't find out either. When this impasse occurs, start doing assists or look for engrams.

There are some bizarre or strange postoperative (after operation) or post injury (after injury) conditions which do surrender miraculously to auditing. A suppurating incision (operation cut that remains open and unhealing), a bone that will not heal after having a plate put on it, such things usually surrender to auditing. These facts should be used but they do not contradict that medical treatment was needed in the first place.

The psychiatrist is an example of the other extreme to spiritual healing. Instead of "all mind" he is saying "all physical".

Holding either extreme produces failures.

The psychiatrist got into his "all physical" by a sensing that insanity symptoms seemed to resemble persons in pain or delirium.

In these cases the stress of physical suffering is pouring back into and overwhelming the mind.

After considerable study on this, I realized that an error could have been made out of a statement "all insanity is physical".

This is probably the case in the large percentage of the insane. But from this one cannot then say "all mental trouble is physical" because that can be demonstrated as not true. We see it as easily as in a case of a person falling ill on the receipt of bad news, who then gets good news and gets well. The great Voltaire, on his deathbed, received news that he had been awarded the Legion of Honor, after a lifetime of being scorned by Authority. He promptly got up, put on his clothes and went down to receive the award.

In the case of insanity having physical causes, one could discover this, say it and be promptly misunderstood in this way. The sufferer is in a general agony from a nerve long ago crushed. This actual pain is distributed from its point of concentration to the whole of the nervous system. The person cannot think, looks dazed, cannot work or

act. An operation removes the pressure causing the condition. The person is then "sane" in that he can perform the actions of life.

After a few successes of this nature, the psychiatrist leaps to the conclusion all *mental* trouble is physical. He teaches some student saying "all mental trouble is physical". The *student* goes off, tries to figure it out, dreams up a special insanity virus or "genes" or a special illness called "insanity". He then resorts to all manner of odd and often brutal treatments. By cutting or shocking a nerve channel one can stop the pain messages but such actions lay in new complications which usually terminate in premature if not immediate death or injury.

This tells one why tranquilizers (psychotropic drugs) make a patient rational or at least able to function for a short while. They too have their side effects. Usually all they do is, like aspirin, reduce the pain.

Patients do not always know they hurt. They suppress the pain or sensation. It seems normal to them or "life". When they receive a distressing experience or have an accident they cease to suppress and may go "insane", which is to say, become continuously overwhelmed by pain or unwanted sensation. They cannot think or act rationally. They may even be insane only during periods of the day or month that coincide with the *time* of the accident. But they are in physical distress.

As they cannot eat or sleep, their condition worsens by exhaustion and they may go into various states including a deathlike motionlessness or actually die.

**The CORRECT ACTION ON AN INSANE PATIENT IS A FULL SEARCHING CLINICAL EXAMINATION BY A COMPETENT MEDICAL DOCTOR.**

He may find disease, fractures, concussion, tumours, or ANY COMMON ILLNESS which has escaped treatment and has become chronic (perpetual). He should keep looking until he finds it. For it is there. NOT some "insane germ" but some ordinary recognizable illness or physical malfunction.

The WRONG THING is to cut nerves or subject the person to more pain. Electricity can *force* a nerve channel to flow or paralyze it. That is probably why it *seems* to work sometimes. But it cures nothing and more often *confirms* the insane condition and certainly fills the patient with dread and terror, injures him and shortens life.

The problem in insanity is often how do you keep the patient from injuring himself or starving or dying before he can be examined by a competent medical doctor in a properly equipt clinic.

This is done by rest, security, feeding, under drugs if necessary.

A patient can be "built up" by various biochemical compounds, diathermy and other mild means that add to his stamina.

Treatment of what really troubles him such as continual sensation from a once broken leg which was never set, a broken spinal disc or such pathological ills as disease, can then be treated properly and corrected.

Recovered from the treatment, the patient will be found not to be "insane" any longer.

Auditing can then occur, any and all engrams (traumas) erased and the person's recovery will be greatly accelerated.

Of course the real target of auditing is the improvement of the ability to handle life, greater intelligence, reaction time and other benefits.

Like the spiritual healer of another age who said all was mind and forbade physical healing, the practitioner who says all is body and scorns mental healing is an extremist.

Each of these is at the opposite ends of "Aristotle's Pendulum". Each has *seen*

with his own eyes *a few* remarkable cures. Thus each is confirmed in his belief and will hotly argue and even attack others who do not share his or her extreme view.

The truth, as is usually found, lies in between.

There is no "insanity virus". Even heredity remains unproven since families perform similar actions, are prone to similar physical ills and they also mentally pattern or copy each other. Either physical or mental facts can similarly prove that "insanity runs in the family" when it seems to do so. Thus "hereditary insanity" is an apperency which gives rise to the folk tale.

There is the spiritual identity of man, the mind, the thetan, call it what you will.

There is the physical body of man and that, even if cellular, is still material or physical or whatever you call that.

Proponents of both extreme illnesses are likely then to go off on an erratic course of search and research as the truth includes both and when you do include both you then begin to add up successes toward the desirable 100% of the physical sciences in result.

One cannot call either extreme more than an art. And the proponent of the purely physical does not have a "science" just because sciences are also physical.

One has a science only when one can predict and attain uniform results by the application of its technology.

It was very natural for the psychiatrist to *think* he had a foe in Scientology as all he had to hear was "spirit" and he was off. Since that has been his opposite "foe" for a long time.

To *heal* Man one has to realize he is dealing with two things—the spirit and the body. When a preclear comes to us because he wishes to be *physically* cured of a real current illness or malfunction, we do not serve him well if when we see he does not respond to auditing we do not require a full physical clinical study of his body until a real illness is found and treated.

If we already *know* he is ill we should call in the doctor. And we should limit auditing to assists.

This is also a case of crossed purposes. We are trying to give him greater capability and freedom. He is only trying to stop hurting.

Go ahead, sign them up. But at the first smallest clue (like the White Form) that he is being audited only to get well, we should have in good contact a medical doctor or clinic who is friendly and does not do unusual things to people and get the preclear diagnosed to *really* find what is wrong with him, get it cured if it is medically feasible and then, with a physically well pc, give him his auditing.

If this is done routinely, another benefit will also occur. The preclear so audited will not again become ill easily and will retain his very real auditing gains when he has these.

We are good enough to often get by. The ability of the body to get well often asserts itself when a preclear is given auditing, since the source of perpetuation (continuance) is removed from the illness and it changes.

Letting a pc, who has a badly set continually painful bone go on up the grades is doing him a disservice. He probably will not attain or retain his gains.

The stable datum on which I operate as a case supervisor is that if a pc does not get good gains quickly I want to know (and will find) what is physically injured or ill about him before I go on letting him be audited. The X-ray machine and other clinical actions become a must. For he is in suppressed pain and each time he gets *a change*, he puts on full stops *as* it started to hurt. He won't get the same gain again and tomorrow the same process or type of process won't work. He stops the pain if it starts to hurt

and puts a new stop on his case. This is true of those cases who really have a physical illness.

Slow gain, poor result is a physically ill pc.

The exercise of these points requires judgement for a person can be given treatments which will not heal him. Where this is the case, and the treatment seems too damaging or uncertain, treat the pc on this routine:

1. Rest
2. No harassment
3. Food
4. Mild sedatives.

When the person seems well, audit him.

The truth of the above definition of "insanity" can be experienced easily with no great stress. To have a headache or toothache is sometimes quite distressing and distracting, making one gloomy or inactive. Taking an aspirin cheers one up and he can work.

That is in fact the basic mechanism. It is why tranquilizers work.

This is why old-timers thought they had to cut nerves to "cure" the insane. But that's like fixing the telephone exchange by throwing a hand grenade into the switchboard. You may get no more complaints but you sure don't have a telephone any more. Which, I suppose, is the basic way to stop *all* complaints. Nobody can ring up even if the house were on fire!

Drugs such as marijuana are craved only when the being "needs them" to stop undesirable physical pain or sensation. Then they backfire, causing more distress than they cure.

Some pcs, taken off marijuana for a few weeks, can be audited. Some can't. Those who then can't be audited are in pain whether they consciously realize it or not. In their "unconscious mind" (below their self-suppression) they hurt.

So those who can't be audited well when taken off some drug like marijuana should be gotten to a good clinic and given "the works". A competent medical doctor will find the broken bone, the disease, the diabetes. Give it a medical cure.

Then audit the pc by Standard Tech, checking resistive case lists, etc all over again.

Pcs don't always know they're ill.

Mental upset aggravates physical discomfort. Physical discomfort aggravates mental unrest.

So play it safe.

A slow case who doesn't respond well to very usual approaches has something else wrong with him physically.

Don't be an extremist.

Your job after all is to do the most you can for the pc.

## POLITICS

Here is a scale taken from *Excalibur* from memory. *Excalibur* was an unpublished book written in the very late 1930s. Only fragments of it remain.

By placing it against the Tone Scale developed at the end of 1950, certain current political philosophies are better estimated. By then looking up these tone characteristics in *Science of Survival* much can be learned and the ideologies are thus made easier to predict or handle.

REPUBLIC	3.0
DEMOCRACY	2.5
SOCIAL DEMOCRACY	2.0
FASCISM	1.5
COMMUNISM	1.1
ANARCHISM	0.0

The cycle of a nation goes on a descending spiral down this scale.

Those two tones apart are not likely to fight. Those a tone apart fight seldom. Those a half tone apart are in continual conflict.

As this was worked out before World War II it is quite remarkable to see how true it has held. And how each one has taken something from its neighbors.

I will not go into what lies above democracy except that Man is trying with his ideologies to solve mainly the problem of succession. History has seen other government forms work far more ideally than those named but in none of these could one guarantee succession of the beneficial rule. Thus adherents to all forms of ideology can be made to agree that "benign monarchy" is an excellent form of government. But they discard it because a truly good benign monarch is not necessarily succeeded by one in the next reign.

Few governments exist in pure form. (Note there are no major governments at this writing above Social Democracy.)

**DIANETIC ASSISTS**

(Include in Medical Series)  
The Use of Dianetics to the Medical Doctor

There is everything to be said for correct medical treatment in the handling of the sick and insane.

"Insanity" is most often the suppressed agony of actual physical illness and injury.

To "treat" this agony with shock and "brain operations" is a Nuremberg type offense and is indictable as mayhem or manslaughter.

The medical treatment of "insanity" requires sure awareness by the patient of his whereabouts and present time. These are usually quite unbearable so he has sunk into the past to escape the agony of the present.

The TOUCH ASSIST given to such injured persons permits healing to occur by restoring the person to the present and his whereabouts to some degree.

Healing after medical treatment might not occur rapidly if the "insane" or chronically ill person remains in the past, unable to confront the present.

Thus the touch assist speeds and often permits healing after medical treatment and sometimes in minor injuries and illness permits the doctor to accomplish healing without further treatment.

There is the TOUCH ASSIST, the CONTACT ASSIST and the AUDITING ASSIST.

The touch assist done as described elsewhere brings the patient's attention to injured or affected body areas. When attention is withdrawn from them, so is circulation, nerve flows and energy which for one thing limits nutrition to the area and for another prevents the drain of waste products. Some ancient healers attributed remarkable flows and qualities to the "laying on of hands". Probably the workable element in this was simply heightening awareness of the affected area and restoring the physical communication factors.

The CONTACT ASSIST is remarkable when it can be done. The patient is taken to the area where the injury occurred and makes the injured member gently contact it several times. A sudden pain will fly off and the injury if minor lessens or vanishes. This is again a physical communication factor. The body member seems to have withdrawn from that exact spot in the physical universe.

The restoration of awareness is often necessary before healing can occur.

The prolongation of a chronic injury occurs in the absence of physical communication with the affected area or with the location of the spot of injury in the physical universe.

The AUDITING ASSIST is done by a trained auditor using an E-Meter.

It consists of "running out" the physically painful experience the person has just undergone, accident, illness, operation or emotional shock. This erases the "psychic trauma" and speeds healing to a remarkable degree if done properly.

In addition to assists there is Dianetic auditing of an acutely ill person which handles the current and past illnesses and injuries by erasing the "physical trauma".

The last is a skilled activity. Practitioners who have the idea such things do not have causes will of course fail to locate the causes.

A sickness can be composed, let us say, of a headache, a nausea, apathy and weariness.

Such a sickness may be bizarre, without medical reason.

By first getting the patient to find and say what shock occurred when the sickness began, getting when, and getting it recounted, the "illness" will lessen, the emotional state will alter—called a "release of affect".

By then finding an earlier similar instance and getting that one dated and recounted a further release of affect may occur.

If the good indicators, smiles, etc, do not occur in the patient, one again asks for an earlier incident, dates it and gets it recounted.

The phenomena of "floating needle" on the E-Meter should not be bypassed on a physically sick person. If it occurs, regardless of when, and the patient is smiling and suddenly free from symptoms, one at once desists with further auditing on that subject and at that time.

If no floating needle and a full release of symptoms occur, one then traces back the remaining symptoms. Let us say the headache is now gone due to recounting times of emotional duress. But the patient is still slightly nauseous. One traces the nausea to earlier or other incidents. It will vanish when found and dated.

The apathy vanished somewhere along the way but weariness remains. One traces the weariness to another or other incidents.

In short one handles each manifestation of the bizarre illness until all symptoms are gone and the patient is happy and cheerful.

Needless to say all this requires a skilled auditor but the skill can be acquired in a Dianetic training course.

The important thing is not to tell the patient what caused it, but to let him tell you. Otherwise the symptom suppresses.

The approach in any of these assists is quiet, gentle, permissive, never forcing the patient, speaking only the words required to do the process.

The temporarily insane by reason of emotional shock, where no medical illness exists, should be permitted rest and should then be handled by an assist as above or normal Dianetic auditing. Most often, rest and no further harassment result in a return to sanity in a short time such as a few days, but not in a terror atmosphere such as a psychiatric asylum where the patient is in the risk of being hurt or killed. Electric shock prolongs the condition and brain surgery is of course not treatment but murder as at best it deprives the person of his coordination and at worst shortens his life. The occasional and rare brain tumour is of course an exception but this is a medical not a psychiatric matter, no matter what manifestations the person exhibits. Most medically ill people do exhibit symptoms of mental derangement at some stage of their illness.

The acceleration of healing of medical illness or injury such as broken bones or

the aftereffects of delivery or operations can be accomplished by the Dianetic auditing of the resulting trauma soon after full medical treatment or attention. The improvement factor is about 1/3 the normal time of recovery by some thousands of test cases.

Such auditing is done by a usual Dianetic procedure.

In addition to the above assists there is regular Dianetic auditing which handles chronic discomforts and prevents future illness as well as improving the state of well-being of a person.

The mechanisms of the mind revealed in Dianetics are of great use to the field of medicine.

They are easy and quick to apply.

About one month's training is all that is necessary to acquaint an otherwise educated and intelligent person with the fundamentals and skills necessary to assists.

Considerably more time of course is necessary to train a skilled Scientology auditor, but this is not the subject of this paper.

There is no conflict of interest between any healing profession and Dianetics. Dianetic materials and papers are fully available.

There is a conflict between Dianetics and political practices such as psychiatry since electric shock, brain operations and general degradation of the person may prevent the patient's recovery by Dianetics.

As answers exist now for insanity there is no reason to continue Medieval or Fascist solutions to the problem of the psychosomatically ill or the insane and we are doing everything in our power against fantastic opposition to end the torture and killing of the insane regardless of the politically "desirable" ends envisioned by some groups.

Dianetics, like any other true treatment, like aspirin or penicillin, was originally designed to handle the apparent basic cause of psychosomatic illness. The first research was intended to help allied prisoners of war degraded by the Japanese and Chinese prison camps and who after VJ day were transferred to Oak Knoll Naval Hospital. Later, in 1954, in a much more advanced state of development, Dianetics was successfully employed to eradicate the results of allied prisoners of the Korean war who had been subjected to Russian brainwashing. The subject has been improved, made easier to teach and apply and its results bettered continually over a total period of 29 years. It has in 1969 been fully updated as *Standard* Dianetics. It is very successful and is in very broad use over the world.

**NEW PRECLEARS**  
**The Workability of Scientology**

The "training" of a new preclear (never before audited) has long been a subject of know-how amongst auditors but has not actually been covered previously.

The conditions of a new preclear are these:

- (a) Doesn't know what is supposed to happen.
- (b) May be under the stress of being embarrassed to talk to someone.
- (c) May have preconceived ideas of how he is supposed to respond to the auditor (such as psychoanalytic "free association" where he just talks, etc).
- (d) May be waiting for some magical effect entirely independent of his own participation (as in getting a "shot" from a doctor).

It is too much to ask of a being to:

1. Talk to another intimately about himself,
2. Fumbling with a new activity while
3. Confronting his own bank.

Possibly he has never done any of the three before and to ask him to do them all at once .....well!

All cases are started in their lowest ability level since they have not had it increased. Whereas they may be quite well off as human beings, they do not know how well off they might become.

The wrong thing to do is to enforce their improvement with a sales talk or evaluation on how well they did in the session.

And it is wrong to go on auditing them while they essentially remain in mystery.

The correct solution to all these difficulties is to assign the pc to do a PE Course if it includes TRs and to have the pc do the TRs before being audited.

We probably should have a set of poster type pictures put up in a PE area as follows:

Picture of an auditor with a meter in front of him, profile view, "This is an AUDITOR. He does not invalidate, criticize or evaluate for the preclear."

Picture of an E-Meter, "This is an E-METER. It is used to verify the preclear's gain and register when each separate auditing action is ended."

A picture of a being, a silhouette showing no features, "This is YOU, a PRECLEAR, a spiritual being who is now on the road to becoming clear, hence preclear."

Picture of an auditor with a meter and a shadowy preclear. "This is a SESSION. The auditor and the preclear locate, step by step, any mental blocks to increased ABILITY AND FREEDOM."

A picture of a down point to the left and a road going up high to the right. At the down point is SUCCUMB. At the up point is SURVIVAL. Some figures are on the line, they are the auditing session interspersed with a small figure of somebody studying. A big arrow parallels the line pointing up. "Scientology AUDITING and STUDY are the road to ABILITY and FREEDOM."

A picture of the Grade Chart simplified, modernized to show sub-zeros plainly and including OT Levels. "Freedom is reached by going up through the GRADES of auditing."

A picture of the classes of auditors all the way to Class VIII including the PE Course, etc and where taught. "Ability and gain are achieved by TRAINING."

A series of pictures of a caved-in person who gets better and better in subsequent higher pictures. "Scientology processing obtains continual IMPROVEMENT."

A picture of a body, a thetan. "You are a SPIRITUAL BEING, not a body or an animal, as you will discover in processing."

A picture representation of each of the dynamics from I to 8 including the R6 god with an arrow paralleling them on a slant upwards. "There is more to LIFE than personal suffering and trouble." The picture of the R6 god used is the "Old Man" symbol as used on the covers of various Dianetics and Scientology Publications.

A picture of a sunburst with Scientology written in its centre, "Scientology reveals the natural laws of life. You CAN know the answers."

This set prominently displayed in an org in a long panel from left to right, with a sign over it, "You have come to the right place," and a long arrow indicating the sequence, will do an awful lot to answer a preclear's questions. At the end of the panel a sign, same size, saying "See the Registrar, Room       " will also direct the preclear.

The preclear should be signed up, if he is a preclear, and with the money paid, sent to a PE Course.

If this is not feasible, he at least should be first assigned to do TRs.

A preclear information sheet can also be compiled giving him data commonly asked.

A preclear's dictionary which includes all terms used in processes and their definition should also be given to him.

If the preclear seems not to be improving even as early as the TRs, a white form of case and health history should be very carefully done, including narcotics.

If he is on narcotics he must come off them and have been off them for a while (in Los Angeles they say six weeks), before resuming his auditing.

If on resuming auditing the preclear still does not gain despite 7 cases, a careful and full medical clinical examination should be ordered as the preclear is medically ill in some previously unsuspected fashion. This is covered in HCO B 12 March 1969, "Physically Ill Pcs".

Should this not prove to be the case, or if the pc does not get well then apply the HCO B of 2 April 1969, "Dianetic Assists", an auditing assist as given in that HCO B.

Above all, don't let *unnecessary* stops occur on this line for pcs who just sail through.

In a recent glance over the case folders of some stalled or "chronically ill" pcs I found the main sin was simply "No Auditing" occurring in the following ways:

Case 1—3 case supervision directions carefully and correctly advised but NONE OF THEM DONE. No other auditing was done either. Then a fourth case supervision direction on top ignoring the folder and advising something else but that was not done either.

Case 2—Preclear chronically doing badly. Was being "audited" but hadn't a clue. Was not up to talking to an auditor at all. (I ordered TRs and the auditor did them, the pc bloomed and went on up the grades splendidly.)

Case 3—Pc all crippled up from old injuries. In the folder I found no C/Ses there had been done as ordered. Also found the pc had sneaked his folder and done some wild self auditing before auditing could be done. (Ordered HCO B 12 March 1969, Touch Assists and then medical treatment to set a long time *broken* back.)

Case 4—Pc *told* the auditor in the session she had a secondary sitting right there and was in it. And although had bad indicators in, the auditor just ended the session.

Case 5—Pc ordered in for a Review, was given the cans, the auditor said "That's it", pc went off in mystery.

Case 6—Pc shaking and fevered but no physical illness according to doctor. Auditor A did an S & D. Pc still not well. A few weeks later illness recurred. I got hold of the pc, asked when the shaking had begun, found an engram where the pc had been withholding being cold, ran it, pc totally recovered. The incident had occurred only a day before Auditor A's session. Had Auditor A merely asked what had been going on he would have found it at once, run it and that would have been that. It was only an auditing assist that was needed which is why I wrote HCO B 2 April 1969, "Dianetic Assists". It hadn't ever occurred to me that auditors wouldn't use the principle of engram running to handle a pc who hurt.

So it adds up to the fact that just not *doing* auditing is a fundamental error. That's what's meant by "no auditing" in the 7 Resistive Cases of a Class VIII. Auditing just wasn't used to handle the pc. "No Auditing."

The NEW pc who hasn't a clue what auditing is is apt to get a lot of "No auditing". So you teach him what to expect by posters, a PE, TRs.

The *troubled* pc who is all introverted with a real physical or mental problem had jolly well better get it handled, as in the "Physically Ill Pcs" HCO B 12 March 1969 or with Dianetic Assist as per HCO B 2 April 1969. You don't just sail on up the grades and throw them away.

If you ever get an area that thinks Dianetics and Scientology don't work (which is about as silly as saying there is no gravity) then:

- (a) You have an area that has been infiltrated and the tech performance perverted; or
- (b) You have a person around who is terrified that it *will* work and others grown more powerful will now destroy him (which surrenders casewise to "Physically Ill Pcs" or the top Power Process used first followed by sub-zeros and grades); or

- (c) You have a narcotic-silly area and are not making them desist before auditing or handling their past addiction by running out its engrams; or
- (d) You have an area that just isn't auditing at all; or
- (e) You are not handling new pcs as we used to and as recommended in this HCO B.

As a final remark, I have seen a person get "audited all the way to the top" who wasn't ever audited at all. As a comment this is pretty bad but a close check revealed that a large percent did not even know the content or action of a key grade below where they were supposed to have "arrived". They had zero indoctrination as a pc and had not ever made even the sub-zero of ARC Straight Wire.

So lay this down, Case Supervisors and auditors all, as a firm cast-in-concrete rule:

**IF YOUR PC DOES NOT OBTAIN A TOTAL REALITY ON HAVING HAD GAINS BEYOND HIS EXPECTATIONS, AUDITING HAS NOT BEEN DONE IN THE FIRST PLACE OR THE PC IS ON DRUGS OR PHYSICALLY ILL.**

I look at it this way, auditing is terribly simple. Turn me loose with an E-Meter and a pc and up the line he comes. If he doesn't or can't respond he's seriously ill. If he's that ill that he can't be audited he needs medical treatment. And when he's had that, back to the meter and I'll show you a shining pc.

You say, yes, that's you. You know and can do it.

Sure, sure, sure. But anyone who has studied his meter, his books and bulletins can do it just as easily. If the pc answers his questions and **IF HE DOES AUDIT.**

HCO BULLETIN OF 6 APRIL 1969

Remimeo  
Dianetics Course

### FUNDAMENTAL AUDITING

For some years it has not been appreciated fully that the ability to do DIANETIC AUDITING is the true fundamental background of a Scientology auditor.

For many years, 1950 onward, a Dianetic auditor was proudly capable of resolving mental and physical problems by his ability to find and run engrams and secondaries.

The Dianetic auditor had no other skill or tools than his understanding of mental image pictures, as locks, secondaries and engrams and the time track.

With these tools he produced many miracles. Broken bones healed in two weeks instead of six, withered limbs restored, burns vanished, swellings reduced visibly to nothing, lives wrecked by grief and loss recovered, women lost their aging wrinkles and sought-after abilities returned.

The percentage of win was above 50%, which is double that of former approaches.

The use of the E-Meter and my development of R-3-R increased this percentage.

Dianetic training was usually one month in length and attained a high percentage of successful graduates who could attain excellent results.

Dianetics operates at the level of the human being and is addressed mainly to the body and mind. It does not attempt and should not be confused with the end product of Scientology which is spiritual freedom. The end product of Dianetics is a well, happy, high IQ human being.

Dianetics is itself and has its place. When one can handle Dianetics so as to make people well and happy, one can then begin to think of and work on the higher aspects of Scientology.

To attempt to obtain the results of Scientology by applying only Dianetics is in fact a confusion of objectives.

The Dianetic auditor, whether the "very *best* people" behind governments like it or not, is the natural inheritor of all mental healing.

Working in conjunction with bona fide physical healers such as the actual practicing medical doctor, the Dianetic auditor, with only the skills taught on the Dianetic Course, could all but eradicate psychosomatic illness and mental illness on this planet. Tens of thousands of cases in Dianetics show this is no idle boast. The recent breakthrough showing most insanity is common physical illness untreated, adds up to making such an objective a fact.

The Scientology auditor is all too often balked by the fact that his preclear comes to him already ill. His preclear is below being a well human being. That is part of the gradient. If the Scientology auditor is not also a good Dianetic auditor he tends to ignore the fact that his preclear is not yet up to being a well human being.

Applying Grade Processing the Scientology auditor has already skipped a grade—a well human being. He therefore fails to understand that his preclear is simply seeking to *escape* as a thetan the gradient of being a well being.

The role of Dianetics, let us face it, is that of a healing science. It is the most

advanced mental science man has. It should not be skimped or scanted.

A good Dianetic auditor can handle the bulk of psychosomatic illness and speed the healing of ordinary illness or make it possible for the person to recover. Mental aberration as such can be handled in Dianetics if it works in conjunction with other valid branches of physical healing.

There is then a demarcation between Dianetics and Scientology. The Dianetic auditor's skills reach up to and include a well, happy human being. This is in excess of man's hope for any mental science.

The Scientology auditor is working for increased ability and spiritual freedom. And that is far in excess of any dream of accomplishment man has had including Buddhism.

When we get a sick human being being handled to make him spiritually free we get a confusion and are likely to fail.

The Scientology auditor who is also a good basic Dianetics auditor can make that being well enough, using Dianetics and available healing skills, to succeed with Scientology objectives.

But it has become plain, particularly in the last few months when I have been sorting out materials to communicate them better, that there is a vast difference between Dianetics and Scientology.

A Dianetic preclear is one who is being processed toward the objective of a well and happy human being. A Scientology preclear is a well, happy human being who is being processed toward total ability and spiritual freedom.

Those two definitions should be well learned. It will prevent much confusion and some failures.

When I hear of a preclear "getting his Grade IV to get rid of his headaches" I really groan.

A preclear "getting his Grade IV" obviously never got his Dianetic auditing and the auditors who audited him were mixed up.

I would never never never audit a pc on grades if I found before me a sick person. I would simply change gears, get busy with good old Dianetics and use physical healers if necessary to get a well, happy pc before me. *Then I* would go on with grades.

Scientology objectives are so far above anything man has any hope for that he at once thinks of them as healing activities. They are not.

Dianetics is the healing activity.

Therefore all Dianetic course materials are refined with that objective fully in view. And when a Scientology auditor finds himself with a Dianetic preclear on his hands and if that auditor learned his Dianetics well, then he will apply Dianetics and when the preclear is ready for it, only then will he apply Scientology.

Any Scientology failures are totally owing to the auditor not learning his Dianetics in the first place.

So have at it and get a hatful of healing wins as a Dianetic Auditor.

Dianetics Course

**DIANETICS COURSE AUDITING REQUIREMENTS**

In conjunction with the expansion of its curriculum, the auditing requirements of a Dianetic student for certification are as follows:

25 hours total session time as an auditor.

This auditing must include the following:

- A. Touch Assists.
- B. Contact Assists.
- C. Changing the life of someone who has lost a loved one by running the secondary or chain to GIs.
- D. Running straight engrams of former injuries.
- E. Auditing assists on ill pcs, taking and tracing down every manifested symptom to its engramic incident or chain.
- F. Doing TRs with pcs and indoctrinating them as pcs.

The 25 hours must contain one or more remarkable cases demonstrating changes in the physical condition or well-being of a preclear.

Without these auditing actions and a total certainty Dianetics works as demonstrated in the cases he handles, no student enrolling on a Dianetics Course after receipt of this HCOB may be certified as a Hubbard Dianetic Auditor.

Any checksheet issued after receipt of this HCOB for the Dianetics Course must include:

- 1. HCO Pol Ltr of 6 April 69
- 2. HCOB 6 April 69
- 3. This HCOB (6 April 69 Issue II)
- 4. HCOB 28 Feb 69
- 5. HCOB 7 Feb 69
- 6. HCOB 12 Mar 69
- 7. HCOB 2 April 69
- 8. HCOB 5 April 69

These are in addition to the existing HDA checksheet.

HCOBs or Pol Ltrs after this date relating to Dianetics are to be included on new checksheets issued to students.

An HDA is requisite to Level Zero Academy enrollment.

## REASONS WHY

The reason Scientology auditors occasionally fail is that they seek to use grades to make pcs well. Grades are a route to spiritual freedom and greatly increased ability. Auditing a pc on grades who has not yet attained physical well-being as a human being is an oversight only by one not trained in and uncertain about Dianetics. A Dianetic auditor would use Dianetics to handle the lack of well-being of the pc.

A Scientology auditor who is also skilled in Dianetics would not make the mistake of doing Grade or Level auditing on a temporarily or chronically ill pc. He would shift off to Dianetics, run the secondaries or engrams necessary to resolve the physical difficulty and then go on with Scientology auditing.

Sometimes a Scientology auditor who has not become adept at Dianetics goes through his whole training thinking grades will accomplish physical healing, auditing sick pcs and wondering why "Scientology does not make them well" without ever realizing he is at cross purposes. He is trying to make Scientology do with grades or remedies what is done easily with Dianetics.

A person can go all the way up the grades and into the OT sections always looking only to "get well" and miss the entire thing, whereas a remarkably little skilled application of Dianetic auditing would have long ago resolved it. Persons who "don't make OT" are only persons who didn't make Dianetics.

It is vital then to give the Dianetic auditor total certainty of his dominance in the field of making people recover and making them into well, happy human beings before he then starts them off into the upper very valuable vital areas of Scientology grades.

Most of the persons who want auditing are afflicted by discomfort and unhappiness if not illness.

Since the two subjects were for a long while researched as one, some early materials are crossed. Usually materials after 1952 apply mainly to Scientology. But during this later period (as witness R-3-R and current advances) Dianetics has also been advanced.

The skill of the Dianetic Auditor is no small thing. It is worth attaining as itself. I myself, when called on to handle the ailing, pick up my meter and go to work and in an hour or two have a miraculous recovery. When I don't, which is seldom, I get the pc examined clinically and find he or she has a broken skull or back or a gallstone or some remediable thing. After this is fixed up, I once more audit them and they finally emerge as bright, well human beings.

And I do not use in all this anything that is not contained in the Dianetics course.

My percentage is 100%. And so can yours be.

HCO BULLETIN OF 16 APRIL 1969

**HEALTH FORM, USE OF**

As one needs a guide to know what to audit on a case, the Dianetic Health Form is an essential auditing action.

Also, some cases do not know they have recovered. It is Scientology that addresses improved awareness, not Dianetics. Dianetics accomplishes an eradication of the unwanted condition and when it is gone it is gone. The pc will not again mention it in many cases and it would be an error to hammer him about being better now.

*Therefore* a second Health Form gives a comparison. The somatics and pains not mentioned in the second which were in the first can be considered to be gone.

A second form done later gives the auditor and (when a Case Supervisor is also on the case) the Case Supervisor an indication of the actual improvement. A few days, weeks or months can elapse between giving the form. This gives an indication of improvement. Any number of Health Forms can be given.

One of the old problems of Dianetics was that the pc recovered from his arthritis fully and then only nagged the auditor about a new symptom. It wasn't that the pc *had* to have an illness (only the 19th century psychologist believed that it was no use to cure anything as the patient just got something else). The fact is that the symptoms of the pc are *several*, not just one.

You take up and audit *each* symptom or complaint, one after the other.

This is a new advance in Dianetics—that a preclear's illness or upset has more than one source. His illness or upset is a *composite*.

You audit the most available symptom first. Then find the next one and audit it, then the next, etc.

The symptom in which the pc is most interested is the one to do first. You run its secondary or engram or chain and it vanishes.

Then do the one in which he is *now* interested and run its secondary or engram or

Now find the next symptom, etc.

Sooner or later the pc will have tremendous good indicators, be smiling, happy.

That's the time to quit. Right there. Until then, keep finding and fully erasing the latest symptom the pc has.

This can be done with or without a meter. The meter makes it easier. The biggest read on an item given on the Health Form is the one to audit first.

One finds "an incident which could have caused that", dates it loosely, runs it as an incident without pushing hard, gets an earlier similar incident and runs that, or even a third or fourth earlier similar (each time earlier) incident until a floating needle or the pc indicates the thing is gone.

Then one finds out what may now be bothering the pc and does the same action on it.

Sooner or later the pc will become bright, happy, symptom free.

Symptoms are pains, emotional feelings, tiredness, aches, pressures, sensations, unwanted states of the body, etc.

The only point where an auditor may get a hang-up is when he encounters an earlier wrong diagnosis. Someone told the pc he had heart trouble and the pc gives that as a symptom but doesn't really have one. When such a puzzle comes up you look for allies (other people) who had heart trouble (or whatever the thing was) or you find out from the pc and meter if it was a wrong diagnosis.

If you are auditing without a meter, you take the pc's *interest* as the indicator. You audit the symptom in which he is interested and cease to audit it when it is gone.

You can use whatever is given on the original Health Form that was done until the form is no longer valid or until the pc's good indicators are in. When the pc brightens up, that's the end of that Health Form. A new one must be done **WHEN THE PC IS AGAIN FEELING BAD, TIRED OR WORRIED.**

The purpose of any session or series of sessions is to get the pc feeling well and happy.

Sometimes the pc's condition is obvious and the engram equally obvious. The pc has just had a child. The delivery of it and any earlier similar engram is of course audited at once. Any recent experience is so handled.

If a pc wants no auditing and yet is ill or miserable, one finds out why he doesn't want to be audited by getting him to explain (when he will become auditable) or one finds and runs as secondaries, engrams or chains bad experiences with treatment.

If the pc doesn't recover at all, then the Auditor's Code has been violated or the engrams were overrun or not run long enough to erase or the pc was very ill medically and should have had a medical examination first.

But even with poor auditing it is rare for a pc not to recover.

Of course, the more skilled (follows the Auditor's Code, knows his meter, knows his Dianetics) the Auditor is, the more certain recovery becomes.

The worst crime is overwhelming the pc by telling him what's wrong, not letting him tell you.

The Health Form is of very great assistance in handling all this. The use of it is as follows:

1. The Auditor sits down with the pc (usually the pc on a meter) and explains he's going to do a Health Form and try to help the pc.
2. The Form is completed.
3. The Auditor picks out by meter or by asking the pc which symptom he has his attention on.
4. The Auditor finds an incident that had that symptom in it, dates it and runs it as an incident.
5. The incident (and symptom) erases or the Auditor finds an earlier similar incident, etc, dates it and erases it until the incidents and symptoms are gone.
6. A new symptom is located on the Health Form by meter or pc's interest.
7. Steps 4 and 5 are repeated.

8. A new symptom is located on the Health Form or by pc's complaint.
9. Steps 4 and 5 are repeated.
10. We go on doing this until the pc is suddenly well, smiling and happy and at that moment we at once desist.
11. We tell the pc that is the end of the session. Note if several sessions were required to do the above, we start each new one by telling the pc it's started and end each session by telling the pc the session is ended.

Each session is written down as it is done and preserved for future correction or use.

The basic Health Form follows as part of this HCO B. Individual copies are made out for each pc and left in his case folder.

Dianetic Auditors

### DIANETIC CASE SUPERVISION

Dianetics is done differently than Scientology in that its auditors are trained up to HDA only. Therefore they do not have various skills you will find in a Scientology Auditor. Even when they become a Scientology Auditor, Dianetics is still done as Dianetics.

Therefore the Case Supervisor supervising folders done by Dianetic Auditors must not expect or require any of the following:

1. RUDIMENTS, they came in long after Dianetics.
2. MODEL SESSION, this was invented 11 years after Dianetics.
3. TRIPLE FLOWS.
4. WITHHOLDS PULLED.
5. PTPs handled (Present Time Problems).
6. ARC BREAKS patched up.

In short knowledge and skill above and beyond the training received on a new Dianetics Course is not to be expected.

There are also things in Book One we no longer use such as Repeater Technique, looking for phrases to explain conditions.

We use Dianetics as it was re-worked in the early 60s and as currently being presented. If it isn't on the checksheet of the Dianetics Course, then we don't demand it.

We do demand some skill with a meter and what a floating needle is.

If a Dianetic pc gets in trouble we send him to Qual for a review. In this review, all Scientology skills (but no grades) can be done.

In review he can get in his rudiments, etc.

It is very worthy of note that in Reviewing Dianetics or in doing Dianetic auditing ONE CAN RUN OUT BAD SESSIONS AS AN AUDITOR OR PC BY USING R-3-R ON AUDITING SESSIONS OR THERAPY.

If we keep Dianetics to Dianetics we will again achieve the miracles of which it is capable.

Dianetics has been refined greatly. But it is all there on the checksheets now. There is no hidden data line.

It is far less complex today than it was in 1953, for instance, and much more effective. But it is still Dianetics. It is a technology that runs and erases locks, secondaries and engrams and their chains.

It should be case supervised and done with that fully in mind.

An HDA is an HDA. He can do what he can do.

And it's marvellous.

### DIANETIC CASE FAILURES

The foremost failure of Dianetics on cases, by actual inspection, is a failure to *do* Dianetics.

It may sound peculiar or too obvious to say that. But this fact has to be stressed since it was found to be the leading reason for non-recovery.

Even this has its degrees of error.

1st is just NO auditing. A case wasn't audited at all. No session, no auditor, no auditing. Complaint, "I'm a Scientologist I still have awful headaches." Sounds real incriminating. The FACT is in this question "Did anybody run the engram?" "No, just grades."

Dianetics wasn't used at all.

The next degree is starting in on a lock, secondary, engram or chain of them and not completing it to erasure. Running the pc through one engram once with no good Indicators or erasure and then calling it a session is really no auditing. Next session you must *complete the action started*.

The next degree is to get rid of one chronic somatic or sensation and then fail to carry on when the pc has others too.

The most recent discovery I made was that an illness has several sources expressed each one as a different sensation, ache, pain or emotion. EVERY ONE OF THESE IS OUT OF A MENTAL IMAGE PICTURE OR THE SERIES OF THEM CALLED A CHAIN.

The degree of omission in applying Dianetics is that one did not take up each separately stated or assessed symptom and erase its source—that particular mental image picture.

The vast majority of Dianetic cases I have case supervised now have this in common—NO AUDITING in one or more instances outlined above.

Really it's kind of "corny" as an error. It is so "corny" that people try to make more of it than simply the patient or engram didn't get audited.

"She still has her headaches."

"Did you find and audit the mental image picture of the experiences which had head injury in it?"

"No."

"Well did you give her a session?"

"Yes. "

"What did you run?"

"I did Power on her."

"Then you didn't give her a Dianetic session."

"Oh, no. Dianetics is old, we don't do that anymore. She still has her headaches. . . ."

POW!

**DIANETICS vs SCIENTOLOGY**

Dianetics is Dianetics and Scientology is Scientology.

They are *separate* subjects. They have in common certain tools like the E-Meter, TRs and auditor presence. But there it ends.

Dianetics addresses the *body*. Scientology addresses the thetan. While a thetan can produce illness, it is the body that is ill.

Thus Dianetics is used to knock out and erase illnesses, unwanted sensations, misemotion, somatics, pain, etc. Scientology and its grades are *never* used for such things.

Scientology is used to increase spiritual freedom, intelligence, ability, to produce immortality.

To mix the two has been a very bad error.

Dianetics came before Scientology. It disposed of body illness and the difficulties a thetan was having with his body. This was a Present Time Problem to the thetan. In the presence of a PTP no case gain results (an old discovery).

When a thetan has body discomfort or upset solved, he could then go on with what he really wanted which were the improvements to be found in Scientology.

Mixing the two practices in any way produced and will produce no real case gain. Scientology grades will only occasionally get rid of body ills and Dianetics will not achieve real spiritual freedom.

Used within their own areas they both each one separately achieves that for which it was intended. Dianetics can make a well body, Scientology can make a recovered thetan.

So you don't use Scientology remedies or Scientology Case Supervisor procedures to run Dianetic sessions. High Tone Arm, ARC Breaks, etc are not even considered in Dianetic Auditing.

Dianetics was researched in 1932, '38, '45, '48, '49, '50, '51, '52 to name the principal early years. It was redeveloped in 1962 and '63 when I made R-3-R discoveries and re-released. And it was finally realized as per this HCOB in 1969 after further research.

I found that Dianetics had been forgotten for a dozen years and was being given a light brush-off as a course and that auditors and pcs were trying to use Scientology grades to handle body ills such as headaches, chronic somatics and so on.

Man's usual PTP is his body. So if one gave him gold ornaments he'd try to use them to cure his aches and pains.

Thus Dianetics was forgotten and unused and Scientology was being made to attempt cures. Thus they were, both subjects, busily being made to fail to some degree.

Dianetics as it now exists is so simple, so elementary and so broadly applicable to the body that it requires a real effort to complicate it or make it unworking. Keep the two separate in both application and use.

Recognize them as two entirely distinct and separate subjects with widely different uses.

Dian Checksheet  
AOs

## SOMATICS AND OTS

If a preclear or pre OT has physical difficulties, bad perception trouble, illness or physical disability HE HAS NO BUSINESS GETTING GRADES POWER CLEARING OR OT LEVELS.

HE

NEEDS

DIANETICS

Once *that is* completely understood it will end any and all "failures".

The Dianetics he needs is fully contained in the new Dianetics checksheet.

Using Scn auditing and grades to handle common Dianetic problems is to audit a pc over a Present Time Problem.

The big PTPs a thetan has are his body.

A thetan is a thetan and he wants spiritual freedom and ability.

A body is a body.

Scientology = thetan rehabilitation.

Dianetics = body improvement.

All Dianeticists and Scientologists, all pcs and pre OTs should be informed of this.

Using Scn to help the body and Dianetics to help the thetan is a mix of practices and the misuse of both.

Even the applications are different.

In Scn you handle PTPs, ARC Breaks, Missed Withholds that occur in sessions.

In Dianetics you erase the session or incident in which they occurred.

Dianetic processing uses a Meter, R3R and assists and TRs. It also uses an understanding of what the subject is for. It erases locks, secondaries and engrams or their chains. That's exactly what it does and what is done with it. The mental image picture is the source of continued pain, somatics, bad perception or illness. This subject has to be DONE, actually *used* These data in this paragraph are the *total* essentials of Dianetics. It is taught, case supervised and used as Dianetics.

The thetan, scales, ARC, exteriorization, ability, freedom, the grades, clearing, and OT levels are the sole province of Scientology.

Earlier writings tend to overlap and intermingle the two subjects.

Because one was not permitted to heal, that being frowned on in some countries, Dianetics tended to be suppressed and was lost sight of. Scientology began to be made to try to do Dianetic work.

We can now cleanly separate the two and so obtain enormously increased case gains.

## **Dianetics**

### **BASIC DEFINITIONS**

ERASURE is the action of erasing, rubbing out, locks, secondaries or engrams.

A LOCK is a mental image picture of an incident where one was knowingly or unknowingly reminded of a secondary or engram. It does not itself contain a blow or a burn or impact and is not any major cause of misemotion. It does not contain unconsciousness. It may contain a feeling of pain or illness, etc, but is not itself the source of it. Example: One sees a cake, feels sick. This is a lock on an engram of being made sick by eating cake. The picture of seeing a cake and feeling sick is a lock on (is locked to) the incident (unseen at the moment) of getting sick eating cake. When one finds a lock it can be run like any other mental image picture.

A SECONDARY is a mental image picture of a moment of severe and shocking loss or threat of loss which contains misemotion such as anger, fear, grief, apathy or "deathfulness". It is a mental image recording of a time of severe mental stress. It may contain unconsciousness. When it is restimulated by a similar but lighter experience another mental image picture is recorded which becomes a lock on the secondary and serves to keep the secondary alive. A secondary is called a secondary because it itself depends upon an earlier engram with similar data but real pain, etc.

AN ENGRAM is a mental image picture which is a recording of a time of physical pain and unconsciousness. It must by definition have impact or injury as part of its content.

It is of the very greatest importance that a Dianetic auditor really grasp what these things are. Otherwise he won't know what he is doing or to what.

Now because he isn't seeing his preclear's pictures an auditor can become very careless about them and not handle them correctly.

If an auditor doesn't really know what these things are (erasure, locks, secondaries, engrams) he cannot of course hope to handle them for the preclear.

The basic Dianetic errors are just not knowing what these are and that they are there to be handled and that these and these alone cause psychosomatic ills.

Once one has a full grip on these definitions he can then and only then hope to do anything with them for the preclear.

If the auditor is going to handle the aches, pains, unwanted sensations and psychosomatic illnesses of the preclear, it requires that he fully grasp these basic definitions.

Literally millions of complications can stem from the simple fact that a preclear records experiences in mental image pictures and that these thereafter can affect HIS BODY adversely.

Once one really understands that mental image pictures are *all* there is in the preclear's "mind" one has understood the total of aberration. There is NOT something else there. No "id", no "ego". There are only mental image pictures.

These, if you use the exact procedures of Dianetics, can be found and erased.

When the unwanted locks, secondaries and engrams are erased the preclear will be rid of the physical disabilities of which he complains and will be well physically.

SOMATIC—means essentially body sensation, illness or pain or discomfort. "Soma" means body. Hence PSYCHO SOMATIC or pains stemming from the mind.

MISEMOTION—Anything that is unpleasant emotion such as antagonism, anger, fear, grief, apathy or a death feeling.

This is the entire breadth of Dianetics today.

In Scientology we deal with the thetan, the being who is the individual and who handles and lives in the body. This is beyond the scope of today's Dianetics.

If a preclear is well physically made so by Dianetics and any required physical medication or nutrition, he can then embark on Scientology, the increase of his abilities and spiritual freedom.

If a preclear who is being audited or has been audited on Scientology Grades becomes ill one DOES NOT TRY TO MAKE HIM WELL BY GIVING HIM NEW HIGHER GRADES. That has been an error of great magnitude. Instead ONE REVERTS TO DIANETIC AUDITING until the pc is well and only then continues with Scientology.

This is correct procedure because it works.

People "come into Scientology" to cure their headaches. Somebody starts them off on Grade auditing, several Grades later they still have their headache. It is a continual Present Time Problem to them and the auditor. It sometimes vanishes during Grade Processing. This gives an unfortunate win.

The right thing to have done was give the person DIANETIC AUDITING, until he or she no longer had headaches and then begin to audit the person on Grades so as to put them well above ever again getting headaches.

Continual headaches come from mental image pictures retained by the pc of having a head crushed or shot off or hit. That is an *engram*. It actually had to happen. It is NOT imaginary or delusion. The proof is that when the auditor finally erases the engram the recording of the injury is gone and the headaches will not again occur.

The preclear often is unable to confront the actual engram at once. He offers one a LOCK, a time when he had a headache. One "runs" this lock (one always runs whatever is offered, you don't force the pc) and finds after putting the preclear through it a couple of times that IT IS GETTING MORE SOLID or it simply isn't erasing. One finds an earlier recording. This possibly turns out to be a secondary. The pc had a moment of loss and cried and also had a headache.

This secondary may or may not erase. If it does one leaves it of course as finished. But if it does not erase and isn't erasing after a couple of times through it, one then asks for an earlier one.

One probably would then get the actual *engram*, a recording of a time when the head was actually injured.

One runs this and after a couple of times through, finds it isn't erasing and so goes earlier for another engram.

This one erases.

When it erases the whole chain of headaches ALSO erases.

And that is the end of the pc's headaches period.

One then inquires after other somatics or sensations and handles them the same

It is all done by using the technique called R-3-R without variation.

Since these recordings contain mainly other-determinedness (pictures of others doing things) the auditor always has more control over the preclear's mental image pictures than the preclear does. Thus the pictures do what the auditor says. This point too must be grasped by an auditor or he will be waiting on the preclear to act or move in time.

The TIME TRACK is the consecutive record of mental image pictures which accumulates through the preclear's life or lives. It is very exactly dated.

PLEASURE MOMENTS are mental image pictures containing pleasure sensations. They respond to R-3-R. One seldom addresses them unless the preclear is fixated on some type of "pleasure" to a point where it has become highly aberrated.

BLACK FIELD is just some part of a mental image picture where the preclear is looking at blackness. It is part of some lock, secondary or engram. In Scientology it can occur (rarely) when the pc is exterior, looking at something black. It responds to R-3-R.

INVISIBLE FIELD is just a part of some lock, secondary or engram that is "invisible". It like a black field responds to R-3-R.

PRESSURE SOMATIC is, in Dianetics, considered to be a symptom in a lock, secondary or engram, simply part of the content.

Whatever, the symptom pain sensation, whatever, it is from either the body directly (such as a broken bone, a gallstone or immediate physical cause) or is part of the content of a mental image picture—lock, secondary or engram.

The Dianetic auditor does not audit ideas or think. He is handling mental recordings. Ideas are in them. Ideas come out of them. But *think is* no longer part of Dianetics.

In Dianetics we handle locks, secondaries and engrams.

KEY IN is the action of recording a lock on a secondary or engram.

KEY OUT is an action of the engram or secondary dropping away without being erased.

FLOATING NEEDLES occur when a key-out occurs or when an engram is erased.

When one *keys out* (rather than erases) an engram, the preclear can always, in life, get a *key-in* of the engram again and so become ill as before. This does not mean one should overrun a floating needle. It does however point out that you can *key out* an engram without running it and at once key it back in again and run it.

An example is getting the date. One gets a floating needle. It is better to leave it at that. But also realize the incident that hasn't been run is still there.

MULTIPLE ILLNESS—means the preclear is physically uncomfortable or ill from several engrams of different types all restimulated. One runs one somatic chain at a time, running each new symptom that is assessed or stated by the preclear.

CHAIN means a series of recordings of similar experiences. A chain has engrams, secondaries and locks. Example—Head injury chain in the sequence encountered by an auditor and run by R-3-R—sporting goods display window seeing it (lock), losing a bat (secondary), hit in the head with a bat (engram). The engram is the earliest date, the secondary a later date, the lock the most recent.

By using somatics to trace back (meaning discomforts, complaints, sensations, aches, pains) and by staying on the chain of only one somatic (i.e. headaches) you get back down the single chain without dispersing all over the place into different chains. Thus one runs the chain of one particular somatic or discomfort or complaint down to key-out or erasure before doing the next somatic or discomfort or complaint.

AUTOMATIC BANK—When a pc gets picture after picture after picture all out of control. This occurs when one isn't following an assessed somatic or complaint or has chosen the wrong one or one which the pc is not ready to confront or by overwhelming the pc with rough TRs or going very non-standard. Some pcs turn up in their first session with automatic banks. The thing to do is carefully assess the physical complaint for longest or best read and gently handle *that* chain well.

BASIC—This is the FIRST experience recorded in mental image pictures of that TYPE of pain, sensation, discomfort, etc. Every chain has its basic. It is a PECULIARITY and a FACT that when one gets down to the basic on a chain (a) it erases and (b) the whole chain vanishes for good. Basic is simply earliest.

UNBURDENING—As a basic is not at once available on any chain one usually *unburdens* it by running later engrams, secondaries and locks. The act of unburdening would be digging off the top to get at the bottom as in moving sand. As you run off later incidents, the ability of the preclear to confront it also increases and basic is easy to run when finally contacted.

BASIC BASIC—This belongs in Scientology. It is wholly beyond the scope of Dianetics. It means the most basic basic of all basics and results in clearing. It is found on the Clearing Course. If contacted or run before the pc was brought up through the Scientology Grades, he wouldn't be able to handle it anyway as experience has shown. So this is part of Scientology, not Dianetics.

VALENCE is the form and identity of the preclear or another, the beingness. We are not much concerned with this in Dianetics today. It is handled in Scientology.

ALLY—A person from whom one had sympathy and was dependent upon.

ASSESS in Dianetics means choose, from a list or statements, which item or thing has the longest read or the pc's interest. The longest read will also have the pc's interest oddly enough.

If you know these definitions COLD so you don't have to mutter them or memorize them but just KNOW them, you will really get results with Dianetics.

The biggest failure in training auditors was their faulty grasp of what they were addressing and their additive think.

The discoveries of Dianetics were basic and vital and opened a wide new unexplored frontier.

These words were assigned to things arbitrarily. They had to be. Man had not had any notion of these things before so they had no names and had to be assigned names.

The names were chosen because they didn't also mean something else in another field of science.

The terms are therefore IMPORTANT and what they mean and the things they name must be grasped before success can attend any auditing.

Any failures of Dianetic auditors were not the failures of Dianetics. The persons attempting to audit others didn't KNOW what these *things* were, essentially the lock, the secondary, the engram, erasure and key-out.

So these are essential to any training or use of Dianetics.

**DIANETICS**  
**ERASURE**  
**HOW TO ATTAIN**

If you run a lock, secondary or engram through TWICE and it does not erase, you ask for an earlier similar incident related to the somatic being handled.

If a mental image picture goes more *solid* on the second pass through, an earlier similar incident must be found.

Eventually you will find a basic incident that will erase. It will be the earliest on the chain.

Follow the somatic, not the narrative content.

If handling an assessed headache you ask for "an earlier headache or head pain".

Don't ask for narrative chains such as "an earlier fight with your mother".

The rule is invariable—IF IT ISN'T ERASING OR IS GOING MORE SOLID AFTER TWICE THROUGH GET AN EARLIER INCIDENT RELATING TO THE ASSESSED SOMATIC AND RUN IT.

This was a very essential part of R-3-R but was somehow omitted from some descriptions of the procedure.

## PAST LIVES

The reason the first Hubbard Dianetic Research Foundation had trouble was that its board of directors attempted to stop past lives from being run.

When a group seeks to forward only what is currently acceptable it of course stalls all progress.

Further it is dishonest to suppress or fail to reveal scientific discoveries.

Disagreeing with the Law of Gravity could give one some very bad falls.

Pre-Dianetic mental studies customarily threw out anything that did not agree with their pet theories or would be "unpopular" with authorities.

Such was the dishonesty practised in the humanities that the whole field had fallen into brutal hands. Dianetics had to encounter the Dark Age atmosphere which then prevailed, complete with torture and murder of the insane.

The facts are that what the auditor believes has little to do with the preclear's reality. If a practitioner challenges or demands proof of a patient's data the patient becomes ill—that is the bald fact of it. It's part of the Auditor's Code.

As far as *past lives* are concerned, if you don't run mental image pictures from past lives when they come up on a chain, the preclear will not recover.

A pathetic case of this occurred in early research. A girl crippled by polio was able to throw away her crutches after my first session. And would have become entirely well except that she recalled seeing and hearing Lincoln give his Gettysburg address. Her mother condemned her for such nonsense. The girl's lameness was confirmed and perpetuated by this and by a psychotic father who raved at me for daring to suggest such things. I didn't suggest anything. In auditing the girl she suddenly came up with being at Gettysburg listening to Lincoln.

Seems a bit cruel to condemn a young girl to a lifetime of lameness just to satisfy a fixed idea.

The *weird* idea is that one only lives but once.

We have several times traced the graves of pcs in a special project and they usually came up correct. One pc was very upset to find his friend had failed to erect the fitting paid for tombstone, substituting a common slab, possibly to pocket the difference.

Some pcs have been so overwhelmed in the past by some great figure that they go into his valence in that life. This often throws discredit on past lives.

I recall one girl who had been every famous figure in history who when we got her in valence turned up to have been only a victim to them. The great generals and politicians of history, it must be sadly remarked, aren't easily distinguished from mass murderers.

But even famous figures are somewhere.

Past lives as a subject is made distasteful, possibly purposely, by some who, by fearing to have been a nobody and seeking status, talk loudly to others about having been Napoleon, Julius Caesar and Brutus all at the same time.

In a society which tries to hide in the current identity or seeks to mortalize everyone and make people only animals the subject of past lives can be a difficult one socially.

The truth in auditing is, IF YOU DON'T RUN THE INCIDENTS GIVEN BY THE PC HE DOESN'T GET WELL.

One spectacular recovery of an insane woman occurred when she ran an incident as a lion who ate her keeper. Freudian work hadn't been able to crack the case. The alienist at the sanitarium kept her in with trying to explain how it was all delusion (the current technique pre-Dianetics). A Dianetic Auditor found and ran it and she became sane at once and stayed so.

It is NOT the auditor's role to handle the philosophic or social aspects of incidents. To chide a pc for having an anti-social engram or a record of a crime or to challenge his data or refuse him his past life will bar his road to recovery and is itself a crime.

It will be found that Man is basically good. Only his aberrations are bad. When you run out his engrams he becomes social and reverts to being good.

Auditing is auditing. Audit what the pc has to audit. Leave the social aspects of the case to others. It's not the auditor's job.

### DIANETIC USE

Why Dianetics fell out of use had nothing to do with its workability. It has worked and well since 1950.

In some areas, mainly the US, it was illegal to heal or cure anything. There was even a law in California giving 25 illnesses that were against the law to cure. The "Better" Business Bureau in the US even issues pamphlets that state that "You can always tell a fake healer because he says he can cure something".

Why a civilization would make it illegal to cure illness can only be explained by some vested interest making more money out of people being sick than getting people well.

There existed a continual threat to anyone who helped their fellows.

The ability of Scientology to bring about spiritual freedom therefore received the concentration of effort by organisations.

Lately public opinion has turned heavily against these suppressive groups and the public discovery that illegal seizure, torture and murder was the hidden activity of political psychiatric groups has lost these people their support.

It was overlooked that spiritual *healing* of the body has not been illegal and that Dianetics used for pastoral counseling is completely legal.

It is a sobering thought that the only effective technology of psychosomatic healing—Dianetics—could be suppressed out of full usage.

One is handling the effect of the spirit on the body. Therefore even Dianetics is spiritual healing and as such is far from illegal.

Man should not be kept ill just to let a few have a monopoly.

In almost all other countries than the US there is no restriction on healing despite monopolistic efforts to make one.

Another reason Dianetics was for some time out of use was that it was believed it had been superseded by Scientology which it never was in fact. Dianetics can be done with no reference whatever to Scientology or its techniques.

People who have given up through illness are also prone to want to leave. Instead of confronting their illness it is easier to try to get away from it. Thus such people are in a hurry to be free and prefer Scientology. But if they have a sick body, it is a present time problem and inhibits attaining the spiritual freedom they seek.

The *correct* procedure is to make them well wherever possible with medical treatment and to handle their psychosomatic illnesses with Dianetics and then, before any further abuses by life can occur, to raise their ability and secure their freedom with Scientology. This is the correct use of Dianetics. It is the remedy for psychosomatic illness.

The basic use of Dianetics is to make a well body and to augment physical treatment.

Any injurious experience can be erased by Dianetics. It is very easy to use and if one wants people well and happy it should be used at every occasion.

A person has an operation. This should be followed soon after by the erasure of the engram of the experience by R-3-R and the usual Dianetic auditor actions. The healing time will be greatly speeded and often healing will occur where a relapse might have followed.

A woman has a child. The engram of delivery should be run out soon after. The result of doing so is very spectacular. There is no "postpartum psychosis" or dislike of the child and no permanent injury to the mother. It is in fact best to audit the mother both before and after the delivery, which gives one fast relatively painless childbirth and quick recovery.

Recovery from disease under treatment is speeded by Dianetic auditing.

Where the incident of the break is, with any chain, run out, a broken limb will heal (by X-ray evidence) in two instead of six weeks.

Some patients who are not responding to medical treatment who are then given as little as a touch assist will *then* be found responsive to the medical treatment. An auditor giving the person a Dianetic session will more or less ensure that the medical treatment will now work.

A person who is accident prone when audited usually loses this unwanted characteristic.

Many "insane" recover from their symptoms when given proper medical treatment, rest, no harassment and then good mild Dianetic processing. They become and remain normal people without relapse.

Chronic, which is to say, long-term illnesses cease when audited by Dianetics and then medical treatment, which was earlier ineffective.

Whole classes of "mentally retarded" children have been made more normal by teachers in London County Council schools using relatively unskilled Dianetics.

Tiredness, unwanted sensations, bizarre pains and aches, bad hearing or sight also routinely respond to Dianetic processing.

The sickness and death rate of persons who are part of Dianetic groups is only a small fraction of that of other groups.

Pilots audited with Dianetics, by a test involving a whole squadron, went without a single even minor accident for the following year.

Scientists audited with Dianetics have greatly improved intelligence. Dianetics raises IQ as a side product to usual auditing, at a rate of about one point of IQ per hour of processing.

Withered limbs, skin blotches and rashes and even blindness and deafness have all responded to Dianetics.

Possibly the point which counted most against Dianetics in the early attacks on it was that it did a vast array of things. The truth was, it actually did them. When you have the answer to the human mind as in Dianetics of course anything caused by the mind can be remedied.

It is very much easier to train a Dianetic auditor than a Scientology auditor. It requires only about a month to make a Dianetic auditor who is sufficiently conversant with the subject to get results. This too was used against Dianetics as the psychiatrist of that day claimed he himself needed twelve years of study to do psychiatry. Of course when the public found out that the product of these twelve years of study was killing the "insane" and increasing their number the argument became silly.

The spectacular personal gains which were available in Scientology were so great they tended to obscure the very real use and value of Dianetics.

Further, a Scientology executive trained and processed beyond the need of body help tended to forget that much of the public out there first had to be helped out of their physical misery before they could attempt anything like personal gain.

You use Dianetics much the way you would use any remedy.

When a fellow is burned you audit out the burn.

When a woman loses a loved one you audit out the loss.

When a young man can't finish his schooling you audit out his unhappy school experiences.

Dianetics is for USE. There is not a lot of admin about it. It isn't something you use after bowing down three times to Chicago. You just USE it.

A Dianetic auditor who sees someone sick and who doesn't get him treatment and then audit him is just not humane.

Woman going to have a baby—get out the meter and audit her into shape for it. When she's had it, run out the delivery.

Fellow burns his hand, break out the meter.

Dianetics is the answer to human suffering. USE it.

Ideas build up to halt the use of Dianetics such as "once you have a floating needle on engrams you don't run them any more—". That's silly. An F/N on a chain can be called the end of *that* chain. But not of Dianetics on the case.

I am not trying to make anyone wrong by reintroducing the real use of Dianetics. I myself had not realized how separate and vital it was as a technology until recently. I was engaged for many years researching and completing Scientology. I had not noticed and had not said that Dianetics must be preserved and used in all cases of psychosomatic illness or in physical suffering.

Yet, during all this time when I had to handle illness, I did not use Scientology. I used good old Dianetics.

Now I have refined it and made a better statement of it and made it easier to use and I trust it will be used for what it was intended and that Scientology grades will be relieved of the burden of attempting to heal physical illness, a use for which it was never designed.

Scientology is a vital practice in itself. It places a person *above* any further illness or suffering. But he has to be made well first.

People will ask, "Deafness? Now what special process is needed in curing deafness ....."?

This is one of the modern refinements of Dianetics. One runs whatever is assessed for the preclear. He doesn't decide to cure somebody of deafness. He handles the illness that reads. Maybe it will be deafness.

You have one single procedure covering all cases and that is R-3-R and the steps of HCOB 16 Apr 69. You audit what reads when assessed. The whole of the person's complaints, if you just keep on going with HCOB 16 Apr 69, should eventually vanish.

Having gotten the pc well by medical care and Dianetic auditing, *then* start out with Scientology. If he gets sick again before many grades, revert to Dianetics, handle it and then when he is well, resume Scientology where you left off.

*Never* run a Scientology grade to make a pc well or cure something. It's a misapplication.

By *using* Dianetics as readily as you use shoes you can make and keep people well. You don't worry about overruns, rudiments or anything else. You just use R-3-R even to correct ARC Breaks and PTPs and bad auditing.

By then correctly using Scientology we can make the person a far better being.

We now have STANDARD DIANETICS.

We have developed Scientology STANDARD TECH.

Both are now valid as themselves.

They do not cross.

Dianetics for the body.

Scientology for the spirit.

USE BOTH.

### DIANETIC RESULTS

Every once in a while you get a Scientology result while running Dianetics. Also, sometimes you get a Dianetic result while auditing Scientology.

This tends to keep the two distinctly different subjects confused with each other.

A preclear, after Dianetic auditing, tells the Examiner he is exterior and feeling fantastically bright. This is a Scientology result.

Sometimes a Scientology preclear after attaining a grade will state that it has healed his terror stomach. This is a Dianetic result.

There is nothing whatever wrong with this except that it gives an auditor an invitation to confuse the subjects and think they are the same.

The clue is CONSISTENCY.

Dianetics only rarely exteriorises a preclear.

Scientology only occasionally handles a terror stomach. In fact a person whose terror stomach wasn't handled by Dianetics and its R3R can go all the way to OT VI sometimes with it. He doesn't get rid of the terror stomach and he doesn't (since he had a present time problem all the way) make OT VI either.

If it is a body pain, sensation, somatic, illness, disability, the subject to use is Dianetics.

If it is a gain in ability and beingness that is the purpose, the subject to use is Scientology.

After many years of handling cases this emerged as a very factual fact. Dianetics is Dianetics, Scientology is Scientology. If you mix them they attain limited results.

This is so true that when you use all the prohibitives and Never Nevers of Scientology in doing Dianetics, Dianetics also fails.

See these two subjects as clearly separate. They each have their own Case Supervision orders. You don't use Scientology Case Supervision orders in case supervising Dianetics. And you don't use the Dianetic rules on Scientology.

One addresses the body, the other the thetan. They both go by their own rules.

There is also STANDARD DIANETICS as rigidly taught and adhered to, so Dianetics is not sloppy Scientology either.

Dianetic results are a well body and a being happy with it.

Scientology results are a free, powerful and immortal being.

They can and do achieve their proper end results but only when used properly, separately and as themselves.

## SOMATICS

You must run only by somatic, not by narrative. Narrative means “Falls down stairs” “An earlier fight with brother”. By *somatic* is meant a pain or ache sensation and also misemotion or even unconsciousness. There are a thousand different descriptive words that could add up to a *feeling*. Pain, aches, dizziness, sadness—these are all FEELINGS. Awareness, pleasant or unpleasant, of a body is what we are trying to run in Dianetics.

All chains are held together by one similar *feeling*. That is a new discovery. Chains are not held together by narratives or personnel or locations. They are held together by FEELINGS. Thus we ASK FOR AND FOLLOW DOWN ONLY FEELINGS. Those can be aches, pains, sensations, misemotion—any FEELING.

This brings to light a further discovery. One never assesses medical terms or symptoms.

An engram contains pain and unconsciousness. All right. Then its basic would be a physical duress not a symptom resulting from that duress.

Example: The pc says “headache”. You assess headache, you try to run “headaches” and all you ever get is times a pc had a headache. Well, the headache is a symptom caused by a head *injury*. The engram must have contained a shot in the head or a crushed skull or some actual injury. The word “headache” would describe only how the head feels later when the engram occasionally goes into restimulation.

So you would get only locks and secondaries to audit and only by chance and an alteration by the pc of the command to find an earlier headache would you ever get to an engram in which the head was crushed or injured. “Headache” is the *result* of a head injury, and it doesn’t describe the injury which, in engram form, is now giving the pc headaches.

Take the medical term Arthritis. You could ask for arthritis and get only visits to the doctor or times in a wheel chair. The physical injury contained in the engram causing the arthritis is not described.

Alcoholism would present the same problem. If the pc listed and the auditor assessed “Alcoholism” we would only get times when he was drunk, not the engram causing the symptom which might contain “Feeling very dry”.

Therefore one has more than one column on a Health Form. One would give the physical disability or complaint. The second would be Pc’s Description of the FEELING. We would land the real engram every time, not only its locks or secondaries. (It is quite all right to run locks and secondaries as it is necessary to unburden the chain and increase the pc’s confront, but chains always end up in a basic engram at the bottom and if you don’t get and erase that then the chain will key in again.)

In asking for list items one puts down only what the pc says. That’s an invariable rule. But when the pc says some mere symptom like “headache” or medical term like

“arthritis” the auditor writes it down but *also* asks, “What is the feeling of that?” or some such question and writes what the pc then says AND ONLY ASSESSES THE FEELING STATED.

Example: Pc says a complaint is “SINUSITIS”. The auditor writes it down. But asks also for the feeling of it. The pc says, “A burning sensation in the nose.” In assessing the list the auditor does not call out “Sinusitis.” He says, “A burning sensation in the nose.” And marks down its meter read.

If the auditor took and assessed only “SINUSITIS” and then asked for incidents of sinusitis he would get only locks and secondaries—times when the engram was in restimulation. And he would rarely get the real basic and engram that causes the symptom .

This discovery opens the door to swift “cures”. But one is obviously not treating SINUSITIS. He is looking for an incident in which there was a “burning sensation in the nose”. And after a few locks and upper engrams he’d find and run the real injury in which the nose was burned.

HCO BULLETIN OF 27 APRIL 1969

Remimeo  
Dn Auditors  
etc

**R-3-R Restated**

**COMMANDS ON SECOND RUN ON AN INCIDENT**

Until a full rundown is issued, this error in R-3-R as published is corrected.

In going through an incident the second time one DOES NOT ask for date and duration again or any description.

After the 1st time through an incident and when pc has recounted it the auditor

- A. Tells pc, "Move to the beginning of the incident."
- B. "Tell me when you are there --"
- C. When pc has said he is, "Scan through to the end of the incident."
- D. "Tell me what happened."

The second, 3rd, etc run through the same incident use the above or some variation thereof.

**ERASURE OR GOING SOLID**

After the second time through, find out if it is erasing or going more solid. If it is erasing go through it a third time, etc until it is erased. Erasure is usually accompanied by a Floating Needle and a cognition immediately afterwards.

**PC INTEREST**

In doing R-3-R it is necessary that (a) one chooses things the pc is interested in and (b) one does not force a pc to run things he is protesting being run on.

**ERASING LAST INCIDENT FOUND**

If you ask if there is an earlier incident and the pc says "No" you do not just walk off from the one he was just running. You send the pc through it again and it will erase.

**COMPLETING CHAINS**

If you do sloppy R-3-R and do one thing after another without getting an F/N or an erasure, you will get the pc stuck up on the track. You complete each chain to F/N or erasure.

**F/Ns vs. ERASURE**

If a LOCK F/Ns you can get earlier incidents on the same chain until the pc actually runs the engram or chain of engrams.

While it is not always safe to pass an F/N and go earlier to the real engram and erase it, a pc who is only F/Ned on locks will get the engram keyed in again later. The somatic may return unless engrams are run to erasure.

## ENDING SESSIONS

An R-3-R session can be safely ended on a cognition and Good Indicators such as a cheerful happy pc.

This doesn't mean the end of all Dianetic auditing. In the next session another assessment will turn up more unwanted feelings.

## ENDING DIANETICS

Dianetics is ended off only when a pc has become well and happy and remains that way.

## DIANETIC FAILURES

Dianetics can be made to fail by alteration of its materials from its precise workable application.

It is basically so simple it is hard to conceive that this could happen.

But it *has* happened several times and was a contributing cause to its lack of use in several areas for some years.

There are various ways to make Dianetics difficult. Most of these come under three headings:

1. False information as to how it doesn't work by some vested interest acting as a third party (see HCO B 26 Dec 68 on 3rd Party Law).
2. Failure to provide or get studied the actual data and HCOBs.
3. Mis-instructing which enters an instructor's or examiner's opinion or invalidation or alteration of the actual technology.

A person who pays attention to 1 and 3 and who doesn't insist on 2 is courting failure in auditing. Many many instances exist of each of these three being done and almost *all* failures one has in auditing can be traced to one of the three reasons given above.

The failures aren't because of the pc or the bad intention of the auditor. Believe that. They came from either not using Dianetics at all or 1, 2 or 3 above. So don't let yourself get caught in these errors given above.

### HIGH TA IN DIANETICS

In Scientology a high TA is always an overrun.

In Dianetics it means AN ENGRAM TOO LATE ON THE CHAIN TO ERASE IS IN RESTIMULATION.

A Scientology auditor “rehab” overruns.

A Dianetic auditor cures high TA by finding what engram (lock or secondary) is in restimulation (active). This will show up as a PAIN, SENSATION, MISEMOTION OR OTHER PRESENT TIME FEELING the pc has. In short, just by finding the somatic by list and assessing for longest read and running R-3-R you can cure a high TA.

You handle a TA that goes up during a session by completing the chain exactly as in R-3-R.

The same action you do for R,3-R *also* cures the high TA.

By running a pc through only once each time instead of twice you leave a later incident too charged for the pc to see an earlier incident.

By trying to erase the somatic only, not the picture (“pc no longer has somatic”) you can leave the picture partially there.

There can be an infinity of wrong ways but only one right way and the right way is R-3-R by the book.

A high TA (4 or above) is simply the E-Meter’s reaction to increased mass. Mental Image Pictures have mass. The mass has what is called resistance to electricity. The E-Meter measures electrical resistance. Mass resists electricity. Thus in the presence of mental mass as contained in mental image pictures, the Tone Arm of the E-Meter rises.

When you restimulate an engram, the E-Meter current flow has more trouble getting through the pc and the TA rises.

When the engram (or lock or secondary) is “keyed out” (moved away) the TA comes down and the meter needle will float.

If you find a long chain with many engrams on it and run a late engram the TA goes up. As you go earlier, and eventually find Basic, the TA comes down and when you erase the basic engram the TA will come down to between 2 and 3 and the needle will float.

Old disproved theory pre-Dianetics was that the E-Meter reacted to sweat on the hands but of course a person would have to sweat and “unsweat” to make the meter behave as it does. And the idea of “unsweating” would be ridiculous. Palms of the hand do not go wet—dry with enough rapidity to account for meter reaction up and down.

When you run several engrams through once or several somatic chains without erasing any you pile up too much mass and the TA will go high and stick.

Even if nothing is done to repair this the pc will de-stimulate (the pictures will drop away) in from 3 to 10 days.

It is a very poor show of auditing to do R-3-R other than exactly by the book. It is very easy to do it exactly right. The drill is simple. If done exactly right the result is good and invariable.

### ASSESSMENT AND INTEREST

An assessment consists simply of calling off the items the pc has given and marking down the reads that occur on the meter. The pc is not required to comment during this action and it is better if he does not.

This action is called "Assessment for Longest Read". It is used mainly in Dianetics.

There are two Scientology assessments which are differently done. These are "Assessment by Elimination" and "Listing and Nulling". They are not used in Dianetics. One does not mix the three types.

In Dianetic Assessment by Longest Read one uses these symbols:

X	—	didn't read
Tick	—	small jerk of needle
sF	—	Small Fall (a quarter to half an inch)
F	—	Fall (about one to 2 inches)
LF	—	Long Fall (2 to 3 inches)
LFBD	—	Long Fall followed by a "blow down" or TA motion downward.

All falls are to the right. A "BD" is a Tone Arm motion to the left made to keep the needle on the dial.

The favoured action for an item is an LFBD and if one item on the list does so, that is it without any further assessment.

The reason one assesses is that IF AN ITEM DOES NOT READ ON THE METER WHEN ASSESSED IT IS BEYOND THE PC'S LEVEL OF AWARENESS.

It is very unwise and unsafe to try to run a somatic which has not read on the list. It will be beyond the pc's reality and beyond his awareness and will result in overwhelming him.

That an item reads guarantees that the pc will be able to confront and erase the chain. So that an item reads well is a guarantee that the pc can handle it and will not get in too deep for him.

The exception to this is a PROTEST read. An item, possibly already run, is seen to read. The pc frowns. He is protesting and the meter is registering protest, not the item. One never runs a pc against his protest. To do so will overwhelm him and give a bad result. A protest almost never blows down the TA.

To be *sure* that the item is right, one usually asks the pc if he is interested in the item chosen.

If the pc says no, he doesn't want to run it, this is a protest read.

One then picks the second best reading item on the assessment already done and checks that with the pc for interest. The pc will usually be interested in it.

The pc can almost always be counted on to be interested in any item that gives a LFBD.

One *never* simply asks the pc which on the list he is interested in as “an assessment” as it will be found the pc simply chooses at random and may choose a null item. The result may be a very unsuccessful session.

An auditor may sometimes be astonished by what reads. The pc, let us say, obviously has a broken leg but what reads is an earache. One runs what reads, not what the auditor knows should be run. A “know best” in an auditor can be a fatal fault.

On a second or third assessment, items which were at first null or reading poorly will be found to “come alive” and read well. The pc, by being audited, has had an increase of ability to confront and, if the auditing is standard, an increase in confidence. The result is that items beyond his reach previously (and did not read well) are now available and can be run easily.

The E-Meter measures the awareness depth of the pc. On things which do not read on assessment you would find his reality poor. Things that read well on assessment will be found to be things on which a pc has a high reality and a high interest level.

Only if pushed to audit without a meter could an auditor assess by interest only. There is no real excuse for it if one has an E-Meter.

Auditing without a meter is a chancy activity.

Good assessment by longest read is the best entrance to a successful session.

The same list will serve for the next item to be run and should be used rather than just asking the pc.

## AUDITOR TRUST

A pc tends to be able to confront to the degree that he or she feels safe.

If the pc is being audited in an auditing environment that is unsafe or prone to interruption his or her confront is greatly lowered and the result is a reduced ability to run locks, secondaries and engrams and to erase them.

If the auditor's TRs are rough and his manner uncertain or challenging, evaluative or invalidative, the pc's confront is reduced to zero or worse.

This comes from a very early set of laws (*Original Thesis*):

Auditor plus pc is greater than the bank,

Auditor plus bank is greater than the pc,

Pc minus auditor is less than the bank.

(By "bank" is meant the mental image picture collection of the pc. It comes from computer technology where all data is in a "bank".)

The difference between auditors is not that one has more data than another or more tricks. The difference is that one auditor will get better results than another due to his stricter adherence to procedure, better TRs, more confident manner, and closer observance of the Auditor's Code.

No "bedside manner" is required or sympathetic expression. It's just that an auditor who knows his procedures and has good TRs inspires more confidence. The pc doesn't have to put his attention on or cope with the auditor and feels safer and so can confront his bank better.

## **GRINDING OUT ENGRAMS**

(Including notes on OTs and Dianetics)

Now and then an auditor encounters the phenomenon called (since 1950) GRINDING.

GRINDING means going over and over and over and over a lock, secondary or engram without obtaining an actual erasure.

The sense of the word comes from the action of using an emery wheel on a hard substance. The substance doesn't get much smaller or thinner no matter how long it is done.

The reason grinding occurs is that the incident is too late on the chain. There are earlier incidents.

It is a highly undesirable action. A Dianetic Auditor who puts the pc through an incident four or five times without erasure or appreciable reduction is encountering "grinding". He should ask the pc to see if there isn't something earlier with a similar somatic.

### **OTS AND DIANETICS**

We have encountered two cases who were "OT VI" who also got into grinding without there being anything earlier. In both these cases, they did not want a session and were only going through it to be obliging. Both of these "OTs" had skipped some of their grades. The proper action would have been to review their grades, the grade known as OT III was certainly out. When a person gets above Clear, oddities can be expected to occur when you try to run Dianetics on them. If they really haven't made all their grades, however, and are physically ill, the correct action is to do all possible to handle their case by Standard Dianetics and then rehabilitate or get done all the rest of the grades. What has happened here is that they were using Scientology to escape an uncomfortable body that should have been straightened out by Dianetics in the first place. The "out grade" is in fact Dianetics, failure to use it before going on to Scientology.

You can therefore expect some of these Scientology cases who are "OT" but haven't really made it due to out Dianetics, to run very well on Dianetics, by the book. The action is to handle their physical complaints with Dianetics and then rehab or get done all the Scientology grades, being watchful for grades not done at all.

Some of these "OT" flubs, however, can be expected to "grind" and to fail to erase engrams. They will not have wanted a session in the first place and need a green form with particular attention to "withholds" and thereafter a complete review of all grades, particularly completely skipped "OT grades".

### **NOT FOLLOWING SOMATIC**

Possibly a pc who does not go down the somatic chain but who skips from one somatic to another could also get into grinding.

## THROUGH ONLY ONCE

A pc not put through each incident on a chain twice before going earlier could get into grinding. The pc who is run through each incident once only before being sent earlier will certainly fail to get off enough charge to get earlier.

## NO PAST LIVES

The pc who is stubbornly refusing to go into any past lives will certainly get into grinding as they seldom reach basic on any chain.

## THE FIVE GAEs

The five Gross Auditing Errors (GAEs) are:

1. Can't handle and read an E-Meter.
2. Doesn't know and can't apply Technical data.
3. Can't get and keep a pc in session.
4. Can't complete an auditing cycle.
5. Can't complete a repetitive auditing cycle.

These are the only errors one looks for in straightening up the auditing of an Auditor.

If you look for other reasons, this is itself a gross goof. There are no others.

**FLOATING NEEDLE**

A Floating Needle is the idle uninfluenced movement of the needle on the dial without any patterns or reactions in it. It can be as small as 1 “ or as large as dial wide. It does not fall or drop to the right of the dial. It moves to the left at the same speed as it moves to the right. It is observed on a Mark V E-Meter calibrated with the TA between 2.0 and 3.0 with GIs in on the pc. It can occur after a cognition blowdown of the TA or just moves into floating. The pc may or may not voice the cognition.

It, by the nature of the E-Meter reading below the awareness of the thetan, occurs just before the pc is aware of it. So to give a “That’s it” on the occurrence of the F/N can prevent the pc from getting the cognition.

Pcs and pre-OTs OFTEN signal an F/N with a “POP” to the left and the needle can actually even describe a pattern much like a Rock Slam. Meters with lighter movement do “pop” to the left and R/S wildly for a moment.

One does not sit and study and be sure of an “F/N”. It swings or pops, he lets the pc cognite and then indicates the F/N to the pc preventing overrun.

A one hand electrode sometimes obscures an F/N and gives false TA. If used, use higher sensitivity and get the TA from 2 cans when needed.

Course

(Revision of HCOB 1 September 1968)

**SUMMARY OF HOW TO WRITE AN AUDITOR'S REPORT,  
WORKSHEETS AND SUMMARY REPORT, WITH SOME  
ADDITIONAL INFORMATION**

*AUDITOR'S REPORT*

An Auditor's Report should contain:

Date  
Name of Auditor  
Name of Pc  
Condition of Pc  
Length of Session  
Time Session started and ended  
TA at beginning and end of Session  
Rudiments  
What Process was run—LISTING THE EXACT  
COMMANDS (often forgotten by most auditors)  
Time of Start and End of Process  
Whether Process is flat or not Any F/Ns.

*WORK SHEETS*

A Work Sheet is supposed to be the complete running record of the session from beginning to end. The Auditor should not be skipping from one page to another but should just be writing page after page as the session goes along.

A Work Sheet is always foolscap, 8 x 13 inches, written on both sides and each page is numbered. Pc's name is written on each separate sheet.

A Work Sheet may be in 2 columns depending on how big the writing is of the Auditor.

When the session is completed, the Work Sheets are put in proper sequence and stapled with the Auditor's Report Form on top from beginning to end of session.

TA and time notations should be made at *regular* intervals throughout the session.

When making a list on a Pc:

1. Always mark a read as it reads—F. LF. BD.
2. Always circle the reading item. Mark if indicated to the Pc with *IND*.
3. Always when extending a list put in a line from where it has been extended, e.g.

Item	Joe Shoes Socks	
	<hr/>	extended
	Sky Wax Pigs, etc., etc.	

NOTE: When you repair an old auditing session you *always* write on the old auditing report and W/sheets in a *different coloured pen* with the date of the-report.

When running various processes in a session, mark each F/N clearly noting time and TA.

### *SUMMARY REPORT*

A Summary Report is written exactly as per HCOB 17 March 1969, "Summary Report".

Two gross goofs I have noticed since case supervising folders on the RSM is that Auditors have not been turning in Ethics cases to the MAA. In one instance, a Pc was audited by 2 auditors in 2 different sessions, got a R/S on crimes against Scientologists and M/W/Hs and neither auditor turned the Pc in to Ethics. This is not the only instance. The second thing is that Auditors are very evaluative of the Pc's case as indicated by their comments on the Summary Report. This is incorrect; this report is used simply as an exact record of what happened during the session. It is not up to the auditor to evaluate the Pc's Case, this is the Case Supervisor's job. The auditor may suggest what is to be run, at which time the Case Supervisor will review the session, what was run, how the Pc went in relation to what was being run and then give his directions.

-----

Auditor Report Forms or W/sheets are never recopied. The Auditor should always read over his W/sheets before turning in folder to the Case Supervisor and, if any words or letters are missing or cannot be read, they should be written in with a different coloured pen.

If these rules are followed it will make the Case Supervisor's job much much easier and auditors' reports more valuable.

To add the obvious, it is a CRIME to give any session or assist without making an Auditor's Report or to copy the original actual report after the session and submit a copy instead of the real report. Assist reports that use only contact or touch assists may be written after a session and sent to Qual.

Dianetics Course

### TEACHING THE DIANETICS COURSE

As the teaching of basic data restimulates confusions which are then dramatized by throwing the course off line, the teaching of the Dianetics Course as follows is hugely vital.

The teaching of Dianetics Auditors is laid down on these simple principles.

1. The data on tapes and Bulletins is studied without alter-is, interpretation or addition by the student, fellow student, instructor or supervisor.
2. Well done and other folders are studied by the individual student.
3. No lecturing or additional interpretation or evaluation by Supervisors.
4. The student audits only when he has completely passed on 1 and 2 above. He must not audit before he has completed his checksheet three times through.
5. Things the student is weak on are done in clay.
6. The student is sent to cramming at his own expense for bad auditing goofs. He may also be taken off auditing and made to do his checksheet again.
7. Any student question is answered by referring to the HCOB, folder or tape or by explaining it is beyond the scope of Dianetic auditing.
8. A rigid invariable schedule is precisely adhered to.
9. Checksheets and tapes and folders are gone through in the sequence laid down by the checksheet and not randomly out of sequence.

If this is made difficult then the programme must be cut back to the bare bones of the original above.

The teaching of standard tech must also be standard. Therefore the above MUST be adhered to completely.

### CASE SUPERVISING DIANETICS FOLDERS

All a Case Supervisor looks for in Dianetics folders to advise the next action is departure from exact Standard Dianetics procedure.

It is a very easy job providing the Case Supervisor knows his Standard Dianetics exactly and completely.

Any time there is the most minute or flagrant departure from exact assessment or exact R-3-R, there will be a breakdown of the results.

It is quite a tribute to the tech that this is true. And it is true. Doing C/S recently on a very great many Dianetic cases audited by relatively untrained auditors the following emerged in letters ten feet high.

1. Where the auditor followed the exact procedure without deviation the results were uniformly excellent.
2. Where the auditor deviated from the exact procedure the results were poor or bad.

There are many, many ways an auditor can deviate from exact procedure.

There is only one exact procedure.

As a result of doing this C/S work, I would, if I were doing Dianetic C/Sing, refuse to let an auditor audit until he had been through his checksheet 3 times. This would save nearly all the work required of a Case Supervisor.

When the auditor is in a fumbly state regarding the procedure and has not drilled it until he could do it with the house caving in, the preclear does not get good results. That is really all there is to it.

If the auditor simply observes the Auditor's Code, handles TRs and the meter fairly well and does the assessments and R-3-R exactly as laid out, the results will be found to be astonishingly good, even miraculous.

To correct a bad session the normal action of the C/S is to order the offbeat actions done correctly.

#### EXAMPLE

- A. Auditor assessed by interest only, not by read and the session bogged down. C/S action—Reassess by longest read.
- B. Medical terms and operations were part of assessment list, one was chosen and case bogged. C/S action, order such be taken off the list and somatics, pains, sensations, emotions only be assessed.

- C. Pc was put through each incident on the chain only once and finally bogged. C/S action, order the whole chain rerun so that pc has been through each one twice and the earliest one found erased.
- D. A basic was found and auditor told it was erasing but sent pc earlier but pc could find nothing so left it. C/S orders the basic erased.
- E. Auditor tells pc he won't run it because it "isn't an engram". C/S action, order auditor to retrain on Auditor's Code and do Invalidation and Evaluation in clay. Orders pc to an Scn Review, Green Form.
- F. Pc very nattery to auditor. C/S orders pc to Scn Review "and be sure to pull all withholds".
- G. C/S finds his orders to complete a chain left undone with a high TA were not done—folder mislaid or pc not routed. Pc has become ill. Order the pc to medical treatment and the chain completed.

You see how it is. Each time the auditor violated normal simple procedure, the C/S orders that the normal simple procedure be completed either by first giving pc an Scn Green Form in Qual and then completing the Standard Dianetics action or, omitting Qual (when pc not out-rud), just getting the real Standard action done.

This is really all there is to Case Supervising Dianetic Case Folders. The more you try to do something else than the above the further the case will go wrong.

The Dianetic Auditor does not have to know how to do Green Forms or rudiments and these are NOT DONE in Standard Dianetics sessions. When they have to be done you get a Scientology Auditor to do them.

It is a serious error to mix up Dianetics and Scientology in the same session—that is to say, to do ruds, rehab overruns, etc, etc.

The potential errors of out-ruds and all the rest are present of course in any Dianetics session, but do not happen when exact Dianetic procedure is used. When they do happen you send the pc to an Scn Review Auditor.

This is Case Supervision, Dianetics. It has been fully worked out by my Case Supervising a great many Dianetic sessions to launch this new view of Dianetics. And the above is what I found.

It drives home also the necessity of training Dianetic auditors as precision technologists and the risk of letting people audit before they are fully grooved in on exactly what's done in a Dianetic session.

**CASE SUPERVISOR  
FORMS**

The two principal forms used by a Dianetics Case Supervisor are as follows:

Dn C/S I is for new, unaudited pcs or for old ones who try to be psychoanalytic cases or who don't catch on.

Dn C/S 2 is for cases who have or have not been given a Medical Examination and who have had auditing.

**SEA ORGANIZATION  
STANDARD DIANETIC C/S NO. 1**

\_\_\_\_\_  
Preclear

\_\_\_\_\_  
Date

1. Work with TRs on the pc until he has a good idea of auditing.
2. Explain what a meter does ("Registers interest and charge").
3. Explain what is an F/N.
4. Define mental image pictures, locks, secondaries, engrams so he understands them.
5. Define Chains.
6. Define Erasure.
7. Return folder to me.

\_\_\_\_\_  
CASE SUPERVISOR

**SEA ORGANIZATION  
STANDARD DIANETIC C/S NO. 2**

\_\_\_\_\_  
Preclear

\_\_\_\_\_  
Date

1. Make a list of any occasional or current illnesses, unwanted sensations, aches, pains, disabilities, tiredness feelings, emotions, fears, dislikes.
2. Assess for longest read.
3. Compare with pc's interest (don't audit it unless pc agrees that's it).
4. Do R-3-R on it.
5. If it goes more solid or is not erasing after going through it twice, go earlier, asking for "an earlier incident with similar (somatic, ache, pn, etc)".
6. Erase basic on the chain.
7. End off on that chain if you get an F/N or an erasure.
8. Reassess, repeat the R-3-R on new chain.
9. End off session only on very pronounced GIs (GOOD INDICATORS).
10. Return folder to me.

**METER TRIM CHECK**

E-Meters can go out of trim during a session because of temperature changes.

Thus even if the meter is properly calibrated and reads at 2.0 with a 5,000 ohm resistor across the leads and 3.0 with 12,500 ohms, by the end of the session a pc can be apparently reading below 2.0 because the meter is off trim.

The following meter procedure is therefore to be followed AT THE END OF EACH SESSION (AFTER GIVING "THAT'S IT"):

1. DON'T MOVE THE TRIM KNOB
2. PULL OUT THE JACK PLUG
3. MOVE THE TA UNTIL THE NEEDLE IS ON "SET" AT THE SENSITIVITY YOU WERE USING IN THE SESSION
4. RECORD THE TA POSITION AT THE BOTTOM OF THE AUDITOR'S REPORT FORM AS: "Trim Check—TA = . . ."
5. IF YOUR METER IS KNOWN TO BE OUT OF CALIBRATION (as in Para 2 above) RECORD ALSO: "Calibration error— on meter = 2.0 actual" at the bottom of the form.

## PECULIARITIES

When you run into pc peculiarities or odd pc phenomena in Dianetic auditing that get in the road of R-3-R, DO NOT try to solve it by going non-standard or getting inventive. It will be fatal.

The operating rule is end off the session and SEND THE PC TO A SCIENTOLOGY REVIEW.

If you are a Scientology as well as a Dianetic auditor, you may be tempted to at once shift into Scientology. That can also be fatal.

If no Qual Div is nearby and you are a Scientology auditor also and if no other Scientology auditor is around to give the review only then could you attempt a "Green Form" which is used in Qual Divisions in orgs. The way to do that is end the Dianetic session, take a break and begin the Scientology Review Session. But this is not good. It is best to send the pc to Qual and insist Qual actually handles.

Some odd phenomena that come under this rule follow:

Pc gets a stuck picture and can't audit the chain he should be on because picture keeps coming in.

Pc's pictures are constantly changing, sometimes too fast to grab onto.

Pc gets a dozen pictures at once and can't run them or decide what to run.

Field goes black and won't clear up.

Pc gets angry at auditor.

Pc very nattery about Dianetics or orgs.

On these or many more the Dianetic auditor should NEVER try to force pc to go on or do something odd or brilliant. He should simply say, "I am sorry. I will end this session." And does so. And sends the pc to the nearest Qual Division.

## SICKNESS

It will sometimes happen that a pc has a session and then three or four days later becomes physically ill.

The auditor may feel that auditing did it. It didn't. The auditing given would have to be non-standard for this to happen, but the auditing is not to blame.

According to my friend Dr. Stanley Lief, over a century ago Hahnemann developed a healing technology known as homeopathy which administered minute doses of medicine. The original theory seems to have been that the disease or illness was still in the body and would be released. The person would be wildly ill again and then permanently recover. This is probably a poor statement of the whole subject of homeopathy and its basic techniques may have worked well but have been lost.

In any event, the phenomenon has application here.

We would say that the mental image picture of the incident was stopped at a "stuck point" and that it would "run out" of itself if it were unstabilized.

A touch assist can do this. The person may become wildly ill after one and then recover.

What apparently happens is that the chain of incidents becomes unsettled and the same incident on the chain in which the person has been stuck for a long while runs out physically. It completes itself, which is to say, it finishes its cycle of action.

At a hospital where I studied, this was part of the things I observed.

Medicine sometimes will not work on a patient. It works on others but not on a particular one.

If that particular one is given mental attention even as mild as brief Freudian analysis, it will be found that medicine will now work on the person.

This formed one of the first application discoveries I made. From it I inferred that function monitors structure and proceeded to investigate mental actions and reactions in the field of illness. From this came Dianetics some years later.

Mental therapy prior to 1945 was so ineffective, consisting only of 19th Century psychoanalysis and Russian and East European psychiatry, that no one else seems to have observed, then or now, that "mental blocks" are able to obstruct medical treatment of a real physical nature.

The proof is that when one even reduces the mental block slightly, medicines such as antibiotics or hormones will now be effective when they were previously ineffective on some patients.

It is this factor which gives purely medical treatment a somewhat random appearance. The patient is "stuck" at some point in time. Even inadequate handling of him mentally (such as a touch assist or a poorly or partially done session or even a "bad" session) "unsticks" the person from the frozen or fixed "stuck" point.

One of three things can now happen:

1. The person can be treated medically for his illness with greater effect.
2. The person in two or three days gets apparently sick or sicker but eventually recovers and is not subject to that exact sickness again—(it “ran out”).
3. No further result is noted.

-----

These data are *very* useful to a Dianetic auditor or a medical doctor. A person can be ill and the illness not surrendering to the usual treatment. Brief mild Dianetic auditing can be done. The medicine may now work.

An auditor who specializes in keying out locks at the first F/N will find occasionally that his preclear becomes ill in two or three days from some occasional but longstanding illness which then “runs out” and doesn’t appear again.

An auditor who gives a non-standard, very poor session may find a preclear occasionally becoming ill within the next three or four days. The auditor and others blame the auditing.

Any auditing is better than no auditing.

Standard Dianetics is much more powerful than old Dianetics and should only be done by auditors trained to do it exactly.

Sessions which are non-standard should be corrected *as soon as possible*, certainly within two days or you may find the preclear beginning to go through an illness cycle.

The cycle was waiting to complete itself for a long time. The auditing unsettled it. It “ran out” physically because the pc was moved in time in the incident in which he has been “stuck”.

An understanding of this phenomena is necessary. It is useful data. Audit a pc badly, audit a pc too much to F/Ns on locks only, give a pc too many touch assists and you will find now and then that the occasional pc becomes physically ill, runs a temperature, etc. Before blaming yourself too much, realize the pc has often been ill in the past, that the mental cause of it has been loosened up and manifests itself and runs out physically. It is not fatal. That illness won’t recur again as it has in the past.

However, that it is not fatal to the pc is no excuse not to do a good STANDARD job of auditing.

If Standard Dianetics is used WITH NO DEPARTURE from its technology and procedure the phenomenon will not occur and no pcs experience a physical aftermath.

STANDARD DIANETICS taught precisely, done precisely, only makes people well.

### F/N AND ERASURE

It will be found that when an auditor obtains a floating needle (F/N) on locks without erasing the basic on the chain that the manifestation or somatics may recur in minutes, days or years. For they have only keyed out.

It is sometimes risky to audit past an F/N on the same chain. A Scientology auditor never would audit past an F/N. A Dianetic auditor has to recognize that the pc has only run a lock and ask for an earlier incident.

A floating needle is also obtained by *erasure* of the basic on a chain. *That is* the F/N one wants in Dianetics.

### TONE ARM POSITION

A floating needle is valid only between 2.0 and 3.0 Tone Arm position on a meter. Above or below that Tone Arm reading, the F/N is called an "ARC Break" needle.

A real F/N also carries with it GOOD INDICATORS. A cheerful happy pc.

When the Tone Arm is below 2.0, the incident chain has not been erased.

When the Tone Arm is above 3.0, erasure has not occurred.

When the Tone Arm is up at 4.4 the pc has made it more solid and has not erased the basic on the chain.

On the second time through, if the TA rises, you know there is an earlier incident.

### OVERRUN

The Dianetic Auditor is not concerned with "rehabilitation" of the overrun. In Dianetics it only means the engram chain is in restimulation and has not been erased.

When the basic erases, the TA will fall or rise to the area between 2.0 and 3.0 and the needle will F/N. One *then* stops promptly on that chain. He can reassess and run another chain now.

### COGNITION

COGNITION means a pc origination indicating he has "Come to realize". It's a "What do you know. I....." statement.

Cognitions usually occur immediately after an erasure. They sometimes occur while running the chain. But when they occur with very good indicators the chain is almost always gone.

You can expect the rapid end sequence of (1) Erasure (2) F/N (3) Cognition in a well run Standard Dianetic session.

That's all you really need to know about it in Dianetics.

## CULTURAL LAG

The reason why Dianetics and Scientology were abused or even fought has to do with what is called a “cultural lag”.

This has often occurred in the history of technical developments.

An example is Dr. Semmelweis’s discovery of the cause and cure of childbed fever. For over half a century after that women still died in agony after child-bearing. Eventually the culture caught up to it and the illness which had accounted for a huge percentage of female deaths ceased to exist. Dr. Semmelweis’s discovery of its prevention was “ahead of its time”. Pathetically, scoffed and disbelieved, he even died to prove he was right.

The atomic bomb was wholly feasible more than a decade before it was “developed”. No one credited it and no one put up the cash.

The radio telephone was invented and demonstrated half a century before it was generally used.

Cultural lag occurs for many reasons.

In any field as retarded as the human sciences the emergence of Dianetics and Scientology, full and workable and complete, is startling. And thereby subject to disbelief.

This does not mean they aren’t used and useful.

It is significant that hundreds of aerospace technicians, working with satellites and rocketry, broadly used Scientology first. At the same time parliaments in some socially backward countries were busy passing laws against Scientology to protect their psychiatrists whose medieval approach was to seize people without any process of law and castrate them and saw out brains as a “cure” for mental illness.

In a world where governments are fighting to dominate men’s minds, mental technology is needed to protect the individual and to prevent the enslavement of all.

So Dianetics and Scientology may be a century ahead of their times but still they are just in time before we all go up in smoke.

Dianetics was the first practical workable easily taught science of the mind. It has endured already 19 years and is better and more used than ever before.

**DIRTY NEEDLE**

A “dirty needle” indicates that a pc has withholds or is ARC Broken.

When a pc is to be audited on Dianetics as a student or org pc he/she usually goes to the Examiner after a Dn C/S I (training pc) is done.

If a DIRTY NEEDLE (ragged, jerky, ticking needle, not sweeping) is seen by the Examiner or the auditor the pc should have a Scientology Review before Dianetic auditing is begun with an order for “GF and pull all withholds”.

**TRS AND DIRTY NEEDLES**

When a student’s pc develops a dirty needle (dn) it is caused by one of three things.

1. The student’s TRs are bad.
2. The student is breaking the Auditor’s Code.
3. The pc has withholds (w/hs) he does not wish known.

The remedy for TRs is to have the student do them in clay, showing the lines and actions of each TR. And to do more TRs with a fellow student.

The remedy for Code Breaks is to have the student define and do Invalidation and Evaluation in clay. And to list examples of possible upsets caused by each line of the Code.

The remedy for the pc with withholds is to send to a Scientology Review Auditor as Scientology can handle outnesses which occur in Dianetic sessions.

It is a safe rule in any event when a “dirty needle” occurs to send the preclear to a Scientology Review Auditor.

It is also a safe rule to assume that the student whose pcs get dirty needles is deficient on TRs and the Auditor’s Code.

## ERASURE

Now and then a pc does not understand that he is supposed to be erasing a PICTURE and only goes far enough to erase the somatic. Auditor says, "Is *it* erasing?" Pc can't feel somatic so he says, "It's gone." Auditor puzzled by no F/N but buys it.

What you want to know as an auditor is "Is the *picture* erasing?" You can use that line to check, but not habitually.

-----

Erasure depends in some measure on the pc getting to the BEGINNING of the incident. Sometimes the pc keeps starting a bit late in the incident and so does NOT get an erasure.

If you assess an item like "Dizziness after an operation" and try to run it the pc will bog utterly as the whole operation precedes the somatic called for and not only won't erase but also won't show as a picture.

Trying to run a somatic like "my mother's hitting me" is a narrative incident not a somatic. It won't erase because you can't go earlier on the somatic as it's not named. There's probably a whole chain on "a stinging face" and chains are connected by somatic, not narrative or the same people or incident type. FEELING makes the chain. Only chains of feelings (pains, sensations, misemotions, etc) uniformly go down to a basic that will erase.

**DRUG AND ALCOHOL CASES**  
***PRIOR ASSESSING***

Those cases which have been long and habitually on drugs and alcohol sometimes suffer from a "SOMATIC SHUT-OFF". They appear anaesthetized (unfeeling) and sometimes have "nothing troubling them" whereas they are on drugs, drink and are in reality in a suppressed physical condition and cannot cease to take drugs or drink.

One can find, in such a case, a very high TA which doesn't seem to reduce. The TA can be brought down by auditing the drug and alcohol engrams as a chain.

However, there is another approach.

Any such case took up drugs or alcohol because of unwanted pain or sensation or misemotion. You can use that as a stable datum which resolves the situation.

All it requires is a special assessment called a PRIOR ASSESSMENT. For the person looked on drugs or alcohol as a cure for unwanted feelings. One has to assess what was wrong *before* or prior to the cure.

You determine if the person is on drugs or alcohol habitually. If so you determine which was earlier.

Now you ask for and list the pains, sensations, emotions or feelings he or she had before taking drugs or alcohol.

In doing this assessment, you must grab the read and mark it plainly as it occurs. If you just list and then go over the list the person may be back in present time and, as these are now cut off by the masses of drug or alcohol engrams on top of them, they won't read again. So you must catch the read as the person first mentions it.

You choose the longest read and find and run the chain by R-3R as in any other Standard Dianetic auditing.

The only difference is the assessment time period. You are listing for a time before they went on drugs or alcohol.

The running out of the chain of unwanted feelings they had before going on drugs or alcohol removes the reason they started taking drugs, smoking marijuana or drinking. The compulsion to still use drugs or drink is lessened and they can come off it.

This can also be used as a working rule to get earlier than any "curative" activity. Almost anything which comes later is a cure for something earlier. It could be said that the present time being is a compound of past cures. To handle, the action would be the same as for drugs or alcohol. List the unwanted pains or feelings before the cure and run the longest reads by R-3R.

As there will be more than one chain involved, you of course take your next longest read and run that next, just as in any assessment.

The general term for this type of assessment is PRIOR Assessing, not because it is done before auditing but to determine what the pc was suffering from before he used a harmful "cure".

**HEALTH FORM, USE OF  
A BRIEF DESCRIPTION OF AUDITING**

As one needs a guide to know what to audit on a case, the Dianetic Health Form is an essential auditing action.

Also, some cases do not know they have recovered.

It is Scientology that addresses improved awareness, not Dianetics. Dianetics accomplishes an eradication of the unwanted condition and when it is gone it is gone. The pc will not again mention it in many cases and it would be an error to hammer him about being better now.

*Therefore* a second Health Form gives a comparison. The somatics and pains not mentioned in the second which were in the first can be considered to be gone.

A second form done later gives the auditor and (when a Case Supervisor is also on the case) the Case Supervisor an indication of the actual improvement. A few days, weeks or months can elapse between giving the form. This gives an indication of improvement. Any number of Health Forms can be given.

One of the old problems of Dianetics was that the pc recovered from his arthritis fully and then only nagged the auditor about a new symptom. It wasn't that the pc *had* to have an illness (only the 19th Century psychologist believed that it was no use to cure anything as the patient just got something else). The fact is that the symptoms of the pc are *several*, not just one.

You take up and audit *each* symptom or complaint to erasure of its picture, one after the other.

This is a new advance in Dianetics—that a preclear's illness or upset has more than one source. His illness or upset is a *composite*.

You audit the most available symptom first until the picture causing it is erased. Then find the next one and audit it to erasure of its picture, then the next, etc.

The symptom which has the longest read and also in which the pc is interested is the one to do first. You run its chain to erasure of basic and it vanishes.

Then do the one which has the longest read (omitting the first from the list) and in which he is interested and run its secondary or engram or chain to erasure.

Now find the next symptom, etc.

Sooner or later the pc will have a well, healthy body, health, stability and a sense of well-being.

One finds "an incident which could have caused that", dates it loosely, runs it as an incident without pushing hard, gets an earlier similar incident and runs that, or even

a third or fourth earlier similar (each time earlier) incident until a floating needle or the pc indicates the PICTURE IS GONE (has erased).

Then one finds out what may now be bothering the pc by new assessment and does the same action on it.

You can expect each chain to end with GOOD INDICATORS, pc smiling and happy. It is not all done in one session.

You only end a session really when the pc is smiling and happy after an erasure of the basic picture on the chain.

Sooner or later the pc will become bright, happy, symptom free, stable and has a well body. Then one shifts the preclear off into Scientology auditing to bring about maximum intelligence and ability. Symptoms are pains, emotional feelings, tiredness, aches, pressures, sensations, unwanted states of the body, etc.

If you are auditing without a meter, you take the pc's *interest* as the indicator. You audit the symptom in which he is interested and cease to audit it when it is gone. This however is very chancy and often fails, so an E-Meter is recommended.

You can use whatever is given on the original Health Form that was done until the form is no longer valid or until the pc's good indicators are in. When the pc brightens up, that's the end of the Health Form. A new one must be done WHEN THE PC IS AGAIN FEELING BAD, TIRED OR WORRIED.

The purpose of any session or series of sessions is to get the pc feeling well and happy.

Sometimes the pc's condition is obvious and the engram equally obvious. The pc has just had a child. The delivery of it and any earlier similar engram is of course audited at once. Any recent experience is so handled.

If a pc wants no auditing and yet is ill or miserable, one finds out *why* he doesn't want to be audited by getting him to explain (when he will become auditable) or one finds and runs as secondaries, engrams or chains bad experiences with treatment. The best answer to a difficult pc is to send him or her for a Scientology Review and *then* begin Dianetics.

If the pc doesn't recover at all, then the Auditor's Code has been violated or the engrams were overrun or not run long enough to erase or the pc was very ill medically and should have had a medical examination first.

But even with poor auditing it is rare for a pc not to recover.

Of course, the more skilled (follows the Auditor's Code, knows his meter, knows his Dianetics) the Auditor is, the more certain recovery becomes.

The worst crime is overwhelming the pc by telling him what's wrong, not letting him tell you.

The Health Form is of very great assistance in handling all this. The use of it is as follows:

1. The Auditor sits down with the pc (usually the pc on a meter) and explains he's going to do a Health Form and try to help the pc.
2. The Form is completed.
3. The Auditor picks out by meter or by asking the pc which symptom he has his attention on.

4. The Auditor finds an incident that had that symptom in it, dates it and runs it as an incident as per R-3-R.
5. The incident picture (and symptom) erases or the auditor finds an earlier similar incident, etc until the pictures and symptoms are gone.
6. A new symptom is located on the Health Form by meter and its chain is erased. Each chain erased should leave the pc cheerful if not completely well.
7. Steps 4 and 5 are repeated.
8. A new symptom is located on the Health Form or by pc's complaint.
9. Steps 4 and 5 are repeated.
10. We go on doing this until the pc is suddenly well, smiling and happy and at that moment we at once desist.
11. We tell the pc that is the end of the session.

Note: If several sessions were required to do the above we start each new one by telling the pc it's started and end each session by telling the pc the session is ended.

Each session is written down as it is done and preserved for future correction or use.

The basic Health Form is available from orgs. Individual copies are made out for each pc and left in his case folder when handled.

**PASTORAL COUNSELLING  
HEALTH FORM**

Revised 22 July 1969

(Part of HCO Bulletin 19 May 1969)

This form is done by an auditor. It is metered.

Don't try to handle items as the PC gives them unless an item BDs and the PC is interested. Otherwise assess after it is done. It also should be reassessed for additional items to run.

If the PC gives you a medical term (e.g. Migraine Headache) as an illness, write it down in the first column then ask PC what the somatic is (e.g. Pain in Head), write that down in the second column and note beside it any read. There is no rote command. Get somatics (not incidents) that can be assessed and run.

If the PC gives you a *somatic* don't then ask for the feeling of it. Just write it down in the second column with its read and carry on down the list. If the PC gives several somatics in response to one illness, write down each as a separate somatic. Assess only the second column. Do not assess multiple somatics (i.e. several somatics as one item) and do not assess items that are not somatics. Do not assess narrative items. Do not accept or assess considerations.

Remember that an illness has more than one somatic to be audited out before it is wholly gone.

Persons medically ill should be sent for medical exam.

Cross those off that have been run until form is completely handled.

The end product of this form is entirely to pick out what to audit.

**KEEPING DIANETICS WORKING IN AN AREA**

In that any Dianetics Course, starting out, has only its Course Supervisor trained, the problems of what is used for Case Supervision and Cramming Supervisor in Qual will arise.

Here more than any other points, alteration can enter.

Altering, doing something else, is a sufficiently serious problem to destroy a Course and all the benefits of Dianetics in a whole area.

Early on, during the development of the Standard Dianetics Course, we were suddenly getting case failures. These were traced by Case Supervision to wild variations from Standard Dianetic procedure. These variations were traced to an examiner who during student checkouts was giving "advice". As soon as this was handled, case gains immediately resumed.

Over the many years of Dianetic use, I think we must have seen all possible variations of auditing. "New" phenomena were often discovered and used and eventually the whole subject wandered off into never-never land and ceased to produce uniform results.

What has happened here in Standard Dianetics is that the exact actions that produce results on all cases have been isolated and used as THE procedure.

The procedure is a thin narrow walkway through a huge field of potential alterations.

**THERE ARE NO DIFFERENT CASES.**

Built in to the Standard Dianetic procedure are the remedies.

For instance early Dianetics was plagued by several problems:

1. Lack of visio—an inability to see pictures. This was solved by getting date and duration.
2. Perception shut-off. Not required in total now to produce results. Sonic, ability to hear the sound in pictures, is not needed at all. Impression is sufficient.
3. Somatic shut-off. Not now required to be solved but its source (drugs and alcohol) has been discovered.
4. Rough sessions. Solved by TRs.
5. Lack of auditor judgement in diagnosis. Solved by the E-Meter.

In these years of research I have been able to wrap up these and other things.

There have been more cases run on Dianetics than could easily be counted. So the research data is very broad. This is no new subject. It has been close to 39 years under research.

Thus what you are told on the Standard Dianetics Course is the essence of all this

work and experience. There are no unsolved problems, there is only varied application where there should not be.

The whole object of the course is to train people to get good RESULTS, and train people to give a course that results in GOOD AUDITORS. That's the whole thing.

We could also teach over 50,000,000 words about things that *don't* get results or train auditors.

The essence of a brilliant subject is a simple subject.

Therefore anything that varies the data of a Standard Dianetics Course can send it out into unworkability.

I've seen auditors also use "peyote" (a drug), CO2 and drugs "to help auditing". I've seen many different meter types used. I've looked over a thousand different ways to run a session. And I've seen all these things fail.

The four points of greatest potential failure are

1. A Course Supervisor who interprets data and alters it in order to satisfy some student's offbeat quest.
2. An Examiner who throws curves into data by means of invalidating the right data.
3. A Case Supervisor who does not simply and only put the auditor back onto the main line and who seeks to "solve" cases by altering data.
4. An Auditor who, not knowing his data in the first place, alters the data and, because in an altered form he fails, starts off on a wilder alteration of data and fails harder.

Under Supervisor come the Course and Cramming Supervisor both.

So you see, that to get real Standard Dianetic results going in an area you have to be *very* alert to hold the exact data line as contained in the HCO Bs.

Where you begin to find case failures, look to 1 to 4 above and to student failure to just simply study and drill.

For the first time you have an exact subject in the field of the "humanities". These "humanities" for all man's history have been a mass of superstition, bad logic, propaganda, authority and brutality. An *exact* humanity is so new that it has a bit of a hard time. All the errors and prejudices start to "blow off" when truth enters in.

Just be sure you don't lose the subject with the confusion.

Cope, make do, hold the line and you'll have a successful Dianetic area. It's worth working toward, worth achieving.

You have only one big stable datum.

IF IT ISN'T WORKING IT IS BEING VARIED.

To get it working again, find who and what is varying it and get back on the main line.

## ASSESSMENT

In all the years of auditing, listing and assessing anything has been a weak spot in general auditing.

More goofy alterations can occur and more errors in this activity than any other.

In Standard Dianetics if you assess the wrong item or a wrongly worded item the case won't run, the TA goes up or the TA goes down. *HIGH* TA (above 3.5) is a lot of mass coming in. *LOW* TA (below 2) is overwhelm.

Bad TRs can cause low TA as the auditor is overwhelming the pc. Too many times through without going earlier is the usual cause of these 4.5 to 5.5 TAs.

But both high and low TA are in some degree caused by not quite right assessment.

Pictures going off (pc gets a black or invisible field) is also caused by a wrong assessment.

The whole subject of assessment means PICK OUT THE THING THAT WILL RUN. That's all one is trying to do.

As I have never had the faintest trouble listing and assessing anything or even finding the right somatic with no meter at all, it is hard for me to advise how to correct MISASSESSMENT or assessment errors. It just evades my reality. The whole subject is too easy. Just too awful easy.

So my belief is that students try to put too much into it. They try to get a pat-phrased question to ask like "What is the feeling?"

They stare (TR 0) at the pc when they should be looking at the meter. Try TR 0 on the meter!

An old operating definition of ASSESSMENT is:

ASSESSMENT IS DONE BY THE AUDITOR BETWEEN THE PC'S BANK AND THE METER. THERE IS NO NEED IN ASSESSING TO LOOK AT THE PC. JUST NOTE WHICH ITEM HAS THE LONGEST FALL OR BD. THE AUDITOR LOOKS AT THE METER WHILE DOING AN ASSESSMENT.

A clue to this is the continual misuse of the Azimuth meter. I keep finding them with paper pasted behind the dial. This shows they aren't used right. One bends the stand peg to get it out of the way, and writes by looking at his pen through the glass. Then he never misses a read as the meter is between him and the item he is writing.

One is assessing for PAINS, SENSATIONS, UNWANTED EMOTIONS, ACHES. It can get so far out that the pc is made to say only feelings like "a going in feeling" and never even mention a pain.

There are so many signs and indicators that it is a wrong item when it is that I can't see how it could be missed. On a wrong item the pc has bad indicators, the meter doesn't read, there is no pc interest. Wow. It's as obvious as a sinking ship.

On a right item the meter reads well when the pc says it, the pc's good indicators come in somewhat when it's announced, the pc is very interested in running it. It's about as obvious as sky rockets.

So just given these two descriptions of the reaction to a wrong item and a right item I should think anybody could tell them.

Rote procedure gets heavily in the road of a Dianetic assessment. The pc gives a list, the auditor doesn't watch the reads and note them, then the auditor commonly goes back to assess the list. By that time the charge is off. He should have watched the meter in the first place and taken that. Why all this assessing of the finished list. Of course when you already have a list done by another with no reads marked on it, you have to read it off and mark what reads. And using a list a second time you have to read it off to the pc to see what reads.

When a student demands a rote procedure for Dianetic assessment he is asking for trouble and is trying not to understand.

If the student simply understood that he was trying to find an item that read well, brought in moderate GIs and in which the pc was interested and which was usefully worded and which would run, he would have it made.

I get the feeling that Scientology listing gets all mixed up on a Dianetic Course. There *are* precision Scientology listing and nulling actions which must *not* be violated. These have NOTHING to do with Dianetics. Nothing!

A Standard Dianetics list can be so sloppily done it's hard to believe. BUT the auditor has to watch the meter and be sure he has one with the pc's interest, worded so as to run into an engram chain.

I've seen an incredibly botched up job as finding a somatic done this way. Pc listed, needle and TA all over the dial. Auditor picked out four somatics. Wrote them down and called them off. None read. The auditor then said the pc couldn't be audited on Dianetics and should be sent for Scientology. *Who is kidding who?* The somatics read like mad. There was even one with a LFBD. Yet the auditor had to go into some goofy rote procedure or ritual and by it "discover" there were no somatics.

The errors in this operation of finding a somatic can be so corny and so idiotic that I have to assume the auditor doesn't know or understand what he's trying to do and doesn't even look at the meter while he does it.

Honest, this action of finding the somatic to run is SO easy to do that only over-complication can block it.

The auditor wants to know what aches, pains, bad feelings, misemotions the pc complains of and out of these takes the one that reads best while the pc is saying it or it is being called off and which brings in the pc's GIs moderately and in which the pc is interested. The somatic MUST read.

Now what's so hard about that?

It requires one looks at his meter when the pc is giving it or it is being talked about.

There are no Scientology listing considerations in it.

Now and then the pc has a discreditable somatic and the auditor has to coax the pc to give all.

Now and then the pc says "My LUMBOSIS" and if you ran that or any medical term you'd only get him in doctors' offices or in hospitals, as it's a medical term, not a somatic.

Evidently the student gets in such a sweat about finding a “right item” that he goes up the spout on good sense.

In Scientology lists there’s only ONE item. On Dianetic lists there can be a dozen, for a Dianetic list isn’t really a list. It isn’t trying to isolate the mental troubles of the pc. A Dianetic list is simply the pc’s physical aches and pains. Golly, people are notorious for discussing their aches and pains. Why is it so hard to find one that reads well on a meter?

Well, you have to watch the meter.

That’s probably the outness. Students are so socially adjusted they keep looking at the pc, maybe even trying to look pleasant rather than trying to read a meter.

I feel, in trying to communicate and teach how to locate what to run, as if I am explaining where the floor is. And the people I’m explaining it to are wondering *how* you look at a floor, what chant you intone while looking at a floor and what mathematical equation you use to make sure it is the floor. It’s that kind of a thing. I say, “There’s the floor. If you stamp on it and it is there you will get a sound.” And guys think, “Well, maybe but how loud a sound and do you use the right foot or the left foot and if that’s the floor I can’t find the ceiling because I have no sextant.”

All I’m trying to tell you is that when you are looking for a somatic in the pc and hit it the meter reads well, the pc has moderate GIs when you tell him what it is you’ve chosen, he is interested and it will run.

And honest to Pete, that’s all there is to it. And if somebody says there’s anything else he’s trying to wreck a whole course and a lot of auditors.

I can’t say it any plainer.

## DIANETICS ITS BACKGROUND

The world before Dianetics had never known a precision mental science.

Man has used mental knowledge in the past mainly for control, politics and propaganda.

The word “psychology” in the popular usage is synonymous with “getting around” somebody.

In the thousands of years before 1950 there were many philosophers and much knowledge was gathered in the field of logic, mathematics, electronics and the material sciences.

However, due to ideologies and political conflicts, little of this prior knowledge was ever applied to the field of the human mind.

The scientific idea of regarding as a truth only that which could be demonstrated with a result was never really applied to the mind.

“Researchers” in this field were not fully trained in mathematics, the scientific method or logic. They were interested mainly in their own private ideas and in political Targets.

As an example, the only “schools” of psychology taught or followed in the West were Russian and East German.

The primary school was that of Ivan Petrovitch Pavlov (1849—1936) a veterinarian. Every school child and university student was required to study Pavlov in one disguise or another. The burden of Pavlov’s work is that man is an animal and only works through “conditioning”. The Western nations overlooked the fact that this work had already destroyed several countries including Czarist Russia, that Stalin had made Pavlov write up his work in the Kremlin in 1928 in order to permit the control of men. Using the mental studies of an enemy is a very dangerous thing to do.

The West at that time was run by only the “very best people” and possibly it pleased them greatly to think that the masses they controlled were only animals after all. That this also made them animals did not occur to them.

Billions of dollars were appropriated by parliaments and congress to subsidize men to “better control” their animals.

These men had no idea of healing anyone or helping anyone. Riots and civil disorder were the only product they achieved.

Dianetics was released straight into the teeth of these heavily subsidized Barons of the Mind with their “it takes 12 years to make a psychiatrist” and “authority states” and “any effort to interrupt this monopoly must be stamped out at once”.

Psychology and psychiatry were *state* (government) subjects, pushed by the “very best people”.

They could not make their way on their own because they were contrary to the public morals and customs. The public actually wanted *nothing* to do with them.

In mental institutions torture, permanent damage and death were the order of the day, on the basis that it did not matter if one killed people as they were just animals anyway.

So the public was on the side of Dianetics (and later Scientology) and the governments were on the side of the “very best people”.

Press, controlled by governments and intelligence services and the “very best people”, lied endlessly about Dianetics (and Scientology).

Dianetics, a new valid mental science, was pitted against Russian and Eastern European teachings.

Dianetics is not only the first mental science developed in the West, it is the first mental science on the planet that uniformly produces beneficial results.

Man is being subjected to fantastic and violent efforts to lure or crush him into docility. This is the obvious end product of Russian and Eastern European technologies now heavily financed and supported, unwittingly, by Western governments.

Man’s response to this is riots and civil disorder in the universities, unions and streets. Man does not accurately trace the source of his oppression. He is violently worried.

The government response has been more millions to psychologists and psychiatrists to develop new means of control and oppression. What has not worked in the past is not likely to work in the present or the future.

Czarist Russia, the entire Balkans, Poland, Germany and many more Eastern European countries have already perished trying to use the work of Pavlov, Wundt and others. The entire West, having “bought” the same governing ideas, is now in turmoil and is perishing in its turn.

Dianetics refuses to be a revolutionary activity. It does not have to be. All it has as a mission is to get itself *applied*.

The basic building block of a society is the individual. From individuals groups are built. And this is the society. No society is better than its basic building blocks.

Men are *not* animals.

Well men are sane men.

Dianetics, if applied to individuals in the society, brings hope, well and sane beings.

These well and sane beings, sent on to Scientology, then become brilliant and very able beings.

We are evolving Man to a higher state.

In this state he can better handle his problems.

We are not trying to overthrow anyone. We are not revolting against anyone. In truth we can even make the fancied “very best people” into actual very best people.

Dianetics was first conceived in 1930 and the developments of 39 years have gone into producing Standard Dianetics.

*Dianetics: The Original Thesis* was published in 1949 in manuscript form. It was copied in various ways, hand to hand across the world. *Dianetics: The Evolution of a Science* was published in late 1949. *Dianetics: The Modern Science of Mental Health* was published May 9, 1950 and has since sold millions of copies.

In the early '50s new discoveries concerning the spirit brought us into Scientology.

But Dianetics was never lost sight of and every little while I would push it further ahead toward a fast, easy, 100% workability.

The present release of Standard Dianetics is a near final product.

If done exactly, it produces good, permanent results in only a few hours of auditing.

One can train a Dianetic auditor in Standard Dianetics in from 10 days to a month at the most, with an average of about 2 weeks.

These are very, very worthwhile advances and *Standard Dianetics* is almost as great a breakthrough in 1969 as the *Original Thesis* in 1949. Hundreds of thousands of hours of search and research have gone into it.

Dianetics has progressed from the pre-Dianetic period of *no* science of the mind, to the existence of a real *science* of the mind, to a fast accurate science simpler than any other scientific subject and of more value to Man.

All this advance has been very hardly won, without government billions, in the teeth of avalanches of lies and opposition.

The subject owes no allegiance to anyone but itself. It has no commitments to anyone. It has no politics. It belongs to those who use it.

It is the only game in the universe where everyone wins.

Let's keep it that way.

## AUDITING OUT SESSIONS NARRATIVE VERSUS SOMATIC CHAINS

Now and then it is necessary to audit out the last session or an auditing session.

One does this by R-3-R but there is a slight change in wording when asking the pc to go earlier. One asks for an EARLIER SIMILAR INCIDENT. "Is there an earlier similar incident?" A session, when audited, does not always erase. Instead it has become part of a chain. Therefore one has to run R-3-R on it and get an earlier similar *incident*.

The chain may go back vast amounts of time.

Whereas the pc may only have been in Scientology 3 days, before Scientology there were other types of "sessions" such as psychoanalysis. And before that, in Rome and Greece, dream therapy in which one was "visited by a God". And before that—well, the chain can have a very far back basic. One does not of course suggest ever what the earlier incident may be. There is no telling what the pc may confuse with a session.

If one asked the pc to "locate an earlier incident with a similar feeling" one would be on another chain entirely. Hence one asks, simply, "Is there an earlier similar incident?" when running a session out.

Running a session out has the liability that one is running a NARRATIVE CHAIN, a similar *experience* rather than a similar somatic.

One of the major 1969 breakthroughs was that chains are held together mainly by somatics. The body condition or somatic is what keeps the chain in association.

One can of course run "narrative incidents" by which one means similar EXPERIENCES. "Locate an earlier time your mother spanked you." "Locate an earlier wreck." These will run and sometimes even get to and erase a basic. BUT they are LONG and sometimes don't ever get to basic at all and the chain may not erase. Running only narrative incidents is what made early Dianetics run up such fabulous numbers of hours in processing.

Somatic chains go quickly to basic and are the important chains.

Thus when we erase a chain of sessions we sometimes run into a very long chain. Sometimes the TA goes up to 4 or 5 (particularly if the auditor grinds). Using a wrong go-earlier command is a primary reason for trouble.

Usually if you ask simply for an earlier similar incident the pc goes back to something that will erase and the chain blows.

But remember, asking for similar types of *experience* can cause trouble in that it gets very long and basic may not appear for some time.

You can get away with running out sessions in most cases, enough to make it a worthwhile action. But only if you ask for "an earlier similar incident". This phrase is a workhorse phrase of auditing anyway.

The *best* thing to do is goof no assessments or sessions in the first place.

HCO BULLETIN OF 24 MAY 1969

Dian Checksheet

### THE DIFFICULT CASE

Dianetic Course Supervisors can expect up to 20 percent threatened course failures because of "case failures" meaning the student's own case.

If a student has no gains himself he is unlikely to be able to audit well.

In HGCs, given Standard Dianetic Auditing, anything up to 25% of the pcs will not resolve on Standard Dianetics alone.

The reason for this is that in Standard Dianetics one audits without "Rudiments". Thus you get the pc coming in with life ARC Breaks, Present Time Problems and Missed Withholds.

The answer is to send the preclear to a Scientology Review for a "Green Form" (GF).

If the person comes back to Standard Dianetic Auditing and still has a hard time of it or gives the auditor a hard time or gets sick, send the person back to a Scientology Review with this instruction:

"Give Green Form to F/N and then assess No. 40 GF and handle."

The Class VIII will take it from there.

This should reduce course failures and HGC case failures down to the very small percentage of those who are there for other reasons than learning or receiving auditing.

Thus, unless the *cases* are handled these percentages of 20% and 25% may occur.

Students don't have cases. But failed students do.

### OT CASES

Handling the OT Case can be very tricky. Any one of these can give the auditor trouble. But it is usually nothing much to handle unless the OT is what we call a "False III". This is somebody who gaily went up the grades without doing them. You don't have to know more about it than that.

Thus if a person who is OT is giving trouble being audited on Dianetics it's better to turn him or her over to a Class VIII for routine handling on Scientology.

Any OT who has somatics is auditable on Dianetics which he should have had in the first place as he was using Scn grades to get rid of his headache! Or some somatic.

If the "OT" isn't auditable on Dianetics then he's a problem for a Class VIII and not a very tough one either.

To the HDG this is not very complex.

Audit the "OT" on Standard Dianetics. If it works okay just carry on until he's rid of his somatics and turn him over to Qual when he's okay.

If it doesn't work, then cease Dianetics and turn him over to Qual who will get the thing straight by the usual Class VIII remedies.

That's all you have to know about OTs in Dianetics.

Dian Checksheet

## DIANETIC HIGH CRIMES

Aside from Auditor's Code violations there are only four high crimes a Dianetic auditor can commit:

1. Cease to audit suddenly with the pc down the track somewhere.
2. Make a sudden evaluative remark in the middle of the session.
3. React or comment adversely on what the pc is running such as being critical of the pc for having such an incident.
4. Force a pc to go on when he doesn't want to.

These mess up pcs quite badly and give them a great deal of trouble afterwards.

Over the years these four actions have been observed being done from time to time by persons trying to audit in Dianetics. They are just as bad in Scientology but oddly, I don't recall them being done in Scientology, only Dianetics.

Example of 1: Auditor fails to give next command or any further commands and leaves pc hanging.

Example of 2: "Are you really interested in this session or not?"

Example of 3: "That was a horrible thing to do."

Example of 4: "Go ahead. Get into it," after pc has asked to stop.

There are countless variations of these. In I the pc volunteers it's all sort of unreal in the incident so the auditor, instead of TR 4, just ends session.

These are very bad things to do. They don't kill anybody. But they surely make pcs less auditable.

### HIGH TA ASSESSMENT

When a pc has a high TA (4.0 or above) after having one or more sessions, it is OBVIOUS THAT THE EARLIER CHAINS FOUND WERE NOT ERASED.

What makes a TA *high*? A TA, in Dianetics, is high ONLY for one reason. One or more engram chains are IN RESTIMULATION.

A high TA equals mental energy mass.

Engrams have mass in them even when they are pictures. The figures in -the picture, the scenery, the picture have mass.

It is electrical mass.

It registers as a TA above 3.

To say that the TA is 3.3 and the picture was erased is silly. That .3 is indicating that part of the mass is still there.

This is often also true above 2.0.

When the meter needle is not floating the TA is registering *mass*. Mental mass.

So when you see a TA going up, up, up you know the picture isn't erasing but is getting more SOLID.

The solidness is visible right on the TA dial.

So to ask for a rerun when you've already ground and ground and the TA has been up up up is silly.

The meter is already telling you there is an earlier incident as the one the pc is in is getting more solid and is not erasing.

To assess a pc who has a high TA is a GOOF. One should be asking what chain in an earlier session was not flattened. And flatten it. And if that doesn't work, send the pc to Review for a "GF40 and handle".\*

In Scientology a high TA means "overrun". The Dianetic auditor however doing Dianetics does not "rehab" the F/N. He is handling why the TA does go high. Mental mass consisting of pictures. A Scientology overrun goes by an F/N. In the F/N movement the mass moved away. It didn't erase. If you keep on running the same action the mass moves in again. The Scientology auditor recovers the moment it moved off by "rehabbing the point of release". The Dianetic auditor in doing Dianetics finds the incomplete chain, carries it to basic and gets it GONE forever.

### LOW TA

A low TA (below 2) means the pc is overwhelmed and has retreated.

[\* This paragraph was deleted when this HCO B was reissued and amended as HCO B 22 July 1969, Issue II, *High TA Assessment*, page 418.]

If you chop up a pc with bad TRs you may see his TA go below 2.

Also some incidents force a pc below 2, but when they are erased the TA comes back up to F/N.

If you think you have had an erasure but the TA is below 2 at the time of F/N, then you haven't erased any chain.

#### EXCEPTION

A discharged meter or one with its trim set incorrectly (2.0 = 2.0) or a faulty meter or electrodes will give the auditor or examiner wrong reads.

One should check his meter before session for full charge and get the pc to squeeze the cans to see if he is registering on the meter.

*Urgent*

**THE VIII's NIGHTMARE**

The most awful thing I think that can happen to a Class VIII Case Supervisor is to have to try to do his job with no competent Review Auditor.

The lack of a Review Auditor ends the trail. If the HGC squirrels and then Review goofs up too and there's no good auditor in Review to catch that, an VIII Case Supervisor feels licked.

Therefore the proper procedure is to take up the case with himself as auditor, straighten it out.

And demand someone is sent to an VIII Course to be trained.

Now a new mess can occur if the person sent to the VIII Course comes back and can't audit either.

The thing to do *then is* for the senior VIII in the org to ALWAYS EXAMINE A RETURNING VIII GRADUATE AND IF HE/SHE FLUNKS telex the Second Deputy Commodore Pacific (AOLA) and send the "graduate" back to the AO for retraining and file a job endangerment chit on the AO Class VIII Supervisor via his Commanding Officer of that AO.

This is the one line that must not break down.

Misteaching Tech in such a way as to fail to provide the orgs with competent auditors is the only way I know of to destroy orgs.

We must keep Standard Tech Standard and well done.

## HOW NOT TO ERASE

There are two extremes a Dianetic student can go to on the subject of erasure.

A. He can grind and grind and grind (ABCD, ABCD, ABCD, ABCD, on and on) with the TA going up up and never once tell the pc to go earlier.

B. He can watch the TA come down to between 2 and 3 and go loose on the last incident run, ask the pc "erase or solid" get a non-committal answer and send the pc earlier. He can keep sending the pc earlier and earlier on another chain without ever noticing he's finished the first chain.

These are the two extreme cases. In Case A it is OBVIOUS from TA rise that the chain has an earlier incident. In Case B it is obvious from the TA that the chain erased.

In A the student is preventing the pc from going earlier when he should.

In B the student is forcing the pc to go earlier when he shouldn't.

In both cases the student hasn't a clue of what an engram chain is.

It is marvelous how students demand "the exact phrase" to use as an effort to avoid having to really understand what he is doing in auditing.

If a student hasn't a clue about what he is doing then a thousand goofy outnesses will keep cropping up, each one requiring (a Supervisor thinks) a special instruction. After a while you get a course text weighing one ton, and all because the student didn't grab the basic definitions in the first place.

A student who will do either A or B above has not grasped that an engram chain is held in place by the basic for that chain and that basic is the FIRST TIME and that the clue to erasure is unburdening down to first time and erasing first time and that all picture chains are there because the first time is there.

The student assumes one *always* asks "solid or erasing". Or that one always does only what the pc says. Or some such consideration.

I would damned well never ask "solid or erasing" if I saw the TA start to climb. I would know the TA measured mental mass and that it was accumulating and wouldn't erase. I'd just ask for an earlier incident.

Honest, it's awful easy.

A very odd outness a student will encounter when he is so dedicated to the exact words is the fast pc who erases before he can tell about it. Along about no. 3 of R3R the TA blows down and the needle F/Ns.

A student who knew his business by understanding would ask, "Did it erase?" of course. The pc would say, "It vanished," and VGIs would come in.

A fast running pc on a light chain can occasionally blow an engram by inspection.

If it was basic for that chain, one would be committing the crime described in B above. The pc is likely to go into another chain or a heavy protest.

So you see, there's no substitution for actually *understanding* what's going on.

There's the pc, there's the bank, there's the meter needle, there's the meter tone arm and there's the auditor, there's the procedure, there's the report. That's all the parts there are to a session.

When one *understands* each one, one can audit. When one doesn't understand some part of any of the above, he will require unusual solutions.

Anything truly powerful is truly simple.

So a student who goofs is being complex and hasn't understood something about one of the major parts named above.

I just saw a goofed-up session that went like this:

PC: It (the engram) happened every day for three days.

AUDITOR: ABCD.

Flunk. The auditor was so deficient in knowing about chains and first time that he didn't tell the pc to go to the first day's engram but let the poor pc flounder in day 3 ! And so the chain did not erase and the pc hung up in it.

If the rule of First time is really understood, one would realize a lot of things, even that the pc was beginning an incident half way through it and hadn't begun to run the beginning of it so of course, no erasure. If this happened on basic ..... "There's no earlier incident" (TA high).

"Does the one we're running start earlier?"

"Hey, yes it does."

"Move to the new beginning of the incident....."

Yoicks, an erasure!

This is no invitation to depart from procedure. It's an invitation to see procedure as an *action*, very precise, capable of being understood and done, not a rote chant.

I'm *sure* some students are ex-medicine men who did their spells with exactly worded chants. It's time they understood the brew in the pot !

That's the procedure—not do the commands rhyme!

**DIANETICS AND RESULTS**  
**DIANETIC COUNSELING GROUPS**

The isolated practitioner who hung out his shingle, and sought its work all alone would have to be a "one-man band".

Let us list the basic essential "hats" he would have to wear.

Reception  
Registrar  
Cashier  
Ethics Officer  
Examiner  
Case Supervisor  
Auditor  
Review Auditor  
Public Relations Officer

If successful he would spend about 5 hours a day auditing, 2 hours eating and 8 hours sleeping. This leaves 9 hours in which to do the remaining "hats".

Of necessity one or more would be neglected. On that point he would tend to cave in as a "one-man band".

It takes about 2 Admin personnel to keep a tech personnel going.

Even a group of auditors, trying to make lots of money, usually try to do nothing but audit. It is not that they have case failures. It is that they fail to wear the essential hats.

The best auditing results are obtained from teamwork.

A Review Auditor has to be a trained Scientologist. Lack of one means a roughed-up pc has to be sent to the nearest org.

But there is no reason one cannot work as part of a group, even if the others are only part-timers.

The best solution to all this is to form a DIANETIC COUNSELING GROUP and get the essential posts on the org board held. Then the advances and gains the group makes will be advances that are stable.

This group would of course have to have liaison with a competent Medical Doctor or Clinic.

In the United States especially, the COUNSELORS would have to be ministers.

A Dianetic auditor would be able to audit all day even if the whole group only worked evenings.

Let's face it. The auditor auditing alone will have case failures. He won't have

time to pick them up. He won't be able to get them to Qual. After a while he will have losses and some failed cases that muddy up his neighborhood just as other professions get.

Psychiatry and psychology failed as single practitioners not only because they had no real tech but because they tried to work alone. This turned them toward governments which then used them only to control populations and there went whatever tech they might have developed.

The single practitioner theory in Dianetics failed badly as an early Dianetics practice. Auditors that made it only attached themselves to the rich. Others became drifters.

The answer, we have found out long since, is the group.

The full hats, organization and activities and how they interrelate are available to Dianetic Counseling Groups. It is a wide area of interesting development all by itself. We had to know org basics to make orgs.

A Dianetic Counseling Group can be enfranchised and made regular and helped. It will tend to stabilize any practice area. And it will MINIMIZE case failures.

The official position of orgs is that they cannot take responsibility for the results obtained by single practitioners.

Auditing is a team activity.

Even if one were a medical doctor or a psychiatrist or psychologist, it would be best to have on hand or on call the rest of the team or at least a Dianetic Counseling Group even if one were not an integral part of it.

The purpose of auditing is healthy sane people.

The largest percentage are very grateful and very happy.

And then there are the few who, through misconducted lives, are quite a handful to say the least.

Realism requires that auditing be a group action.

As such a group can also teach a course, it is not difficult to recruit able people to help.

I recall in particular two pathetic cases of singlism. One was a psychoanalyst who learned how to be an auditor and had to stop using Dianetics as it cleaned up all his practice and he had so much trouble finding "patients". The other was an auditor who found himself with the whole of a war vessel's crew as pcs and no help in sight.

In either case forming a Dianetic Counseling Group, getting them checked out on their "hats" and doing their duties even part-time would have solved all.

One stick won't burn. One auditor cannot in truth live and work alone.

## PREDICTION AND CONSEQUENCES

Probably the reason omissions of omission and commission are done at all lies in Man's inability or faulty ability to predict and to realize consequences.

Men are rather thoroughly stuck in the present and so involved with its confusions that they rarely foresee anything and are mainly oblivious to any consequences of their own actions or failures to act.

This gives them the appearance of being stupid.

When men become too confused to even stay in the present they slide into the past and become "psychotic" or, at best, "neurotic".

The Russian psychologist Pavlov was acceptable in Western Universities and governments mainly because he dealt only in stimulus and response mechanisms. Men in universities and governments and other places from which it is difficult to view life (since the situations are so lofty) took psychology and psychiatry at face value. Men were animals one trained like dancing bears. In other words these subjects were political subjects aimed at *control*. There was no thought of *healing* anything. "Treatment" meant, not heal or cure, but *train* by punishing "bad" characteristics. It is interesting that neither subject ever listed any *good* characteristics. A typical "treatment" was to punish with electric shock a "bad habit". They would give an alcoholic a taste of liquor and shock him so that he would feel the shock each time he thought of liquor.

This is the Russian Pavlov at work in all American mental practice prior to Dianetics and Scientology. Needless to say a great many people were injured for life but no one was cured of anything.

The psychiatrist and psychologist who did these things were themselves of a criminal temperament and widely boasted they could not tell right from wrong. The ability to tell right from wrong is the legal definition of sanity.

The reason domineering politicians in government supported the psychologist and psychiatrist with billions in funds and helped them destroy any potential rival was that certain types in government conceive it their duty to control populations. In their view populations were merely a herd of animals to be managed and kept from committing anti-social acts as well as milked for tax money or slaughtered.

By making a totally confusing and violent environment and stripping the country of any constitutional safeguards the security of the individual was undermined to a point where he had to be continually alert to immediate threat in his environment.

This tended to pin people in close to present time. It inhibited any future, planning for the future or any long distance consequences in the future.

Thus Russian mental "treatment" imported into the West actually did prevent the people from being able to predict—as they were continuously battered by government.

Thus crime rose to a fantastic level. The citizen, pinned into insecurity in the present by outrageous economic, governmental and social duress, became much less able to predict and therefore became oblivious of the consequences of his own acts.

Most “criminal” types are completely unable to predict and thus have no fear of any consequences even when they are obvious to a more sane person.

The case that is very bad off therefore does not register on a meter. Having no awareness of good or evil due to his low case condition there is no apparent charge on overt acts of omission or commission, regardless of who has been hurt.

Man is basically good.

When his level of awareness rises he begins to be able to predict and see the consequences to himself or others of evil actions.

The more he is freed and the higher his intelligence and ability rise the more “moral” he becomes.

Only when he is beaten down below awareness as a chronic condition does Man commit evil actions.

It is not for nothing that soldiers have to be brutalized and stuck in the present by threat and duress to make them commit harmful actions.

When a person’s awareness is improved he is also able to predict and can foresee consequences on the eight dynamics.

Criminal governments and brutalizing societies are poor things to have around, they are not “clever” enough to forecast their own demise. They engage in cold or hot wars instead of working out their problems. They buy Pavlov and dog technology to crush “bad traits” rather than cure and heal anyone. They work to decrease all liberty or abolish constitutional safeguards.

True Sanity is that condition wherein one is sufficiently intelligent to solve his problems without physical violence or destroying other beings and yet survive happily and prosperously.

The road from insanity to sanity is a road of recognition of the world around one, the future, and consequences of one’s own actions.

Thus the principle of the overt motivator sequence will be found to explain and its techniques remedy the brutality into which races fall.

**MATERIALS, SCARCITY OF**

A hidden outness and training slower downer is materials, scarcity of.

A whole course can be wrecked by lack of study materials.

Speed of Training was a major 1969 breakthrough. It takes only 2 weeks to a month to make a competent Dianetic auditor using Standard Dianetics. This can be greatly retarded by study material scarcity.

The best way to handle this is to have plenty of study packs, books and clay.

Another way to handle it is to break the checksheet down into parts A, B, C and D and issue different sections of it to a broad new course. It does not greatly matter which one the student does first.

Material scarcity tends to equalize itself when a course enrolls every day. You gradually get a spread-out of materials.

In past years study materials have been a continuing problem. All possible is being done to make this easier. But as Dianetics expands it will probably never cease to be a problem. It is a point which requires thought and attention on the part of every group, org, Course Supervisors and Administrators.

**F/N**

It is possible to get a floating needle and Very Good Indicators while simply spotting or dating an engram.

This does not often happen. But when it does happen it *occasionally* also causes trouble if the F/N is by-passed.

The criterion is to let the pc have his win.

A pc who gets

1. An F/N
2. A Cognition, and
3. Very Good Indicators

on an incident or chain has

- A. Keyed it out (still there but not keyed in) or
- B. Erased it by inspection or
- C. Erased it by running the chain.

C is the case in by far the greatest percentage of pcs and sessions.

B is so rare that you won't find it except on clears or persons who are nearly clear.

A (key-out) is rather common.

The auditor's problem is to tell which it is. Really it isn't much of a problem.

Almost all of the time C is the case. One just does Standard Dianetics—list, assessment, R3R, and you eventually get an erasure of the basic of the chain, with an F/N, VGIs and a cognition.

When a key-out occurs, you can get an F/N, GIs and possibly a cognition BUT THE INCIDENT THE PC WAS RUNNING HAD NO IMPACT OR INJURY IN IT. You *can* by-pass the F/N in Dianetics in this case and complete the chain. If you just leave it at that no damage is done BUT THE PC MAY KEY IN AGAIN EVEN BEFORE HE/SHE GETS TO THE EXAMINER. Even the somatic may come back. If so, just finish the chain. There's no real damage done. But if it WAS an engram (contained pain and unconsciousness) and it erased and the auditor got an F/N, VGIs and a Cognition and tried to force the pc to go earlier you can get a very upset pc who has to be sent to Review for a Green Form.

When you get the very rare pc who, well advanced, actually blows an engram by inspection you will know it. Such a pc already audits very fast—hard to keep up admin-and is clear or near clear. The somatic, the lot simply goes. If you try to push the pc into running it, some sort of fire-fight may occur, a thing to be avoided.

If judgement of all this seems difficult, there's a safe rule: "Let the pc have his win".

And remember that a win consists of

1. An F/N
2. A Cognition and
3. VGIs.

-----

The main liability of pushing a pc past a win is that he may "jump chains" and begin on another chain with no assessment. This gets him into trouble.

If, in A above, you left it as a keyed-out lock, the pc will simply get the same symptoms again sooner or later.

-----

You are dealing with an exact activity in Standard Dianetics. It has no "special cases" or "exceptions". The procedure is the procedure and it is the procedure that gets the wins.

This matter of key-out or erasure is the only area of the subject where judgement comes into play. And even that can be shirked by letting the pc have his or her win.

C/S

**HOW TO CASE SUPERVISE  
DIANETICS FOLDERS**

It is very easy to Case Supervise a Dianetics Folder and pcs being handled by Dianetics.

One does the following:

On any new pc a Dianetics C/S 1 is ordered. If this was successful (almost always is) a Dianetics C/S 2 is ordered.

If this is successful one does DIANETICS C/S 3 which consists of "Reassess for longest read. If an item is found which also has pc's interest, R3R. If no item, add to list, take longest read. R3R."

The other C/Ses are those which call for Prior Assessment to drugs, alcohol or inability to get out of this lifetime, the remedy for pictures in past sessions and those C/Ses (which are actually Class VIII) that send the pc to review.

There is very little to Dianetic C/S work.

The Case Supervisor MUST be a Hubbard Dianetic Counsellor. There is no substitute for that. One who isn't would hopelessly snarl up real HDCs or HDGs or students aspiring to those certs.

The Dianetic C/S should really be an HDG *and* a Class VIII. Even so he has to keep these techs completely separate.

One NEVER asks a Dianetic auditor in a Dianetic session to do anything except Standard Dianetics. There are *no* other actions.

The C/S, in correcting an auditor, should do it positively and refer to the Dianetic HCO B. Negative criticism, I have found, undermines auditors. One can as easily say the same thing in a positive way. Instead of, "You broke the Auditor's Code," one can as easily say, "Pcs must be rested before session. See Auditor's Code."

Only in Scientology does one run triple engrams, secondaries and locks.

One NEVER gets inventive in doing a Dianetic C/S. It is all very straightforward.

The C/S point of view in Dianetic C/Sing is that one is trying to get Standard Dianetics done. One isn't, in Dianetics C/S, torturously laboring to solve some difficult case.

Therefore there are only four possible actions for a Dianetics C/S to take:

- A. THE CASE THAT MAKES GAINS IS GIVEN MORE DIANETICS.
- B. THE CASE THAT HAS HAD ALL POSSIBLE DIANETIC GAIN (and that is considerable, ranging from 10 to 50 hours or more) IS SENT ON TO SCIENTOLOGY.

- C. THE CASE THAT MAKES NO GAIN DUE TO CASE “ODDITY” IS SENT TO A SCIENTOLOGY REVIEW.
- D. THE SESSION THAT IS NON-STANDARD IN AUDITING REQUIRES THE PC BE SENT TO SCIENTOLOGY REVIEW.

It is the fantastic fact that the pc will ONLY get Dianetic wins when receiving Standard Dianetics. Non-Standardness only once in a hundred will give a case gain and that is a fluke. The Case Supervisor must have good subjective and objective reality on this fact. *He* must therefore be the ultimate in dictatorial martinet precision in requiring *standard* auditing and assigning standard C/Ses.

There are two types of cases only that come up.

1. The case as in A above who just goes on getting wins.
2. The case (who in life is usually chronically ill even if “up and about”) that requires a C/S to play adept Scientology Reviews against Dianetic auditing. Such a case is “solved” by now being sent to Review, now being sent to Dianetics, back and forth.

In D above, the pc who gets a non-standard session and is bogged at the Examiner’s is simply given a Scientology Green Form to F/N. He/she is then returned to Dianetic auditing. This is a very usual, easy action.

In C above, the “oddy” case is easily recognizable in the folder. The oddity consists mainly of getting Dianetic auditing, getting sick. Or in getting auditing but not being able to follow good standard commands.

Such a case also has a history of being ill. This case also can’t make any real headway in study and messes up pcs as an auditor and can’t seem to do standard auditing.

This C case, at first glance, seems to be hopelessly difficult and invites many to squirrel.

The case is more prevalent than one would think. It runs as high as 50% of voluntary pcs.

It could run much higher in the wog world. One spots the case ONLY BY THE CASE’S REACTION TO GOOD Dianetic Auditing, not by any opinion or test.

But this case isn’t any real challenge to the C/S or Scientology Review Auditor.

Underlying all this illness and inability to concentrate or study or audit or hold case gains there is a heavily burdened chain that makes things seem very different than they are.

There is no trick to resolving the C case.

The C/S, having seen that the person roller-coasters after Dianetic Auditing, or can’t study or can’t audit, orders the person to Review for:

“GF to F/N” “Assess No. 40 GF and handle.”

The Scientology auditor in Review does this. No. 40 GF is the “7 Resistive Cases”.

When the Scientology auditor has done *the* item found, the C/S then picks the next in line on the No. 40 GF list, then the next and, if any, the next and orders these handled too. This assessment list usually finds “one in”. But in addition to /// there were others that read ///X, //X and /X. THESE ARE ALSO HANDLED. All by

Standard Tech of course. And in dwindling order of reads.

Then the C/S sends the pc back to Dianetic Auditing for routine assessments and R3R.

It is a saddening event to a C/S when the Scientology Review Auditor lets him down. So an accomplished Class VIII on that Review Spot is worth his weight in blessings. Lucky is the C/S who has a fine Class VIII. When he doesn't have he orders only one action done between C/Ses and watches like a hawk. Reviewing Reviews is a horrible waste of time, even though it has to be done when necessary.

This C type pc will now sail along for a while in Dianetics. But don't be amazed to have the pc roller-coaster *again*.

When the C type pc does you simply order again a Scientology Review and GF to F/N and No. 40 GF and handle. And it will all come out differently this time. And then the pc is sent back for more Dianetics.

This is what is meant by interplaying Dianetics with Scientology Reviews for a C type case.

You will just be *amazed* at the eventual result in the pc. Really a cracked case, man !

Very sick pcs are sent directly to a medico of course. And Dianetic auditing is given along with medical treatment to get the pc off stuck points. This is all covered in HCOBs on Medical uses of Dianetics and includes touch assists.

The "insane" pc is given absolute rest, a secure environment and any needful medical treatment (but never shock or surgery of the brain or nerves, of course, since that's only depersonalization treatment).

When in better physical health the "insane" pc is given just routine Standard Dianetics. But the sessions must be flubless and thoroughly within the Auditor's Code as the "insane" can't stand up to any goofs or overwhelm.

These "insane" pcs are most often simple cases of medically ill people—gallstones, malnutrition, deficiencies in certain vitamins, broken backs—the usual.

To undertake to *audit* an "insane" pc to sanity without complete attention to the above paragraphs is adventurous in our experience. But with these things given attention, the "insane" pc often responds amazingly. But do not be surprised to find that the "insane" pc turns into a C type as he comes up the scale.

The main trouble with the "insane" is that too many people around them are completely devoted to making them even more insane and they almost never respond to any treatment, medical or Dianetic, while kept in their same environment associating with the same people.

Also we could say that "Hell hath no fury to match that of a cured psychotic's associates". Usually the real crazy one is an associate, not the "insane" one.

#### C/S PROCEDURE

In doing a C/S on a Dianetic folder, I usually inspect the following in the following order:

1. The Examiner's Report to see if the pc thought it was okay and if the Examiner's TA, needle and Indicator observation is all right.
2. The pre-session C/S to see what was previously ordered done.

3. The session to see if the C/S was done.
4. The 1, 2, 3, 4, 5, 6, 7, 8, 9 sequence and ABCD to see if it is Standard. I seldom read text if the session was okay at Examiner's unless the session did not go well.
5. The F/N, Cog and GIs or VGIs at chain and session ends.

If all that is okay I give it a "well done".

If it isn't all okay I look for the 1, 2, 3, etc that was not followed by an ABCD but by a new 1, 2, 3, 4, etc instead.

I try to find where the session went off Standard and point out the Standard actions that should have been done.

If the pc came out of it okay, I order more Dianetic auditing.

If the pc didn't, I send the pc to Review.

If it had lots of ABCDs and ground to a high TA session end I check to see if the auditor asked for an earlier beginning.

If the Dianetics folder is getting fat and the session was unsuccessful I look for a possible C type pc and handle accordingly.

If the pc is reported ill, I order medical, an assist and treat the pc thereafter as a C type.

The *value* of a C/S whether Dianetic or Scientology depends on his unflinching adherence to Standard actions.

A C/S that dreams things up to try to "solve a case" by squirrel processes is worse than no Case Supervisor at all.

The gain of cases depends on the Standard, unswerving adherence to Standard Dianetics, to C/Sing in complete standardness and a Scientology Review auditor who really is a flawless Standard Tech man.

The result is the result of a TEAM. To that team one *also* adds the Admin team of the rest of the group doing *their* jobs.

Given all that, one can straighten up whole population areas and activities and get the job done on the goal lines of Well and Happy Human Beings and a Well and Happy Society both with greatly increased survival potential.

C/Sing is a happy job itself. And blessed is a C/S who has good standard HDCs and good Review auditors on his lines and a good HDG making new good HDCs and a good AO somewhere making good new VIIIs, all backed with orgs whose staffs know their Org Exec Course and policy.

The C/S's job only becomes unhappy and impossible when the auditors are non-standard or the Admin people never heard of lines or policy and he himself departs from the straight and narrow of Standard Dianetics and Standard Tech.

The purpose of Dianetics can be accomplished smoothly and easily only if the above are taken into account.

These C/S data are as thoroughly researched in practical application as tech itself and are derived from hard won practical experience.

Case Supervisors

**URGENT—IMPORTANT**

I have made a breakthrough in auditor training which eliminates failed auditors and failed sessions and gives us 100% training success and 100% on Dianetic sessions.

In C/Sing hundreds of Dianetics sessions I found that the auditor's reports on failed sessions did not include any reason for the failure. In researching this I found that only certain auditors were failing. Thus, it was not a technical failure but an auditor failure. These folders must therefore contain false reports or no reports on what had happened.

For all that I could see, as the Case Supervisor, New Dianetics tech was failing on some cases.

Further investigation disclosed that things had gone on in those sessions which were non-standard but not reported.

In developing this I discovered the golden rule:

**WHEN YOU HAVE A FAILED SESSION YOU ASK THE PC WHAT THE AUDITOR DID.**

In this way you discover an amazing array of flagrant outnesses. With these you can retrain the auditor and he or she will then win every time.

We have compiled a large array of samples of outnesses found, any one of which would have made a session fail or cause a Dianetics student not to obtain results.

The variety can be infinite in number but the chief one is

**FAILING TO GIVE THE  
NEXT COMMAND.**

The new auditor does not realize how serious it is to flub a command.

The pc is "down the track" and not in present time. He looks like he is there. When he fails to get the next command or gets a wrong command he becomes alarmed, comes into Present Time as best he can and the auditor loses control.

Anytime a pc is made to wait, whether by a wrong command or no command or an auditor writing too much on his work sheet, a Dianetic session crashes.

The TA may go up or down, the chain messes up and the session fails.

Other additives or outnesses mess things up. An auditor instead of auditing talking about other pcs or his own case, an auditor halting to look up a word for himself, a thousand such actions can, any one, wreck a session.

Auditing is very fast and very exact.

It is a business-like activity.

It is a technical preciseness.

When that is violated one gets failed sessions.

An auditor-student may think he knows his commands. When he is auditing a doll he can do it. When confronted by a live pc, he needs to know the commands so well that pc randomness does not throw him off the right command.

I therefore developed four new Dianetic TRs. They are TR 101, 102, 103 and 104.

When a student fails to get a good result we (1) ask the pc what he did, (2) send the student back to training, (3) send the pc to Review for a Green Form to F/N and No. 40 GF and handle all reading No. 40 GF items, (4) send the student to Review for a GF to F/N and a No. 40 GF and handle all reads and three-way Failed Help, three-way Help brackets, (5) get the student corrected on what we learned he- did wrong from the pc and (6) get the student drilled on TRs 101, 102, 103 and 104.

We tolerate no flubbed sessions.

If a pc suffers because of a flub, we boost him way up with Review as a case.

If a student flubs we handle him as a case and retrain.

All this has been subjected to a lot of research and proof.

And what do you know! We get 100% training wins and 100% Dianetic session.

No failed auditors, no failed pcs.

Planet, here we come!

### DIANETICS AND ILLNESS

Although mention of this is made elsewhere in the Dianetics Course, the facts about ILLNESS do not seem, in practice, to reach the Case Supervisors or Dianetic Auditors.

The idea that one can always get rid of an illness by auditing ONE chain to basic is false. Man dreams about “one-shot” cures to a point where he could be accused of being impotent!

Here is an example: A preclear “has always wanted to get his bronchitis handled”. In Dianetics a list is made for chest or lung pains or sensations. *One* is chosen and erased. The “bronchitis” is now better or even absent for a few days. Then we have the preclear back again saying “It didn’t cure my bronchitis”.

Enough cases are handled successfully by running *one* chain on a somatic that people get stuck in the win.

Here is another example: The pc says he has migraine headaches. The auditor assesses a “head pain” quite correctly and then runs out one chain. The migraine does not occur for a week after. Then here’s the pc again saying “I’ve still got a headache”.

All this is invalidative of the tech and the auditing. A Registrar or Public Division hearing this tends to lose faith in the powers of the tech.

The FACT is that the illness was not properly handled or C/Sed or audited.

In the first place a pc trying to get cured of bronchitis or migraine—or any one of a dozen other illnesses—should be sent for a medical examination. How do you know the bronchitis isn’t tuberculosis? Or the migraine headache isn’t a fractured skull?

A “continual side pain” may be a gallstone.

In short, something which continually hurts or disables may be structural or physical.

So, when you omit the first action (medical) in handling an illness, you set up an auditor for a possible failure.

Many of these things can be cured medically without too much heroic action.

If it *is* medical and can be cured medically, then it should be.

Also it should be audited. This lets the medical treatment work. Many “incurable” illnesses become curable medically when they are also audited.

The second thing that gets overlooked is that AN ILLNESS IS A COMPOSITE (composed of many) SOMATIC.

The correct auditing action on “bronchitis” or “chest trouble” or “migraine headache” or any other continual worrisome illness is to continue to find somatics, sensations, feelings, emotions or even attitudes in the area affected and run their chains.

It takes more than one chain of engrams to build up an ill area.

Having found and run the “deflated feeling” of bronchitis, which was the first best read, the C/S should order and the auditor find and run the NEXT somatic, sensation, feeling, emotion or attitude in *that* area.

It is sometimes necessary to add to the list *for that area* of the body.

Seeing a continual or recurring illness on the Health Form the C/S and auditor should dig out of that area every somatic, sensation, feeling, emotion and attitude that can be made to read and run those chains, each one to basic and erasure.

THAT is the way you handle any illness, whether continual or temporary.

The maxim is that IT TAKES MORE THAN ONE CHAIN OF ENGRAMS TO MAKE A BODY ILL.

Continual reassessing and adding to general lists will get there eventually providing it is done long enough. But this general approach will find a certain number of pcs saying to Registrars, Public Officers and friends, “I’ve still got my\_\_\_\_\_”.

It is in fact a false report. They didn’t still have all of it. It is one chain less and therefore better.

But auditing gives gains by *deletion*. A pc does not suffer from what has been erased. He suffers only from that which has not yet been handled.

Some persons tried years ago to get their trouble handled, somebody or some practice failed and after that they don’t mention it at all. They don’t support the technology anymore either.

So, in handling illness, give the handling of the structural disease side of it to the medical doctor, and thoroughly handle *all* the mental side of it with auditing and everyone wins.

Any Registrar or Public Division personnel colliding with “My lumbosis was not handled” should call this HCOB to the attention of the person, the Case Supervisor and the auditors.

Only then can you have 100% tech.

*IMPORTANT*

**AUDITING SPEED**

Almost any failure you have ever had with an auditor or in auditing came from Auditor Comm Lags or errors.

This is a vital datum. It came to light from applying the rule—ask the pc what the auditor did after any failed session and get it corrected in the auditor.

SPEED is the main factor behind the mystery of a failed session.

In AUDITING OTs the speed the auditor must have is far greater than required by just in off the street. This *speed* factor is the real REASON why OTs were at first considered very hard to audit on Dianetics.

All this also applies to VIII auditing and training.

The better an auditor knows his TRs, his processes, his meter and admin the faster he can operate.

If you train auditors only up to slow, comm laggy handling of a session you will get a lot of mysteriously “failed sessions”, ending with the TA high and the pc very low!

A somewhat slow auditor auditing a new pc may be fast enough to get away with it.

Put him on a person whose Dianetics is finished and some grades in, he begins to have a few “case failures”.

Now put him to auditing reviews or Dianetics on a Pre OT and all sessions fail.

The remedy is to speed the auditor up with TRs 101, 102, 103, 104.

In assigning auditors you only dare assign fast ones to Pre OTs.

For 19 years this hidden speed factor has lain behind the vast majority of our “failed sessions”. As it never appeared on the session reports (except as excessive admin for which the pc must have had to wait) anyone doing D of P work or C/S work was in mystery and tended to get desperate and even squirrel (change and invent processes).

The only other source of failure was the physically ill aspect. This has just been verified in a series of over one hundred cases. Dianetics combined with Scientology reviews progressed splendidly on all but about seven and these who were then physically examined thoroughly were found to have serious and current physical illness.

Speed and accuracy then is the stress of all training and the lack of it is the source of all auditing failures on pcs who are not severely ill.

Even the latter respond once their purely physical illness is properly handled.

(REISSUE OF HCO BULLETIN OF  
25 MAY 1969, AMENDED)

**HIGH TA ASSESSMENT**

When a pc has a high TA (4.0 or above) *after* having one or more sessions, it is OBVIOUS THAT THE EARLIER CHAINS FOUND WERE NOT ERASED.

What makes a TA *high*? A TA, in Dianetics, is high ONLY for one reason. One or more engram chains are IN RESTIMULATION.

A high TA equals mental energy mass.

Engrams have mass in them even when they are pictures. The figures in the picture, the scenery, the picture, have mass.

It is electrical mass.

It registers as a TA above 3.

To say that the TA is 3.3 and the picture was erased is silly. That .3 is indicating that part of the mass is still there.

This is often also true above 2.0.

When the meter needle is not floating the TA is registering *mass*. Mental mass.

So when you see a TA going up, up, up you know the picture isn't erasing but is getting more SOLID.

The solidness is visible right on the TA dial.

So to ask for a rerun when you've already ground and ground and the TA has been up up up is silly.

The meter is already telling you there is an earlier incident as the one the pc is in is getting more solid and is not erasing.

In Scientology a high TA means "overrun". The Dianetic auditor however doing Dianetics does not "rehab" the F/N. He is handling why the TA does go high. Mental mass consisting of pictures. A Scientology overrun goes by an F/N. In the F/N movement the mass moved away. It didn't erase. If you keep on running the same action the mass moves in again. The Scientology auditor recovers the moment it moved off by "rehabbing the point of release". The Dianetic auditor in doing Dianetics finds the incomplete chain, carries it to basic and gets it GONE forever.

If the C/S cannot find the incomplete chain by folder inspection he orders "Assess the pictures or masses pc has touched in life or auditing and have been left unflat, get its somatic, Run R3-R".

## LOW TA

A low TA (below 2) means the pc is overwhelmed and has retreated.

If you chop up a pc with bad TRs you may see his TA go below 2.

Also some incidents force a pc below 2. But when they are erased the TA comes back up to F/N.

If you think you have had an erasure but the TA is below 2 at the time of F/N, then you haven't erased any chain.

## EXCEPTION

A discharged meter or one with its trim set incorrectly (2.0 = 2.0) or a faulty meter or electrodes will give the auditor or examiner wrong reads.

One should check his meter before session for full charge and get the pc to squeeze the cans to see if he is registering on the meter.

**AUDITOR ASSIGNMENT POLICIES**

One used to hear auditors complain, “Scientologists are harder to audit than new pcs”. We know the answer to this now. It is Auditor *Speed*. When an auditor complains of this, he is revealing that he is a slow auditor.

Dianetics and Scientology (demonstrated by carefully controlled tests) greatly speed up reaction time. They also increase IQ rapidly and were the reason colleges came off their “IQs never change”.

As a person is audited he becomes quicker mentally. Also he becomes less comm-laggy. Also he is more familiar with technology and his own case and is less afraid of himself and his “bank”.

In assigning auditors to pcs if you do not pay attention to comparable grade levels between auditors and pcs you will have failed sessions.

Therefore it is policy not to assign an auditor whose grade and class is less than that of the pc.

Further, a good auditor deserves a good auditor. To assign a new student to audit a skilled and practised veteran auditor of excellent auditing record is suppressive. The new student or new graduate would probably be intimidated just at the thought of auditing someone who is far more expert—this would magnify his flubs and comm lags.

Therefore it is policy to assign only good proven auditors to good auditors.

It is a suppressive act to assign a new or poor auditor to an auditor who has proven he can attain uniformly good results.

Slow auditors will be found successful auditing slow auditors.

This does not excuse not drilling slow auditors up to becoming fast precision auditors.

Good auditors are valuable. They should be safeguarded, given favours and even pampered.

Slow auditors should be drilled and given slow (new) pcs only until their own case gain brings them, with their drills, higher case gain and thus higher speed.

**SERIOUSLY ILL PCS**

In Green Form No. 40 there is an item:

“Seriously Physically Ill”.

This is handled as follows:

1. Medical Examination
2. Medical care
3. Dianetic Auditing as follows:

List all somatics and feelings connected with the illness.

Assess the list.

Run R3R.

Continue to assess the list and run R3R on items found.

Add to the list any new items connected with the illness.

The main point is to exhaust the entire list, of all reading items.

An illness contains many somatics, feelings, emotions.

As a pc who is ill is easily made an effect, the auditing sessions should be smoothly done and each session relatively short, completing each session on the first erasure that gives the pc an F/N and a win (Erasure, Cognition and F/N).

The remaining items on the GF 40 are then handled.

If “Seriously Physically Ill” is not *THE* GF 40 item, it is still handled but in its turn doing the above Dianetic actions.

Needless to say the item “Seriously Physically Ill” is handled by a Dianetic Auditor.

(NOTE: No narrative or multiple items must be audited. Get them restated.)

## ANTIBIOTICS

A pc on antibiotics *should* be given Dianetic Auditing.

Very often antibiotics do not function unless the illness or injury is also audited.

The basic failures of antibiotics apparently stem from a traumatic condition which prevents the medical treatment from functioning.

When a person is medically treated for an illness, it is best to back up the action with auditing.

Sometimes the patient is too ill to be fully audited. It is difficult to audit someone who is running a temperature. In such a case, let the antibiotics bring the temperature down before auditing. But if the temperature does not come down, in the interest of the patient's recovery, auditing should be done.

It is usually too late when the patient is in a coma. But one can still reach a patient who is unconscious by touching the patient's hand to parts of the bed with "Feel that (object)".

A patient will sometimes respond to commands even when "unconscious" if you tell them to squeeze your hand to acknowledge they have done the command.

Years ago the auditing of unconscious persons was worked out and successfully done.

Needless to say, auditing any sick person requires the most exact, careful auditing, strictly by the Auditor's Code.

## POSTOPERATIVE AUDITING

A person who has been operated on or medically or dentally treated or a mother who has just delivered a child should have the engram audited out *as soon as possible* by Dianetic R3R.

The after-effects of anaesthetics or the presence of drugs or antibiotics is to be neglected.

The usual action is to

1. Get them medical treatment.
2. Audit them as soon as possible on the illness or injury.
3. Audit them again when they are well.
4. Get them a Review if they seem to be showing much later after-effects despite Dianetic auditing.

HEAVY DOSES OF VITAMIN B1, B COMPLEX and C should accompany all such auditing actions.

## SAVING LIVES

All this comes under the heading of saving lives.

At the very least it saves slow recovery and bad after-effects and resultant psychosomatic illnesses.

Dianetics is the first development since the days of Rome that changes and improves the RATE OF HEALING.

Dianetics is also the first development that removes traumatic barriers from the path of healing.

Medicines and endocrine compounds quite often are effective in the presence of Dianetic auditing which were once inexplicably ineffective in many cases. The barrier to healing was the engram. With that removed, healing can occur.

## OBJECTIONS TO USE

Any barriers or objections to using Dianetics to assist the effectiveness of medicine or to increase the rate of or even secure effective recovery place the patient at risk as certainly as failing to use antiseptics.

Such objections can be dismissed as stemming from barbaric or superstitious mentalities or from motives too base to be decent.

It would not be possible to count the number of lives Dianetics saved in the 19 years even before the advent of Standard Dianetics. Few human betterment activities have been so widely successful and so uniformly helpful as Dianetics.

Case Supervisors

**THE “ART” OF CASE SUPERVISION**

One does not in actual fact Case Supervise against results.

Case Supervision is done against the thoroughness and exactness of technical application.

To give an auditor a well done when he has made a technical flub (despite a good result on the pc) is to hang the auditor with a win. The next time he does the same thing he is liable to get a resounding lose.

In looking over folders one C/Ses against Standardness of application. The tech takes care of the rest.

For a long time, auditing was “what you could get away with”. It no longer is. It is the act of holding a standard. Only in that way does one get 100% wins.

In assigning what is to be done with a pc or pre-OT, one seeks to keep the case progressing or winning.

The Case Supervisor’s action is to get the case audited as long as possible! Any impulse to get the case off one’s lines will be a losing one.

Cases progress in exact ratio to the amount of charge gotten off. They do not progress by magic buttons designed just for that case.

The “sudden” big wins are the result of the accumulated effect of getting charge off.

It is of course charge of a certain type and that type is contained in the Case Supervisor’s book, in the mechanics of Dianetics and Scientology.

Early on (using Standard Tech) the *worse* off (more shallow) the case is, the *faster* it F/Ns. The pc is reaching no depth. An example is someone who cannot get into or run past lives. They F/N almost at once on any process. This does not mean they are at once “clear” or released. It means they are like a coiled spring. When you touch them something flies off.

The Case Supervisor on such a case works hard to keep them running Dianetics. The task is finding something to audit, not to complete pcs.

When the Dianetics Grade was missed, people F/Ned their way straight on up to OT VI, still wondering where their headache came from.

This doesn’t mean that in Scientology you by-pass F/Ns. It means that the Case Supervisor prepares the case.

The finance statistic of orgs is assisted by attempts to stretch out auditing and is harmed by fast brush-off “completions”.

The reputation of the org is also harmed because the field fills up with shallowly run partially solved cases.

Tech is so *fast* today that only now can a Case Supervisor work at attempting to prolong a pc in auditing.

The statistic of an HGC should be the number of successful auditing hours delivered, not the number of pcs completed.

Therefore the Case Supervisor is alert to the inability or ability of a pc or pre-OT to go backtrack, to the number of engrams the pc runs per chain before erasure, to the number of commands given before F/N on a Scientology process. And by this he can gauge how arduously the case must be worked on.

For example, on a child, a bruised finger yesterday run as an engram F/Ns. In Scientology any grade command will also F/N on clearing it. End result, no real case improvement.

But if you keep at it and at it and at it, gradually gradually the case runs deeper and deeper into the past and confronts heavier and heavier incidents.

Then, as it goes along, the case runs faster and faster, requiring far more “commands per unit of time in session”.

Finally the case begins to blow by inspection and, ideally, has what is known as a “Clear Cognition”.

Scientology, dealing with the thetan and considerations, is now able to function with total bite.

Power and R6EW really get the pc somewhere.

The Clear and OT sections make him fly.

And you have a real OT.

That is the general Case Supervisor plan.

As the number of hours in actual auditing are now under 50 for audited cases and under another 50 for solo, there is no use at all trying to solve a case fast.

Solve it *standardly*.

The Case Supervisor book gives you a lot of things to do for certain pc characteristics. One tries if possible to do the lot.

Applying the right C/S direction at the right time is only knowing one’s tech.

This is the basic rationale behind C/Sing. It really has no strain. Only poor auditing can mess it up so you police that hard, do the right direction at the right time and let tech do the rest.

### “LX” LISTS

There are now three “LX” Lists:

LX3—Attitudes

LX2—Emotions

LX1—Conditions.

Originally they were called “X” because they were Experimental. They still are to some extent so the X is retained.

These serve to isolate REASONS A BEING IS CHARGED UP TO SUCH an extent that he is OUT OF VALENCE. When a person is out of valence he does not easily as-is his bank.

These lists are assessed down to one item. The item is then run by 3 way recall 3 way engram (or secondary).

### END PHENOMENA

We now have a new discovery. I have found that a person who is out of valence experiences, when run on LX1 lists (and now the others above, LX2 and LX3) and 220H, a remarkable valence shift if he is run on enough items.

In one fashion or another he comments on this in session.

This is the End Phenomena of Out of Valence processes (the LX items and 220H).

It is *always* attained if enough items are run.

Quite ordinary cases are out of valence. If their folder gets too fat you can assume they are out of valence. Perverts, suppressives and critical, snide, ruthless, arrogant or contemptuous personalities are always out of valence. A person who is in treason on the 1st dynamic is always out of valence.

So whether GF No. 40 (h) OUT OF VALENCE reads or not, if the folder is fat, you play safe and assess and run LX items until the person has the Valence Cognition.

Without being coached, a person who is out of valence always has the cognition if he is run on enough items and 220H.

### USE OF LISTS

Today we run everything that reads with 2 or more strikes on an LX List. Just as ANY read on GF No. 40 is handled, so ANY double strike is handled on an LX List.

One does not reassess. One takes *the* item that stayed in, then the items that read next best and so on down to all those that stayed in twice before they went out.

Today you can assume safely that anyone out of valence can be put in valence quietly and efficiently with LX items and 220H if he is audited and if the auditing is standard.

This is quite a worthwhile development as it resolves the heavily overcharged case. A symptom of a heavily charged case is F/Ning too quickly to be processed well.

Using these lists on a pc is not a critical action. Even (and especially) children are too overcharged to be easily audited.

Case Supervisors

**CASE FOLDER ANALYSIS, DIANETICS**

There are only nine things that can go wrong in a Dianetic Session.

These are the only reasons chains do not erase or the session does not complete with Very Good Indicators.

The first eight come under the head of auditing skill or knowledge.

They are listed in order of frequency:

1. Auditor Comm Lag (lack of speed in giving commands).
2. Flubbed Commands in which the commands are used incorrectly.
3. TRs out, either being inaudible or overwhelming or TR 4 not handled.
4. Auditor additives.
5. Failure to call for an earlier beginning of the incident when the pc can find no earlier incident—results in grinding and high TA.
6. Failure to call for an earlier incident when there is one.
7. Demanding pc goes earlier when the last incident was basic, making pc jump into another chain.
8. Misassessment (multiple item or narrative item or both or taking an item that doesn't read or in which pc has no interest).
9. Pc has out rudiments.

-----

Note that the first four are BEYOND THE VIEW OF THE CASE SUPERVISOR.

The largest number of session failures come under these first four. Therefore it is routine for the Case Supervisor to have the pc asked what the Auditor did. It is usually surprising. It will be one of the first four listed above. It requires a retrain.

The next four are also auditor flubs but are detectable if the Case Supervisor reads the worksheets of the session.

Therefore the Case Supervisor must know 5, 6, 7 and 8 above very well indeed and be able to look for them. In all of these the TA goes high or very low and the session ends up as a bust.

You can easily see 5. The pc is still on the same chain but begins to grind ABCD ABCD ABCD ABCD, the TA goes way up or down below 2 and the auditor command "Is there an earlier beginning?" is spectacularly absent. So the C/S tells the next auditor to get the earlier beginning of the same incident and it will F/N, Erase and get VGIs.

6 is very easy for the C/S to spot. The pc has been given ABCD ABCD ABCD ABCD ABCD etc *and* has been asked for an earlier beginning to the same incident but hasn't been asked for an earlier incident. So the C/S tells the next auditor to get an earlier incident.

7 is also easy for a C/S to detect from the worksheet of the session. Before the pc got into another chain by being forced to go earlier below basic, the TA went to a normal range, there may even be a cognition noted. The auditor missed the potential F/N by just not putting the pc through the basic again ABCD. Also the pc protested or had trouble when the auditor tried to go "earlier than basic" and also may mention another somatic.

In 8, Misassessment, you can tell just by looking at the item that it is multiple such as "A burning pain in my hair and a feeling of tension on my hand"; that it is narrative "getting my feet wet" (where's the feeling in that????); or after the fact of the engram "dizziness after a car wreck". A real classic would be "A stomach ache when I was thrown from a horse". The C/S hardly has to look at the end of the session to know it will be no erasure, high or low TA and Bad Indicators at the Examiner.

As auditors who do these last four things have their basic definitions madly out (such as "I never did understand what a somatic was") and as in the first four the approach to the pc, TRs and additives need ironing out, the C/S sends the auditor for retrain.

From the C/S point of view (and fact) the technology applied gets uniform good results. Thus the C/S *never gets reasonable*.

The auditor will on retrain settle down. 100% sessions will occur regularly when he really can audit.

## PC REPAIR

The commonest C/S for a pc after a session that ends with a high TA or a below 2 TA and/or Bad Indicators at Examiner is "To Review, GF to F/N. Assess Auditors Auditing Dianetics Scientology Sessions Reviews Gains (or whatever you care to add), Prepcheck. Review Auditor to (complete chain) (check last incident for earlier beginning and complete chain) (complete 1st chain left incomplete when pc forced into second chain and then complete second chain) (find out what was wrong in session and correct)." Use the one in brackets that applies.

## OUT RUDS

In number 9, we get several manifestations. The pc has a good looking session yet complains to the Examiner. That is to say VGIs F/N Cog at session end, but sour grapes ten minutes later at the Examiner's.

A pc who gets sad at session end and is or has been sad a long time and is sad and moping or despondent is, of course, suffering from an ARC Brk and is being audited over one and probably has had it for long duration. The proper C/S action is "To Review, GF to F/N. Check ARC Brk Long Duration (LD)." This last is done with Itsa earlier Itsa and ARCU CDEI by the auditor.

The pc who is being audited over a PTP won't be making any gains. They quickly evaporate. The C/S orders 'LTO Review. GF to F/N. Check Problems and being audited over problems.'

When a pc is a bit nasty to the auditor or Examiner, he is of course being audited over withholds. The C/S is "To Review. GF to F/N. Then check and pull all withholds and check if the pc has been audited over withholds."

## PHYSICALLY ILL PCS

When a pc is ill or has a history of illness you get him/her medical attention and apply HCO B 24 July 69 which requires listing all somatics, etc in the area and running them all by R3R.

When a pc gets ill after auditing but the sessions look alright, you can be pretty sure that the pc is being audited over out ruds so a C/S orders “To Review. GF to F/N. Assess GF 40 and handle any out ruds found in that assessment first.”

## SPECIAL CASES

There may be some special versions of out ruds but they are all one variety or another of out rud.

The pc himself can generate out ruds by lying to his Dianetic auditor. It still shows up as out ruds, withholds.

One pc (out of a hundred) said uniformly that “it was getting more solid” to escape each incident, got himself into a jump chain situation continually and became very ill indeed. This also operated as a withhold in session. It was not detectable in the worksheets except that the pc became ill. It came out while flying ruds in a Review session.

But generally pcs don’t act up in sessions if the auditing is straightforward and many get better even when audited over all kinds of out ruds.

When a C/S begins to be mystified concerning some pc, why betterment isn’t occurring—why the pc’s manifestations and remarks never change—or the pc becomes ill, then only four things need to be done. And all four should be ordered by the C/S.

1. Medical exam and any treatment.
2. Review to straighten up all out ruds.
3. Dianetic auditing listing all somatics, etc in area and R3R on all those that read.

And when the pc has markedly recovered:

4. Fly a rud, GF 40 and handle every item that reads fully. And whether it reads or not treat the case as Out of Valence and run LX 3, LX 2, LX 1, each item that reads twice 3-way recall, 3-way secondary or engram. You finish up the two or more slash items of LX 3. Then finish LX 2, then LX 1. Somewhere along the line the pc will change markedly before the auditor’s eyes, go into his own valence and that’s as far as you go with LX lists.

The use of GF 40 is not restricted only to sick pcs. One gives any pc whose folder gets the least bit fat the GF 40 routine and assumes he’s out of valence whether it reads or not and then sends the pc back to Dianetics.

## HEALTH FORMS

There is one other flub a bit maddening to a C/S.

When the C/S says “Assess Existing lists or add” and the auditor says no items, it is quite often an auditor flub, a special kind of 8 above—misassessment.

One green auditor took 3 pcs in a row and could find no item, concluding that each of the 3 pcs was done with Dianetics! It turned out that the auditor's TR 1 was so bad the pcs couldn't hear her!

Another auditor didn't have his meter plugged in and another one was found never to have done any meter drills.

Aside from getting the pc asked what the auditor did, which also should be done when it's obvious there should have been an item and wasn't, the C/S should order "Do a new Health Form" when the old list F/Ns or draws a blank even when properly assessed.

The pc can also be sent to the Examiner to be asked if there is anything not handled. The pc may give an area of interest. If there is one, but it hasn't read, the C/S should send the pc to Review for GF to F/N and probably a GF 40 and handle. Then one can get the area asked about in Review and Suppress and Protest put in on it and back to Dianetics.

### EXTERIOR

Some pcs go Exterior and of course are off auditing. This often makes them unhappy as they are not well off yet. There are several VIII remedies for this beyond the scope of this HCO B.

### SUMMARY

I have personally C/Sed a vast number of Standard Dianetic sessions and the above is all I had to do or know to keep them all going well.

If you look for tricky processes in Dianetics to "solve" some case, you will make a bad error as a C/S. They all come under the above data.

Good luck.

**FLYING RUDS**

To clarify how to fly ruds:

If a rud reads, you get the data and then ask for earlier until you get an F/N.

If a rud doesn't read, put in Suppress and recheck. If it gets any comment, natter or protest or bewilderment, put in False and clean it.

To fly all ruds you ask for an ARC Brk, if no read, put in Suppress. If it reads take it, do ARCU CDEI Earlier ARCU CDEI Earlier until you get an F/N. Then do the same with PTP. Then with MW/Hs.

If in starting a rud does *not* read or F/N even if Suppress is put in go to the next rud until you get one that does read. Follow *it* earlier to F/N.

*Then* F/N the 2 that didn't read.

**INCORRECT**

To get a rud reading with or without Suppress and then fail to follow it earlier and to continue to call it and take only reads is incorrect.

**CORRECT**

*If a rud reads you always follow it earlier until it F/Ns.*

You do NOT continue to test it with a meter and do NOT leave it just because it fails to read again.

If a rud reads you clean it with earlier, earlier, earlier to F/N.

If a rud reads and the read is false you clean false.

There are TWO actions possible in flying ruds.

1. The rud is not out. If it didn't read you check suppress. If it read but is in any way protested you clean false.
2. The rud is out. You get the data, you follow it earlier earlier until it F/Ns. You do not continue to check it for reads.

**GREEN FORM**

This applies also to handling ruds on the Green Form.

## ARC BREAK

If there is an ARC Break you get it, use ARCU and CDEI, indicate, then if no F/N you follow it earlier, get ARCU CDEI, indicate, if no F/N you get an earlier one on and on, always with ARCU CDEI until you get an F/N.

## PTP

If you get a PTP you follow it earlier earlier earlier until you get an F/N.

## MISSED WITHHOLD

If you get a withhold you find out WHO missed it, then another and another using Suppress. If protest you put in false. You will find these W/Hs also go earlier like any other chain but they don't have to.

## MIXING METHODS

If you get a rud read and the pc gives you one you don't then check the read again. You get more until you get an F/N.

To get a rud answered and then check suppress and its read is mixing 1 and 2 above.

## FALSE

"Has anyone said you had a .....when you didn't have one?" is the answer to protested ruds.

-----

Any VIII should be able to fly any rud at will. The above clarifies HCOB and Tape data on this subject.

### HANDLING ILLNESS IN SCIENTOLOGY

Sickness is of course the result of engram chains in restimulation.

One has to ask, however, what causes restimulation to occur?

The answer is Out Ruds plus a suppressive environment or situation.

Therefore, obviously, if one wanted to really handle handle handle sickness and do some miracles, one would use the lot of one's weapons.

Don't mistake that Dianetics (HCOB 24 July 1969) can all by itself practically bring the dead to life to all intents and purposes and it can be used all by itself.

However, when that doesn't work completely, then the Class VIII Case Supervisor and well trained Scientology auditors can step in.

Let us examine the basic full dress parade routine of what Scientology and Dianetics could be used.

1. Put in Life Ruds (as given below).
2. 3 S&Ds.
3. All somatics, sensations, emotions and attitudes in or in regard to the sick area listed and handled by DIANETICS (HCOB 24 July 69) (which includes any medical treatment as in that HCOB).
4. A Review that flies a rud and a Scientology auditor runs the second and third flow of each somatic found and run in the Dianetic auditing.

Obviously this illness hasn't a chance at all. It disappears in 1. Or in 2. Or in 3. And there aren't very many that would ever get to 4.

The system is obvious. You take away the current out ruds and the illness can de-stimulate. You take away the suppressions and de-stimulation is more positive.

You erase all the engrams and the source is gone.

You do the second and third flows and the overts and sympathies are also vanished.

On ruds alone you can of course get a recurrence.

You also risk a recurrence on the S & Ds.

The motivators go on the engram chains.

The overts and sympathy for like illness goes on the second and third flows.

#### LIFE RUDS

As the person with Out Ruds makes no real gain it is wise to put ruds in "In life".

This is done with

"In life have you had an ARC Break?"

"In life have you had a Problem?"

"In life have you had a Withhold?"

If the person has had much auditing you ask after each of the “In life” questions, “Was that present in an auditing session?”

### S & Ds

The full parade for three S & Ds (as given in HCOB 19 January 1968 in the Class VIII pack) is as follows:

3 Item S&D:

Fly a rud.  
Assess  
Withdraw From  
Stop  
Unmock  
Suppress  
Invalidate  
Make Nothing of  
Suggest  
Been Careful of  
Fail to Reveal

Take the 3 that read best (null to 3 items). Use the one that read most first.

Test one of these items in these two questions to see which question then reads best.

“Who or What has attempted to .....you?”

“Who or What have you tried to .....?”

List the best reading question by the laws of Listing and Nulling. BE EXACT IN FOLLOWING THOSE LAWS or you’ll make the person even sicker!

Use each of the 3 this way.

Prepcheck any item that does not F/N until it F/Ns or proves not to be the correct one in which event correct the list. If the list item does not F/N on being found and indicated, you prepcheck it to F/N.

### DIANETICS

HCOB of 24 July 69 covers the use of Dianetics in this regard.

### SECOND AND THIRD FLOWS

The running of the 2nd and third flows is covered in VIII materials and in any event is self-evident.

This rundown is what could be known as beating an illness to death.

Handling it medically and spiritually should bring home a winner every time.

This full approach is recommended only when one has encountered a resistive situation.

Very often a Dianetic Assist precedes all this.

Usually the Dianetic handling is done without the ruds or S & Ds.

But when you have somebody whose “lumbosis” has not surrendered to Dianetics, you have this full approach to fall back on.

It’s nice to have a full arsenal.

### STUDY SLOWNESS

If your course is not progressing rapidly for the class, it is highly probable that the training rules and policies laid down in the Course Supervisor's Course (HDG) are not being followed exactly.

If your own progress is too slow to suit you or if even on retrain you do not feel you are making it, consult with your supervisor and specifically ask him to make sure that all his Course Supervisor data is being applied. Slowness could only happen if you are passing over words without understanding them, or if you are letting other students or people interpret data for you rather than taking exactly what it says on the bulletins. Or it may be you do not have your own materials or you need a Scientology Review and what they call a "Remedy A" or a "Remedy B" to clean up the subject of study.

Dianetics and Scientology were entered into a world where the technology of study itself was poor and had to be developed in order to teach a precision subject. The study tech is vital and valid.

In one mass experiment the following, given for illustration here, occurred.

A class of 15 on Dianetics, taught with all Course Supervisor policy fully applied, the students not pre-selected for aptitude, 7 had attained full HDG with all auditing well dones and very well dones in just under three weeks.

The remainder were mixed with a part-time Dianetics class (31/2 hours of study a day) of over a hundred people. In the following three months only two had graduated. Most of the remainder were only on their first time through at the end of three months.

A vigorous survey of this class was made and it was found that all the things given as vital to be done regarding study were not being done and all the things that were not supposed to be done were being done.

A qualified Course Supervisor and staff were placed in charge and the large course began to graduate three a day almost at once.

From this you can see that there is a great deal of value in the Study technology of Dianetics and Scientology.

Do not let your class or yourself get slowed by an out-policy course.

Good luck.

### TRIPLE FLOWS

A being has a minimum of 3 flows. By “flow” is meant a directional thought, energy or action.

The three flows are:

- Inward to oneself
- Outward to another or others
- Crossways, others to others.

VI. There are many more flows possible as have been much more fully covered in Scientology Class

Examples:

Flow 1, to self, Drinking.

Flow 2, self to another or others, pc giving them drinks.

Flow 3, others to others, people giving other people drinks.

Flow 1, to self, being hit on the nose.

Flow 2, self to another, pc hitting somebody else on the nose.

Flow 3, others-others, other people hitting others on the nose.

Item Example using a proper Dn item, a pain in the arm.

Flow 1, to self, receiving a pain in the arm.

Flow 2, to another, pc giving another a pain in the arm.

Flow 3, others-others, other beings giving others a pain in the arm.

Notice that the direction of the flow does NOT change the item. Only the direction changes.

### SINGLE ITEMS

It will be found that a pc can run “single items” for quite a while.

By “single” is meant “to self” Flow 1.

This however eventually can result in a *stuck flow*. This is based on the fact that a flow which runs too long in one direction can “stick”. It will not flow longer in that one direction. It now has to have a reverse flow run.

Thus one can run a single flow item after item. But after *many* items are run as single flows, a pc *can* get stuck and run poorly.

The answer is to run Flows No. 2 and No. 3 on the same items already run in single flow.

One MUST begin with the first item and run each item on Flows No. 2 and No. 3.

Example: One ran the following items on a pc single flow (to self, Flow No. 1).

A sore jaw

Anger

A head pain

A dizzy feeling

The pc seems to be doing all right but it is time to run the triples. So one runs

A sore jaw, Flow No. 2 R3R

A sore jaw, Flow No. 3 R3R

Anger, Flow No. 2 R3R

Anger, Flow No. 3 R3R

A head pain, Flow No. 2 R3R

A head pain, Flow No. 3 R3R

A dizzy feeling, Flow No. 2 R3R  
A dizzy feeling, Flow No. 3 R3R

Now having begun triples, one of course runs all new items assessed in triple form.

Item Flow No. 1 R3R  
Item Flow No. 2 R3R  
Item Flow No. 3 R3R

Each flow run is of course treated as a chain and is carried back to its basic and erasure.

#### SICK PCS

Pcs who do not immediately get well on Single flows must of course be run on the other 2 flows for each item already run.

Pcs who drop back to a sick state during auditing must be run on the other two flows.

In actual practice where a pc does not get well promptly he is given medical care as he was *physically* ill. Then he is given a Scientology Review (Green Form to F/N and any session repair and GF No. 40 and handle fully).

Then HCOB 24 July 69.

And then he is run on triples, putting in Flows No. 2 and No. 3 on all items run so far. Added to this Review can be what is known as Life Ruds and 3 S & Ds. THEN and only then is the pc put back on Dianetics and all items are given Flows No. 2 and No. 3 and is run on triples thereafter.

The above paragraph applies to any sick pc. The sequence of the actions in the above paragraph can be varied. One doesn't just put in triples on the pc to "cure" him. Medical action and Scientology Review and the actions to handle a sick pc must be done. The point for this HCOB is that the pc MUST have all singles now done in triple and that all further items must then be done as triples.

Since only one Command in R3R varies in triples (see Issue II of this HCOB) ANY DIANETIC AUDITOR who has done a Starrated checkout on this HCOB and Issue II of this date CAN DO DIANETIC TRIPLES.

Don't get complex about it such as assessing for a Flow No. 3 or skipping around on a list or asking the pc's permission or for his interest to do No. 2 and No. 3. It's almost impossible to go wrong doing Flows No. 2 and No. 3. There aren't any "special cases".

A Dianetic auditor SHOULD QUALIFY FOR HIS HDC doing SINGLES. There's less chance of getting balled up. Or of pushing a wrong assessment.

Where the pc has been run on a narrative item or a multiple item, skip it for triples.

#### NECESSITY OF TRIPLES

This is absolutely certain about triples: A PC MUST BE RUN ON DIANETIC TRIPLES BEFORE HE CAN BE CALLED A DIANETIC COMPLETION.

When a pc has been called a Dianetic Completion on singles and has done Scn triples and even OT grades HE SHOULD BE RUN ON DIANETIC TRIPLES and can be at any time.

(See Issue II HCOB 5 Oct 69 for Dianetic Triple Commands.)

**DIANETIC TRIPLES**

The additional 2 flows are

Flow No. 2 Locate an Incident of your causing another (item).

Flow No. 3 Locate an Incident of others causing others (item).

Item can be preceded by “a” or “an”.

When singles have been run already, take the earliest single item always. Proceed in order of sequence run doing Flows No. 2 and No. 3 on each. Don't skip any. Don't start later in list. Interest, etc, has nothing to do with it. Just do it.

The remaining R-3-R Commands are used without variation.

**TRIPLE ERRORS IN DIANETICS**

In running triples *after* running single flow on several items, IT CAN BE DIFFICULT IF THE TA IS HIGH AT SESSION START.

The correct thing to do when an auditor starts a session to run Flows 2 and 3 on a single item already run AND FINDS THE PC'S TA IS HIGH (3.5 up) is to send the pc to Review to have his ruds put in.

The TA may not be high on the 2nd or 3rd flow about to be run at session start but on some other chain.

The rule is simple:

WHEN STARTING A SESSION TO RUN FLOWS 2 OR 3 OF A SINGLE ITEM PREVIOUSLY RUN IN AN EARLIER SESSION, SEND THE PC TO REVIEW FOR RUDIMENTS.

In actual practice one can sometimes muddle through and the TA will come down and the needle F/N on the Flow 2 or 3 anyway. BUT THE AUDITOR WILL HAVE TO BE VERY ALERT TO BLOWDOWNS, which indicate a basic has been reached, not overrun it beyond F/N and generally run a flawless session.

**FORCING A PC**

Forcing a pc to go on being audited when the pc is refusing or not wishing to go on upsets the pc and his case and will often result in low TA (below 2) and will give the pc a heavy loss.

There is no excuse for it.

It invalidates the pc's cause.

The correct action is to either find out why he doesn't want to go on or send the pc to a Scientology Review.

**DIANETIC TRIPLES PLURAL ITEM**

The item must be made plural on Flow 3 when one is running Triples, i.e: "Pain in the head", as an item on Flow I and Flow 2, becomes "Pains in their heads" on Flow 3.

**STARTING WITH TRIPLES**

One who is already fully qualified as an HDC or HDG who starts a new pc can start with Triple Flow and run each item thereafter on Triples.

New items assessed on a pc already run on Triples should be run on Triple Flow.

## **DRUGS, ASPIRIN AND TRANQUILIZERS**

I have just made a real breakthrough on the action of painkillers (known as aspirin, tranquilizers, hypnotics, soporifics).

It has never been known in chemistry or medicine exactly how or why these things worked. Such compositions are derived by accidental discoveries that “such and so depresses pain”.

The effects of existing compounds are not uniform in result and often have very bad side effects.

As the *reason* they worked was unknown very little advance has been made in biochemistry. If the reason they worked were known and accepted possibly chemists could develop some actual ones which had minimal side effects.

We will leave the fact that this could be the medical biochemical discovery of the century and let the Nobel prizes continue to go to the inventors of nose-drops and new ways to kill and simply ourselves use it. Biochemical tech is not up to the point at this time that it can utilize it.

Pain or discomfort of a psychosomatic nature comes from Mental Image Pictures. These are created by the thetan or living beings and impinge or press against the body.

By actual clinical test, the actions of aspirin and other pain depressants are to

- A. INHIBIT THE ABILITY OF THE THETAN TO CREATE MENTAL IMAGE PICTURES and also
- B. TO IMPEDE THE ELECTRICAL CONDUCTIVITY OF NERVE CHANNELS.

Both of these facts have a vital effect on processing.

If you process someone who has lately been on drugs, including aspirin, you will not be able to run out the Dianetic engram chains properly because they are not being fully created.

If you process someone immediately after taking aspirin for instance, you probably will not be able to find or assess the somatics that need to be run out to handle the condition. For the next day after taking the aspirin or drug the mental image pictures may not be fully available.

In the case of chronic drug taking, the drugs must be wholly worn off and out of the system and the engrams of drug taking must be run out in their entirety, triple flow. If this is not done, auditing will be trying to handle chains that aren't being fully created by the thetan.

In the case of auditing someone who has taken drugs—*aspirin, etc*—within the last few hours or two or three days, the chains of engrams definitely will be found not fully created and therefore not available.

This would all be fine except for three things:

1. Auditing under these conditions is very difficult. The TA may be high and will not come down. One gets “erasures” at TA 4.0 with an “F/N”. Auditing errors become easy to make. The bank (chains) is jammed.
2. The thetan is rendered STUPID, blank, forgetful, delusive, irresponsible. A thetan gets into a “wooden” sort of state, unfeeling, insensitive, unable and definitely not trustworthy, a menace to his fellows actually.
3. When the drugs wear off or start to wear off the ability to create starts to return and **URNS ON SOMATICS MUCH HARDER**. One of the answers a person has for this is **MORE** drugs. To say nothing of heroin, there are, you know, aspirin addicts. The compulsion stems from a desire to get rid of the somatics and unwanted sensations again. There is also something of dramatization of the engrams already gotten from earlier drug taking. The being gets more and more wooden, requiring more and more quantity and more frequent use.

Sexually it is common for someone on drugs to be very stimulated at first. This is the “procreate before death” impulse as drugs are a poison. But after the original sexual “kicks” the stimulation of sexual sensation becomes harder and harder to achieve. The effort to achieve it becomes obsessive while it itself is less and less satisfying.

The cycle of drug restimulation of pictures (or creation in general) can be at first to increase creation and then eventually to inhibit it totally.

If one were working on this biochemically the least harmful pain depressant would be one that inhibited the creation of mental image pictures with minimal resulting “woodenness” or stupidity and which was body soluble so that it passed rapidly out of the nerves and system. There are no such biochemical preparations at this time.

-----

These tests and experiments tend to prove that the majority of pain and discomfort does come from mental image pictures and that these are immediately created.

Erasure of a mental image picture by Standard Dianetic processing removes the compulsion to create it.

Drugs chemically inhibit the creation but inhibit as well the erasure. When the drug has worn off the picture audited while it was in force can return.

The E-Meter Tone Arm under drugs or on a drug case can go very high—TA 4.0 TA 5.0. It can also be dropped to “dead thetan” (a false clear read).

Auditing a person on drugs can obtain an “erasure” and “F/N” at TA 4.0. But the erasure is only apparent and must be “rehabbed” (verified or redone) when the person is off drugs.

Any habitual drug taker applying for auditing while still on drugs should be given a six weeks “drying out” period, off drugs this whole time, and then the drug taking (by somatic or sensation of drugs or prior assessment to drugs—preferably both) must be run out as an early auditing action.

A person who has taken aspirin or other drugs within the past 24 hours or the past week, should be given a week to “dry out” before auditing of any kind is given.

-----

It is not fatal to audit over drugs. It is just difficult, the results may not be lasting and need to be verified afterwards.

Chronic drug takers who have not had drugs specifically handled may go back to drugs after auditing as they were too drugged during auditing to get rid of what was bothering them and which drove them to drugs.

With the enemies of various countries using widespread drug addiction as a defeatist mechanism, with painkillers so easily available and so ineffective, drugs is a serious auditing problem.

It can be handled. But when aspirin, that innocent seeming painkiller, can produce havoc in auditing if not detected, the subject needs care and knowledge.

The above data will keep the auditor clear of the pitfalls of this hazard.

To paraphrase an old quote, we used to have iron men and wooden ships. We now have a drug society and wooden citizens.

I've been studying this for over a year and a half and have made the breakthrough.

Drug companies would be advised to do better research.

And auditors are advised to ask any pc, "Have you been taking any drugs or aspirin?"

The medical aspect is an understandable wish to handle pain. Doctors should press for better drugs to do this that do not have such lamentable side effects. The formula of least harmfulness is above.

*IMPORTANT AND URGENT*

**CASE SUPERVISION AUDITING AND RESULTS**

The whole “secret” of producing high case gain and total results with Dianetic and Scientology auditing lies in the following:

**DIANETIC RESULTS**

When an auditor can produce exact auditing on Dianetics you know he can audit.

Dianetics is a very simple, precise procedure. The *major* errors are

- (a) misassessment (inability to use a meter usually but out TRs can do it)
- (b) taking narrative somatics and running them
- (c) forcing a pc toward “earlier incident” when it required “earlier beginning” making the pc jump chains
- (d) fumbling commands
- (e) out TRs.

An auditor’s poor TRs and corny errors such as above will prevent Dianetic results.

But the Standard Dianetic auditing is so simple THAT IT DEMONSTRATES CLEANLY WHETHER THE *PERSON* CAN AUDIT OR NOT.

This is not true of Scientology auditing particularly VI, VII and VIII. Here the procedure is more complex. The errors of the auditor are obscured in the possibility of a wrong C/S or a complex pc. Thus whether the auditor can audit or not, just as an auditor, is obscured.

Thus, with the auditor as a variable factor, the tech can look variable.

Therefore you can lay down this rule as truth and it will be truth until the end of time:

If a IV, V, VI, VII or VIII cannot produce invariably excellent results his basic auditing is deficient but obscured by the complexity of material.

Therefore it is vital that an auditor be a proven result-getting Standard Dianetic auditor before any result can be expected of him in his/her Scientology auditing.

We have now had several dark mysteries cleared up on this subject with many examples. For instance one auditor who had been thought a competent VI and had

been “auditing” for years was found to be getting too many failed pcs; he was trained up as a Standard Dianetic auditor and on his first sessions it was found that he could not produce Standard Dianetic results; he was vigorously groomed on his TRs which were wildly out and always had been and made to do the very exact business-like procedure of Standard Dianetics. He then got excellent Standard Dianetic results session after session on his pc and could be designated as a very good Dianetic auditor. He was briefly retreaded on his Scientology materials and at once could get terrific results with upper level Scientology.

From this we can state without any fear of contradiction by your future experience that:

An VIII who is not a proven Standard Dianetic auditor as well is not dependable as an auditor no matter who trained him.

The practice of loosely certifying HDCs without total proof that they get excellent uniform session results on Dianetic pcs can foul up the whole field and jeopardize the entire auditing future of the student. To certify an HDC who doesn't get provenly excellent Standard Dianetic results is an act of treason against all that person's future pcs and all the rest of us.

If tech is “out” in an area it will be because some of the auditors, whatever their class, are not capable of delivering simple Standard Dianetic sessions, regardless of the level at which they are auditing. And out tech will be compounded if the Case Supervisor is not *also* an excellent HDC for he won't know the errors for which to look.

When you can really dig this and know it and get it in practice the bulk of out tech and “failed pcs” in an area will vanish.

I know it is sometimes hard to achieve a simplicity as simple as Standard Dianetics but when it is done, tech worries from there on up are over.

*IMPORTANT*

**CASE SUPERVISION, HOW IT GOES NON-STANDARD**

Probably the No. 1 lesson that has to be learned by a Case Supervisor without any wiggles or doubts or derails is that he can be (and must not be) driven off standard tech by false auditing reports.

At least half the failed sessions he gets are false reports!

The auditor has not noted some of the things he did or he has noted things that did not happen.

The person who falsifies an auditing report usually is the same person who gets bad results. Naturally.

The report is usually not knowingly false. It does not include the data as to why the session failed.

This leaves the Case Supervisor with an impression that standard tech was done but that it failed. That sends him into a figure-figure and proposing unusual solutions. This gets him into reviewing reviews, long hours of C/Sing, backlogs and an area muddled up by “failed cases”.

A Case Supervisor has to know his Standard Tech forwards and backwards.

In a correct auditing report of a failed session the answer as to why it failed is neon light big and glaring. So the Case Supervisor corrects it and corrects the auditor.

But that is only true of about half the failed sessions the Case Supervisor gets. **THE OTHER HALF OF THE FAILED SESSIONS ARE FALSE REPORTS.**

Instead of going the route and first getting inventive and then damning tech and taking up Yoga, the Case Supervisor **MUST** realize:

1. That if he himself doesn't know his Dianetics and Scientology cold, he will certainly never be able to spot errors in its application.
2. That standard tech—Dianetics and Scientology—are invariable in results and that the only variables are the Case Supervisor and the auditor.
3. That there are no “different” pcs.
4. That 50% of the failed sessions are also false reports if you can't find in the folder why the session failed.
5. That if you can't find in the folder why the session failed or the pc isn't doing well you get the pc asked about the session and get *data* as to why it failed. (The answers and outnesses will amaze you.)

6. That when the above fully dawn on a Case Supervisor he becomes totally successful.

There is a sort of breakthrough a Case Supervisor makes, a sort of crisis he passes through where the above points suddenly become glaringly clear to him. After that he is a hard-eyed, uncompromising precisionist that nothing gets by and whose field area gets results—results—results and tech and stats soar.

It doesn't take too much. Given a command of the tech, Dianetics and Scientology, he can spot easily in the worksheets why a failed session went adrift, send it to review to be remedied and send the auditor to cramming.

But the session where the pc left session with "F/N VGIs 2.0" and arrives at Examiner with "needle tight, 4.3, Indicators poor" and in which all seems usual and standard... ! Hey! That's a false auditing report. It doesn't mean standard tech doesn't work! It means a false worksheet. You haven't got the data needed to handle or do the next C/S.

So you have somebody else ask the pc what happened in that session and get it written down and get the folder back.

Man, it would knock over an elephant. Some of the things you get back! "Well he was reading off items I guess but I couldn't hear him...." "I asked him not to shout and he said 'I'm the auditor not you'." "I kept trying to tell him I was exterior...." "He wouldn't accept the withhold. He said it wasn't a withhold because he'd heard it from my wife...." "I had to keep telling him what the next command was...." "But it *wasn't* a headache that I was trying to get handled. I was vomiting during most of the session...."

Boy, the world of Never-Never-Never that lies behind those reports where you can't find the reason!

Suddenly, as I say, the Case Supervisor makes his own personal breakthrough. His "I wonder what's really wrong with this pc...." turns into, "Auditor to cramming to Review R3R commands and TR 104. Pc to Review to Fly a rud or GF to F/N. Assess Auditor, Auditors, Commands...."

Oh, you say, we don't have an Examiner in our Franchise—listen, you better teach your receptionist to do an Examiner form—Yes, but we don't have a Case Supervisor or cramming—brother, are you so in love with the buck that you'll salt out your whole area with failed cases just to get high pay on low stats? Auditing is a TEAM action. If you can't do it as a team action it's not Standard admin to begin with and sure as shooting your practice or your franchise will fail in the long run.

Maybe that's the first breakthrough the Case Supervisor makes. To realize auditing actions are team actions.

But not to get off the rails, IF YOU CAN'T FIND THE FAILURE IN THE FOLDER GET THE PC ASKED, FOR YOU'RE LOOKING AT A FALSE IF ONLY INCOMPLETE WORKSHEET.

**STUDENT RESCUE INTENSIVE**

In working with a student, a *Supervisor* found that engrams and secondaries gather around the subject of study and developed some material on it which I tested and redeveloped.

He said:

“The subject of study has been abound with ‘authorities’ and boobytraps forever and a day, but until Ron researched this field of human endeavour and published his findings on tapes, HCOBs and Policy Letters, nobody has EVER made any progress toward the resolution of study itself as a problem.

“In this very day and age we find physical punishments of students the rule rather than the exception, and even the use of instruments like canes, sticks, shoes and such like articles in order to ‘teach’ a student (create ‘ARC’) is accepted as normal practice.

“The phenomena of secondaries and engrams resulting thereof, which inhibit study are not known about or completely ignored, and often handled by a further duress.

“And many a once bright keen young student throws in his study in despair and goes to the nearest oculist for even stronger lenses in his glasses to help his ruined eyesight.

“THE SUBJECT, THE VERY IDEA OF STUDY ITSELF HAS BECOME  
TRAUMATIC, IT IS AN AREA OF LOSSES AND PHYSICAL PAINS.”

The Class VIII C/S can be audited by a Class III.

1. Fly a rud to F/N.
2. Do a Remedy A on Dianetics or Scientology. (Omit if student had one.)
3. Do a Remedy B. (Omit if student had one.)
4. Assess: Be Trained, Be Educated, Study, Learn.
5. Prepcheck.
6. Take the item found in 4 and fit into:
7. *3 Way Recall*
  - SF-1 Recall being forced to (item of 4).
  - SF-2 Recall forcing another/others to (item of 4).
  - SF-3 Recall another forcing another/others to (item of 4).

8. *3 Way Secondaries*

- SS-1 Locate an incident containing misemotion in which you were forced to (item of 4).
- SS-2 Locate an incident containing misemotion in which you forced another/others to (item of 4).
- SS-3 Locate an incident containing misemotion in which another forced another/others to (item of 4).

*3 Way Engram*

- SE-1 Locate an incident containing pain and unconsciousness in which you were forced to (item of 4).
  - SE-2 Locate an incident containing pain and unconsciousness in which you forced another or others to (item of 4).
  - SE-3 Locate an incident containing pain and unconsciousness in which another forced another or others to (item of 4).
9. If the student still has trouble or feels it isn't complete, list for the somatic, misemotion or attitude connected with becoming informed or being taught and run R-3-R.

End of the Scn Study Intensive

-----

DIANETIC STUDY INTENSIVE

This Dianetic Study Intensive is done simply by doing steps 7 and 8 of the Scn C/S by a Standard Dianetic Auditor.

In this case 9 is almost certainly done.

This completes the Dn Study Intensive.

-----

PROMOTING STUDY INTENSIVES

Any org or course has on it some slow students or students who easily dope off while attempting to study, or students who become upset by study or try to blow.

A Registrar should periodically obtain a list of these and see that they are sold a Study Intensive.

**RISING TA**

In running R3R when the pc's TA is rising after 2 runs through, the indication is that there is an earlier incident (or in rare cases, an earlier beginning).

One does not need to ask Erasing—solid? when he sees the TA rise as obviously it (the incident) is going more solid. It is correct, the auditor seeing the TA rise, simply to ask for an earlier incident and if "No" then an Earlier beginning.

The exception is the low TA (below 2.0). If the TA is let us say at 1.6 and rises to 1.8 during or after the second run through, the incident may well be erasing as a below 2.0 is abnormal. It will come above 2.0 only when the chain is erased. So one DOES ask for Erasing—solid? and carries on as usual with R3R when the TA is below 2 but rises.

# SUBJECT INDEX

1965 -1969

## A

- abbreviations and symbols of Dianetics and Scientology, 79
- aberration(s), aberrated, *defn.*, "a crooked line"; from Latin *aberratio*, a wandering from, and *errare*, to wander or to err, 197
- considered in a passive and active way, 197
- evidences of an aberrated area, 196
- man is basically good, only his ~ are bad, 346
- pc need but become aware of actual cause of an aberration to have it vanish, 58
- pc never has done anything in this life that aberrated him, 199
- source of, 160, 340
- ability, accent on; *see NSOL*
- Ability Release, Grade IV Release, 98
- acceptance level; *see NSOL*
- accident prone, when audited, usually loses this unwanted characteristic, 348
- acknowledgement, premature, leads to inadvertent withholdings, 26
- acknowledgements, premature, or late-or-never acks result in same thing, pc running on and on and on, 138
- admin personnel, takes about 2 ~ to keep a tech personnel going, 402
- affinity = space and willingness to occupy the same space of, 261
- agreement, reality = mass or agreement, 261
- alcohol; *see drugs*
- ally, *defn.*, person from whom one had sympathy and was dependent upon, 343
- alter-is, *defn.*, covert avoidance of an order, 193
- and degraded beings, 193
- basis of alter-is, 193, 291
- degraded beings, why they alter-is orders or don't comply, 193
- of orders and tech is worse than non-compliance, 193
- poor results and alter-is come from can't-apply, 90
- American Personality Analysis; *see OCA/APA*
- analytical mind, when it becomes aware of a point in the reactive mind, makes it vanish, 57
- antibiotics often do not function unless illness or injury is also audited, 371, 422
- antisocial act done and then withheld sets pc up to become "an ARC breaky pc", 22
- antisocial behavior, basic reason for, 179
- antisocial personality, 177; *see also* social personality; suppressive person; *ISE*
- attributes of, 177, 178, 179, 181
- social vs. antisocial personality, 183
- test that declares only ~ without also being able to identify social personality would be itself a suppressive test, 180
- anxiety, state of, explained, 18
- APA, American Personality Analysis; *see OCA/APA*
- application, apply
- "can't-apply", condition of, results of and handling, 90
- case supervision is done against thoroughness and exactness of technical application, 424
- checkouts must consult ability to apply, 205
- gap between mere knowledge and application of that knowledge, 89
- if you can't get the technology applied then you can't deliver what's promised, 4
- ARC, *defn.*, understanding and time, 261
- ARC break(s), 16, 433; *see also* rudiments
- ARC always must precede an ARC break, 261
- blows, ~ don't cause blows; M/W/Hs do, 22
- bottom of ARC breaks is a missed withhold, 22
- commands for ~, PTP and M/W/H, 259
- finding and indicating clears the ARC break; if it doesn't clear on what you find, then you haven't found it, 16
- generality causing ARC break, handling of, 17
- handling ARC breaks with Routine 3H, 239
- handling, primary error, handling as an ARC break when pc really has a M/W/H, 22
- Level VI ARC breaks, 18
- M/W/Hs and ~, how to distinguish between, 22
- never audit an ARC broken pc for a minute, locate and indicate the BPC at once, 91
- OCA/APA, only an ARC break can lower one, 16
- occurs on a generality or a not there, 16
- pc who seems to have a lot of ~ is a "withholdy pc", not an "ARC breaky pc", 22
- pc will go into a sad effect if you don't find ~ but instead continue the process, 16
- PTP or withhold, don't mistake for an ~, 77
- when pc doesn't change despite skillful ~ handling, locating and indicating, it was a withhold in the first place, 22
- when something becomes unlocatable it can cause an ARC break, 18
- ARC break needle, 73, 145, 265, *defn.*, floating needle with TA above 3.0 or below 2.0, 373
- bad indicators always accompany, 275
- can occur with TA between 2 and 3, 275
- description of ARC break needle, 176
- ARC Break Processes (old R4-H renamed R-3-H), Grade III Release, 95; *see also* Routine 3H
- ARC Release [1965], 96
- ARC Straight Wire can crack neurotic cases, 175, 261
- ARC Straight Wire, commands for, 261
- art, *defn.*, a word which summarizes the quality of communication, 83; *see also* Art Series [IX487]
- decline of art forms, 85
- fundamentals of art, 83
- perfection vs. communication, 84
- why much originality can be a liability, 83

## SUBJECT INDEX - 1965/1969

- artist, rehabilitating, 85, 219  
as-is, person out of valence does not easily as-is his bank, 426  
as-is, users of drugs cannot as-is, do not get TA, nor do they have cognitions, 245  
aspirin, actions of ~ and other pain depressants, 443  
aspirin, pc taking ~, handling of, 444  
aspirin, that innocent seeming painkiller, can produce havoc in auditing if not detected, 445  
assess(ing), assessment, 266, 388  
  *defn.*, locating on a prepared list, one item; listing and nulling means the pc lists, 266  
  *defn.*, pick out the thing that will run, 388  
  actions of, do not apply to listing and nulling, 266  
  auditor looks at meter while doing an ~, 388  
  Dianetic assessment; *see* Dianetic assessment  
  done by auditor between pc's bank and meter, 388  
  interest and ~, 357  
  is not auditing unless one is Auditing by List, 76  
  listing and ~, weakest applied point in our tech, 212  
  listing and nulling vs. ~, 266; *see also* listing and nulling  
  list, two ways to use, 210  
  LX1, 267  
  never assess medical terms or symptoms, 352  
  prepared lists; *see* prepared lists  
  prior assessment, one has to assess what was wrong before or prior to cure, 377  
  service facsimiles, 189  
  tone arm and assessment, 388  
  why assessment is done, 357  
  Why, ~ to find the Why for failed auditors and bogged cases, 92  
assist(s), 150  
  Auditor's Report, Crime to give assist without making, 364  
  began by "This is the assist" and ended by "That's it", 150  
  has a very finite purpose, 150  
  types: Auditing, Contact, Dianetic, Touch, described, 318  
audit(ed)(ing),  
  aspirin can produce havoc in auditing, 445  
  Awareness Scale and auditing, 33  
  basic auditing, 69  
  body, attention must come off, before anything helpful usually occurs by way of auditing, 312  
  case failure, only alter-is of routine auditing can cause, 27  
  case set-up for auditing, 283  
  comm cycle, additives on ~ not permitted, 59  
  comm cycle, effect of fractured comm cycle on Ethics type case, 49  
  comm cycle, to perfect muzzled auditing comm cycle use Mutter TR, 104  
  Dianetic auditing; *see* Dianetic auditing  
  don't force auditing into physical healing, 313  
  drugs and auditing; *see* drugs  
  end product of all auditing is a floating needle [1965], 63, 68; *see also* end phenomena  
  audit(ed)(ing) (*cont.*)  
    environment influences pc's ability to confront, 359  
    fundamental auditing, 325  
    gives gains by deletion, 416  
    gross auditing errors (GAEs), five, 93, 361  
    guiding style, 151  
    ill, pc gets ill after auditing but sessions look alright, how to handle, 430  
    ill pcs require light auditing, 249  
    ill, sometimes patient is too ill to be fully ~, 422  
    incidents, if you don't run the incidents given by pc he doesn't get well, 346  
    muzzled, *defn.*, using only TR 0, 1, 2, 3 and 4 by the text, 59  
    no-auditing, examples of, 323  
    one doesn't audit carefully, one audits with a relaxed competence that follows the rules, 149  
    only auditing keys out bank, 107  
    overrunning auditing actions, 241  
    pc must never be audited while ARC broken, 76  
    pc will worsen after if connected to an SP, 76  
    post operative auditing, 422  
    primary and secondary auditing styles, 150  
    purpose of auditing is healthy sane people, 403  
    reduces time of healing, 312  
    report, *defn.*, report of session given, written during session, on the session, 112  
      in correct ~ of failed session, answer as to why it failed is neon light big and glaring, 449  
    results, how to get, 69, 402, 412  
    rules: get the pc through it; what turns it on will turn it off; the way out is the way through, 43  
    rules of auditing, eight big, 76  
    speed, 417  
    states of being attained by ~, 61  
    team activity, 145, 402, 403, 412, 450  
    Vitamin E assists auditing, 123  
  Auditing Assist, 318  
  Auditing by Lists, 41, 64, 76  
  auditor(s)(s),  
    assignment policies, 420  
    auditing alone will have case failures, 402  
    bad auditor vs. dangerous auditor, 149  
    checkouts are required before application, 156  
    classifications [1965], 34  
    comm cycle, roughness of auditor's comm cycle can prevent not only a release from occurring but can prevent rehabilitation, 66, 76  
    confidence, auditor who inspires, 359  
    control, cure for auditor who can't control pc, 140  
    C/Ses or ~ who begin to goof, how to handle by two-way comm or earlier purpose, 306  
    C/S uses Summary Sheet to get ~ attitude, 268  
    cycle of decline of an auditor and student, 273  
    Dianetic auditing is fundamental background of auditor, 325  
    Dianetic auditor; *see* Dianetic auditor  
    dirty needle is always caused by auditor chops, flubs, etc., 148

## SUBJECT INDEX - 1965/1969

- auditor(s)('s) (*cont.*)  
does not invalidate, criticize or evaluate for pc, 321  
Ethics, auditor to, 50  
flunks a C/S instruction and can't get it going,  
remedy for, 282  
forcing pc, why auditor mustn't, 369, 442  
may only take advice on cases from C/S, 49  
must know Dianetics to understand mind and  
aberration, 160  
negative criticism undermines auditors, 409  
new auditors, 413, 420  
pc plus ~ is greater than the bank, ~ plusbank is  
greater than the pc, pc minus ~ is less than the  
bank, 359  
pc's reality, what auditor believes has little to do  
with, 345  
pictures, auditor always has more control over pc's  
mentalimage picturesthanpc does, 342  
real auditor is when his pcs don't overtalk or  
undertalk but answer auditing question and  
happily now and then originate, 139  
results, auditorisn't getting results means either he  
or pc is doing something else, 91  
results, auditors are not gauged by results, but by  
flawless application of standard tech, 273  
Review auditors, 126, 399  
speed, 417, 420  
staff auditor advices,49  
tools, auditor has to know his tools very well to be  
able to observe pc, 90  
TRs, auditor who can't do his TRs can't audit, 138  
TRs, auditor who chops up pc with bad TRs may  
see TA go below 2, 419  
unusual solutions, 49  
who reports "it didn't work", handling of, 7, 28  
who won't hear what pc is saying, 22  
Auditor's Code [1968], 269  
dirty needle, breaking Auditor's Code causes, 375  
pc, challenged by an "auditor" who is breaking ~,  
gets solid reaction in reactive bank, reason why,  
291  
Auditor's Report, 246, 363  
Crime to copy it, 247, 364  
Crime to give any session or assist without making  
an ~, 247, 364  
authorities, field containing the most ~ contains least  
codified knowledge, 83  
automatic bank, *defn.*, when a pc gets picture after  
picture after picture all out of control, 343  
cause of, how to handle, 343  
awareness,  
assessing the awareness levels on pc, 190  
E-Meter measures awareness depth of pc, 358  
healing, restoration of awareness is often necessary  
before healing can occur, 318  
item which does not read on meter when assessed  
is beyond pc's level of awareness, 357  
level of ~—that of which a being is aware, 33  
Scientology addresses improved ~, 329, 378  
Axioms; *see* entry in full index; *PXL*  
Azimuth meter, 388
- ### B
- bad indicators; *see* indicators, bad  
bank; *see* reactive mind  
basic auditing; *see* auditing, basic  
basic basic, *defn.*, most basic basic of all basics and  
results in clearing, 343  
basic of chain, *defn.*, first experience recorded in  
mental image pictures of that type of pain,  
sensation, 343  
chain is held in place by basic for that chain, 400  
engram contains pain and unconsciousness; its  
basic would be a physical duress not a symptom  
resulting from that duress, 352  
somatic chains go quickly to basic and are the  
important chains, 394  
B complex, B1 and C, use of, 422  
BD; *see* blowdown  
beginning of incident, erasure depends in some  
measure on pc getting to, 376  
beginning rudiments; *see* rudiments, beginning  
behavior, underlying facts in odd human ~, 292  
being, states of, attained by processing, 20, 61  
birth, auditing of, 379  
birth, do not run prenatal or birth engrams unless  
they come up naturally, 163  
black field, *defn.*, some part of mental image picture  
where pc is looking at blackness, 342  
black, probable cause of "all black" on Green Form,  
258  
blowdown,  
*defn.*, when auditor has to move TA from right to  
left to keep needle on dial and movement is .1  
divisions or more then a BD is occurring, 69  
*defn.*, tone arm motion to the left made to keep  
needle on dial, 357  
auditor must not speak or move during ~, 69  
floating needle cannot be observed during ~, 69  
is a period of charge blowing off bank, relief and  
cognition to a pc while it is occurring and for a  
moment after it stops, 69  
blowing engrams by inspection, 400, 407  
blows, cause of, 22  
body, *defn.*, a carbon-oxygen engine running at a  
temperature of 98.6 degrees F, 124  
big PTP a thetan has is his body, 339  
Dianetics addresses ~, Scientology addresses the  
thetan, 338, 339, 351  
effect of Vitamin E on body, 124  
mind or spirit can predispose illness or injury, 312  
must be handled to some degree before anything  
helpful occurs by way of auditing, 312  
pc assigns ~ to his case or case to his ~, 312  
sick body is a PTP and inhibits attaining spiritual  
freedom by Scientology, 347  
while a thetan can produce illness, it is the body  
that is ill, 312, 338

## SUBJECT INDEX - 1965/1969

*Book of Case Remedies* used by person himself to spot by-passed charge, 13  
BPC; *see* by-passed charge  
bridge, the, 34  
Buddhism, Scientology's relation to, 195  
by-passed charge, never audit ARC broken pc for a minute even but locate and indicate ~ at once, 91  
by-passing, how to handle compulsive ~, 126

### C

cans, E-Meter cans, best type, 67  
cans, never let pc off, while clearing commands, 284  
can squeeze; *see* EMD (EM Drill 5)  
case(s); *see also* preclear  
all react to same actions, they differ in amount of "charge", 281  
does not advance, six reasons why, 91; *see also* resistive, 7 resistive cases  
don't "solve" by altering data, 387  
failure, only alter-is of routine auditing can cause, 27  
gain and no case gain,  
any level is capable of giving a stable case gain, 310  
auditing gives gains by deletion, 416  
cases progress in exact ratio to amount of charge gotten off, 424  
continuing overts hidden from view are cause of no case gain, 91, 102  
criminals get no case gain, 102  
fast, slow and no-gain case, 103  
pc audited a bit below or at his level of awareness gets case gain, 33  
pc not getting gains, causes of, 91, 315, 324, 429, 435  
pc who makes no case gains is suppressive, 75, 76, 103; *see also* resistive, 7 resistive cases  
running engrams produces most case gain, 278  
no one grade solves the whole case; that's why there are grades, 252  
remedies, 282  
set-up for auditing, 283  
standard tech alone resolves all cases, 242  
state of case and ability to follow a command line are co-ordinated, 126  
tests give idea of how charged up ~ may be, 281  
there are no different cases, 386  
types of cases,  
bad off case does not register on E-Meter, why, 405  
continuous overt case commits antisocial acts daily during auditing, 23  
delusory or dub-in cases also sometimes trace to chemical "releases", 258  
Dianetic "oddy" case, 410  
difficult case, 395  
drug cases, characteristics of, 377  
case(s), types of cases (*cont.*)  
dub-in case has a wholly one-sided flow and is trying to run the other side, 279  
Ethics type case, effect of fractured comm cycle on, 49  
"failed cases" are medically ill or injured cases, 313  
fast, slow and no-gain case, 103  
heavily charged case, symptoms of, 281, 426  
low TA cases, 121  
neurotic, ARC Straight Wire can crack, 261  
OT cases on Dianetics, 395  
out of valence case, 426  
"roller-coaster" case, 109  
special cases, 430  
that can't get into or run past lives, 424  
unusual cases, do the usual, 73  
which runs shallow and F/Ns easily, 424  
7 resistive cases, 310  
Green Form, No. 40 GF is "7 resistive cases", 410  
worsening is caused only by a PTS situation, 114  
worse off the case, lighter you handle it, 281  
case supervising, case supervision, C/S, case supervise; *see also* Case Supervisor  
against standardness of application, not against results, 424  
auditor flunks a C/S instruction and can't get it going, remedy for, 282  
basic rationale behind C/Sing, 425  
Dianetics, 336, 366, 409, 411, 428  
gross case supervision errors, 254  
how it goes non-standard, 449  
points on, 248  
use Summary Sheet to get auditor's attitude, 268  
Case Supervisor; *see also* case supervising  
auditors may only take advice on cases from CIS, 49  
biggest error for C/S is not to read through the pc folder, 254  
correcting auditor, should do it positively and refer to HCO B; negative criticism undermines auditors, 409  
Dianetics C/S, four possible actions to take, 409  
false auditing reports, C/S's response to, 50, 450  
folder handling, 49, 254, 268  
High Crime for a C/S not to write in a pc's folder what the case supervised instructions are, 245  
limited by what his auditors can do, 282  
lives in an Ivory Tower, 145  
must watch ethnics (customs) oddities and changing fashions, 253  
only variable a ~ has is how charged up is a case, 281  
pc gets into Ethics trouble, C/S should have folder reviewed, 251  
plays adept Scientology Reviews against Dianetic auditing, 410  
request for Review, 74  
standard tech and C/S, 449  
who begin to goof, how to handle, 306

## SUBJECT INDEX - 1965/1969

- CCHs, 40, 118, 257  
 are processes, not drills, 40  
 CCH 1, 2, 3 and 4, commands and how to run, 118-20  
 CDEI Scale Expanded, 200  
 chain(s), *defn.*, series of recordings of similar experiences, 343  
 are held together mainly by somatics, 352, 394  
 basic of; *see* basic of chain  
 engrams which go solid when you try to run them are too late on chain, 227  
 floating needle on chain can be called end of that chain, but not of Dianetics on case, 349  
 grinding occurs because incident is too late on ~, 360  
 it takes more than one chain of engrams to build up an ill area, 337, 416  
 narrative chain; *see* narrative  
 somatic ~ go quickly to basic and are important ~, 394  
 somatics, run one chain at a time, 343  
 when cognitions occur with very good indicators chain is almost always gone, 373  
 charge(ed),  
 all cases react to same actions, they differ in amount of "charge", 281  
 blowdown is a period of ~ blowing off bank, 69  
 cases progress in exact ratio to amount of charge gotten off, 424  
 reality is proportional to amount of ~ off, 227, 281  
 study blows charge, 281  
 symptom of heavily charged case is F/Ning too quickly to be processed well, 426  
 tests give an idea of how ~ up case may be, 281  
 checkouts; *see also* training  
 check for application in checkouts, 205  
 star-rated ~ required before application, 156  
 "star-rated" means 1 00~o letter perfect in knowing, understanding, demonstrating and being able to back material with no comm lag, 157  
 child, children,  
 application of Scientology to children, 30  
 how to live with; *see NSOL*  
 much time is used to flatten things on ~, 32  
 processes for, 30, 31  
 church, Scientology is a religious practice in that the ~ of Scientology conducts basic services such as sermons at ~ meetings, christenings, weddings and funerals, 195  
 Classification Gradation and Awareness Chart [1965], 33  
 Class IV and V, 308  
 Class VI, Saint Hill HGC staff auditor is not the same as a Class VI Saint Hiller, 34  
 Class VIII,  
 Case Supervisor, the basic processes, 278  
 Course principles, 276  
 purpose of, 242, 273  
 six zones of action in, 252  
 Clay Table Healing goof, 29  
 clay table training, 205  
 Clear, 61, 86, 141  
 checks and re-Clear checks, 203, 204  
 Fifth Stage Release, 87  
 Grade VII—Clear, 95, 142  
 has no vicious reactive mind and operates at total mental capacity, 19  
 keyed-out Clear, 19, 20, 51  
 Operating Thetan vs. Clear, 5 1, 56, 86  
 postulates of Clear read as a surge, 220  
 Release—Clear—OT, 86, 141  
 road to Clear, 19  
 R6 bank, 62  
 Clearing Course, do not run Power on anyone who has run CC materials, 203  
 coaching, rules of, 122, 233, 234  
 cognition(s), 373, *defn.*, pc origination indicating he has "come to realize"; it's a "What do you know. I \_\_\_\_" statement, 373  
 blowdown is a period of relief and ~ to pc while it is occurring and for a moment after it stops, 69  
 don't prevent by cutting when F/N appears, 275, 362  
 F/N occurs most often after a big ~, 145, 147  
 is rather quick, not an hour's maundering, 162  
 usually occur immediately after an erasure, 373  
 cold (common), cause of and handling, 18  
 collective thought agreement, result of, 6  
 command(s),  
 clearing commands, 110, 265, 284, 305  
 never let pc off cans while clearing ~, 284  
 failing to give the next command, 413  
 new auditor does not realize how serious it is to flub a command, 413  
 rudiments, important to clear the commands, 265  
 use of symbols to keep track of given, 238  
 command line, case state and ability to follow a command line are co-ordinated, 126  
 communication, *defn.*, energy or recognition, 261; *see also New Slant on Life*  
 art and communication; *see* art  
 cycle additives, 59  
 cycle, auditor's; *see* auditor's comm cycle  
 line, worse off case, the less person can follow a comm line, 126  
 processes—Grade 0 Release, 95, 96, 98  
 two-way; *see* entry in full index; PXL  
 compliance, degraded beings refuse to comply with out mentioning it, 193  
 computation, service facsimile is a ~ generated by the being not the bank, 173  
 "conditioning", Pavlov's school of, 391  
 conditions, ethics; *see ISE*  
 conditions of existence; *see NSOL; PXL*  
 confidential materials, reason for, 105  
 conflicts are usually remedial by conference unless a third party is promoting conflict, 290

## SUBJECT INDEX - 1965/1969

- confront; *see also* NSOL  
    auditing environment influences pc's ability to ~, 359  
    Dianetic item that reads guarantees pc will be able to confront and erase chain, 357
- confusion and glee, 257
- confusions, teaching of basic data restimulates confusions, 276, 365
- consciousness, on death of; *see* NSOL
- than"consequences and prediction, related to overts, 404, 405
- considerationandis-ness;*see*PXL
- constructive ideas are individual and seldom get broad agreement in a human group, 6
- Contact Assist, described, 318
- continuous overt; *see* overt, continuous
- control, cure for auditor who can't control pc, 140
- course can be wrecked by lack of study materials, 406
- Course Supervisor outnesses make slow courses, 437
- Course Supervisor's duty, 272
- Course Supervisor's use of Remedy A and B, 150
- crime and criminal acts are perpetuated by antisocial personalities, 177, 178
- Crime, High; *see* High Crime
- crime, why it increases, 404
- criminal(s),  
    codes and violent punishment are not needed to regulate social personalities, 182  
    creation of, 404  
    get no case gain, 102  
    having no awareness of good andevil, 405  
    most ~ are unable to predict and thus have no fear of any consequences, 405
- critical, only reasons a pc is critical are a withhold or misunderstood word, 91
- critical, pc with withholds will be critical, natter or blow and is out of comm, 76
- criticism, C/S negative ~ undermines auditors, 409
- criticize, auditor does not invalidate, criticize or evaluate for pc, 321
- C/S; *see* case supervising; Case Supervisor
- cultural lag, 374
- cure, never run Scientology grade to make pc well or cure something, 350
- cure, prior assessing is done to determine what pc was suffering from before he used a harmful "cure", 377
- cycle of action, antisocial personality cannot finish, 178
- and non-cyclical process ending, 101
- cyclic process, *defn.*, repetitive process which does cause pc to cycle on time track, 101
- D**
- Danger Conditions—technical data for Review auditors, 126
- auditor' .149
- data; *see also* knowledge  
    don't "solve" cases by altering data, 387  
    person does not have more Scientology data just because he is a Release, 39  
    security of, 105  
    teaching of basic ~ restimulates confusion, 276, 365
- date and duration of incident found permits an incident to be run with visio, 158, 386
- dating, don't use "more"—"less", use "greater  
    "lesser than", 191
- dating, E-Meter dating on rehab, 66
- dating, it is possible to get F/N and VGIs while simply spotting or dating an engram, 407
- declare errors, 67, 75
- definition, cycle of mis-definition, 153
- Definition Processes, 150, 151
- degraded bejngs~ data on, 193,194
- depression/ suppression and oppression are basic causes of depression, 2
- Description Processing; *see* PXL
- destructive actions are approved by antisocial person, 179
- Dianazene, for radiation prevention, what it is, 123
- Dianetic(s), 262  
    assessment, 357, 388, 389, *defn.*, choose, from a list or statements, which item or thing has the longest read or pc's interest, 343  
    by longest read, list of symbols, 357  
    Dianetic misassessment, how to tell, 429  
    prior assessment, 377
- auditing, 421; *see also* R3R  
    ability to do, is fundamental background of Scientology auditor, 159, 325  
    C/S plays adept Scientology Reviews against ~, 410  
    is so simple that it demonstrates cleanly whether person can audit or not, 447  
    original version, done on a gradient, 162  
    procedure [1966] ,161  
    run somatics, not medical terms, 389  
    run what is offered, don't force pc, 341  
    run what reads not what auditor thinks, 358  
    tone arm position and ~, 373
- auditor(s),  
    ability to get results is a basic for, 448  
    are not expected to do Scientology actions, 336  
    don't wait on pc to act or move in time, pictures do what auditor says, 342  
    instructions, 158  
    is not concerned with "rehabilitation" of over cyclical run, 373  
    locks, auditor keys out locks; what happens to pc, 372  
    must know Dianetics to understand mind and aberration, 160  
    requirements, 366  
    skills reach up to and include a well, happy human being, 326  
    value of being Dianetic auditor before Scien"dangerous tology auditor, 447, 448

## SUBJECT INDEX - 1965/1969

### Dianetic(s) (*cont.*)

body pain, sensation, somatic, illness, disability, subject to use is Dianetics, 351  
case failures, causes of, 337, 386, 387  
case supervision, 336, 366, 411  
C/S 1 and 2 [1969], 368, 409  
C/S 3 [1969], 409  
Case Supervisor, four possible actions to take, 409  
chain; *see* chain  
Course, [1966] 158, [1969] 327, 365  
definitions, 340  
development of, 393  
drugs, pc on drugs lately, why Dianetics can't be run properly, 443; *see also* drugs  
early Dianetic problems now solved, 386  
end phenomena: erasure, F/N, cognition, 373  
Engram Release, 175  
Engrams Triple, 297  
erasure; *see* erasure  
errors, 355, 366, 414, 447  
High Crimes, 396  
nine things that go wrong, 428  
session outnesses, examples, how to handle, 366; *see also* L3RD [in full index]  
worst crime is overwhelming pc by telling him what's wrong, not letting him tell you, 379  
floating needle on a chain can be called end of that chain, but not of Dianetics on case, 349  
Grade, when Dianetics Grade was missed, people F/Ned their way straight on up to OT VI, still wondering where their headache came from, 424  
grinding, 400  
healing profession and Dianetics, there is no conflict of interest between, 320  
Health Form; *see* Health Form  
high TA in Dianetics, 356, 418  
illness and Dianetics; *see* illness  
incidents, earlier beginning, 401  
item(s),  
already run may give a protest read, 357  
ask for pc interest, 357  
how they first are null and later read, 358  
right item indicators, 389  
that an item reads guarantees that pc will be able to confront and erase chain, 357  
wrong item indicators, 388, 429  
list(s), *defn.*, is simply pc's physical aches and pains, 390  
Dianetic lists vs. Scientology lists, 390  
note reads as pc mentions items, 377, 389  
"oddity" case, 410  
Operating Thetan and Dianetics, 360, 395  
pain depressants inhibit ability of thetan to create mental image pictures and impede electrical conductivity of nerve channels, 443  
peculiarities handled by Scientology Review, 370; *see also* list, L3RD [in full index]

### Dianetic(s) (*cont.*)

preclear is one who is being processed toward objective of a well and happy human being, 326  
F/Ns on a lock, ask for an earlier incident, 373  
is supposed to erase a picture, not only somatic, 376  
not changing or improving, how to handle, 430  
often is unable to confront actual engram at once, 341  
repair, 429; *see also* L3RD [in full index]  
telling there are several incidents, take earliest, 401  
who does not resolve on Standard Dianetics alone, how to handle, 395  
results, 351  
accomplishes an eradication of unwanted condition, 329, 348, 378  
are a well body and a being happy with it, 325, 351  
changes and improves the rate of healing, 320, 348, 423  
Dianetics raises IQ as a side product to usual auditing, 348, 420  
medicine made effective by Dianetics, 372, 423  
"mentally retarded" children have been made more normal by Dianetics, 348  
operations and delivery, aftereffects of, handled by Dianetic auditing, 320  
roller-coaster after ~ auditing, handling, 410  
rudiments, out, in Dianetics, 429  
Scientology, Dianetics and, 160, 349, 351  
Dianetics addresses the body; Scientology addresses the thetan, 325, 338  
greatly speed up reaction time, increase IQ rapidly, 420  
reason why they were abused or even fought has to do with "cultural lag", 374  
Secondaries Triple, 295  
Secondary Release, 175  
stuck pictures, 227  
Study Intensive, 452  
tone arm, high, in Dianetics, reason for and how to handle, 356, 418  
Triples, 438, 440, 441  
Flow 2 and 3 commands, 440  
necessity of, 439  
plural item, 442  
TRs are TR 101, 102, 103 and 104, 414  
use of Dianetics, 347, 348  
for pastoral counseling is completely legal, 347  
handles locks, secondaries and engrams, 342  
must be used in all cases of psychosomatic illness or in physical suffering, 338, 349  
you use Dianetics much the way you would use any remedy, 349  
Dianetic Assists, 318  
Dianetic Counseling Group, 402, 403  
Dianetic Research Foundation, first, failed as it wouldn't run past lives, 345

## SUBJECT INDEX - 1965/1969

- Dianetics: The Modern Science of Mental Health*, some things in ~ we no longer use such as repeater technique, looking for phrases to explain conditions, 336
- Director of Processing's work is completely textbook, 50
- dirty needle(s), *defn.*, ragged, jerky, ticking needle, not sweeping, 375  
(brief, not continuous) on Grade 5 or above person means "no", 220  
causes of, 148, 375  
indicates pc has withholds or is ARC broken, 375  
real dirty needle is constant and continues, 220  
TRs and dirty needles, 375
- disagreement, how to cure, 126
- discipline vs. reactive mind, 102
- dizziness, *defn.*, feeling of disorientation and includes a spinniness, as well as an out-of-balance feeling, 192
- DMT, a drug, description of, 244
- Director of Processing
- dramatization restrained by Ethics, 102
- dreams follow a sudden loss, 18
- drills; *see also* training  
are done by students to accustom them to actions that will be necessary in doing processes, 40  
condition of "can't-apply" is handled by drills, 90  
processes are not drills; using a process as a drill leaves it unflat on students, 40
- drug(s), 243  
alcohol's effects and handlings same as drug's, 243, 258, 377, 386  
aspirin, 443  
auditing over, 444  
caffeine is a drug, 243  
cases, characteristics of, 377  
convulsions, it is possible to come off drugs without convulsions, 243  
data on LSD-25, marijuana, hashish, peyote, mescaline, STP and DMT, 244  
drive a person out of an unbearable PT or out of consciousness altogether, 292  
"drying out" period, 322, 444  
effects of drugs, 243, 444  
burns up Vitamin B1 in system rapidly, 243  
can cause forceful exteriorization, 258  
chemically inhibit the creation of mental image pictures and inhibit as well the erasure, 444  
make auditing very difficult, 443, 444  
produce a threat to body; thetan reacts by mocking up, 291  
restimulation of pictures, cycle of, 444  
somatic shut-off is caused by drugs and alcohol, 386
- handling of; *see* Drug Rundown [in full index]  
"insanity" and drugs, 291, 292  
person looked on them as a cure for unwanted feelings, 377  
prior assessing, drug and alcohol cases, 377
- drug(s) (*cont.*)  
reactions to drugs, 292  
"releases" are deadly because they give the sensation of release while actually pulling in mass, handling of, 258  
tone arm under drugs or on drug case can go very high, TA 4.0, TA 5.0; it can also be dropped to "dead thetan" (a false clear read), 444  
tranquilizers, how they work, 314, 443  
trippers, 258  
users of drugs cannot as-is, do not get TA, nor do they have cognitions, 245  
why drugs are dangerous, 243
- dub-in case has a wholly one-sided flow and is trying to run the other side, 279
- dub-in or delusory cases also sometimes trace to chemical "releases", 258
- dull, cause of feeling dull when talking to certain people, 26
- duration and date of incident found in engram runD of P; *see* ning permits an incident to be run with visio, 158, 386
- dynamic, 1st, person in treason on ~ is always out of valence, 426

## E

- earlier beginning, 401
- Effect Scale, 200
- "ego", no such thing in mind, only mental image pictures, 340
- "electrical" is bridge between sensation and pain and is difficult to classify as either pain or sensation when it exists alone, 192
- E-Meter; *see also* specific names of E-Meter reactions; *reads; BIEM*  
ARC broken pc may not read on, 73  
assessment is done by auditor between pc's bank and meter with auditor looking at meter, 388  
Azimuth meter, 388  
cans, best type, 67  
cans, never let pc off cans, 284  
case that is very bad off does not register on E-Meter, why, 405  
check it before session, 419  
dating; *see* dating  
discharged or off trim reads wrongly, 398, 419  
drill(s), 12, 94; *see also* EMD  
don't use a pen to represent the needle, 94  
list of ~ outnesses and what they mean, 122  
electrode, one-hand electrode sometimes obscures an F/N and gives false TA, 275  
how it works; *see* BIEM  
is used to verify pc's gain and register when each separate auditing action is ended, 321  
measures the awareness depth of the pc, 357, 358  
misuse, 66

## SUBJECT INDEX - 1965/1969

- E-Meter (*cont.*)  
needle; *see also* needle characteristics by name  
actions; *see EMD* (EM Drill 12); *BIEM*  
ARCBreakneedle; *see* ARCBreakneedle  
characteristics, 201  
dirty needle; *see* dirty needle  
floating needle; *see* floating needle  
meter just falls flat when you've got a complete  
list; needle goes clean, 129  
reactions above Grade IV, 220  
stage four needle; *see* stage four needle  
when meter needle is not floating, TA is registering mental mass, 418  
pc must not be able to see TA position on ~, 271  
reads; *see* read  
sensitivity knob; *see BIEM*  
sensitivity setting, 110, 144, 147  
setting up; *see BIEM*  
*see* EM Drill 21  
tone arm; *see* tone arm  
trim check procedure, 168, 369  
trim set incorrectly gives wrong read, 398  
Emotional Assessment List, LX2, 427  
emotional shock, insane by reason of, handling, 319  
Emotional Tone Scale, 200  
emotion and misemotion are closely allied to motion,  
being only a finer particle action, 192  
emotions, frozen, or "unemotional" people, cause of,  
232  
end phenomena, floating needles (F/Ns) are ~ for any  
process or action with pc on two cans; it  
coincides with other ~, but is senior, 275  
end phenomena of LX Lists, 426  
end rudiments; *see* rudiments, end  
engram(s), 279; *see also* lock; secondary  
*defn.*, mental image pictures of pain and unconsciousness person has experienced, 61, 87, 142  
*defn.*, mental image picture which is a recording of  
a time of physical pain and unconsciousness; it  
must by definition have impact or injury as part  
of its content, 340  
blowing by inspection, 400, 407  
contains pain and unconsciousness; its basic would  
be a physical duress not a symptom resulting  
from that duress, 352  
delivery engram should be run out soon after, 348  
Dianetics pc often is unable to confront actual  
engramat once, 341  
*erasure*; *see* *erasure*  
floating needle, it is possible to get F/N and VGIs  
while simply spotting or dating an engram, 407  
grinding out, 360  
have mass in them even when they are pictures,  
397, 418  
ill, it takes more than one chain of engrams to  
make a body ill, 416, 435  
manifestations of, 192  
nonextant engrams, 232  
overt-motivator sequence of ~, 231  
pc should never be forced into or through ~, 227  
engram(s) (*cont.*)  
prenatal or birth engrams, do not run, unless they  
come up naturally, 163  
reality on engrams increases in ratio to charge  
taken off case, 227  
running; *see also* R3R  
date and duration of incident found permits an  
incident to be run with visio, 158  
engrams which go solid when you try to run  
them are too late on chain, 227  
most unlimited action, 278  
simplicity of, 159  
three flows, 279  
secondaries and engrams, 61, 86, 141  
gather around subject of study, 451  
running, give spectacular results, 159  
running, unlimited action, 278  
secondary derives all its power from an under steering;  
Iying engram, 163  
tone arm behavior on engram chains, 356  
entrapment vs. freedom; *see NSOL*  
enturbulation, explanation of, 292  
environment,  
auditing ~ influences pc's ability to confront, 359  
dangerous ~, anyone forced into, tends to either  
go fully into PT or retreat from PT, 293  
safe and dangerous ~, difference between, 137  
suppressive person (SP) was one that wove a  
dangerous ~ around pc, 136  
EP; *see* end phenomena  
erasure, erased, erases, erasing, 376, *defn.* action of  
erasing, rubbing out, locks, secondaries or  
engrams, 340  
cognitions usually occur immediately after erasure,  
354, 373  
depends in some measure on pc getting to begin  
ning of incident, 376  
drugs chemically inhibit creation of mental image  
pictures but inhibit as well the erasure, 444  
floating needle and erasure, 342, 354, 373  
how not to erase, 400  
how to attain, 344  
key out vs. erasure, 57, 262, 342, 407  
last incident found, 354  
picture, not only the somatic, 356, 376  
Scientology rehab vs. Dianetic erasure, 397, 418  
"solid or erasing", asking, 344, 354, 400, 453  
tone arm below 2 at time of F/N, you haven't  
*erased any chain*, 419  
tone arm going up, up, up means picture isn't erasing  
but is getting more solid, 397, 418  
tone arm, incidents can force pc's TA below 2, but  
when erased TA comes back up to F/N, 398,  
  
two extremes a Dianetic auditor can go to on  
subject of erasure, 400  
ethics; *see also* *Introduction to Scientology Ethics*  
auditor to Ethics, 50  
Case Supervisor should watch for Ethics record of  
pcs who have been C/Sed, 251

## SUBJECT INDEX - 1965/1969

ethics (*cont.*)

codes; *see Introduction to Scientology Ethics*  
conditions; *see Introduction to Scientology Ethics*  
dramatization restrained by Ethics, 102  
effect of fractured auditing comm cycle on Ethics  
type case, 49  
is not merely a legal action, it handles whole  
phenomena of case worsening (roller-coaster)  
after processing, 113  
pc is not sent to Ethics because of withholds  
gotten off in session, 50  
pc's getting off another person's offenses, report  
alleged offenses to Ethics for investigation, 50  
policies are leveled primarily at making auditing  
and training honest and flawless, 28  
PTSEs and SPs must be sent to Ethics, 77  
purpose of; *see Introduction to Scientology Ethics*  
suppressive person dominates an area, only Ethics  
actions can handle, 146  
tech, interpretation of, is an Ethics matter, 209  
ethnics, C/S must watch ethnics (customs) oddities  
and changing fashions, 253  
euphoria caused by some external stimuli must be  
rehabbed, 253  
evaluation of importances, 90  
evil actions, 405  
Examiner's Form, 255  
Examiner, when the Examiner does not declare a pc  
and does not send pc to Certs and Awards, he  
sends pc to Review (he can also, instead, send  
pc to Ethics) [1965], 75  
Excalibur, an unpublished book written late 1930s,  
317  
existence, conditions of; *see NSOL; PXL*  
Expanded Know to Mystery Scale, 201  
exterior, 61, 62, 431  
exteriorization, 293  
drugs can cause forceful exteriorization; un-  
handled drugs can inhibit ~, 258  
exterior pc who can't be audited, how to handle, 276,  
293; *see also Interiorization Rundown* [in full  
index]

## F

F; *see fall*  
facsimile; *see mental image picture*  
failed cases are medically ill or injured cases, 313  
fall, definition of sF, F, LF, LFBD, 357  
false and suppress, use on rudiments, 281, 433  
false, how to ask False question, 434  
false TA; *see tone arm, false*  
feeling, chains are held together by one similar feel-  
ing, not by narratives or personnel or locations,  
352  
Fifth Stage Release, 71, 87  
fight, it takes a third party to develop, 288  
first dynamic; *see dynamic, 1st*  
First Stage Release, 56, 61, 62, 70, 71

First Stage Released OT, *defn*, the person has not  
only come out of his bank but also out of his  
body, 62  
floating needle(s) (F/N), 275, 362, 407  
basic, F/N obtained by erasure of basic on chain is  
F/N one wants in Dianetics, 373  
blowdown, ~ cannot be observed during a BD, 69  
case, symptom of heavily charged case is F/Ning  
too quickly to be processed well, 424, 426  
chain, F/N on chain is end of that chain, but not  
of Dianetics on the case, 349  
cognition, don't prevent by cutting when F/N  
appears, 275, 362  
cognition, F/N occurs most often after a big cog  
nition, 145, 147  
electrode, one-hand electrode sometimes obscures  
an F/N and gives false TA, 275  
end phenomena for any process or action is F/N,  
68, 275  
erasure and F/N, 354, 373  
good indicators, what determines a real F/N is GIs,  
275, 373  
how to get them on a pc, 147  
indicating floating needle, 275, 362  
is valid only between 2.0 and 3.0 TA position, 373  
lock, Dianetic pc F/Ns on a lock, ask for an earlier  
incident, 354, 373  
lock, F/N on a lock can be by-passed on R3R, 407  
occurs just before pc is aware of it, 275, 362  
occur when a key-out occurs or when an engram is  
erased, 342  
overrunning free needle, 143  
if process is overrun F/N vanishes with just one  
extra command, 144  
overrun past F/N will cause TA to rise, 275,  
277  
rehab or release, don't continue past F/N, 66  
Search and Discovery, do not continue to do  
S&Ds beyond an F/N, 218  
releasing, F/N does not last very long in releasing,  
275  
rudiment, don't fly, when pc comes into session  
with F/N, 280  
Scientology auditor never would audit past an  
F/N, 373  
sensitivity setting and free needle, 144, 147  
tone arm and F/N, 275  
"floating needle" with TA above 3.0 or below  
2.0 means pc is ARC broken, 275, 373  
"high TA F/Ns" during rehab, 251  
miss an F/N and TA will go up, 275  
overrun of any action past F/N will cause TA to  
rise, 275, 277  
to see if a needle is floating the TA must have  
stopped moving down, 69  
what it looks like, 67  
flow(s),  
*defn.*, an impulse or direction of energy particles  
or thought or masses between terminals, 307  
*defn*, directional thought, energy or action, 438

## SUBJECT INDEX - 1965/1969

- flow(s) (*cont.*)  
dub-in case has a wholly one-sided flow and is trying to run the other side, 279  
it is type of process rather than the type of pc which regulates the flows, 307  
Triple Flows; *see* Triple Flows, Dianetic used in Triple Grades, 307  
which runs too long in one direction can “stick”, 438  
Flow 1, 2, 3: (1) inflow, (2) outflow, (3) cross flow, 238, 438  
flying ruds; *see* rudiments, flying  
F/N; *see* floating needle  
folders, analyzing and reviewing, 268  
forcing a pc, don’t, 341, 369, 442  
forgiveness, 154, 155  
Former Release check, 73  
Fourth Stage Release, 70, 71, 87  
freedom,  
end product of Scientology is spiritual ~, 325  
entrapment vs. freedom; *see* NSOL  
Grade III Release, Freedom Release, 98  
reached by going up through the grades of auditing, 322  
route to freedom lies through knowledge, 2  
free needle; *see* floating needle  
Freud’s accidental cures explained, 137  
future, past and present; *see* NSOL
- G**
- GAEs; *see* gross auditing errors  
gain(s); *see* case gain  
game, playing the; *see* NSOL  
generality, generalities,  
ARC break occurs on a ~ or a not there, 16  
“everybody” makes a dispersal which the pc can’t see through, 17  
formula to handle ARC break caused by ~, 17  
not there is also a ~ because it can be anywhere, 18  
person who speaks only in very broad ~, 177  
reactive bank is full of generalities which explains the hard ARC breaks of Level VI, 18  
GF; *see* Green Form  
glee, what it indicates, and remedy of, 257  
glib, make glib student demonstrate application, 205  
good, awareness of good and evil, 405  
good indicators; *see* indicators, good  
Gradation Chart modernized [1965], 97  
grade(s); *see also* level  
cease to call Release by stages and call them by grades, 95  
“level” and “grade” are the same but when one is a pc one has a grade and when one has a level one is studying its data, 20  
no one grade solves the whole case; that’s why there are grades, 252  
rehabbing grades, 143, 203, 241  
grade(s) (*cont.*)  
release on a grade, what may be audited, 141  
run additional processes of a grade until pc releases at that grade, 96  
Triple; *see* Triple Grades  
Grade 0 Release—Communication Release, 96, 98  
Communication Processes, 95  
Grade I Release—Problems Release, 96, 98  
Problems Processes, 95  
Grade II Release—Relief Release [Overt Release], 95, 98  
Grade III Release—Freedom Release [ARC Release], 96, 98  
ARC Break Processes (old R4-H renamed R-3-H), 95  
Grade IV Release—Ability Release [Habit Release], 96, 98  
Service Facsimiles, 95  
Grade V Release—Power Release, 96, 98  
Power Processes, 95  
sensitivity is run at 5 above Grade V, 110  
Grade VA Release—Power Plus Release, 98, *defn.*, 142  
Grade Vs and VAs, what they can be audited on, 38  
Grade VI Release—Whole Track Release, 96, 98, *defn.*, 142  
R6EW, 95  
Grade VI run on new pcs means failure, 100  
Grade VII—Clear, 95, 98, 142  
gradient, *defn.*, steepening or increasing from slight to heavy, 162  
greatness, what is greatness, 154  
Green Form, [1965] 52, [1966] 184, [1968] 221, 280, [1969] 433  
“all black” reads on GF, probable cause, 258  
each item is independent of the rest, 250  
handling items, 210, 250, 260  
“seriously physically ill”, how to handle, 421  
how and when to use, 74, 92, 395  
in HGC [1965], 76  
nature of its “unlimited” use, 280  
No. 40 GF is “7 resistive cases”, 410  
No. 40 is not restricted only to sick pcs, 430  
“to free needle”, not necessarily correct; it may or may not, 250  
grief is always loss, 232  
grinding, *defn.*, going over and over and over and over a lock, secondary or engram without obtaining an actual erasure, 360  
Dianetic grinding, 400  
preclear who does not go down somatic chain but who skips from one somatic to another could also get into grinding, 360  
reason grinding occurs is that incident is too late on chain; there are earlier incidents, 360, 361  
gross auditing errors (GAEs), five, 93, 361  
group(s),  
common denominator of ~ is reactive bank, 6  
constructive ideas are individual and seldom get broad agreement in a human group, 6

## SUBJECT INDEX - 1965/1969

group(s) (*cont.*)  
Dianetic group, essential hats, 402  
individuals vs. group, 6, 392  
will dream up bad technology to destroy good technology, 5  
Group Processing; *see PXL*  
guiding style auditing, 151  
"Guk Bomb" and Vitamin E, 123

### H

Habit Release, Grade IV Release [1965], 96  
happy, is it possible to be; *see NSOL*  
hashish, description of, 244  
hats, Dianetic group, essential hats, 402  
havingness, can squeeze test, 46  
Havingness, Remedy of, [process], and Spotting Spots in Space [process]; *see PXL*  
Havingness Scale, 201  
healing,  
Dianetics changes and improves the rate of healing, 320, 423  
don't force auditing into physical healing, 313  
profession and Dianetics, no conflict of interest, 320  
reduce time of healing by auditing, 312  
restoration of awareness often necessary before healing can occur, 318  
Health Form(s), 329, 332, 430  
get somatics (not incidents) that can be assessed and run, 381  
procedure, 330, 379  
run the feeling not the physical disability, 352  
second form done later gives an indication of actual improvement, 378  
symptoms are pains, emotional feelings, tiredness, aches, pressures, sensations, unwanted states of body, etc., 330  
help, antisocial person can't tolerate, 179  
Help, five-way bracket on Help, 106  
help, psychotics and help, 133  
HGC statistic, 425  
hidden standard, *def-*, problem a person thinks must be resolved before auditing can be seen to have worked, 109  
is always an old problem of long duration; it is a postulate-counter-postulate situation, source of which was suppressive to pc, 109  
suppressives and hidden standards, 109  
High Crime(s), 156  
for a C/S not to write in a pc's folder what the case supervised instructions are, and for auditor to accept verbal C/S instruction, 245  
four Dianetic High Crimes, 396  
School Indoc; *see TR 7*  
high TA; *see tone arm, high*  
Hitler, 133  
homeopathy, 371  
homo sapiens, state of, 33

honest people have rights too; *see NSOL*  
hormones ineffective on patient, can be made effective by Dianetics, 371, 423  
Hubbard Guidance Center; *see HGC*  
Hubbard, L. Ron, his travels, 2  
human behavior, odd, underlying facts in, 292  
human character; *see NSOL*  
human mind; *see also NSOL*  
"researchers" in the field of, 391

### I

"id", "ego", no such things in the mind, only mental image pictures, 340  
Identification, Scale of, 200  
ill, illness,  
antibiotics often do not function unless illness or injury is also audited, 422  
auditing reduces time of healing or recovery, 312, 320, 326, 348  
body is capable of having physical ~ independent of any mental or spiritual action, 312  
cycle, pc beginning to go through, 372  
handling of illness, 319, 435  
"insanity" is most often suppressed agony of actual physical illness and injury, 318, 411  
is a composite, 319, 329, 378, 415  
it takes more than one chain of engrams to make a body ill, 416  
mental vs. physical, 312, 415  
multiple illness means pc is physically uncomfortable or ill from several engrams of different types all restimulated, 342  
preclear(s), 312  
don't always know they're ill, 316  
don't force a pc who is ill, 249  
gets ill after auditing but sessions look alright, how to handle, 430  
handling of physically ill pcs, 347, 421, 429  
get a medical examination, 313, 315, 411  
require light auditing, 249, 421  
need Dianetics, not Scientology, 328, 339, 341  
overts or M/W/Hs which don't read on ill pc though pc is nattering are not available to be run right then, 249  
pc doesn't get gains, check for physical injury or illness, 315, 316  
psychosomatic illness, Dianetic auditor can handle the bulk of, 326  
psychosomatic ills, cause of, 340  
PTS = illness, 165  
"running out" after session, 371  
S&D, a bad S&D can make a person sick, 165, 208  
Scientology places a person above any further illness or suffering, but he has to be made well first, 349  
sickness is a result of engram chains in restimulation, 435  
sometimes patient is too ill to be fully audited, 422

## SUBJECT INDEX - 1965/1969

- ill, illness (*cont.*)  
symptoms, source of, 337  
thetan, while a thetan can produce illness, it is the body that is ill, 338
- importances, evaluation of, 90
- incident(s); *see* R3R
- indicators, bad, always accompany ARC breakneedle, 275
- indicators, good, determine a real F/N, 275, 373
- individual, basic building block of a society is ~, 392
- individual, constructive ideas are individual and seldom get broad agreement in a human group, 6
- individuals vs. group, 6
- inflow, outflow, cross flow, 238
- injury; *see also* illness  
Dianetic auditing speeds healing, 320  
“insanity” is most often suppressed agony of actual physical illness and injury, 318  
preclear doesn’t get gains, check for physical injury or illness, 315
- insane, insanity,  
by reason of emotional shock, handling of, 319  
glee is a kind of insanity, 257  
handling of insane, I 15, 116, 314, 411  
having physical causes, 313, 411  
“hereditary insanity” is an apparency, 315  
how to set up insane person for auditing, 314
- of types of insanity, 292  
is a being who has been overwhelmed by an actual SP until too many persons are apparent SPs, 115  
most often suppressed agony of actual physical illness and injury, 314, 318  
PT, relationship to insane and drug taker, 292  
recover from their symptoms when given proper medical treatment, rest, no harassment and then good mild Dianetic processing, 348  
road from insanity to sanity, 405  
there is no “insanity virus”, 315  
time track of drug takers and insane, 291
- instruction; *see* training
- intelligence quotient, 420
- interest, assessment and, 357
- interest, pc interest in R3R, 354
- invalidate, auditor does not invalidate, criticize or evaluate for pc, 321
- invalidated auditors, 306
- invisible field, *defn.*, part of some lock, secondary or engram that is “invisible”, 342
- IQ; *see* intelligence quotient
- is-ness and consideration; *see* PXL
- item (s),  
Dianetic item; *see also* Dianetics  
how they first are null and later read, 358  
lists, note read as pc gives the item, 389  
on a right item meter reads well when pc says it, good indicators come in, pc is very interested in running it, 389  
on a wrong item pc has bad indicators, meter doesn’t read, there is no pc interest, 388
- item(s) (*cont.*)  
must be made plural on Flow 3 when one is running Triples, 442  
narrative vs. somatic items, 376  
Search and Discovery, if item turns out to be a group, how to handle, 114  
which does not read on meter when assessed is beyond pc’s level of awareness, 357
- itsa,  
itsa earlier itsa is unlimited, 280  
letting a pc itsa, 138  
on and on with no gain, cause of, 26  
what it is, 138, 139
- Ivory Tower, Case Supervisor lives in, 145
- ### J
- justice, 155; *see also* NSOL
- ### K
- keeping Scientology working, 4
- key in, *defn.*, action of recording a lock on a secondary or engram, 342
- key out, keyed-out, *defn.*, action of engram or secon infinity dary dropping away without being erased, 342  
Clear vs. keyed-out Clear, 19, 20, 51  
Dianetic auditor who specializes in keying out locks, what happens, 372  
erasure vs. key-out, 342, 407  
only auditing keys out bank, 107  
OT vs. keyed-out OT, 51, 56  
rehab, all recovery must be by key-out, not erasure; key-outs are done by finding key-ins; it is de-stimulation, not re-stimulation, 57
- Knowingness, Scale of, 200
- knowledge; *see also* data  
application of knowledge requires evaluation of importances, examples, 90  
field containing the most authorities contains the least codified knowledge, 83  
philosophic knowledge is only valuable if it is true or if it works, 1  
route to freedom lies through knowledge, 2  
technology means methods of application of an art or science as opposed to mere ~ of science or art itself, 89  
what is knowledge; *see* NSOL
- Know to Mystery Scale, Expanded, 201
- ### L
- laws of listing and nulling; *see* listing and nulling
- level(s); *see also* grade  
any level is itself capable of stable case gain, 310  
are designed for all cases, 27

## SUBJECT INDEX - 1965/1969

- level(s) (*cont.*)  
“grade” and “level” are the same but when one is a pc one has a grade and when one has a level one is studying its data, 20  
apply Level Processing, 27  
to chase a pc on up the levels to cure an outness on earlier levels is idiocy, 310  
Levels 0, I, II, III, IV, common errors on, 169-70  
Triple, 300  
Level I Triple, 301  
Level II Triple, 301  
Level III Triple, 301  
Level IV Triple, 303  
Level VI, 19  
ARC breaks, 18  
consists of several processes; the preclear (still a preclear) has to be able to audit to make it; it can't be done for him, 19  
requires several months to audit through even with expert training, 19  
LFBD—long fall followed by “blowdown” or TA motion downward, 357  
fall (2 to 3 inches), 357  
life; *see also NSOL*  
life subjects are subject to overrun, 147  
ruds, 435  
list(s),  
Dianetic; *see* Dianetic list  
List 1, how to use, 41  
List I B, 206  
List 2B, 207  
List 3B, 207  
List 4A, 213, 285  
LX Lists; *see* LX Lists  
prepared; *see* prepared list  
listing and nulling, 306, *defn.*, means the pc lists, 266 [up to 1968 L&N in some bulletins is called *assessment*]  
assessing and listing, weakest applied point in our tech, 212  
assessment vs. listing and nulling, 266  
complete list, *defn.*, complete list is list which has only one reading item on list, 236  
F/N during listing means no charge left and no item, 172  
laws of listing and nulling, 236, 266  
S&Ds, Remedy Bs, etc., are listed by pc and follow laws of listing and nulling, 266  
List L4A—for assessment of all listing errors, 213, 285  
note down reads as you list, 256  
old lists are not to be copied, 256  
Remedy A is done only by listing, 206  
Remedy B is done by listing, 199, 206, 266  
Scientology listing and nulling actions have nothing to do with Dianetics, 389  
Search and Discovery lists; *see* Search and Discovery  
living and Scientology; *see PXL*  
living, two rules for happy; *see NSOL*  
lock(s), 61, 86, 107, 141; *see also* engram  
*defn.*, mental image pictures of non-painful but disturbing experiences the person has experienced; they depend for their force on second how to daries and engrams, 61, 86, 141  
*defn.*, mental image picture of an incident where one was knowingly or unknowingly reminded of a secondary or engram; it does not itself contain a blow or a burn or impact and is not any major cause of misemotion; it does not contain unconsciousness; it may contain a feeling of pain or illness, etc., but is not itself the source of it, 340  
Dianetic auditor who specializes in keying out locks, what happens, 372  
F/N on a lock can be by-passed on R3R, 407  
reducing locks, what it does, 61, 141  
R3R, if a lock F/Ns you can get earlier incidents on same chain until pc actually runs engram or chain of engrams, 354, 373  
loss,  
common response to sudden loss is to feel every thing is gone or going, 18  
dreams follow a sudden loss, 18  
grief is always loss, 232  
past life and memory of it is buried under terrific loss of possessions and body, 163  
secondary in its original use meant “a moment of loss”, 163  
love is road to strength; to love in spite of all is secret of greatness, 155  
low TA; *see* tone arm, low  
LRH; *see* Hubbard, L. Ron  
LSD-25, description of, 244  
“LX” Lists, 426  
end phenomena, 426  
LX1 (Conditions), 432  
looking up an assessed item from an LXI acts as an invalidation, 267  
LX2 (Emotional Assessment List), 427  
LX3 (Attitudes), 446  
serve to isolate reasons being is charged up to such an extent that he is out of valence, 426  
use of, 426, 430
- ### M
- man is basically good, 346  
man's search for his soul; *see NSOL*  
marijuana, description of, 244  
marital counseling, correct approach, 289  
marriage; *see NSOL*  
mass(es),  
engrams have mass in them even when they are pictures, 397, 418  
engrams, if you run too far back you get a pc into masses he can't easily handle, 227  
mind, whole answer to mind is mental pictures and masses created by thetan, 160

## SUBJECT INDEX - 1965/1969

- mass(es) (*cont.*)  
reality = mass or agreement, 261  
tone arm, high, equals mental energy mass, 356, 397, 418
- materials, scarcity of, 406
- medical, medicine,  
doctors, 309  
addressing any group of medical doctors, keep it in field of Dianetics, 309  
Dianetic group should have liaison with a competent MD or clinic, 402  
examination, 313, 421  
illnesses can be physical; if so, medical action is first action, 415; *see also* illness  
medicine made effective by Dianetics, 371, 372, 423  
“mental blocks” can obstruct ~ treatment, 371  
operations, medical or dental treatment, deliveries, should be audited out as soon as possible by R3R, 422  
patients who do not respond to treatment, 348  
pc “stuck” in time can make medicine ineffective, 371
- memory, past life and memory of it is buried under terrific loss of possessions and body, 163
- mental,  
healing, Dianetic auditor is natural inheritor of all, 325
- don’t send insane to ~, 1 16  
illness vs. physical illness, 312  
man has used mental knowledge in the past mainly for control, politics and propaganda, 391  
treatment and crime, 404
- mental image picture(s),  
are all there is in pc’s mind; this is totality of aberration, 340  
auditor always has more control over pc’s mental image pictures than pc does, 342  
bank means ~ collection of pc, 359  
drugs chemically inhibit creation of mental image pictures and inhibit erasure, 444  
erasure of mental image picture removes compulsion to create it, 444  
if you don’t run ~ from past lives when they come up on a chain, pc will not recover, 345  
illness symptoms are out of ~, 337  
is source of continued pain, somatics, bad perception or illness, 339  
stuck, reasons for, 227  
whole answer to the mind is mental pictures and masses created by thetan, 160  
why they make TA go high, 356  
“mentally retarded” children, 348
- mescaline, 244
- meter; *see* E-Meter
- middle rudiments; *see* rudiments, middle
- mind, analytical; *see* analytical mind  
mind, reactive; *see* reactive mind
- minus scale Releases: ARC Straight Wire and Dianetic, 175
- misemotion, *defn.*, anything that is unpleasant emotion such as antagonism, anger, fear, grief, apathy or a death feeling, 341  
emotion and misemotion are closely allied to motion, being only a finer particle action, 192  
emotion and misemotion include all levels of complete Tone Scale except pain, 192
- missed withhold(s), 434; *see also* rudiments  
ARC breaks and ~, how to distinguish between, 22  
auditor who won’t hear what pc is saying has made him have a withhold and it responds as a ~, 22  
bottom of ARC breaks is a missed withhold, 22  
cause blows, 22  
M/W/H pc, why they are hardest to handle, 22  
M/W/Hs which don’t read on ill pc though pc is nattering are not available to be run, 249  
nattery pc, don’t run ARC break, run ~, 265  
rudiment, commands for, 259  
“Who nearly found out” is unlimited for ~, 280
- mistakes, anatomy of, 219
- misunderstood(s),  
chain of misunderstood words, 153  
genus of overts is misunderstood, 97  
looked up can yet remain troublesome, cause of, 14  
one goes dull after passing over a word one does not understand and brightens up the moment he spots the word that wasn’t grasped, 14  
only reasons pc is critical are a withhold or mis hospitals, understood word, 91  
overts and misunderstood words, 153  
Remedy A locates ~ person has in Scientology, 206  
Remedy B, don’t ask for misunderstood words in found subject, 199
- Model Session, 60, 78, 259; *see also* session  
Class II, 44
- Money Process, command of and how to run, 215  
“more” “less” occur in bank, use in dating forbidden, 191
- mores and changing fashions, C/S must know, 253
- motion sensation, *defn.*, feeling of being in motion when one is not; it includes “winds of space”, feeling of being blown upon especially from in front of face, 192
- motivator, *defn.*, an aggressive or destructive act received by person or one of dynamics, 231; *see also* overt-motivator sequence
- Mutter TR, purpose, commands, position and training stress of, 104
- muzzled, *defn.*, using only TR 0,1, 2, 3 and 4 by the text, 59
- M/W/H; *see* missed withhold
- mystery, what is basic; *see* NSOL

## N

- Napoleon, 133
- narrative; *see also* chain  
chains are held together by one similar feeling, not by narratives or personnel or locations, 352

## SUBJECT INDEX - 1965/1969

- narrative (*cont.*)  
narrative chains are often very long, 394  
run chains only by somatic, not by narrative, 344, 352  
somatic vs. narrative chains, 352, 376, 394  
when running a narrative chain, ask for “earlier similar incident”, 394
- nattery preclear, don’t run ARC break, run M/W/H, 265
- needle; *see* E-Meter, needle; needle characteristics by name
- neurotic, ARC Straight Wire can crack neurotic cases, 175,261
- no case gain; *see* case gain and no case gain
- non-compliance, alteration of orders and tech is worse than non-compliance, 193
- non-compliance, reason for, 291, 292
- non-cyclical process, *defn.*, repetitive process which does not cause pc to cycle on time track, 101
- no report, refusing to give a withhold in session is a no report, 23
- not know, alter-is and poor results do not really come from ~; they come from can’t apply, 90
- not there and generality, 18
- not there, ARC break occurs on a generality or a not there, 16
- O**
- OCA/APA, PTP can hold a graph unchanging and only an ARC break can lower one, 16
- Opening Procedure by Duplication; *see* PXL  
importance of two-way comm during; *see* PXL
- Opening Procedure of 8-C; *see* PXL
- “open-minded” people, turn them into dedicated ones, 8
- Operating Thetan(s), 62  
*defn.*, a Clear who has been familiarized with his environment to a point of total cause over matter, energy, space, time and thought, 56  
*defn.*, one who is cause over matter, energy, space and time and is not in a body, 61, 86, 141  
*defn.*, being who has once more recovered his full abilities and freedom, 87, 142
- Clear and OT, 51, 56
- Dianetics and OTs, 360  
OT giving trouble being audited on Dianetics, turn him over to a Class VIII for routine handling on Scientology, 395  
OT who has somatics is auditable on Dianetics which he should have had in first place, 395
- exterior, 276  
“false III”, 395  
handling the OT case, 395  
keyed-out Operating Thetan and Operating Thetan, difference between, 51, 56
- OT III Course, handles degraded beings, 193
- reactive bank, OT has no reactive bank, is cause over matter, energy, space, time and thought and is completely free, 62
- Operating Thetan(s) (*cont.*)  
Release—Clear—OT, 86, 141  
somatics and OTs, 339  
when a Clear has been familiarized with his capabilities, you have an OT, 86
- operations should be audited out as soon as possible by R3R, 320, 348, 422
- order, on bringing; *see* NSOL
- organization(s),  
auditing is an organization action, 145  
failures in training will cause trouble for orgs and Scientology, 8  
finest organizations in history have been tough, dedicated organizations, 8  
why the early Scientology organizations failed, 6
- originality, why much originality can be a liability in art, 83
- originate, real auditor’s pcs don’t overtalk or under talk but answer auditing question and happily now and then originate, 139
- OT; *see* Operating Thetan
- outflow, 238
- out tech; *see* technology, out
- over-correction, when ~ has been present you straighten out the blunders in folder, 241
- overrun(s), overrunning, 66, 373  
auditing actions, 241  
Dianetic auditor is not concerned with “rehabilitation” of overrun, 373  
don’t overrun, stop when result is attained, 51  
free needle and overrun, 143  
if process is overrun free needle vanishes with just one extra command, 144  
overrun past F/N will cause TA to rise, 275, 277  
life can be an ~ and pc never audited will respond to rehab of “something overdone”, 145  
life subjects are subject to overrun, mechanism of, 147  
rehabbing several overruns, 147  
tone arm goes up means an overrun in life or on a process or grade of release, 147  
tone arm, high, handling by rehabbing overruns, 251 [Important: *see* also High and Low TA Breakthrough, VII-268]  
tone arm, high, in Scientology high TA is always an overrun, 356, 397, 418  
types of overrun that can require repair, 176  
wrong ownership can cause TA to act up in a peculiar way that looks like an overrun, 280
- overt(s), *defn.*, an aggressive or destructive act by individual against one or another of 8 dynamics, 231  
as a solution to a PTP; find what PTP he’s trying to solve with these crazy overt acts, 23  
commands to be used to clean up ~, 238  
continuing overt act, 102  
continuing overts hidden from view are cause of no case gain, 91, 102  
continuous overt case, 23

## SUBJECT INDEX - 1965/1969

- overt(s) (*cont.*)  
continuous PT overts, listing question to handle, 260  
missed withholds or overts which don't read on an ill pc though pc is nattering are not available to be run right then, 249  
misunderstood words and overts, 153  
  genus of overts is misunderstood, 97  
prediction and overts, 404  
pre-OTs often have plain withholds with no overt connected, 280  
  slow gain case is committing overts, 102  
overt-motivator phenomena, two extreme stages, 231  
overt-motivator sequence, 231, 238  
  of engrams, 231  
  of secondaries, 232  
  principle of ~ will be found to explain and its techniques remedy the brutality into which races fall, 405  
Overt Release—Grade 11 Release [1965], 96  
  O/W processes, 95  
Overt/Withhold, running O/W [Model Session], 44  
overwhelm(ed)(ing),  
  bad TRs can cause low TA as auditor is ~ pc, 388  
  Dianetics, worst crime is ~ pc by telling him what's wrong, not letting him tell you, 379  
  person totally overwhelmed by a suppressive assumes valence of suppressive, 128  
low, (below 2) means pc is overwhelmed and has retreated, 388, 397, 419  
ownership, wrong ownership can cause TA to act up in a peculiar way that looks like an overrun, 280  
own things, antisocial person can't, 179  
Oxford Capacity Analysis; *see* OCA/APA
- P**
- pain, *defn.*, is composed of heat, cold, electrical and combined effect of sharp hurting, 192  
  body pain, subject to use is Dianetics, 348, 351  
  insanity can be suppressed pain, 314  
  is from either the body directly or is part of content of mental image picture, 342  
painkillers (known as aspirin, tranquilizers, hypnotics, soporifics), actions of, 443  
past lives, 345  
  cases that can't get into or run past lives, 424  
  failures stemming from not running ~, 345  
  memory is buried under terrific loss of possessions and body, 163  
  pc refusing to go into any past lives will get into grinding as they seldom reach basic on any chain, 361  
Pastoral Counseling Health Form, 381; *see also* Health Form  
pastoral counseling is completely legal, 347  
past, present and future; *see* NSOL  
  past, thetan can escape an unbearable PT by dropping into past, even without drugs, 292  
  patients not responding to medical treatment, how to handle, 348  
  Pavlov and his work, 391, 404  
  pc; *see* preclear  
  penalties and rewards; *see* ISE  
  people, honest people have rights too; *see* NSOL  
  perception, pc or pre-OT with bad perception trouble needs Dianetics, 339  
  perfection in art; *see* art  
  personality, antisocial; *see* antisocial personality  
  personality, social; *see* social personality  
  personnel, it takes about 2 admin personnel to keep a tech personnel going, 402  
  petition; *see* *Introduction to Scientology Ethics*  
  peyote, description of, 244  
  philosophy, *defn.*, the love, study or pursuit of wisdom, or of knowledge of things and their causes, whether theoretical or practical, I can only be a route to knowledge, I religious philosophy, what it implies, 195  
  physical(ly),  
    difficulties, pc with ~ needs Dianetics, 339, 349  
    disability, in Dianetics run the feeling not the physical disability, 352  
    healing, don't force auditing into, 313  
    ill, illness; *see* ill, illness  
  pleasure moments, *defn.*, mental image pictures con tone arm, taining pleasure sensations, 342  
  political philosophies placed against Tone Scale, 317  
  postoperative auditing, 422  
  postulate(s), 67  
    Clear's postulates read as a surge, 220  
    problem is postulate-counter-postulate, 109  
    suppression, person faced with, is facing a counter postulate, 109  
  potential trouble source; *see also* roller-coaster;  
    Search and Discovery  
    case worsening is caused only by a PTS situation, 114  
    degraded being is so PTS he works for suppressives only, 193  
    handling, 77, 91, 109, 113, 165  
    is known by "roller coastering", 75, 162  
    must be sent to Ethics, 77  
    only PTS = illness, 165  
    pc is always a PTS if he roller-coasters and only finding right suppressive will clean it up, 91  
    PTS, why people become, 216  
    suppressive person, apparent SP only reminds pc of actual one and so is restimulated into being a PTS, 114  
    Type One, *defn.*, SP on case is right in present time, actively suppressing person, 113  
    handling, 113  
    Type Two PTS, 166, *defn.*, apparent suppressive person in present time is only a restimulator for the actual suppressive, 113  
    handling, 114; *see also* Search and Discovery

## SUBJECT INDEX - 1965/1969

- potential trouble source (*cont.*)  
Type Three, *defn.*, is beyond facilities of orgs not equipped with hospitals as these are entirely psychotic, 113  
handling, 115  
Power Plus Release—Grade VA Release, 98  
Power Processes,  
confidential, from Pr Pr on up the data is, 105  
do not run on anyone who has run CC materials, 203  
Grade V Release—Power Processes, 95  
low TA cases and Power Processes, 121  
on high TA cases [1965], 100  
what they do, 56, 62  
Power Release—Grade V Release, 96, 98  
Release or Second Stage Release, 56  
preclear(s)('s), *defn.*, spiritual being now on the road to becoming Clear, hence preclear, 321; *see also* case  
able to confront to the degree that he or she feels safe, 359  
“ARCBreaky pc”, handling of, 22  
ARC broken, don’t audit until handled, 16, 76, 91  
assigns body to his case or case to his body, 312  
audited a bit below or at his level of awareness gets TA action, case gain and has cognitions, 33  
challenged by an “auditor” who is breaking Auditor’s Code, gets solid reaction in reactive bank, reason why, 291  
critical, only reasons a pc is critical are a withhold or misunderstood word, 91  
Dianetic preclear, *defn.*, one who is being processed toward objective of a well and happy humanbeing, 326  
not changing or improving, how to handle, 430  
often is unable to confront actual engram at once, 341  
repair, 429; *see also* L3RD [in full index]  
telling there are several incidents, take earliest, 401  
who does not resolve on Standard Dianetics alone, how to handle, 395  
“different” pcs, there are no, 449  
dirty needle, three causes for pc having, 375  
doesn’t get gains, check for physical injury or illness, 315, 316  
environment influences pc’s ability to confront, 359  
ethics, pc who gets into Ethics trouble should have folder reviewed, 251  
exterior pc who can’t be audited, how to handle, 293; *see also* Interiorization Rundown [in full index]  
exterior, you cease to audit or he will go back in; audit again when he goes back in [1968], 276  
fast running pc on a light chain can occasionally blow an engram by inspection, 400  
floating needle occurs just before pc is aware of it; don’t prevent pc from cogniting, 362; *see also* floating needle  
preclear(s)('s) (*cont.*)  
folders, analyzing and reviewing folders, 268  
gets ill after auditing but sessions look alright, how to handle, 430  
getting off another person’s offenses, report alleged offenses to Ethics for investigation, 50  
has to be able to handle Scientology technology to handle his own bank, 19  
ill physically, 312; *see also* illness  
don’t force a pc who is ill, 249  
handling of physically ill pcs, 347, 415, 421, 429  
require light auditing, 249, 421  
need Dianetics, not Scientology, 328, 339, 341  
on antibiotics should be given Dianetic auditPowering, 422  
pcs don’t always know they’re ill, 316  
Search and Discovery, a wrong item on an S&D can make pc ill, 208  
insane pc, handling of, 411  
itsa on and on with no gain, cause of, 26  
missed withhold pc, why they are hardest to handle, 22  
must be well to start on Scientology auditing, 325  
nattery, don’t run ARC break, run M/W/H, 265  
needle doesn’t react to auditor, preclear may be ARC broken, 73, 76  
needs but become aware of actual cause of aberration to have it vanish, 58  
never audited will respond to rehab of “something overdone”, 145  
never has done anything in this life that aberrated him, 199  
new preclear(s), 217, 321; *see also* case super vising, Dianetic C/S I [in full index]  
Grade VI run on new pcs means failure, 100  
not getting gains, causes of, 76, 315, 324, 429, 435; *see also* resistive cases  
not getting results means either he or auditor is doing something else, 91  
on drugs must come off them before auditing, 322; *see also* drugs  
on Scientology Grades gets ill, revert to Dianetics, 341  
past lives, pc refusing to go into any past lives will get into grinding, why, 361; *see also* past lives points pc may have to handle before auditing, 283  
PTS, pc is always a potential trouble source if he roller-coasters and only finding the right suppressive will clean it up, 91; *see also* potential trouble source  
purposes and postulates, effect of, 67  
refusing auditing or not wishing to go on, 369, 442  
released at Zero will of course soon begin to have problems; he goes to next grade, not to Review for an assist, 252  
release, pc who has attained a stage of, may not be run further on processes of that stage or below or he will go back into his reactive mind, 86; *see also* release

## SUBJECT INDEX - 1965/1969

- preclear(s)(‘s) (*cont.*)  
Review, when to order pc to, 256  
roller-coasters after Dianetic auditing, handling of, 410; *see also* roller-coaster  
sad effect, pc will go into, if you don’t find ARC break but instead continue the process, 16  
says it’s A and it doesn’t blow, it must be something else, 92  
six things that can be wrong with a pc, 93  
slow gain, poor result, is a physically ill pc, 316  
“stuck” in time can make medicine ineffective, 371  
suffers only from that which has not yet been handled, 416  
suppressive person, pc will worsen after auditing if connected to, 76; *see also* suppressive person  
what auditor believes has little to do with pc’s reality, 345  
who does not go down somatic chain but who skips from one somatic to another could also get into grinding, 360  
withholds and preclear; *see also* withholds  
“withholdy” vs. “ARC breaky”, 22  
with withholds will be critical, natter or blow and is out of comm, 76  
won’t run when auditor’s comm cycle is out, and pcisanEthicstypcase,49  
prediction and overts, 404  
premature acknowledgements, effects of, 26,138; *see also* acknowledgements  
prenatal or birth engrams, do not run, unless they come up naturally, 163  
pre-OT, brief dirty needle on ~ means “no”, 220  
pre-OTs often have plain withholds with no overt connected, 280  
pre-OTs require fast auditors, 417  
prepared lists are unlimited so long as the items are varied, 280  
prepared lists, assessment means the locating on a prepared list, one item, 266  
prepared lists, two ways to use, 210  
Prepcheck is an unlimited action, 280  
present, past and future; *see NSOL*  
present time,  
anyone forced into dangerous environment tends to either go fully into PT or retreat from PT, 293  
drug may be taken to drive a person out of an unbearable PT,292  
relationship to insane and drug taker, 292  
underthreatthetangoesoutofPT,291  
present time problem, 434; *see also* problem; rudiments  
commands for, 259  
don’t mistake a PTP or withhold for an ARC break, 77  
long duration PTPs prevent good gain and send pc into back track, 91  
OCA/APA, PTP can hold a graph unchanging and only an ARC break can lower one, 16  
present time problem (*cont.*)  
overts as a solution to a PTP, how to handle, 23  
pc being audited over PTP won’t be making any gains, 76, 429  
sick body is a PTP and inhibits attaining spiritual freedom by Scientology, 347  
thetan, big PTPs a thetan has are his body, 339  
two-way communication and present time problem; *see The Phoenix Lectures*  
press, 392  
pressure, bank solidity is a form of, 192  
pressure somatic is, in Dianetics, considered to be a symptom in a lock, secondary or engram, simply part of content, 342  
prior assessment, one has to assess what was wrong before or prior to the cure, 377  
problem, *defn.*, is postulate-counter-postulate, 109; *see also* present time problem  
hidden standard is always an old problem of long duration, 109  
pc released at Zero will of course soon begin to have problems; he goes to next grade, not to Review for an assist, 252  
suppressive, if you find a suppressive on a case you will also find a chronic problem, 109  
Problems Process, “What is the problem?” “What solutions have you had for that problem?”, 111  
Problems Release—Grade I Release, 95, 96, 98  
process(es),  
are not drills, 40  
basic processes, 278  
can go F/N in a session break and intention of auditor to continue sends TAhigh, 277  
cyclic process, *defn.*, repetitive process which does cause pc to cycle on time track, 101  
developed are too powerful to admit of goofs and departures and unusual solutions, 28  
don’t underrun or overrun, 100  
end of process, cyclical and non-cyclical, 45, 101  
flows, it is type of process rather than the type of pc which regulates the flows, 307  
free needle, if process is overrun free needle vanishes with just one extra command, 144  
level processes must be audited in sequence in the level itself, 27  
limited processes, 278  
lower level processes are run at sensitivity 16, 110  
non-cyclical process, *defn.*, repetitive ~ which does not cause pc to cycle on time track, 101  
rewording a process given in the levels can be catastrophic, 27  
standard process, errors that make it not seem to work, 76  
star-rated checkouts of processes are required before application, 156  
start of process [Model Session], 45  
Think processes are unlimited, 282  
Process I—X, 25  
processing; *see* auditing

## SUBJECT INDEX - 1965/1969

professional in arts is one who obtains communication with art form at minimum sacrifice of technical quality, 84  
protest of doing it too often pushes TA up, 280  
protest read, Dianetic item already run may give, 357  
psychiatry, "all mental trouble is physical", 313  
psychiatry, psychology and psychiatry are political subjects aimed at control, 404  
psychology and government, 404  
psychology, "conditioning" and psychology, 391  
psychosis, 131  
psychosomatic, *defn*, pains stemming from mind, 341; *see also* illness  
    illness, Dianetic auditor can handle the bulk of, 326, 349  
    ills, cause of, 340  
psychotic(s), 131  
    absolute minimum is 21h% of population, 133  
    characteristics of a psychotic, 133  
    help and psychotics, 133  
    PTS Type Three is beyond facilities of orgs not equipped with hospitals as these are entirely psychotic, 113  
    Search and Discovery handles victims of ~, 134  
psychotropic drugs, how they "work", 314  
*PT*; *see* present time  
*PTP*; *see* present time problem  
*PTS*; *see* potential trouble source  
who seek to liken Scientology to something else, how to handle, 152  
punishment, criminal codes and violent ~ are not needed to regulate social personalities, 182  
purpose(s),  
    artists, purpose S&D is very magical on, 219  
    auditors or C/Ses who begin to goof, how to handle by two-way comm or earlier ~, 306  
    difference between one thetan's forward thrust and another's is purpose, validity of, 198  
    pc's own purposes, 67

### Q

Qual,  
    basis of Qual actions [1965], 73, 75  
    chits when SP or PTS is found not sent to Ethics, 77  
    highest crime in Tech and Qual is to fail to insist on star-rated checkouts, 156  
    keynote of Qual is correction, 211  
    senior datum, 211  
    Tech vs. Qual, 167  
Qualifications technical actions, 73  
"quickie grades" denied gain to tens of thousands of cases, 4

### R

radiation, Dianazene for radiation prevention, 123  
reaction time, Dianetics and Scientology greatly speed up, 420

reactive mind, 87, 142  
    analytical mind becoming aware of a point in reactive mind makes it vanish, 57  
    assessment is done by auditor between pc's bank and meter, 388  
    auditor plus pc is greater than bank, auditor plus bank is greater than pc, pc minus auditor is less than bank, 359  
    bank-agreement, 6  
    bank means mental image picture collection of pc; it comes from computer technology where all data is in a "bank", 359  
    Clear, relationship to, 19, 56, 61, 86, 141  
    described, 62  
    discipline vs. reactive mind, 102  
    group, common denominator of a group is the reactive bank, 6  
    "id", "ego", no such things in the mind, 340  
    is full of generalities which explains the hard ARC breaks of Level VI, 18  
    liability of the reactive mind, 20  
    mental image pictures are all there is in pc's "mind", 340  
    myths of the mind; *see NSOL*  
    Operating Thetan, relationship to ~, 62  
    person out of valence does not easily as-is his bank, 426  
    preclear has to be able to handle Scientology techpublicology to handle his own bank, 19  
    pressure, bank solidity is a form of, 192  
    records of mind are permanent; *see NSOL*  
    Release is pulled out of, 61, 86, 141  
    R6 bank, 38, 62  
    the reactive mind, 61  
    spirit or mind can predispose illness or injury, 312  
    thetans without banks have different responses, 6  
    things that can pull one back into, 61, 86  
    whole answer to mind is mental pictures and masses created by thetan, 160  
read(s); *see also* E-Meter  
    ARC broken pc may not read, 73  
    Assessment for Longest Read, 357  
    Dianetic lists, note reads as pc mentions items, 377, 389  
    Dianetics, run what reads not what auditor thinks, 358  
    false reads, checking for, 249, 250  
    instant; *see* EMZ (EM Drill 19)  
    items, how they first are null and later read, 358  
    item which does not read when assessed is beyond pc's level of awareness, 357  
    listing, note down reads as you list, 256  
    pre-OTs, reads on, 220  
    protest read, 357  
    rudiments, if it reads and pc gives one, don't check the read again, 434  
    Search and Discovery, do not list an S&D button if question for list does not read, 218  
    somatic, don't run if it hasn't read, 357  
    symbols of reads, 357

## SUBJECT INDEX - 1965/1969

- reality, *defn.*, mass or agreement, 261  
proportional to amount of charge off, 281  
what auditor believes has little to do with pc's reality, 345
- Reality Scale, old and new, 201
- recall, 279  
*defn.*, present time remembering something that happened in past; it is not re-experiencing it, re-living it or re-running it, 271  
*defn.*, you are in present time, thinking of, remembering, putting your attention on something that happened in the past, all done from present time, 271
- Recall Processes are unlimited, only limitation being the subject, 278
- Recall Processes, three flows of, 279
- recognition, communication=energy or ~, 261
- rehab, rehabbing, rehabilitation,  
all recovery must be by key-out, not erasure; key-outs are done by finding key-ins; it is de-stimulation, not re-stimulation, 57  
Dianetic auditor is not concerned with "rehabilitation" of overrun, 373  
don't continue past a floating needle, 66  
don't use rehabs to over-correct, 241  
drug "releases", rehab by counting, 253, 258  
E-Meter dating on rehab, 66  
floating needle, "high TA F/Ns" during ~, 251  
grades, 203  
lower grades rehabbing, 143  
when to rehab grades, 241  
liability of rehab, 58  
life can be an overrun and pc never audited will respond to ~ of "something overdone", 145  
never use a new process to cure an overrun, 148  
procedure, 57, 63, 66  
errors, 66, 99, 107  
incorrect rehab procedure, 117  
rehab by rehab procedure, don't use another process, 144  
when not to rehab, 241
- Release rehabilitation, 63  
Former Release, 57, 66, 99
- Scientology rehab vs. Dianetic erasure, 397, 418
- SelfAnalysis*, rehab on, 188
- theory of, 58
- tone arm, high, handling by ~ overruns, 251
- Release(s)('s), *defn.*, a person who has been able to back out of his bank; the bank is still there but the person isn't sunk into it with all its somatics and depressions, 19  
auditing past a state of release, what happens, 76  
auditing, there are no release points prior to, 107  
auditor's comm cycle, roughness of, can prevent release from occurring, 66  
can have their problems handled, their withholds pulled, their ARC breaks repaired and any release at any stage can be audited on exact processes of Release Rehabilitation, 86  
declare for Release, 75
- Release(s)('s) (*cont.*)  
degree and relative permanence of being pulled out of reactive mind determines state of ~, 86  
drug "releases" are deadly, why, 258  
erasure vs. release of engrams, 262  
exterior is secondary in importance to the fact of being a Release, 62  
floating needle, you wreck a Release by running past, 66  
Former Release check, 73  
goofs, 66  
not getting all releases, 67  
grades of release, 96, 98, 141  
belowZero, 175  
cease to call Release by stages and call them by grades, 95  
Clear is on other side of reactive bank and above all grades of release, 56  
type of process run to attain, 95  
is pulled out of his reactive mind, 61, 86, 141  
is stable as long as he or she is not pushed into R6 bank, 38  
keyed-out Clear vs. Release, 19, 20  
pc does not remain in status quo (unchanging state) while a Release, 70  
period of release, pc gives pre-Scientology times, how to handle, 108  
person does not have more Scientology data just because he or she is a Release, 39  
postulating going down scale or an attack on something can collapse a state of Release, 67  
rehabilitation of; *see* rehabilitation  
stages, 56, 70, 71, 86  
First Stage Release, 56, 61, 62, 70, 71, 86  
Second Stage Release, 56, 61, 62, 70, 71, 87  
Third Stage Release, 56, 61, 62, 70, 71, 87  
Fourth Stage Release, 70, 71, 87  
Fifth Stage Release, 71, 87  
state, key out a major lock you may today get a release state, 107  
suppressive persons go for new Releases, 39, 68  
training, Release's increased abilities regarding, 39
- releasing, F/N does not last very long in, 275
- religion, Scientology is a religion, why, 195
- religions, why Scientology does not conflict with other religions, 195
- religious philosophy and religious practice, 195
- remedies, 150  
*Book of Case Remedies* used to spot by-passed charge, 13  
case remedies, 282
- Remedy A, 150, 206  
done only by listing, 206  
guiding secondary style in normal application, 151  
locates misunderstands person has in Scientology, 206  
patter, 151  
revision of Remedy A, 206

## SUBJECT INDEX - 1965/1969

- Remedy B, 150,199, 206  
  can remedy glee, 257
- listing, 199, 206  
  don't ask for misunderstood words in found subject, 199  
  guiding secondary style in normal application, 151
- limited process, 278  
  more than one of List 3B can be done if all steps are done for each one, 207  
  must not be run to limit the pc to this life, 199  
  patter, 152  
  revision of Remedy B, 206
- repair, Dianetic pc repair, 429; *see also* L3RD [in full index]
- repair, overrun that can require repair, 176
- repeater technique, we no longer use, 336
- represent list, if you find a *group* on an S&D do a represent list, 164
- resistive, 7 resistive cases, 310, 410; *see also* Green Form 40; case, resistive [in full index]  
  Green Form No. 40 [GF 40] is "7 resistive cases", 410
- restimulate(s), restimulation,  
  cycle of drug restimulation of pictures, 444  
  multiple illness means pc is physically uncomfortable or ill from several engrams of different types all restimulated, 342  
  roller-coaster of processing results is never because of restimulation caused by training, 94  
  sickness is the result of engram chains in ~, 435  
  teaching of basic data restimulates confusions, 365  
  tone arm, high, E-Meter reaction to increased mass, 356  
  tone arm in Dianetics is high only for one reason, one or more engram chains are in ~, 418
- returning, *defn.*, to go back and re-experience an incident, 271
- review(s)(ing),  
  action, 129  
  auditor, importance of, 399  
  Case Supervisor plays adept Scientology ~ against Dianetic auditing, 410  
  folder reviewing, 268  
  never have a backlog of Reviews, 74  
  "Review to handle", 74  
  Scientology Review for a "Green Form", 395  
  standard procedure: don't audit the case, audit the procedure, 73  
  when to send pcs to Review, 167, 256
- Review Auditing Form; *see* Green Form
- rewards and penalties; *see* ISE
- right, *defn.*, forwarding a purpose not destructive to majority of dynamics, 197
- roller-coaster; *see also* potential trouble source case that betters then worsens, 109  
  *defn.*, Coney Island fast up and down quarter-mile of aerial railway, 162  
  after Dianetic auditing, handling of, 410  
  causes of and handling, 109, 113
- roller-coaster (*cont.*)  
  Ethics handles whole phenomena of case worsened by ing (roller-coaster) after processing, 113  
  of processing results is never because of restimulation caused by training, 94  
  pc is always a potential trouble source if he roller is a coasters and only finding the right suppressive will clean it up, 91  
  PTS = roller-coaster, 75,162
- Ron; *see* Hubbard, L. Ron
- Route 1, reactive mind prevented pcs from doing Route 1 drills, 19
- Routine 2-12 List One; *see* EMD
- Routine 3H, 239
- rudiments, ruds, 280; *see also* ARC break; missed withhold; present time problem  
  beginning rudiments [Model Session], 44  
  commands for ARC break, PTP, missed withhold, 259  
  commands, important to clear, 265  
  don't run ruds if TA high, 277  
  end rudiments [Model Session], 45  
  flying ruds, 433  
  don't fly when pc comes into session with an F/N, 280  
  handling rudiment is just getting pc going, 97  
  if a rud reads you always follow it earlier until it F/Ns, 433  
  if it reads and pc gives one, don't check the read again, 434  
  instant rudiment reads; *see* EMD (EM Drill 18)
- life ruds, 435  
  middle rudiments [Model Session], 45  
  out ruds, 429  
  in Dianetics, 429  
  pc himself can generate out ruds by lying; it shows up as out ruds, withholds, 430  
  pc with out ruds makes no real gain, it is wise to put ruds in "in life", 435  
  questions if not done in the same day tend to be unlimited, 280  
  sensitivity 16, rudiments are run at, 110  
  use suppress and false, 281, 433
- run what is offered, don't force the pc, 341
- R (number); *see* Routine (number), except R3R and R6 [below]
- R3R; *see also* Dianetic auditing; engram running commands on second run on an incident, 354  
  earlier beginning, 401  
  earlier incidents, 360  
  if a lock F/Ns you can get earlier incidents on same chain until pc actually runs engram or chain of engrams, 354  
  if a mental image picture goes more solid on second pass through, an earlier similar incident *defn.*, dent must be found, 344  
  second time through, if TA rises, there is an earlier incident, 373
- erasure; *see* erasure  
  exactly followed gives uniform results, 366

## SUBJECT INDEX - 1965/1969

### R3R (cont.)

- incidents can force pc's TA below 2, but when erased TA comes back up to F/N, 398, 419
  - operations, medical or dental treatment, deliveries, should be audited out as soon as possible by R3R, 348, 422
  - pc telling there are several incidents, take earliest, 401
  - run the incidents given by pc or he doesn't get well, 346
  - run what reads, 350
  - solid, example of pc saying "it was getting more solid" to escape each incident, 430
  - TA and R3R, 397
- R6 bank; *see* reactive mind
- R6EW, Grade VI Release, 95
- R6EW, next step for a Grade VA Release in auditing is R6 EW, 38
- R6EW, when pc has taken locks off reactive mind itself, using R6EW, he attains Fourth Stage Release, 87

## S

- sad effect, cause of, 16
- safeguarding Scientology materials, 105
- safeguarding technology, 10
- Saint Hill HGC staff auditor is not the same as a Class VI Saint Hiller, 34
- sane person, passive and active, 197
- true sanity is that condition wherein
  - one is sufficiently intelligent to solve his problems without physical violence or destroying other beings and yet survive happily and prosperously, 405
  - ability to tell right from wrong is legal definition of sanity, 404
  - doubt about own sanity, answer to, 135
  - road to sanity, 405
  - true sign of sanity, 154
- science, how to study a; *see* NSOL
- "Scientologists are harder to audit than new pcs", answer is auditor speed, 420
- Scientologists, never be half-minded about being, 8

- are listed by the laws of listing and nulling, 266
  - artists, purpose S&D is very magical on, 219
  - bad S&D makes a person sick, 165
  - commands, 164
    - key S&D question: "Who or what has unsanity, defn., mocked you?", 210
  - correcting S&Ds, 263
  - disconnection letters, S&D and, 166
  - errors, 127, 136
  - F/N, "S&Ds to F/N", 218, 250
  - handles victims of psychotics, 134
  - item,
    - general item, how to handle, 208
    - missed item, 165
    - "myself" as item, 128
    - turns out to be a group, how to handle, 114, 164
    - wrong item on an S&D can make pc ill, 208
  - listing questions, 207
  - must read, 218
  - listing rules, 129
  - List L4 used to assess an ARC break on ~, 171
  - List L4A, 213
  - meter just falls flat when you've got a complete list; needle goes clean, 129
  - Purpose S&Ds, 218
  - service facsimile, locating, and Search and Discovery, difference between, 115
  - SP, when discovered, give an S&D to his associates, 144
  - three S&Ds, procedure for, 436
  - trouble in, 128
  - types: Type S, Type U, Type W, 216, 219
    - more or less limited to one of each type, 278
- seasickness, example of handling, 202

## SUBJECT INDEX - 1965/1969

- secondary, secondaries, 232, 279; *see also* engrams  
*defn.*, mental image pictures containing misemotion (grief, anger, apathy, etc.); they contain no pain; they are moments of shock and stress and depend for their force on underlying engrams, 61, 86, 141  
*defn.*, mental image picture of a moment of severe and shocking loss or threat of loss which contains misemotion such as anger, fear, grief, apathy or “deathfulness”, 340  
 bury engrams, 163  
 called a secondary because it itself depends upon an earlier engram with similar data but real pain, 340  
 derives all its power from an underlying engram, 163  
 originalusemeant”amomentofloss”, 163  
 overt-motivator sequence of, 232  
 running ~gives spectacular results, 159  
 Second Stage Release, 56, 70, 71, 87  
*Self Analysis* lists rehab, 188  
 “self-coaching” is flunked, 234  
 sensation, *defn.*, all other uncomfortable perceptions than pain stemming from reactive mind; these are basically “pressure”, “motion”, “diz~iness”, “sexual sensation”, and “emotion and misemotion”, 1 92  
 sensitivity setting, 110,144, 147  
   free needle and sensitivity, 144,147  
   knob; *see BIEM*  
   lower level processes are run at sensitivity 16, 110  
   rudiments are run at sensitivity 16, 110  
 service facsimile(s), 173

   computation generated by the being not the bank, 173  
   Grade IV Release—Service Facsimiles, 95  
   methods to find, 189  
   pc giving a doingness, how to handle, 173  
   Search and Discovery and locating ~, difference between, 115  
 session, *defn.*, auditor and preclear locate, step by step, any mental blocks to increased ability and freedom, 322; *see also* Model Session  
   Auditor’s Report, Crime to give any session or assist without making one, 364  
   break, process can go F/N in, 277  
   data, important data in a session, 91  
   end of session [Model Session], 46  
   failure, causes of, 274, 417, 449  
   failure, handling, 449  
   illness “running out” after session, 371  
   ill pc needs smooth and short sessions, 421  
   preliminaries [Model Session], 44  
   start of session [Model Session], 44  
 set-up for auditing, 283  
 sexual sensation, *defn.*, any feeling, pleasant or unpleasant, commonly experienced during sexual restimulation or action, 192  
 sF—small fall (a quarter to half an inch), 357  
 shock, insane by reason of emotional shock, handling of, 319  
 sick; *see* ill  
 social personality, 180; *see also* antisocial personality;  
   *Introduction to Scientology Ethics*  
   antisocial personality vs. social personality, 183  
   basic motivation of the social personality, 182  
   criminal codes and violent punishment are not needed to regulate, 182  
   primary characteristics of, 181  
 society, basic building block of, is individual, 392  
 solid, engrams which go solid when you try to run them are too late on chain, 227  
 solid, erasure or going solid, 344, 354, 397, 400, 418, 453  
 somatic(s), 352  
   *defn.*, “pain” or “sensation” with no difference made between them, 192  
   *defn.*, this is general word for uncomfortable physical perceptions coming from reactive mind, 192  
   *defn.*, essentially body sensation, illness or pain or discomfort; “soma” means body, 341  
   *defn.*, pain or ache sensation and also misemotion or even unconsciousness, 352  
   chains go quickly to basic and are important chains, 394  
   don’t run if it hasn’t read, 357  
   erase the *picture*, not only the somatic, 356, 376  
   grinding can result from not following ~, 360  
   Health Form, get somatics (not incidents) that can be assessed and run, 381  
   illness is a composite somatic, 415  
   lingering somatic, how to handle, 279  
   mental image picture is source of, 339  
   narrative vs. somatic, 344, 352, 376, 394  
   OTs and somatics, 339, 395  
   run somatics not medical terms, 389  
   shut-off is caused by drugs and alcohol, 377, 386  
 soul, man’s search for his; *see NSOL*  
 SP; *see* suppressive person  
 space, affinity = space and willingness to occupy the same space of, 261  
 speed and accuracy is stress of all training, 417  
 speed, auditing speed, 417  
 spiritual being, you are a spiritual being not a body or an animal, as you will discover in processing, 322; *see also* thetan  
 spiritual freedom is end product of Scientology, 325  
 spiritual manifestations, religious philosophy implies study of ~; research on nature of spirit and study on relationship of spirit to body; exercises devoted to rehabilitation of abilities in a spirit, 195  
 Spotting Spots in Space [process] and Remedy of Havingness [process]; *see PXL*

 stage four needle, 77  
   all machine, no pc, 201

## SUBJECT INDEX - 1965/1969

standard tech; *see* technology, standard  
star-rated checkouts of processes are required before application, 156  
"star-rated" means 100% letter perfect in knowing and understanding, demonstrating and being able to repeat back material with no comm lag, 157  
Start—Change—Stop processes may not be drills, 40  
stats, after SP is removed, if stats are still down, look for another SP, 144  
stimulus response mechanism, Pavlov and, 404  
STP, a drug, description of, 244  
Straight Wire Release, 175  
Straight Wire Triple, 294  
stuck, pc "stuck" in time can make medicine ineffective, 371  
stuck picture, reasons for, 227  
student(s); *see also* training  
  assists, 75  
  coaching, handling justifications of student, 234  
  decline of student, 273  
  errors of students, 169  
  study mainly the research line, 242  
  there is no student we enroll who cannot be properly trained, 8  
  words a student misunderstands and looks up can yet remain troublesome, cause of, 14  
Student Rescue Intensive, 451  
study,  
281  
  Dianetic Study Intensive, 452  
  engrams and secondaries gather around subject of study, 451  
  materials, course can be wrecked by lack of study materials, 406  
  Scientology auditing and study are the road to ability and freedom, 322  
  slowness, 437  
Sub-Zeros, 190, 294  
Summary Report, 47, 112, 247, 364  
Supervisor; *see* Case Supervisor; Course Supervisor  
suppress button, use of in rudiments, 281, 433  
suppression, in presence of, one makes mistakes, 219  
suppression, people who are PTS became that way because of ~ by persons or objects, 216  
suppression, person faced with, is facing a counterpostulate, 109  
suppressive person(s); *see also* antisocial personality  
  actions of SPs, 39, 68, 136, 137  
  go for new Releases when the Release is still finding his or her "feet", 68  
  Release becomes a particular target for, 39  
  wants other person to reach less, 137  
  was one that wove a dangerous environment around pc, 136  
  actual SP vs. apparent SP, 114  
  apparent SP only reminds pc of actual one and so is restimulated into being a PTS; actual SP actually suppresses another, 114  
  degraded being is not a suppressive, 193

suppressive person(s) (*cont.*)  
  dominates an area, only Ethics actions can handle, 146  
  gets no case gain, 76, 103  
  give S&D to associates when SP is discovered, 144  
  handling of SPs, 77  
  hidden standards, suppressives and, 109  
  how a suppressive becomes one, 128  
  indicator of the presence of, 146  
  insane is a being who has been overwhelmed by an actual SP until too many persons are apparent SPs, 115  
  is always a person, a being or a group of beings, 114  
  no case gain in the past = SP, 75; *see also* resistive cases  
  often located in childhood, 137  
  pc will worsen after auditing if connected to a ~, 76  
  person totally overwhelmed by a suppressive as cycle of sumes valence of suppressive, 128  
  PTS Type One, SP on case is right in present time, actively suppressing person, 113  
  PTS Type Two, apparent suppressive person in present time is only a restimulator for actual suppressive, 113  
  Search and Discovery locates suppressives on case, 207; *see also* Search and Discovery  
  unmocking (an effort to reduce or make dis blows charge, appear) is primary effort of suppressives, 208  
  supreme test of a thetan is his ability to make things go right, 197  
  symptoms, illness has several symptoms, run each as a chain, 337  
  synonym, don't substitute a word for word being word cleared, 14

## T

TA; *see* tone arm  
target, antisocial personality habitually selects wrong target, 178  
teamaction, auditing is ~, 402, 412, 450  
tech; *see* technology  
Technical Division, highest crime in, 156  
Technical Division vs. Qual Div, 167  
technical, it takes about 2 admin personnel to keep a tech personnel going, 402  
technician, keynote of skilled technician is that he is a product of practice, 90  
technology (tech),  
  *defn.*, application of precise scientific drills and processes of Scientology, 89  
  *defn.*, methods of application of an art or science as opposed to mere knowledge of science or art itself, 89  
  applied, ten points to get the correct technology applied, 4  
  getting in tech, 93

## SUBJECT INDEX - 1965/1969

- technology (tech) (*cont.*)
- group will dream up bad ~ to destroy good ~, 5
  - interpretation of, is an Ethics matter, 209
  - out tech, 89, 93, 242, *defn.*, Scientology is not
    - being applied or is not being correctly applied, 89
    - description of, 209
    - how to get it in, 89
    - to solve an earlier out tech situation one does
      - not* “give the next level”, 310
  - pc has to be able to handle Scientology technology to handle his own bank, 19
  - recovery, 143
  - safeguarding technology, 10; *see also* ISE
  - saw, 139
  - Scientology ~ is its actual application to oneself, a preclear or situations one encounters in life, 89
  - standard tech, 268
    - alone resolves all cases, 242
    - auditors are not gauged by results, but by flawless application of standard tech, 273
    - consists of exact grade processes and case repair, 242
    - is invariable in results and the only variables are C/S and auditor, 449
    - only reason it doesn’t work is that it hasn’t been applied, 268
    - produces 100% results, 273
  - temperature, it is difficult to audit someone who is running a , 422; *see also* Temperature Assist [in full index]
  - terminal, 3 terminal universe, 288, 307
  - tests give an idea of how charged up case may be, 281
  - test that declares only antisocial personalities without also being able to identify social personality would be itself a suppressive test, 180
  - theory and practice, difference between, 89
  - theory is only as good as it can be proven or as it works, 134
- thetan,
- banks, without banks thetans have different responses, 6
  - bank, there’s nothing wrong really with a thetan but his reactive bank, 18
  - big PTPs a thetan has are his body, 339
  - can escape an unbearable PT by dropping into past, even without drugs, 292
  - difference between one thetan’s forward thrust and another’s is purpose, validity of, 198
  - drugs produce a threat to body; thetan reacts by mocking up, 291
  - illness, while a thetan can produce illness, it is the body that is ill, 338
  - pain depressants, effect on thetan, 443
  - present time, under threat ~ goes out of PT, 291
  - Scientology deals with thetan, being who is the individual and who handles and lives in body, 341
  - some thetans are bigger than others, none are truly equal, 194
- thetan (*cont.*)
- spiritual freedom and ability, thetan wants, 339
  - supreme test of a thetan is his ability to make things go right, 197
  - unmocking, when threatened with, a thetan mocks up obsessively, 291
  - Think processes are unlimited, 282
  - third party law, 288
  - Third Stage Release, 56, 61, 70, 71, 87
  - threat, under threat thetan goes out of PT, 291
  - three S&Ds; *see* Search and Discovery
  - tick, *defn.*, small jerk of needle, 357
  - time; *see also* PXL
    - understanding and time = ARC, 261
  - time track, *defn.*, consecutive record of mental image
    - pictures which accumulates through pc’s life or lives, 342; *see also* whole track
    - of drug takers and insane is not being made up wholly of present time events; it is a composite of past track, imagination and present events, 291
    - track dating; *see* EMD (EM Drill 25)
  - tiredness routinely responds to Dianetic processing, 348
  - tone arm; *see also* BIEM
    - action falsified by overcompensation of ~, 7
    - assessment and TA, 388
    - below 2 at time of F/N, then you haven’t erased any chain, 419
    - blowdowns; *see also* EML (EM Drill 10)
      - auditor must not speak or move during, 69
    - Dianetic auditing, on second time through, if TA rises, there is an earlier incident, 373
    - erase, when basic erases, TA will fall or rise to area between 2 and 3 and needle will F/N, 373
    - erasing—solid, one does not need to ask this when TA rises as obviously it (incident) is going more solid, 453
    - false TA, one-hand electrode sometimes obscures an F/N and gives false TA, 275
    - floating needle, overrun, and TA will go up, 275, 277
    - flying up in a break, cause of, 277
    - goes up means an overrun in life or on a process or grade of release, 147
    - going up, up, up means picture isn’t erasing but is getting more solid, 397, 418
  - high TA,
    - assessment, 397, 418
    - equals mental energy mass, 397, 418
    - floating needle, “high TA F/Ns” during rehab, 251
    - handling by rehabbing overruns, 251
    - handling high TA after running single item, 441
    - how to get down, 277
    - in Dianetics, is one or more engram chains in restimulation, 356, 418
    - in Scientology high TA is always an overrun, 356, 397, 418

## SUBJECT INDEX - 1965/1969

- tone arm (*cont.*)  
high TA (*cont.*)  
    mental image pictures, why they make TA go high, 356  
    ruds, don't run if TA is high, 277  
    3.5, above 3.5, 388, 441  
    4.0 is high, 277, 356, 397  
*low, defn*, below 2, 388, 397, 419  
    bad TRs can cause low TA as auditor is overwhelming the pc, 388, 419  
    cases (who go below 2.0) will not react to any processing but Power Processing [1965], 121  
    cause of low TA, 397  
    incidents can force pc's TA below 2, but when erased TA comes back up to F/N, 398, 419  
    means pc is overwhelmed and has retreated, 397, 419  
    mass registers as TA above 3, 356, 388, 397  
    mass, when meter needle is not floating TA is registering mental mass, 397, 418  
    overrun, wrong ownership can cause TA to act up in a peculiar way that looks like an overrun, 280 TR 8, Tone 40 on an Object, 229  
    pc audited a bit below or at his level of awareness gets tone arm action, case gain and has cognitions (new concepts of life), 33  
    position, 373  
        failure to pass a re-Clear Check by TA position is meaningless, why, 204  
        pc must not be able to see TA position, 271  
    protest of doing it too often pushes TA up, 280  
    reading; *see EMD* (EM Drill 7)  
    restimulate an engram, E-Meter current flow has more trouble getting through pc and TA rises, 356  
Tone Scale, Emotional, 200  
Tone Scale, political philosophies placed against, 317  
Tone 40 on an Object; *see* TR 8  
Tone 40 on a Person; *see* TR 9  
Touch Assist, 318  
track; *see* time track  
training; *see also* checkout; drills; student; TRs  
    ability and gain are achieved by, 322  
    demonstrating in training, 205  
    failures in, will cause trouble for orgs and Scientology, 8  
    handle the individual student, not the class as a whole, 8  
    instruction attitude, proper, 8  
    instruction, consideration, mechanics and theory behind; *see PXL*  
    levels, 97  
    materials, scarcity of, slows down ~, 406  
    medical doctors in orgs, 309  
    Release's increased abilities regarding ~, 39  
    roller-coaster of processing results is never because of restimulation caused by training, 94  
    speed and accuracy is stress of all training, 417  
    tough training, importance of, 8  
training drills or routines; *see* TRs  
tranquilizers (psychotropic drugs), how they work, 314, 443  
traumatic barriers, 423  
trim, E-Meter; *see* E-Meter trim  
Triple Flows, Dianetic, 438, 440, 441  
    Flow 2 and 3 commands, 440  
    item must be made plural on Flow 3 [Dn] when one is running Triples, 442  
    necessity of, 439  
Triple Grades, 307, 308  
    advantage of, 309  
    lower grades, 305  
"tripper", *defn*, somebody who has taken drugs, 258  
TRs,  
    auditor who can't do his TRs can't audit, 138  
    bad TRs can cause low TA, 388, 398, 419  
    bad TRs cause dirty needles, 375  
    Dianetic TRs are TR 101, 102, 103 and 104, 414  
    Mutter TR, 104  
    there is no substitute for perfect TRs, 91  
    TR 6, 8-C (Body Control), 111, 228  
    TR 7, High School Indoc, 111, 228  
    TR 9, Tone 40 on a Person, 111, 230  
    Upper Indoc TRs, 40, 111, 228  
truth, group can't evolve truth, 5  
truth, Know thyself . . . and the truth shall set you free, 1  
truth, scientific idea of regarding as a truth only that which could be demonstrated with a result was never really applied to the mind, 391  
two-way comm; *see* communication, two-way
- ### U
- unburdening, *defn*, 343  
    clue to erasure is unburdening down to first time and erasing first time, 400  
unconscious person, what to run, 422  
understanding and time = ARC, 261  
universe, 3 terminal universe, 288, 307  
unmocked, key S&D question: "Who or what has unmocked you?", 210  
unmocking (an effort to reduce or make disappear) is primary effort of suppressives, 208  
unusual solutions, auditor asking for, what it means, 49  
unusual solutions, don't use, 144  
Upper Indoc TRs, 40, 1 1 1, 228
- ### V
- valence(s), *defn*, form and identity of pc or another, the beingness, 343  
as-is, person out of valence does not easily as-is his bank, 426  
folder, if folder gets too fat you can assume they are out of valence, 426

## SUBJECT INDEX - 1965/1969

### valence (s) (*cont.*)

- LX lists serve to isolate reasons being is charged up to such an extent that he is out of valence, 426
- of famous figures, 345
- person who is in treason on 1st dynamic is always out of valence, 426
- perverts, suppressives and critical, snide, ruthless, arrogant or contemptuous personalities are always out of valence, 426
- verbal, giving and accepting verbal C/S instruction is a High Crime, 245
- Viewpoint Straightwire; *see PXL*
- visio, lack of visio, an inability to see pictures, solved by getting date and duration, 158, 386
- vitamin(s), 123
  - drug or alcohol burns up the Vitamin B1 in the system rapidly, 243
  - use of Vitamin B1, B complex and C, 422
  - Vitamin E data, 123, 124

## W

- war, cause of, 288
- well and sane beings, sent on to Scientology, then become brilliant and very able beings, 392
- what is greatness, 154
- “What is the problem?” “What solutions have you had for that problem?” [process], 111
- White Form, why you do one, 313; *see also* Preclear Assessment Form [in full index]
- whole track, *defn.*, the moment to moment record of a person’s existence in this universe in picture and impression form, 61, 87, 142; *see also* time track
  - bits and pieces of ~ remain after locks, secondaries and engrams are reduced; these bits inhibit the being from recovering knowledge, 61
- Whole Track Release—Grade VI Release, 96, 98
- “winds of space”, feeling of being blown upon, especially from in front of the face, 192
- win, what it consists of, 408
- wisdom is meant for anyone who wishes to reach for it, I
- withhold (s),
  - auditor who won’t hear what pc is saying have made him have a ~ and it responds as a missed withhold, 22
  - critical, only reasons a pc is critical are a withhold or misunderstood word, 91
  - dirty needle indicates that a pc has withholds or is ARC broken, 375
  - inadvertent ~ wherein pc thinks he is withholding because auditor didn’t hear or acknowledge, 90
  - in session, refusing to give ~, is a no report, 23
  - in trying to locate withhold it is not a motivator done to pc but something pc has done, 91
  - pc himself can generate out ruds by lying; it shows up as withholds, 430

### withhold(s) (*cont.*)

- pc is not sent to Ethics because of withholds got ten off in session, 50
- pc with withholds will be critical, natter or blow and is out of comm, 76
- premature acknowledgement leads to inadvertent withholds, 26
- pre-OTs often have plain withholds with no overt connected, 280
- PTP or ~, don’t mistake for an ARC break, 77
- when pc doesn’t change despite skillful ARC break handling, locating and indicating, it was a ~ in the first place, 22
- when to report withholds, 50
- withholdy pc that ARC breaks a lot, way to handle, 22
- word(s); *see also* misunderstood
  - dating—forbidden words, 191
  - synonyms, don’t substitute words with, 14
- worksheets, 246, 311, 363
  - Auditor Report Forms or ~ are never re-copied, 247, 364
  - one never writes up ~ after session from notes, 311

## X

- X—didn’t read, 357

## Numerals

- 7 resistive cases, 310, 410; *see also* case, resistive [in full index]
- 8-C (Body Control); *see* TR 6
- 8-C, commands for, 111
- 8-C, Opening Procedure of; *see PXL*

## ALPHABETICAL LIST OF TITLES

Abbreviations and Symbols of Dianetics and Scientology	79	CCHs (HCO PL 17 May 65)	40
Academies Relation to HCO Justice		CCHs (HCO B 1 Dec. 65)	118
—Student Training—The No-Gain-Case		CCHs Not Grade 1	257
Student <i>OEC Vol. 1-383, Vol. 4-</i>	61	Change of Commands—Overt-Motivator Sequence	238
Admin Know-How—Alter-Is and Degraded Beings	193	Checking for False Reads	249
Aims of Scientology, The	88	Check Sheets, Course <i>OEC Vol. 4-466</i>	
Alter-Is and Degraded Beings—Admin Know-How	193	Classification at Upper Levels—Temporary Measure <i>OEC Vol. 4-392</i>	
Anatomy of Mistakes	219	Classification, Gradation and Awareness Chart	33
Antibiotics	422	Classification, Gradation and Awareness Chart of Levels and Certificates	36
Anti-Social Personality, The		Class II Model Session	44
—The Anti-Scientologist	177	<i>Class VIII Lectures</i>	259
Application—More on the Application of Scientology to Children	30	Clay Table Healing Goof	29
ARC Break Needle (21 Sept. 66)	176	Clay Table Training	205
ARC Break Needle (7 Oct. 68)	265	Clear and OT Behaviour	51
ARC Breaks	16	Clear Checks and Re-Clear Checks	203
ARC Breaks and Missed Withholds	22	Clearing Commands	110
ARC Straight Wire	261	Clearing Commands—All Levels	284
Art	83	Clearing Course Materials—Security of Data	see—105
“Art” of Case Supervision, The	424	Coaching	233
Assessment (7 Oct. 68)	266	Code of a Scientologist <i>OEC Vol. 0- 25</i>	
Assessment (21 May 69)	388	Commands for Upper Indoctrination TR 6, TR7, TR9	111
Assessment and Interest	357	Comm Cycle Additives	59
Assessment for Service Facsimiles	189	Completing Levels—Case Gain	310
Assessment: LXI	267	Complexity and Confronting—Study <i>Vol. IX-</i>	
Auditing by Lists	41, 64	Conditions Test Process I—X, A—Registrars	25
Auditing Goofs—Blowdown Interruption 309	69	Continuing Overt Act, The	102
Auditing Out Sessions—Narrative Versus Somatic Chains	394	Continuous PT Overts	260
Auditing Reports	112	Correction	284
Auditing Speed	417	Course Completion—Student Indicators	<i>OEC Vol. 4-202</i>
Auditor Assignment Policies	420	Course Pattern (27 Feb. 65)	<i>OEC Vol. 4-449</i>
Auditor’s Code, The	269	Course Pattern (14 Oct. 65)	<i>OEC Vol. 4-464</i>
Auditor’s Report—Triple Grades	311	C/S—How to Case Supervise Dianetics Folders	409
Auditor Trust	359	Cultural Lag	374
Basic Processes, The—Case Supervisor -Class VIII	278	Cyclical and Non-Cyclical Process Conclusions	101
Blowdown Interruption—Auditing Goofs	69	Danger Conditions—Technical Data for Review Auditors	126
<i>Book Introducing the E-Meter, The</i>	174	“Dangerous Auditor”, The	149
Book of Case Remedies—Application of Tech	13	Dating—Forbidden Words	191
<i>Book of E-Meter Drills, The</i>	12	Definition of Recall	271
Case Folder Analysis, Dianetics	428	Definition Processes	150
Case Gain—Completing Levels	310	Deletion of TR 5	<i>OEC Vol. 4-191</i>
Case Supervising Dianetics Folders	366	Dianetic Assists	318
Case Supervision Auditing and Results	447	Dianetic Auditing	<i>OEC Vol. 4-229</i>
Case Supervision, How It Goes Non-Standard	449	Dianetic Auditing Course	158
Case Supervisor—Class VIII—The Basic Processes	278	Dianetic Case Failures	337
Case Supervisor Data	251		
Case Supervisor—Folder Handling	268		
Case Supervisor Forms	368		

Dianetic Case Supervision	336	Fundamental Auditing	325
Dianetic Counseling Groups—Dianetics and Results	402	Glee	257
Dianetic Courses—Stuck Pictures	227	Green Form	see footnote—226
Dianetic Failures	355	Green Form, S & D	250
Dianetic Health Form	332	Grinding Out Engrams	360
Dianetic High Crimes	396	Gross Case Supervision Errors	254
Dianetic Results	351	Handling Illness in Scientology	435
Dianetics (HCO B 28 Sept. 68)	262	Handling the Student—Supervisor Know How	<i>OEC Vol. 4-204</i>
Dianetics (HCO PL 6 Apr. 69)		Handling the Suppressive Person—The Basis of Insanity	<i>OEC Vol. 1-375, Vol. 4- 53</i>
<i>OEC Vol. 1-524, Vol.. 2-285, Vol. 4-232</i>		Health Form, Use of	329, 378
Dianetics and Illness	415	HGC Cure (Continued)	<i>OEC Vol. 4— 84, Vol. 5- 69</i>
Dianetics and Results—Dianetic Counseling Groups	402	HGC Cure—Interne Training and Staff Auditors	<i>OEC Vol. 4- 78, Vol. 5- 63</i>
Dianetics—Basic Definitions	340	HGC Pc Review Auditing Form	52,184, 221
Dianetics Course Auditing Requirements	327	“Hidden Data Line”, The	<i>OEC Vol. 4-186</i>
Dianetics—Erasure—How to Obtain	344	High Crime	156
Dianetics—Its Background	391	High TA	277
Dianetics vs. Scientology	338	High TA Assessment	397, 418
Dianetic Triples	440	High TA in Dianetics	356
Dianetic Triples Plural Item	442	How a Suppressive Becomes One—Search and Discovery Data	128
Dianetic Use	347	How Not to Erase	400
Difficult Case, The	395	How to Apply Level Processing	27
Dirty Needle	375	How to Case Supervise Dianetics Folders—C/S	409
Don’t Force a Pc Who Is Ill	249	Information on Rehabilitation	117
Drills, Allowed	<i>OEC Vol. 4-188</i>	Interne Training and Staff Auditors—HGC Cure	<i>OEC Vol. 4- 78, Vol. 5- 63</i>
Drug and Alcohol Cases— <i>Prior</i> Assessing	377	<i>Introduction to Scientology Ethics</i>	235
Drug Data	244	Keeping Dianetics Working in an Area	386
Drugs	243	Keeping Scientology Working	4
Drugs and “Insanity”—Non-Compliance and Alter-ls	291	Key S & D Question, The	210
Drugs & Trippers	258	Laws of Listing and Nulling, The	236
Drugs, Aspirin and Tranquilizers	443	Lecture Graphs	106
E-Meter Drill Coaching	122	“Letting the Pc Itsa”—The Properly Trained Auditor	138
E-Meter Drills	94	Library Record of Levels see footnote-117	
E-Meters Allowed	<i>OEC Vol. 4- 77</i>	Library Record of Levels—Tapes Arranged by Levels see footnote—183	
E-Meter Sensitivity Setting	110	List Handling	210
Erasure	376	List L4A—For Assessment of All Listing Errors, S & Ds, Remedy A, Remedy B, etc.	213, 285
Errors of Students	169	List L4 S&D	171
Ethnics	253	Lists	263
Evidences of an Aberrated Area	196	Low TA Cases	121
Examiner’s Form	255	L4A—For Assessment of All Listing Errors	213, 285
False Reads	250	“LX” Lists	426
Five GAEs, The	361	LXI (Conditions)	432
Five Way Bracket on Help	106	LX2	427
Floating Needle (21 Oct. 68)	275	LX3 (Attitudes)	446
Floating Needle (7 May 69)	362	Manifestations of Engrams and Secondaries Further Defined	192
Floating Needles, Listing Processes	172		
Flying Ruds	433		
F/N	407		
F/N and Erasure	373		
Folders, Marking of	<i>OEC Vol. 4-571</i>		
Forcing a Pc	369, 442		
Former Therapy—Resistive Cases	<i>see Vol. VII-449</i>		
Free Needles, How to Get Them on a Pc	147		

Materials, Scarcity of	406	Psychotics	131
Medical Doctors	309	PTS Auditing and Routing	<i>OEC Vol. 1-439, Vol. 4-578</i>
Meter Position	271	Purpose of Class VIII, The	273
Meter Trim Check	168, 369	Qualifications Technical Actions	73
Minus Scale Releases: ARC Straight Wire		Qual Senior Datum	211
—Dianetic	175	Rehab & Correction	241

*The*  
**Technical Bulletins**  
*of*  
**Dianetics and Scientology**

*by*  
**L. Ron Hubbard**

FOUNDER OF DIANETICS AND SCIENTOLOGY

**Volume**  
**VII**  
**1970-1971**

---

*I will not always be here on guard.  
The stars twinkle in the Milky Way  
And the wind sighs for songs  
Across the empty fields of a planet  
A Galaxy away.*

*You won't always be here.  
But before you go,  
Whisper this to your sons  
And their sons —  
“The work was free.  
Keep it so. “*

**L. RON HUBBARD**

**L. Ron Hubbard**  
*Founder of Dianetics and Scientology*

## EDITORS' NOTE

“A chronological study of materials is necessary for the complete training of a truly top grade expert in these lines. He can see how the subject progressed and so is able to see which are the highest levels of development. Not the least advantage in this is the defining of words and terms for each, when originally used, was defined, in most cases, with considerable exactitude, and one is not left with any misunderstandings.”

—L. Ron Hubbard

The first eight volumes of the *Technical Bulletins of Dianetics and Scientology* contain, exclusively, issues written by L. Ron Hubbard, thus providing a chronological time track of the development of Dianetics and Scientology. Volume IX, The Auditing Series, and Volume X, The Case Supervisor Series, contain Board Technical Bulletins that are part of the series. They are LRH data even though compiled or written by another.

So that the time track of the subject may be studied in its entirety, all HCO Bs have been included, excluding only those upper level materials which will be found on courses to which they apply. If an issue has been revised, replaced, or cancelled, this has been indicated in the upper right-hand corner along with the page number of the issue which should be referred to.

The points at which Ron gave tape recorded lectures have been indicated as they occurred. Where they were given as part of an event or course, information is given on that event or course on the page in the chronological volumes which corresponds to the date. The symbol “\*\*\*” preceding a tape title means that copies are available from both Publications Organizations. A tape preceded by “\*” means that it will soon be available. No asterisk (\*) means that neither Publications Organization nor Flag has a master copy of that lecture. If you have, or know anyone who has, copies of *these* tapes, please contact the Flag Audio Chief, P.O. Box 23751, Tampa, Florida, 33623, U.S.A. The number in the tape title is a code for the date; example: 5505C07—55 = year, 1955; 05 = month, May; C = copy; 07 = day, 7th; 7 May 1955. The abbreviation tells what group the tape is a part of. For an explanation of the abbreviations see Volume X, page 539.

At the back of this volume is a Subject Index covering only the material in this volume. Use the index to locate the LRH source material in context, don't just get data from the index. This index has been combined with indexes from other volumes to form the Cumulative Index which is in Volume X, starting on page 287.

# LONG CONTENTS

## **HCO B 3 Jan. 1970 TRIPLE ERRORS IN DIANETICS, 1**

When high TA after singles send pc to Review before triples,

## **HCO B 15 Jan. 1970 THE USES OF AUDITING, 2**

Auditing isn't just Dianetics and Grades, 2  
Auditing applied to specific things, 2  
Auditing is not a limited action, 3

## **HCO B 15 Jan. 1970 HANDLING WITH AUDITING, 4**

Pc's desire or complaint must be handled, 4  
Examples of not handling, 4  
Service and handling are the same thing, 4  
Don't allow a backlog of pcs, 5  
Auditing "loses", keep at it until it is a win, 5  
Don't promise instant miracles, 6

## **HCO B 19 Jan. 1970 REGISTRARS' ADVICE FORM, 7**

Informs C/S what pc wanted and expected, 7

## **HCO B 21 Jan. 1970 CANCELLATION OF PERMISSIVE TRs, 8**

Correct TRs and application listed on HCO B 17 April 1961, 8

## **HCO B 27 Jan. 1970 NARRATIVE ITEMS EXPLAINED, 9**

Narrative item may give no chain, 9  
Narrative chains of excessive length, 9  
Narratives vs. somatics, 9

## **HCO B 27 Jan. 1970 E-METER DRILL COACHING, 10**

List of observations made on coaching of E-Meter drills, 10

## **HCO B 29 Jan. 1970 NULL LISTS IN DIANETICS, 11**

List isn't null; it is suppressed or invalidated, 11  
How to use suppress and invalidate buttons, 11

## **HCO B 31 Jan. 1970 WITHHOLDS, OTHER PEOPLE'S, 13**

Pc "getting off" other people's withholds must have a chain of similar overts and withholds that are his own, 13

## **HCO B 4 Feb. 1970 PC APPLICATION FOR MAJOR ACTIONS, 14**

Case must be set up before starting a major action, 14  
Never run a pc on a major action whose case is giving trouble, 14  
Auditing set-up actions, 14

## **HCO PL 4 Feb. 1970R PC APPLICATION FORM FOR ANY MAJOR AUDITING ACTION, 16**

**HCO B 13 Feb. 1970 HIGH TA, FULL HANDLING OF, 18**

The cause of high TA is an engram chain in restimulation, 18  
Remedy DDDA 400A for chronic high TA, 19

**HCO B 20 Feb. 1970 FLOATING NEEDLES AND END PHENOMENA, 20**

Dianetics end phenomena, 20  
Scientology Grade 0 to IV end phenomena, 21  
How to indicate floating needle, 21  
Waiting for F/N to broaden to cognition, 22

**HCO B 26 Feb. 1970 STANDARD TECH AND INVALIDATION, 23**

Standard Tech is not a process or a series of processes; it is following the rules of processing,  
23  
A Class VIII can crash stats by invalidation, 23  
Things that should happen when a Class VIII returns to an area, 23

**HCO B 10 Mar. 1970 LIST OF PERCEPTICS—DIANETICS BULLETIN, 25**

55 human perceptions, 25

**HCO B 20 Mar. 1970 ALLY, DEFINITION OF, 26**

Ally computation, 26

**HCO B 22 Mar. 1970 EXTERIORIZATION AND HIGH TA, 27 [REVISED]**

Auditing trouble after exteriorization, 27  
Engram behavior, 27  
The missed beginning of an exteriorization, 28  
The remedy is to audit out interiorizations, 28  
Interiorization Rundown procedure, 29

**HCO B 27 Mar. 1970 GRADE II RELEASE, 30 [CANCELLED]**

Command of Grade II Single Flow, 30

**HCO B 27 Mar. 1970 GREEN FORM, 31**

Do an L-1A if pc was not fully satisfied that all has been handled, 31

**HCO B 29 Mar. 1970 AUDITING AND ETHICS, 31**

Cases undergoing Ethics actions should not be audited until the Ethics matter is cleared up and  
complete, 31

**HCO B 31 Mar. 1970 DIANETIC TR NOTES, 32 [CANCELLED]**

How to avoid coach restim in doing TR 104 and TR 103, 32

**HCO B 1 Apr. 1970 ETHICS PROGRAM NO. 1 CASE ACTIONS, 33**

Lack of case gain, 33  
Poor study record, 33  
TA too high or too low, 33  
Poor post stats, 33  
Current drug history or connections, 34  
Psychiatric history, 34  
Low aptitude, IQ and leadership test scores, 34

**HCO B 8 Apr. 1970 GF-40 HANDLING—CLARIFICATION, 35**

All reading items on a GF-40 are handled, 35  
Order of handling items, 35

**HCO B 8 Apr. 1970 MORE ON PREPCHECKS, 35**

When prepcheck uncovers ARC break and ARC break handled to EP, it is EP of that prepcheck, 35

**HCO B 11 Apr. 1970 AUDITING PAST EXTERIOR, 36**

“Audited over exterior” symptoms, 36  
Interiorization Rundown and two-way comm session, 36

**HCO B 12 Apr. 1970 LIST L-1B, 38 [CANCELLED]**

How to use L-1 B, 38  
List-1 B, 39

**HCO B 21 Apr. 1970 2 WAY COMM C/Ses, 40**

Four main reasons for two-way comm C/Ses, 40  
Q and A example, 40  
Evaluation in auditing two-way comm is a deadly sin, 40  
Two-way comm worksheets are more detailed, 40  
C/S maxim “when in doubt order a 2 way comm”, 41  
Two-way comm is done on meter, 41

**HCO B 6 May 1970 BLOWS—AUDITING PAST EXTERIOR, 42**

Blow as an effort to exteriorize, 42

**HCO B 6 May 1970 DIANETIC TRIPLES, 43**

Flow No. 2 and 3 commands, 43  
Triple Dianetics “earlier” commands, 43

*C/S Series 1*

**HCO B 24 May 1970 AUDITOR’S RIGHTS, 44 [REVISED]**

Auditor responsibility for C/Ses, 44  
Accepting the pc—rights of refusal, 44  
Accepting a C/S, 44  
Ending the session—unworkable C/S, 44  
Inability to fly ruds, 45  
Unreading items—checking for reads, 45  
Questions must read to be listed, 45  
List trouble—L4, 45  
High TA at session start, 45  
Ruds going out—why and what to do, 45  
Case not handled, 46  
Set up for major actions (defines repair, rudiments, set up, major action, grade, program), 46  
Program and Grade violations, 47  
Ability attained—completion of action, 48  
Unnecessary repair when pc is running well, 48  
What the auditor did wrong, 48

**HCO B 27 May 1970 UNREADING QUESTIONS AND ITEMS, 49**

Never list a listing question that doesn’t read, 49  
Never prepcheck an item that doesn’t read, 49  
Listing errors, 49  
Dianetic “list” is not a listing action, 49  
Things that don’t read won’t run, 50  
Suppress and invalidate buttons, 50

**HCO B 28 May 1970 CORRECTION LISTS, USE OF, 51**

Four ways to use prepared lists, 51  
When to use which assessment method, 51  
Setting up cases, 51  
Error in using prepared lists, 51

**HCO B 30 May 1970 INTERIORIZATION INTENSIVE—2 WAY COMM, 52**

Interiorization Rundown is ALWAYS followed in the next session with “2 Way Comm on Interiorization-Exteriorization”, 52  
Cognition on Int RD, 52

**HCO B 2 June 1970 FLOATING NEEDLES, 53**

Dianetic end phenomena, 53

**HCO B 5 June 1970 TRIPLE GRADES, 54**

Scientology Triples, 54  
Dianetic Triples, 54

**HCO B 8 June 1970 LOW TA HANDLING, 55**

Person whose TA is low is in a state of overwhelm, 55  
Causes of false TA, 55  
Actions for low TA cases, 55

*C/S Series 2*

**HCO B 12 June 1970 PROGRAMMING OF CASES, 56**

Program definition, 56  
The master program for every case is given on the Classification and Gradation Chart, 56  
Quickie Grades, 56  
Case supervision basic facts, 56  
Three types of programs: Basic Program, Repair Program, Return Program, 57  
Correct way to program, 57  
Program dispersal, 58  
Example of handling program outnesses, 59  
Program necessity, 59  
C/S holds a steady course, 60

*C/S Series 3*

**HCO B 13 June 1970 SESSION PRIORITIES—REPAIR PGMS AND THEIR PRIORITY, 61**

Programming errors and delay in repair can cause pc illness, 61  
Program errors, 61  
Difference between self-auditing and solo auditing, 61  
EP of repair, 62  
Pc routinely complaining means need of Repair Program, 62  
Repair Program sample, 62  
Effect Scale, 63  
BPC, 63  
Overwhelm, 63  
Two variables for C/S decision, 63  
Cause of pc overwhelm, 64  
Ingenuity of C/S, 64  
Use of two-way comm, 65  
Repair actions, 65

**HCO B 13 June 1970 HUBBARD CONSULTANT STUDY STRESS ANALYSIS, 66**

Hubbard Consultant training, 66  
Hubbard Consultant Stress Analysis No. 1, 66  
Hubbard Consultant Stress Analysis No. 2, 67  
Hubbard Consultant Stress Analysis No. 3, 67  
Hubbard Consultant Stress Analysis No. 4, 67

*C/S Series 4*

**HCO B 14 June 1970 THE RETURN PROGRAM, 69**

When a Repair Program is changed into a Return Program, 69  
Difference between Repair and Return Programs, 69  
Example of Return Program, 70

*C/S Series 5*

**HCO B 15 June 1970 REPAIR EXAMPLE, 72**

Repair Program example, 72  
Repair Program errors, 73  
Note on VIII auditing, 73  
Need of Life Repair before Dianetics, 74  
Repair is a Tech Div action, 74  
Repair of a Dianetic pc, 74  
C/S Q and A, 75

*C/S Series 6*

**HCO B 16 June 1970 WHAT THE C/S IS DOING, 76**

Apparent force of words and phrases in engrams, 76  
Low TAs, 76  
High TA, 76  
Mental masses, forces, energy are what C/S handles, 77  
Pc search for significance, 77  
The E-Meter and what it records, 77  
Backwards C/Sing, 77  
Reliable indicators of completed Grade, 78  
F/N abuse and “quickies”, 78  
Pc abilities, 79  
C/S purpose, 79

**HCO PL 17 June 1970 TECHNICAL DEGRADES, 80**

Checksheets with degrading statements must be destroyed, 80  
High Crimes concerning checksheets, 80  
High Crimes concerning delivering auditing, 80

*C/S Series 7*

**HCO B 19 June 1970 C/S Q AND A, 82**

Example of Q and A, 82  
Q and Aing with Exam statement of pc, 82  
C/Sing a win is Q and A, 83  
C/Sing in agreement with pc demands, 83  
Caution—pc data is used to parallel what mind does, 84

*C/S Series 8*

**HCO B 19 June 1970 CHART OF HUMAN EVALUATION, 85**

Use of Chart of Human Evaluation in C/Sing, 85  
Self-auditing—manifestation of overwhelm, 85  
Mannerism changes in pc, 86  
Changing the pc, 86  
C/S is changing the pc’s position upward on the Chart of Human Evaluation, 86

*C/S Series 9*

**HCO B 21 June 1970 SUPERFICIAL ACTIONS, 87**

Cultural inclination to “quickie”, 87  
Short programs are for the birds, 87  
C/S making long programs saves time, 87  
Target is success stories and results, 88  
Actions to be done on sick pcs, 89  
Folly of short-cutting processes, 90  
“Omitted time” is a basic insanity, 90  
Speed liability and honest results, 90

*C/S Series 10*

**HCO B 24 June 1970 REPAIRING A REPAIR, 92**

There is a basic goof in a repair session for it to have gone wrong, 92  
C/S procedure for repairing a Repair Pgm session, 92  
New auditor flubs, 93  
Use light handling on pcs who need lots of repair, 93

*C/S Series 11*

**HCO B 25 June 1970 C/S SERIES 11, 94**

Case supervision instructions are always written, 94  
Why it is a High Crime for C/S not to write C/S instructions, 94  
Key points on case supervision, 94  
Double folder danger, 95  
Analyzing folders, 95  
Reviewing folders, 95  
Main question of a C/S, 96  
Auditing and Ethics actions, 96  
Out admin—liability, 96  
Gross case supervision errors, 97

*C/S Series 12*

**HCO B 25 June 1970 GLOSSARY OF C/S TERMS, 98**

Progress Program, 98  
Advance Program, 98  
Expanded Lower Grades, 98  
Dianetic Clear, 98  
Classification Chart, 99  
Quickie Grades, 99  
Dianetic pcs, 99  
Training, 99

*C/S Series 13R*

**HCO B 30 June 1970R VIII ACTIONS, 100**

“Old” processes are not cancelled by new ones, 100  
Basics are not cancelled by later developments, 100  
VIII auditing, 101  
Resistive cases, 101  
When to use GF 40, 101  
Purpose and validity of OT IV Rundown, 102  
Case Supervisor actions, 102

*C/S Series 14*

**HCO B 3 July 1970 C/Sing 2 WAY COMM, 104**

Reasons for C/S errors in C/Sing 2 way comm, 104  
Rules of C/Sing 2 way comm, 104

**HCO B 14 July 1970 SOLO CANS, 106**

Basic trouble with a single-hand electrode, 106  
Construction of single-hand electrode, 106  
Standard electrodes, 107  
Small hands, 107  
How to prevent shorting, 107  
Solo can illustration, 109

**HCO B 15 July 1970 UNRESOLVED PAINS, 110**

Two reasons for pain not resolved on Dianetics, 110  
Not enough auditing on enough chains, 110  
Sympathetic nervous system pains, 110  
Toothache, 111

**HCO B 16 July 1970 THE PSYCHIATRIST AT WORK, 112**

Pain association, 112  
Psychiatric “cures” are implantings with compulsive ideas, 112  
Skill level of psychiatrists, 113  
Psychiatrists’ masters, 113

**HCO PL 22 Nov. 1967 OUT TECH, 115**

The only ways you can fail to get results on a pc, 115  
There is no hidden data line, 115  
Never delete data from checksheets or assign part of it “background” data, 115

**HCO B 24 July 1970 DATA SERIES, 116**

Hubbard Consultant Out-point—Plus-point List procedure, 116

**HCO B 1 Aug. 1970RA F/N AND ERASURE, 117**

Tone arm position, 117  
Overrun, 117  
Cognition, 117

**HCO B 8 Aug. 1970 LIST L-1B, 118 [CANCELLED]**

**HCO B 15 Dec. 1968 L4B—FOR ASSESSMENT OF ALL LISTING ERRORS, 119  
[REVISED]**

*C/S Series 15*

**HCO B 16 Aug. 1970 GETTING THE F/N TO EXAMINER, 122**

Unflat engram chains and high TA, 122  
Causes and solutions for high TA at Exam after F/N in session, 122  
How to program a pc who has a chronic somatic, 123  
Dianetic pc pattern at Examiner, 123  
High TA and illness, 124  
Low TA at Exam, 124

**HCO B 20 Aug. 1970 EXTERIORIZATION RUNDOWN MUSTS, 125**

One session rule, 125  
Ext Rundown must be flubless, 125  
Ext Rundown must be followed by a two-way comm session, 126

*C/S Series 16*

**HCO B 21 Aug. 1970 SESSION GRADING—WELL DONE, DEFINITION OF, 127**

Well done, 127  
Very well done, 127  
No mention, 127  
Flunks, 128  
Flunk and retrain, 128  
Two methods of invalidating an auditor’s auditing, 128  
Auditor handling by C/S, 129  
Auditor’s stat is well done auditing hours, 129

*C/S Series 17*

**HCO B 26 Aug. 1970 INCOMPLETE CASES, 130**

Overshooting and undershooting, 130  
Quickie Grades and actions, 130  
Complete cases, 131

**HCO B 28 Aug. 1970RA HC OUT-POINT PLUS-POINT LISTS RA, 132**

Procedure, 132  
Out-point List, 133  
Plus-point List, 135

**HCO PL 8 Sept. 1970RA EXAMINER'S 24 HOUR RULE, 138**

Four manifestations in a pc at Exam indicating need for 24 hour repair, 138  
Any goofed session must be repaired within 24 hours, 138  
Examiner's actions concerning 24 hour rule, 138

*C/S Series 18*

**HCO B 11 Sept. 1970 CHRONIC SOMATIC, DIANETIC HANDLING OF, 139**

C/S Series 15 contains rundown for full Dianetic handling of the pc who has a chronic somatic, 139

*Study Series 1*

**HCO B 21 Sept. 1970 STUDY DEFINITIONS, 140**

*C/S Series 19*

**HCO B 6 Oct. 1970 FOLDER ERROR SUMMARIES, 142**

Who does an FES, 142  
Who pays for an FES, 142  
Necessity for an FES, 142  
Necessity for FES not halting delivery, 142  
Blind repair, 143

*C/S Series 20*

**HCO B 8 Oct. 1970 PERSISTENT F/N, 144**

The bug behind "Quickie Grades", 144  
What to do with a persistent F/N or big win, 144  
Gradual widening of F/N, 144

**HCO B 13 Oct. 1970 COURSE SUPERVISOR CORRECTIONS, 146**

Supervisor uses two-way comm to handle students, 146  
Supervisor must show that he is interested in the progress of his students, 146  
Course Supervisor does not interrupt a student's progress or correct when there is nothing to correct, 146

**HCO B 18 Oct. 1970 AUDITOR'S STATS ON F/N VGI, 147**

Auditor's stat can include previous no-F/N at Exam sessions, 147  
FES credits on auditor's stat, 147

**HCO B 26 Oct. 1970 OBNOISIS AND THE TONE SCALE, 148**

Obnosis is "observing the obvious", 148  
Examples of obnosis, 148  
How to spot people on the Tone Scale, 149  
Spotting tone drill, 149  
Student gain from these exercises, 149

*C/S Series 21*

**HCO B 10 Nov. 1970 C/S RESPONSIBILITY FOR TRAINING, 152**

C/S is responsible for auditors' ability to audit, 152  
Auditor training stages, 152  
C/S giving a daily auditors' conference, 153  
C/Sing auditors—1 flub, 1 retrain in Cramming on that point, 153

*C/S Series 22*

**HCO B 28 Nov. 1970 PSYCHOSIS, 155**

About 15% to 20% of the human race apparently is insane, 155  
Ways for a C/S to detect insane, 155  
Types of insanity, 156  
Definition of insanity, 156  
The nature of man, 156  
Techniques to handle insane, 157

*C/S Series 23*

**HCO B 2 Dec. 1970 EXTERIORIZATION SUMMARY, 159 [REVISED]**

Use of HCO Bs covering Exteriorization Rundown, 159  
Two-way comm step, 159  
Ext is a remedy, 160  
C/Sing Ext, 160  
End result of Ext Rundown, 160  
C/S wins, 161

**HCO B 10 Dec. 1970 CLAY TABLE WORK IN TRAINING, 162**

Words misunderstood can cause blows, 162  
Construction of clay table, 162  
Use of clay table on courses, 163

**HCO B 23 Dec. 1970 FAST COURSES, 165**

It is illegal to give a retread course away, 165  
Reasons for slow courses, 165

**HCO B 2 Jan. 1971 ILLEGAL AUDITING, 167**

Lists of withholds required of a staff member without proper sessioning are now illegal, 167  
Challenging people out of session as "having withholds" is illegal, 167

**HCO B 4 Jan. 1971 EXTERIORIZATION AND HIGH TA, 168**

Auditing trouble after exteriorization, 168  
Exteriorization defined, 168

AND WORKSHEETS FOR HQS CO-AUDIT, 215**

Auditor's Report, 215  
Worksheets, 215  
Auditor's Report Forms and worksheets are never re-copied, 215

*C/S Series 34*

**HCO B 6 Apr. 1971 NON F/N CASES, 217**

What an Exam non-F/N indicates, 217  
Answer to cases that don't F/N at Exams, 217  
Twelve things that can foul up a case, 218  
Stable datum on cases that run well, 219

**HCO B 11 Apr. 1971 L3B—DIANETICS AND EXT RD REPAIR LIST, 220  
[REVISED]**

*C/S Series 35*

**HCO B 12 Apr. 1971 EXTERIORIZATION ERRORS, 224 [REVISED]**

Correct an Ext RD error as a first action, 224  
Dianetic auditors can repair Int RDs, 224  
Reasons for high TA, 224  
Data on what ext in session means, 225  
Dianetic C/S 1, 225

*C/S Series 36*

**HCO B 21 Apr. 1971 QUADRUPLE DIANETICS—DANGERS OF, 226 [REVISED]**

Quad Dianetic errors, 226  
Quad Dianetics requirements, 226  
Reason for TRs, 226  
Rehabbing chains, 227  
Flubbed chains, 227  
L3B, 227  
Overruns are demonstrated by a rising TA, 227  
Firefights, 228  
Interiorization, 228  
Safe actions, 228  
C/S responsibility, 228  
FFD, Int-Ext Rundown and Power require flawless auditing and C/Sing, 229

**HCO B 26 Apr. 1971 TRs AND COGNITIONS, 230**

Cognitions are the milestones of case gain, 230  
Reactive mind straightens out by as-ising its content, 230  
Auditor plus the pc is greater than the pc's bank, 230  
A perfect session, 230

**HCO B 27 Apr. 1971 EDUCATION, DEFINITION OF, 232**

Affinity, reality and communication together make up understanding and so play their role in  
education, 232  
Minimum requirements of supervisor, 232

**HCO B 28 Apr. 1971 OKAYS TO AUDIT IN HGCs, 233**

Cramming must exist in any org which sells auditing, 233  
HGC requirement, 233  
Intern program, 233

**HCO B 30 Apr. 1971 AUDITING COMM CYCLE, 235**

Auditor runs the session, 235  
The auditing comm cycle that is always in use, 235

**HCO B 13 May 1971 STUDENT GRASP OF MATERIALS, 236**

How to handle new students asking technical questions, 236  
Course Super is there to get the student's confront up on the materials not to lessen it by "explaining", 236  
Student only fails by not confronting, duplicating, absorbing and using the materials before him exactly like it says, 237

***Basic Auditing Series 1R***

**HCO B 23 May 1971R THE MAGIC OF THE COMMUNICATION CYCLE, 238**

Auditor and pc as two pole system to as-is mass, 238  
Difficulties of auditing are difficulties of the communication cycle, 238  
Basic tool of auditing is the communication cycle of auditing, 238  
Basic auditing is called basic auditing because it goes prior to the technique, 239  
Auditing as reach and withdraw, 239

***Basic Auditing Series 2R***

**HCO B 23 May 1971R THE TWO PARTS OF AUDITING, 240**

Auditing goes in two stages: 1. Form a communication line; 2. Do something for the pc, 240  
Aberrations are hard to keep, one has to work at it, 240  
Process doesn't work until auditor has a comm line to pc, 241  
Pc justifying himself and trying to uphold status is not in comm with auditor, 241  
Theory of overrun, 242  
Auditor must keep in his communication line with pc, 242

***Basic Auditing Series 3***

**HCO B 23 May 1971 THE THREE IMPORTANT COMMUNICATION LINES, 243**

Itsa Maker line—the pc's line to his bank, 243  
Itsa line—pc's line to the auditor, 243  
What's-it line—auditor's line to the pc, 243  
Itsa line is a report on what has been as-ised, 243

***Basic Auditing Series 4R***

**HCO B 23 May 1971R COMMUNICATION CYCLES WITHIN THE AUDITING CYCLE, 244**

Basically two communication cycles between auditor and pc that make up auditing cycle, 244  
Acknowledgement cycle, 244  
Six communication cycles make up one auditing cycle, 246  
Communication cycle consists of just cause, distance, effect with intention, attention, duplication and understanding, 246  
Handling of pc origination, 246

***Basic Auditing Series 5R***

**HCO B 23 May 1971R THE COMMUNICATION CYCLE IN AUDITING, 248**

Obnosis (observation of the obvious), 248  
Auditor watches pc's comm cycle; auditor's own is perfect, 248  
Auditor must know when pc has finished answering the command, 248  
Magic of acknowledgement, 249

***Basic Auditing Series 6***

**HCO B 23 May 1971 AUDITOR FAILURE TO UNDERSTAND, 250**

Auditor response when he doesn't understand pc, 250  
Invalidation—avoid use of "you" to pc, 250  
Evaluation—auditor repeating what pc says, 250  
Don't tell the pc what the pc said and don't gesture to find what the pc meant, 250  
Don't drive in anchor points by shoving things at or gesturing toward pc, 251  
Rock slammer, 251

*Basic Auditing Series 7*

**HCO B 23 May 1971 PREMATURE ACKNOWLEDGEMENTS, 252**

- Effects of premature acknowledgement, 252
- What premature acknowledgement does to conversation, 252
- Premature acknowledgement leads to inadvertent withholds, 252

*Basic Auditing Series 8*

**HCO B 5 Feb. 1966 “LETTING THE PC ITSA”—THE PROPERLY TRAINED AUDITOR, 253**

- What Itsa is, 253
- Cure for auditor who is “letting the pc itsa”, 254
- Tech savvy, 254
- Cure for auditor who can’t control pc, 255

*Basic Auditing Series 9*

**HCO B 23 May 1971 COMM CYCLE ADDITIVES, 256**

- There are no additives permitted on the auditing comm cycle, 256
- Mannerism additives, 256

*Basic Auditing Series 10R*

**HCO B 23 May 1971R RECOGNITION OF RIGHTNESS OF THE BEING, 257**

- Idea of the additive data to the thetan, 257
- Auditing is the business of deleting wrongnesses from the individual, 257
- Auditor must look at rightnesses of pc, not just wrongnesses, 257
- Pc’s ability to as-is or erase in a session is directly proportional to the number of good indicators present in the session, 258
- Good vs. bad indicators, 258

*Basic Auditing Series 11*

**HCO B 23 May 1971 METERING, 259**

- Auditor does not tell the pc anything about the meter or its reads ever, except to indicate an F/N, 259
- Steering a pc, 259

*C/S Series 38*

**HCO B 26 May 1971 TRS COURSE AND AUDITING—MIXING MAJOR ACTIONS, 260**

- Person on a TR Course or in progress on a TR cycle may not also be audited, 260
- Rules regarding TR Course, 260
- Points that bog a case, 260
- TRs are a program, 261
- Interjected programs, 261
- Reason for auditing intensives, 261
- Cross programming, 261
- Visual idea of completing actions, 262

*C/S Series 39*

**HCO B 31 May 1971 BEST ADVANCE PROGRAM, 263 [REVISED]**

- Sample Advance Program, 263

*Study Series 2*

**HCO B 2 June 1971 CONFRONTING, 264**

- First requisite of any subject is the ability to confront the various components of the subject itself, 264
- Student who learns rapidly has a high ability to confront that subject, 264
- “Glib” students, 264
- “Confronting” is actually the ability to be there comfortably and perceive, 265
- Definitions of gradient scale, skipped gradient, flattening, overrunning, invalidation, 265
- Gradient of confronting study, 265

**HCO B 2 June 1971 OVERRUN—DON'T USE, 267**

C/S Series 37 and C/S Series 37 Addition are both cancelled, 267

***C/S Series 37R***

**HCO B 3 June 1971 HIGH AND LOW TA BREAKTHROUGH, 268**

Basic principle of overrun, 268  
Overrun is full of mass and ARC breaks, 268  
37R TA handling rundown, 269  
Low TA, 270 End phenomena of TA Handling Rundown, 270  
Flows note, 270  
Auditor qualifications, 271  
Interiorization Rundown, 271

***C/S Series 40***

(Amends and Replaces  
HCOB OF 6 OCT 69, same title)

**TRIPLE ERRORS IN DIANETICS**

In running triples *after* running single flow on several items, IT CAN BE DIFFICULT IF THE TA IS HIGH AT SESSION START.

The correct thing to do when an auditor starts a session to run flows 2 and 3 on a single item already run AND FINDS THE PC'S TA IS HIGH (3.5 up) is to send the pc to Review to have his ruds put in.

The TA may not be high on the 2nd or 3rd flow about to be run at session start but on some other chain.

The rule is simple:

WHEN STARTING A SESSION TO RUN FLOWS 2 OR 3 OF A SINGLE ITEM PREVIOUSLY RUN IN AN EARLIER SESSION, AND THE TA IS HIGH (3.5 UP) AT SESSION START, SEND THE PC TO REVIEW FOR RUDIMENTS.

In actual practice one can sometimes muddle through and the TA will come down and the needle F/N on the Flow 2 or 3 anyway. BUT THE AUDITOR WILL HAVE TO BE VERY ALERT TO BLOWDOWNS, which indicate a basic has been reached, not overrun it beyond F/N and generally run a flawless session.

## THE USES OF AUDITING

Case Supervisors, Registrars and Letter Registrars particularly should know something of the enormous number of uses to which auditing can be put.

The idea of selling and applying "Dianetic Triples" and "Scientology Grades" as all one knows about is an approach that is both lazy and ignorant.

It is doubtful if one could count the number of uses to which auditing can be placed to help livingness and improve the health, ability and outlook of a person.

The trend now is to apply auditing to special requirements. But this is not a new trend—it is merely unknown. Emphasis on completed grades tended to drive out of sight the real uses of auditing.

Naturally one wants his Dianetic Triples and his Scientology Triples. But to say this is the end of auditing is silly.

In the pursuit of the "new" one forgets the successful old. In Class VI auditing, there are thousands of processes, all valid, if run only to F/N.

Dianetic Auditing particularly lends itself to specific situations. For instance, a pregnant woman should be audited on emotions and somatics relating to birth or babies before delivery. We used to simply audit the girl's own birth and any past births (R3R). Then immediately after delivery the engram is run out. Handling pregnancy in this fashion has the woman up and about in 3 days and in fine condition. This prevents utterly the extreme of "postpartum psychosis", as mental upset due to delivery is called. It prevents any upset with the husband or child. It prevents physical aftereffects. In short, it *should* be done.

People who have been ill for some time often only get well because they are audited.

After any illness the person should be audited.

After accidents and medical care people should be audited.

Almost any human situation containing pain or misemotion should be handled by auditing.

In the field of ability auditing is king. The inability to study or to work or even to live can be handled in many ways. The simple action of listing the somatics, emotions and attitudes of the unwanted condition and running them R3R Triples relieves them.

A Registrar can sign up "Intensives" on these subjects and get them relayed to the Case Supervisor.

Auditing is for *use*.

Auditing *is* the answer to human disability and travail. It can make life worth living.

Auditing is not a limited action, “He’s had his triples so you can’t do anything” is about as limited a view as you can get.

The public should be given lists of things they may want handled. The use of auditing should be known, particularly in lower orgs.

A Case Supervisor should be fully aware of what auditing can do and insist that it get done.

There is no limit to what good auditing can do. That is the first thing one should learn about it.

**HANDLING WITH AUDITING**

There is no reason or excuse not to actually HANDLE a pc's desire or complaint with auditing.

By *handle* is meant finish off, complete, end cycle on.

To give you an idea of the reverse—in admin we sometimes find terminals that refer despatches to others, let them drift, give excuses why not. This all adds up to NOT HANDLING. This is the basic reason for DEV T (Developed, meaning excessive, traffic). Like the stationery company writes somebody in the org to please specify the number of sheets wanted. So whoever's hat it is refers it to somebody else who refers it to another who fails to answer. In this way, the org can look industrious while accomplishing nothing. Nobody HANDLES it.

You can get a similar situation going with pcs. Nobody HANDLES the pc. And if you keep this up, your whole area fills up with unhandled pcs, the org's repute goes down and stats eventually crash.

The org is being paid to HANDLE pcs. It is not being paid to put them off or explain or let them drift away.

Here is an example from the early 1960s. An org had it going that anybody who was feeling bad and demanding help got a review. The review consisted of a Green Form to F/N. While this would clean up an ARC Brk or PTP or a poor prior session, it sure wasn't about to remedy a feeling of nausea. So a pc would come in with a feeling of nausea. He would be sent to Review, get a Green Form and F/N on an ARC Break. Then Review would shrug off the fact that the pc was still nauseated by saying all it could do was a GF! In short, it wouldn't *handle* the pc.

Another recent case—pc with migraine headaches. Got some (evidently poor) Dianetic Auditing. No change. When the pc's friend complained, he was told it was "the illegal life she was living" and no action was taken. So the pc went to another org and *there* they refused auditing due to painkillers (instead of waiting 2 or 3 days until it wore off).

These are cases of NOT HANDLING.

The idea of non-handling can also go into fees. A pc once paid a Franchise for auditing to be done in an org. The Franchise did not forward the fee so the org sent the pc back home.

Service and HANDLING are the same thing. When you give service you handle.

There are thousands of ways of not handling. Letting backlogs occur in Tech and Qual is probably the most serious to org income and to field repute. Also if a person is goofed up in Tech he probably is suffering and to be put off in Qual for any reason at all is a severe blow to the org. A 3 hour Qual backlog is too long.

So, part of HANDLING cases is HANDLE N - O - W !

I recall a Qual backlog I once found of 10 pcs. They were of all varieties—but the main fault was just nobody had the idea except the pcs that they should be handled NOW. And HANDLED. I sat down and did four of them in the next four hours and grabbed off auditors from Admin and Exec areas and handled the rest. Within 6 hours of finding this backlog, they were all HANDLED, happily, finally and wholly satisfied.

What was required was (a) a determination to handle cases, (b) a surety they could be handled and (c) the actual handling. All three points are needful.

Only two things prevent the above. When the help factor is low in the org or its auditors, there is no real determination to *handle* cases. A commercialism enters where the payment of the money is more interesting than the delivery of the service. This is self-defeating. One has to have the money but one won't continue to get money unless one is vitally interested in actually delivering service—which means actually handling the cases.

The certainty that one *can* handle cases depends in the main upon good training and exact application of the technology. There can be an awful lot of tech to apply but the point is to apply the tech that is applied with exactness. “Squirreling” is not really different processes—it is careless, incomplete, messed up auditing procedure. An auditor auditing a process that reads with excellent TRs to an F/N with good indicators seldom has any loses. But even given good procedure, one occasionally gets a lose. This tends to reduce one's certainty that he can get a result on a pc. Usually it isn't one's own pcs that cause this—it's hearing about some pc who didn't get a result, but not hearing the whole story.

If one's command of the subject of auditing is poor he doesn't recognize why there was a lose. A pc lies about having eaten or slept or is being audited on someone else's determination or some such thing and because of these, the pc gets a lose. This causes the auditor to have a lose.

Some auditors can get 20 wins and I lose and then mourn only about the I lose.

What is missed here—with pc loses—is that it is almost always a short-term lose. They lost in this one but nobody thinks to KEEP AT IT WITH DIANETICS AND SCIENTOLOGY UNTIL IT'S A WIN.

I've seen somebody audited for years before he finally and forever lost his chronic trouble. He would get better and then relapse, never quite so bad. And finally he recovered totally.

So there must be some idea extant amongst auditors that all “twins” in auditing must be fast, total and appreciated volubly. This isn't always the case. In fact, it is in the minority.

So an auditor's and an org's certainty should depend only on being certain of eventual permanent result and to be very extra happy when it is fast, total and appreciated.

To *handle* a case one keeps at it. So the pc got an intensive. So the pc wasn't handled *in that* intensive. Well, one doesn't just dust it off and say that's it forever. The Case Supervisor looks harder and gets the Registrar to get more auditing bought.

If Dianetics didn't handle, Scientology will. If this process didn't handle completely, that process may.

This is the winning attitude. I know one case that's still goofed up after a decade. The medics put a steel pipe in his leg bone. He won't get it taken out and insists on auditing only. So every few months somebody tries again. Sooner or later this case will be handled. The point is to keep trying to handle, not dream up reasons it can't be.

Auditors brought up with the idea that 5 hours of auditing should always resurrect a decayed corpse haven't been brought up right. Some SP around them has been making demands of the subject and auditing that BUILD IN LOSES.

Girl with migraine, 15 hours of Dianetics, still has migraine. Okay. So we don't brush her off. We get her to buy a good long Scientology intensive and do a full "GF 40". Still has migraine. So we now do another Dianetic Intensive.

We don't mislead her. We say, "Okay, you want to get rid of your migraine. So we'll stay with you if you'll work along with us as long as it takes. It might happen fast, it might happen slow. You might have to go all the way to OT Grades. But we'll try all the way."

A Registrar that promises instant miracles is cutting the Tech Sec's throat and the GI as well!

The condition *can* be handled. The whole point is, for the good of the pc and the org it eventually must be handled.

There are literally thousands of processes and approaches available for use.

The pc expects the condition to be handled. So one way or another one gets the pc handled. To do otherwise is to court disaster for the org.

Now and then a pc gets away, nearly always because of errors that get the pc upset with the subject of auditing, never when the org wasn't still trying to handle. A session was goofed and not repaired, somebody in the org inferred the condition couldn't be handled, that's the sort of thing that loses pcs.

Keep on trying to handle and you will succeed.

Auditing is remarkable enough already not to cripple it by leading pcs to expect instant results every time.

But the main point is, you audit a pc with Dianetics and Scientology until the pc's case is handled.

And sooner or later, it will be.

**REGISTRARS' ADVICE FORM**

Although no Registrar may give tech advice to a pc, what the pc wanted and expected and bought is made a matter of interest to the Case Supervisor.

Routing:

1. Registrar's Desk.

PC complained of \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

PC hoped to achieve \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

PC was sold \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

Any data from pc CF folder \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

2. To Examiner or Tech Director for Interview.

PC's TA \_\_\_\_\_ NEEDLE \_\_\_\_\_

PC's appearance \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

Prior Auditing\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

PC hopes\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

3. To Tech Services.

Include in PC folder and send folder to the C/S. Be sure to send any old tech folder the pc may have on file or may have had sent in or brought in.

4. C/S noted the above.

\_\_\_\_\_

Initial

Note: This Advice Form in no way relieves the C/S of any responsibility in handling the pc's case. It is advice only. The C/S may require other actions be done first. Insofar as possible, the pc's desires are achieved but not necessarily in this one intensive and the pc should be so informed by the Registrar.

Tech Personnel

**NARRATIVE ITEMS EXPLAINED**

A Narrative Item is one which will land the pc in a single incident for which there is no chain.

Flagrant example: "The time the horse Baldy dumped me in the Potomac."

Obviously there was only one such incident. If it doesn't F/N, where are you going to go with R3R? No chain.

Example: "When my mother spanked me." One incident. No chain.

Example: "A feeling like catching my hand in a 322 IBM computer on March 3 last year." Only one incident. No chain.

Example: "Like being bitten by a dog." Several examples on a chain but the SOMATIC he is trying to get rid of has a basic on it of being tortured.

**NARRATIVE CHAINS OF EXCESSIVE LENGTH**

These are by repeating story. By incident description.

There may be 40 billion times his shoe pinched.

Example: "Feeling like a shoe pinching me." The chain is endless. On the same somatic list was "A painful foot." This, being a somatic, permits you to get to a basic.

Example: "Feeling like my parents were cross with me." There may be seven thousand such incidents. You never get to basic.

**SOMATICS**

In old Dianetics, we often ran narratives. They can be run. But now and then there is only one incident and it never arrives at any basic.

Or there are so many similar incidents you go on for days!

The breakthrough came in assessing only somatics, sensations, emotions, attitudes.

There are two types of chains—( 1 ) story or narrative (2) feelings.

The feeling chains (pain, soreness, physical sensation) are the ones that relieve what's wrong with the pc. You can audit for a long time on narrative or story incidents without relieving any somatics.

Narrative items can give you trouble in R3R.

Somatics, sensations, emotions, attitudes as R3R items not only give you no trouble to audit but deliver the goods.

A sore arm chain can include incidents such as:

1. Being hit by a tree.
2. Run over by a carriage.
3. Being wounded in a duel.
4. Being hit by a stone axe.

If “sore arm” is the item assessed (a somatic) then you get all four incidents listed.

Suppose you assess 3 “Being wounded in a duel” as the item. It’s a narrative item because it describes the incident. So you run 3 only, never get to 4 and leave the pc with a sore arm.

He’s trying to get rid of a *sore arm*, not a duel.

Get it?

### **E-METER DRILL COACHING**

The following was submitted by Malcolm Cheminai Supervisor on the Saint Hill Special Briefing Course.

Here are some observations I have made on the coaching of E-Meter drills, which I feel could be of use:

1. The coach’s needle is dirty. The student’s out comm cycle has cut his comm in some way, but PRIOR to that the coach failed to flunk the part of the comm cycle that went out. Correct flunking by coaches equals students with no dirty needles.
2. If a coach’s TA starts climbing on a drill and the needle gets sticky, it means that the student’s comm cycle has dispersed him and pushed him out of PT. The coach is either ( 1 ) not flunking at all (2) flunking the incorrect thing.
3. The correct flunking by the coach of an out comm cycle, which has dispersed him and pushed his TA up, will always result in a TA blow down. If there is no blow down, the coach has flunked the wrong thing.
4. Needle not responding well and sensitively on assessment drills, although the needle clean. Coach has failed to flunk TR 1 (or TR 0) for lack of impingement and reach.
5. Coach reaching forward and leaning on the table, means TR 1 is out with the student.
6. Students shouting or talking very loudly on assessment drills to try and get the Meter to read by overwhelm. The reason for this is invariably—”but I’m assessing the bank!” They haven’t realized that *banks* don’t read, only thetans impinged upon by the bank—therefore the TR 1 must be addressed to the thetan. The meter responds proportionately to the amount of ARC in the Session. (See HCO B 29 Jan 70 for lists that don’t read.)

**NULL LISTS IN DIANETICS**

It happens all too often in Dianetic auditing that:

- (a) No further items on the assessment list read but
- (b) The pc still has these somatics.

This is quite a problem. It cuts short the number of hours that can be delivered and leaves an unhappy pc.

But what do you know, the list isn't null. It is *suppressed* or *invalidated*.

Here is where the Dianetic Auditor bridges over into Scientology, to which this action properly belongs.

There are many many such Scientology actions which the Dianetic Auditor will learn how to do when he studies to become a Scientology class auditor.

However, the great importance of the problem of a null or apparently dead list makes it necessary to teach the Dianetic Auditor this technique.

**SITUATION: NO ITEM ON THE Health Form or List NOW READS, ONE OR MORE HAVE BEEN RUN, THE PC STILL HAS SYMPTOMS THAT ARE ON THE LIST. BUT THEY WON'T READ.**

**SOLUTION: THE DN AUDITOR NULLS BY SUPPRESS "BUTTON" AND IF NEEDED, THE INVALIDATE BUTTON.**

This is normally called "getting in the suppress button" or "getting in the invalidate button".

It is called BUTTON because when you push it (say it) you can get a meter reaction.

In Scientology, this is called "Nulling by suppress".

All right, the list comes out all X—nothing reading.

The auditor, watching the needle out of the corner of his eye and also looking at the list (a trick you must be able to do so as never to miss a read on the meter), nulls down the list on all unrun items.

"On the item 'dizzy feeling' has anything been suppressed?"

"On the item 'painful head' has anything been suppressed? That reads."

PC: "Yes, I suppress it all the time."

Auditor: "Painful head. That reads. Are you interested in running that item?"

PC: "Yes! I kept wondering why it never read."

The auditor then runs R3R.

In the case of *Invalidate*, if suppress doesn't read, one "puts in the invalidate button".

Auditor, reading an apparently null list:

"On the item 'dizzy feeling' has anything been invalidated?"

"On the item 'sore feet' has anything been invalidated? That reads."

PC: "Yes, because it didn't read in the first place."

"Sore feet. That reads. Are you interested in running that item?"

PC: "Yes!"

So the auditor runs R3R.

As you will learn in Scientology, when the pc suppresses or invalidates something, the read *transfers* to suppress or invalidate, whichever they did. Suppress or invalidate now read, the item itself doesn't until one puts the button (suppress or invalidate) in.

**DON'T LET A DIANETIC PC OFF AUDITING JUST BECAUSE HIS UNRUN LIST ITEMS WON'T READ ON THE METER.**

Get in Suppress and Invalidate on the items as above.

It is a rapid action, not two way comm between items. You ask the *meter*, not the pc.

Hope this helps.

**WITHHOLDS, OTHER PEOPLE'S**

Now and then, quite rarely, you find an auditor who in being audited "gets off" other people's withholds.

Example: "Yes, I have a withhold from you. Charley said you were insane."

Example: "Yes, I have a withhold. Mary Agnes has been in prison."

One also finds public pcs trying to do this occasionally.

The facts of the case are that it doesn't do anybody any good casewise to "get off" other people's withholds.

Essentially, a withhold by definition is something the *pc* did that was an overt act, which the *pc* is withholding and thus keeping secret.

Thus, getting off things that somebody else did is not helpful to a case as such things aren't aberrative to the *pc*.

But now let's look at this more closely.

If a *pc* is "getting off" other people's withholds **HE HIMSELF MUST HAVE A CHAIN OF SIMILAR OVERTS AND WITHHOLDS *that are his own***. Getting off other people's withholds is then seen as a symptom of the *pc* withholding similar actions of his own.

Let us then complete the two examples above.

Auditor: "Do you have a withhold?"

Pc: "Charley said you were insane."

Auditor, correctly: "Do you have a similar withhold of your own?"

Pc: "Er-uh—well actually I told the class you were crazy last month."

---

Auditor: "Do you have a withhold?"

Pc: "Mary Agnes has been in prison."

Auditor: "Ok. Do you have a similar withhold of your own?"

Pc: "Er-uh—well—I spent two years in a reform school and I've never told anybody."

You can assume that any *pc* who is trying to get off withholds someone else had is making a sort of out-of-valence effort to avoid giving his own withholds.

This applies, of course, to all overts as well. Somebody giving other people's overts (which aren't aberrative to him) is actually failing to give overts of his own which are aberrative to him.

This is the mechanism behind the fact that if a *pc* is nattering about somebody the *pc* has overts on that somebody. The natter is "other people's overts". Getting these off does not help the *pc*. Getting the *pc*'s off does. Never be misled by a nattering *pc*. Never be hooked into letting him get off other people's overts and withholds.

*URGENT—IMPORTANT*

**PC APPLICATION FOR MAJOR ACTIONS**

It is vital that HCO Policy Letter of 4 February 70, "PC Application Form for Any Major Auditing Action", be filled out by any pc applying for major auditing actions.

Major actions are:

Dianetic Singles  
Dianetic Triples  
Scientology Singles  
Scientology Triples  
POWER  
R6EW  
CLEAR  
OT GRADES

Other actions, such as Student Rescue Intensives, Assists, handling chronic somatics, regaining specific abilities, as desired by the pc, are not major actions.

THE BIG POINT OF CLASS VIII IS THAT A PC'S CASE—OR A PRE-OT'S—IS PREPARED AND SET UP FOR ANY MAJOR ACTION.

This applies to *all* levels of pcs and applies to ALL AUDITORS whether VIII or not.

NEVER RUN A PC ON A MAJOR ACTION WHOSE CASE IS GIVING TROUBLE.

Get that trouble *handled first*. This is done IN TECH DIV 4, not in Review. Pcs shy off reviews. Reviews are for cases flubbed IN AUDITING. Ordinary Dianetic Intensives or Class VI Scientology processes to handle case trouble are run in the Tech Division.

The lowest level of handling is to get the pc to a medical doctor for treatment of any purely medical trouble. This can be accompanied by Dianetic assists. We do not advocate severe operations and particularly do not advocate "exploratory operations". We will not refuse auditing on the grounds of medical illness. We do advocate that known physical illnesses that respond to medical treatment be given it.

Assists are the next level.

Flying life ruds, S & Ds and other such Scientology actions, including "GF 40 Complete", more Dianetics and Class VI processes are all preparatory actions. There are literally hundreds of these.

It takes, it is reported, 25 hours of Dianetics for a field pc to get into past lives. On the PL Form No. 6, these are noted. If the pc has not contacted past lives yet, he must have more Dianetic Auditing until he does so. Using Suppress and Invalidate on old lists gives you lots of items to run triple.

If a needle is dirty the pc needs to be smoothed out by good auditing.

If the TA is high (4 or above) the pc needs more engrams run.

Dianetics and Class VI actions can and do handle chronic somatics. Use such processes until there are no more chronic somatics.

Test results should be available to a Case Supervisor. Until these are better, it is folly to engage in Scn triples or Power or above as the gains won't hold.

EXAMPLE OF WRONGNESS: Pc has had Scn singles. TA tends high. Registrar signs up for triples and without further ado they are delivered. Flunk. The pc should have had a lot of Dianetics before anyone ran triples.

EXAMPLE OF WRONGNESS: Pc with migraine signs up for Power, is given Power, asks for refund. Flunk. The pc should have been required to get all Dianetic auditing necessary to get rid of the migraine and the whole case smoothed before Power was begun.

It is very serious not to prepare a case for a major step. The cycle of sign up, give major action, refund is a very very sour way to deliver auditing.

The org and the Case Supervisor and the auditor must care what happens to the pc. An org and a Case Supervisor and an auditor must have a reality on what auditing can do.

By using HCO PL 4 Feb 70, you get around the sticky bit of the pc thinking he is just being persuaded to have more auditing. He is made to *apply*. He is looked over in Tech as well as the form and told what needs to be done first.

If you are really interested in the pc, you will have no trouble.

---

The pc or PreOT makes out HCO PL 4 Feb 70 for every major step in auditing. Studying these the Case Supervisor will know what to do.

Do not use HCO PL 4 Feb 70 to prevent auditing from occurring. On the contrary, use it to increase gains on the pc.

This PL is also a major promotion opportunity. But don't promote by mailing it broadly unless you actually have auditors auditing in your org and the large number of auditing actions which can be done on a pc comprehended by the org and Case Supervisor.

Handled right, this HCO PL 4 Feb 70 can bring success and great prosperity to your org and make a very happy field.

REVISED 26 OCTOBER 1975  
(Revision in this type style)

**PC APPLICATION FORM  
FOR ANY MAJOR AUDITING ACTION**

This form is to be made out by the Preclear and mailed or handed in to the Registrar who will forward it to the Case Supervisor. It is an addition to any other sign-up papers.

-----  
PRECLEAR NAME (BLOCK CAPS) DATE

-----  
CURRENT ADDRESS

-----  
CITY

I \_\_\_\_\_ (name) hereby apply for auditing:

- \_\_\_\_\_ *Life Repair, any Org*
- \_\_\_\_\_ *Drug Rundown, any Org*
- \_\_\_\_\_ *Dianetic Case Completion, any Org*
- \_\_\_\_\_ *Expanded Grades, Scientology, any Org  
(Triple or Quad)*
- \_\_\_\_\_ *Expanded Dianetics, Continental Orgs, Saint Hill Orgs,  
Orgs where authorized*
- \_\_\_\_\_ *POWER, in a Saint Hill Org*
- \_\_\_\_\_ *R6EW, in an Advanced Org*
- \_\_\_\_\_ *CLEAR, in an Advanced Org*
- \_\_\_\_\_ *OT LEVELS, in an Advanced Org*

1. I realize it may be necessary to prepare my case for a major action, such as above or to handle medical actions or to get auditing for chronic somatics or particular difficulties.

2. I have the following physical disabilities: \_\_\_\_\_  
\_\_\_\_\_

3. I have had auditing on the following: \_\_\_\_\_  
\_\_\_\_\_

4. I have had case gains on: \_\_\_\_\_  
\_\_\_\_\_

5. I have been trying to get the following chronic condition handled: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

6. I have, have not (circle one or the other) contacted past lives in running engrams.

-----

7. The following close relatives or family are favorable/unfavorable to Dianetics and Scientology:

-----

8. I have, do not have a drug history. (Circle one or the other) *By drugs is meant—to mention a few—tranquilizers, aspirin, amphetamine, medical drugs, marijuana, LSD, opium, and including alcohol.*

-----

8a. *I am, am not presently taking drugs. (Circle one)*

-----

9. I have, have not been treated by psychiatrists. (Circle one) Give any details.

-----

10. I am a fast, slow student. (Circle one)

-----

11. I have already had the following auditing actions:

-----

-----

12. My training level in Dianetics or Scientology is (include have read books or not, if no formal training):

-----

13. I object, do not object to medical treatment (circle one), if I am physically ill.

-----

14. I plan the following auditing actions after the above major grade is attained:

-----

-----

I hereby swear and attest the above to be true.

-----  
SIGNED

Fill out, sign and return to the Registrar, who will include it in your folder for Case Supervisor use.

**HIGH TA, FULL HANDLING OF**

(Refers to HCO B 17 Sept 68, "Overrun Process",  
Case Supervision No. DDD 400)

The problem that "bugs" a great many auditors and gets in the way of a lot of pcs is HIGH TA.

Since the issue of Class VIII materials over a year and a half ago, I have been studying this problem and have additional observation and remedy on it. Whereas earlier materials handle it, it sometimes crops up again on the same pc. To handle it fully and forever on a pc was the principal target in my further research.

The following develops:

THE CAUSE OF HIGH TA IS AN ENGRAM CHAIN IN RESTIMULATION.

There is no other cause or reason for it than that.

Engram chains go into restimulation on OVERRUN IN LIFE.

Thus Overrun results in a high TA, but THE REASON OVERRUN RESULTS IN A HIGH TA IS THAT IT THROWS AN ENGRAM CHAIN INTO RESTIMULATION.

One sees this in running R3R when:

- (a) The original chain is erased and the pc jumps chains.
- (b) When the auditor insists on a rerun of an erased chain.

One sees this in Scientology when a floating needle is by-passed. The underlying engram chain is then restimulated instead of keyed out and the resulting mass (of engrams) sends the TA high.

Rehab keys out the mass again.

An auditor should understand this Scn cycle—Auditing Commands = key-out of mass in engrams = F/N. Overrun is Auditing Commands = key-out of mass in engrams = F/N + more Auditing Commands = key-in of mass in engrams = overrun = high TA. Rehab gets back the point of key-out = F/N again as the mass drops away out of restim.

In Dianetics an *erased* chain removes the mass. Overrun = disrelated chain being restimulated. Rehab can occur with F/N when the disrelated chain drops away.

The only real fault Symptom No. DDD, Direction 400, Pigeonhole 8 of Class VIII C/S Booklet, has is an auditor's failure to get a BD item on his list. If he just listed to BD item on the question "What has been overrun?" he would usually get his F/N.

However, with the above discoveries, there is a new way of handling a chronic high TA which follows:

CHRONIC HIGH TA is defined as one which is found high two sessions running (consecutive). “High” means around 4.0 or above. But 3.8 can also be called “high” if it occurs at session beginning too often.

To simplify—if a pc at session start has a 4.0 TA two or more sessions in a row, you can call it a chronic high TA.

The C/S CONCLUSION seeing this is that something has been overrun, usually in life but possibly in auditing. The same remedy applies to both.

One does not try to fly a rud or handle something else. One applies this remedy DDDA 400A:

1. List “What has been overrun?” Get a BD item.
2. Rehab if feasible with “How many times have you been released on that?” Get the number of times and you will get an F/N.
3. Using that item, as expressed by the pc, narrative item or not, run 3 way flows R3R.

This will knock out the high TA tendency.

This Remedy DDDA 400A replaces DDD 400.

It does not matter how high a TA goes during session so long as it eventually F/Ns. Dianetic auditors jump chains, miss basic or they don’t get down to basic. This gives a high TA or a low one. The remedy here is to rehab the point of erasure or to continue the chain to erasure.

Sometimes a pc goes exterior in session. The TA flies up after session at the Examiner. In this case, rehab the exteriorization point. This is sometimes detectable usually when pc leaves a session with F/N and has 4.0 at Examiner!

The principle of mass = high TA is the same except in this case the mass is the *body*.

I trust this will help.

HCO BULLETIN OF 20 FEBRUARY 1970

Remimeo  
Dn Checksheet  
Class VIII  
Checksheet

**FLOATING NEEDLES AND END PHENOMENA**

Now and then you will get a protest from preclears about “floating needles”.

The preclear feels there is more to be done yet the auditor says, “Your needle is floating.”

This is sometimes so bad that in Scientology Reviews one has to Prepcheck the subject of “Floating Needles”.

A lot of by-passed charge can be stirred up which ARC Breaks (upsets) the preclear.

The reason this subject of floating needles gets into trouble is that the auditor has not understood a subject called END PHENOMENA.

END PHENOMENA is defined as “those indicators in the pc and meter which show that a chain or process is ended”. It shows in Dianetics that basic on that chain and flow has been erased, and in Scientology that the pc has been released on that process being run. A new flow or a new process can be embarked upon, of course, when the END PHENOMENA of the previous process is attained.

DIANETICS

Floating needles are only ONE FOURTH OF THE END PHENOMENA in all Dianetic auditing.

Any Dianetic auditing below Power has FOUR DEFINITE REACTIONS IN THE PC WHICH SHOW THE PROCESS IS ENDED.

1. Floating needle.
2. Cognition.
3. Very good indicators (pc happy).
4. Erasure of the final picture audited.

Auditors get panicky about overrun. If you go past the *End Phenomena* the F/N will pack up (cease) and the TA will rise.

BUT that’s if you go past all four parts of the end phenomena, not past a floating needle.

If you watch a needle with care and say nothing but your R3R commands, as it begins to float you will find:

1. It starts to float narrowly.
2. The pc cognites (What do you know—so that’s . . .) and the float widens.
3. Very good indicators come in. And the float gets almost full dial, and
4. The picture, if you inquired, has erased and the needle goes full dial.

That is the full End Phenomena of Dianetics.

If the auditor sees a float start, as in 1, and says, "I would like to indicate to you your needle is floating," he can upset the pc's bank.

There is still charge. The pc has not been permitted to cognite. VGIs surely won't appear and a piece of the picture is left.

By being impetuous and fearful of overrun, or just being in a hurry, the auditor's premature (too soon) indication to the pc suppresses three quarters of the pc's end phenomena.

## SCIENTOLOGY

All this also applies to Scientology auditing.

And *all* Scientology processes below Power have the same end phenomena.

The 0 to IV Scientology End Phenomena are:

- A. Floating needle.
- B. Cognition.
- C. Very good indicators.
- D. Release.

The pc goes through these four steps without fail IF PERMITTED TO DO SO.

As Scientology auditing is more delicate than Dianetic auditing, an overrun (F/N vanished and TA rising, requiring "rehab") can occur more rapidly. Thus the auditor has to be more alert. But this is no excuse to chop off three of the steps of end phenomena.

The same cycle of F/N will occur if the pc is given a chance. On A you get a beginning F/N, on B slightly wider, on C wider still and on D the needle really is floating and widely.

"I would like to indicate to you your needle is floating" can be a chop. Also it's a false report if it isn't widely floating and will keep floating.

Pcs who leave session F/N and arrive at Examiner without F/N, or who eventually do not come to session with an F/N have been misaudited. The least visible way is the F/N chop, as described in this session. The most obvious way is to overrun the process. (Running a pc after he has exteriorized will also give a high TA at Examiner.)

In Dianetics, one more pass through is often required to get 1, 2, 3, 4 End Phenomena above.

I know it said in the Auditor's Code not to by-pass an F/N. Perhaps it should be changed to read "A real wide F/N". Here it's a question of how wide is an F/N? However, the problem is NOT difficult.

I follow this rule—I never jolt or interrupt a pc who is still looking inward. In other words, I don't ever yank his attention over to the auditor. After all, it's *his* case we are handling, not my actions as an auditor.

When I see an F/N begin I listen for the pc's cognition. If it isn't there, I give the next command due. If it still isn't there, I give the 2nd command, etc. Then I get the cognition and shut up. The needle floats more widely, VGIs come in, the F/N goes dial wide. The real skill is involved in knowing when to say nothing more.

Then with the pc all bright, all end phenomena in sight (F/N, Cog, VGIs, Erasure or Release, depending on whether it's Dn or Scn), I say, as though *agreeing* with the pc, "Your needle is floating."

## DIANETIC ODDITY

Did you know that you could go through a picture half a dozen times, the F/N getting wider and wider without the pc cogniting? This is rare but it can happen once in a hundred. The picture hasn't been erased yet. Bits of it seem to keep popping in. Then it erases fully and wow, 2, 3 and 4 occur. This isn't grinding. It's waiting for the F/N to broaden to cognition.

The pc who complains about F/Ns is really stating the wrong problem. The actual problem was the auditor distracting the pc from cognition by calling attention to himself and the meter a moment too soon.

The pc who is still looking inward gets upset when his attention is jerked outward. Charge is then left in the area. A pc who has been denied his full end phenomena too often will begin to refuse auditing.

Despite all this, one still must not overrun and get the TA up. But in Dianetics an *erasure* leaves nothing to get the TA up with!

The Scientology auditor has a harder problem with this, as he can overrun more easily. There is a chance of pulling the bank back in. So the problem is more applicable to Scientology as a problem than to Dianetics.

But ALL auditors must realize that the END PHENOMENA of successful auditing is not just an F/N but has 3 more requisites. And an auditor can chop these off.

The mark of the real VIRTUOSO (master) in auditing is his skilled handling of the floating needle.

## STANDARD TECH AND INVALIDATION

Invalidation is a serious button.

When a Class VIII goes home, he is, of course, a better auditor.

He can and will crash all stats in the area if he charges around invalidating all auditors not so fortunate as to be an VIII.

### STANDARD TECH

Clarifying what Standard Tech is:

An Auditor correctly auditing the materials of his class is performing Standard Tech.

Standard Tech is not a process or a series of processes. It is following the rules of processing.

For example, one runs a process to its end phenomena. One lists by L & N laws. One sees that a question reads before auditing it. One audits with TRs in. One follows the Auditor's Code. One repairs any ARC Break or gets it repaired. One doesn't kid around and coffee shop with processes. One gets trained for the grade he is auditing. One uses study tech. One checks out HCO Bs correctly. That sort of thing is Standard Tech.

Any process ever taught on the SHSBC or ever released in ANY book can be audited and be Standard Tech.

Standard Tech cancelled no certs or classes or processes.

If you check a process question to see if it reads and run it to its F/N and other end phenomena following the rules of auditing, that's Standard Tech.

Basically, Standard Tech was a way of auditing following the rules of auditing as listed above.

There are ways to C/S for maximum case gain but these vary and advance.

---

Remember, stats of an area can be crashed if an VIII begins to invalidate every auditor junior to him or the C/Sing.

The stats of an area can be made to soar by an VIII who helpfully guides others into respecting the basic rules of auditing.

When an VIII returns to an area these things should happen:

1. Enthusiasm of auditors for auditing pcs should increase.
2. Volume of auditing hours delivered should soar.

3. New people should be clamoring to become auditors.
4. Training speed per student should quicken.
5. Respect for correct auditing as noted above should increase.
6. People not getting results should be guided into correct application for their grade.
7. Auditing results should increase per session.
8. Auditing and training should boom in popularity.

Now review what you know of auditing as an HDG and VIII and you will find you have been taught how to do all the above.

In studying VIII keep your eye on how to get the above eight things going in your area with what you now know. You won't be able to make VIIIs out of HDCs or Class IVs or VIs but you sure can make terrific HDCs, IVs and VIs out of them.

That's why you're an VIII.

**ALLY, DEFINITION OF**

To clear up any confusion on the word “Ally” it is defined here.

By “Ally”, in Scientology, we mean “a person from whom sympathy came when the preclear was ill or injured. If the Ally came to the preclear’s defense or his words and/or actions were aligned with the individual’s survival, the reactive mind gives that Ally the status of always being right—especially if this Ally was obtained during a highly painful engram.”

**EXTERIORIZATION AND HIGH TA**

For a long while we have known that if you audit a person after he or she has exteriorized, you often get a high Tone Arm, somatics and an upset case.

The answer has *been* to cease to audit a person after exteriorization has occurred.

This is so much a fact that five out of five “in trouble” cases I recently examined had every one of them been audited for some time after they exteriorized. The TA had or had not gone high but the cases were bogged. They revived at once when the fact of exteriorization was located. F/N, VGIs and when rehabbed (by counting number of times) somatics ceased.

The rule has been—don’t audit after a pc has exteriorized.

This is one of those very fundamental things that seems to defy research and yet if not solved will keep things messed up. Persons who exteriorize on lower grades need their upper grades and yet if audited further may mess up. This places a limit on auditing and yet the person may still have aberrations and somatics. But the fact of having exteriorized bars the road.

So I got to work and made a breakthrough on it. Hurrah!

It has now been fully vindicated by long tests and is now released for general use.

**EXTERIORIZATION**

Exteriorization is defined as the act of moving out of the body with or without full perception.

It is the fact of this act which proves that the individual is not a body but an individual. This discovery in 1952 proved beyond any question the existence of a thetan, that the individual *was* a thetan, not a body, and disproved that man was an animal, and that he was a spiritual being timeless and deathless.

Techniques have existed since 1952 that exteriorize a person. These are not now used because the person (a) still being aberrated and not Clear, soon returns to his body and (b) when audited thereafter has trouble.

This is a major problem a thetan sometimes has at death. How to exteriorize? He makes it eventually of course but he should be able to do so at once.

But, in my research, I found it unreasonable that a person would be hard to audit just because he had exteriorized and had reinteriorized. For he has obviously done just that at every death and birth and must have done so hundreds of billions of times. So why should a recent exteriorization then make him hard to audit? Yet it did.

My asking of that question was the first breakthrough. The rest soon followed.

**ENGRAM BEHAVIOR**

We know in Dianetics that if you continue to run the last part of an engram which has in fact an earlier beginning which isn’t being run and is ignored the TA will go up.

The reason for this is that the *first* of a chain or the first part of an experience or a first experience (basic on a chain of incidents) has to be run for the chain or incident to erase.

If you only ran the end of incidents you would get a high TA and no erasure.

If you only ran incidents late on the chain you would get a high TA.

Pcs are uncomfortable, feel under pressure, when their TA is high (above 3.5 or up).

If you don't erase incidents or chains of incidents when auditing (or key them out as in release) you get a perpetually high TA.

High TA cases have been "overrun" on something. That however is a very oversimplified explanation. The truth is that they have been run on something that didn't erase. The something has an earlier beginning than was detected or an earlier incident. In life one, having engrams about it, adds new incidents in living until something is "overrun" or done too often. The TA is therefore high.

A TA records MASS. Mental mass has a higher electrical resistance and so measures more "ohms" of resistance, an electrical term for the trouble electricity has in passing through something. The more resistance the more units of resistance are recorded on the meter. The TA actually measures resistance.

Thus, the end of an incident can be restimulated. If the beginning of it is never touched then one will just accumulate more and more mass.

#### THE MISSED BEGINNING

What has happened here, as regards exteriorization is that we have concentrated on EXTERIORIZATION.

If one is IN something, he must have gotten into it.

Therefore the beginning of an exteriorization is the INTERIORIZATION.

The being went *into* something before he went out of it.

Exteriorization occurs at death. That's an engram. Interiorization occurs at birth, that's an engram.

So when somebody goes Exterior he is actually liable to key in having gone interior in the first place.

Get it?

So when you exteriorize somebody or he exteriorizes during auditing he gets keyed in a bit and without having audited earlier INTERIORIZATIONS, he has been put in the last part (exteriorization) of an incident which began with Interiorization.

Not only are you touching on something (exteriorization) late on a chain (which has hundreds of billions of like incidents ahead of it), you are also touching something which is late in the incident (which began with interiorization).

On both counts then, the TA may go high.

#### THE REMEDY

The remedy is to audit out *Interiorizations*.

If this is done, then the pc can be audited all you want after Exteriorization.

Auditing the Interiorizations by recall, secondaries, engrams, triple flow on each, restores the possibility of auditing a pc after an exteriorization has occurred in auditing.

## THE PROCESS

The Case Supervision directions for Interiorization are to be done by a Scientology Auditor. They can be done purely in Dianetics by using only steps 5, 7 and 8. It is more effective when done by an Scn Auditor who is also HDC.

1. Omit ruds but assess a form L1A if pc upset.
2. Clear EXTERIORIZATION with pc.
3. Check for having been audited after exteriorization. (TA should come down and F/N, Cog and VGIs.)
4. Rehab (rehabilitate) condition by getting or counting number of times exteriorized. You should get F/N, Cog and VGIs.
5. Clear INTERIORIZATION carefully so pc knows what you mean. (Can flub if this step omitted.)
6. Run 3-way Recall on Interiorization:
  - RF 1—Recall a time you interiorized. (To F/N.)
  - RF 2—Recall a time you interiorized another. (To F/N.)
  - RF 3—Recall a time others (or another) interiorized others. (To F/N.)
7. Run 3-way Secondaries:
  - SF 1—Locate an incident of loss or emotion when you interiorized. (R3R to basic.)
  - SF 2—Locate an incident of loss or emotion when you interiorized another. (R3R to basic.)
  - SF 3—Locate an incident of loss or emotion when others interiorized others. (R3R to basic.)
8. Run 3-way Engrams:
  - EF 1—Locate an incident containing pain and unconsciousness when you interiorized. (R3R to basic.)
  - EF 2—Locate an incident containing pain and unconsciousness when you interiorized another. (R3R to basic.)
  - EF 3—Locate an incident containing pain and unconsciousness when others interiorized others. (R3R to basic.)

Note: All steps and flows as above given to end with F/N, Cog and VGIs. Don't chop the F/N by indicating until pc has had his cognition and VGIs.

(It will be seen that Recall and R3R steps and procedure are standard except they address the subject "Interiorization".)

## FUTURE AUDITING

One should now be able to audit the pc even after exteriorization.

## FURTHER USE

Pcs worried about not being able to exteriorize should be run on this process.

## WARNING

This is a major case action and should only be run when the pc is rested and in good physical shape.

---

## SUMMARY

If a pc goes exterior on Dianetics, Scientology lower grades or at OT levels, one at once audits out the chain of Interiorizations, using the above C/S. With this done the pc or pre-OT can go on being audited.

---

The way is open to more powerful OTs.

---

All fundamental discoveries are essentially simple ones.

**DIANETIC TR NOTES**

(Cancels HCO B 15 January 1970,  
Issue III, "TR 104", written by another)

To avoid coach restim in doing TR 104 and TR 103 please note the following:

1. In TR 103 the "session" is between STUDENT and DOLL. TRs are done on the *DOLL* not the coach.
2. In TR 103 the coach is not obliged to answer all of the commands—he may or may not. If he doesn't, the student assumes the DOLL has answered and proceeds accordingly.
3. In TR 103 and TR 104 NEVER give dates and durations, as a coach, in actual units of TIME—use something else. "4 Figs", "2 potatoes", "horsefeathers" are all perfectly good "dates" for coaching purposes or in bull-baiting.
4. Likewise never use real somatics in coaching or bull-baiting TR 103 and TR 104—use nonsense terms or harmless ones.
5. In TR 103 the coach occupies the position of a bull-baiter who interjects distractions, bull-baiting and disruptive remarks into the "session" between student and doll. He can throw in answers on behalf of the doll which the student must abide by; but the coach does not play the part of "pc". Don't go playing the role of "pc" on a real set of process commands!

Also, please note that the POSITION of the coach in TR 104 and TR 103 is *beside* the student, not across from him.

All C/Ses  
All Auditors

**ETHICS PROGRAM NO. 1 CASE ACTIONS**

I have developed the following C/Ses to make every staff member an Ethics Upstat.

One or more of the following C/Ses for each category (as applicable) can be given so that each staff member achieves Ethics Upstat status. Each session commences with "Fly a rud."

1. LACK OF CASE GAIN:

1. (a) Medical Exam and any treatment.
- (b) Review to straighten up all out ruds. When pc has markedly recovered:
- (c) Fly a rud, GF40 and handle every item that reads fully. Run LX lists 3, 2 and I and each item that reads twice run three way recall, 3 way secondary or engram to end phenomena.
- (d) CCHs.
2. Dianetic Triples—at least 25 items run triple.
3. Scientology Triples.

2. POOR STUDY RECORD:

1. Any needful Review.
2. Student Rescue Intensive.

3. TA TOO HIGH OR TOO LOW (above 4.0 or below 2.0):

*Too high:*

1. Do procedure in HCOB 13 Feb 70, "High TA, Full Handling of" as follows:
  - (a) List "What has been overrun?" Get a BD item.
  - (b) Rehab if feasible with "How many times have you been released on that?" Get the number of times and you will get an F/N.
  - (c) Using that item, as expressed by the pc, narrative or not, run 3-way flows by R3R.

Note: If the above doesn't work well, TA still high, do this:

1. Check if Exterior in Auditing.
2. Rehab.
3. Run Interiorization HCOB 22 March 1970.

*Too low:*

1. Look for any bad sessions and use List 1A on that session (as per HCOB 2 March 1970, "List L-1A").
2. Clean up any ARC Break of long duration.
3. Prepcheck "Invalidation".
4. Do GF 40 and handle.
5. Class VIII to do LX Lists as needed. Proceed with general case advance by grades.

4. POOR POST STATS:

1. Two-way comm on the purposes of the post, as follows:  
Take the stated purposes for .....(applicable post).  
Clear each one with him/her by 2-way comm on a meter until (each

purpose) doubts, conflicts, problems and misunderstandings are handled.  
(Maybe one will F/N, maybe not.)

2. Run “Who have you failed to help?”  
“Who has failed to help you?”  
“Who has failed to help another?”  
“Who have you helped?”  
“Who has helped you?”  
“Who has helped another?”  
Run each of the six legs to F/N and end phenomena.
  3. Run Reach and Withdraw on key object in pc working area. “Reach for the ....” “Withdraw from the ....” to VGIs and cognition or 3 commands with no change or equal comm lag.
  4. Run overts on post or on the org or on any org or group.
  5. Run Overts-Justifications: “What overt have you committed?” “How have you justified that?”
  6. Case handling as per HCOB 4 February 1970, “Pc Application for Major Actions”.
  7. General auditing as required up the grades.
5. CURRENT DRUG HISTORY OR CONNECTIONS:
1. Person off drugs for required amount of time.
  2. GF 40 section on drug handling (Class VIII action).
  3. Dianetic Prior Assessment of drugs and run all reading items on Dianetics three flows.
6. PSYCHIATRIC HISTORY:
1. Run out past psychiatric treatment.
  2. Run “What somatics, sensations, feelings or emotions did you have prior to mental treatment?” Do a nice list. Run R3R three flows on all reading items. If no reading items, apply Suppress and Invalidate on the list as per HCOB 29 January 1970 “Null Lists in Dianetics”. If still no reading items, do a new revised Health Form.
  3. Person may be PTS and an S & D may be needed.
7. LOW APTITUDE, IQ AND LEADERSHIP TEST SCORES:
1. CCHs.
  2. Op Pro by Dup.
  3. Run “What purpose has failed?” This should be to a BD item. It will F/N and the pc cognite and GIs. Then run three way R3R on the item.

All the above actions are run as per HCO Bulletin “Floating Needles and End Phenomena” 20 February 1970.

8. Where the same process occurs in 2 of the above remedies do not repeat it in the 2nd one run.

It is noted here that the above actions utilize the skills of just about every level of Auditor training, so there should be many auditors in the org who can assist on the above auditing actions and so speed up the program.

The goal—every person on staff an Ethics Upstat.

Good case gain!

“GF 40—Out of Valence Case”)  
Class VIII

**GF-40 HANDLING—CLARIFICATION**

1. *All* reading items on a GF-40 are handled. The rule of handling all items that read twice or more as in prepcheck and LX list assessments does not apply to GF40.
2. If “Audited over out Ruds” reads, it is handled first regardless of how many times it read.
3. If “Out of Valence” assesses out with the greatest number of reads it is handled last (after all other reading GF-40 items have been handled).
4. In all other cases the GF-40 items are handled in order of greatest number of reads.

(Reference HCO B 22 Mar. 1970,  
"Exteriorization and High TA")

On Flag where we do a lot of auditing on pcs when I took over C/Sing after 8 months off C/S lines, I found a very high percentage of cases had been audited past Exterior. It was a very high percentage.

Many of these pcs (most of them VAs or on OT levels) had various symptoms:

Headaches  
Body aches and pains  
Effort  
Pressures from environment.

The common denominator was "audited over Exterior".

The main symptom of this was high TA at session start or TA up at Examiner after F/Ns, Cog, VGIs at session end. Not all however suffered from high TA but all who had high TA after lots of auditing had been audited past Exterior.

The above reference HCO B re Exteriorization and Interiorization was tested and written as the breakthrough which permits auditing after Exteriorization and going on up the grades.

The check even after this showed such a high percent of cases had been audited past Exterior on Dianetics, Scn, Power, Clearing or OT grades that I wish to bring the point home emphatically to C/Ses that it is of major importance to handle this situation by checking for it and running Interiorization.

The C/S is:

Has High TA, headaches, body aches, heavy pressures or discomfort (any one of these). Therefore

1. Check for Exteriorization during auditing. If so do the remaining steps:
2. Rehab Ext by counting number of times.
3. Clear Interiorization fully.
4. Run Interiorization

3 way recall  
3 way secondaries  
3 way engrams.

These steps all go to F/N, Cog and VGIs of course.

If after session during the next few days, pc shows again a tendency to high TA, give this C/S:

1. Two-way comm on Interiorization and on Exteriorization.

This pushes the cognition further. The pc may not have added it all up yet. Don't evaluate. Just question and listen with no Q and A.

---

Pcs or Pre-OTs can go on up to higher grades after Exteriorization if Interiorization is run. This is even true of "Dianetic Clears" (which does *not* cancel the need of doing the Clearing Course but is a special grade).

We are far more successful in early auditing (such as Dianetics and lower grades) than we think!

HCO BULLETIN OF 12 APRIL 1970

(Cancels HCO B 2 March 1970, Issue II,  
"List L-1A" which was compiled by  
another and changed the  
original order of items.)

Class VIIIs  
Class VIs  
Class IVs  
Class IIIs  
Level III  
Checksheet

**LIST L-1B**

When a pc gets upset in session or when an ARC Break has occurred, and the session tends to bog down, use this list; assess the line for a read, using the prefix "In this session, has.....". Where the line reads, indicate to the pc, let him examine it and itsa. Call the line again for another read, repeat your action as above until the line is clean.

Where the line is clean, indicate to the pc that the line is clean, and continue down the list.

This list is handled until the by-passed charge has been located, indicated, blown, with an F/N and VGIs.

Where an upset has occurred in earlier sessions, and there was a failure to use L1B, the C/S should instruct to have the pc assessed on L1B, using the prefix "In an earlier session, has....." as per this rundown.

## LIST L-1B

1. A withhold been missed?
2. Some emotion been rejected?
3. Some affinity been rejected?
4. A reality been refused?
5. A communication been cut short?
6. A communication been ignored?
7. An earlier rejection of emotion been restimulated?
8. An earlier rejection of affinity been restimulated?
9. An earlier refusal of reality been restimulated?
10. An earlier ignored communication been restimulated?
11. A wrong reason for an upset been given?
12. A similar incident occurred before?
13. Something been done other than what was said?
14. A goal been disappointed?
15. Some help been rejected?
16. A decision been made?
17. An engram been restimulated?
18. An earlier incident been restimulated?
19. There been a sudden shift of attention?
20. Something startled you?
21. A perception been prevented?
22. A willingness not been acknowledged?
23. There been no auditing?
24. Went Exterior?
25. Interrupted actions?
26. Actions continued too long?
27. Data invalidated?
28. Someone evaluated?

**2 WAY COMM C/Ses**

There are four main reasons why a Case Supervisor or an auditor gives a "2 way comm" C/S.

1. WHEN NOT ENOUGH DATA TO C/S. "2 way comm to obtain data about case progress and status."
2. WHEN PC INFERS SOMETHING IN CASE THAT'S NOT BEEN HANDLED. "2 way comm to find what pc thinks should be handled on case."
3. WHEN PC HASN'T COGGED ON END RESULT. "2 way comm on (process just run) to see what thoughts pc had regarding it."
4. WHEN PC'S POST PURPOSE IS BEING CLEANED UP. "2 way comm on how his post purpose fits into org—or if he can do it."

In all these instances the C/S may be as specific as he likes about what he wants asked or cleared up. In other words the quoted C/Ses above are only examples. Each of the above four general types can have a great number of different questions. The C/S must be very familiar with the four *types* given in capitals above.

On his part the auditor can vary the C/S's question around to get different slants on it. The auditor doesn't have to get an F/N on the 2 way comm session but often does.

The auditor can introduce a curve, an alter-is, by Q and A with the pc and by evaluation.

The Drill on 2 way comm is the old ask and listen.

A Q and A is of course echoing the pc's statement. Example: Pc: "I never liked my father." Auditor: "What about your father?" Pc: "He was cruel." Auditor: "What about cruel people?" Pc: "I don't like them." Auditor: "What else don't you like?" And so on and on.

A correct session is for the auditor to hold to the C/S's main line of questioning no matter how he phrases it and listen to and write down what the pc says.

Evaluation in auditing 2 way comm is the other deadly sin. The auditor asks and listens. He doesn't explain anything to the pc. Example: Pc: "I didn't dig the process."

Auditor: "Well you see that process was intended to ..... " and here we go on

Evaluation. Even an auditor's facial expression can be evaluation.

Ask and listen and ack. Prompt only by varying the original question now and then, that's what the good 2 way comm auditor does.

W/S

The 2 way comm worksheet is rather more detailed as to what the pc says than process worksheets.

The C/S needs the data.

Or in looking it over the auditor himself, if he's his own C/S, will need the data.

The questions the auditor asks should be noted on the worksheet as a guide.

### MAXIM

It is a C/S maxim "when in doubt order a 2 way comm".

### 2 WAY COMM AUDITOR

Any auditor can 2 way comm. Saint Hillers were best at it. Academy Level Auditors can be used in this, even Dianetic Auditors.

The only reservation is not to assign an auditor whose *grade is* lower than the pc's. The auditor's class is not as important as his grade. The reason for this is that the OT pre-OT, in being 2 way commed by a Grade V, can blow the poor auditor apart or can be stuck with a data withhold.

### METER

All 2 way comm is of course done on a meter. It is, however, not a Sec-check or Prepcheck. TA position and needle reaction and F/Ns are important to the C/S.

One doesn't 2 way comm past an F/N, cog and VGIs.

Remimeo

(Reference HCO B 22 March 1970,  
"Exteriorization and High TA")

**BLOWS**  
**AUDITING PAST EXTERIOR**

I have found a major cause of blows from classes, orgs and Scientology.

Overts are of course a primary cause but many have overts and *don't* blow, so why do such people blow?

A case audited past Exterior, particularly if it is not acked, tends to get stuck on Exteriorizing. This can (but doesn't always by any means) cause the person to take himself away!

Three recent "blows" all fell in this category. One who was trying to blow, when audited on Interiorization, changed his mind.

An amazing number of pcs go exterior on modern auditing. Modern processes? Dianetics and Scientology are very fast.

Some haven't even realized it, didn't know what it was.

When they go exterior and you keep on auditing them without running Interiorization as per HCO B 22 March 1970, *Exteriorization and High TA*, they become stronger as thetans while being reinteriorized and they get odd somatics, particularly in the head.

Uncomfortable they want OUT. Trying and failing to get out (since Interiorization has not been run) in desperation they *leave* an org or class, body and all, without being Exterior as a thetan.

If you rehab Exterior and run an Interiorization Intensive the dramatization ceases.

The excuses such "blows" give you would fill a large book. Yet it is only that they are seeking to exteriorize, can't, so they "exteriorize" by leaving, body and all.

The Interiorization Intensive as given in the earlier HCO B handles.

A person couldn't be audited past Exterior, you know.

But if given an Interiorization Intensive he or she can be.

When they have been audited past exterior without an Interiorization Intensive you will have trouble with the case, the TA and with blows. So use the Interiorization Tech.

Dianetics  
Checksheet

(HCO B 5 October 1969—Issue II—  
with addition of “Earlier” Commands)

**DIANETIC TRIPLES**

The additional 2 flows are:

Flow No. 2      Locate an incident of your causing another (item).

Flow No. 3      Locate an incident of others causing others (item).

Item can be preceded by “a” or “an”.

When singles have been run already, take the earliest single item always. Proceed in order of sequence run doing Flows No. 2 and No. 3 on each. Don’t skip any. Don’t start later in list. Interest, etc has nothing to do with it. Just do it.

The remaining R-3-R Commands are used without variation.

**Triple Dianetics Earlier Commands**

When running Flows 2 and 3 on Standard Dianetics, the following are the “earlier” commands:

F-2            “Is there an earlier incident of your causing another....(item)?”

F-3            “Is there an earlier incident of others causing others....(item)?”

*C/S Series 1*

**AUDITOR'S RIGHTS**

AUDITOR RESPONSIBILITY FOR C/Ses

An auditor who receives a Case Supervisor direction (C/S) of what to audit on a pc is NOT discharged of his responsibility as an auditor.

THE AUDITOR HAS A SERIES OF RESPONSIBILITIES THAT ARE PART OF EVERY C/S HE GETS TO AUDIT.

ACCEPTING THE PC

No auditor is required to accept a specific pc just because the pc is assigned to him.

If an auditor does not believe he can help that particular pc or if he dislikes auditing that particular pc the auditor has a right to refuse to audit that pc.

The auditor must state why.

The Case Supervisor, Director of Processing or Director of Review, nor any of their seniors, may not discipline the auditor for refusing to audit a particular pc.

An auditor who refuses to audit his quota of hours or sessions is of course subject to action.

Thus refusing to audit a particular pc, so long as one is not refusing to audit other pc's, is not actionable.

"I do not wish to audit this pc because.....I am willing to audit other pcs", is the legal auditor statement in the matter.

Some pcs get a bad name with some auditors, some don't appreciate the auditing, some conflict with a particular auditor's own personality. There are such instances. It does not mean certain pcs cannot be helped by others.

It is also true that an auditor who dislikes a pc may not do a good job so the rule also has a practical side to it.

One auditor disliked young men and did a bad job on them. Another disliked old ladies and chopped them up in session. One pc had messed up several Scientologists and couldn't find anyone to audit him at all.

We are not auditing people to make amends to the world.

Thus an auditor has a right to reject or accept the pcs he is given.

ACCEPTING A C/S

When the auditor gets a C/S to do on a case and if he thinks it is not the correct thing to do he has the right to reject the C/S for that pc and require another one he can agree to.

The auditor does *not* have the right to start doing a C/S and change it during the session except as noted below.

ENDING THE SESSION

When the C/S he has is proving unworkable *during* the session, the auditor has a right to end the session and send the folder to the C/S.

Ending the session is totally up to the auditor.

If the auditor just doesn't complete an action that was producing TA and could be completed it is of course a flunk. Such a case is just not running a basic engram the one more time through that would bring the TA down and give a proper end phenomena. This and similar actions would be an auditor error.

The judgement here is whether or not the auditor's action is justified in ending the session.

Even though he may have made an error, the auditor cannot be blamed for the *ending* off of the session as that is totally up to him. He can be given a flunk for the error.

#### INABILITY TO FLY RUDS

If an auditor cannot get a rud to F/N, cannot get any rud to F/N, he is justified in starting a Green Form.

The auditor solution to no F/N on ruds is to do a GF whether the C/S said to or not.

This is an expected action.

It is understood the auditor would use Suppress and False in trying to fly ruds.

#### UNREADING ITEMS

When an item the auditor has been told to run doesn't read on the meter, even when the auditor puts in Suppress and Invalidate on it, the auditor MUST NOT do anything with the item no matter what the C/S said.

It is expected he will see if it reads and use Suppress and Invalidate on it. And if it still doesn't read he will be expected NOT to run it.

#### LISTS

When an auditor whose C/S told him to list "Who or what ...." or any list question finds that the list question does not read, the auditor MUST NOT list it.

When doing a list ordered by the C/S it is assumed that the auditor will test it for read before listing and that he will NOT list an unreading question. (A read is an actual fall, not a tick or a stop.)

#### LIST TROUBLE

When an auditor has trouble doing a list and getting an item it is expected he will use a Prepared List like L4B to locate the trouble and handle it.

As it is very hard on a pc to mess up a list it is expected the auditor will handle the situation then and there with no further C/S directions.

#### HIGH TA

When the auditor sees the TA is high at session start yet the C/S says to "Fly a rud" or run a chain, the AUDITOR MUST NOT TRY TO FLY A RUD and he must not start on a chain.

Trying to bring a TA down with ARC Brks or ruds is very hard on a pc as ARC Breaks aren't the reason TAs go up.

Seeing a high TA at start the Dianetic auditor or Scn auditor up to Class II does *not* start the session but sends the folder back to the C/S and for a higher class auditor to do.

Seeing a high TA at start the Scientology auditor (Class III or above) (a) checks for exteriorization in a recent session and if so the session is ended and the C/S is asked for an "Interiorization Rundown"; (b) if the pc has had an Interiorization Rundown the auditor lists to BD F/N Item "What has been overrun?"

These actions are expected of the auditor even when not stated in the C/S.

#### RUDS GOING OUT

When the ruds go out during the session the auditor recognizes the following.

Pc Critical = W/H from auditor

PC Antagonistic = BPC in session

No TA = Problem

Tired = Failed Purpose or no sleep

Sad = ARC Break

Soaring TA = Overrun or Protest

Dope Off = By passed F/N or not enough sleep

No Interest = Out Ruds or no interest in the first place.

An auditor who isn't sure what it is but runs into trouble with the pc (except on lists which he handles at once always) is smart to end off the session quickly, write down the full observation and get it to the C/S.

The auditor who is an old hand and knows what he is looking at as per above scale (and the C/S the C/S would give) handles it promptly.

PC critical = W/H = pull the W/H.

PC antagonistic = BPC = assess proper list (such as L1 B) and handle.

No TA (or case gain) = Problem = locate the problem.

Tired = no sleep or Failed Purpose = check which it is and handle.

Sad = ARC Brk = locate and handle, Itsa earlier Itsa.

Soaring TA = O/R or Protest = find which and handle. Such an O/R is usually by rehab.

Dope off = lack of sleep or BP F/N = check on sleep, or Rehab F/N.

No interest = no interest in first place or out ruds = check for interest or put in ruds.

List goes wrong = BPC = handle or do L4A or any L4 at once.

Ruds won't fly = some other error = assess GF and handle.

The auditor has no business trying to do the C/S given when it collides with and isn't designed to handle any of the above.

If the previous session disclosed such an error and this session C/S was designed to handle and doesn't, the auditor should end off and the next C/S should be "2 way comm for data".

#### CASE NOT HANDLED

When the auditor or the Examiner collides with a pc who is asserting his case has not been handled, there should not be a new set of actions based on little data but the auditor should end off and the C/S should order a "2 way comm on what hasn't been handled".

The auditor should not at once take this up as part of any other C/S.

In other words an auditor doesn't change the C/S to a 2 way comm on something not called for by C/S.

#### MAJOR ACTIONS

An auditor should *never* begin a major action on a case that is not "set up" for it.

As this can occur during a session it is vital to understand the rule and follow it. Otherwise a case can be bogged right down and will be hard to salvage as now a new action to repair has been added to an unrepaired action. Now, if the auditor starts a major action on a case not "set up" we get 2 things to repair where we only had 1 as the major action won't work either.

*Repair* = patching up past auditing or recent life errors. This is done by prepared lists or completing the chain or correcting lists or even 2 way comm or prepchecks on auditors, sessions, etc.

*Rudiments* = setting the case up for the session action. This includes ARC Brks, PTPs, W/Hs, GF or O/R listing or any prepared list (such as L1B, etc).

*Set up* = getting an F/N showing and VGIs before starting any major action. It means just that—an F/N and VGIs before starting *any* major action. Such may require a repair action and rudiments as well.

*Major Action* = any—but any—action designed to change a case or general considerations or handle continual illness or improve ability. This means a *Process* or even a series of processes like 3 flows. It doesn't mean a grade. It is any process the case hasn't had.

*Grade* = a series of processes culminating in an exact ability attained, examined and attested to by the pc.

*Program* = any series of actions designed by a C/S to bring about definite results in a pc. A program usually includes several sessions.

The vast bulk of auditing errors come about because C/Ses and auditors seek to use a Major Action to repair a case.

It is a responsibility of an auditor to reject a C/S which seeks to use one or more major actions to repair a case that isn't running well.

The auditor must understand this completely. He can be made to accept a wrong C/S for the pc and even more importantly can in his own session make the error and mess up the case.

Example: Pc has not been running well (no real TA or had a grumpy Exam report). Auditor sees C/S has ordered a major action, not a repair by prepared lists, ruds, etc. The auditor must reject the C/S as he will be made to fail in session by it.

Example: Auditor gets a C/S, "(1) Fly a rud; (2) Assess LX3; (3) Run 3 way recall, 3 way secondaries, 3 way engrams on all // X items." The auditor can't get a rud to fly. Does the LX3. In other words he flunks by failing to SET UP the case. It could also go this way. Auditor can't get a rud to fly, does a GF, gets no F/N. He MUST NOT begin a major action but MUST end off right there.

It is fatal to begin any new process on the case designed to change the case if the case is not F/N VGIs.

The pc who starts processing for the first time and is surely not F/N VGIs must be *set up* by repair actions! Simple rudiments, Life ruds, O/R list on life, even assessing prepared lists on life, these are repair actions. The pc *will* sooner or later begin to fly. Now at session start you put in a rud, get F/N VGIs and CAN start major actions.

So this auditor has a responsibility not to be led up a garden path by a C/S which orders a major action on a pc who isn't repaired or by not being able in session to get an F/N VGIs by repair.

The *only* exceptions are a touch assist or life ruds or the Dianetic assist all on a temporarily sick pc. But that's repair isn't it?

#### PROGRAM VIOLATIONS

When an auditor receives a C/S and sees that it violates the pc's program he should reject it.

The pc, let us say, is supposed to finish his Dianetic Triples but is suddenly being given a Group Engram Intensive. That violates the program and also the grade.

If the pc is running badly, a repair should be ordered. If not, the program should be completed.

Example: An effort is being made to get the pc to go backtrack. This is a program containing several major actions which probably consists of several sessions. Before this program is complete and before the pc has gone backtrack, the C/S orders "(1) Fly a rud, (2) 3 S & Ds". The auditor should recognize in 3 S & Ds a major action being run into the middle of a program and reject it. The correct action is of course the next backtrack process.

#### GRADE VIOLATIONS

A pc who is on a grade and hasn't attained it yet must not be given major actions not part of that grade.

Example: Pc is on Grade I. C/S orders a list having to do with drinking. It is not a process on that Grade. It could be done after Grade I is attained and before Grade II is begun. The C/S is incorrect and should not be accepted.

## ABILITY ATTAINED

Now and then before the full major action is complete or before all the grade processes are run, the pc will attain the ability of the grade or the end phenomena of the action.

This is particularly true of valence shifters or Interiorization Rundowns and can happen in grades.

The auditor should recognize it and, with the F/N VGI's always present at such moments, end off.

I know of one case who had a huge cog about Interiorization on Flow 1 Engrams and was pushed by both C/S and auditor to do Flows 2 and 3 who bogged so badly that it took a long while—weeks—to straighten the case out.

The ability itself gets invalidated by pushing on.

On the other hand this should never be taken as an excuse. "I think he clogged to himself so we ended off." It must be a real "What do you know!" sort of out-loud cog with a *big* F/N and VGI's and directly on the subject to end off a major action or a program or a grade before its actions are all audited.

## REVIEWING REVIEWS

An auditor who gets a C/S or an order to repair a case that is running well should reject doing the action.

I have seen a case ordered to repair who had Ext Full Perception Doing Great. The repair bogged the case. The case then got running well again but a second C/S ordered a new repair which of course bogged it. Then major actions were done. The case was again repaired and rehabbed and became ok. Three times the auditor should have said NO.

## "WHAT HE DID WRONG"

An auditor has a right to know what he did wrong in the session that went wrong.

Most often a sour session occurs only when the rules and data in this HCO B have been violated.

But an auditor's TRs can go out or his listing and nulling is in error.

After a session that went wrong somebody else (not the auditor) should ask the pc what the auditor did. This sometimes spots a false auditing report. But it also sometimes is a false report by the pc.

In any event, the auditor has a right to know. Then he can either correct his auditing or his know-how or he can advise the C/S the pc's report is untrue and better repair can be done on the pc.

Savage action against an auditor is almost never called for. He was trying to help. Some people are hard to help.

These are the rights of the auditor with relation to a C/S. They are all technical rights based on sound principles.

An auditor should know them and use them.

If an auditor stands on these rights and gets beaten down he should put all the facts before his nearest OTL or SO ship as something would be very wrong somewhere.

Auditing is a happy business—when it is done right.

## UNREADING QUESTIONS AND ITEMS

(With particular reference to doing  
a Group Engram Intensive)

Never list a listing question that doesn't read.

Never prepcheck an item that doesn't read.

These rules hold good for all lists, all items, even DIANETICS.

A "tick" or a "stop" is not a read. Reads are small falls or falls or long falls or long fall blowdown (of TA).

A preclear's case can be gotten into serious trouble by listing a list that doesn't read or prepchecking or running an item that doesn't read.

On a list, this is the sort of thing that happens:

The List is "Who or what would fly kites?" The C/S has said to "List this to a BD F/N Item". So the auditor *does* list it without checking the read at all. The list can go on 99 pages with the pc protesting, getting upset. This is called a "Dead horse list" because it gave no item. The reason it didn't was that the list question itself didn't read. One does an L4 on the pc to correct the situation and gets "Unnecessary action".

On a list that is getting no item you don't *extend*. You correctly use L4 or any subsequent issue of it. If you extend a "dead horse list" you just make things worse. Use an L4 and it will set it right.

This weird thing can also happen. C/S says to list "Who or what would kill buffaloes?" The auditor does, gets a BD F/N Item "A Hunter". The C/S *also* says to list as a second action "Who or what would feel tough?" The auditor fails to test the Question for read and lists it. Had he tested it, the list would not have read. But the list comes up with an item, "A mean hunter". It has stirred up charge from the first question and the item "A mean hunter" is a *wrong* item as it is a misworded variation of the first list's item! Now we have an unnecessary action *and* a wrong item. We do an L4 and the pc is still upset as maybe only one or the other of the *two* errors read.

---

In a Dianetic "list" one is not doing a listing action. One is only trying to find a somatic or sensation, etc that will run. The item must read well. Or it won't produce a chain to run. In actual fact the Dn list Q does usually read but one doesn't bother to test it.

But an item that doesn't read will produce no chain, no basic and the pc will jump around the track trying but just jamming up his bank.

The moral of this story is:

**ALWAYS TEST A LISTING QUESTION BEFORE LETTING THE PC LIST.**

ALWAYS MARK THE READ IT GAVE (sF, F, LF, LFBD) ON THE WORKSHEET.

ALWAYS TEST AN ITEM FOR READ BEFORE PREPCHECKING OR RUNNING RECALL OR ENGRAMS.

ALWAYS MARK THE READ AN ITEM GAVE (sF, F, LF, LFBD) ON THE WORKSHEET.

### CHARGE

The whole subject of “charge” is based on this. “Charge” is the electrical impulse on the case that activates the meter.

“Charge” shows not only that an area has something in it. It also shows that the pc has possible *reality* on it.

A pc can have a broken leg, yet it might not read on a meter. It would be *charged* but below the pc’s reality. So it won’t read.

### THINGS THAT DON’T READ WON’T RUN.

The Case Supervisor always counts on the AUDITOR to test Questions and Items for read before running them.

The auditor, when a Question or Item doesn’t read, can and should always put in “Suppress” and “Invalidate”. “On this (Question) (Item), has anything been Suppressed?” “On this (Question) (Item), has anything been Invalidated?” If either one read, the question or item will also read. The Case Supervisor also counts on the AUDITOR to use Suppress and Invalidate on a Question or Item. If after this there is still no read on the Question or Item, that’s it. Don’t use it, don’t list it. Go to the next action on the C/S or end off.

**CORRECTION LISTS, USE OF**

The various lists designed to find by-passed charge and *repair* a faulty auditing action or life situation should be used heavily and thoroughly.

There are many such lists—Green Form, L1B, L4, etc. They are available in HCO B form and are themselves corrected and re-issued from time to time. They can be found in HCO B 5 July AD13 and others.

There are FOUR WAYS TO USE these prepared lists.

1. The auditor starts at the top and takes up each read until he gets one to F/N. In this case the auditor does not do "Itsa earlier Itsa". He just cleans each read.
2. The auditor starts from the top and on each read cleans it and does Itsa earlier Itsa to F/N or to a clean no-read and goes on.
3. The auditor assesses the list down until he gets a heavy read and cleans that, using Itsa earlier Itsa. Then he can go on to the next heavy read, cleans that. Etc to F/N. In this case he can get several F/Ns on the same list.
4. The whole list is rapidly assessed over and over until one item stays in and that is given to the pc.

UPSET PC

When a pc is very upset and misemotional the action in 4 above is the only one to use as it is the safest. On a very upset or antagonistic pc don't engage in any chatter, just grab a list and assess it, and indicate the By-Passed Charge. The results are usually magical.

REPAIR

Repairing a case fully, as done in Qual or in an HGC, where the person has led an out-rud life, Method 3 above is the one to use. Various and assorted lists can be employed.

SETTING UP

The best way to set up a case for auditing a major action is to Repair it. This can be necessary before the person is ever audited at all on any major action such as Dianetics or Grades.

Such an action can go on and on and should. The action is to bleed the list of all possible use, using 3.

This is a new discovery I have made.

AUDITING REPAIR

Auditing repair usually uses Methods 1 or (for pcs upset from lists) 4.

ERROR IN USING LISTS

The major error in using prepared lists is not to really get full use out of the list.

In using lists don't be in a great hurry or do a superficial job.

The list is for the *pc*, not a statistic.

C/Ses  
Tech—Qual  
AUDITORS  
C/S Checksheet

**INTERIORIZATION INTENSIVE**

**2 WAY COMM**

The Interiorization Rundown (HCO B of 22 March 1970, “Exteriorization and High TA”) is ALWAYS followed in the next session with “2 Way Comm on Interiorization-Exteriorization”.

If the Interiorization auditing has to be repaired, that is done first of course.

BUT AN INTERIORIZATION RUNDOWN IS NEVER COMPLETE UNTIL AN ADDITIONAL LATER SESSION IS GIVEN ON 2 WAY COMM ON INTERIOR EXTERIOR.

A C/S in repairing cases should always look to see if a pc

1. Has exteriorized at some time during auditing.
2. If so the only C/S that can now be done is the Interiorization Rundown.
3. If an Int Rundown has been given, then the C/S must check to see if a later session was given on “2 Way Comm Int-Ext”.
4. If this 2 way comm was omitted, or not in a separate session, then “2 Way Comm on Int-Ext” must be ordered even if there have been several intervening sessions.

**COG**

It is *usually* the case that the pc did not fully cognite when he had the Int Rundown. His TA may stay high after an Int session. O/R is of little use to get it down. What’s missing is the 2 way comm session. In it the pc usually cognites and things then go right.

The current C/S and auditor error is trying to do everything briefly and all at once. Ordering an Int Rundown and 2 way comm on it in the same session would be part of such an erroneous trend.

The 2 way comm must be *another* session preferably on another later day.

It is a flagrant C/S error to omit “2 Way Comm Int-Ext” after an Interiorization Rundown session.

The signal to order an Int Rundown is pc went Ext in auditing or has been found to have gone exterior. Auditing will not run well when the pc is audited past or after exteriorizing.

An Int Rundown must now be ordered.

If unsuccessful it must be repaired.

Successful or repaired, an Int Rundown must be followed by the 2 way comm session.

Two way comm must be done with exact TRs. The auditor must not Q and A. He must not evaluate (tell the pc what it's all about).

2 way comm is a precision process. The pc is kept talking, not by giving him commands. He is kept on the subject of Int-Ext (or the 2 way comm subject), not encouraged to leap about by Q and A.

You cannot consider an Interiorization Rundown complete unless followed by 2 way comm.

If the case hasn't had it following his Int Rundown he must be ordered to it.

### FLOATING NEEDLES

The HCO B 29 Jan AD 20 which amends a series of earlier HCO Bs and introduces the idea that you ask "Did that Incident erase" (which is not asked now) IS CANCELLED.

The correct End Phenomena of Dianetics is F/N + Cognition + VGIs.

This HCO B also introduced enforcing an F/N by calling off the item.

The actual fact is that you should not cut into the pc's end phenomena with premature questions or F/N indications. The pc is introverted and such actions by the auditor extrovert his attention and annoy the pc and spoil the correct End Phenomena which is F/N + Cog + VGIs.

Actions by the auditor such as "Your needle is floating" "Did it Erase", etc chop the pc before full End Phenomena is attained.

When End Phenomena is fully attained on a Dianetic chain the auditor need only go on to the next flow or end the session.

**TRIPLE GRADES**

The HCO B 3 Feb 69 which stated they were not taught on Dn Course and must be audited by a Class V Auditor is CANCELLED.

**SCIENTOLOGY TRIPLES**

Scientology Triple grade for a grade is used, with the havingness process as the last process of each level.

Lower Scn processes for that grade are run first. Any of these that can be run on three flows are also run triple.

A triple flow for a grade process may be audited by any auditor of the class of that grade. In other words a Class 0 auditor can run the major triple for Grade Zero as the last process run for Grade 0. He may also run other processes on three flows if they apply to Grade 0 or below.

**DIANETIC TRIPLES**

Any trained Dianetic Auditor should run triples.

Single Dianetics is only for assists and new student auditors.

Any other Dianetics run should be run in triple flow.

**CONFLICT**

Any other technical or tape lecture advices or rumours of such other orders are cancelled by this HCO B.

### LOW TA HANDLING

A person whose TA is low is in a state of overwhelm.

Poor TRs or rough auditing easily drive the TA down.

A TA can go low *during* a run like on engrams, and can come back up when actual erasure occurs.

Usually a person whose TA goes below 2.0 when run on incidents too steep for him will get low TA.

A low TA is of course any TA below 2.0.

An occasional cause of this is as simple as the meter not being trimmed.

Sweaty hands, improper electrodes, and sometimes a faulty meter also cause a "low TA" to appear.

Heavy processes like LX 1-2-3 are sometimes an overwhelm.

An invalidative look on an Examiner's face can drive a TA down a bit. Cold cans can send it UP high.

Lack of rest or time of the day gives some cases a low or high TA. At 2:00 a.m. TAs often are *very* high, for instance.

Persons with low TAs tend to be somewhat inactive in life and non-causative.

When audited with poor TRs or on processes too steep some persons' TAs go low (below 2.0).

An F/N is NEVER an F/N when above 3.0 or below 2.0.

Life repairs and auditing repairs, light processes and no goof auditing are the proper actions for low TA cases.

Auditors whose pcs' TAs go low should look to the flawlessness of their auditing, the ease of their TRs and refuse any heavy overwhelm type C/Ses for such pcs.

Good Two-Way Comm on troubling subjects, use of prepared lists on life, mild close to objective processes, no forcing over protests, never running processes that don't read first, getting the pc out of being effect and toward being cause, extroverting the pc's attention with objective processes all work well on low TA cases.

The actual technical reason for low TAs is found in higher levels and does not concern and would be of no use to lower level pcs.

Take it easy. Don't goof as auditor or C/S are the keynotes of low TA cases.

My opinion on this is that people worry too much about low TAs.

On Flag where auditing is done like silk we haven't seen any low TAs for ages.

*C/S Series 2*

(C/S Series 1 is "Auditor's Rights",  
HCO B 24 May 1970, not so marked.)

**PROGRAMMING OF CASES**

Every action taken on a Case by a CASE SUPERVISOR (or an auditor doing his own C/S actions) should be part of a definite outlined PROGRAM for that case.

**PROGRAM Definition**—A program is defined as the sequence of actions session by session to be undertaken on a case by the C/S in his directions to the auditor or auditors auditing the case.

The master program for every case is given on the Classification and Gradation Chart issued from time to time. The earliest of these Charts was 1965 followed by 1st December 1966 followed by 1st January 1968 followed by 1st December 1969. The reissues of the Chart are done to improve the communication of the data on the Chart. The program factor has not much changed since its earliest issue. Tapes about this Chart were made for the SHSBC at its first issue and of course remain valid. The processes called for on the Chart are all part of the SHSBC or for upper levels part of the SH and AO Confidential materials. From time to time they are reissued but they remain standard and have been so since the first issue of the Chart.

The Chart and its materials have now and again been neglected or disregarded and **THE NEGLECT HAS RESULTED IN FIELD FLAPS AND DOWN STATS.**

Omitting this gradient of processes not only stalls cases but results in a case manifesting out-grade phenomena.

A pc must attain the full ability noted on the Chart before going up to the next level of the Chart.

Telling the pc he has made it is of course evaluation.

The outnesses which have occurred surrounding this Chart are hard to believe. They consist of total abandonment of the Chart, degrading and losing all its lower grade processes, feeding a pc at Dianetic level data at Class VI and telling him, who has not made Dianetics yet, he is now Clear, cutting down all processes from the Chart bottom up to IV to be able to do them in 2 1/2 minutes, neglecting all levels up to OT V and then trying to put in a few lower grades and sending on to OT VI, having the pc after one trivial session attest all abilities at once and many other errors.

This is crazy driving. If a bus were driven along a road this way it would soon be wrecked and back where it started but in an ash heap.

Genius in C/Sing is normally required only when some former driver wrecked the thing instead of driving it right in the first place.

To Case Supervise one has to accept the following facts:

1. Dianetics and Scientology work.
2. The subjects are serious subjects not experimental toys.
3. The basics and fundamentals are stated early in the period of development and have not changed.

4. The “newest and latest” is usually a recovery of basics and better statements of them.
5. The purpose of the subject has not altered and continues to be the attainment of ability and freedom for the individual.
6. That things which were true early in the subjects are still true.
7. That the mind responds on a gradient of improvement not suddenly like a bomb explosion.
8. That the Classification and Gradation Chart and *all* its processes and steps IS the basic program of *any* case.
9. That all other programs are efforts to get the pc or pre-OT back on the basic program.
10. That there is no hidden data line and that the materials and procedures are refined mainly to facilitate use and communication of them.
11. That auditing is for the pc, not the org or the auditor.
12. That major processes are done to improve the case.
13. That repair is undertaken to eradicate errors made in auditing or the environment which impede the use of major processes.
14. That a case has to be programmed by the C/S to get it advancing as it should have been in the first place on the Classification and Gradation Chart.
15. That a C/S is not being called upon to develop a new Chart for the case but only to get the case back on the basic Chart and get it done.

### 3 PROGRAMS

There are then 3 types of Programs:

1. THE program laid out in the Classification and Gradation Chart. (Called The Basic Program.)
2. Repair Programs to eradicate case mishandling by current life or auditing errors. (Called a Set-Up Program.)
3. Major actions to be undertaken to get the case back on the Class Chart from wherever he has erroneously gotten to on it. (Called a Return Program.)

It has been a very common C/S action to disperse away from a program laid out. This has been happening ever since the first issue of the Class Chart and has been a principal source of trouble for C/Ses.

This happens in several ways:

1. Not knowing the importance of the Class Chart.
2. Not knowing basics.
3. Falling for SP propaganda that “we don’t use that now”, “the material is old”, “it’s only background data”, etc, that deteriorates what one *does* know and could use.
4. Failure of auditors to give good sessions and do the Usual required in a session.
5. Abandonment of the C/S’s own Repair or Return Program—usually because of false auditor reports or operating on insufficient data from the pc.

The correct way to go about all this is to:

- A. Repair the case thoroughly with minor actions like GFs, prepared lists, ruds, two-way comm.
- B. Acquire adequate data on the pc.
- C. Complete any C/S Return Program begun.
- D. Get the pc back on the Class Chart without any processes of the grade skipped.
- E. Run the case on the Class Chart.
- F. Repair any departures or errors made in life or auditing.
- G. Get the pc back on the Class Chart.

### DISPERSAL

Not following any program is a complete exercise in non-sequitur (means one step does not follow the last but is different and unrelated).

In giving a pc process after process that are not related to each other and follow no Repair Program or Return Program is non-sequitur in the extreme.

If processes were remarks one would get a sequence of processes given the pc sounding like this. "The submarine just went by so we will order a hundred tons of bread. There wasn't any beer so birds are seldom seen. The dance was very fast so we fixed the carburetor. He has very long hair so we decorated his father's tomb."

"Give pc Scn Triples then do his Dianetics then fix up his hidden standard," would be a series of crazy non-sequitur C/Ses. Nothing is connected to or proceeds from anything. That would be a dispersed program for sure.

It actually happens horribly enough. Study a Class Chart and then look through some old folders. At once, the sequence of processes ordered sounds like "The submarine just went by so order a hundred tons of bread."

Such C/Sing has no cause and effect in it. A person totally ignorant of basic cause and effect gets "Pc nattery. Run Dianetics." "Pc's case not advancing. Do Grade 0." The cause of the pc condition is not understood. A nattery pc has withholds. A case not advancing has problems. That's real actual basic tech (see Auditor's Rights HCO B for the table). This data is over 15 years old at this writing, is part of proper Academy courses and the SHSBC and is even in Class VIII materials. The reasons for the pc's behavior or trouble are not mysterious reasons never revealed. They are all very well given in course materials.

Here is an actual case, a folder I examined of a pc who is now in trouble and needing a Repair and Return Program.

Pc was an accident prone (person who is apparently dedicated to having accidents). Very low aptitude score (about 30). Had been skipped over almost the entire Class Chart and given Power.

To handle accident proneness was given CCHs. This cured it.

Had Exteriorized so was given Interiorization Rundown without a 2-way comm session.

Pc subsequently developed bad somatics. (Dianetics was never flattened or completed.)

A quarter of an inch of Examiner's reports wherein the pc was asking for help or medicine to get rid of somatics was then put one by one into the folder.

Despite this the "C/S" saw "Va" on the pc's folder and ordered R6EW.

More Examiner's calls collected.

The pc ran one item, making one mark on a worksheet and attested R6EW.

More Examiner's reports collected, pc reporting self ill.

"C/S" seeing R6EW attested ordered pc to Clearing Course.

Pc did one brief session attested Clear.

More Examiner's reports into folder, pc in pain and now in Ethics trouble.

"C/S" ordered pc to OT I.

Pc spent 35 minutes on OT 1 in terror of it, hastily attested, had 5 accidents in 3 days.

Folder sent to me as a "baffling case".

So the correct actions now have to be taken.

1. Repair pc with every list known to Man or Beast to get off BPC collected in these overwhelming levels.
2. Repair pc in errors in current life.
3. Return Program the pc by running simple things, 2-way comm, to give pc some wins in actual case gain by maybe handling by 2-way comm minor this life or childhood upsets with family, maybe putting in ruds on some early subject that turns up.
4. Put pc back on the Class Chart TO COMPLETE THE INCOMPLETE GRADE (Dianetics) to its full end phenomena as per Class Chart.
5. Bring the pc on up the Class Chart using all processes for each grade and honestly attesting each grade in turn.

It's all a shame because the pc had a lose on *status*. She wanted to be Clear and OT, was actually on it and never walked up the stairs to get to it.

#### PROGRAM NECESSITY

One can see from all this the NECESSITY of working by program on a case.

Even when one starts an honest program for the case one can get thrown off of it and begin to do something else.

If the pc goes exterior, of course, one has to handle by Interiorization Rundown before the case can be audited at all. But that's no reason to then skip all the grades! A pc can go exterior at any point. Thus it must be handled when it occurs. But that does not mean anything happened to one's program or the Class Chart. Exterior or Interior, a pc unflat on Dianetics (not attained the ability marked on the Class Chart) is unflat on Dianetics!

And a pc who is unflat on Dianetics will have out lower grades.

Jumping processes on the Class Chart set the pc up to fall on his head later. An "OT VI with problems" is really just an unflat Grade I. And until Grade I is flattened to permanent Ability Attained on the Class Chart, he remains an unflat Grade I.

A C/S who gets wound up in this sort of skipped everything and made nothing, of course has an awful mess on his hands. He can feel as lost as Hansel or Gretel. But waiting to get covered up by leaves is for the birds.

If one finds the pc off the road, the thing to do is return the pc to the road at the point he didn't walk it AND THERE ARE NO SHORTCUTS FOR THE MIND.

The utter despair and insane barbarism psychiatry descended into was patient lost, psychiatrist lost, patient crazy, psychiatrist into insane sadism.

So maybe the first lesson a C/S really has to learn is:

## THERE IS A KNOWN ROAD OUT.

There is no shortcut, it has to be walked every inch of it.

And therefore the greatest enemy of the C/S is the SP who says “that’s all old” “we don’t use that now” “that’s just background data” and thereby obscures the actual road.

And another enemy is the pc who screamingly demands to be put up to Clear at once so he won’t have this awful headache!

## STEADY ON

Thus the measures a C/S takes to hold a steady course will profit him greatly in the end with good solid gains for the pc.

As the pc should no longer be a total humanoid by Class IV the lower grade gains are the most important of all.

A C/S who puts a Class Chart into every folder he handles is doing a wise thing. Even if it’s big, clumsy, hard to handle, it is at least thorough.

If on it he marks in red things the pc has gotten to falsely and if in green things the pc made from the bottom walking an honest road, he knows where he is at! Seeing the whole training cycle half of the Chart continue blank means that much more ignorance and trouble for the pc in making his gains stably.

If the C/S put his Repair Program on a *Red* sheet in the folder and dated it out session by session to be audited until it was DONE and all flubs made in doing it also marked in and repaired, the C/S wouldn’t lose his place in the book. For a red sheet stands out in amongst other folder papers. A red sheet with a “folder error summary” on one side of it and the C/S’s Repair Pgm on the other keeps the pc’s progress located. When that Red sheet is done it should be signed by the C/S as DONE which retires all errors to that point.

A bright *blue* sheet giving the C/S RETURN PGM properly dated also gives one a chance to not get steered off. A new Red Repair Pgm sheet fixing up errors occurring in doing the Blue sheet can be pushed into the folder but the Blue sheet can be resumed again.

The Blue sheet completed should find the pc back on the Class Chart.

A list of processes run tallied up by the auditor each session keeps the C/S from repeating a process and gives him the Dn items used singly to be done triple.

While all this Admin may seem time consuming, lack of it mounts up into valuable AUDITOR TIME being thrown away.

-----

C/Sing is a road. It has milestones. When the pc didn’t pass one honestly he got lost.

There’s no reason for pc, auditor and C/S to *all* get lost.

The C/S has an exact road to hold to, return to and repairs to get done so the pc can get moving on the Return Pgm and the Class Chart which IS the road.

It took too many trillions to find this road for it to be neglected. For if the C/S neglects it people won’t arrive anywhere but get lost as well.

The right idea is the road.

*C/S Series 3*

**SESSION PRIORITIES  
REPAIR PGMS  
AND THEIR PRIORITY**

When a pc has had an incorrectly run session, one that did not wind up with F/N Cog VGIs, it is often harmful to delay the repair session.

Most cases of pcs becoming ill or having accidents stem from

- A. Major Errors in Programming the case.
- B. Delay in Repairing a goofed session.

There have been several examples recently of pcs ending session with an unflat process after which the repair session was delayed for several days or even weeks and the pc came down with a cold or had some minor accident or got in Ethics trouble.

Thus Repair has priority.

**PROGRAM ERRORS**

Under A. a major error in programming lays the case open to having goofed sessions and exposes the auditor to some risk of making errors. The reason for this is that the pc gets overwhelmed or bogged simply by not coming up through all the processes of each level on the Class Chart.

Let us say the pc is trying to make it on R6EW Solo Study but keeps having *Problems* with it and can't get on with it.

The uninformed C/S orders a Student Rescue Intensive. This is all right as far as it goes. But a more searching look into the records is likely to find that this pc had exactly 10 minutes on the whole of Grade I!

The Out-Program is far more likely to play havoc with this pc than just problems. He is possibly in doubt as to case gains and his reality is poor and yet he is being exposed to the highly restimulative materials of an upper level to which he has never climbed.

A direct effort now to put in problems Grade I also puts an auditor at risk.

Instead of merely being able to run problems as he would have been able to earlier, the pc is in some sort of overwhelm and is nervous or scared or believes *he is* at fault some way. He will look everywhere but in the right direction.

The answer to an incorrectly programmed case is, of course, a repair program and the sooner the better.

Such repair programs must be very light. Prepared lists to find charge, 2 way comm on various subjects, take a walk. And such a repair program **MUST NOT**

- (a) Let the pc dive into rough heavy charge, or
- (b) Be overdone to total boredom.

**SELF AUDITING**

Some pcs "self audit", which is different than Solo auditing since it has no meter or session and is just wandering about the bank (some overwhelmed pcs self audit in Solo wandering all over the place).

This is a symptom of session or study or life overwhelm.

It requires a Repair Program.

#### EP OF REPAIR

The End Phenomena of a Repair Program is the pc feeling great and feeling he can get Case Gain.

A good, clever Repair Program produces what badly programmed cases would consider total recovery.

It is a good idea to have the pc attest to

“I have had definite gains from the recent sessions and feel great.” Or with a hearty “Yes” to “Does Scientology really work for you.”

Oh, you say, how could *that* much gain come from just repair?

Well, Repair is almost always being done on a pc who was overwhelmed by life or auditing in the first place.

Life we know has a way of overwhelming people.

When a person is overwhelmed by life, an auditing error is more likely to occur.

When Incorrect Programming occurs, then any auditing on it can add up to more overwhelm which adds up to more errors.

#### CONSISTENT COMPLAINT

The pc whose Examiner forms routinely have a sour note in them should not be continued on the Class Chart or any Return Program.

He is a Repair pc and nothing else.

If you get the idea that any lower level can produce large changes in a person you will see that lower level processes are being mis-programmed if they are producing only the gains of Repair actions.

The sign of mis-programming is most often seen in Examiner reports where the pc's comments or demands are “for more auditing” or “Got to have a session” or “wasn't really handled” or sour comments or cracks.

When you examine some folders you will see some pc has more than his share of this.

That's a sign to LIGHTLY DO IT.

The wrong way to go is plunge!

I have seen a C/S order 2 major actions in one session after a bad session on a pc in a DESPERATE effort to reach the case!

The exact reverse is required.

*Repair* the case by:

- I. Patch the session goof.
- II. Use prepared lists for locating session charge in past sessions.
- III. Use prepared lists and two way comm on items found.
- IV. Get ruds in on periods of the pc's life.
- V. Get ruds in on parts of the pc's body that are ailing.

This is not a model Repair Program but only a sample of one. It isn't a model because the pcs have different things wrong with them.

But you could blindly do all of the above and still wind up with case gain and a win for a staggering pc.

*Then you* would do a Return Pgm to get the pc back on the Class Chart. But not until then.

I have seen a pc stagger along for years getting auditing (of a sort) while still retaining a set characteristic or somatic who when handled with *very* mild processes had a case gain and then returned to the Class Chart HAVE A COMPLETE CHANGE OF THE CHARACTERISTIC.

#### EFFECT SCALE

A C/S can get into the lower end of the effect scale and feel that desperate that he begins to throw away every major process he can order on the pc, even 2 or 3 per session! But the direction of win was LIGHTER not heavier action.

Sort of like “this sparrow keeps getting bowled out with rocks. Let’s try real artillery on him!”

If one is trying to make a better sparrow he should lay off the rocks and lighten it up, not step up the barrage! Some cotton tufts might do wonders! Might even make the sparrow reach!

The basic trouble with ALL past efforts at “psychotherapy” and “religious uplift” and “self betterment” and healing was:

The more desperate the situation the more desperate was the remedy used.

The right answer is:

THE WORSE THE CONDITION THE LIGHTER THE REMEDY REQUIRED.

Dealing with psychotics in an institution you would find that “Hello” pleasantly said would do more for cases than all the drug firms and electric shock machines and brain icepicks have ever done in all their existence.

Well if it applies to psychotics, it applies surely to people that aren’t.

Simple interest and listening can crack an awful lot of overwhelmed cases that would only bog further if not first repaired.

#### BPC

The exact BPC of the last session handled is always the first action in Repair Programming.

This is the exact BPC. An unfinished Dianetic Chain is BPC. So get it handled. The wrong list item is heavy BPC so get it handled.

And get this BPC off now! Now! Don’t wait 2 days or a week. Repair it on priority.

#### OVERWHELM

Don’t always blame the auditor. He may goof and he shouldn’t. But if his procedure and TRs were reasonably correct, how come the pc got a tangled session.

If the auditor has a usually good record and you get a goofed session, then realize the pc is a bit troublesome and was not running standardly.

Of course this doesn’t excuse student goofs or plain lousy auditing. But when the auditor does all right, then the case must be in an overwhelm of some sort.

So we have 2 variables here for C/S decision.

x1-Auditor fault?

or

x2-Pc in an overwhelm?

There is a decision here to be made by the C/S. It's resolved by folder inspection and knowledge of the auditor.

All right—Auditor usually okay. That eliminates x1. So we have a pc in overwhelm? Look over past record of pc. Runs okay. That cancels x2.

So we repair that *one* session and its goof and continue with the Return Pgm or the Class Pgm whichever the pc was on.

What if x1 showed lots of bad sessions by the auditor and x2 showed pc usually okay. Investigate auditor's auditing and send to Cramming for TRs, etc.

What if x1 Auditor okay and x2 pc has lots of trouble?

NOW we get to an overwhelmed pc.

You see how it's sorted out by the C/S?

From inspecting two things only the C/S can decide what's to be done now. If the decision isn't clear-cut get the auditor looked into and the pc asked about the auditor's actions *and* his own case. If his "case has lots of trouble" skip worrying the auditor further unless that discloses other errors on other cases.

Okay. So the pc is running badly. So he's in an overwhelm.

Inspection will reveal one or more of three things.

1. Case didn't come up the Class Chart right.
2. Case being run in a temporary Life overwhelm.
3. Former errors not repaired.

1 and 3 may both exist.

The correct C/S action is a Repair Program in any case. If 3 is true you engage in that first.

If 2 is true you use Repair actions on life as the second part of your Repair Program.

If 1 is true you will also have a Repair Program to lay out first in any event and just include it in.

Write it all up on a red sheet and follow the sheet session by session as you C/S.

You will now have handled the overwhelm if your Repair Pgm is good and fully done and not brushed off at the first sign of VGIs in the pc at Examiner.

If 1 is true you now do a Return Pgm. This of course is what processes you're going to get run to fill in the processes that haven't been run to get the Class Chart all done and the pc back up to where he was. He has run *some* after all.

## INGENUITY

The genius and bright ideas of a C/S are not exerted with major processes ever. Only the Interiorization Rundown after the pc exteriorized or when it is discovered he has and possibly a Student Rescue or a sickness assist are the exceptions to this.

One doesn't Repair with major processes! That's like "The engine wouldn't run so he hit it with a sledge hammer."

Ingenuity is required of a C/S only in the area of repair.

Locating BPC is rather standard in repair action.

But fishing up the case by 2 way comm and little prepchecks and getting in ruds on things or times require a certain flair in a C/S.

I recall one pc who was staggering on engrams, couldn't talk to people and was a general mess. The wrong action would be to run a major grade like Comm on the pc. The pc had to be handled with 2 way comm of *some* sort. Yet she couldn't talk auditing or anything else fluently enough about anything to clear anything up. I asked her what would it be awful to say and she went scarlet, hemmed and hawed and blurted out "Swearing!" So we 2 way commed about it! What a torrent! Recovered completely. Recovered so well she thought that was all there was to auditing and was immensely gratified!

Another pc had lost his job and couldn't face any part of it. I 2 way commed what his job had consisted of. He promptly went out and got another.

Sometimes it takes a lot of sessions and a lot of reading worksheets to find subjects.

BUT IF YOU CAN PERSUADE AUDITORS TO MARK EVERY FALL AND BD IN 2 WAY COMM SESSIONS you will find exactly where the pc is hung up and ordering 2 way comm on that and related things does wonders.

But all repair isn't two way comm. Touching things is a very good way to handle repairs. Cars, typewriters, airplanes, or book pictures thereof or anything or any picture of anything also works.

The "touch assist" is a little fragment of a whole array of "touch".

Cases sometimes flinch at remembering anything at all. The answer is touch things and "Reach and withdraw" is part of this and is used in repair.

TRs (all of them 0 to IX) are so good in repair action that they actually cure 50% or more drug addicts when run for weeks in groups such as on the HAS Course. It is even reported that when run on people still on drugs over periods of weeks they come *off* the drugs of their own volition. TRs are a fine unlimited repair action.

Prepared lists run on all sorts of things can repair a whole life.

"Look at me. Who am I?" is used in a Repair Session when a pc goes too wild to audit. (An exception is list errors when the only remedy is a fast L4A.)

Mimicry is actually too high for Repair.

Repair is its own subject.

The only demand in Programming it is to give priority to recent auditing errors or recent life catastrophes.

Many cases obviously have to begin processing with a Repair. Life overwhelm is the reason. And an S & D can be far too steep.

Next to skimping lower grades, Repair is too little used.

And it is needed. And the urgency is to not let things go too long unrepaired.

### **HUBBARD CONSULTANT STUDY STRESS ANALYSIS**

A competent operator of an E-Meter, which is used in stress analysis, needs very little training but needs to be highly observant in meter reading.

A student who is having trouble is placed across a table from the Hubbard Consultant. The student is given the leads to hold one in each hand and the meter balanced.

The Hubbard Consultant makes a Consultant Report. This is a form or plain sheet with the student's name at the top, the date and the course name, or a description of the material being handled.

The time and the meter reading is placed routinely at appropriate intervals on the left edge of the sheet.

The questions asked by the Hubbard Consultant are written down with the student's answers in brief.

The Hubbard Consultant is trained to ask what he is supposed to and to listen to and acknowledge what the student says. The Hubbard Consultant never comments by words or expression and makes no cracks or evaluations. He is trained to:

1. Operate the meter
2. Ask questions
3. Acknowledge
4. Take notes
5. Note down times and meter actions
6. Assess a list of prepared items for meter reads
7. To say "That is all" at the end of the period
8. To staple and file the notes in the student's folder.

#### **HUBBARD CONSULTANT STRESS ANALYSIS No. 1**

This is two way communication.

The Hubbard Consultant asks if there is anything the student is having trouble with.

The Hubbard Consultant acknowledges and continues to prompt the student to talk about it until the student seems more cheerful about it.

## HUBBARD CONSULTANT STRESS ANALYSIS No. 2

The Hubbard Consultant asks if there is anything in the course materials or other material being studied that the student disagrees with.

The student answers.

The Hubbard Consultant acknowledges and prompts until the student has resolved it.

## HUBBARD CONSULTANT STRESS ANALYSIS No. 3 (For use where the difficulty is with tape recorded material.)

The student is asked at what point of the tape he bogged down.

This tape is procured, put on a player and the earphone placed on the student.

The material is played from a point earlier than the student said.

The student is on the meter. The Hubbard Consultant has control of the tape player start-stop.

As the tape plays the Hubbard Consultant watches his meter needle. As soon as it reads (falls) the Hubbard Consultant stops the machine and asks what word or term that was.

If the student can't tell him the tape section is replayed from an even earlier point.

A needle read is watched for and the machine stopped.

The Hubbard Consultant asks for the word or term the student has just heard. The student gives it.

The Hubbard Consultant has the student look up the word—

- (a) If a non-technical word in the student's language it is looked up in a good dictionary of that language which must be available.
- (b) If it is a technical word or term in the subject, it is looked up in the glossary.
- (c) If in the glossary the student reads the term aloud and the Hubbard Consultant watches the needle. Any word that reads is looked up in the student's language dictionary as in (a) above.

## HUBBARD CONSULTANT STRESS ANALYSIS No. 4

In the case of written material, the student is not placed on a tape player but reads the material to the Hubbard Consultant who proceeds as in Hubbard Consultant Stress Analysis No. 3 (a), (b) and (c).

Students who go to sleep during study are asked if they have had enough sleep the night before. If not, they are taken off study and given manual or clerical work to do for the remainder of that day.

If the student has had enough sleep, he is given the appropriate Hubbard Consultant Stress Analysis action as above.

Students given Hubbard Consultant Stress Analysis should be cheerful and relieved at the end.

If E-Meters are not available for Stress Analysis a Hubbard Consultant can be trained to do the four actions above by watching the facial characteristic change of the student. This is more difficult than in using an E-Meter.

The meter readings when the matter is cleared up should be between 2(F) and 3(M) on the 1 to 6 dial and the needle should be "floating".

On the 1 to 6 dial the position 2 measures 5,000 ohms across the leads with the needle at set. The position 3 measures 12,500 ohms.

A floating needle is the idle uninfluenced movement of the needle on the dial without any patterns or reactions in it. It moves to the right at the same speed as it moves to the left. It is loose and free.

When the student has resolved the matter, is more cheerful about it and the floating needle is observed, the matter is not taken any further. This indication to stop must be observed so that the consultant action is not overdone. Overdoing this action could cause further difficulty.

If the needle is agitated with small jerky movements the student is upset and is not being frank with the Hubbard Consultant or has been provoked by the Hubbard Consultant. Discussion cleans this up.

If the meter is reading above 3 the stress has not been resolved.

An E-Meter measures body tension. It is useful to Management in locating points of Stress after physical tests on equipment (as in test pilots or machine operators) so that faults of design where the machine is not well adjusted to man can be accurately remedied. It also works on physical stresses resulting from the tension of concentrating particularly when the student or trainee is unable to grasp materials or handle a subject or equipment.

By the use of the E-Meter a Hubbard Consultant can isolate the exact point of a man's difficulty with a subject or equipment and clear this up. Or the exact point can be found where equipment is not well adapted to man.

Its use in study can pin-point the exact thing that has halted the flow of comprehension. Thus it can be cleared up.

*C/S Series 4*

**THE RETURN PROGRAM**

When a case has been repaired, there is always a Return Program made up by the C/S.

It is handwritten on a blue sheet of paper that is easily spotted in a folder.

When the Repair Pgm has been concluded, the case is considered to be “set up” for a Return Pgm.

The exact point where a Repair Program is changed into a Return Program is when the case has had some wins and is in far better shape than he was when he first began to be audited (which means his first ever auditing).

The point is also identifiable as the point where the person feels more outflowing and less overwhelmed if at all.

This is obviously a point of case change.

The common and incorrect practice of looking for case change as the only benefit from processing should be relegated to Repair End Phenomena.

Processing is actually measured by the gradual increase in ability. Step by step these increases in ability walk up the Class Chart and ability is the measure of progress.

The C/S who is looking for THE solution to a case, the one shattering bang of total effect on the pc, has set himself for continuous losses in C/Sing. For there is no one action that totally changes a case from bottom to top in one fell swoop. The C/S who thinks there is continually fiddles hopefully. A case has MANY things to be handled, not one.

There is no one single wrongness or out-point in a case. A case is a collection of out-points. He hurts, he can't talk, he has problems, he is ARC Broken, he has service facs, he is stuck in incidents, etc, to just mention a few such out-points.

A radio receiver that has been many times broken and is a heap of twisted parts, is not going to get repaired, much less improved by a radio repairman finding one huge error in it and correcting that. He'll have to correct a lot of minor errors in it before any major error even shows up.

The “One-shot clear” idea of the uninformed of 1950 is impossible. When a person goes onto the Clearing Course after missing the lower grades he just doesn't make it at all. He often can't even get reads.

It takes many miles of road, past many “case changes” to get up the gradient scale to top ability.

A Repair Program takes the case from where it has falsely gotten to on the Class Chart and gets off the overwhelm with light processes.

The Return Program begins when the case is no longer so overwhelmed and is getting wins from the Repair Program.

THE RETURN PROGRAM CONSISTS SIMPLY OF WRITING DOWN IN SEQUENCE EVERY NEEDFUL STEP AND PROCESS MISSED ON THE CLASS CHART BY THE CASE WHICH ARE NOW TO BE DONE.

Example:

A case has falsely gotten to R6EW Solo and isn't making it well.

The C/S writes up a light process but extensive Repair Program (first on auditing, then on life).

The case achieves the EP of repair in case changes and less overwhelm.

The C/S now examines the 2-way comm sessions and Examiner's reports to establish what levels are out. No change = Level 1. Lots of ARC Brks = Level 2.

The C/S lists all the Level 1 and Level 2 processes the pc did not get done and this is the Return Program.

When these are done and the pc has made it, the C/S has the pc honestly back at R6EW on the Class Chart and continues to follow the Class Chart.

Needful repairs also sometimes have to be done in getting the Return Pgm done. In each case a new Repair Program is done. The old Return Program looked over but probably just continued.

Example of a case at OT 1 now completely repaired:

Case has somatics = Dn Level Unflat

Makes others guilty = Level IV Unflat

Dramatizes = R6EW Unflat.

The Return Program consists of completing Dn, rehabbing comm, *all* Level IV processes, Redo R6EW, rehab Clear, return to OT 1.

That completes the Return Program.

In other words, when the case, found in trouble at a level, is fully repaired and winning, the C/S studies the current data on the case to establish the major levels that are out (each Level has an error and an ability) and then gets these into a Program which then session by session is followed.

The program which can be completed in one session will never be written as there is no such program.

A program is the consecutive layout of what has to be done in the next many sessions.

The basic program is the Class and Grade Chart.

The Return Program is the return to the false point reached by getting honestly done all the points missed on the road.

The pc who can't attest a grade ability at any point has to have:

1. A Repair Pgm.
2. A Return Pgm.

It is a truism that the grade he can't seem to make is not the grade. An earlier grade is out if the processes of any one grade, properly run, do not achieve that grade.

The earliest error is of course a failure to achieve the lowest grade there is. What is out here is that the case needed to be *started* on a Repair Pgm for life. Now, that skipped, one has to do a Repair on both auditing and life.

The Return Pgm is easy in this instance as it just puts the pc back on what he was on, the first level. But this is the *only* instance where a pc is restored by the C/S to the level he was on without an extensive Return Program.

So a Return Pgm always follows the Repair Pgm.

And a Return Program consists of putting the pc over road sections he missed on the road up.

A Return Pgm is concluded and retired when the pc is back on the grade he falsely had reached before the Repair and Return were done, and is now making that grade.

*C/S Series 5*

**REPAIR EXAMPLE**

Pc X was rushed through lower grades in 20 minutes, given Power to no result, was fed cognitions on upper level material and when run on Dianetics was found "stuck in present time". After two bogged sessions this pc, who had come from a far place, came to Flag where I took over (not very pleased).

The actual rundown outlined as a Repair Program (see C/S Series 3) was as follows on 2 8<sup>1</sup>/<sub>2</sub>" x 13" red cards to be kept in pc's folder.

PC X

REPAIR PGM

- I LAST ERROR REPAIRED 27.5.70
- II. BOGGED SESSION 6/6/70  
Repaired 11/6/70 (too long a wait but done).
- III. Two Way Comm on what did you experience in Power Processing  
Successful 1/6/70 (Revealed all Lower Grades out, Clear Cog fed him,  
unable to really run Dn.)
- IV. L4A assessed on each list run on him, one list at a time as he recalls it.
- V. Auditor Auditing Prepcheck.
- VI. Gains Prepcheck.
- VII. An assessed GF done to get each charge found off.
- VIII. 2 Way Comm How Do You Feel About Auditing Now? Completes auditing  
cycle. Repair.
- IX. 2 way comm on life before Scn. (Note all Falls and BDs.) To C/S.
- X. C/S to pick up items out of IX and Prepcheck each one that still reads when  
called off (one to be called then run, no assessment).
- XI. Two way comm on rough areas When have you had a rough time? Note all  
Falls and BDs. To C/S.
- XII. C/S to list all F or BD items. Prepcheck each one.
- XIII. 2 way comm What possessions have you had? To C/S.
- XIV. C/S to list all F—BD Items and Prepcheck.
- XV. L1B in auditing and 2 way comm on gains.
- XVI. C/S Note what period of his life pc hung up in. Auditor to put in ruds on it.

XVII. Find out what body part or area hurts. Put in Ruds on it.

(Pgm can be extended to be sure pc has had wins and is in better condition than was in before auditing and no longer overwhelmed or can be cut if this occurs before then.)

(Return Pgm begins with TRs 0-9, on up the Class Chart as needed to get his abilities and ends off with a full repair of Power, rehabbing Pr Pr 4 and 5 and running 6 to EP and checking lists. He will then be back on Class Chart properly. )

-----

This is not a Repair Pgm to be copied particularly. It is given as an extent of Repair which would then be done session by session and ticked off by the C/S as he ordered each new step.

The No. IV L4A prepared list would be wholly assessed for each specific list.

The V and VI are a whole list of things not given here, common to such a step, but containing no dynamite-type things like "SPs" or "Overwhelm" or other things like the names of major processes.

Note that everything from I to VIII are strictly auditing repairs.

IX to XVII handle life areas.

This case should have been *started* in auditing with a Life Repair Pgm such as given from IX to XVII. Had he been on drugs as a habit (or just shaky about life) TRs 0 to 9 could have begun his auditing followed by Life Repair IX to XVII.

#### NEW DEVELOPMENT

These actions of Repair before level auditing are a new development as such but 2 way comm and these actions are all from the early '60s SHSBC.

#### POSSIBLE FAULTS

Evaluation, Q and A and an inability to listen resulting in the auditor chopping comm would be the chief reasons any errors would creep into the sessions given in the Repair Program. As these might not show up in the auditing reports, if the Repair Pgm sessions did not result in gain the C/S would have the auditor's auditing checked for these points of Evaluation, Q and A and comm chop. The sessions are actually very easy to run and could be done by an Academy Class III or better by a Class VI.

#### NOTE ON VIII AUDITING

VIII Auditing presumed, when developed, that lower grades were still being delivered.

VIII Auditing and Training are fully valid. They are, as the Class infers, a high level of auditing and remain so.

The sequence of recent development has been:

VIII Auditing to Standard

Dianetic HDC-HDG auditing to Standard Dianetics

C/Sing for all levels

C/Sing below levels

C/Sing to handle the neglect of lower grades and SHSBC data which are being gotten back in rapidly.

The C/S is therefore confronted with cases without lower grades and the earliest and reissued Class Chart neglected.

The mania for Quickie Lower Grades and the acts by a few who fed upper “cognitions” and other evaluation to pcs wrecked for a while a part of the bridge and made it impassable.

Much of the current C/S work should take this into consideration. The Repair Pgm given above is not as long as it could be and certainly would be no shorter.

The IX to XVII are a brief layout of how new cases could be handled BEFORE any actual level auditing as a guarantee of real gains. This is a **whole zone of action** (pre-Level, pre-Dianetics) becoming increasingly necessary by the decline of the culture as visible in **pcs now beginning processing as different from those even up to 1962.**

These IX to XVII steps would also work on institutional cases but one should take it even easier.

I repeat, this Repair Pgm I to XVII is an EXAMPLE and its numbers are not useful as different Repair Pgms would be designed by the C/S for the pc. Many other things could be done, none of them heavy or desperate.

The C/S should caution any Registrar NOT to sell with the name “Repair Pgm”. This is entirely technical and not PR or Sales. It is just *Auditing* as far as the Registrar is concerned.

Had Pc X been processed on all earlier grades in a scramble before 1962, one would list and then rehab every process run as part of the *Return* Pgm. Such a step would be done as the *last* step however of the Return Program as a prelude to straightening out the highest grade falsely attained before Repair. The rehab would not be a substitute for running all the processes of the levels not previously run. Rehab is no part of Repair.

## TECH ACTION

We have fallen into a belief that any repair is done in Review. Review is now the place the pc goes when the C/S gives up.

Repair is a Tech Div Action and counts as hours of auditing delivered. Auditing is auditing. Obviously 2 25 hour intensives could be consumed in a Life Repair before a new pc ever came near even an assessment of the minus scale of the first Class Chart much less a level!

In Academies, students may get anxious to “get their grades practiced” and so may skip repair actions needful. Thus upper level students should audit lower level students.

## DIANETICS

Pcs audited only on Dianetics in franchises and centers will make some astonishing physical and even mental improvements. The larger percentage will do so.

However, a C/S will find some have had physical gains “without finding out about it”. The reality factor has not increased to any degree.

Such pcs of course get a long Repair Program and are then given a Return Program to Dianetics, their highest level.

The sample Repair Pgm above fits such pcs as well as one that attained higher levels before it was found that lower grades were out.

There are no variables in what the pgms are:

1. Pc bogs or not gaining.
2. Repair Pgm outlined and concluded.
3. Return Pgm outlined and concluded.

What the C/S puts in the Repair Pgm and what he puts in the Return Pgm can be very variable indeed.

#### C/S Q AND A

The only fault I've seen in a C/S trying to outline 2 way comm could be called a "C/S Q and A".

The pc has a big win about "Frogs". A huge cog F/N VGIs changes his life.

The Q and A C/S is to order "Frogs two way commed".

The system one uses is not to use pc wins as items to further handle. That stifles (overruns) the win. It's an ability gained.

One should be able to write off win items as gains and let the pc have them. And use items pc mentions that read (shows he has Reality on them) to push up to new wins.

The C/S in looking into 2 way comm for things to handle finds *his* prizes in subjects that read but haven't F/Ned.

The cycle is find an item that reads, push it to F/N cog GIs. Leave that. Find another that reads. Push it to F/N cog VGIs. Leave that. Find another. . . . etc.

2 way comm with the auditor marking F, LF, LLF, BDs, etc gives the C/S worksheets to pick new items out of. The C/S looks to see if any of these were the subject of any F/N. If so he crosses them off. He orders prepchecks or two way comm on the items that read and haven't F/Ned.

That's the way the C/S gets his Instructions to Auditor for the exact actions of the Repair Pgm steps he has already outlined.

HCO BULLETIN OF 16 JUNE 1970

Remimeo

(Reissued & corrected 3 Oct. 71. Only change—  
[page 79] word “arrived” corrected to “aimed”.  
*Correction in this type style.*)

### *C/S Series 6*

## WHAT THE C/S IS DOING

In *Dianetics: The Modern Science of Mental Health* considerable stress is placed on the words and phrases in engrams. This is still functional. However as I did further research I found that (a) many pcs were unable to get the words in the engram and (b) the apparent force of the words was derived wholly from the pain, emotion, effort contained in the engram. In Standard Dianetics the words in an engram play no major role in the auditing.

The use of the words to de-aberrate and concentration on phrases in engrams is valid but *junior* in force to the pain, misemotion, etc in the engram. Thus if you run out the *force* the words drop into insignificance. This is often how the pc gets cognitions: the words and meaning concealed in the engram are changing value and devaluating. The pc can then think clearly again on a subject previously pinned down by the *force*. Get the *force* out and the words take care of themselves and need no special handling.

The *meaning* of things plays a secondary role in processing to forces.

Thetans find counter-forces objectionable. Almost all chronic (continual) somatics have their root in force of one kind or another.

In that the handling of things with bodies involves force to greater or lesser degree, incapability and derangement of mental values is proportional to the thetan's objection to force.

This objection descends down to a wish to stop things. It goes below that into overwhelmedness in which propitiation and obsessive agreement manifest themselves.

### LOW TAs

The low TA is a symptom of an overwhelmed being.

When a pc's TA goes low he is being overwhelmed by too heavy a process, too steep a gradient in applying processes or by rough TRs or invalidative auditing or auditing errors.

A low TA means that the thetan has gone past a desire to stop things and is likely to behave in life as though unable to resist real or imaginary forces.

### HIGH TA

Chronically high TAs mean the person can still stop things and is trying to do so.

However, all one has to do is restimulate and leave unflat an engram chain to have a high TA. High TA is reflecting the force contained in the chain.

An “over-run” means doing something too long that has engrams connected with it which means an engram chain with too many engrams on it being restimulated by life or auditing. Hence Over-run.

If this overrun persisted unhandled eventually the pc would be overwhelmed and one, in theory, would have a low TA.

### MENTAL MASSES

Mental masses, forces, energy are the items being handled by the C/S on any pc.

If the C/S loses sight of this he can wander off the road and go into the thickets of significance.

Engrams, secondaries, locks all add up to mental masses, forces, energies, time, which express themselves in countless different ways such as pain, misemotion, feelings, old perceptions and a billion billion thought combinations buried in the masses as significances.

A thetan can postulate or say or reason anything. Thus there is an infinity of significances.

A thetan is natively capable of logical thought. This becomes muddled by out-points held in by mental forces such as pictures of heavy experiences.

As the masses and forces accumulated and copied from living build up, the logic potential becomes reduced and illogical results occur.

### PC SEARCH

The pc is continually searching for the *significance* of a mass or force—what is it, why is it.

The C/S is easily led astray by this.

All forces in the bank contain significances.

All forces can be unburdened and lightened up by the various procedures of auditing.

The search of the pc is for significance.

The action of the C/S is reduction of forces.

### THE E-METER

The E-Meter records what force is being discharged in every slash, fall and blowdown. The amount of TA per session is the C/S's index of gain.

Note that a discharged process no longer gives TA and gives case gain.

The amount of significance recovered or realized by the pc only shows up as cognitions.

As the TA works off the case, then one has two indicators:

1. There is needle and TA action.
2. The pc cognites.

One shows that force is coming off. Two shows that thought is releasing from force.

### BACKWARDS C/Sing

If a C/S processes toward significance only he will get cases that do not progress.

The needle action detects not so much significance as where the force is.

Diving toward significance the C/S winds up shortening grades, looking for “magic one-shot buttons” and overwhelming cases by shooting them on up the grades while levels remain *loaded* with force.

#### RELIABLE INDICATORS

When a pc gets no more TA action on Level I he will have made Level I and will *know* it. He will therefore attest to “No problems”.

The reliable indicators are TA action and cognitions while a level is still charged.

Diminished TA action and cognitions mean the purpose of the level has been reached.

A feeling of freedom and expansion on a subject is expressed in a normal TA and a loose needle.

The pc will now attest to an ability regained.

#### F/N ABUSE

To process only to F/N and even chop off the cognitions on a process abuses the indicator of the F/N.

You can find many pcs who bitterly resent F/N indications. They have been:

- A. Not run on all the processes of a level;
- B. Still have force on the subject;
- C. Were chopped off before they could cognite.

The ARC Break in this is UNFINISHED CYCLE OF ACTION.

The proper End Phenomena for a process is F/N Cognition VGIs. Now look at that carefully. That is the proper end phenomena of a PROCESS. It is not the end phenomena of a LEVEL or even of a TYPE of process.

Let us say there are 15 possible Scientology processes for orienting a pc in his present location.

To run *one* of these 15 and say, “F/N that’s it. You’re complete,” is a Quickie impatient action that rebounds on the pc eventually. If there are 15, run 15 !

Possibly the pc on no. 12 will cognite he’s really right where he is. Only then could you cease to work at it.

An F/N Cog VGIs tells you a *process is* finished, not a whole class of actions!

Thus 2 1/2 minutes from 0 to IV is not only impossible, it is murderous. It will result in an overwhelm, a low TA or a high TA eventually.

Level I says, amongst other things, “Problems Processes”. There are certainly half a dozen. Each would be run to F/N Cog VGIs. When these and the *other* processes of the Level are run, the pc will come to have no further reaction to problems and will be able to handle them.

A cognition in lower levels is not necessarily an ability regained. Thirty or forty cognitions on one lower level might add up to (and probably would) the realization that one is free of the whole subject of the level.

It is safe to run more processes. It is unsafe to run too few.

## PC ABILITIES

It is not enough for the pc to have only negative gains of deleting force. Sooner or later he will have to begin to confront force.

This comes along naturally and is sometimes aided by processes directly *aimed* at further confront. “What problem *could you* have?” sooner or later is needed in one form or another.

What force can the pc now handle?

All auditing in a body—and any living in a body—makes a being vulnerable. Bodies break, suffer, intensify pain.

Sooner or later a pc will go Exterior. The Interiorization Rundown must be ordered as the next action or you will have a pc with a high TA. 2-way comm Ext-Int must be given in a following session (not the same one) so the full cognitions will occur.

After this the pc is less subject to the body and his ability to confront force will improve.

Do not be too worried or surprised if after this the pc has some minor accident with the body. Exterior he forgets its frailty. However, such things are minor. He is “learning how to walk” a new way and will run into chairs! He gets this figured out after a while.

Pcs sometimes improve their ability to handle force while interior so as to have mysterious headaches or new body pressures. Inevitably they *have* been *exterior* and need Interiorization run. They were just using too much force while still inside !

Thus force is the thing, significance very secondary.

Force of course is made up of time, matter, energy, flows, particles, masses, solids, liquids, gasses, space and locations. All this gets inherently handled in processes published long since.

The pc tends to dive for the *thought* imbedded in the force. He will tell you he’s being processed to find out who his parents were or why he is sterile or who did him in, etc, etc. The C/S who chases after this is a deerhound illegally chasing mice!

## C/S PURPOSE

The C/S is there to make certain that the pc makes gains and attains the actual abilities of the level.

*The C/S is for the pc.*

C/S auditor control exists only to keep the auditing standard, the TRs good, the processes ordered done and to End Phenomena each one.

No other reasons for C/Sing exist.

HCO POLICY LETTER OF 17 JUNE 1970

Remimeo  
Applies to all  
SHs and  
Academies  
Franchises

*URGENT AND  
IMPORTANT*

**TECHNICAL DEGRADES**

(This PL and HCO PL Feb 7, 1965 must be made part of every study pack as the first items and must be listed on checksheets. )

Any checksheet in use or in stock which carries on it any degrading statement must be destroyed and issued without qualifying statements.

Example: Level 0 to IV Checksheets SH carry "A. Background Material—This section is included as an historical background, but has much interest and value to the student. Most of the processes are no longer used, having been replaced by more modern technology. The student is only required to read this material and ensure he leaves no misunderstood." This heading covers such vital things as TRs, Op Pro by Dup! The statement is a falsehood.

These checksheets were not approved by myself, all the material of the Academy and SH courses IS in use.

Such actions as this gave us "Quickie Grades", ARC Broke the field and downgraded the Academy and SH Courses.

A condition of TREASON or cancellation of certificates or dismissal and a full investigation of the background of any person found guilty, will be activated in the case of anyone committing the following HIGH CRIMES.

1. Abbreviating an official Course in Dianetics and Scientology so as to lose the full theory, processes and effectiveness of the subjects.
2. Adding comments to checksheets or instructions labelling any material "background" or "not used now" or "old" or any similar action which will result in the student not knowing, using, and applying the data in which he is being trained.
3. Employing after 1 Sept 1970 any checksheet for any course not authorized by myself and the SO Organizing Bureau Flag.
4. Failing to strike from any checksheet remaining in use meanwhile any such comments as "historical", "background", "not used", "old", etc. or VERBALLY STATING IT TO STUDENTS.
5. Permitting a pc to attest to more than one grade at a time on the pc's own determinism without hint or evaluation.
6. Running only one process for a grade between 0 to IV.
7. Failing to use all processes for a level.
8. Boasting as to speed of delivery in a session, such as "I put in Grade zero in 3 minutes." Etc.

9. Shortening time of application of auditing for financial or laborsaving considerations.
10. Acting in any way calculated to lose the technology of Dianetics and Scientology to use or impede its use or shorten its materials or its application.

REASON: The effort to get students through courses and get pcs processed in orgs was considered best handled by reducing materials or deleting processes from grades. The pressure exerted to speed up student completions and auditing completions was mistakenly answered by just not delivering.

The correct way to speed up a student's progress is by using 2 way comm and applying the study materials to students.

The best way to really handle pcs is to ensure they make each level fully before going on to the next and repairing them when they do not.

The puzzle of the decline of the entire Scientology network in the late 60s is entirely answered by the actions taken to shorten time in study and in processing by deleting materials and actions.

Reinstituting full use and delivery of Dianetics and Scientology is the answer to any recovery.

The product of an org is well taught students and thoroughly audited pcs. When the product vanishes, so does the org. The orgs must survive for the sake of this planet.

*C/S Series 7*

**C/S Q AND A**

Just as an auditor can Q and A so can a C/S.

As you know Q and A is the incorrect 2-way comm action of wandering off the question by feeding the pc what the pc said as a Question, the Answer is taken as the next auditor's Question. Many various outlines of what Q and A is already exist and this is just to refresh the subject. Example: Student Auditor is ordered "2-way comm on cities," by the C/S which is okay. But it can be Q and Aed like this: Student: "Tell me what you think about cities." Pc: "They're cold." Student: "What about cold?" Pc: "I don't like it." Student: "What else don't you like?" Pc: "Well ..... old men." Student: "What about old men?" Pc: "They're obnoxious." Student: "What else is obnoxious?" Pc: "....." Well you remember all about that. It's maddening and shows *no* auditor control and certainly doesn't handle the original C/S subject of "cities".

There are three main ways in which a C/S can Q and A in C/Sing.

PC C/S

Pc goes to Examiner on own volition and says, "I am ill. I need my ruds flown."

A C/S Q and A would be "Fly ruds."

Pc on his own goes to Examiner and says, "I am upset about my job."

C/S writes "L1B on job."

You get the idea. The first one is therefore Q and Aing with Exam statement of pc.

This is varied by taking a pc's note or letter or report and accepting what the pc says is wrong. Like "I'm PTS to my husband." And then C/Sing "2-way comm on husband."

Naturally the ancient law applies here. If the pc knew what it was it would not be wrong and would as-is. Pc coming up to Exam saying, "It's my husband!" with F/N Cog VGIs would be what would happen if it *was* the husband. And that would be great but of no real value to C/S except pc has had a win and not to now use "husband".

Give you an actual example: Pc in Solo ruds found she hated George. It F/Ned. *Next* audited session pc was saying she hated George. Wrote a note about George. C/S did not notice the outness. Ordered LIB on George and in a 2-way comm got little or no TA, continued to be ill. The fact is it wasn't George at all and not even a terminal. Pc had gone up one grade too many, hit an overwhelm, the earlier 6 grades were out! Correct action was to have done a general repair the moment a pc suddenly and mysteriously caved in and got ill on a new level! The pc never should have been going on up grades for the last 6 grades!

The tendency to toss it all off with a Q and A not only didn't handle but obscured the real situation.

## C/Sing A WIN

The second Q and A is to C/S a pc win.

Pc in 2-way comm mentions cats and more cats and cats and finally at the end of session has a big F/N Cog VGIs on cats.

The C/S sees all this “cat” mention and orders “Prepcheck cats.”

That is a very cruel sort of Q and A.

Another version of it of course is to see a pc reach a full End Phenomena on a series of processes like an unmistakable pc-volunteered valence shift and keep on going into an inval. Correction is to rehab of course.

Yet another version is to pull a w/h and then keep pulling it so the pc doesn't think it's gone. Correction is to rehab of course.

The TA often goes high or low on these Q and A actions and Inval-Eval actions are ordered and the release point rehabbed.

## NEXT GRADE PLEASE!

The third Q and A a C/S can pull is to agree to the pc's demands for the next grade despite all contrary indicators.

“I'm ready for Clear now!” says the pc full of somatics whose R6EW wasn't really done and who can't talk.

The Registrar, execs and others push on this also.

The D of P and C/S have total authority on this. They should be diplomatic. “He can have the grade of course but I will have to prepare him for it,” is the best answer. “Please make arrangements for Clear preparation—25 hours.”

If the C/S doesn't hold the fort on this the pc put into the next grade who isn't ready will fall on his head.

If this pressure from the pc (in any version) continues, have him sign a waiver “I will not hold the org or any principals responsible and waive any refund if I am put on next grade.” That either gets home or he says okay and signs. So put him on the grade and hope he doesn't fall on his head—and if he does, *now* demand he get the hours needed to get fixed up so he can really make it.

A D of P or C/S often have other pressures exerted on them that are not technical in nature such as economics, ambition, status symbols (of having a high grade regardless of a headache) and have to cope with these diplomatically. But any but tech considerations are dangerous to entertain.

## SUMMATION

Of these 3, 2 are concerned with letting someone else C/S. Like an engineer letting someone else plan the railroad.

And the third is also slightly in that nature, consisting of not noticing the pc's wins and using them with which to C/S.

## CAUTION

This doesn't mean the pc is always wrong. He is generally right when he says he's overwhelmed or upset. He's almost always wrong when he says *what*

overwhelmed him or what BPC was out WHEN SIMPLY SAYING IT DOES NOT CORRECT THE CASE OR PRODUCE F/N VGIs.

You always *use* the pc's data one way or another in that you are paralleling what the MIND does. That's reads. Not what the pc says.

Remember that what's really wrong lies in the field of mass, energy, space, time, form and location. As these are eased up (by Standard Dianetics and 18 years of Scientology actions and processes) thoughts come to view. So if you Q and A with thoughts already in full view, you never really ease up the bank. That's why Q and A with significance is not done.

*C/S Series 8*

**CHART OF HUMAN EVALUATION**

*Science of Survival's* Chart of Human Evaluation is a study for C/Ses and is of great use.

When you find the pc on one of its columns you can see if the pc stays there or falls back there.

Standard Dianetics opened this chart to full use for C/Ses. 18 years of Scientology processes and know-how are to a large degree evolved from this chart.

IF A PC IS STAYING AT A LEVEL OF THE CHART OR FALLS ON IT you know he is running *above* his level.

Processing Changes Conditions.

If it doesn't improve them (or the pc's behavior) then the pc's Reality is not being reached. It can be plus or minus, above or below. It is seldom that the pc's reality is higher than the processes used and really only occurs when a grade honestly run is rerun. Then you get pc protest as he's *made* that.

Pcs who get sick suddenly are being run far too high on the Class Chart. Pcs who don't change are also being run too high.

Behavior, mannerisms are the index. DO THESE CHANGE? If they do the pc is improving. If they drop lower on the Human Evaluation Chart the pc is in overwhelm.

PICKING THOUGHTS OUT OF FORCES IN THE BANK BRINGS A NO CHANGE.

In other words you can park a pc by continuing nothing but think processes which address only significance.

**SELF AUDITING**

Self auditing is the manifestation of being overwhelmed by masses etc and pulling only think out of the bank. Pulling out think then pulls *in* more force which gives more self audit.

Not all self audit is bad. The pc eventually realizes it's forces! After a few tens of thousands of hours! If he knows all the answers.

A good push against a wall is worth a hundred hours of self auditing. And it's force.

**HUMAN EVALUATION**

This famous chart (in use by the way by an airline and several other areas, and which had to be printed as desk blotters for personnel people at one time) could easily be expanded in numbers of vertical columns to include all behavior.

The C/S is at a disadvantage as he doesn't see pcs. But he can have a mannerism item filled in on a Summary Report. "Mannerisms\_\_\_\_\_" "Mannerism changes \_\_\_\_\_"

This serves.

It also serves to look at the psychosomatic column of the chart and a pc's Health Form.

#### CHANGING THE PC

The pc will change in ideas when he changes his relationship to forces.

Tons of processes do this.

Objective Processes have to be run in on a pc now and then.

Somatics passing through in a session are a definite clue to force change. The nosomatic pc is either high as an angel or being run too high.

You don't have to run directly at force for forces to change in the pc.

One 2 way comm I did with a pc released his hold on a huge bundle of forces!

The body responds badly to forces.

The conflict between protecting or using a body and being as a thetan able to withstand large forces gets so mixed up in a pc he can wind up as a force-shy thetan !

#### STANDARD PROCESSES

Standard processes such as those in use for 18 years handle this when fitted into their levels.

What the C/S has to realize is that he is (a) producing an optimum rate of change in the pc if he is C/Sing well and (b) changing the pc's position upward on the Chart of Human Evaluation.

*C/S Series 9*

**SUPERFICIAL ACTIONS**

One of the reasons Scientology tended toward disuse in the late 1960's was not its workability. It was a growing cultural disinclination to do things thoroughly.

"Fast, quick results" was interpreted as seconds or minutes. In old psychotherapy as practiced in the 19th Century it required ONE YEAR of weekly consultation to see if anything could be done about a case and FOUR MORE YEARS to produce a meager superficial result. Compared to that two or three hundred hours of processing was nothing.

As we began to dominate this field in terms of persons handled and results obtained, psychiatry invented "instant psychiatry" by which no result was gotten in no time.

SPEED became the primary consideration of the culture. Jet planes, fast cars "saved time". But an old Chinese, when told by a driver that he had saved 4 minutes in speeding back from town asked, "What are you going to do with the 4 minutes?"

Time itself is a basis of aberration. Dropping time out is the consideration of factory managers of production lines as "the faster something can be made the more you have of it". But look at this again. Something can be done so fast it isn't done at all! The difference between a very fine camera and a cheap one is speed of manufacture. Cheap cameras don't get their parts carefully machined or matched—they don't fit together—they break, cease to work. A fine gun can be told by the lack of tool marks on the hidden places. A cheap gun's inner bolt is a mess of scars. It isn't smooth in operation. It didn't take much time to make but it also jams and freezes up when you try to use it. Maybe you've heard of "hotter than a 2 dollar pistol". A 2 dollar pistol is "hot" because it's so quickie made it usually blows up and blows off a hand.

There is a point where SPEED is simply a cover for a cheap worthless product.

Let us take a filthy room. A lazy housekeeper comes in and sweeps a few bits of dust under the carpet, leaves soot all over the windows and garbage on the mantle and says it's clean. Somebody else not afraid of work spends an hour at it and leaves a really clean room.

**SHORT PGMS**

A short pc program is economically and efficiently for the birds.

In the first place a C/S has to know the extent of his tech well to be able to think up light processes in quantity.

If one heard a C/S say, "But I don't have time to spend an hour doing a long program for the pc," one is listening to something peculiar. If one spent an hour or two doing up a real long 20 action program to repair the pc, then for the next 20 C/Ses it takes only a few minutes to look over the session and order the next action on the list. If one had no program one would have to study the *folder* each time. One actually saves C/S time by doing *long* programs both to repair and to get the pc back on the Class Chart where he'd gotten to.

Further, auditing is sold by the hour and it WASTES money and income and pcs to short program them.

“Yes but we sell result! If we can get 200 pcs done in 100 auditing minutes we would make £18,233 clear profit .. “

Well the cruel answer to that was when orgs began to do that on lower grades they didn't attain the result on the pc and stats went DOWN!

Power was once priced against the fact of 50 to 100 hours of auditing. It retained the price and by cutting out all End Phenomena or real gain it was at last being given in 20 minutes. And after just so many years of this economic dishonesty, SHs crashed! They had sold out the real value of the product for a quick buck. The “field” became “ARC Broken” and few takers came to an SH. It is a very long hard road back. And it is a very costly one.

“Quickie Grades”, instead of making fortunes for one and all, crashed the whole Scientology network.

BECAUSE QUICKIE RESULTS ARE LAZY AND DISHONEST.

Let's just face up to the facts of life!

Selling out the integrity of the subject for a buck wrecks the subject.

### SUCCESS

The real stat of an org is Success Stories.

Honest grades and time spent in C/Sing and in auditing to obtain them add up to success for the individual, the org, its field, the country and the planet.

The *time* it takes to process somebody is how long it takes to get *each* single result available. It is not how slowly or quickly it is done. A book is not a good book if it takes 7 years to write. And a bad book isn't always written in 2 weeks. It takes as long to write a good book as you get a good book. The *result is* the result and TIME IS JUST AN ENTERED ARBITRARY.

A person who overwhelms at Grade IV is an easily overwhelmed person. It might take 50 hours just to repair the case and the person's life. That might be 20 or 30 steps on the program.

If the C/S can't dream up 8 or 9 ways to repair past auditing and 15 or 20 ways to repair a life, then it's time to go back and read *The Original Thesis, Evolution of a Science, DMSMH, 8-80, 8-8008* and listen to a hundred or so SHSBC tapes.

“Yes, but I have no time to ..” Well, that's also saying “It can't be done well.”

But there is time. If anyone looked over his area he would be able to throw out the time-wasting actions if it comes to that.

“Look. I'm the C/S, the D of P and have to audit 3.....”

That's a statement that the job has already been done so badly that no persons show up to take over the extra hats! And the no-result programs cripple the economics and that becomes no help.

I have seen Mary Sue take over an HGC that had tons of unsolved cases and too few auditors and have watched her solve one case at a time and within 2 weeks have 35 auditors and no backlogs and in six weeks no unsolved cases! She was using the “old”, “historical”, “background”, “we don't use them anymore” processes!

So it not only can be done, it is the thing to do.

That org's stats soared. It became solvent. It ran at a high run and was a happy org.

### SICK PCs

When there are sick people on a list one doesn't just "give a Dianetic Assist" and send to a doctor and write them off.

If one knows his tech, there was a *reason* the person got sick. One also knows a sick person goes into overwhelm easily.

One can do a touch assist, a contact assist, two-way comm, ruds on the accident, ruds before the accident, Dianetic Assist, medical treatment, life ruds, HCO B 24 July '69, two-way comm on suppression, 3 S & Ds, assessment for area of illness, prepcheck on area, ruds on area, hello and okay with the affected area, reach and withdraw from area, two-way comm, recall on persons similarly ill, location of the postulate that caused it with itsa earlier itsa, prepcheck on the body or its part, more HCO B 24 July '69, more ruds, assessment of failed purposes, two-way comm on the sickness.

That's not a program. It's just a helter-skelter list of a *lot* of things to do. It would not greatly matter what order they were done in but lighter actions should be the earlier. And in a program auditing repair comes before life repair.

### EXPECTANCY

Now if a C/S or an auditor has a magical complex, he expects ONE process to run a person from wog to OT VI and in ONE minute.

The missing knowledge is "gradient scales". Stairs and ladders have steps and rungs. It takes TIME to climb a tower.

The magical complex thinks of processes as incantations or charms. A person C/Sing would always be trying to find THE process the pc should be run on. The think is that THE process, once discovered, would take no time at all and the pc would magically become well!

Pardon me, but that's pure goofiness.

And it would set the C/S up for constant FAILURE.

One sees such a person scrambling through processes, trying to guess "which one which one which one. Oh there's one! Now we run it for 3 minutes on the pc. Oh dear. It didn't work. He isn't well. Let's see what's here still. Scramble scramble. Oh, here's one. This green paper is probably the right color. Auditor! Run this on the pc. Oh dear, it didn't work. He isn't well yet. So! We will take these 5 major processes and run them all in one session and add six grades. Do that! Do it! It's a desperate situation. Oh dear,

the pc blew. Well I guess the subject doesn't work or I'm a failure .. "

That is NOT how one should C/S.

If a workman was supposed to cure an ox hide and was told salt would do it and he had a magical complex, what would he do. Well, he might take a small salt shaker and sprinkle the corner of the hide (thinking the right thought) and find that the hide rotted in a few days. He could then conclude salt didn't cure ox hides. If someone kept hammering at him to cure ox hides with salt and he kept sprinkling the corner (knowing it wouldn't work) he'd get a very odd idea about his orders! But who would suspect that this workman thought it was magic! An honest rubbing of salt all over and into the ox hide is the meaning of "salt will cure ox hides"!

But that would take work. It would take TIME! It would have to be honestly and thoroughly done. But one would have cured ox hides and gotten shoes and a profit and pay and everything for one had a *product*.

Magical thought in auditing isn't likely to give anyone a product of really able people!

### SHORT-CUTTING PROCESSES

Processes can be short-cut as well as programs.

Take an early (means basic, useful, useable) version of Rising Scale. There are 18 pairs. Each *pair* should be run to F/N, Cog, VGIs.

An auditor told to run Rising Scale can run along the 18 pairs until one F/Ns. And leave it.

The process has been short-cut. And with that shortcut went its ability to restore fertility!

So one hears Rising Scale will sometimes restore fertility or change eyesight. Orders it done. It is done to 1 F/N. No real result occurs.

Or take Dianetics. Dianetics can be chopped "to save TIME". First feeble flutter of an F/N, no Cog, no VGIs, auditor barking "Did it erase? Did it erase?" Final result, no real gain. There goes the subject. Half an hour to run the chain, no extra 30 seconds for the real F/N, the Cog, the VGIs.

SO ONE WASTES A RESULT FOR THE SAKE OF SAVED TIME.

### THE AGE

It is a symptom of the age that there is no time. But in the Data Series PLs one finds that "omitted time" is a basic insanity.

That a body lives only about 70 years puts an awful limit on Man.

Man's Empires endure at most only about 300 years if that.

70 years is not enough time to make a real career and 300 years is not enough time to even groove in a civil service.

Man pays for it with poor lives and rotten governments.

But it doesn't take 70 years or 300 years to process a pc. A year maybe up to homo novis. A few years to OT. Even traveling it casually slow.

25 hours to repair someone's life and 50 to 100 hours to get him up to no somatics with Dianetics is pretty satisfactorily fast.

What's this take? A week to repair. 2 to 4 weeks for full Dianetics. At 25 hours a week. That's very little.

And it's enough to tell him to get trained so he can have all he wants.

### SPEED LIABILITY

When speed is the consideration, not results, you get a very cheap camera or car. And you can expect it to fall apart very soon. You also get a cheap reputation.

We are in the Leica and Cadillac and Rolls Royce product class without trying.

Why settle for “Quickie Grades”?

You get no students that way and *that’s* the heavy org income. You get no expanding field. And you won’t ever get a cleared planet.

We’ve learned all this the hard way. So let’s not let it go unheeded.

The place to handle the situation is with C/Sing.

And to gain the co-operation of C/Ses to make results real results by insisting that speed is the fast road to poverty in the long run.

If the C/S burden is too heavy, start pushing training. Then you’ll get help.

Honest C/Sing gives an honest result.

It takes as long to correct a case as it takes. It takes as long to make a person well as it takes. It takes as long to get a real lasting grade result as it takes.

And that’s a lot longer than the time spent on it in the late 60’s.

ALL pcs “have to be OT tomorrow”. Why let them C/S their case by demanding it only take 2 minutes?

Self C/Sing is no more effective than self auditing.

Registrars as well as pcs try to grab the C/S hat. “I will sell you a marital intensive because you have such a bad cold.” And Execs, “Run this staff member on money.....”

Well, a C/S’s hat is the C/S’s. And he should wear it for honest results. And damn others trying to C/S and wreck his job.

**THERE ARE NO CONSIDERATIONS WHICH FORGIVE ANY RESULT THAT IS NOT THOROUGH AND HONEST FOR EVERY PROGRAM OR GRADE.**

*C/S Series 10*

**REPAIRING A REPAIR**

When a pc is on a Repair cycle it is quite horrible to have a bad (goofed) session occur.

Why?

Well the pc is on a Repair cycle because he is overwhelmable. A goofed session is more overwhelm. AND it was goofed on a process type which was already what you would use for Repair. So NOW what do you do?

The answer of course is to sort out the real error. If you can't find it readily in the worksheet have the Examiner ask the pc what the auditor did.

Then having found the actual goof, you have it repaired by rehab of the BP F/N or an L1B using "Method 3" in assessing the prepared list.

The goofs are fortunately few in type.

There HAS to have been a basic goof for a Repair session to have gone wrong.

So when one goes wrong, you really search the worksheet until you find it and if it isn't visible get the pc asked.

These goofs are pretty elementary. The auditor possibly doesn't know that a TA can go DOWN by overwhelming by overrun or way up by overrun. So a usual goof in Repair is overrun of an F/N or an item that F/Ned or a list that F/Ned.

Example: In a Repair Pgm a GF is called for. Auditor clears a couple items, suddenly hits a hot one, pc gets F/N, Cog, VGIs. Auditor (told to get all the charge off the GF overlooks senior data—let pc have a win, GFs often raise hob with the TA if run further than THE item) goes on down the GF list past the F/N VGIs hunting for new charge. Pc's TA goes to 1.6 ! Pc cogs he has a stuck picture. TA 1.6. "End of sess."

Now what do we do. Well, a new factor now enters in.

**C/S WANDER**

The pc was on a precise Repair Pgm, is only at VI out of XVIII steps.

But the pc is rough. Rough running. Diverges, critical, boggy.

And now he is stuck into a goofed session and we have to repair a repair!

A C/S at this point can wander. He can Q and A. The WHOLE REPAIR PGM CAN GET DEPARTED FROM AND THE PC REALLY BOGGED.

When faced with Repairing a Repair Pgm session watch it! Don't wander!

The C/S procedure is this:

1. Find in the W/S or from the pc the exact goof.
2. Repair that goof by rehab, indicating BPC or two way comm, depending on the error.
3. DO NOT ORDER A NEW DIFFERENT NON-PGM ACTION.
4. Continue the PGM.

It is here a C/S can go adrift. New actions crossing the original program can soon have C/S, pc and Auditor chasing over hill and dale. It is a fatal pursuit.

About the only time you change a Repair Pgm once outlined is to extend it or lighten it. But in that case do a whole new Pgm.

You will find 2 way comm is lighter than a Prepcheck.

Let us say pc was doing great on 2 way comm. Gets into a Prepcheck session and goes out the bottom.

In such a case the Prepcheck is repaired of any goof noted in it and 2 way comm that session—and it comes out all right. If no goof can be located, 2 way comm it and it will be okay.

An Auditor can throw a list not ordered into a Repair Pgm by finding the TA high at session start and doing an O/R list and goofing the list. It would already be dicey to *list* a pc who is on a Repair Pgm. To then goof ordinary laws of listing and nulling can get grim.

The first C/S action to repair the repair is of course to get the list corrected with an L4A. You can often spot the listing goof as a C/S. It's usually an O/R of an O/R list or an incomplete list or an "unnecessary list". It's poison to list a pc on a Repair Pgm, however. 2 way comm it.

If a check for Exteriorization reveals it, you have no choice but to do an Interiorization Rundown. That's a common reason. But if the pc is already flinching at engrams, limit the Interiorization to 3 way Recall and note it clearly that he's only 3 way Recall of Int.

#### AUDITOR FLUBS

Student or new Auditors produce the most flubs. It is therefore good to keep them off repair actions or Repair Pgms.

The commonest flubs are failing to trim the meter and ignoring the F/N at "3.1", yet sitting right there running the pc up to 4.0 without ever asking, "Have we by-passed a release point?"

Poor TRs, not having 2 way comm down, neglecting pc origin or chopping comm are probably next in order of frequency.

#### REPAIR PCs

Remember that pcs who need lots of repair are DELICATE cases. Feather touch is the watchword.

They are not all that easy to audit. They can cause Auditors and C/Ses to disperse.

Such pcs are afraid of force and easily get engulfed if pushed hard into the bank.

So lightly, lightly.

And exact repair of any flub.

And get back to the program! Mid program is no time to become inventive.

HCO BULLETIN OF 25 JUNE 1970

Remimeo

**C/S SERIES 11**

The following HCO Bs have been combined in this issue:

HCO B 31	Aug '68	"Written C/S Instructions"
HCO B 1	Sept '68	"Points on Case Supervision"
HCO B 11	Sept '68	"Case Supervisor Data"
HCO B 17	Sept '68	"Gross Case Supervision Errors"
HCO B 17	Sept '68	"Out Admin—Liability"
HCO B 22	Sept '68	"Auditors must always ...."
HCO B 8	Oct '68	"Case Supervisor—Folder Handling"
HCO B 15	Mar '70	"Double Folder Danger"
HCO B 29	Mar '70	"Auditing and Ethics"

and reference to LRH ED 101 Int "Popular Names of Developments".

**C/S DATA**

Case Supervision instructions are *always* written. A Case Supervisor always writes his C/S instructions on a separate sheet of paper for the pc folder.

Repair Programs (now called Progress Programs) are on red sheets.

Return Programs (now called Advance Programs) are on bright blue sheets.

All C/Ses are written in duplicate (a carbon copy is made). The C/S keeps the carbon copy for reference in case the original ever gets lost.

**HIGH CRIME**

It is a High Crime for a Case Supervisor not to *WRITE* in a preclear's folder what the case supervised instructions are and a High Crime for an auditor to accept verbal C/S instructions.

To commit this crime causes:

1. Extreme difficulty when doing a folder error summary as there is no background of what was ordered and why.
2. Gives the auditor leave to do anything he likes as not in writing.
3. Is open to misduplication and can cause squirrel processes to be run and so mess up a preclear with Non-standard Tech.

Any C/Supervisor found guilty of this from this date is to be removed as this could only be considered a deliberate attempt to mess up preclears.

**POINTS ON CASE SUPERVISION**

1. Check your orders to find out if auditor did them.

2. Check to see if commands correct and if pc's reaction was expected reaction for those commands.
3. Check any list and find out if there was mislisting.
4. Advise against a background of Standard Tech.
5. Order any errors corrected or get the case on further up the grades.
6. Beware of over-correction.
7. Beware of false, pessimistic or over-enthusiastic auditor reports. They are detected by whether the case responded to usual actions as they all do.
8. Beware of talking to the auditor or the pc.
9. Have implicit confidence in Standard Tech. If it is reported not working the auditor's report is false or the application terrible but not reported.
10. Above all else hold a standard and NEVER listen to or use unusual solutions.

### DOUBLE FOLDER DANGER

When a preOT has a Solo and an Auditing folder, both, there is a great danger if the Case Supervisor does not look at BOTH before C/Sing.

There has been an instance of a preOT running strange C/Ses on himself. Another ran C/Ses out of other folders on himself. In both cases the consequences were hard to repair when finally found.

In another case in the Solo folder the preOT had gone exterior with full perception. But the Non-Solo Auditing folder was being C/Sed. The TA shot up for 2 months without any C/S except myself calling for *all* folders.

PreOTs unfortunately run on a Solo folder and an audited folder. Unless both are to hand when C/Sing wild errors can be made by the C/S.

There is *also* the case of a person having two audited folders, being C/Sed at the same time. This is an Admin error.

The firm rule is C/S ONLY WITH ALL FOLDERS TO HAND.

The embarrassing situation where one can't get a folder from another org or field auditor or where the old folder is lost has to be made up for somehow. It mustn't halt auditing totally.

### CASE SUPERVISOR—FOLDER HANDLING

#### *Analyzing Folders*

Go back in the folder to the session where the preclear was running well and come forward from it doing a folder error summary.

#### *Reviewing Folders*

In reviewing a folder, the first thing to do is to look at the C/S to see if it was done.

Use the Summary Sheet to get the Auditor's attitude and pc mannerism changes.

Use the Auditor's Report Form to get the time of processes.

Read and take all your data from Worksheets and compare it to and see that C/S was complied with and ensure Standard Tech was applied.

If you can't read the reports, send it back to have the Auditor over-print illegible words. Never try to case supervise (C/S) an illegible worksheet as you'll only run into headaches.

The After Session Examiner's Report gives you the first clue of how suspicious you should be in examining the folder and whether or not auditing reports contain falsities.

### *Standard Tech*

You're never led by anything into departing from Standard Tech. The *only* reason it doesn't work is that it hasn't been applied.

The main question of a Case Supervisor is:

WAS IT APPLIED?

If you follow this exactly, you'll never miss.

### CASE SUPERVISOR DATA

A Case Supervisor should watch for Ethics record of pcs who have been C/Sed.

If they fall on their head, get into low conditions, the folder should be reviewed.

Most probably the auditor did not do what was ordered and, if folder looks okay, chances are the auditing report is false as *something is wrong* or pc would not be in trouble.

### AUDITING AND ETHICS

Cases undergoing Ethics actions, Comm Evs, amends projects or low conditions should not be audited until the Ethics matter is cleared up and complete. It only louses up their cases to audit them when under such stress.

### ADMIN

Auditors must always put the pc's grade or OT level very prominently on the Auditing Report.

A Case Supervisor cannot properly C/S a case without having this data.

To not do this is out admin.

### OUT ADMIN—LIABILITY

Much has been said about the importance of admin in auditing but auditors just aren't getting it—so ..... it now becomes a LIABILITY to have out admin in pcs' folders.

Folders are to be submitted with the latest session on top. Auditor's report form is stapled to Worksheets which are dated, numbered and in order, latest on top. Summary Report is then attached to the auditing report and W/Ss with a *paper clip*. This of course is as well as the usual admin such as legible writing, re-writing illegible words, marking reads and F/Ns, and all End Phenomena, etc.

The C/S instructions for that session go *under* that session, so you get C/S 4/6/68, Auditing Session 4/6/68, C/S 5/6/68, Auditing Session 5/6/68, C/S 7/6/68, etc, etc.

As the whole purpose of Class VIII is to minimize the time in auditing, by doing perfect Standard Tech, this cannot be done if it takes 15 minutes to put the folder in order, so it can then be case supervised, so it can then be audited.

#### GROSS CASE SUPERVISION ERRORS

1. FAILING TO USE PROGRESS AND ADVANCE PROGRAMS WHEN NEEDED.
2. Ordering unnecessary repairs.
3. Trying to use repair processes to get case gain instead of getting the pc onto the next grade.
4. Not writing down C/S instructions, but giving them to an auditor verbally.
5. Talking to the auditor re the case.
6. Talking to pc re his case.
7. Failing to send pc to examiner if you're unsure why his folder has been sent up for C/S.
8. Being reasonable.
9. Not having enough Ethics presence to get his orders followed.
10. Issuing involved repair orders.
11. BIGGEST GROSS CASE SUPERVISION ERROR for C/S is not to read through the pc folder.

*C/S Series 12*

**GLOSSARY OF C/S TERMS**

**RECOVERY PROGRAM:** The pack of

LRH EDs	100 Int	10 May '70	Lower Grades Upgraded
	102 Int	20 May '70	The Ideal Org
	103 Int	21 May '70	Fast Flow Grades Cancelled
	104 Int	2 Jun '70	Auditing Sales and Delivery Pgm No. 1
	106 Int	3 Jun '70	What Was Wrong
	107 Int	3 Jun '70	Orders to Divisions for Immediate Compliance
	10 SH	6 Jun '70	SH Pcs
	108 Int	11 Jun '70	Auditing Mystery Solved
	101 Int	21 Jun '70	Popular Names of Developments

comprising the program to recover full use and results of EXPANDED LOWER GRADES.

**PROGRESS PROGRAM:**

What is called a "Repair Program" on the first issue of the C/S Series HCOB just being issued is re-named a PROGRESS PROGRAM. It has been found that case gain which has not been earlier achieved can be consolidated by a PROGRESS PROGRAM. It takes 25 hours, can be done by a Class I or above as long as it is C/Sed by an VIII who has starrated on the new C/S Series. This is quite a technical development in itself. It is the answer to a pc who had "Quickie Grades" and didn't actually reach full abilities in earlier Scientology auditing. It is followed by an Advance Program which follows below.

**ADVANCE PROGRAM:**

This is what was called a "Return Program" in the C/S Series. The name is being changed from "Return" to "Advance" as more appropriate. It gets the pc really up to where he should be. It may take 50 hours or more.

**EXPANDED LOWER GRADES:**

Pcs won't like being told they "have to have their lower grades rerun". Actually that's not a factual statement anyway. The lower grades harmonic into the OT Levels. They can be run again with full 1950-1960 to 1970 processes as given on the SH Courses all through the 1960s. These are now regrouped and sorted out and are called EXPANDED LOWER GRADES. Only this route will now be sold. There are no Dianetic or Scientology single—triple or "Quickie Lower Grades" any more.

**DIANETIC CLEAR:**

There is such a state. It is not however attained by feeding people Scientology cognitions as was done in L.A. Only about 25% go actually Clear on Dianetics. A Dianetic Clear or any other Dianetic pc now goes on up through the grades of Scientology and onto the proper Clearing Course. The Dianetic Clear of Book I was clear of somatics. The Book I definition is correct. This is the End Phenomena of Dianetics as per the Class Chart *and* Book 1. 25%, no more, make Dianetic Clear

accidentally. They still need Expanded Lower Grades to make Scientology Clear. Becoming a Dianetic Clear does not stop them from getting Power Processing. Modern Power is to its total End Phenomena.

*CLASSIFICATION CHART:*

This chart "Classification and Gradation Chart" has been reissued many times. All issues are more or less valid. To save print, the processes run column appears in "Processes Taught" on the Auditor side of the Chart. All these processes and more are used in Expanded Lower Grades. The chart is *Valid*.

*QUICKIE GRADES:*

Persons were too demanding to be done quickly. On many cases these grades as given were valid but a large number of cases needed Expanded Lower Grades. 20 minutes from Grade 0 to IV and 5 minutes Power was far more than many could stand up to. These need a PROGRESS PGM and an ADVANCE PGM. This is true of persons at Va or R6EW or on CC or OT Levels. All these who haven't fully made it need a PROGRESS PGM and an ADVANCE PGM "to pick up all the latent gain they missed".

*DIANETIC PCS:*

Dianetic pcs should be audited on Dianetics until no somatics, then go up through Expanded Lower Grades to Power, R6EW, Clearing Course and OT Levels.

*TRAINING:*

Any pc who has trouble needs training and the amount of time required in Expanded Lower Grades and so on makes it cheaper to be trained.

***C/S Series 13R***

**VIII ACTIONS**

(GF 40, IV Rundown, VIII  
Case Supervision.)

Inevitably, when any new approach or process is released, some will instantly assume that all “older” (actually more *basic*) data has been cancelled. There is no statement to that effect. It is not guessed that this will be assumed and so we *could* lose an entire subject.

We did in fact lose Dianetics for a decade and all but lost Scientology in the following ten years.

A subject can be reorganized and made more workable. That was done in 1969 for Dianetics. BUT IT HAD NEVER BEEN UNWORKABLE!

The 1969 Dianetics Reorganization *refined* the 1962-63 discoveries of R-3-R. A better *communication* was made to the user and the preclear.

Amazingly, the reissue of Dianetics as Standard Dianetics caused about a dozen people (even in high places unfortunately) to at once assume that Dianetics wiped out any need for Power, Scientology Clearing or anything else! Even an unauthorized Policy Letter (not signed by me) and an HCO B (also not signed by me) gave this impression. They were of course cancelled the instant they were discovered to have been sent out.

This idea that the “old” is always cancelled by anything “new” has its root in the idea that a later order cancels earlier orders, which is true. But orders are one thing and Tech basics another.

What if, in the science of physics, a book by Professor Glumph came out, omitting the three laws of motion and gravity. It is assumed then that Newton’s laws are no longer valid. Because they are *old*. (Newton lived between 1642 and 1727.) So some young student engineer is baffled because bridges have *weight* and can’t work out gravity or motion! And he and his fellows begin to build without knowing these laws and there goes the whole of engineering and the culture itself!

This is no fantasy. As a college student in upper math I was utterly baffled by “calculus”. I couldn’t find out what it was for. Then I discovered it had been developed by Sir Isaac Newton, examined the basics and got the idea. My college text omitted *all* the basic explanations and even the authorship of the subject! Calculus today is really not enough used because it isn’t understood.

Anyway, here’s the main surprise: Until 1970 the whole of Scientology was never in use in processing! Students had ridden along with the research line up into the OT sections, discarding the ladder behind them. For nearly 3 years an increasing proportion of preclears were not actually making it. The gradient to get them onto the bridge had been neglected as “old” when in fact they were not “old” but BASIC.

The amazement of auditors (and their delight) when the HCO B on Auditor’s Rights (C/S Series 1) was released indicated that they had become “process oriented” with all the WHY gone.

## VIII AUDITING

The 1968 VIII Standardization aimed actually at good TRs, auditing presence, and basics in auditor performance. VIII auditing was developed to handle the OT band.

It is entirely valid. Its only omission was detailed actions now developed as to how to handle a pc or Pre OT who had been pulled up the line and had fallen on his head.

Out Grades was spotted and discussed in detail in VIII auditing.

Giving lower grades fast was the only error. It was not realized in 1968 that End Phenomena of lower grades was not being required.

The re-release of the entire band of Academy and Saint Hill materials in 1970 is a re-emphasis on the *validity* and *necessity* of using it ALL on pcs! And in understanding the mind and life! And all this is quite welcome and very successful. Not noticed is that this whole band was never before presented for full *use* on *all* pcs. As I say, 1950-1969 auditors had been riding with the “newest and latest” because it was “popular”. Only a few wise old-timers continued to use the most basic actions.

But just as VIII auditing was an unauthorized signal to suppress all that had been known before, so now, with the full release for use of Expanded Lower Grades, a few began to say that VIII auditing was now “old”!

One assumes then that some like to be able to say that something is now “old”. Has a superior sort of ring to it, I guess. Anyway we’d better disregard this tendency to retire basics. It is more amusing than otherwise. So let’s get on with the job.

## RESISTIVE CASES

The RESISTIVE CASE rundown is an VIII development TO HANDLE THOSE WHO CANNOT MAKE THE GRADES.

It was put into the Green Form as GF 40 so as to preserve it.

To it could now be added “Overwhelmed”. This would indicate need of Repair (Progress) and Return (Advance) Programs. But many other indicators exist already.

*So when* do you use a GF 40?

Let us say the pc has been run on Grade Zero. And at the Examiner cannot or does not attest.

One would first look for simple auditing errors in recent sessions. These would get reviewed and corrected.

One would then look for lower actions than Grade Zero that had been missed.

*If* it still seemed hard to figure out, one would use a GF 40, Resistive Cases.

In essence, if one adds “Overwhelm” to the GF 40 list you have on it all the reasons a pc won’t advance IF he has been run on all processes up to that point.

Overwhelm would indicate need of a Repair and Return.

Grade I, Problems, is the usual ordinary reason for no case advance.

Problems shows up as an out-rud in GF 40 and is simply put in as a rud not as a grade.

But if a Grade *II* or above has a Problem??? That means Grade I is out.

GF 40 remains even more plainly as a “When all else fails”.

It is used that way.

When a pc doesn't attest, and all has been done for him otherwise, you use a GF 40.

This was its proper use in the first place.

All such materials except Rapid or Quickie Grades are valid.

And (joke) these remarks on GF 40 Resistive Cases do not wipe out “Repair and Return Programs”.

#### IV RUNDOWN

The so-called IV Rundown as taught on the VIII Course is of course quite valid.

Originally developed to catch cases that had somehow gotten up to OT III and were falling on their heads, it is a collection of actions. It salvaged many cases.

The missing datum was that in recent times these cases were falsely reported to have had their lower grades. THEY, the cases themselves, said they had “had lower grades”. This made a mystery. The fact is, with multiple declare (declaring 0 to IV to the Examiner all at one time mostly without any mention of End Phenomena of the grade) these cases were OUT GRADE in the extreme.

The IV Rundown was an effort to catch it all up to make a real OT.

“Out Grades” didn't read as it didn't mean anything to the pc and besides “they'd all been rehabbed a dozen times anyway”. But nobody mentioned never having attained any End Phenomena and the Class Chart was never really gotten IN IN IN in the first place.

You will find many pcs have had various parts of the “IV Rundown” run earlier.

For a while it was the fashion to use the IV Rundown or a part of it on any balky case at any level. At OT IV (which was an audited step and none of it really confidential) the C/S simply ordered run whatever was left of it not already run.

Somewhere on the case all of the IV Rundown still should be run. But of course that would now be on a Return (Advance) Program and well up the line.

If Repair-Return doesn't get a grade made this is the time to do a IV Rundown. On (3) Valence Shifter—LX1, LX2, LX3 lists can be done in triple, recall, secondary, engram. Earlier Practices, Former Therapy can also be triple, recall, secondary, engram.

This is on Page 28 (not 23) of the original VIII Case Supervisor Manual and part of it is also now GF 40.

If a case really needs this he won't be making a lower grade really so the GF 40 or its slightly wider OT IV Rundown can be used.

To both, “Overwhelmed by auditing” should be added in any future issue to indicate a needed repair action.

#### CASE SUPERVISOR ACTIONS

HCO B 10 Dec 1968, “Case Supervisor Actions” Confidential, VIIs only, is still valid. It remains Confidential as it mentions some OT phenomena that would spin a

Grade Va. However, some VIII C/S is going to be told that “Expanded Lower Grades changes all that”. It doesn’t.

Listen: In the next to last paragraph of the cover page of this manual (HCO B 10 Dec 68) it says:

“Standard Grades are not part of this set-up AS IT IS UNDERSTOOD THAT THE AUDITOR KNOWS THESE. Directions to do Standard Grades are written on a blank sheet.” (I have added the block letters for emphasis here.)

At the time this was written I had not discovered that Lower Grades were gone out of use and I let be published Triple Grades which seemed to condense all lower grades. The Major Process or Major Grade Process is definitely not enough to make a pc make a lower grade. I am sorry I gave any support at all to such an idea by not examining the whole scene when it began to show up. / *did find it and did correct it however when auditing statistics over the world showed the fault. (28 hours was the total weekly delivery of orgs!)*

If you add the dozens and dozens of Lower Grade Processes as given in Expanded Lower Grades to the VIII C/S HCO B of 10 Dec 68 and included this C/S Series and its *new* development of Repair (Progress) and Return (Advance) programs you would have the whole package of C/Sing.

So the VIII actions are *all* valid.

Auditor classes below VIII have this C/S Series. The AO C/S Course adds in the VIII actions as well.

Any C/S who does not know well *The Original Thesis, Dianetics: The Evolution of a Science, Dianetics: The Modern Science of Mental Health, Scientology 8-80 and Scientology 8-8008* will go badly astray. It is vital to know these books and others in this area, to know *what* one is trying to handle.

Class VI (SHSBC) tapes and bulletins are all valid and vital to Lower Grade auditing and C/Sing.

-----

I trust this gives the C/S some idea of what is still “in”.

It all is.

*C/S Series 14*

**C/Sing 2 WAY COMM**

The C/S is liable to make most of his C/S errors in C/Sing 2 Way Comm.

The reasons for this are

1. 2 way comm IS auditing.
2. The errors that can be made in any auditing can be made in 2 way comm;
3. Untrained or poorly trained auditors do not always respect 2 way comm as auditing.
4. Errors in 2 way comm become masked since the procedure is loose.
5. Earlier C/Ses on the case may have missed the easily missed 2 way comm errors.

**RULES OF C/Sing 2 WAY COMM**

- A. The C/S must recognize that 2 way comm *is* auditing. Therefore it follows all the rules of auditing.
- B. Any error that occurs in other auditing can occur in 2 way comm auditing. Errors in a 2 way comm session must be carefully looked for as they easily can be masked in the worksheet.
- C. Auditors must be persuaded by the C/S to make notation of *auditing* essentials in 2 way comm as of senior importance to pc's text (which is also made note of in the W/S).
- D. The questions asked in 2 way comm can be very incorrect just as rote processes can be.
- E. An auditor must be trained as a 2 way comm auditor (Class II). Otherwise he will Evaluate, Q and A and commit other faults.
- F. If an ARC Break occurs early in a 2 way comm session and is not handled as such the rest of the session is audited over an ARC Break and can put a pc into a sad effect.
- G. A pc with a PT problem not being handled in the 2 way comm will get no gain.
- H. A pc with a W/H in a 2 way comm session will become critical, natterly and/or get a dirty needle.
- I. Two way comm processes must be flattened to F/N. If an F/N doesn't occur then the subject didn't read in the first place or the auditor Qed and Aed or evaluated or changed the subject or the TRs were out or the pc's ruds were out.

- J. A two way comm subject chosen must be tested for read in that session before being used for 2 way comm.
- K. Improper 2 way comm questions can plunge the pc into an out rud situation not then handled. "Is anything upsetting you?" or any mention of upsets by the auditor is the same as asking for an ARC Break. "Has anything been troubling—worrying you lately?" is the same as asking for a PTP. "Who aren't you talking to?" is asking for W/Hs.
- L. The subject of major processes should be kept out of 2 way comm C/Ses, auditors' questions and 2 way comm assessment lists (ARC Brks, Problems, overts, changes or any major auditing subject, as they are too heavy, being the buttons of the bank).
- M. The C/S should only let Class II or above auditors do 2 way comm sessions.
- N. A rud going out in a two way comm session must be put in by the auditor.
- O. A 2 way comm session should end in an F/N.
- P. Auditors whose 2 way comm sessions do not end in F/N must be taught to check the subject for read before using, not to Q and A, not to Evaluate and given a refresher on 2 way comm tapes and HCO Bs.
- Q. In a 2 way comm session that flubs the C/S must be careful to isolate the errors just as in any other auditing session that flubs and put them right.
- R. A 2 way comm subject that reads on test and doesn't F/N on 2 way comm must be checked for O/R (if TA went up) and rehabbed by the 1965 Rehab method, or Prepchecked or just continued.

-----

The whole point to all of this is that a 2 way comm session IS auditing. It is delivered by the auditor, C/Sed and remedied like any other session.

Also it is usually being run on a delicate pc who is more affected by errors than pcs being given other processes.

E-Meter Literature

**SOLO CANS**

I have worked out more ideal Solo electrodes for the E-Meter—"cans".

The basic trouble with a single-hand electrode is that it gives a falsely higher TA which can be very alarming.

The Tone Arm range on the Meter should be between 2.0 and 3.0 for a floating needle to be valid. This is when two regulation electrodes (steel soup cans) are employed.

When you use only one electrode, holding it in the left hand if you are righthanded, the TA can read as high as 4.0 when it is actually 3.0. Also a TA at 1.7 can read as 2.5 !

Single-hand electrodes are almost as old as the modern meter. An aluminum tea ball with an insulator between the screw threads served in the earliest models, an electrode leading to each half.

Two stainless steel pipe sections about an inch in diameter, separated in the middle by a rubber ring, with an electrode to each end was a single-hand electrode version which came down to modern times.

There were no further developments of any lasting value on this problem of single-hand electrodes until a few months ago.

The problem in Solo Auditing is of course that if you held electrodes in both hands you couldn't write or work the meter at the same time. BUT a single-hand electrode gives the wrong TA even if it does give the right needle reads (which it does). To get the right TA then one must unplug the single-hand electrode and plug in the two-hand electrode. In this operation the TA can change and the wires get tangled. This commotion is of course distracting.

What I worked out was a two-can electrode that became a single-hand electrode at once.

You take 2 small juice or vegetable steel cans with their tops neatly removed. They must be the paper label, not the painted kind of course.

The size required is  $2\frac{1}{8}$  inches diameter at the rim (that is about 54 millimeters). The length is  $3\frac{3}{4}$  inches (which is about 95 millimeters).

You then take a piece of soft sponge or foam rubber about  $\frac{3}{8}$  inches thick (about 10 mm). You cut a circular piece of sponge rubber about  $2\frac{3}{8}$  inches (about 60 mm). It is just slightly larger than the can diameter.

You glue this sponge or foam rubber circle to the closed end of one can but not to the other.

Snap the electrode wires into the open ends of the cans. You now have to all requirements a two-can electrode setup, with the difference that one can's base has a rubber pad on it. Holding these one in each hand gives you the 2-can more correct TA read.

By putting the closed base of one can against the grubbier pad on the other can, taking them in one hand (two fingers on each can as you hold them) you have a single-hand electrode.

In an instant you can take them in two hands and get the *correct* TA (adjusting the Tone Arm with a knuckle or finger tip). Taking them back in one hand and resetting the TA you again have your single-hand read.

In using this system you should change your notation to an indication of whether it is a one-hand or two-can read (to save your Case Supervisor from heart failure).

The new notation is as follows: 3.75 (1) 2.9 (2). It doesn't mean you always use both reads. You add the brackets and a 2 or 1 to show whether it's a double or single (2) or (1) read. At session start and at end you always give both, i.e. 3.5 (1) 2.5 (2). And at the end you give a trim check like 1.9 = 2.0 (done by unplugging the electrodes from the meter for an instant and putting the needle at set and reading what the TA is). It should be 2.0 but often has drifted to 1.9 or 2.1. That verifies all reads.

### STANDARD ELECTRODES

A standard can is about 23/4 inches (69 mm) diameter by about 4 1/2 or 5 inches (114 mm or 127 mm) long.

Steel soup or vegetable cans, unpainted, tops cleanly removed, label and glue washed off, tin plated or not, have been standard for many years. It is with these that calibration has been done.

It is amusing that I had to work hard on electrodes to get the first meters to work at all. Everything got tried. Steel rods, aluminum (aluminium) tea balls, metal pads, metal straps, you name it. The only one that works consistently is the good old common kitchen variety soup can. It's amusing to see efforts to "improve our electrodes". Other versions have all been tried and failed and every few years we have to have a soup can revival campaign to get people back to standard reads.

The smaller juice can as described for the single-hand electrode does not give the exact read as the standard cans when used as a two-can electrode. So the smaller can shouldn't be used by Examiners. You can check the difference if you like between these two can sizes.

But the standard cans are too big as a one-hand to be held comfortably in most people's left hand. The difference is not great enough to worry anyone in normal auditing.

### SMALL HANDS

People with small hands or children can't cope at all with a standard can.

The size given for the single-hand (2 1/8" x 3 3/4") is more suitable for them.

For very little children, two Kodak 35 mm unpainted cassette cans from any photo shop will serve admirably.

These two 35 mm cassettes fixed with a rubber pad on the bottom of one as described for the single-hand electrode above will serve a child as a one-hand electrode.

### SHORTING

The whole trick in preparing two separate cans to be held as a single-hand is to make sure that when you put the bottoms together they don't short. They can cause a "rock slam" or a sudden fall if the metal of the cans touch. Thus the glued-on rubber pad must be a bit bigger than the can diameter and thick enough so it doesn't press through.

Old setups were bolted together and couldn't be separated easily for two-can reads. These two cans are loose from each other.

A drawing of the setup done by Richard Gorman is illustrative.

Important note: The smaller cans can give a falsely low TA read being small. If you get such a read, have two large standard cans handy to snap onto the leads and check. Will save heart failure at seeing 1.7 for two-can read!

Dianetic Auditor  
Dianetic Checksheets

## UNRESOLVED PAINS

It occasionally happens that a pc's certain pain does not resolve on Dianetics.

There are two reasons for this:

### 1. NOT ENOUGH AUDITING ON ENOUGH CHAINS.

Sooner or later the exact small piece of an engram "already run" shows up on another chain later.

Example: Pain in an area of an operation occurs now and then again weeks, months or years after the operation has been run out as an engram. Sooner or later just on general auditing the missing bit of the operation shows up, blows. Voila! Pain gone forever.

This is peculiar especially to abdominal operations like an appendectomy. The operation was run out. The scar stays puffy. The pc is occasionally ill from it. Pc's conclusion is that Dianetics hasn't worked on it. More auditing on other somatics (just general Dianetics) is given. One day the remaining bit of the operation, hidden from view, apparently erased, shows up, blows. Pc now fine.

A reason for this is "overburden" in that the incident was too charged in one place to be confronted. As the whole case is unburdened, confront comes up. The piece that was missing (and giving the pain) blows.

There is no way of forcing it. In fact it would be fatal to try.

The other reason for it is that the missing bit causing the pain is a different somatic like "a Chest Compression". This bit of the operation had another basic than the one run.

The answer to a persistent or recurring somatic in an injured area is always more Dianetic Auditing of the standard type, just addressed to the bank not the special somatic. Just keep doing the usual and one day it all straightens out.

### 2. SYMPATHETIC NERVOUS SYSTEM PAINS.

There are two sides to the body. As you learn in touch assists, if the right hand is injured you include also the left hand.

Body nerves conduct pain. The two sides of the body interlock. Pain gets stopped in the nerves.

If the right elbow is hurt the LEFT elbow will have echoed the pain.

Example, you find a pc with a pain in the left elbow. You try to audit a left elbow chain. It doesn't fully resolve.

If you ran injuries to the RIGHT elbow, suddenly there's a somatic going through the left elbow! It gets well.

This is the sympathetic nervous system. The right ear, injured, also gets echoes with a somatic in the left ear. You audit the right ear only. Pc comes up with a sore left ear!

You can actually direct a pc's attention to it (non-standard but a research technique) and he can find where the uninjured ear echoed the injured ear.

Where you can't fully repair a crippled left leg, don't be surprised to find it was the *right* leg that was hurt.

You audit the *left* leg somatic in vain. If you do, start auditing somatics in the **OPPOSITE SIDE OF THE BODY**.

## TOOTHACHE

The mystery of toothache is resolved in both 1 and 2 above, especially 2.

The pain is concentrated on the left upper molar. You audit it in vain. Toothache persists.

Look at the pc's mouth. Has the **RIGHT** upper molar ever been pulled or injured? Yes. That's how the *left* molar began to decay. The right upper molar was pulled. The pain (especially under the painkiller on the right side only) backed up and stopped on the opposite side. Eventually the left upper molar, under that stress, a year or ten later, caves in and aches.

Mysterious as it wasn't injured. Mysterious as the opposite molar is long gone, doesn't hurt anymore.

When a toothache does not resolve in auditing, audit the opposite tooth on the other side. You can actually do it by count of teeth.

It's sort of auditing a no-somatic.

Pc in misery with right upper molar. No pain on left side. Audit an injury he had on the left side (it will read on the meter also). Voila! The toothache that wouldn't go away eases up!

The fellow who has the exact opposite teeth pulled (upper right wisdom, upper left wisdom) is in for it as there is a constant cross-play. Makes the mouth odd and pressury. Both sides are reacting to the other side!

Dentists often note the strange pressure, "bursting feelings", a patient has when a tooth "needs pulling". This is the stress in the nerves from an injury which occurred on the opposite side!

An auditor can audit a right side tooth in vain unless he knows enough to audit **THE OTHER SIDE**.

For a pc with a toothache, on the *right* side, you can list for feelings on the *left* side of the mouth and get "numbness", "no feeling", etc. Audit *that* list and suddenly magically the toothache on the opposite side not being audited eases up.

As toothaches sometimes give a Dianetic auditor a failure, he should know about the sympathetic factor as above. The failure becomes a success.

Dn Cse Checksheet

**THE PSYCHIATRIST AT WORK**

Auditors are often fought by psychiatry. The auditor is often called upon to handle psychiatric abuses. Auditors should know some facts about psychiatry.

**PAIN ASSOCIATION**

As a technical action, it is of interest to any auditor to know that Pain and Ideas is a basic “therapy” used down the years by psychiatrists and such lot.

The practice is very general and very old.

The person is made to associate his “wrong ideas” with pain so that he “will not have these ideas”, or will be “prevented from doing those things”.

A crude current example is to electric shock a person every time he smokes a cigarette. After several “treatments” he is supposed to associate the pain with the idea and so “give up smoking”.

Homosexual tendencies are also so “treated”.

In earlier times alcoholism was “cured” by putting poison in drinks so drinking would make the person violently ill so he would “stop it”.

Examples of this are all over the time track.

The mechanism is “If you get this idea you will feel this pain” ZAP!

Basically this is the action of an implanter.

Current use of it will be encountered where psychiatry has been busy implanting.

This is a pinnacle, an all, of psychiatric “treatment”.

Another version of it is drugs. Make the person too torpid (sluggish) to have *any* ideas. The motto of this is “too dead to act”. Institutions are emptied by hooking psychotics and “community psychiatry” exists “to make them take their pills”, in short, to keep them hooked. This started the current drug craze that spread into “illegal” drugs.

The auditor will encounter this with growing frequency as the business of it is so big that one group spends 12 billion in advertising alone per year! This is the Rockefeller drug cartel. They also spend vast sums in lobbying parliaments.

**OBSESSION**

Most “got to’s” or obsessions come from Pain Association or drug association.

People in pain or drugged can become obsessed with *doing* the idea.

What the psychiatrist does not care to publicize is that his “cures” are implantings with compulsive ideas.

The smoker so treated now MUST smoke but CAN'T smoke. These two things are opposed. That is known as frustration—a form of insanity.

Must reach can't reach, must withdraw can't withdraw is total basic insanity.

Thus psychiatry is *making* insane people.

This is why the insanity statistic is soaring and why the crime statistic is on a wild climb.

The psychiatrist if he handled his field well and did really effective work would have a *declining* insanity and crime statistic.

That the psychiatrist and his “technology” has been in charge during the whole period of these alarming statistics is ignored by governments.

The psychiatrist argues that he needs more money and more practitioners. But he gets money by the billion. The state has to totally support them because the public will have nothing to do with them.

Psychiatric care in a private hospital costs \$30,000. \$2,000 a month for board only is the price at Walnut Lodge in Washington DC, an average place. £60 a week is charged in England for a shabby room. “Care” is extra if it exists.

Psychoanalysis costs £9,000 for a full and ineffective course, takes 5 years, 30% suicide in the first 3 months.

Psychiatric treatment runs 5 times the total cost of every course, grade and action available in Scientology orgs.

#### SKILL LEVEL

Any HAS knows more and can do more about the mind than any psychiatrist.

There is no real level of comparison since psychiatry as used is a destructive technology.

Under a “drug treatment” engram you often find savage electric shocks of execution strength buried.

It is doubtful if one could watch an electric shock “treatment” without vomiting.

In “neurosurgery” the Ice Pick is used to rip and tear up people's brains.

Holes are drilled in skulls and the brain sliced up.

No evidence exists that this ever helped anyone but it makes incurable invalids.

Illegal seizure of anyone and his torture is legal in most “civilized countries”.

#### MASTERS

The psychiatrist has masters. His principal organization, World Federation of Mental Health, and its members, the National Associations of Mental Health, the “American” Psychiatric Association and the “American” Psychological Association are directly connected to Russia.

Even the British Broadcasting Company has stated that psychiatry and the KGB (Russian Secret Police) operate in direct collusion.

A member of the WFMH sits on every major “Advisory Council” of the U.S. government, to name one government.

Ministers of Health or Health Authorities are members of the National Association or the WFMH.

The psychiatrist has masters.

#### DOCUMENTATION

All these statements are the subject of total documentation in the hands of Scientology.

#### SUMMARY

The auditor in auditing uncovers considerable data in former psychiatric cases.

Further an auditor can put to rights a case so abused unless a fatal injury has been done.

As psychiatry circulates rumours about auditors and attempts to discourage the use of Dianetics and Scientology, it is only fair for the auditor to know exactly the status of psychiatry and psychology as used today.

It goes without saying that the savagery and fraud of psychiatry must cease and that auditors must encourage in state and public and through all their connections displacing psychiatric abuses with sane auditing.

HCO POLICY LETTER OF 22 NOVEMBER 1967  
(Revised and Reissued 18 July 1970)

Student Hat  
Remimeo

*ALL STUDENTS*  
*ALL COURSES*

**OUT TECH**

If at any time a supervisor or other person in an org gives you interpretations of HCOBs, Policy Letters or tells you, "That's old. Read it but disregard it, that's just background data", or gives you a chit for following HCOBs or tapes or alters tech on you or personally cancels HCOBs or Policy Letters without being able to show you an *HCOB* or Policy Letter that cancels it, **YOU MUST REPORT THE MATTER COMPLETE WITH NAMES AND ANY WITNESSES ON DIRECT LINES TO THE INTERNATIONAL ETHICS OFFICER AT WORLDWIDE. IF THIS IS NOT IMMEDIATELY HANDLED, REPORT IN THE SAME WAY TO YOUR NEAREST SEA ORG MAA.**

The only ways you can fail to get results on a pc are:

1. Not study your HCOBs and my books and tapes.
2. Not apply what you studied.
3. Follow "advice" contrary to what you find on HCOBs and tapes.
4. Fail to obtain the HCOBs, books and tapes needed.

There is no hidden data line.

*All* of Dianetics and Scientology works. Some of it works faster.

The only real error auditors made over the years was to fail to stop a process the moment they saw a floating needle.

Recently the felony has been compounded by disclosure of the facts that data and tapes have been deleted from checksheets, data has been "relegated to background" and grades have not been in use fully to complete end phenomena as per the Process column on the Classification and Gradation Chart. This caused an almost complete unmock of the subject and its use. I am counting on you to see it is not allowed to happen **EVER AGAIN.**

Any supervisor or executive who interprets, alters or cancels tech is liable to the assignment of a Condition of Enemy. *All* the data is in HCOBs or Policy Letters or on tape.

Failure to make this mimeo known to every student carries a \$10 fine for every student from which it is withheld.

### DATA SERIES

The HCO Policy Letters called the Data Series sometimes bring about a headache or upset in a student.

This occurs due to the list of five out-points.

The cure is to assess the basic out-points (sensibly expressed as a list). Then handle by 2 way comm on what read.

It will be found that this will clear up the trouble.

A special list of these is being made ready for Hubbard Consultant use.

The exact procedure is:

1. Assess a prepared list of out-points for best read.
2. Clean up the item with 2 way comm to F/N.
3. Assess a prepared list of plus-points and take the best read.
4. Discuss with 2 way comm to F/N.

If there is no F/N, reassess the same list again for the best item now.

The lists are unlimited in use. The expansion of the prepared lists of out-points and plus-points to get all variations gives one an almost unlimited process.

Deep, long-term upsets or present time disturbances can both be handled in this way.

While further data will be released on this subject, it is necessary for C/Ses to know an occasional consequence of study of the Data Series.

The tech belongs in the HC study materials.

### F/N AND ERASURE

A floating needle always occurs when the basic on a chain erases.

### TONE ARM POSITION

A floating needle is valid only between 2.0 and 3.0 Tone Arm position on a meter. (*Note: False TA can be caused by dry or calloused hands or improper grip—makes it read high. And by overly wet or greasy hands—makes it read low.*)

Above or below that Tone Arm reading, the F/N is called an “ARC Break” needle. A floating needle between 2.0 and 3.0 Tone Arm position with BAD indicators is an “ARC Break” needle. It is not a real floating needle.

A real floating needle, between 2.0 and 3.0 Tone Arm position also carries with it COGNITIONS and VERY GOOD INDICATORS. The pc is cogniting, cheerful and happy.

When the Tone Arm is below 2.0, the chain has not been erased.

When the Tone Arm is above 3.0, erasure has not occurred.

When the Tone Arm is up at 4.4, the pc has made it more solid and has not erased the basic on the chain.

On the second time through, if the TA rises, you know there is an earlier incident.

### OVERRUN

The Dianetic Auditor is not concerned with “rehabilitation” of the overrun if he sees the Tone Arm has gone high. In Dianetics it only means the engram chain is in restimulation and has not been erased.

When the basic erases, the TA will fall or rise to the area between 2.0 and 3.0 and the needle will F/N, the pc will have cognitions and very good indicators. The sequence is F/N, Cog, VGIs, Erasure. The auditor *then* stops running that chain. He can reassess and run another chain now.

### COGNITION

COGNITION means a pc origination indicating he has “Come to realize”. It’s a “What do you know. I....” statement.

*Cognitions usually occur immediately before an erasure.* Cognitions can also occur while running the chain. But when they occur with a real floating needle and very good indicators, you know erasure is occurring. When you see this happening, let the pc cognite. Don’t chop his cognition. Let all the bits and pieces blow.

*You can expect the rapid end sequence of:*

1. Floating Needle
2. Cognition
3. Very Good Indicators
4. Erasure

*in a well run Standard Dianetic session.*

*That’s all you really need to know about it in Dianetics. But you have to know it very well.*

**L4B**  
**FOR ASSESSMENT OF ALL LISTING ERRORS**

PC'S NAME \_\_\_\_\_ DATE \_\_\_\_\_

AUDITOR \_\_\_\_\_

1. WAS THE LIST UNNECESSARY?  
(If it reads, indicate BPC and indicate that it was an unnecessary action.)
2. WAS THE ACTION DONE UNDER PROTEST?  
(If it reads, handle by itsa earlier similar itsa.)
3. IS A LIST INCOMPLETE?  
(If reads, find out what list and complete it, give the pc his item.)
4. HAS A LIST BEEN LISTED TOO LONG?  
(If so, find what list and get the item off from it by nulling with suppress, the nulling question being: "On.....has anything been suppressed?", for each item on the overlong list. Give the pc his item.)
5. HAVE WE TAKEN THE WRONG ITEM OFF A LIST?  
(If this reads, put in Suppress and Invalidated on the list and null as in 4 above and find the right item and give to the pc.)
6. HAS A RIGHT ITEM BEEN DENIED YOU?  
(If this reads, find out what it was and clean it up with Suppress and Invalidate and give it to the pc.)
7. HAS AN ITEM BEEN PUSHED OFF ON YOU YOU DIDN'T WANT?  
(If so, find it and get in Suppress and Invalidate on it and tell pc it wasn't his item and continue the original action to find the correct item.)
8. HAD AN ITEM NOT BEEN GIVEN YOU?  
(If reads, handle as in 6.)
9. HAVE YOU INVALIDATED A CORRECT ITEM FOUND?  
(If so, rehab the item and find out why the pc invalidated it or if somebody else did it, clean it up and give it to pc again.)
10. HAVE YOU THOUGHT OF ITEMS THAT YOU DID NOT PUT ON THE LIST?  
(If so, add them to the correct list. Renuall the whole list and give the pc the item.)
11. HAVE YOU BEEN LISTING TO YOURSELF OUT OF SESSION?  
(If so, find out what question and try to write a list from recall and get an item and give it to the pc.)
12. HAVE YOU BEEN GIVEN SOMEBODY ELSE'S ITEM?  
(If so, indicate to the pc this was not his item. Don't TRY to find whose it was.)

13. HAS YOUR ITEM BEEN GIVEN TO SOMEONE ELSE?  
(If so, find if possible what item it was and give it to the pc. Don't try to identify the "somebody else".)
14. HAS A RELEASE POINT BEEN BY-PASSED ON LISTING?  
(If so, indicate the overrun to the pc, rehab back.)
15. HAS A RELEASE POINT BEEN BY-PASSED ON THE QUESTION ONLY?  
(If so, indicate the overrun to the pc and rehab back.)
16. HAVE YOU GONE EXTERIOR WHILE LISTING?  
(If so, rehab. If Ext Rundown not given, note for C/S.)
17. HAS IT BEEN AN OVERT TO PUT AN ITEM ON A LIST?  
(If so, find out what item and why.)
18. HAVE YOU WITHHELD AN ITEM FROM A LIST?  
(If so, get it and add it to the list if that list available. If not, put item in the report.)
19. HAS A WITHHOLD BEEN MISSED?  
(If so, get it, if descreditable ask "Who nearly found out?")
20. HAS AN ITEM BEEN BY-PASSED?  
(Locate which one.)
21. WAS A LISTING QUESTION MEANINGLESS?  
(If so, find out which one and indicate to the pc.)
22. HAS AN ITEM BEEN ABANDONED?  
(If so, locate it and get it back for the pc and give it to him.)
23. HAS AN ITEM BEEN PROTESTED?  
(If so, locate it and get the protest button in on it.)
24. HAS AN ITEM BEEN ASSERTED?  
(If so, locate it and get in the assert button on it.)
25. HAS AN ITEM BEEN SUGGESTED TO YOU BY ANOTHER?  
(If so, get it named and the protest and refusal off.)
26. HAS AN ITEM BEEN VOLUNTEERED BY YOU AND NOT ACCEPTED?  
(If so, get off the charge and give it to the pc, or if he then changes his mind on it, go on with the listing operation.)
27. HAS THE ITEM ALREADY BEEN GIVEN?  
(If so, get it back and give it again.)
28. HAS AN ITEM BEEN FOUND PREVIOUSLY?  
(If so, find what it was again and give it to pc once more.)
29. HAS AN ITEM NOT BEEN UNDERSTOOD?  
(If so, work it over with buttons until pc understands it or accepts or rejects it and go on with listing.)
30. WAS AN ITEM DIFFERENT WHEN SAID BY THE AUDITOR?  
(If so, find out what the item was and give it to the pc correctly.)
31. WAS NULLING CARRIED ON PAST THE FOUND ITEM?  
(If so, go back to it and get in Suppress and Protest.)

32. HAS AN ITEM BEEN FORCED ON YOU?  
(If so, get off the reject and suppress and get the listing action completed to the right item if possible.)
33. HAS AN ITEM BEEN EVALUATED?  
(If so, get off the disagreement and protest.)
34. HAD EARLIER LISTING BEEN RESTIMULATED?  
(If so, locate when and indicate the by-passed charge.)
35. HAS AN EARLIER WRONG ITEM BEEN RESTIMULATED?  
(If so, find when and indicate the by-passed charge.)
36. HAS AN EARLIER ARC BREAK BEEN RESTIMULATED?  
(If so, locate and indicate the fact by itsa earlier similar itsa.)
37. DO YOU HAVE AN ARC BREAK BECAUSE OF BEING MADE TO DO THIS?  
(If so, indicate it to the pc, check the question if reads. Get earlier similar itsa.)
38. HAS THIS LIST CORRECTION BEEN OVERRUN?  
(If so, rehab.)
39. IS THERE SOME OTHER KIND OF BY-PASSED CHARGE?  
(If so, find what and indicate it to pc.)
40. WAS THERE NOTHING WRONG IN THE FIRST PLACE?  
(If so, indicate it to pc.)
41. HAS THE UPSET BEEN HANDLED?  
(If so, indicate it to the pc.)
42. HAS A LIST PROCESS BEEN OVERRUN?  
(If so, find which one and rehab.)

*C/S Series 15*

**GETTING THE F/N TO EXAMINER  
(High, Low TAs and Chronic Somatics)**

If after an F/N session end the pc's TA goes up, as at the Examiner's in an org, the pc is afflicted with unflat Engram Chains.

All High TAs depend on unflat or restimulated engram chains.

TAs go high on Overrun because the overrun restimulates engram chains not yet run.

Engram (or secondary or lock) chains can be keyed out. This does not mean they stay out. In a few minutes or hours or days or years they can key back in.

A pc will also de-stimulate in from 3 to 10 days usually. This means he "settles out". Thus a pc can be overrun into new engram chains (by life or an auditor), TA goes up, 3 to 10 days later the TA comes down.

When a pc is audited to F/N VGIs and then a few minutes later has a high TA the usual reasons are

1. Has had his comm chopped or full Dianetic or Scientology End Phenomena not reached or
2. Has been run on an unreading item or subject or
3. Is overwhelmed or
4. Has a lot of engrams keying in or
5. Has been run in the past without full erasure of engrams or attaining End Phenomena.
6. Lists badly done or other misauditing cause a pc to feel bad and key in chains also.
7. A pc can be audited when too tired or too late at night.

The solution to any of these is easy—on (1) always see that the pc attains full EP, particularly on engram chains. On (2) make auditors check for read even in two-way comm subjects, list questions or Dianetic items before running them. On (3) see also (2) and get the pc a proper Progress (Repair) Program. On (4) Repair or isolate pc so his PT isn't so ferocious looking (meaning Repair [Progress] Pgm him well or let him change his environment and then audit him) or (5) look into his folder to see who audited him on so many chains when, with no real erasure or EP. (6) You use Repair lists (like L4A, LIB, etc) and other usual action. On (7) you make the pc get some rest and if he can't, make him go for a walk away until he is tired and *then* walk back and get some sleep.

All these really add up to keyed in or unflat engram chains. Whether the pc can handle them depends on Repair and the usual.

Of all these the past auditing without attaining EP on engram chains (whether done in Dianetics or Scientology) is a usual reason for a much audited pc to have a high TA.

The answers to any high TA that won't come down and to any pc who continually arrives at Examiner after an F/N VGI session end with his TA UP are

- A. Faulty auditing not letting pc go to Full Dn EP when running engrams.
- B. A false auditing report (PR type report meaning promoting instead of auditing).
- C. Too many engram chains in past restim by life or auditing.

Any correct Standard Dianetic Auditing will eventually handle. But it is usual to do a PICTURE REMEDY (see HCO B 5 June 1969).

A pc who has a *chronic somatic* would get programmed like this:

- I Repair (Progress) Pgm until pc feeling better.
- II Picture Remedy with all reading and interest items Dn triple full Dn EP.
- III Health Form—with all reading and interest items Dn triple full Dn EP.
- IV Somatics of the area with all reading and interest items Dn triple full Dn EP.
- V Run the engram chain of the incident (operation, accident, etc) he believes caused it. R3R triple.
- VI HF to F/N on the HF itself and attest full Dianetic result as per Class Chart.

That's maybe 50 hours, all done in Dianetic triples, of course, in steps II to VI.

IF the Dianetic Auditing is standard and to Dianetic EP (F/N Cog VGIs) you will see this pattern at the Examiner or a few minutes after session.

First few sessions

TA 4.0 or more at Exam. Doubtful GIs.

Next few

TA 3.75 and blowing down to 3.25 at Exam. GIs.

Next few

TA 3.75 BD to F/N at Exam. GIs to VGIs.

Next two or three

TA 3.5 BD to F/N at Exams VGIs.

Finally

TA 2.5 F/N VGIs at the Examiner.

Another pass at the HF finds it F/N and pc can and will attest Dianetics.

That's what you would expect to see if the Auditing was standard, if the case was straightened out of past flubs in the Repair step. Errors such as running unreading items or firefights caused by out TRs or false auditing reports or Dn EP not reached at session end or pc needing ruds put in at session starts would prevent this pattern from happening at the Examiner's. So if the pattern doesn't happen you know the auditing is goofy or something is out which had better be found. One pc for instance had a huge w/h of having a disease and was audited over it for 2 years = auditing over a w/h and PTP = no case gain. Silly pc. But also a very dull C/S not to alert to some outness there and find it. Another pc had a high TA and the fault was just that she never got any auditing at all! So they kept operating on her! Somebody didn't know Dianetics and auditing was for USE.

## HIGH TA AND ILLNESS

Pcs with high TAs feel ill and get ill.

No use to elaborate on that. It's just a fact and is THE fact about pcs who get ill. So maybe you see why this HCOB is important!

## LOW TA AT EXAM

Pcs with low TAs are more or less in apathy.

If it F/N VGIs at session end and is low at Exam (like 1.9) (OR if it went low in session and didn't F/N), then the pc is

- (a) overwhelmed and needs auditing and life repair
- (b) can have been run on a flat or unreading item that invalidated his former win.

Example: Pc listed on an unreading list few sessions later worrying about it and coming to Exam with low TA. Repair is the answer. Low TA pcs need a Life Repair also.

Note: The new Hubbard Consultant Assessment List is now under test at this writing and may become essential as a pre-repair function and if so would be before repair in the chronic somatic list of actions as a pgm.

C/S Checksheets

**EXTERIORIZATION RUNDOWN MUSTS**

(Reference HCOB 22 Mar '70,  
Ext and High TA)

An Exteriorization Intensive must be:

1. RUN ALL IN ONE SESSION.
2. RUN WITHOUT FLUBS.
3. FOLLOWED BY ANOTHER SESSION OF 2-WAY COMM RUN TO F/N COG VGIs.

**ONE SESSION RULE**

When you try to run an Exteriorization Rundown in 2 or more sessions there is a frequent chance of ruds going out between sessions and, of course, they can't be put in until Ext Rundown is complete as it's "Auditing a pc past Exterior".

If a C/S or Auditor wants real trouble just stretch an Ext Rundown over 2 or 3 sessions.

It is very difficult to straighten the resulting mess out. (See HCO B 28 Jul '70, Corrected 9 Aug'70.)

The only reason one would take 2 or 3 sessions to do the rundown is because the pc "doesn't have the time", and so make sure the pc DOES have the next 2 to 5 hours free before starting one.

This rule includes NO BREAKS.

**FLUBLESS**

Auditors who have occasional flubs-Dn failures to flatten chains or run them to chopped EP instead of a correct F/N COG VGIs at basic HAVE NO BUSINESS RUNNING EXT RUNDOWNS.

Flubs in any event are just corny.

They are particularly messy when they occur in the EXT RUNDOWN.

The Ext Rundown is auditing by the book!

(Reference HCO B 20 Feb '70, "Floating Needles and End Phenomena", and the whole modern Standard Dianetics Course including later HCO Bs for it.)

Flubs mar any auditing result. They make a real mess on an Ext Rundown as Review auditing over an Ext if the Rundown is not complete is difficult and results in high TA.

Yet one Franchise invalidated the pc's cog, made the pc do it all in clay, left

chains incomplete and took a week over it! And then wondered why the pc was unhappy !

NO FLUBS!

### FOLLOW WITH 2-WAY COMM

A day or two or a week after the Ext Rundown (not less than a day nor more than a week), an Ext Rundown **MUST BE FOLLOWED BY A TWO-WAY COMM SESSION.**

The reason for this is that there is a cognition delay on almost all cases. The 2-way comm blows off locks, etc and the pc usually gets a big cog and never afterwards worries about Exteriorization.

If the Ext Rundown is done in 2 or 3 sessions, flubbed, not followed by 2-way comm in a later session, the pc can get hung up on the subject.

The Auditor doing 2-way comm must have experience and know-how on 2-way comm. (See HCO B 21 Apr '70, "2-Way Comm C/Ses", HCO B 3 July '70, "C/Sing 2-Way Comm", HCO B 10 July '70, "2-Way Comm—A Class III Action".)

*All 2-way comm sessions go to End Phenomena of an F/N.*

It will be found the subject of Interiorization-Exteriorization usually will still be charged. But it should be checked for read as in all items and subjects used in auditing. The rule is you don't audit things that don't read. Suppress and Inval buttons can be put in to get a read. If you audit things that don't read, the TA is liable to go up.

A nicely done 2-way comm on Interiorization and Exteriorization blows the pc to Present Time and cleans him up nicely.

-----

The Ext Rundown can be done any time it is found the pc has been audited past Exterior. It **HAS** to be run in such a case before any Review or ruds or anything else. So it's dicey—a delicate proposition.

-----

An Exteriorization (or Interiorization same thing) Rundown is about the hottest thing that's come along for some time. It solves, for instance, the total goal of Buddhism. It is the key to immortality. It's pure theta gold.

So respect it by running by the book, exactly, perfectly and to a total win.

*C/S Series 16*

**SESSION GRADING  
WELL DONE,  
DEFINITION OF**

A “well done” to an auditor requires a precise meaning. It is not given by the C/S because an auditor is a friend or because he would be offended if he didn’t get one.

“WELL DONE” GIVEN BY THE C/S FOR A SESSION MEANS THE PC HAD F/N VGIs AT THE EXAMINER IMMEDIATELY AFTER THE SESSION.

This then presupposes that session lines include an Examiner even if it’s a receptionist and it includes the use and understanding of Exam Reports. (See HCO PL 26 Jan ‘70, Issue III, or any rewrite and Exam tech.)

It presupposes the Examiner has a meter to hand and that the pc makes a statement.

Thus, if there are no Exam Reports there can’t be a well done given, eh? True enough. A C/S who C/Ses without Exam Reports done by a different person than the auditor is asking to fly blind and to get auditor “PR” (public relations or brag) and false auditing reports.

No F/N at Exam no well done.

This is harsh as early on pcs often get no F/N at Examiner. BUT IN EVERY CASE THERE ARE CURRENT EARLIER TECH ERRORS ON THE CASE when the F/N doesn’t get from the session to the Examiner. It is also harsh because the failure to get the F/N to the Examiner could be a C/S error! But (see HCO B 24 May ‘70, “Auditor’s Rights”, C/S Series 1), the auditor should not have accepted the C/S.

The C/S could be too heavy, or the case needed a repair first or the process ordered is not part of a proper program.

HOURS SUCCESSFULLY AUDITED INCLUDES ONLY “WELL DONE” OR “VERY WELL DONE” SESSIONS.

**VERY WELL DONES**

An auditor gets a “VERY WELL DONE” when the session by worksheet inspection, Exam Report inspection is:

1. F/N VGIs at Examiner.
2. The auditing is totally flubless and by the book.
3. The whole C/S ordered was done without departure and to the expected result.

**NO MENTION**

A no mention of well done or very well done or anything simply means:

1. F/N did not get to Examiner.
2. No major auditing errors exist in the session.

### FLUNKS

A FLUNK is given when:

1. The F/N did not get to Examiner and didn't occur at session end.
2. Major errors or flubs occurred like no EP, multiple somatic, unflown ruds, etc.
3. The C/S was not followed or completed.
4. Auditor's Rights listed errors occurred.
5. No F/N and BIs at Examiner.

The exact error must be noted on the worksheet and in the next C/S along with the Flunk.

### FLUNK AND RETRAIN

When an auditor does not improve but continues to get NO MENTIONS and FLUNKS, he requires retraining.

Such retraining must include:

1. Cleaning up all Misunderstoods of tech.
2. Cleaning up willingness to audit.
3. Cleaning up overts on people and pcs.
4. Examination by inspection of TRs.
5. Starrating material missed or not grasped as per session troubles.

### INVALIDATION

Invalidative remarks should not be made by a C/S. Experience has shown they do no good and also do harm.

But there are 2 methods of invalidating an auditor's auditing:

1. Let him go on flubbing and getting no results.
2. Direct invalidation of his intentions or future or potential.

In 1, nearly all auditors who stop auditing never really knew how to audit in the first place or have gross misunderstands or have accumulated intentional or unintentional overts on pcs or have been too harshly invalidated. When they don't really grasp the ease and simplicity of auditing they get into other troubles.

A really well trained, smooth auditor never gets any real charge on his case on the subject of auditing.

When you let an auditor flub, the whole subject gets invalidated and he loses his value because he goes into doubt. This can be said with complete confidence today as the whole of Dianetics and Scientology is there and it works very very well indeed IF IT IS USED AND IF THE C/SING AND AUDITING IS CORRECT AND FLUBLESS.

## AUDITOR HANDLING

The C/S is really not just the Case Supervisor, he is also the auditors' handler.

Like a boxer's trainer or a star's director, the C/S handles his guys. They are all a bit different, auditors. There are prima donnas and meek mousey ones and steady-on ones and all kinds.

They get the credit for the sessions from the pcs most often. They really don't like not to be C/Sed.

And they VALUE the well dones and the very well dones and they flinch at the flunks. And the honest ones know all about it before they turn it in. And some don't mention the flub but think you're a fool if you miss it.

So it's important to have a constant in assigning what the auditor is given for the session.

WELL DONE AUDITING HOURS are all that's valid for a stat.

So a C/S must be very exact and correct in his determination of well done, very well done, no mention and (forlornly) a flunk.

This should remove argument from the matter and bring certainty.

Class VIII

*C/S Series 17*

**INCOMPLETE CASES**

OVERSHOOTING and UNDERSHOOTING are two very defeating errors in C/Sing.

OVERSHOOTING would be defined as going beyond a completion or completing a completion.

In such a circumstance the pc for instance reaches an F/N VGI point in Review and *then* the C/S decides to handle the case in Review.

Example: 2 or 3 sessions have been goofed. Review patches them all up to F/N VGIs all okay. Then a C/S C/Ses to Review the case to repair the errors. The case feels invalidated, caves in, needs further repair.

I have seen more than one folder where this cycle has been done three times! In one of these an action had to be taken to patch up a goof so the pc could go back onto a grade. The goof was patched up to F/N VGIs. The correct action would have been to put the pc back on the incomplete grade. But no, a *new* Review cycle was laid out, audited, pc caved in. A *new* cycle to repair this was entered in upon. It was successful. The pc got F/N VGIs at Exam. The C/S ordered a *new* Review of the case, the case caved in, was then patched up and finally got an F/N VGIs. And was ordered to be reviewed .....

Studying what was wrong with the cases I found the above. I ordered an assessment of a list, got "unnecessary actions" and *got* the *cases* back onto *the incomplete cycle of the grade* and they did fine.

This can be done with a grade. It was the fault of early Power.

UNDERSHOOTING would be to leave a cycle incomplete and go off to something else.

Example: Case sent to Review or given a Review session to repair goofs. One goof is handled but there are three to handle. Case returned to the grade before being set up.

This can be so bad that the case never made *any* grade at all.

The modern Repair (Progress) Pgm as outlined in this C/S series takes care of this.

**QUICKIE GRADES AND ACTIONS**

Quickie grades left us with a totality of incomplete cases.

You look over a folder and you see the pc at "OT IV". The folder is *thick*. He has had lots of auditing. He has aches and pains, problems, makes people wrong.

Probably he could be audited for another thousand hours without ever coming right! Unless there was an orderly program to complete his case level by level on the Class and Grade Chart.

It would take a Repair (Progress) Pgm and then an Advance Pgm that included each grade to completion.

He would have to have his ruds put in, any flubs at once handled session to session, just to complete Dianetics. Finally, his chronic somatics gone, he would F/N on the Health Form and that would complete his Dianetics with his attestation.

And so on right on up the Grades, each one done fully to the voluntary declare for that grade as per the Grade and Class Chart.

In doing Dianetics, Grades, etc you still have to get in ruds and handle the case so it is set up for each major action and repair the flubs at once when they occur.

While completing an action you have to keep the case running, not audit over ARC Brks, PTPs, W/Hs and flubs.

The best answer is NO FLUBS. But when they occur they must be repaired in 24 hours.

When repaired (and not re-repaired and re-re-repaired with overshoots) you get the case back on the same cycle that was incomplete.

#### COMPLETE CASES

A case is not complete unless the lowest incomplete Grade Chart action is complete and then each completed in turn on up.

As you look over current folders who have had years of auditing, some of them you generally don't find *any* completed actions and you do find overshoots on Reviews.

It is not the least bit hard to handle these cases. This C/S series shows you how. Auditing and Life Repairs (Progress), Advance Pgm completing fully each incomplete grade.

The C/S is blessed who follows these two rules:

RECOGNIZE A COMPLETION OF AN ACTION AND END IT OFF.

RECOGNIZE AN INCOMPLETE ACTION AND COMPLETE IT.

Don't overshoot, don't undershoot.

Follow the rules.

HCO BULLETIN OF 28 AUGUST 1970RA  
REVISED 30 MAY 1973  
REVISED 9 OCTOBER 1974

Remimeo

**HC OUT-POINT PLUS-POINT LISTS RA**

(Reference Data Series HCO PLs.)

(Revised to include additional  
out-points issued since original HCO B.)

The following lists are used:

- (a) To assess for a read.
- (b) Clear up with 2-way comm.

PROCEDURE

One assesses the Out-Point List and goes as far as a good read. One clears that up to F/N VGIs (very good indicators). He then leaves off that list for now.

One then takes up the Plus-Point List. One assesses it as far as one needs to go to get a good read. One then takes that up with the preclear with 2-way comm until there is an F/N and VGIs.

One now resumes where he left off on the Out-Point List and assesses until he gets a new good read. He takes that up with 2-way comm until he gets an F/N VGIs.

One now takes up the Plus-Point List where he left off until he gets a good read. He takes that up with 2-way comm until he gets an F/N VGIs.

In this way the lists are alternated.

They can be done over and over.

-----

These are the elements of illogic and insanity on the Out-Point List. They are the elements of logic and sanity on the Plus-Point List.

-----

A meter *must* be used.

-----

It is done exactly by the Auditor's Code. Never tell the person what he thinks. Never invalidate what he has said. Just acknowledge and let him/her tell you about it.

-----

The reads of course disclose things which have charge on them.

*Take a good read.*

*2-way comm on: “Any example of \_\_\_\_\_ in your life?” to F/N.*

*Assess again.*

*Same process.*

*Continue as long as you have TA on it.*

*Stop with any win.*

*Can be done to full F/Ning assessment on both lists.*

The list items can be used in 2 ways.

- A. They can be called off straight.
- B. They can be given a prior statement.

In A one would say, “Knowing something is right \_\_\_\_\_” noting read or lack of it. “Knowing a datum is correct \_\_\_\_\_” noting read.

In B one would be directing the person’s attention to some sphere of action like “In your work knowing something is right” noting read, etc. One would go on using this same prior statement on all the assessment until the whole subject, “work”, was cleaned up. That would be a work consultation. Or one could say, for marriage problems, “In marriage knowing something is right” “In marriage knowing a datum is correct \_\_\_\_\_.”

One uses the same subject for both Out-Point and Plus-Point Lists until that one subject is cleaned up.

**ALWAYS FINISH OFF WITH THE PLUS-POINT LIST.**

-----  
**OUT-POINT LIST**

1. Omitted Fact \_\_\_\_\_
2. Omitted Terminal \_\_\_\_\_
3. Omitted Data \_\_\_\_\_
4. Omitted Location \_\_\_\_\_
5. Omitted Matter \_\_\_\_\_
6. Omitted Energy \_\_\_\_\_
7. Omitted Space \_\_\_\_\_
8. Omitted Form \_\_\_\_\_
9. Missing Scene \_\_\_\_\_
10. Missing Person \_\_\_\_\_
11. Changed Sequence of Facts \_\_\_\_\_
12. Changed Sequence of Data \_\_\_\_\_
13. Changed Sequence of Particles \_\_\_\_\_
14. Changed Sequence of Locations \_\_\_\_\_
15. Changed Sequence of Objects \_\_\_\_\_
16. Changed Sequence of Spaces \_\_\_\_\_

17. Changed Sequence of Forms—————
18. Twisted Ideas—————
19. Dropped Out Time—————

### EXAMINER'S 24 HOUR RULE

A flubbed session is visible at the Examiner.

Regardless of the worksheet or report, any session ending with Bad Indicators, above 3.0 TA or below 2.0 with no F/N or an ARC Break needle, a Stage 4 needle, a rock slam, a stuck needle, still or a dirty needle independent of TA position indicates a non-optimum session.

When an Examiner sees any one of these following four manifestations in a pc after a session:

1. Non-optimum TA position (above 3, below 2).
2. Non-optimum needle (ARC Brk needle, Stage 4, rock slam, stuck, still or dirty).
3. Bad Indicators as per HCOB on BIs.
4. Non-optimum statement from pc, critical, hostile, belittling, sad, etc.

The Examiner applies the 24 Hour Rule.

This Rule is:

**ANY GOOFED SESSION MUST BE REPAIRED WITHIN 24 HOURS.**

The reason for the rule is that occasionally, particularly when a person has had a sickly life, physical illness will key in after a session goof.

Such are purely C/S or auditing flubs.

A C/S flub consists of gross violations of case programming.

Auditing flubs consist of corny things like running a Rud but no F/N, failure to flatten a Chain, bad TRs, auditing over out-ruds, chopping the pc before full End Phenomena is attained.

Evaluation or even chatter after the session can upset a pc that ended session on F/N VGIs.

IN ALL CASES as per I to 4 above the EXAMINER paper clips a RED CARD on the outside of the FRONT COVER OF THE FOLDER and marks on it THE DATE AND HOUR of the Examination as well as places the EXAM REPORT in the folder, the Examiner logs it in his log in RED BALLPOINT.

The EXAMINER must see that the C/S receives this folder as soon as possible.

The C/S gives total priority to C/Sing it and it is given priority in auditing that C/S.

The pc may even be asked to wait if it can be done in the next hour or two.

**THE FASTER THE FLUBBED SESSION IS REPAIRED THE EASIER IT IS TO REPAIR.**

Sessions which are left unrepaired for more than 24 hours occasionally find the pc physically ill. If repaired quickly or at least within 24 hours no physical reaction results.

The illness will be a key-in of illnesses the pc often had before any auditing. All the flubbed auditing does is key it in, it itself makes no one ill.

If you check folders of ill pcs you will find usually a long period of no-auditing or a flubbed session a few days before the onset of the illness.

Pcs who have not been properly programmed but have been audited on random this or that instead of Progress, Advance and Class and Grade Chart to fully completed grades are the most likely to become ill.

Penalty for violation of the 24 Hour Rule is loss of a day's stats for the division, the day being that day when the unrepaired flub occurred and subtracted at the time the flub is found.

If a flubbed session is found hidden and not disclosed the division loses all its stats for that week.

This action is important.

If C/Ses and auditors made no flubs whatever they would really be getting top results on pcs.

**CHRONIC SOMATIC,  
DIANETIC HANDLING OF**

The full Dianetic handling of the pc who has a chronic somatic is given in the HCO B C/S Series No. 15, of 16 August 1970, "*Getting the F/N to Examiner*".

This HCO B calls the fact to attention. It could get overlooked or be hard to find again as the title of HCO B 16 August does not indicate it directly.

*Study Series 1*

**STUDY DEFINITIONS**

The following definitions are applicable to Scientology study technology:

**CHECKSHEET:** A list of materials, often divided into sections, that give the theory and practical steps which, when completed, give one a study completion. The items are selected to add up to the required knowledge of the subject. They are arranged in the sequence necessary to a gradient of increasing knowledge of the subject. After each item there is a place for the initial of the student or the person checking the student out. When the checksheet is fully initialed it is complete, meaning the student may now take an exam and be granted the award for completion. Some checksheets are required to be gone through twice before completion is granted.

**CHECKLIST:** A list of actions or inspections to ready an activity or machinery or object for use or estimate the needful repairs or corrections. This is erroneously sometimes called a "checksheet", but that word is reserved for study steps.

**CHECKOUT:** The action of verifying a student's knowledge of an item given on a checksheet.

**TWIN CHECKOUT:** When two students are paired they check each other out. This is different than a Supervisor checkout.

**SUPERVISOR CHECKOUT:** A checkout done by the Supervisor of a course or his assistants.

**THEORY:** The data part of a course where the data as in books, tapes and manuals is given.

**PRACTICAL:** The drills which permit the student to associate and coordinate theory with the actual items and objects to which the theory applies. Practical is *application* of what one knows to what one is being taught to understand, handle or control.

**TWIN:** The study partner with whom one is paired. Two students studying the same subject who are paired to check out or help each other are said to be "Twinned".

**TWO-WAY COMM:** The precise technology of a process used to clarify data with another for the other. It is not chatter. It is governed by the rules of auditing. It is used by Supervisors to clear up blocks to a person's progress in study, on post, in life or in auditing. It is governed by the communication cycle as discovered in Scientology.

**METER CHECK:** The action of checking the reaction of a student to subject matter, words or other things, isolating blocks to study, interpersonal relations or life. It is done with an E-Meter.

**COURSE SUPERVISOR:** The instructor in charge of a course and its students.

**COURSE ADMINISTRATOR:** The course staff member in charge of the course materials and records.

**TECH SERVICES:** The activity which enrolls, routes, schedules, distributes the mail of and assists the housing of students.

**STARRATE CHECKOUT:** A very exact checkout which verifies the full and minute knowledge of the student of a portion of study materials and tests his full understanding of the data and ability to apply it.

**ZERO RATE:** Material which is only checked out on the basis of general understanding.

**BLOW:** Unauthorized departure from an area, usually caused by misunderstood data or overts.

**LEAVE OF ABSENCE:** An authorized period of absence from a course granted in writing by a Course Supervisor and entered in the student's study folder.

**ROLL BOOK:** The master record of a course giving the student's name, local and permanent address and the date of enrollment and departure or completion.

**QUAL:** The Qualifications Division (Division V of an org) where the student is examined and where he may receive cramming or special assistance and where he is awarded completions and certificates and where his qualifications as attained on courses or in auditing are made a permanent record.

**CRAMMING:** A section in the Qualifications Div where a student is given high pressure instruction at his own cost after being found slow in study or when failing his exams.

**PROGRAMMING:** The overall planning for a person of the courses, auditing and study he should follow for the next extended time period.

**STUDENT CONSULTATION:** The personal handling of student problems or progress by a qualified consultant.

**HC: A HUBBARD CONSULTANT** is skilled in testing, two-way comm, consultation, programming and interpersonal relations. This is the certificate especially awarded to persons trained to handle personnel, students and staff. These technologies and special training were developed to apply Scientology auditing skills to the field of administration especially. An HC is not an auditor but a consultant. HC is a requisite for Course Supervisors and Student Consultants.

**SCHEDULING:** The hours of a course or the designation of certain times for auditing.

**OUT:** Things which should be there and aren't or should be done and aren't are said to be "Out", i.e. "Enrollment Books are out."

**IN:** Things which should be there and are or should be done and are, are said to be "In", i.e. "We got scheduling in."

**PACK:** A pack is a collection of written materials which match a checksheet. It is variously constituted—such as loose leaf or a cardboard folder or bulletins in a cover stapled together. A pack does not necessarily include a booklet or hardcover book that may be called for as part of a checksheet.

**MANUAL:** A booklet of instruction for a certain object or procedure or practice.

**POINTS:** The arbitrary assignment of a credit value to a part of study materials. "One page equals one point." "That drill is worth 25 points."

**POINT SYSTEM:** The system of assigning and counting up points for studies and drills that give the progress of a student and measure his speed of study. They are kept track of by the student and Course Administrator and added up each week as the student's statistic. The statistic of the course is the combined study points of the class.

**COMPLETION:** A "completion" is the completing of a specific course or an auditing grade, meaning it has been started, worked through and has successfully ended with an award in Qual.

**SUCCESS STORY:** The statement of benefit or gains or wins made by a student or a preclear or pre-OT to the Success Officer or someone holding that post in an org.

*C/S Series 19*

**FOLDER ERROR SUMMARIES**

A folder error summary, (FES) is usually done by a student especially an interne well taught, learning his practical tech or by an auditor especially hired to do FESs.

It requires many hours to put a folder in sequence and then to list all errors in it.

It should NEVER be done by a working C/S who is responsible for an org's delivery flow.

**COST**

It is costly to do an FES and where possible the cost, duly consulting the pc, should be borne by the pc as a special service.

It can be directly paid for or simply deducted from auditing hours purchased.

**NECESSITY**

A good C/S looking over a folder usually goes back to the last time the pc was doing really well and notes actions necessary from that point.

Programs of a lengthily audited case (fat folder) usually cover LIB, L3A, L4A lists and usually take up 2-way comm on earliest sessions and earliest auditing ever given (for auditors). Thus an FES is not vital in all cases.

I like to have an FES done so I can compare areas covered by the pc in 2-way comm and be sure they come up in subsequent repair sessions.

Also where I can see a lot of bad lists existed, I want to be able to assure they get handled.

Thus an FES is *useful*.

On Flag, an FES is carefully done so as to detect areas of out tech in the world. This is called "the Flub Catch System".

Auditors and C/Ses so detected are sent to cramming in their areas to smooth out their tech knowledge or TRs, all to improve delivery of tech.

Flub Catch makes an FES vital on Flag.

Higher orgs have a similar interest in an FES.

**HALTING DELIVERY**

To halt delivery because of a missing folder or to do a long time-consuming FES is of course contrary to the need to deliver auditing and can result in a no-auditing situation worse than a Blind Repair.

## BLIND REPAIR

When no FES is done, one is doing a Blind Repair. The Progress Pgm and Advance Pgm may have holes in them.

However there are only five areas of danger:

1. Flubbed lists.
2. A bad series of evaluative sessions should be detected and directly handled.
3. Flubbed Power.
4. Extended or flubbed Interiorization.
5. Missed grades.

If a C/S doesn't know about these it may be that the case will not properly repair and he also does not know what Advance Program to do.

But as these *are* specific areas they can be done on a Blind Repair by making them into a list and getting them meter checked.

Example: Pc has lost his folder. Has been audited for several years on and off. One can clear the idea of lists "Someone written down items you say to a question" and see if it gets a read and if so do L4A Method Three "On Lists". One can ask if any auditor ever told the pc what to think and if that reads 2-way comm or prepcheck those sessions by that auditor. Power can be checked by rehab unless the person has gone Clear on the Clearing Course since at which time Power will not need repair. The commands of Interiorization Rundown can be checked with 2-way comm or rehabbed. What won't rehab you run. Missed Grades can be checked, rehabbed or run including any Expanded Grades. The pc usually recognizes the process if it has been run.

Thus one can wander through a Blind Repair without fouling up the case and add to it the inevitable actions common to all Progress Pgms.

## SUMMARY

An FES has value. It is valuable to the pc to get one done. It is a long and extensive action. It can be sold directly or removed from hours bought. It is of vast interest in training auditors and should be done by already trained internes or specially hired auditors. It is NOT done by a C/S and it is NOT used to halt all delivery of auditing and jam up the C/S lines. A lost or delayed folder is not a barrier to a *very* well trained C/S who has starrated a C/S Course. An FES is very useful and tends to eradicate any mystery for a C/S.

*C/S Series 20*

**PERSISTENT F/N**

A FLOATING NEEDLE can *persist*.

This fact tells you at once why you cannot do three major actions in a row in the same ten minutes.

This was the bug behind "Quickie Grades" (0 to IV in one session. This also occurred in Power when it was run all in one day). The auditor would attain a bona fide full dial F/N. The pc was still cogning, still in a big win. The auditor would "clear the next process command", he would see an F/N. He would "clear the next process command", and see an F/N.

BUT IT WAS THE SAME F/N!

Result was that processes 2 and 3 WERE NEVER RUN ON THE CASE.

This is really what is meant by "Quickie Grades".

In 1958 we got real Releases. You could not kill the F/N for *days*, weeks.

Several processes had this effect. Today's real Clear also goes this way. You couldn't kill the F/N with an axe.

By running a lot of Level Zero processes, for instance, you can get a real swinging unkillable F/N.

It not only gets to the Examiner, it comes in at the start of the next day's session!

Now if in one session you ran all of Level Zero and went on up to Level One, you would just be *auditing a persistent F/N*. The pc would get no benefit at all from Level One. He's still going "Wow" on Level Zero.

If you ran Level Zero with one process that got a big wide floating F/N and then "ran" Level I, II, III and IV, you would have just a Level Zero Release. The pc's bank was nowhere to be found. So next week he has problems (Level I) or a Service Fac (Level IV) and he is only a Grade Zero yet it says right there in Certs and Awards log he's a Grade IV. So now we have a "Grade IV" who has Level I, II, III and IV troubles!

A session that tries to go beyond a big dial-wide drifting floating F/N only distracts the pc from his win. BIG WIN.

Any *big win* (F/N dial-wide, Cog, VGIs) gives you this kind of persistent F/N.

You at least have to let it go until tomorrow and let the pc have his win.

That is what is meant by letting the pc *have* his win. When you get one of these dial-wide F/Ns, Cog, VGIs WOW you may as well pack it up for the day.

## GRADUAL WIDENING

In running a Dianetic chain to basic in triple you will sometimes see in one session a half dial on Flow 1, 3/4 of a dial on Flow 2, a full dial on Flow 3.

Or you may have 4 subjects to two-way comm or prepcheck in one session. First action 1/3 dial F/N. Then no F/N, TA up. Second action 1/2 dial F/N. Then no F/N. Third action 3/4 dial F/N. Fourth action full dial-wide floating swinging idling F/N.

You will also notice in the same session-long time for 1st action, shorter, shorter, shorter for the next three actions.

Now you have an F/N that anything you try to clear and run will just F/N WITHOUT AFFECTING THE CASE AT ALL.

If you audit past that you are wasting your time and processes.

You have hit an “unkillable F/N”, properly called a persistent F/N. It’s persistent at least for that day. Do any more and it’s wasted.

If an auditor has never seen this he had better get his TR0 bullbait flat for 2 hours at one unflunked go and his other TRs in and drill out his flubs. For that’s what’s supposed to happen.

F/Ns on pcs audited up to (for that session) a persistent F/N always get to the Examiner.

If you only have a “small F/N” it won’t get to the Examiner. However, on some pcs maybe that’s good enough. May take him several sessions, each one getting a final session F/N a bit wider. Then he gets an F/N that gets to the Examiner. After that, well audited on a continuing basis, the F/N lasts longer and longer.

One day the pc comes into session with a dial-wide floating swinging F/N and anything you say or do does nothing whatever to disturb that F/N.

It’s a real Release man. It may last weeks, months, years.

Tell him to come back when he feels he needs some auditing and chalk up the remaining hours (if sold by the hour) as undelivered. Or if sold by result, chalk up the result.

If the F/N is truly persistent he will have no objections. If it isn’t, he *will* object. So have him come back tomorrow and carry on whatever you were doing.

## SUMMARY

The technical bug back of Quickie Grades or Quickie Power was the Persistent F/N.

This is not to be confused with a Stage 4 (sweep, stick, sweep, stick) or an ARC Broke needle (pc Bad Indicators while F/Ning).

This is not to be used to refuse all further auditing to a pc.

It is to be used to determine when to end a series of major actions in a session.

**COURSE SUPERVISOR CORRECTIONS**

When a Course Supervisor sees a student doping off, looking upset or blowing he acts to clear the matter up with the student with 2 way comm.

Two way comm is actually a process. It is not just talking to someone.

There is a two way comm checksheet. It can be done with or without a meter.

When there is nothing wrong and the student is going along well, the Course Supervisor does not act to correct.

The comparable action in auditing would be: when the pc is doing all right you let him carry on with regular auditing; when he isn't doing all right you take a corrective action such as a Review. It is a serious error in auditing to correct a pc who needs no correction.

In Course Supervision it is a serious error to correct a student who is doing all right.

For example, one sees a student busily checking out another and they are both doing fine. To interrupt or correct these two students would be a supervision error.

Reversely, to see a student frowning or a coaching session bugged and NOT get in and straighten it out would be a supervisor error.

INTEREST

A Supervisor must show that he is interested in the progress of his students.

This comes about by noting their advances and achievements or helping them over rough spots.

Interest is vital. It does not include interruption.

CONCLUSION

The Course Supervisor assists a student when and as it is visible by stats or expression or demeanor that the student needs assistance.

The Course Supervisor does not interrupt a student's progress or correct when there is nothing to correct.

The action of the Course Supervisor is two way comm. This is a process. When the student cannot locate what is wrong or what he passed over, a meter is used with the two way comm.

Violations of this technology of instruction give one slower students and greatly reduced statistics and completions.

**AUDITOR'S STATS ON F/N VGI**

An auditor's stats are computed on the Examiner's report. The auditor is credited for his stat on hours that F/N VGI at the Examiner's.

In Dianetic Auditing it often occurs that the first few sessions F/N VGI at the End of Session but do not F/N VGI at the Examiner's, the TA being high at Examiner's. This situation gradually works off and soon the well audited pc attains F/N VGIs at both the end of session and also at the Examiner's. This shows the progress of the case. This is also true of Scientology auditing.

Therefore WHEN AN AUDITOR HAS SEVERAL SESSIONS THAT F/N VGI AT SESSION END BUT NOT AT EXAMINER'S ON THE SAME PC, AND WHEN THE PC THEN THROUGH GOOD FLUBLESS AUDITING THEN F/N VGIs AT THE EXAMINER'S THE AUDITOR MAY CREDIT THOSE PREVIOUS HOURS TO HIS STAT.

Example: Pc has 7 sessions that F/N at End of Session but do not F/N at the Examiner's. Finally the pc F/Ns VGIs at the Examiner on the 8th session. The auditor may credit the earlier time (7 sessions) to his stat PROVIDING THERE HAS BEEN NO FLUB.

The situation where the auditor was credited only with F/N VGIs at the Examiner, the phenomenon that the pc would F/N VGI at Examiner *eventually* if well audited was not taken into account and caused some auditors to avoid auditing pcs who did not F/N easily.

**FES CREDIT**

An auditor may also credit on his stat 1/2 hour for every hour spent doing Folder Error Summaries. A C/S should not be doing FESes and they are best done by an interne C/S In Training or an Advanced student as they are *very instructive*.

There are times when a pc backlog occurs due to no FESes being done. They take a long time very often as they involve putting the folder in sequence and spotting and listing every auditing error in the folder. Thus it is in such cases only fair to give some stat credit if an auditor has to do them.

## OBNOSIS AND THE TONE SCALE

The following is extracted from the Advanced Clinical Course Preparatory Manual for Advanced Students in Scientology. It was published in 1957.

### OBNOSIS AND THE TONE SCALE

Somewhere in your possession, in your desk, or tucked into a bookcase, are two large pieces of paper. They are covered closely with data invaluable to an Auditor. You have pored over them, and quoted from them many, many times. They are, of course, the Chart of Human Evaluation and the Chart of Attitudes. The data in them is a large part of an Auditor's stock in trade, and every Auditor in the world is, in some degree, familiar with them.

But how about getting the data off the charts and applying it to life, to some real person? It's not hard to do casually, for some acute tone. "Joe was on a 1.5 kick last night." Sure, he turned red as a beet, and threw a book at your head. Simple. Mary breaks into sobs, and grabs for the Kleenex. Couple of Auditors on the scene exchange looks, nod sagely. "Hmm. Grief!" But how about chronic tone, with that thin, shiny veneer of social tone slicked over it? How sharp and how certain are you about that? Now, take a pc that you are familiar with. What, exactly, is his chronic tone? If you don't know, you had better read on. If you do, read on, and learn more about it.

The title of this article starts with an odd word: obnosis. It's been put together from the phrase, "observing the obvious". The art of observing the obvious is strenuously neglected in our society at this time. Pity. It's the only way you ever see anything; you observe the obvious. You look at the isness of something, at what is actually there. Fortunately for us, the ability to obnose is not in any sense "inborn" or mystical. But it is being taught that way by people outside of Scientology.

How do you teach somebody to see what is there? Well, you put up something for him to look at, and have him tell you what he sees. That is what is done in an ACC class, the earlier in the course, the better. A student is asked to stand up in the front of the classroom and be looked at by the rest of the students. An instructor stands by, and keeps asking, "What do you see?" The first responses run about like this: "Well, I can see he's had a lot of experience." "Oh, can you? Can you really see his experience? What do you see there?" "Well, I can tell from the wrinkles around his eyes and mouth that he's had lots of experience." "All right, but what do you see?" "Oh, I get you. I see wrinkles around his eyes and mouth." "Good!" The instructor accepts nothing that isn't plainly visible. A student starts to catch on and says, "Well, I can really see he's got ears." "All right, but from where you're sitting can you see both ears right now as you're looking at him?" "Well, no." "Okay. What do you see?" "I see he's got a left ear." "Fine!" No conjectures, no tacit assumptions will do. Nor are the students permitted to wander in the bank. For example, "He's got good posture." "Good posture by comparison with what?" "Well, he's standing straighter than most people I've seen." "Are they here now?" "Well, no, but I've got pictures of them." "Come on. Good posture in relation to what, that you can see right now." "Well, he's standing straighter than you are. You're a little slouched." "Right this minute?" "Yes." "Very

good.” You see what the goal of this is? It is to get a student to the point where he can look at another person, or an object, and see exactly what is there. Not a deduction of what might be there from what he does see there. Not something the bank says ought to go in company with what is there. Just what is there, visible and plain to the eye. It’s so simple, it hurts.

Along with this practice in observing the obvious about people, the students receive a lot of information about particular physical and verbal indications of tone level. Things very easy to see and hear, by looking at a person’s body and listening to his words. “Thetan-watching” has no part in obnosis. Look at the terminal, the body, and listen to what’s coming out of it. You don’t want to get mystical about this, and start relying on “intuition”. Just look at what’s there.

As examples: You can get a good tip on chronic tone from what a person does with his eyes. At apathy, he will give the appearance of looking fixedly, for minutes on end, at a particular object. Only thing is, he doesn’t see it. He isn’t aware of the object at all. If you dropped a bag over his head, the focus of his eyes would probably remain the same. Moving up to grief, the person does look “downcast”. A person in chronic grief tends to focus his eyes down in the direction of the floor a good bit. In the lower ranges of grief, his attention will be fairly fixed, as in apathy. As he starts moving up into the fear band, you get the focus shifting around, but still directed downward. At fear itself, the very obvious characteristic is that the person can’t look at you. Terminals are too dangerous to look at. He’s supposedly talking to you, but he’s looking over in left field. Then he glances at your feet briefly, then over your head (you get the impression a plane’s passing over), but now he’s looking back over his shoulder. Flick, flick, flick. In short, he’ll look anywhere but at you. Then, in the lower band of anger, he will look away from you, deliberately. You know, he looks *away* from you; it’s an overt communication break. A little further up the line, and he’ll look directly at you all right, but not very pleasantly. He wants to locate you—as a target. Then, at boredom, you get the eyes wandering around again, but not frantically as in fear. Also, he won’t be avoiding looking at you. He’ll include you among the things he looks at.

Equipped with data of this sort, and having gained some proficiency in looking at the isness of people, the ACC students are sent out into the public to talk to strangers and to spot them on the tone scale. Usually, but only as a slight crutch in approaching people, they are given a series of questions to ask each person, and a clipboard for jotting down the answers, notes, etc. They are public-opinion poll-takers from the Hubbard Research Foundation. The real purpose of their talking to people at all is to spot them on the tone scale, chronic tone and social tone. They are given questions calculated to produce lags and break through social machinery, so that the chronic tone juts out. Here are some sample questions, actually used: “What’s the most obvious thing about me?” “When was the last time you had your hair cut?” “Do you think people do as much work now as they did fifty years ago?” At first, the students merely spot the tone of the person they are interviewing—and many and various are the adventures they have while doing this! Later, as they gain some assurance about stopping strangers and plying them with questions, these instructions are added: “Interview at least 15 people. With the first five, match their tone, as soon as you’ve spotted it. The next five, you drop below their chronic tone, and see what happens. For the last five, put on a higher tone than theirs.”

What does an ACC student gain from these exercises? A willingness to communicate with anyone, for one thing. To begin with, students are highly selective about the sort of people they stop. Only old ladies. No one who looks angry. Or only people who look clean. Finally, they just stop the next person who comes along, even though he looks leprous and armed to the teeth. Confrontingness has come ‘way up, and he’s just somebody else to talk to. They become willing to pinpoint a person on the scale, without shilly-shallying. They say, “He’s a chronic 1.1. Social tone 3.5, but real phony.” That’s the way it is, and they can see it. They also become quite gifted and flexible at assuming tones at will, and putting them across convincingly. Very useful in many situations, and lots of fun to do. They grow adept at punching through a comm lag in an informal situation. At sorting out apparencies from realities. The rise in

certainty of communication, and in ease and relaxation of manner while handling people, in the students who have been run through this mill, is something which must be seen or experienced to be believed. The one most often repeated request in every ACC Unit is: "Can't we please have some more obnosis this week? We haven't had enough of it yet." (This statement is very funny to the ACC instructors, because these same students said at the beginning, "If you make me go out there, I'll walk out on the course.") Obnosis is quite important, and should be learned as thoroughly as possible by all Scientologists.

# SCIENTOLOGY 0-8 The Book of Basics

by  
L. Ron Hubbard

**Published November 1970**

Scientology 0-8 is a compilation of the fundamental philosophic materials and technical basics of Scientology.

After some of L. Ron Hubbard's most inspiring statements of his purpose and of his development of Scientology, come the Axioms of Scientology, together with the related Factors, Prelogics and a treatise on Consideration and Mechanics.

Next come the Codes, all together; then the Dianetic Axioms, showing the evolution from the Primary Axioms of *The Original Thesis*, through the Axioms of *Dianetics: The Modern Science of Mental Health*, to the Logics and Dianetic Axioms in their final version (December, 1951).

There is a list of fifty-five human perceptions which were researched by Ron in 1951.

The "Book of Scales," aside from being valuable data, makes for absorbing browsing—for example, the three-page Effect Scale, the PreHavingness Scale, the Pan-Determinism Scale, and many others. And there are the Axioms of Standard Operating Procedure 8-C.

This is an essential handbook for every Scientologist.

160 pages, hardcover with dust jacket, 27 scales and tables, glossary. Available from your nearest Scientology Organization or Mission, or direct from the publishers: Scientology Publications Organization, Jernbanegade 6, 1608 Copenhagen V, Denmark; or Church of Scientology Publications Organization U.S., 2723 West Temple Street, Los Angeles, California, 90026, U.S.A.

*C/S Series 21*

**C/S RESPONSIBILITY FOR TRAINING**

The C/S is fully and entirely responsible for the ability of his auditors to audit. This has been true for 20 years but it gets neglected. This neglect gives us (a) Flubby Auditing (b) Fad tech.

If auditing is flubby it is the C/S who is responsible. In the first place he permitted bad course training without screaming. In the second place he does not persuade or force auditors to correct their tech in cramming after flubs.

Since flubby auditing is the primary reason for no results, an area where tech is bad tends to ride fads or grab "the newest and latest" and hope it will crack cases whereas doing the usual without flubs is what cracks the cases.

If I find an auditor whose sessions I am C/Sing has failed to flatten a chain, I assume not that the pc is difficult but that the auditor does not know about (1) Only running items that read, (2) Multiple somatics, (3) Narrative chains and that his TRs are bad. I spot what it is from the session worksheet and say what it is and order the auditor to cramming (or to be crammed if there is no cramming) on the materials *and* on TRs always.

I cannot C/S with flubby auditors. The pile of C/S folders grows. Any review has to be reviewed and my C/Ses just aren't getting done. If auditors I am C/Sing for are green I can count on a 4+ times increase in my C/Sing time. If my auditors are flubby C/Sing that should require 1<sup>1</sup>/<sub>2</sub> hours takes 6<sup>1</sup>/<sub>2</sub> hours. This is by actual timing.

I have no objection to working with green or newly trained auditors. BUT IF I DO I RETRAIN THEM.

The C/S who accepts an auditor from any course as a trained auditor is an optimist.

There are three *training* stages.

- A. Course Study, theory and practical.
- B. Student Auditing.
- C. Professional Auditing.

The C/S has to do with C. When A and B are very poor the job at C is much harder so the C/S should call it forcefully to attention of Course Supervisors. And *then* get a fast retrain going under himself.

Retraining is an inevitable part of a C/S's job. No matter how good the course may have been the actual practice of auditing gives the new auditor different importance values. Also his hat has changed from a student hat to a real auditor's hat.

As a C/S works with an auditor he trains him. He also may order the new auditor audited.

Essentially the C/S has to shift the new auditor's hat from a "What's it say?" to a "Now I do."

With a whole green crew of auditors I give as a C/S a daily auditors' conference. I make sure my Tech Services is on the ball so auditors get in 5 or 6 hours in 5 or 6 hours, not in 10 or 12 hours while they wait for pcs or go find them. That gives them auditor admin and study time. Then I can have a conference. This conference does not violate any ivory tower as I don't C/S on their data of pcs. I find their questions and get them answered and I give them the reasons behind certain C/Ses.

Then daily daily daily I meet any flub with an order to cramming on the material flubbed and on TRs. And I keep their overts pulled.

A green auditor with me as a C/S has a very arduous time of it. There is no invalidation. Quite the contrary. The message is **YOU CAN AUDIT. YOU CAN GET RESULTS. GET WISED UP AND GET ON WITH IT.**

One flub, one retrain in cramming.

A lot of auditors are around who learned to audit with me as a C/S after their training. In the majority of cases they became fantastic auditors. In some few cases they went elsewhere before they could be fully trained.

The magic of it all is simply: 1 flub, 1 retrain in cramming on that point.

Mostly I didn't even pull them off the pc.

The fuzzy muzzy state of most graduated students needs handling. It is handled by the C/S.

The object of a C/S is to handle and improve cases. He can't do that with flubby auditors. So he has to make auditors out of students. If he does he can then achieve his object.

If the C/S wears this part of his hat he really wins. He seldom has to unravel anything tough. He just C/Ses and the auditors audit **EVENTUALLY**. But every new auditor he gets is certain to lengthen the C/S's working day and lessen his results unless the C/S realizes that there is **ON THE JOB TRAINING** and gets it done.

Training includes the auditor's *staff* hat and his knowledge of Tech and Qual Divisions. This would be true even in a Franchise or the field. They might not have the divisions but they have all the functions!

Recently a C/S had to get about 60 people audited fast. She had seven auditors assigned. She did not assure that these auditors were knowledgeable on the courses they had had and she did not wear the training hat of a C/S. She wound up with herself and one auditor doing the whole 60. The excuse was, the other auditors "couldn't audit".

It would have been far faster in terms of audited pc-hours to have rapidly crash-programmed the seven auditors through a refresher, cleaned up their misunderstands and overts in a co-audit and then, using them, to shove them into cramming on the materials of any flub and TRs for each goof. She would have made seven auditors into stars and she would have gotten the 60 pcs fully audited completely and rapidly with minimal flubs. She would have had 60 Dianetic and Expanded Grade completions, 60 terrific beings **AND IN LESS TIME**.

Morale goes to pot only when auditors do not get results.

Her basic error was assuming auditors should be able to audit. This isn't true of any auditor who has not served an apprenticeship under a competent C/S.

An auditor who has been auditing 10 years, when he starts to audit for me the first time, I put on my C/S training hat and no matter how good or how poor he was when he began I make him a better auditor.

A C/S who doesn't do this is letting the team down and badly.

A C/S who doesn't do this will spend hours daily trying to puzzle out the solution to messes made.

A C/S who doesn't do this fills up a field with flubbed cases regardless of his own skill in C/Sing. He is liable to sink into doubt, then treason and blow.

The C/S who wears his training hat and does do this leads a smooth life, is respected by his auditors and is valuable beyond gold.

To do this a C/S must himself be able to audit and to know his materials well enough to state which ones have to be crammed and never introduce strange ideas.

Such a C/S will never have a revolt and will never have to dream something up or ride new fads because he is getting excellent results straight along for a happy org and public.

I trust a C/S to do this.

*C/S Series 22*

**PSYCHOSIS**

Through a slight change of procedure on certain preclears I have been able to view the underlying motives and mechanisms of psychosis.

Very possibly this is the first time the mechanisms which bring about insanity have been fully viewed. I must say that it requires a bit of confronting.

The alleviation of the condition of insanity has also been accomplished now and the footnote in *Dianetics: The Modern Science of Mental Health* concerning future research into this field can be considered fulfilled.

The things a C/S should know about insanity are as follows:

**HIGHER PERCENT**

About 15% to 20% of the human race apparently is insane or certainly a much higher percent than was estimated.

The truly insane do not necessarily act insane visibly. They are not the psychiatric obvious cases who go rigid for years or scream for days. This is observed only in the last stages or during temporary stress.

Under apparent social behavior the continual crimes knowingly committed by the insane are much more vicious than ever has been catalogued in psychiatric texts.

The actions of the insane are not "unconscious". They are completely aware of what they are doing.

All insane actions are entirely justified and seem wholly rational to them. As they have no reality on the harmful and irrational nature of their conduct it does not often register on an E-Meter.

The product of their post duties is destructive but is excused as ignorance or errors.

As cases in normal processing they roller coaster continually.

They nearly always have a fixed emotional tone. It does not vary in nearly all insane people. In a very few it is cyclic, high then low.

All characteristics classified as those of the "suppressive person" are in fact those of an insane person.

The easiest ways for a C/S to detect the insane are:

1. Pretending to do a post or duties, the real consistent result is destructive to the group in terms of breakage, lost items, injured business, etc.
2. The case is no case gain or roller coaster and is covered under "PTS symptoms".

3. They are usually chronically physically ill.
4. They have a deep but carefully masked hatred of anyone who seeks to help them.
5. The result of their “help” is actually injurious.
6. They often seek transfers or wish to leave.
7. They are involved in warfare with conflicts around them which are invisible to others. One wonders how they can be so involved or get so involved in so much hostility.

### TYPES

The German psychiatric 1500 or so “different types of insanity” are just different symptoms of the same cause. There is only one insanity and from it springs different manifestations. Psychiatry erred in calling these different types and trying to invent different treatments.

### DEFINITION

Insanity can now be precisely defined.

The definition is:

**INSANITY IS THE OVERT OR COVERT BUT ALWAYS COMPLEX AND CONTINUOUS DETERMINATION TO HARM OR DESTROY.**

Possibly the only frightening thing about it is the cleverness with which it can be hidden.

Whereas a sane person can become angry or upset and a bit destructive for short periods, he or she recovers. The insane mask it, are misemotional continuously and do not recover. (Except by modern processing.)

### THE NATURE OF MAN

Man is basically good. This is obvious. For when he begins to do evil he seeks to destroy his memory in order to change and seeks to destroy his body. He seeks to check his evil impulses by inhibiting his own skill and strength.

He can act in a very evil fashion but his basic nature then makes it mandatory that he lessens himself in many ways.

The towering “strength” of a madman is a rarity and is compensated by efforts at self-destruction.

Man’s mortality, his “one life” fixation, all stem from his efforts to check himself, obliterate his memory in a fruitless effort to change his conduct and his self-destructive habits and impulses and losses of skills and abilities.

As this rationale proves out completely in processing and fits all cases observed, we have for the first time proof of his actual nature.

As only around 20% are insane, and as those who previously worked in the mental field were themselves mainly insane, Man as a whole has been assigned an evil repute. Governments, where such personalities exist, listen to the opinion of the insane and apply the characteristic of 20% to the entire hundred percent.

This gives an 80% wrong diagnosis. Which is why mental science itself was destructive when used by states.

## TECHNIQUES

The only technique available at this writing which will benefit the insane is contained in all the overt-motivator sequences and Grade II technology.

At Flag at this writing new improvement on this exists but it is so powerful that slight errors in use can cause a psychotic break in the insane. It therefore will only be exported for use by specially trained persons and this programming will require quite a while.

MEANWHILE it helps the C/S to know and use these firm rules:

ALWAYS RUN DIANETIC TRIPLES.

Never run Singles. The overt side (Flow 2) is vital. If you only run Flow 1 Motivators, the pc will not recover fully. Further running Flow 1 (Motivator only) any psychotic being processed will not recover but may even trigger into a psychotic break. If one never ran anything but motivators, psychotic manifestations would not erase.

DEPEND ON EXPANDED GRADE II TECHNOLOGY TO EASE OFF OR HANDLE THE INSANE.

Don't keep asking what's been done to him as he'll trigger.

A new discovery on this is that when you run out the motivator the person gets a higher reality on his overts. If you ran out all his motivators he would have no reason for his overts. If these are not then run out he might cave himself in.

## PATTERN OF BEHAVIOR

The APPARENT pattern of insane behavior is to come in (ask for processing, go on staff, etc) with the advertised intention of being helped or helping, then mess up either as a pc or on post, then state how bad it all is and leave. It looks obvious enough. He came, found it bad, left.

That is only the APPARENT behavior. APPARENT REASONS.

Based on numerous cases, this is the real cycle. Hearing of something good that might help these hateful awful rotten nasty people, the psycho comes in, wrecks this, upsets that, caves in this one, chops up that one and WHEN SOMEBODY SAYS "NO!" the psychotic either

- (a) Caves himself in physically or
- (b) Runs away.

The psychotic is motivated by intent to harm.

If he realizes he is harming things he shouldn't, he caves himself in. If he is afraid he will be found out, he runs.

In the psychotic the impulse is quite conscious.

## CONCLUSION

None of this is very nice. It is hard to confront. Even I find it so.

Freud thought all men had a hidden monster in them for he dealt mainly with the psychotic and their behavior was what he saw.

All men are not like this. The percentage that are is greater than I supposed but is a long way from all men.

Sometimes one only becomes aware of these when things are getting worked on and improved. They stay on as long as it can be made bad or there is hope it can be destroyed. Then when attention is given to improvement they blow.

Artists, writers often have these types hanging around them as there is someone or something there to be destroyed. When success or failure to destroy or possible detection appears on the scene they blow, often as destructively as possible.

Orgs are subjected to a lot of this. A psychotic sometimes succeeds in blowing off good staff. And then sooner or later realizes how evil he is acting and sickens or leaves.

The society is not geared to any of this at all. The insane walk around wrecking the place and decent people think it's "human nature" or "inevitable" or a "bad childhood".

As of this writing the insane can be handled. The proof of any pudding is the processing. And this is successful. It is also rather swift. But, as I say, it is so swift the special technique has to be done by the specially trained flubless auditor.

For a long while I've realized that we would have to be able to handle insane people as the psychiatrist is fading. I have had opportunity to work on the problem. And have it handled. Until it is fully released, the C/S will benefit greatly from knowing the above as these come on his lines far more often than he has suspected.

The insane can be helped. They are not hopeless.

I trust this data will be of use.

**EXTERIORIZATION**

**SUMMARY**

EXTERIORIZATION CAN BE BADLY MISRUN.

The following HCOBs cover Exteriorization Rundowns.

- HCOB 22 Mar 1970  
Exteriorization and High TA
- HCOB 11 April 1970  
Auditing Past Exterior
- HCOB 6 May 1970  
Blows—Auditing Past Exterior
- HCOB 30 May 1970  
Interiorization Intensive—2-Way Comm
- HCOB 10 July 1970  
Interiorization Intensive Goof
- HCOB 28 July 1970  
An Exteriorization Intensive Flub  
and False Declares
- HCOB 20 Aug 1970  
Exteriorization Rundown Musts
- HCOB 2 Dec 1970  
Exteriorization Summary (this HCOB).

The examination of Exteriorization Rundowns done in the field discloses that some auditors engaged in running it have not been fully checked out on it. HCO PL 26 Aug 1965 gives the correct way to do a starrate checkout. Clay demos must also be correctly done. These are covered in HCOB 11 Oct 1967 and HCOB 30 Oct 1970. These HCOBs on Ext Rundown, Starrates and Clay Demos plus HCO PL 20 July 1970, Issue III, 2-WC as below, make the necessary pack for checking out an auditor before letting him near an Ext Rundown. And all Exteriorization materials as above **MUST BE CHECKED OUT STARRATE AND IN CLAY** before a C/S permits one of his auditors to run it on a pc.

**TWO-WAY COMM**

There is a two-way comm step that follows a day or so after an Exteriorization Rundown.

An auditor doing this step, preferably the same auditor, **MUST BE CHECKED OUT ON TWO-WAY COMM.**

No C/S should permit any auditor to do any 2-way comm until the auditor has been checked out on HCO PL 20 July 1970, Issue III, "Two-Way Comm Checksheet". One can obtain these tapes easily from Pubs (as the Sea Org has recently forced in this line and quality and delivery). Pending such tapes one can certainly get the rest of the materials on the checksheet done by the auditor and let him do 2-way comm while being very watchful as a C/S.

### C/SING EXT

The correcting of an Exteriorization Rundown is far harder than making sure that auditors can do the usual in the first place.

Nearly all a C/S's hard work comes from auditors not well trained on courses (indifferent courses) and failing to check auditors out well on the materials *before* permitting them to deliver a new rundown.

The correction of Ext is hard since until it is complete, other auditing is inadvisable. One, however, gets the Ext Rundown done.

### EXT IS A REMEDY

The Exteriorization Rundown is a REMEDY designed to permit the pc to be further audited after he has gone exterior.

The Ext Rundown is NOT meant to be sold or passed off as a method of exteriorizing a pc. This is very important.

It is general auditing on usual Dianetics and Scientology actions that brings about Exteriorization.

When the pc goes or is found to be exterior one then orders the Exteriorization Rundown. Otherwise the TA will misbehave.

The rundown is a REMEDY USED AFTER EXTERIORIZATION HAS OCCURRED BY REASON OF GENERAL AUDITING.

Anxiety to *get* exterior will prompt a pc to buy and a registrar to sell an Exteriorization Rundown. It is in effect just more auditing as far as the registrar is concerned. When a pc has gone exterior the registrar can insist on his buying enough hours for the remedy.

The Ext Rundown stabilizes the exteriorization and makes it possible to audit the pc further.

The pc is most likely to exteriorize doing Dianetic Triples or Grade II as it is overts and withholds that keep him interiorized.

A really bad off pc can be compulsively exterior, (a) gets audited, (b) interiorizes, (c) then exteriorizes again cleanly. This is when you use the Ext Rundown—at (c).

Drug users get blown out of their heads and bog, TA up. Sometimes their TA problem is such that you have to begin with an Ext Rundown before you can run out the drug engrams.

Sometimes (rarely) a pc can't run engrams but has gone exterior. Such a case invariably is engaged in heavy present time overts. In such a case one runs the 3 Ext recalls and Grade II. (There is a better specific rundown on this but it cannot be released until Quals are functioning fully and training is excellent.)

## END RESULT

The end result of an Ext Rundown is a pc who, having been exterior, can now be audited further.

Without an Ext Rundown a pc who has gone exterior in auditing will thereafter not be auditable until the Ext Rundown has been done.

## DISABILITY

If an auditor can't smoothly audit a rundown as simple as an Ext Rundown, then he is exposed as being unable to run standard Dianetics and should be cleared of his misunderstandings and overts and retrained.

The only real trouble one gets into on an Ext Rundown stems from the inability of the auditor to run a smooth, good TRed R3R session. Pcs are not hard to run on it.

## C/S WINS

A C/S cannot win at all if he is continually having to make up for flubby auditing by the auditor.

Therefore the C/S must be very sure his auditors are fully checked out on things they are to run before running them.

If there is no Qual Staff Training Officer or no cramming, a C/S can fully afford to do the training and cramming himself. Otherwise he will lose far more than that time in C/Sing for auditors not checked out.

By the skill of his auditors you know the C/S. Not by his unusual solutions after flubs.

The Ext Rundown is too easy to do to have any trouble—the trouble comes when the auditors are not checked out beforehand, starrate and in clay, on new things they are to run.

All Levels  
Training

**CLAY TABLE WORK IN TRAINING**

(This is a verbatim re-issue of the full training section of HCO B 17 Aug '64, "Clay Table Work in Training and Processing". It is re-issued for Students' use in Training on Courses. Those Sections not relating to Training can be found in the original HCO B.)

**THE ONLY REASON ANY STUDENT IS SLOW OR BLOWS LIES IN FAILURE TO UNDERSTAND THE WORDS USED IN HIS OR HER TRAINING.**

You will find that students at any level in any course will benefit greatly from Clay Table work on *definitions*.

The importance of this will become apparent as you study our new educational technology, now mainly to be found on the tapes of the few weeks before this date.

A Clay Table is any platform at which a student, standing or sitting, can work comfortably. In an Academy it may be 3 feet by 3 feet or 5 feet by 3 feet or any larger size. Smaller sizes are not useful. In the HGC it is about 2 1/2 feet by 4 feet.

The surface must be smooth. A table built of rough timber will serve but the top surface where the work is done should be oilcloth or linoleum. Otherwise the clay sticks to it and it cannot be cleaned and will soon lead to an inability to see clearly what is being done because it is stained with clay leavings.

In the Academy castors (wheels) can be put on the legs of both the clay table and the clay container where they will be moved a lot.

Several different colours of clay should be procured. The best source is a school supply house where educational supplies are sold. Artists' clay is not as good as the school type. (Ask for kindergarten clay.)

A receptacle, also of wood or metal and having a separate stand of its own of any type, is also valuable. It should have subdivisions in it for the different coloured clays.

The amount of each colour is not important so long as there is at least a pound or two of each colour in a small class or an auditing room.

In the Academy colours are only used to make a student see the difference between one object and another and have no other significance as the objects in the mind are not uniformly coloured. While "ridges" are black, they can become white. Engrams may be a number of colours all in one engram, just as Technicolor is a coloured motion picture. However, some persons see engrams only in black and white. So the colour in the Academy is for instruction only, assisting to tell the difference between one object or another. (In the HGC it may be very significant to the pc, as covered later.)

The instructor works with the table before classes at times, so it is of benefit to have a table so arranged that it will tilt toward the class at about a 30° angle with the floor. This can be done as easily as putting the back legs of the table on temporary wooden blocks or as complicatedly as using a large engineer's drawing table which tilts

its whole top. If a table is to tilt, the lower edge during the tilt must have a one or two inch guard board to keep the covering or the clay from falling to the floor if it slips. It doesn't slip, usually, on a linoleum table surface but sometimes a bit is dropped and an instructor can more gracefully recover it if it hasn't rolled off on the floor. A loose linoleum top is also prevented from sliding off by a guard board.

*Any* part of the mind can be represented by a piece of clay or a white card. The mass parts are done by clay, the significance or thought parts by label.

A piece of clay and a label are usually *both* used for any part of the mind. A thin-edged ring of clay with a large hole in it is usually used to signify a pure significance.

The labels used by instructors (but *not* by students) are done on white cards, inked with a heavy black inking means such as a china marking pencil or a "Gem Marker" where a metal cylinder holds ink and the point is made of felt. The inked label is mounted on a small stick two to four inches long of the kind used by nurses for swabs or metal ones used to hold meat together. Scotch tape or Sellotape will bind a label to a stick.

*Everything is* labelled that is made on the clay table, no matter how crude the label is. Students usually do labels with scraps of paper written on with a ball-point. An instructor would use the fancier kind so that these would easily be visible to others.

The main clay table and its clay container is set up in the lecture room of a course in such a way so that it can be moved up in front of a class, or over in the corner out of the way, or to an area in the room where two or three students can gather around it or work. More than one clay table must be made for large classes but the additional tables need not tilt. In the HGC a clay table is narrower and longer and one is placed in each auditing room. Any HGC clay table can be used to train staff auditors. The clay tables in auditing rooms are used for processing. In the HGC there is not just one table for everyone's use. There is one in each auditing room.

## USE ON COURSES

*Any part of the mind or any term in Scientology can be demonstrated on a Clay Table.*

This is an important point to grasp. The use of the table is not just for a few terms. It can be used for all definitions.

The ingenuity of the instructor or the student *and* their understanding of the terms being demonstrated are the only limits on a Clay Table.

Simplicity is the keynote. Nothing is too insignificant or unimportant to demonstrate on a clay table. The first mistake is to believe that only R6, for which the lower grade student is *not* ready, can be demonstrated on a clay table.

*Anything* can be so demonstrated if you work at it. And just by working on *how* to demonstrate it or make it into clay and labels brings about renewed understanding.

In the phrase "how do I represent it in clay" is contained the secret of the teaching. If one can represent it in clay one understands it. If one can't, one really doesn't understand what it is. So clay and labels work only if the term or things are truly understood. And working them out in clay brings about an understanding of them.

Therefore one can predict that the clay table will be most used in a practice or organization which understands the most and will be least used in an organization that understands the least (and is least successful).

Let us look over the level of simplicity of the terms to be used in a course of instruction.

Let us take BODY. All right, make a few lumps and call it a body and put a sign on it "BODY".

Now that doesn't seem to be much to do. But it is a lot to do to forward understanding.

Let us make a yellow ring of clay beside the body or on it or in it and label it "A Thetan".

We can thereupon see the relationship between the two most used terms in Scientology, "Body" and "Thetan". And cognitions will result. The student's attention is brought right to the room and the subject.

Getting the student to do this by himself, even when he's seen it done by the Instructor, produces a new result. Getting the student to do it 25 times with his own hands almost exteriorizes him. Getting the student to contrive how it can be done *better* in clay or how many ways it can be done in clay drives home the whole idea of the *location* of the thetan in the body.

*ART is* no object in clay table work. The forms are crude.

Take a large lump of clay of any colour, and cover up both "thetan" and "body" with it and you have MIND.

Take every part of the mind and make it in clay by making a thetan, making a body and making one or more parts of the mind (Machine, facsimile, ridge, engram, lock, what have you—all Scientology terms) and get the student to explain what it is and we begin to clarify what we're about.

Get a student to make a Present Time Problem. Make him put in all its parts represented in clay (boss, mother, self) and have each one done with a body, a thetan and a mind and some rather remarkable insights begin to occur.

The quantity of things that can be made has no limit.

The principal thing is to GET EVERY SCIENTOLOGY TERM MADE IN CLAY AND LABELS by the individual student.

You will see a new era dawn in training. You will see Academy blows vanish and time on course cut to one fifth in many instances. These are desirable attainments in any course so Clay Table work is serious Academy business.

Ingenuity and understanding are the only limits on the use of the clay table and the attainment of excellent results with it.

### FAST COURSES

We should end off fast grades and slow courses. What we want is thorough grades and fast courses.

Speed-up of HDCs, Class IV, VI, VII, VIII and “HGC Auditor” Courses at all orgs, AOs (and SHs) would encourage more students. My time for it is 3 weeks. This was up to 5 and even 11 to 13 weeks at once by illegal checksheet increases. Class VIII material *ended* with HCO Bs at the end of 1968. The 1969—mid-1970 HCO Bs and materials are Class IX and we are currently about to prepare orgs for Class X delivery **WHEN ORGS CAN USE WHAT THEY HAVE.**

No Retread of IV, VI or VII may be given at AO expense. **IT IS ILLEGAL TO GIVE A RETREAD COURSE AWAY.**

A person who has to be retreaded on Academy and SHSBC to receive a Class VIII Course is of course a false attest. Further the full expense of the Course would be at the cost of the Academy or the SH that gave it.

Normally speaking a retread requirement would be too unwieldy if the student were sent back to an Academy or an SHSBC. A more practical solution would be to form a retread course from the HGC Auditor Checksheet and give it and send the offending org that gave the Course a bill for it. Teach it to the student. Then put the student on the Class VIII Course. The Class VIII Course has been slowed by:

- (a) Attempting to use it as a free retread IV and VI Course instead of just teaching Class VIII.
- (b) Adding what will be Class IX to the 1968 HCO Bs thus tangling up the Course design and extending its checksheet to triple length.
- (c) Incompetent or unalert Supervision.

The Class VIII Course is 3 weeks long. Period.

Counter policy has been for the Supervisor to set the Course length, to add to the Course, to give away free retread and to give away the 1969—mid-70 materials training.

The auditing skill and type of 1969—mid-70 is different. The C/S Series and type is different and is Class IX. But has even been shoved into Academies!! where they really flub Exteriorization Rundowns.

A Class VIII has an HDC requisite. If they can't cleanly audit pure Dianetics to a result they'll never be able to audit Scientology. We learned in 1969 that the Class VIII failures were due to HDC inabilities!

Class VIII had its own C/Sing, its own remedies, its own skills. They are important. Now do we tell students “they're all old now, we have a C/S Series, etc, etc.” Or do we teach Class VIII?

On Flag a Class IV or VI just can't keep up with the C/Sing. Until he's a VII and

then an VIII. We are auditing IX and X on Flag. That does not mean Class IV, VI, VII and VIII aren't done!

We'll never get Class IX into the field. Ext Rundown flubs in the field are gruesome. That's because Ext we find is a Class IX process! Only a person who has been an HDC, a IV, a VI and an VIII can be taught what we're doing.

Throwing an out of sequence into training in orgs is defeating good auditing.

This HCO B gives you the answers on how to get training back into sequence. Class VIIIs got results they were trained to get. That's all the result any auditor *can* get.

So speed up your courses by wiping out the counter policy.

Fast training gets students in. Slow training messes up the whole field and denies enrollments.

### **ILLEGAL AUDITING**

Lists of withholds required of a crew member or staff member without proper sessioning are now illegal.

Confessionals which do not F/N must be reported to Qual as a failed session.

An Exam report is required after any Confessional.

Any auditing outside of sessions must be reported and if failed may become actionable.

Challenging people out of session as "having withholds" is illegal.

Auditing is done by auditors who are trained and is done on regular lines.

Contact Assists and Touch Assists are not only legal, they are mandatory when any injury occurs.

They must be followed by Exam reports.

**EXTERIORIZATION AND HIGH TA**

(Revises and replaces HCO B 22 March 70 of same title  
by changing clearing of commands and wording  
of commands in Exteriorization Intensive)

For a long while we have known that if you audit a person after he or she has exteriorized, you often get a high Tone Arm, somatics and an upset case.

The answer has *been* to cease to audit a person after exteriorization has occurred.

This is so much a fact that five out of five “in trouble” cases I recently examined had every one of them been audited for some time after they exteriorized. The TA had or had not gone high but the cases were bogged. They revived at once when the fact of exteriorization was located. F/N, VGIs and when rehabbed (by counting number of times) somatics ceased.

The rule has been—don’t audit after a pc has exteriorized.

This is one of those very fundamental things that seems to defy research and yet if not solved will keep things messed up. Persons who exteriorize on lower grades need their upper grades and yet if audited further may mess up. This places a limit on auditing and yet the person may still have aberrations and somatics. But the fact of having exteriorized bars the road.

So I got to work and made a breakthrough on it. Hurrah!

It has now been fully vindicated by long tests and is now released for general use.

**EXTERIORIZATION**

Exteriorization is defined as the act of moving out of the body with or without full perception.

It is the fact of this act which proves that the individual is not a body but an individual. This discovery in 1952 proved beyond any question the existence of a thetan, that the individual *was* a thetan, not a body, and disproved that man was an animal, and that he was a spiritual being timeless and deathless.

Techniques have existed since 1952 that exteriorize a person. These are not now used because the person (a) still being aberrated and not Clear, soon returns to his body and (b) when audited thereafter has trouble.

This is a major problem a thetan sometimes has at death. How to exteriorize? He makes it eventually of course but he should be able to do so at once.

But, in my research, I found it unreasonable that a person would be hard to audit just because he had exteriorized and had reinteriorized. For he has obviously done just that at every death and birth and must have done so hundreds of billions of times. So why should a recent exteriorization then make him hard to audit? Yet it did.

My asking of that question was the first breakthrough. The rest soon followed.

## ENGRAM BEHAVIOR

We know in Dianetics that if you continue to run the last part of an engram which has in fact an earlier beginning which isn't being run and is ignored the TA will go up.

The reason for this is that the *first* of a chain or the first part of an experience or a first experience (basic on a chain of incidents) has to be run for the chain or incident to erase.

If you only ran the end of incidents you would get a high TA and no erasure.

If you only ran incidents late on the chain you would get a high TA.

Pcs are uncomfortable, feel under pressure, when their TA is high (above 3.5 or up).

If you don't erase incidents or chains of incidents when auditing (or key them out as in release) you get a perpetually high TA.

High TA cases have been "overrun" on something. That however is a very oversimplified explanation. The truth is that they have been run on something that didn't erase. The something has an earlier beginning than was detected or an earlier incident. In life one, having engrams about it, adds new incidents in living until something is "overrun" or done too often. The TA is therefore high.

A TA records MASS. Mental mass has a higher electrical resistance and so measures more "ohms" of resistance, an electrical term for the trouble electricity has in passing through something. The more resistance the more units of resistance are recorded on the meter. The TA actually measures resistance.

Thus, the end of an incident can be restimulated. If the beginning of it is never touched then one will just accumulate more and more mass.

## THE MISSED BEGINNING

What has happened here, as regards exteriorization is that we have concentrated on EXTERIORIZATION.

If one is IN something, he must have gotten into it.

Therefore the beginning of an exteriorization is the INTERIORIZATION.

The being went *into* something before he went out of it.

Exteriorization occurs at death. That's an engram. Interiorization occurs at birth, that's an engram.

So when somebody goes Exterior he is actually liable to key in having gone interior in the first place.

Get it?

So when you exteriorize somebody or he exteriorizes during auditing he gets keyed in a bit and without having audited earlier INTERIORIZATIONS, he has been put in the last part (exteriorization) of an incident which began with Interiorization.

Not only are you touching on something (exteriorization) late on a chain (which has hundreds of billions of like incidents ahead of it), you are also touching something

which is late in the incident (which began with interiorization).

On both counts then, the TA may go high.

### THE REMEDY

The remedy is to audit out *Interiorizations* (i.e: times the person *went in*).

If this is done, then the pc can be audited all you want after Exteriorization.

Auditing the Interiorizations by recall, secondaries, engrams, triple flow on each, restores the possibility of auditing a pc after an exteriorization has occurred in auditing.

### THE PROCESS

The Case Supervision directions for Interiorization are to be done by a Scientology Auditor. They can be done purely in Dianetics by using only steps 5, 7 and 8. It is more effective when done by an Scn Auditor who is also HDC.

1. Omit ruds but if pc upset you can do a rapid L1B. Grab first BD item or big read. Indicate any charge.
2. Clear EXTERIORIZATION with pc (per definition given earlier).
3. Check for having been audited after exteriorization. (TA should come down and F/N, Cog and VGIs.)
4. Rehab (rehabilitate) condition by getting or counting number of times exteriorized. You should get F/N, Cog and VGIs.
5.
  - (a) Clear INTERIORIZATION as the state or condition of being interiorized.
  - (b) Carefully clear TO GO IN as the act of the *verb* Interiorizing.
  - (c) Carefully clear WENT IN (past tense of the verb “to go in”) as the past tense of the act of Interiorizing.

It is very important to clear these three steps carefully so that the pc understands that what you will be auditing is times the PC WENT IN or others were caused TO GO IN—and NOT “was in” or “was stuck in” or “sat in”, but the actual times when the action of *going in* occurred.

6. Run 3-way Recall on WENT IN.  
RF 1—Recall a time you went in. (To F/N, Cog, VGIs.)  
RF 2—Recall a time you caused another to go in. (To F/N, Cog, VGIs.)  
RF 3—Recall a time others (or another) caused others to go in. (To F/N, Cog, VGIs.)
7. Run 3-way Secondaries.  
SF 1—Locate an incident of loss or emotion when you went in. (R3R to basic, EP = F/N, Cog, VGIs, Erasure.)  
SF 2—Locate an incident of loss or emotion when you caused another to go in. (R3R to basic, EP = F/N, Cog, VGIs, Erasure.)

SF 3—Locate an incident of loss or emotion when others caused others to go in. (R3R to basic, EP = F/N, Cog, VGIs, Erasure.)

8. Run 3-way Engrams.

EF 1—Locate an incident containing pain and unconsciousness when you went in. (R3R to basic, EP = F/N, Cog, VGIs, Erasure.)

EF 2—Locate an incident containing pain and unconsciousness when you caused another to go in. (R3R to basic, EP = F/N, Cog, VGIs, Erasure.)

EF 3—Locate an incident containing pain and unconsciousness when others caused others to go in. (R3R to basic, EP = F/N, Cog, VGIs, Erasure.)

Note: All steps and flows as above given to end with F/N, Cog, and VGIs. Don't chop the F/N by indicating until pc has had his cognition and VGIs.

CAUTION: THIS INTENSIVE MUST BE DONE IN ONE SESSION.

It will be seen that Recall and R3R steps and procedure are standard except they address the subject "Interiorization" (expressed as WENT IN or TO GO IN).

### FUTURE AUDITING

One should now be able to audit the pc even after exteriorization.

### WARNING

This is a major case action and should only be run when the pc is rested and in good physical shape.

### SUMMARY

If a pc goes exterior on Dianetics, Scientology lower grades or at OT levels, one at once audits out the chain of Interiorizations, using the above C/S. With this done the pc or Pre OT can go on being audited.

-----

The way is open to more powerful OTs.

-----

All fundamental discoveries are essentially simple ones.

### EXTERIORIZATION

On reviews of field-given Exteriorization intensives during the past year, I found many cases had been flubbed.

On researching this I found the following:

1. The Remedy was being used as an effort to Exteriorize people. People exteriorize in any normal auditing. What was needed was a *remedy* to be able to audit them thereafter without driving their TAs up.
2. Auditors evidently skimped their HDC Courses and did not know WHY one went to an earlier beginning or earlier incident. Thus they didn't know why you had to run Interiorization.
3. HCO B 22 Mar 70, "Exteriorization and High TA", must have been studied only for the rote commands. The theory of it was *not* studied.
4. Common Dianetic goofs got in the road of the rundown, the auditor failing to repeat the chain in asking for an earlier incident, i.e. "Is there an earlier incident containing a head pain?"
5. The Exteriorization intensive was being stretched over several sessions. As only it can be audited, between sessions PTPs, etc, would intervene. So it *had* to be done in *one* session.
6. Clearing the command was flubby and the pc often thought Interiorization meant "being in and trying to get out" and so the wrong end of the incident (the end) was being run.
7. People who hadn't been exterior at all and whose TAs were normal—not high—were being run on it.
8. It was being sold as a special rundown to exteriorize people, not just to enable them to go on being audited.

The number of Exteriorization Rundown flubs is excessive.

Therefore new HCO Bs and a new pack have been issued. These include:

HCO B 4 Jan 71, "Exteriorization and High TA" REVISED, which contains the theory and NEW COMMANDS nobody can goof.

HCO B 6 Jan 71, "Starrate Checkouts for Exteriorization Intensive".

HCO B 5 Jan 71, "Going Earlier in R3R and Exteriorization Intensives".

The glaring outness is Dianetic R3R skill. An HDC who can't run a flubless Dianetic session and get all three flows down to F/N studied in doubt, audits in doubt and ought to be in a condition of doubt until he retreads and actually reads the text and does the drills. Dianetic R3R is just too easy to be flubbed.

After patching up many of these done in the field I became very alert to the state of training. A new Course Supervisor Course has been done and is being issued.

Obviously, auditors are no longer required to be starrated on new materials before they audit them. This omission must be remedied at once. **NO AUDITOR MAY AUDIT MATERIALS OR APPLY HCO Bs ON WHICH HE HAS NOT BEEN STARRATED.**

No HGC or C/S may order an auditor to run a process if that auditor has not been starrated on its theory and practical first.

As for Dianetics, an auditor who cannot routinely carry a chain to an F/N VGI Cog and ensure running R3R may not retain his certificate unless retreaded and his HDC is suspended until he is retreaded.

For people to goof up using these clean positive tools is inexcusable.

The results are there to be obtained. **WE OBTAIN SPECTACULAR POSITIVE RESULTS WITH THESE SAME MATERIALS DAILY WHEREVER THEY ARE ACTUALLY STUDIED AND APPLIED.**

Please correct flubby auditing wherever you find it. Auditors must be checked out and drilled on new materials. Courses must be precisely taught. People who flub must be crammed until they don't. And those who still flub must be retreaded.

The materials when applied produce great results. When they are not applied they don't.

**SO APPLY THEM !**

**CORRECTLY.**

HCO POLICY LETTER OF 13 JANUARY 1971

Remimeo  
Qual Div  
Dept 15  
Examiner's Hat  
E/O Hat  
Dept 3 Hat

**EXAM 24 HOUR RULE**

(Additional Information)

When it comes to light that a pc has roller coasted despite an F/N at session end and at Examiner's and if neither Tech nor Qual makes any effort to remedy, then the matter becomes a High Crime.

Example: If a pc at the Examiner's F/Ns and yet within a few hours returns for a second Examination with a complaint which does not F/N, then the 24 hour rule applies.

If the Tech C/S ignores it and no repair is done within 24 hours by Tech or Qual, both lose their stats for that day.

If the matter continues unhandled the matter becomes a High Crime.

**HIDDEN FAILURES**

If due to failure to repair or handle session errors or failure to complete a major action, a pc becomes ill or unable to work, and if no effort is made by Tech or Qual to handle, the matter becomes a High Crime under

HCO PL 7 Feb 65, reissued 15 June 1970, "Keeping Scientology Working" (see Note at the beginning of that Policy Letter), and

HCO PL 7 Mar 65, OEC Volume 1, page 550, No. 3 Crimes: Placing Scientology or Scientologists at risk.

In such a case a Comm Ev must be convened and having fixed the cause of neglect and the persons responsible may, in addition to any fines or penalties, cost Tech and Qual all stats and bonuses for a reasonable period following the occurrence as set by the Comm Ev and as refundable by the divisional personnel from future pay.

HCO BULLETIN OF 10 FEBRUARY 1971

Remimeo  
Tech Secs  
Qual Secs  
Staff Training Officers  
Course Supervisors  
D of T

**TECH VOLUME AND 2 WAY COMM**

(LRH ED 92 INT of 25 March 1970  
re-issued as an HCO B by request  
of many Course Supervisors)

I've been busy studying the problems of volume auditing and training and have made a vital discovery.

We lost a key basic process!

TWO WAY COMM is missing in today's line-up in Academies, on Courses and in HGCs.

It goes this way-to get volume auditing going, you need auditors. To make auditors you need fast training. The reason fast training isn't occurring is because 2 Way Comm seems to be out between Course Supervisors and Students.

Course Supervisors in most instances are not asking students if anything is wrong or how to help them and then letting the students *talk*. While the Supervisor LISTENS.

I am putting together new practical for Course Supervisors. But meanwhile it's very elementary.

1. Detect a student's concern.
2. Get the student to talk about his problems and troubles in study.
3. Listen.
4. Do what one can to help without evaluating.
5. Let the student get back to it.

Students who drift off of courses or who are very slow LACK SOMEBODY TO TALK TO!

Where a student's progress is slow or he or she appears to be troubled or struggling, a good Supervisor notices it early. He gets the student to talk about it. He listens and acknowledges. He does what he can to help without evaluating and lets the student get back to studying.

This action went out when Supervisors were found to be lecturing and evaluating all data which data, entered on the course, upset the high workability of tech as it is found in HCO Bs and on tapes. This was at the time when Supervisors ceased to be named Instructors and became Course Supervisors. This was in the early days of the Saint Hill Special Briefing Course.

Two Way Comm with students tended to vanish also.

Giving a student off-line data and letting the student discuss his troubles are two different things.

### QUAL

In Qual there should also be a Consultant Service which uses a meter and Two Way Comm to find out about cases before patch-up or review. The Qual Consultant should also handle students who are slow or dropped out.

This letting the pc tell his side of it is very valuable. One can handle them much better. Analysing what they say and how they say it helps the Case Supervisor also. I.e., Natter = ARC Brks and overts. The pc's comm has been chopped. An old old session evaluated for him. Etc. Etc. Etc.

### GET IT IN

Two Way Comm should be gotten in on all Courses fast. It will speed training and add up eventually to volume auditing by making trained auditors available. This is the way to unlock that flow.

In the HGC pcs can be Two Way Commed by the Tech Sec.

In Qual someone can two way comm those sent to Review to help the person and get more accurate data for C/Sing.

### THE PROCESS

Two Way Comm is not a rote process. That's why it is hard to teach. The trick is to get the person to talk, to keep him looking and talking until he has a Cog and Very Good Indicators—and sometimes an F/N at the end (not vital).

If you can LISTEN you have it progressing. If you can get a person to talk about his troubles and listen and ack, you really can run it.

**THIS IS YOUR PRIMARY BLOCK ON VOLUME AUDITING. No Two Way Comm in training!**

I hope it helps.

IMPORTANT

**METERING READING ITEMS**

(NOTE: Observation I have recently done while handling a C/S line has resulted in a necessary clarification of the subject of "a reading item or question" which improves older definitions and saves some cases.)

It can occasionally happen that an auditor misses a read on an item or question and does not run it as it "has not read". This can hang up a pc badly if the item was in fact a reading item or question. It does not get handled and exists in records as "No read" when in fact it DID read.

THEREFORE ALL DIANETIC AUDITORS WHOSE ITEMS OCCASIONALLY "DON'T READ" AND ALL SCIENTOLOGY AUDITORS WHO GET LIST QUESTIONS THAT DON'T READ MUST BE CHECKED OUT ON THIS HCO B IN QUAL OR BY THE C/S OR SUPERVISOR.

These errors come under the heading of Gross Auditing Errors as they affect metering.

1. An Item or Question is said to "Read" when the needle falls. Not when it stops or slows on a rise. A tick is always noted and in some cases becomes a wide read.
2. The read is taken when the pc first says it or when the question is cleared. THIS is the valid time of read. It is duly marked (plus any blow down). THIS reading defines *what* is a *reading item or question*. CALLING IT BACK TO SEE IF IT READ IS NOT A VALID TEST as the surface charge may be gone but the item or question will still run or list.
3. Regardless of any earlier statements or material on READING ITEMS, an item does not have to read when the auditor calls it to be a valid item for running engrams or listing. The test is did it read when the pc first said it on originating it or in Clearing it?
4. That an item or question is marked as having read is sufficient reason to run it or use it or list it. Pc Interest, in Dianetics, is also necessary to run it, but that it did not read *again* is no reason to not use it.
5. When listing items the auditor must have an eye on the meter NOT necessarily the pc and must note on the list he is making the extent of read and any BD and how much. THIS is enough to make it a "reading item" or "reading question".
6. In Clearing a listing Question the auditor watches the meter, NOT necessarily the pc and notes any read while clearing the question.
7. An additional calling of the item or question to see if it read is unnecessary and not a valid action if the item or question read on origination or Clearing.
8. That an item is marked as having read on an earlier Dianetic list is enough (also checking interest) to run it with no further read test.
9. To miss seeing a read on an origin or clearing is a Gross Auditing Error.

10. Failing to mark on the list or worksheet the read and any BD seen during pc origination or clearing the question is a Gross Auditing Error.

### EYESIGHT

Auditors who miss reads or have poor eyesight should be tested and should wear the proper glasses while auditing.

### GLASSES

The rims of some glasses could obstruct seeing the meter while the auditor is looking at the worksheet or pc.

If this is the case the glasses should be changed to another type with broader vision.

### WIDE VISION

A good auditor is expected to see his meter, pc and worksheet all at one time. No matter what he is doing he should always notice any meter movement if the meter needle moves.

If he cannot do this he should use an Azimuth Meter and *not* put paper over its glass but should do his worksheet looking through the glass at his pen and the paper—the original design purpose of the Azimuth Meter. Then even while writing he sees the meter needle move as it is in his line of vision.

### CONFUSIONS

Any and all confusions as to what is a “reading item” or “reading question” should be fully cleaned up on any auditor as such omissions or confusions can be responsible for case hang-ups and needless repairs.

### NO READ

Any comment that an item or question “did not read” should be at once suspected by a C/S and checked with this HCO B on the auditor.

Actually non-Reads, a non-reading item or question means one that did *not* read when originated or cleared and also did not read when called.

One can still call an item or question to get a read. That it now reads is fine. But if it has never read at all, the item will not run and such a list will produce no item on it.

It is not forbidden to call an item or question to test it for read. But it is a useless action if the item or question read on origination by the pc or clearing it with him.

### IMPORTANT

The data in this HCO B, if not known, can cost case failures. Thus it must be checked out on auditors.

*C/S Series 25*

**THE FANTASTIC NEW HGC LINE**

(A marvelous new C/S Auditor line has just  
been piloted in for HGCs.)

In the new C/S line the Auditor, in his Admin time at the end of the day, or when he has no preclears, does Folder Error Summaries or Progress and Advance Programs for his pcs and does the C/S form for the Tech C/S as well as adds the day's process and the length of the session and amount of Admin time on that folder to the inside front cover of the folder, with the process run and result.

If his programs and C/Ses are acceptable to the Tech C/S, the Auditor gets full Well Done Auditing Hour credit on his stat.

The Auditor logs his sessions for the day in the general HGC Auditor's log and his Admin time is also logged.

This Admin time is subtracted from the bought hours of the pc where auditing is sold by the hour.

Where Auditors are so engaged and the new folder routing line is in use, this C/S form is used:

Full blank page.

Pc's Name (Red)

Date

Auditor's Name (Red)

Class of Auditor required next sess.

(Session Grade) left blank

Auditor's comment (Red) or think about the case if he wishes.

The next C/S

1. \_\_\_\_\_ Blue

2. \_\_\_\_\_ Blue

3. \_\_\_\_\_ Blue

4. \_\_\_\_\_ Blue

Auditor Signature (Red)

The Auditor does not grade his own session. He leaves this blank.

The correctly Admined folder is then given to Tech Services which routes it (usually with the Auditor's other folders for the day) to the C/S.

The C/S looks it over (it is HIS final responsibility for the case being run right).

The C/S looks to see if the Examiner form taken by the Examiner at session end F/Ned. If it did not he leaves the grade line blank as it is a No Grade session (see F/N

and well done hours) as the Auditor gets no hour credit for the session. If the C/S and other Admin is ok he writes OK with his initial in the session grade space. If none of it is okay he leaves it blank and does the C/S form or programs completely new. In this last case he enters a subtract figure in his log for the auditing time for the week against that Auditor's name.

If the Exam form F/Ned, but the Admin is not okay and the session actions were not okay the C/S writes "Well Done by Exams" on his own new C/S in its proper place and ignores the form and subtracts the Admin time in his book to subtract the Admin from the Auditor's week's stat.

If the session was not okay with no F/N at Exams yet the Admin and next C/S are ok, the Auditor loses the session time in the C/S but gets the Admin time credited to his week's stat. The C/S subtracts the session time in his book, not the Admin time.

Of course, as we hope is usually the case, if the Auditor did the C/S, did a correct session, got an F/N at Exam and did the Admin and next C/S is correct, then the C/S marks "Very well done" in the blank space for session grade with his initial. After inspection, this would be the sole action of the C/S regarding that folder.

By the C/S writing in the session grade (Very well done, well done, okay, flunk, to cramming) the Auditor is receiving acknowledgement for his work and is not just acking himself.

#### THE NEW LINE

The Ideal Folder-C/S line can shift the number of well done hours from a ceiling of 250-300 to 600-800 with one C/S. No matter how many Auditors an org has, older lines put a 250-300 top ceiling on the org's well done hours.

When hours could go above 600 due to the available Auditors (20 or 30), a new parallel line has to be manned by a new C/S, new D of P and another Examiner and more Tech Services personnel.

Despite how hard the C/S and anyone else in tech works, a line not so run will ceiling at about 250 hours, no matter how many Auditors are hired.

A C/S using the old lines can C/S for about 5 working Auditors only with the line running any old way. And even so will work himself half to death.

In trying to get pcs handled, Auditors will be added. The C/S will not be able to handle his job. The line, being faulty, gets pegged at about 250 hours no matter how hard the C/S and Admin people work.

With the same C/S and Tech Services people, and a correct new line, 24 to 30 Auditors will be kept busy at their 5 hours a day (given auditing rooms) and the stat will be able to rise to 600 to 800.

#### NEW SEQUENCE

1. Auditor picks up his pc folders and his pc schedule list at Tech Services at the start of his day from the LEAVING rack.
2. Tech Services (having a duplicate list) begins sending pcs to him (using Tech Pages).
3. The Auditor gives the session.
4. The Auditor leaves the folder in the Auditing room at session end and takes the pc to the Examiner.
5. The Examiner simply does the Exam form on a meter with no folder. He sends the Exam form (hand route) to Tech Services.

6. The Auditor returns at once to his auditing room and a Tech Page has a pc there waiting for him.
7. Having done all his pcs for the day, the Auditor carries his folders to the Auditor Admin Room.
8. Tech Services has placed the Exam forms in the Auditor Admin Room and sees they get into the Auditor's basket *and* the folder.
9. The Auditor does the complete Admin of the session.
10. The Auditor does any program needed for future sessions.
11. The Auditor C/Ses the folder for the next session.
12. The Auditor marks in a box (2 columns) on a sheet stapled to the inside front cover the process, the Exam result, the session time and the Admin time he has just put in.
13. The Auditor hands his completed folders in to Tech Services.
14. Tech Services gets the folders to the C/S using a Folder Page who comes on late and works the C/S's hours.
15. Fed the folders rapidly by the Folder Page who is standing in the C/S area, the C/S does his C/S work. If the Folder Page is fast, removing folders and putting the new one in, chasing up data and other bits for the C/S, the time of C/Sing even when done very carefully will be found to average 3 to 5 minutes a folder even when some require full programming (but not FESing). This makes a ceiling of about 100 folders (sessions) a day for the C/S, an output of 30 Auditors. Needless to say the C/S and the Auditors have to know their business and Qual Cramming is used extensively both for new material and for flubs both in auditing and C/Sing by Auditors.
16. The Folder Page gets the folders over to the D of P office preserving the piles per Auditor as much as possible.

The C/S posts the data he wants Auditors to know or do on the AUDITORS' BOARD of the Auditors' Admin Room. He turns in his Cramming Orders into the D of P basket. This finishes his actions.

Where there is a senior Review C/S there is a hot spur line from the C/S to the senior C/S and back to the C/S. This is not necessarily an instant line. It can be a 12 hour lag line. In orgs where a C/O or Exec Dir or Product Officer or Org Officer is also a very skilled C/S this hot line would probably be in. New tech in use, fantastic completions and utter dog cases nobody can make anything out of go on this senior C/S hot spur line. There are very few of these, only two or three a day in a very busy org. The senior C/S "does" these and sends them back to the C/S. They are then sent on as usual to the D of P.

17. The Director of Processing comes on duty very early. The C/Sed folders will all be there. The D of P has assignment master sheets that are kept up by the D of P.

The D of P does the day's schedules, a list for each Auditor. The lists preferably have a few too many pcs on them.

The D of P can tell what Class of Auditor is required for the next session because the Auditor has marked it in in the upper right-hand corner of the C/S for the next session.

When the D of P has the lists done the folders are placed in the "leaving" rack of Tech Services and Tech Services, now up and about, is given the lists and gets to work on the scheduling board, moving the names about to agree with the lists.

Tech Services does any room shifts or handlings at this time.

18. The D of P now goes to the Auditor Admin Room and begins to muster Auditors from her muster list as they come in and gets them over to Tech Services.

19. A Cramming personnel will be in there trying to get any crammings scheduled.
20. Tech Services hands out folders (which are in neat piles for each Auditor) and schedules to the Auditors as they turn up and handles any arguments or shifts in sequence.
21. Tech Pages are on phones or running to round up pcs and get them going to sessions, which work continues all day.
22. The D of P interviews any hung-up or curious pcs or as requested by the C/S or gets new Auditors or keeps up Admin. This goes on until the C/S comes in when the DofP is off.
23. The Auditor picking up his folders begins the cycle all over again at ( 1 ) above.

#### ABOVE 600

When the well done hours go above 600 a week, A WHOLE NEW HGC is put in duplicating the first, with its own C/S, D of P, T/S, auditing rooms and Auditor Admin Room. It would be HGC Section Two or HGC 2 with the original being HGC 1 .

A special second Cramming would have to be provided in Qual for it.

At first they would share new hours and build up independently. More HGCs are added to the Department at each multiple 600 wd hours.

#### SENIORS

The two chief seniors in the area are the C/S (for tech) and the D of P (for Auditors and bodies).

It is the D of P who must see that Auditors exist and are on post.

It is Tech Services who sees pcs are rounded up and audited. The D of T/S is actually in charge of pcs and all folder files and all board keep-up work.

The D of P should have some tech training. The D of T/S need not have any. The C/S of course is the Tech Expert and should be an HSST.

If there are no Auditors it is the D of P's neck.

If there are no C/Ses it is the C/S's neck.

If there are no folders it is the D of T/S's neck.

And if there are no auditing rooms it is the D of T/S's neck.

If signed-up scheduled pcs don't get to session it is the D of T/S's neck.

If there are no NEW pcs it is the D of P's neck who should begin to shoot Dissem Secs and Registrars and procure new pcs on a by-pass for the org.

From this a table of seniors and duties can be made.

#### CRAMMING

You will notice no pcs are sent to Review on this new line. Review actions are done in Tech as a patch-up in Tech. The Qual Sec is responsible for overall tech quality BUT DOES IT BY CRAMMING C/Ses or Auditors.

Thus Cramming is a busy street.

Cramming must be good, check-outs excellent.

If an Auditor doesn't grasp a C/S he has received he gets help from Cramming.

Auditors new to the HGC are given a fast hard grooving in in Cramming or a Qual Interne Course. (New Auditors never audit until grooved in.)

Tech will be as good as the Cramming Officer can cram.

This line is grooved in by the HAS and kept in by Qual. Or if there is no Qual, it is kept in by the HAS who will find no Qual very embarrassing.

### DUMMY RUN

The line should be dummy run by folders, "pcs" and Auditors until they understand it.

People are often totally unaware of lines and get very sloppy.

Thus this line has to be drilled hard on old and new tech personnel. *All* must know this exact line.

It is a good line.

Fully in, it raises the well done hours stat from 250 per week maximum at total overload to an easy 600 to 800.

Auditors must audit five hours a day, 25 minimum per week of well done hours for any bonus to be paid at all. In the SO they get no pay at all much less bonuses if short on their 25.

Tech Services and an unenergetic D of P or a bad Dissem Sec and Registrar set-up can cause a no pc situation. And often do unless pushed.

But counting FESes and Admin in on an Auditor's wd time helps slack periods to even out. And one Auditor can FES and program folders for others or from files if he is left adrift and short-timed by the D of P or D of T/S or until the Tech Division forces the Dissem Div and Distribution Div to really get on the ball and wear their hats on pc flow.

### PROCUREMENT

The D of P has always had new pc procurement responsibility when all else failed or even when it didn't.

Old folders, for example, are a marvelous source of new auditing repairs and intensives. An FES done on an old folder and a letter to "come in and get audited before you fall apart" is excellent pc procurement, usually neglected by Registrars. Any procurement by a D of P is legitimate.

Auditors who have no pcs can write procurement letters and have for 20 years.

### SUMMARY

This is a beautiful line. It has been piloted hard.

It will serve as well as it is checked out, drilled in and used.

This line is the key to affluence from pcs alone.

(But if the org isn't training Auditors heavily, you'll soon have no Auditors to be on it and the org will not gain its high income low cost cushion from training.)

This line is the answer to really getting auditing done in an area.

*C/S Series 26*

**NEW USES FOR THE GREEN FORM**

The Green Form comes into its own with a new method of use.

A lot of cases have been cracked lately using the GF in a new way.

Designed as *the* Qual tool in 1965 it came into disrepute by getting assessed item by item to an F/N. This made it F/N on a rud.

Thus the whole battery of tricks in the GF never get used on a pc.

There is another assessment Method. Method 5. It is “once through marking the length and BD of all reads”.

One can then C/S “Assess GF once through”.

Actually one usually says,

“GF + 40 Method 5”.

This means the auditor (usually on a case that is messy or just as a routine part of a Progress Program) just rat-a-tat-tat assesses the lot, marks the reads’ length and BDs.

The C/S action that follows—the “Handle” consists of putting a red half swirl around each that read and then doing the C/S for it.

List outness is always handled first. Then ruds like ARC Brks, W/Hs and PTPs. Then more or less by the longest reads.

It makes a long, long C/S in cases that are boggy.

One uses engram running on it whenever he gets a chance as in “drugs”.

Hidden standards are listed on a “Who/what would have \_\_\_\_\_ (the symptom)?” and “O/W on the item found”.

A lot of old processes get a chance on these GF reads. It isn’t all “2-way comm on\_\_\_\_\_”.

Foreign Language cases who do not have English as a native tongue and people who don’t understand a lot have to have the GF items cleared. One takes the reads while clearing the Question, of course.

Designed as a Case Cracker, this new use of the Green Form restores it to a mighty weapon.

Since I redeveloped ways to assess and began to really use this Green Form, I’ve seen several very rough ridgy cases fall apart.

So it is a very cheerful re-discovery. And it is highly urged.

*C/S Series 27*

**LONG C/Ses**

A long C/S is far more desirable than a short C/S in all but the most sickly and feeble cases.

In doing a long C/S, the auditor can also end it off where an F/N goes *3i4* to a dial wide and looks like it will persist. The pc has a win.

A long C/S also permits an auditor to adjust his own length of session.

If the C/S isn't complete on that day, one simply adds (1) "Fly a rud" and (2) "Continue C/S of (yesterday)."

By having a whole Progress Program (repair) laid out on a red sheet and clipped with its green Advance Pgm (grade chart) inside the front cover, over the session summary, the guidance for the case is right there. This gets checked off as done.

The C/S could consist of half the program or even (in shorter programs) all of it.

**Handling**

One speeds a line by taking repeated handlings out of it.

Less sessions mean less handling.

Thus the session is more economical if long.

Getting the pc and folder rounded up 5 times when it means the same number of hours to do it 2 times saves wear and tear.

This is the benefit of very long C/Ses.

**Dianetic C/Ses**

Dianetic sessions often go 5 or even 8 hours.

One tries to do all the flows of an item in one session.

**Length of Pgms**

When auditing the public, not staff, you long program.

In a Progress (repair) Program you try to throw the whole bag of tricks at them.

These are not only repairs, when you do a Progress Program. You throw in a lot of other bits like 2-way comms on BD items.

You now have a Hi-Lo TA List to assess and an Expanded Green Form.

## Advance Programs

All Advance (gradesheet) Programs start *lower* than the pc was if the pc got in trouble *where* he was.

Often a grade is obviously out below where he is graded.

Let us say he is a bogged “Grade IV”. Well, he couldn’t be a Grade IV. So the Advance Program (green paper) that you do picks him up at Grade 0 or even Dianetics.

A bogged “OT I” the other day began to win when

- (a) given a long long Progress Program, and
- (b) shoved back to Grade III on the Advance Program and brought on up *all* the way including OT I before going on to OT II!

## Thorough C/Ses

Thus you can have long C/Ses only when you have long programs already done and pinned to the inside of the front cover, a pink one for Progress (non grade) and a green one for Advance (back up the grades).

Don’t try to save auditing time. Save instead repeated handlings.

This does not go into “over-repair”. A Progress Pgm contains all sorts of bits like 2-wc on “What do you feel you owe your family” (as the pc is always getting off about his family in Ruds).

The advance of a case is the amount of charge you get off it.

Long C/Ses ease your Admin lines greatly.

They also give less chance of having ruds go out between sessions.

Short sessioning has its uses—small children, sick people, psychos.

But long sessions save time in the long run and get the job done.

*C/S Series 28*

**USE OF QUADRUPLE DIANETICS**

With the introduction of QUADRUPLE DIANETICS (HCO B 3 Mar 1971, "Quadruple Dianetics") the problem of how to C/S it arises.

This rule is followed:

IN ALL BUT HCO B 24 July 69 DIANETIC ASSISTS WHERE IT CAN BE USED AT ONCE, THE FOURTH FLOW—O—MUST BE RUN ON ALL ITEMS FORWARD FROM THE FIRST DIANETIC ITEM EVER RUN ON THE CASE.

Where a case has already had Flows 2 and 3 run on Singles, one goes back and runs Flow 0 on those items.

Where a case has only been run on single flow Dianetics (Flow 1 ) one goes back to the first Dianetic Item ever run of which record can be found and does F 1, F 2, F 3 and F 0 in that order.

To C/S a case for Quad Dianetics it is best to first lay out a Scientology repair, making sure the case is flying, then list out the items already run on Single and Triple. Then get them run so that all four flows are complete on each item in sequence from first to last.

This includes any LX items, former practice, drugs or any other engram running. These, like Dianetic items, are listed in their correct sequence of former running.

Then the missing flows are run.

A rehab step of the flows already run is not necessary. This rehab of a flow already run to EP is usually used only when there is question about its having gone to F/N Cog VGIs.

In C/Sing for Quadruple one COMPLETES any flow of an item found that did not F/N. This is indicated on the Item list.

**Doing the List**

The item list is done by the auditor in his admin time for well done time credits.

All former Dianetic items ever run are listed and what flows have been run on them and to what end phenomena.

Example:

*Engram List*

3 Sept 69	Sadness (exact wording that was used)	F 1		
4 Sept 69	A Bored Feeling	F 1	Bogged	
6 Sept 69	An Apathetic Outlook	F 1	Bogged	
6 Nov 69	LX Agonized	F 1	F 2	F 3

7 Nov 69	Former Therapy	F 1	F 2	F 3
			F 2 Bogged	
9 Nov 69	Earlier Practices	F 1 Bogged		
10 Nov 69	A Horrible Sadness	F 1 Bogged		
5 July 70	Int RD	F 1	F 2	F 3
				F 3 Bogged
6 July 71	An Awful Pressure	F 1 Bogged		

Such a list is then handled from the earliest forward by

- (a) Completing the bogged flow and
- (b) Completing the missing flow.

### **Int Ext RD**

This is handled in its proper sequence on the list if the TA is not high or very low.

If the TA on the pc is currently high, Int is handled before any other action is done and all four flows are run on it.

A drug chain also makes a high TA if in existence or unflat.

### **Auditor Checkout**

**BEFORE RUNNING ANY DIANETICS QUADRUPLE *EVER* Y AUDITOR HDC, VI, VII, VIII AND C/Ses MUST BE CHECKED OUT THOROUGHLY ON THE QUAD DIANETICS CHECKLIST:**

HCO B	8 Mar 71	“Precision Dianetics”
HCO B	4 Jan 71	“Exteriorization and High TA”
HCO B	5 Jan 71	“Going Earlier in R3R and Exteriorization Intensives”
HCO B	23 Jan 71	“Exteriorization”
HCO B	1 Dec 70	“Dianetics—Triple Flow Action”
HCO B	17 July 69	“Dianetic Command Training Drills”
HCO B	20 May 70	“TR 103,104 Rundown”
HCO B	3 Mar 71	“Quadruple Dianetics”
HCO B	7 Mar 71	“Use of Quadruple Dianetics”
HCO B	5 Mar 71	“Exteriorization and High TA”
	Issue II	Quadruple
HCO PL	17 Feb 71	Checksheet of Ext RD including Quad DN

Any other HCO B of subsequent issue on this subject.

THERE IS A PACK ON THIS SUBJECT AVAILABLE FROM FLAG.

### **Flubs**

If any auditor has a poor record of getting Dianetic Results, of bogged flows, etc, he needs an HDC Retread. His drills and TRs are out or he is committing Gross Auditing Errors.

Dianetics gives remarkable results only when flawlessly done.

The commands must be precisely given and *all* commands 1-9 A-D are used. It is NEVER shorted "because the pc did it".

THUS ANY HDC TO AUDIT QUAD DIANETICS MUST

- (A) HAVE A RECORD OF GOOD FLUBLESS DIANETIC AUDITING or
- (B) MUST HAVE A RETREAD UNDER A COMPETENT SUPERVISOR and
- (C) MUST BE STARRATED (for true, not just checked) ON THE ABOVE CHECKSHEET OR THE FULL QUAD PACK.

### **C/Sing**

Quad Dianetics, with the above, otherwise C/Ses the same as general DIANETICS.

It should be realized Dianetics is its own field of C/Sing. This remains the same in Quad Dianetics.

### **Promotion**

Quad Dianetics should be promoted only when you have Dianetic Auditors, the Auditors checked out and okayed to audit as above and when you CAN DELIVER.

IVs or VIs should be available to do the Progress Pgms and steps.

### **Upper Levels**

When the IVs VIs VIIs VIIIs or IXs are checked out as above, they should use Quad Dianetics to handle any and all Engram steps called for in general auditing.

That they are upper level auditors does not make it less necessary to do the above.

### **Results**

Quad Dianetics, including the rerun actions, produces some very startling new gains.

Well done Dianetics always has produced fine results.

Quad Dianetics almost doubles the gain.

### **Remedies**

Any and all Dianetic Remedies and general technology remain in full use. They are not changed at all. Only the zero flow is added in each case.

Good Luck.

*C/S Series 29*

**CASE ACTIONS, OFF LINE**

A C/S can be plagued by off line case actions of which he is not informed.

The existence of these can wreck his carefully laid out programs and make a case appear incomprehensible.

Thus it is up to a C/S to suspect and find these where a case isn't responding normally in auditing.

1. LIFE KNOCKING RUDS OUT FASTER THAN THEY CAN BE AUDITED IN.

Schedule sessions closer together and give very long sessions so life hasn't a chance to interfere. Can go as far as requiring person via the D of P to stay in a hotel away from the area of enturbulation or not associate until case is audited up high enough.

Shows up most drastically in Interiorization Intensives where no ruds can be run unless the RD is complete. Thus Int has to be done in one session, with the 2 wc Int-Ext the next day.

2. PC PHYSICALLY ILL BEFORE NEXT SESSION AND AUDITING OF A MAJOR ACTION BEING DONE ON A SICK PC WHO SHOULD HAVE ANOTHER C/S ENTIRELY.

Happens when delayed or late new Exam reports don't get into folder before C/Sing it. Ginger up Exam routing.

Happens when auditors are not alert to the pc's illness and audit anyway. Make auditors not audit and report at once sick pcs.

Pcs hiding general illness may show up as no case gain. Answer is to get a full medical exam.

3. SELF-AUDITING.

Detected by no lasting gain. Hi-Lo TA Assessment will show it up.

Two way Comm on when they began to self audit (usually auditor scarcity or some introverting shock).

4. COFFEE SHOP AUDITING.

Meterless fool around, often by students, stirring up cases.

Forbid it in an area.

5. TOUCH AND CONTACT ASSISTS INTERRUPTING A GENERAL COURSE OF AUDITING, OFTEN TO NO F/N.

Make all such assists be done on a worksheet and make it mandatory to take the pc to an examiner afterwards.

W/S and Exam Rpt then appear in folder.

The C/S can then get in the other actions (Ruds, S & D, HCO B 24 July 69) on the injured pc.

#### 6. STUDY RUNDOWNS.

An illegal and offbeat line can occur when auditing out misunderstands in study or "Management Word Rundown" or such occurs in the middle of a general auditing program.

Require that C/S okay is required.

Get such done at the START of courses and BEFORE a major auditing cycle is begun. Enforce this hard as the other answer that will be taken will be to do it at the end of the cycle and wreck major auditing program results.

#### 7. ILLEGAL PATCH-UPS.

Sometimes all through an intensive there is another auditor unknown to the C/S who 2 wcs the pc or audits the pc who is complaining to him or her.

Shows up in the Hi-Lo TA Assessment.

Forbid it.

#### 8. PEOPLE TALKING ABOUT THEIR CASES.

Past life reality is often badly hurt by people who talk about being Napoleon, Caesar and God. This makes "past lives" an unreal subject by bad comparison.

Restimulative material is sometimes used to "push someone's buttons".

Bullbait that uses actual processes or implants should be stamped out hard.

#### 9. ADVANCED COURSE MATERIAL INSECURITY.

I have seen several cases wrecked by careless storage of Ad Course materials where lower levels could get at them.

One notable case was a suppressive who got hold of Ad Course materials and chanted them at his wife to drive her insane. She recovered eventually. He didn't.

When a C/S gets a whiff of upper level materials on a lower level pc worksheet he should make an ethics matter of it and get it traced.

#### 10. ILLEGAL DRUG USE.

A pc who suddenly relapses onto drugs or who has a long drug history can cause a case to look very very odd. The TA flies up. The case, running okay, suddenly ceases to run.

Addicts can come off it if given TRs 0 to 9 and an HAS Course (modern).

Drug chains are rehabbed and run out by Dianetics.

Class IX

**LIX HI-LO TA LIST**

(Cancels earlier list HCO B 17 Feb 71, HCO B 22 Feb 71  
and HCO B 25 Feb 71, which were not released off  
Flag, and HCO B 3 March 71)

This assessment has been developed to detect the reason for high and low TA. There is nothing unusual about the processes necessary to handle these points.

Interiorization or a flubbed Interiorization Intensive that must be run with WENT INTO is the usual reason, but run this time with exact R3R using each R3R command and getting it answered.

ANY READING QUESTION MUST BE CARRIED TO F/N BY MAJOR ACTION OR 2 WC. TAKE LARGEST BD FIRST UNLESS EXT READS.

HIGH-LOW TA ASSESSMENT

1. Do you have a Stuck Picture?  
(Picture and Masses Remedy Dn) \_\_\_\_\_
2. Are you Trapped?  
(Ext Remedy) \_\_\_\_\_
3. Do you have Pictures in Restimulation?  
(Pictures and Masses Dn) \_\_\_\_\_
4. Do you have Masses in Restimulation?  
(Pictures and Masses Dn) \_\_\_\_\_
5. You went in?  
(Means Ext R/D is out) \_\_\_\_\_
6. Have you Committed Overts?  
(2 wc E/S) \_\_\_\_\_
7. Are you Not-ising Overts?  
(2 wc E/S) \_\_\_\_\_
8. Do you have Withholds?  
(Pull them E/S) \_\_\_\_\_
9. Are there Considerations not mentioned?  
(2 wc E/S) \_\_\_\_\_
10. Have you Committed Crimes?  
(2 wc E/S) \_\_\_\_\_
11. Have you been Self Auditing?  
(2 wc to 1st instance E/S) \_\_\_\_\_
12. Was a Wrong Overrun found?  
(Correct it) \_\_\_\_\_
13. Has there been an Overrun in Life?  
(Locate and Indicate to F/N) \_\_\_\_\_
14. Has there been an Overrun in Auditing?  
(Locate and Indicate to F/N) \_\_\_\_\_
15. Has a list been overlisted?  
(Find and Correct to F/N) \_\_\_\_\_
16. Have reading items been left charged up?  
(Spot them and clean them up by taking to F/N) \_\_\_\_\_
17. Have F/Ns not been indicated?  
(Indicate it to F/N) \_\_\_\_\_
18. Have auditing questions not been understood?  
(2 wc get them properly understood) \_\_\_\_\_

19. Did you say something must have read? \_\_\_\_\_  
(2 wc E/S to F/N)
20. Were you still upset when somebody thought it was handled? \_\_\_\_\_  
(Find and handle to F/N)
21. Are you protesting? \_\_\_\_\_  
(2 wc E/S)
22. Are you urgently trying to leave? \_\_\_\_\_  
(Something Ext R/D undone or unflat)
23. Have you separated out? \_\_\_\_\_  
(Grade II or L10)
24. Are you out and can't go in? \_\_\_\_\_  
(Ext R/D)
25. Are there undisclosed problems? \_\_\_\_\_  
(2 wc E/S)
26. Are you taking or smoking drugs? \_\_\_\_\_  
(Drug remedies)
27. Did you once take drugs? \_\_\_\_\_  
(Drug remedies)
28. Are you out and can't get in? \_\_\_\_\_  
(Ext R/D)
29. Is there a lie? \_\_\_\_\_  
(2 wc E/S)
30. Are you talking to others about your case? \_\_\_\_\_  
(2 wc E/S)
31. Are you listening to others talk about their cases? \_\_\_\_\_  
(2 wc E/S)
32. Have you been looking at or listening to tech materials  
you shouldn't? \_\_\_\_\_  
(2 wc E/S)
33. Do you have opinions you don't dare say? \_\_\_\_\_  
(2 wc E/S to F/N)
34. Are you here for undisclosed reasons? \_\_\_\_\_  
(2 wc E/S to F/N)
35. Are you not telling your Auditor your Cognitions? \_\_\_\_\_  
(Find what and E/S to F/N)
36. Are you withholding your actual case state? \_\_\_\_\_  
(2 wc E/S to F/N)
37. Are you unwilling to talk to the auditor? \_\_\_\_\_  
(2 wc on what he can't say E/S to F/N)
38. Did your auditor overwhelm you? \_\_\_\_\_  
(2 wc E/S to F/N)
39. Are you scared of what might happen in auditing? \_\_\_\_\_  
(2 wc E/S to F/N)
40. Are you somebody else? \_\_\_\_\_  
(2 wc E/S to F/N)
41. Is there a list error? \_\_\_\_\_  
(Find and correct it to F/N)
42. Are you waiting for something to happen? \_\_\_\_\_  
(2 wc E/S to F/N)
43. Do you think something else is wrong? \_\_\_\_\_  
(2 wc E/S to F/N or handle to F/N)

IF EXTERIORIZATION READS CORRECT IT FIRST.

All Levels

**F/N EVERYTHING**

Whenever an auditor gets a read on an item from Ruds or a prepared list (LIB, L3A, L4B, etc, etc) IT MUST BE CARRIED TO AN F/N.

To fail to do so is to leave the pc with by-passed charge.

When a pc has had several reads on various lists which were none of them carried to F/N, it can occur that he will become upset or depressed without any other apparent reason. As one has DONE the lists without F/Ning each item, one now has the mystery of what is wrong?

The error is reading items from Ruds or prepared lists cleaned to no read but not carried to F/N.

This action (amongst many such refinements) is what makes Flag auditing so smooth and indeed makes it Flag Auditing.

When an auditor first tries this he may well think it is impossible.

Yet it is simplicity itself. If you know bank structure you know it is necessary to find an earlier item if something does not release. What has been found as a read on a prepared list *would* F/N if it were the basic lock. So if it doesn't F/N, then there is an earlier (or an earlier or an earlier) lock which is preventing it from F/Ning.

So the RULE:

NEVER WALK OFF FROM A READING ITEM ON A RUDIMENT OR A PREPARED REPAIR LIST BEFORE YOU CARRY IT DOWN (EARLIER SIMILAR) TO AN F/N.

Example: ARC Brk reads. Pc says what it is, Auditor does ARCU CDEI. If no F/N, Auditor asks for an earlier similar ARC Brk, gets it, ARCU CDEI, etc until he gets an F/N.

Example: PTP reads. Carry it E/S (earlier similar) until a PTP F/Ns.

Example: L4B: Has an item been denied you? Reads. Answered. No F/N. Is there an earlier similar denied item? Answered. F/N. Go on to next reading item on the list.

Example: GF assessed once through for reads. The next C/S must take every item on it that read, by 2wc or other process, to an F/N.

So there is a much more general rule:

EVERY ITEM THAT READS MUST F/N.

In Dianetics you get the F/N when you run E/S secondaries or engrams to an erasure, F/N, Cog, VGIs.

In Rudiments, every out rud you get a read on is run E/S to F/N.

On a prepared list you take each read to an F/N or E/S to F/N.

On an LX list you run each flow chain to an F/N.

On GF you get by whatever process an F/N.

On Listing by the Laws of Listing and Nulling, your eventual item listed must F/N.

So another rule:

EVERY MAJOR AND MINOR ACTION MUST BE CARRIED TO AN F/N.

There are NO exceptions.

Any exception leaves by-passed charge on the pc.

Also, every F/N is indicated at the conclusion of the action when cog is obtained.

You take too soon an F/N (first twitch) you cut the cognition and leave by-passed charge (a withheld cognition).

I could take any folder and simply write out the ruds and prepared list reading items and then audit the pc and carry each one to F/N and correct every list so disclosed and wind up with a very shining, cool calm pc.

So “Have reading items been left charged?” would be a key question on a case.

Using lists or ruds on high or low TAs that are not meant for high or low TAs will get you reading items that won't F/N.

So, another rule:

NEVER TRY TO FLY RUDS OR DO LIB ON A HIGH OR LOW TA.

One can talk the TA down (see HCO B on Talking the TA Down).

Or one can assess L4B.

About the only prepared lists one can assess are the new Hi-Lo TA HCO B 13 Mar 71 and possibly a GF+40 once through for biggest read. The biggest read will have a blowdown on it and can possibly be brought to F/N. If this occurs then one also handles all other items that read.

The most frequent errors in all this are:

Not taking a read earlier similar but just checking it and leaving it as “clean”.

Not using suppress and false on items.

And of course leaving a pc thinking things are still charged by failing to indicate the F/N.

Indicating an F/N before Cog.

Not going back through the folder to handle ruds and items that read but were called “clean” or were simply abandoned.

A pc audited under tension of poor TRs has a hard time and does not F/N sometimes, inviting overrun.

The rules then to happy pcs are:

GOOD TRs.

F/N EVERYTHING FOUND ON RUDS AND LISTS.

AUDIT WITH TA IN NORMAL RANGE OR REPAIR IT SO IT IS IN NORMAL RANGE.

HCO POLICY LETTER OF 16 MARCH 1971R  
REVISED 29 JANUARY 1975

*Revision in this type style*

Remimeo  
Course Super Course  
Course Super Checksheet  
LRH Comm to Enforce

## WHAT IS A COURSE?

In Scientology a course consists of a *checksheet* with *all* the actions and material listed on it and *all* the materials on the checksheet available in the same order.

“Checksheet Material” means the policy letters, bulletins, tapes, mimeo issues, any reference book or any books mentioned.

“Materials” also include clay, furniture, tape players, bulletin boards, routing forms, supplies of pink sheets, roll book, student files, file cabinets and any other items that will be needed.

If you look this over carefully, it does not say “materials on order” or “except for those we haven’t got” or “in different order”. It means what it says exactly.

If a student is to have auditing or word clearing rundowns or must do auditing those are under ACTIONS and appear on the checksheet.

A course must have a Supervisor. He may or may not be a graduate and experienced practitioner of the course he is supervising but HE MUST BE A TRAINED COURSE SUPERVISOR.

He is not expected to teach. He is expected to get the students there, rolls called, checkouts properly done, misunderstands handled by finding what the student doesn’t dig and getting the student to dig it. The Supervisor who tells students answers is a waste of time and a course destroyer as he enters out-data into the scene even if trained and actually especially if trained in the subject. The Supervisor is NOT an “instructor”, that’s why he’s called a “Supervisor”.

A Supervisor’s skill is in spotting dope-off, glee and other manifestations of misunderstands., and getting it cleaned up, not in knowing the data so he can tell the student.

A Supervisor should have an idea of what questions he will be asked and know where to direct the student for the answer.

Student blows follow misunderstands. A Supervisor who is on the ball never has blows as he caught them before they happened by observing the student’s misunderstanding before the student does and getting it tracked down by the student.

It is the Supervisor’s job to get the student through the checksheet fully and swiftly with minimum lost time.

The successful Supervisor is tough. He is not a kindly old fumbler. He sets high *checksheet* targets for each student for the day and forces them to be met or else.

The Supervisor is spending Supervisor Minutes. He has just so many to spend. He IS spending Student Hours. He has just so many of these to spend so he gets them spent wisely and saves any waste of them.

A Supervisor in a course of any size has a Course Administrator who has very exact duties in keeping up Course Admin and handing out and getting back materials and not losing any to damage or carelessness.

If Paragraphs One to Three above are violated it is the Course Administrator who is at fault. He must have checksheets and the matching material in adequate quantity to serve the Course. If he doesn't he has telexes flying and mimeo sweating. The Course Admin is in charge of routing lines and proper send-off and return of students to Cramming or Auditing or Ethics.

The final and essential part of a course is students.

If a course conforms with this P/L exactly with no quibbles, is tough, precisely time scheduled and run hard, it will be a full expanding course and very successful. If it varies from this P/L it will stack up bodies in the shop, get blows and incompetent graduates.

The final valuable product of any course is graduates who can apply *successfully* the material they studied and be successful in the subject.

This answers the question What is a Course? If any of these points are out it is NOT a Scientology Course and it will not be successful.

Thus, the order "Put a Course there!" means *this P/L in full force*.

So here's the order, WHEN OFFERING TRAINING PUT A COURSE THERE.

HCO BULLETIN OF 15 DECEMBER 1968

Remimeo

(Amends HCO Bulletin of 9 January 1968, List L4A)  
(ITEM 6 CORRECTED 12 FEBRUARY 1969)  
(Amended 8 August 1970)  
(Amended 18 March 1971)

**L4B**

**FOR ASSESSMENT OF ALL LISTING ERRORS**

PC'S NAME \_\_\_\_\_ DATE \_\_\_\_\_

AUDITOR \_\_\_\_\_

1. DID YOU FAIL TO ANSWER THE LISTING QUESTION?  
(If it reads, find out what question, clear the question noting whether it reads, if so, list it, find the item and give it to the pc.)
2. WAS THE LIST UNNECESSARY?  
(If it reads, indicate BPC and indicate that it was an unnecessary action.)
3. WAS THE ACTION DONE UNDER PROTEST?  
(If it reads, handle by itsa earlier similar itsa.)
4. IS A LIST INCOMPLETE?  
(If reads, find out what list and complete it, give the pc his item.)
5. HAS A LIST BEEN LISTED TOO LONG?  
(If so, find what list and get the item off from it by nulling with Suppress, the nulling question being: "On\_\_\_\_\_ has anything been suppressed?", for each item on the overlong list. Give the pc his item.)
6. HAVE WE TAKEN THE WRONG ITEM OFF A LIST?  
(If this reads, put in Suppress and Invalidated on the list and null as in 5 above and find the right item and give to the pc.)
7. HAS A RIGHT ITEM BEEN DENIED YOU?  
(If this reads, find out what it was and clean it up with Suppress and Invalidate and give it to the pc.)
8. HAS AN ITEM BEEN PUSHED OFF ON YOU YOU DIDN'T WANT?  
(If so, find it and get in Suppress and Invalidate on it and tell pc it wasn't his item and continue the original action to find the correct item.)
9. HAD AN ITEM NOT BEEN GIVEN YOU?  
(If reads, handle as in 7.)
10. HAVE YOU INVALIDATED A CORRECT ITEM FOUND?  
(If so, rehab the item and find out why the pc invalidated it or if somebody else did it, clean it up and give it to pc again.)
11. HAVE YOU THOUGHT OF ITEMS THAT YOU DID NOT PUT ON THE LIST?  
(If so, add them to the correct list. Renuall the whole list and give the pc the item.)

12. HAVE YOU BEEN LISTING TO YOURSELF OUT OF SESSION?  
(If so, find out what question and try to write a list from recall and get an item and give it to the pc.)
13. HAVE YOU BEEN GIVEN SOMEBODY ELSE'S ITEM?  
(If so, indicate to the pc this was not his item. Don't TRY to find whose it was.)
14. HAS YOUR ITEM BEEN GIVEN TO SOMEONE ELSE?  
(If so, find if possible what item it was and give it to the pc. Don't try to identify the "somebody else".)
15. HAS A RELEASE POINT BEEN BY-PASSED ON LISTING?  
(If so, indicate the overrun to the pc, rehab back.)
16. HAS A RELEASE POINT BEEN BY-PASSED ON THE QUESTION ONLY?  
(If so, indicate the overrun to the pc and rehab back.)
17. HAVE YOU GONE EXTERIOR WHILE LISTING?  
(If so, rehab. If Ext Rundown not given, note for C/S.)
18. HAS IT BEEN AN OVERT TO PUT AN ITEM ON A LIST?  
(If so, find out what item and why.)
19. HAVE YOU WITHHELD AN ITEM FROM A LIST?  
(If so, get it and add it to the list if that list available. If not put item in the report.)
20. HAS A WITHHOLD BEEN MISSED?  
(If so, get it, if discreditable ask "Who nearly found out?")
21. HAS AN ITEM BEEN BY-PASSED?  
(Locate which one.)
22. WAS A LISTING QUESTION MEANINGLESS?  
(If so, find out which one and indicate to the pc.)
23. HAS AN ITEM BEEN ABANDONED?  
(If so, locate it and get it back for the pc and give it to him.)
24. HAS AN ITEM BEEN PROTESTED?  
(If so, locate it and get the protest button in on it.)
25. HAS AN ITEM BEEN ASSERTED?  
(If so, locate it and get in the assert button on it.)
26. HAS AN ITEM BEEN SUGGESTED TO YOU BY ANOTHER?  
(If so, get it named and the protest and refusal off.)
27. HAS AN ITEM BEEN VOLUNTEERED BY YOU AND NOT ACCEPTED?  
(If so, get off the charge and give it to the pc, or if he then changes his mind on it, go on with the listing operation.)
28. HAS THE ITEM ALREADY BEEN GIVEN?  
(If so, get it back and give it again.)
29. HAS AN ITEM BEEN FOUND PREVIOUSLY?  
(If so, find what it was again and give it to pc once more.)
30. HAS AN ITEM NOT BEEN UNDERSTOOD?  
(If so, work it over with buttons until pc understands it or accepts or rejects it and go on with listing.)

31. WAS AN ITEM DIFFERENT WHEN SAID BY THE AUDITOR?  
(If so, find out what the item was and give it to the pc correctly.)
32. WAS NULLING CARRIED ON PAST THE FOUND ITEM?  
(If so, go back to it and get in Suppress and Protest.)
33. HAS AN ITEM BEEN FORCED ON YOU?  
(If so, get off the reject and suppress and get the listing action completed to the right item if possible.)
34. HAS AN ITEM BEEN EVALUATED?  
(If so, get off the disagreement and protest.)
35. HAD EARLIER LISTING BEEN RESTIMULATED?  
(If so, locate when and indicate the by-passed charge.)
36. HAS AN EARLIER WRONG ITEM BEEN RESTIMULATED?  
(If so, find when and indicate the by-passed charge.)
37. HAS AN EARLIER ARC BREAK BEEN RESTIMULATED?  
(If so, locate and indicate the fact by itsa earlier similar itsa.)
38. DO YOU HAVE AN ARC BREAK BECAUSE OF BEING MADE TO DO THIS?  
(If so, indicate it to the pc, check the question if reads. Get earlier similar itsa.)
39. HAS THE LIST CORRECTION BEEN OVERRUN?  
(If so, rehab.)
40. IS THERE SOME OTHER KIND OF BY-PASSED CHARGE?  
(If so, find what and indicate it to pc.)
41. WAS THERE NOTHING WRONG IN THE FIRST PLACE?  
(If so, indicate it to pc.)
42. HAS THE UPSET BEEN HANDLED?  
(If so, indicate it to the pc.)
43. HAS A LIST PROCESS BEEN OVERRUN?  
(If so, find which one and rehab.)

**LIST—1—C**

**L1C**

(Cancels earlier L1 Lists  
such as HCO B 8 Aug 70)

Used by Auditors in session when an upset occurs, or as ordered by C/S.

Handles ARC Broken, Sad, hopeless or nattery pcs.

Questions can be prefaced with “Recently” “In this life” “On the Whole Track” or used without.

DO NOT USE ON HIGH TA TO BRING IT DOWN. USE HI-LO TA LIST.

TAKE ALL READING ITEMS OR VOLUNTEERED ANSWERS Earlier  
Similar to F/N as they occur.

1. Has there been an error in listing?  
(If this reads change to L4B at once.)
2. Has a withhold been missed?
3. Has some emotion been rejected?
4. Has some affinity been rejected?
5. Has a reality been refused?
6. Has a communication been cut short?
7. Has a communication been ignored?
8. Has an earlier rejection of emotion been restimulated?
9. Has an earlier rejection of affinity been restimulated?
10. Has an earlier refusal of reality been restimulated?
11. Has an earlier ignored communication been restimulated?
12. Has something been misunderstood?
13. Has someone been misunderstood?
14. Has an earlier misunderstanding been restimulated?
15. Has some data been confusing?
16. Has there been a command you haven't understood?
17. Has there been some word you haven't known the meaning of?

18. Has there been some situation you haven't grasped?
19. Has there been a problem?
20. Has a wrong reason for an upset been given?
21. Has a similar incident occurred before?
22. Has something been done other than what was said?
23. Has a goal been disappointed?
24. Has some help been rejected?
25. Has a decision been made?
26. Has an engram been restimulated?
27. Has an earlier incident been restimulated?
28. Has there been a sudden shift of attention?
29. Has something startled you?
30. Has a perception been prevented?
31. Has a willingness not been acknowledged?
32. Has there been no auditing?
33. Did you go Exterior?
34. Have actions been interrupted?
35. Have actions continued too long?
36. Has data been invalidated?
37. Has someone evaluated?
38. Has something been O/Run?
39. Has an action been unnecessary?

C/S Checksheet  
All Auditors' Hats

*C/S Series 30*

**C/Sing AUDITOR-C/Ses**

When auditors do their own C/Sing, the Org C/S has the additional duty of making certain their C/Ses are correct as well as their sessions.

Therefore the Org C/S (which post is now even more vital) has the duty of

1. Seeing that all auditor flubs are handled in a cramming action on the flubbed action.
2. Seeing that all auditor-as-a-C/S errors are handled in a cramming action on the C/S Series.

Normally a C/S handles his post on the Fantastic New HGC Line, HCO B 5 Mar 71, C/S Series 25, on a fast flow basis. But he is looking for

- (a) "Dog cases"—pcs not running well
- (b) Auditor errors
- (c) Auditor Program errors
- (d) Auditor C/S errors.

Those that are F/Ning VGIs at Examiner he lets go through fast verifying the exam report and the next C/S.

The moment he sees a contrary exam report (F/N with natter or BIs, high TA or low TA with any statement or no statement) he has to decide

- (a) Dog Case?
- (b) Auditor Error?
- (c) Program Error?
- (d) Auditor C/S Error?

In any of the above the Org C/S takes over and handles what he finds. He must *also* require a cramming action on any (b) auditor error (c) program error or (d) auditor C/S error.

The Org C/S then does it right himself.

In any event it is the Org C/S who is fully responsible for all the cases.

That the Org C/S finds a program or C/S wrong does not then cause the auditor-as-a-C/S to cease to C/S. Quite the contrary. Even if every program or C/S he writes is wrong and has to be rewritten he still takes all the actions of the auditor-as-a-C/S.

## DOG CASES

Category (a) is the case who just isn't running well.

The wrong answer to a dog case is to go on auditing and wasting hours hopefully.

The RIGHT answer is to STUDY the case carefully. The Folder Error Summary, the Folder session summary, the sessions, all have to be studied.

The standard C/S action of going back to when the pc was running well and coming forward for the error is very much in use.

Such a case is the result of a FLUB always. Example: High TA case on Power run on and on with TA in the sky. A *careful* FES and study of folders revealed that 2 years before, Power had been completed! Every current action was a brutal overrun! Yet the same C/S and *ten* separate auditors failed to see it! Indicating it and 2wc on the *earlier* Power handled the O/R. Example: Case RD not running well at all, TA going high. A *careful* study of the folder session summary at length discovered that the pc had not F/Ned on 2 way comm Int-Ext. 2wc on this point discovered a total mess of command clearing on the Int RD. This opened the door. Pc thereafter ran beautifully. Example: Pc a total nattery mess every session. *Careful* study found a tiny remark on the white form about going to a psychiatrist. 2wc on it and the antagonism toward auditing and the withhold of having once gone crazy vanished. Case ran well.

Careful study is the clue. The Auditor as a C/S may not put in the time needed to really sort the case out.

A *current* FES of recent auditing can also be ordered. This often reveals a lot of oddball goofs which when handled make the case run well.

The Org C/S is supposed to be the old master on solving these dog cases by careful study.

Heavy laurels to the auditor-as-a-C/S who spots the knot that is tangling the case up.

## AUDITOR ERRORS

The errors of auditors can be so various one only looks to see if the actions of the auditor are standard when the Org C/S has to intervene.

Then the outnesses show up.

Example: Pc's TA shooting up at session end. Examine the previous C/S. Calls for L1B. Examine session. Auditor is found to be ITSAING ARC Breaks, no ARCU CDEI, no earlier similar.

Action ordered, pick up the BD ARC Brk and do ARCU CDEI and carry it E/S to F/N.

Action ordered. Auditor to Cramming to do Pattern of Bank, why earlier? and how to fly ruds.

Always find and handle auditor goofs by Cramming. You'll never have an HGC unless you do.

## PROGRAM ERRORS

When an auditor-as-a-C/S program is poor, the Org C/S redoes it, sends the Auditor to Cramming on the relevant parts of the C/S Series or tech materials.

## C/S ERRORS

When an auditor-as-a-C/S is found to have written a bad C/S that got by but didn't work or when the next C/S is wrong, the Org C/S sends the auditor-as-a-C/S to Cramming to do the relevant part of the C/S Series or the tech that applies.

## CRAMMING

An org that has no sharp, hot Cramming Section in the Qual Div—well God help it.

That org's tech will always be shaky if not outright criminal.

Students need a Cramming or they never really learn not to goof. Where there's no insistence they do not learn.

HGC Auditors need a Cramming. They go stale. New HCO Bs aren't understood unless energetically checked out. The C/S in the Tech Div is at total risk where he is not backed up by Cramming.

The new HCO B 5 Mar 71, C/S Series 25, the new line, demands a Cramming as no auditor is likely to learn to C/S.

You can't risk fast flow with no Cramming to fall back on.

And an org's tech will never improve unless it has a Cramming for HGC auditors and course students.

Qual has to have a library of HCO Bs and course packs and books to really stay on the ball. Then its Cramming is hot, on the point, specializing mainly in finding what the auditor has neglected or misunderstood and getting it done.

Cramming and use of it is the key to a fully satisfied field and an expanding org.

The big plus points of the new HGC line are huge increases in delivery volume, very cocky never-blow auditors who get wins, an enthusiastic field, and last but not least, newly trained and competent C/Ses who guard tech by knowing a correct C/S!

The new line increases speed.

At the same time it requires greater technical safeguards.

The new HGC line won't work unless you have a competent Qual Cramming and an Org C/S who knows his business and detects and pitchforks all flubs in auditing and C/Sing into the fast hands of a hot no-nonsense Cramming Officer.

The new line of HCO B 5 Mar 71 is a great success.

It greatly increases *delivery quality* as well as volume if this HCO B is stressed in putting the new line into action.

### DIANETIC ERASURE

There are several corny stunts that can occur in Dianetics, any of which will add up to no F/N.

1. Trying to run an item that didn't read on being given or when being called. As the chain is not charged it will be hard if not impossible to run. BD items are of course the very best and almost always erase very easily.
2. Starting a new session with a new item with the TA way way up. To play it safe in Dianetic auditing (it can be handled in Scientology) the Dianetic auditor who starts a session and a new action at the same time with the TA high is very foolish. It may not be high on what the auditor is now newly trying to run. The correct action is not to start the session. Just end off with no auditing done. When the TA has settled down on another day (3 days to 10 days later) begin your new action. The pc is ill or is having trouble in life. If you were running a chain in the last session and continue it in the next, disregard the high TA. A way to get around this is get some new items from the high TA pc and take one that blows down well and you can probably bring it off. Safest is don't audit a high TA pc unless to repair an unflat chain (or to run Exteriorization RD). This rule is variable. But you should know it is risky to audit a new item taken from an earlier list when the pc comes into session with a high TA as it may not be high on what you are about to run and so you may get no F/N. The only remedy is to get new items and choose a BD one (or to turn the pc over to a Scientology auditor to assess a Hi-Lo TA list and handle).
3. Running a narrative item can lead to no F/N. (A Narrative Item describes only one possible incident, i.e. "dropping an ironing board on my foot" = no chain = possible no F/N.)
4. Running a pc who has exteriorized in auditing on something other than an Exteriorization RD will produce a high TA and no F/N in the session. After Ext RD has been run anything can be run.
5. Probably the WORST blunder is failing to ask for ABCD again when the pc says "It's erased" but the TA is still high. This is really a corny error. TA 4.9. Pc says, "It's erased! All blank now," and the auditor fails to ask ABCD once more. There is a moment when the pc's NOT-IS of the picture squeezes it into invisibility. The mass of it is still there. It takes just one or two more passes to get the BD and F/N. It's up to the auditor not to let the pc go without that additional ABCD. Then the BD and F/N happen with Cog and VGIs. This error is more common than one would think.
6. Failure to ask for the Earlier Beginning will also cause a long grind (ABCD over and over) and no F/N.
7. Of course, not asking for an Earlier Incident mentioning the same item will also cause a grind and no F/N. When the item isn't also mentioned in the command the pc can jump chains. And if the Earlier Beginning is not asked for at all of course there will be no F/N.
8. Auditing a pc under protest will cause the TA to stay up and no F/N.

The skilled Dianetic Auditor knows these things cold and does not make these errors. Thus he gets his end of session F/N regularly and gets F/N at the Examiner as well when the case has had a few sessions.

*C/S Series 31*

**PROGRAMMING AND MISPROGRAMMING**

There are three important areas of technical application:

1. Auditing Cases.
2. Case Supervising Cases.
3. Programming Cases.

Auditing generally should be gotten into an org on the routine basis of:

1. Get Auditing Volume UP.
2. Get Auditing Quality UP.
3. Get C/Sing Volume UP.
4. Get C/Sing Quality UP.
5. Get Programming Volume UP.
6. Get Programming Quality UP.

To do it in any other sequence is to organize before producing or to inhibit production.

*Auditing* quality is raised by getting in Cramming and getting Cramming done.

*C/S* quality is raised by *C/S* study of cases and the Qual Sec Cramming the *C/S*.

*Programming* quality is raised by getting FESes done so that the action does not block production and Cramming or Programming and then studying the case to make the Programming more real and effective.

**MISPROGRAMMING**

1. Programming a case without data is risky. Dropping out the FES step, not getting White Forms done, etc, short-cutting on data in general can cost tremendous amounts of lost auditing.
2. Doing a vague general hopeful program of Repair (Progress) trusting something will come up is ineffective. With data on the person's life even on a pc never before audited, one can hit the key points even if only with 2-way comm on them. Cases that have been audited and are boggy are so for a reason. Programming without finding that reason can be very ineffective and result in few wins.
3. Running a new major program into an incomplete major program can be as deadly as failing to flatten a process before starting another process only more so.
4. Failing to end off a program when its End Phenomena is achieved is another gross error.
5. Being too ignorant of the basic bank and the tech *theory* (as different than processes) is another barrier to programming.
6. Not Programming at all.

The above six are the principal gross errors in programming.

*C/S Series 32*

**USE OF QUAD DIANETICS**

With the introduction of Quadruple Dianetics it is mandatory important urgent that one does not audit four flow items until one has brought *all* earlier Dianetic Items into four flows.

TRIPLE

This also applies to Triple Dianetics. On a case where only Flow One (Single) has been run, you don't suddenly run a Triple (F1, F2, F3) such as on the LX Class VIII Lists until one has run the earliest Dn item ever run (or that can be found) on Dn Triple and then on forward on Triple up to the LX.

QUAD

However, one would now not bother to run only Triples forward. He would locate the earliest Single or Triple (if no Single Flow) item and run it Quadruple by now running the missing flows.

EXT RD

In doing an EXTERIORIZATION RUNDOWN one mustn't suddenly introduce the 4th flow (F Zero).

If the case has only had Triples in Dianetics one mustn't suddenly introduce a Flow Zero on EXT. The case should be done on Triple Flow EXT.

THEN all earlier Dn Items in sequence run are

- (a) Listed from W/S or Folder Summaries.
- (b) Brought up to current by running in all the missing flows of Quad.
- (c) The EXT RD fourth flow is audited in when one gets to it.

REASON

Auditing additional flows while earlier items remain Single or Triple restimulates the missing flows and stacks them up as mass. They can make a pc uncomfortable until run.

All the missing flows (that were not run) are still potential mass.

This mass restimulates like something too late on the chain when a flow not run on earlier items is run on later items.

Auditing itself is a sort of time track. The earliest session blows the later sessions.

FULL FLOW TABLE

Before running Quad Dianetics one makes a table of earlier items run. Like this:

*FULL FLOW TABLE*

<i>Date</i>	<i>Item</i>	<i>Flow Previously Run</i>	<i>Must Run</i>
2/3/62	Guf Shoulder	F 1	F 2, 3, 0
3/3/67	Gow in Foot	F 1	F 2, 3, 0
30/4/67	Chow in Chump	F 1	F 2, 3, 0
29/9/68	LX Anger	F 1, 2, 3	F 0
	LX Peeved	F 1, 2, 3	F 0
4/10/69	Feeling Numb	F 1, 2, 3	F 0
5/9/70	EXT RD	F 1, 2, 3	F 0
9/10/70	Feeling of Goof	F 1, 2, 3	F 0
10/10/71	Dn Assist on Head	F 1	F 2, 3, 0

## FLAWS

F 1 is FLOW ONE, something happening to self.  
F 2 is FLOW TWO, doing something to another.  
F 3 is FLOW THREE, others doing things to others.  
F 0 is FLOW ZERO, self doing something to self.

## R3R COMMANDS

Standard R3R Commands are used on Quad Dianetics.

They are the subject of another HCO B.

The Zero Command however is very easy being “Locate an incident of (loss or emotion) (pain and unconsciousness) when you caused yourself to have a(an) (item)” with the other commands of R3R as usual.

## NARRATIVE

The question will come up, do we Triple or Quad Narrative items or Multiple somatic items.

The test is, did the flows already run F/N when they were originally run. If they did, include them. If they didn't run exclude them.

This does not mean you omit everything that didn't run.

## REPAIR

While auditing this FULL FLOW DIANETICS you will find various chains that did not F/N when originally run.

These are included and should be concluded to F/N. This means one has to find out if they by-passed the F/N, went too early, jumped the chain, etc. Usually an L3A assessed on that faulty action will give the answer. It is easy to make these old flubbed chains F/N unless you work at it too hard. Usually the reason they didn't is visible on the old worksheet. The auditor forgot to ask for Earlier Beginning or by-passed the F/N or jumped the chain or tried to run it twice forgetting he'd run it before. Corny errors.

## RESULT

The result of doing a FULL FLOW DIANETIC ACTION on a case is quite spectacular. The shadowy remains of somatics blow, mass blows and the pc comes up shining.

## OFFERING FFD

Offering the public Full Flow Dianetics must include the cost of C/S work since it is sometimes lengthy. It is best to sell the action at a flat price that's more than adequate to cover the auditing as well as the hours of FESing and FF table making as the time can be quite long.

The auditing can be remarkably brief. The greatest amount of time is usually spent on the C/Sing and table making.

When offering the package it should be called Quadruple Dianetics—4 times more powerful than previous auditing.

A C/S must liaise with the Dissem Sec and Treasury Sec on selling it or he'll find the org is losing money doing the C/Sing and tables. A nice big fat flat price, not by hours, is best.

## OT WARNING

When doing Quadruple Dianetics on Clears and OTs (and a very few others) it may be found that many chains are now missing or are just copies of the original. Don't be disturbed. Pc says they're gone now they're gone. Just F/N the fact and carry on with the next flow or item.

*C/S Series 33*

**TRIPLE AND QUAD RERUNS**

LAW: WHEN ONE OR MORE OF THE FOUR FLOWS OF AN ITEM OR GRADE ARE LEFT UNRUN, WHEN USED IN LATER PROCESSES THE EARLIER UNRUN ONES RESTIMULATE AND MAKE MASS.

This tells you that high TAs, heavy pressures and even illness can come from by-passed flows.

**BY-PASSED FLOWS**

Example: Dianetic Singles have been run on 7 items. Now the auditor begins to run new items Triple without running Triple on the already run items. The result will be 7 unrun Flow 2s and seven unrun Flow 3s. These will restimulate and form mass and by-passed charge.

Example: Now let us say all 7 previous items have been run Triple. And the auditor now runs a new item Quadruple. This leaves 7 unrun Zero chains. These can restimulate and form mass and by-passed charge.

Example: Now let us say that Dianetics was all run Single and Grades were run Triple. This will restimulate the Dn chains F2 and F3.

Example: Let us say that Dianetics and Scientology Grades were all run Triple. An Exteriorization Rundown is now run Quad. This will throw all Dianetic and Scientology unrun Flow Zeros into restimulation and give by-passed charge.

ANY LATER GRADE RUN WITH MORE FLOWS THAN USED IN EARLIER ACTIONS CAN THROW THE EARLIER UNFLAT FLOWS INTO RESTIM, PILE UP MASS GIVING HIGH TA AND BPC GIVING ARC BREAKS.

**REPAIR**

The more the condition is *repaired* by L1C, L4B, etc, etc, the *worse* the Mass gets.

**SOURCE OF HIGH TA**

Thus High TAs have three principal sources:

1. Overruns
2. Auditing Past Exterior
3. Earlier Unrun flows restimulated by those flows used in later actions.

There are other minor ones such as Drug Background, illness, etc as per Hi-Lo TA Assessment.

**REHABS**

One must NOT recklessly or continuously rehab a past major action. This causes overrun. The thetan is placed at the *end* of the incidents not yet in restimulation or run and the bank gets more solid.

**MASSY THETANS**

The whole trick of this universe is contained in thetans copying or picturing incidents and then getting stuck in the later portion of them.

“Incidents” is the keynote. A Thetan is incident hungry.

This is what traps him.

For some reason he has to be at the earliest end of incidents to erase them. The later he is in incidents and the later he is on the track the more solid he is.

This also applies to the “auditing time track”.

By omitting things like flows on the auditing time track, the thetan thus becomes

The whole theory of the Exteriorization Remedy is based on having gone out (later) *after* he went in (earlier). So Exteriorizing can stick him. (People buy the Ext RD to Exteriorize but the remedy is only done to permit further auditing. They Ext of course when the bank is handled.)

When flows of items are by-passed and then later restimulated by auditing them, mass occurs.

#### GETTING IN ALL FLOWS

When doing additional flows on earlier items or processes one must *also* check or rehab those flows marked as run to F/N in worksheets.

This again will leave unflat flows and BPC unless it is done.

And if it is overdone it will raise the TA by overrun.

So if one had a **case** that had **Single Dianetics and was later run on Triple for new** items (but the Singles not done into Triple) one would have to RUN FIRST the missing unrun flow or flows and then *check* the first Single F I for flatness, then check other previously run flows.

The rule is run the previously unrun one or ones first to get charge off, then verify or run the ones listed as run already.

Then one would do the same for the next item. Run the previously unrun flow or flows and then verify or run those listed as already run to be sure they F/N.

*All* items, in chronological sequence, and *all* processes, would have to be run Quad.

IT WOULD BE A WASTE OF TIME NOW TO RUN IN ONLY TRIPLES.

Whether you have the Quad commands or not they are easy to figure out as you are only missing the Zero Flow, self to self.

So all C/Ses and Auditing actions are “Rehab or Run F1, F2, F3, F0” when getting in all flows on things run to date.

#### HIGH TA

When you are sure an EXT RD has been done correctly and its 2 wc went F/N and the TA later goes high, you check the EXT RD. That is the most usual reason. This simple action is amazingly subject to flubs.

If the TA goes high later you can do a Hi-Lo TA Assessment and handle.

If the TA is still high or low, you had better check the state of flows. Were more flows run on later actions than were run on earlier actions?

If so, Your pc has felt massy, sometimes even ill.

The right action is to get in all flows from the beginning. And do it Quad. Bring *all* his auditing up to Quad.

(If his folder is not available, he has kind of had it. I know of no way, at this writing, to recover lost Dn items but will have to work something out.)

#### NOT IN TROUBLE

If the pc is not in trouble, his best bet is to get on up the grades to Expanded OT III.

#### IN TROUBLE

If he *is* massy and is having trouble the best bet is to

1. Be totally sure of his Int RD.
2. Check O/Rs particularly of a major grade twice or by-passed F/Ns, locate and indicate them.
3. FES, list the items and grades and do a Full Flow action from the beginning of his auditing, raising them all to Quadruple.

#### RUNNING ZERO FLOWS

The Zero Flow in Dianetics is a bit strange. It can be done by full R3R BUT it often depends on the decision the pc made and may F/N very suddenly. It is easily overrun and can be very fast.

A pc can be gotten into trouble on Zero Flows if the auditor is slow and is not alert to his meter and misses the F/N and gives R3R commands after the flow has blown.

#### REHAB OR RUN

The auditor getting in Zero Flows can also ARC Brk the pc by failing to verify if the previously run flows are flat. All the auditor wants is to see them F/N on the command. If they don't he runs them.

Sometimes when he has "run them" again he finds they are being overrun or run twice and has to rehab them by finding this out. The pc sometimes doesn't know until he actually starts to run them. Then he finds they are already run. The clue to this is a climbing TA. If the TA goes up, get off that flow and rehab it.

Example: Pc at first thinks "Pain in shoulder" F2 was never run. Starts to run it. TA goes up. Auditor must pull him off of it by finding out if it is being run twice and rehab it to F/N.

The moral in all these reruns is don't firefight, keep an L1C List and an L3A List handy and use them.

#### RESULTS

The results of straightening up the Int-Ext RD, rehabbing O/Rs and putting in ALL FLOWS on a pc are fantastic.

Getting an All Flows Rundown done correctly gives one all the latent gain the pc has been begging for.

So send to Cramming all C/Ses and auditors who flub.

Program it Right.

C/S it right.

Audit it right.

HCO BULLETIN OF 5 APRIL 1971 R  
Issue II

Remimeo  
HQS Course

REVISED 21 OCTOBER 1974

CANCELS  
BTB 5 APRIL 1971  
Issue I  
SAME TITLE

**SUMMARY OF HOW TO WRITE  
AN AUDITOR'S REPORT AND WORKSHEETS  
FOR HQS CO-AUDIT**

**AUDITOR'S REPORT**

An Auditor's Report should contain:

Date  
Name of Auditor  
Name of Pc  
Condition of Pc at session start  
Time session started  
What process was run—LISTING THE EXACT COMMAND  
Whether any difficulties or upsets occurred. Was Supervisor called?  
Whether process is complete or not  
*F/N, cognition and position of TA*  
Time session ended  
Condition of Pc at session end  
Pc gains or comments  
Length of session.

**WORKSHEETS**

A worksheet is supposed to be the complete running record of the session from beginning to end. The Auditor should not be skipping from one page to another but should just be writing page after page after page as the session goes along. The Auditor writes the wording of the process being run and then the number of each question from the process as he asks it. The Auditor also writes in the Pc's answers and any originations and whether the Pc did the command or not.

A worksheet is always foolscap, 8 x 13 inches, written on both sides and each page is numbered. Pc's name is written on each separate sheet.

A worksheet may be in 2 columns depending on how big the writing of the Auditor is.

When the session is completed, the worksheets are put in proper sequence and stapled with the Auditor's Report Form on top from beginning to end of session.

Time notations should be made at *regular* intervals throughout the session.

When running various processes in a session, mark each one clearly, noting time it was started and ended.

Auditor's Report Forms and worksheets are never re-copied. The Auditor should always read over his worksheets before turning in the folder to the Supervisor, and, if

any words or letters are missing or cannot be read, they should be written in with a different coloured pen.

It is a serious offence to give *any* session or assist (including locational assists) without making an Auditor's Report—or to *copy* the original Report after the session and submit a *copy* instead of the real Report.

Assist Reports that are only contact, locational, or touch assists, may be written after the session and handed in to the Supervisor.

*ALL REPORTS OF ALL SESSIONS GO INTO THE PC'S OWN FOLDER.  
Otherwise past auditing cannot be checked and the case cannot be Case Supervised.*

If these rules are followed, it will make the Supervisor's job much easier and the Auditor's Reports more valuable.

*C/S Series 34*

**NON F/N CASES**

When cases do not bring an F/N VGIs to the Examiner, it is the signal to study the whole case anew and find the bug or bugs that keep it from running and get them handled.

Recently I took over a whole series of these non F/N VGI at Examiner cases and very very carefully studied each one. IN EVERY EXAMINER NON F/N CASE I FOUND FLAGRANT OUT TECH IN (A) THE PROGRAMMING (B) THE C/SING AND (C) THE AUDITING. All three outnesses existed.

These cases were taken as *all* the Non F/N Exam reports on a line containing hundreds of folders and over 600 w.d. hours a week. So you can see that these errors had been missed by expert C/Ses and Auditors. The errors were missed because HOPE was being used instead of study.

There was a *hope* that just routine C/Ses and auditing would work it out eventually.

The fact of non F/N at Examiner was not given sufficient importance.

The fact is that many who F/Ned at the Examiner had small flaws in them yet still got by.

The Exam Non F/N indicates FLAGRANT OUT TECH in the Programming *and* the C/Sing *and* the auditing. That's what it takes.

After a bug is found and corrected the case still may not F/N at the Examiner for a while. But after that while is passed the failure to give the Examiner an F/N means *another* bug and more study.

One case I found had had a major grade done twice two years apart. This was pointed out and rehabbed. But after 2 or 3 sessions the TA remained high. A restudy now found Recall Flow 2 of the Exteriorization Rundown had been run months ago to FIN and then continued for dozens of commands with the TA rising to 4.5. This was then repaired. The case then began to F/N at the Examiner. It now runs like an ordinary case.

There is always a bug, not necessarily current, often very old, in these Exam Non F/N Cases. There are sometimes two or three bugs.

The answer is NOT go on C/Sing and hope.

The answer IS, study and find the bug.

Cases run on triples after a long list of singles is a type of bug.

Cases exteriorizing and then getting no Ext RD is another bug.

Cases given false reads or already run w/hs, cases who don't tell their cogs, cases who were on drugs but drugs were never run, cases that Rockslammed but no crime found, any of the GF 40 or GF reading items, cases with lists out, cases that are always sad or tired ...well these types of cases are the usual bugged cases. But even they sometimes F/N if only to roller coaster.

The general rule of going back to where the case was running well and coming forward still holds. But an audit past Exteriorization can be before that and only eventually catch up.

General repair is harmful when a big bug exists.

Every case I examined had a big bug. Flagrant god-awful overruns, messed up Exteriorization Rundown, three major programs begun, each incomplete, engram after engram botched and run to high TA then walked off from. The errors were real! They had been sitting there for some time unnoticed. Session after session mounting up into piles of wasted auditing.

Sick pcs are another indicator. Pc F/Ns at Exam, then reports sick. Look behind it you find some wild program, C/S and auditing error.

So the answer is to STUDY THE CASE.

Get a total FES done if one has never been done. Get a current FES done or do it yourself.

Then examine the programs and the FESes and Folder Summaries and suddenly you'll find it.

Fortunately there aren't many things that can really foul a case up.

1. Overruns concealed within work sheets. Major grades twice.
2. Auditing past Exterior or flubbed Ext RDs.
3. Earlier unrun flows restimulated by later runs on those flows.
4. GF + 40 Items.
5. Never handled out lists.
6. Undetected drugs or drugs never handled by Dianetics.
7. False reads called (as in w/hs that "won't blow").
8. Hidden standards.
9. Long Duration ARC Brks.
10. Impractical or inapplicable programs.
11. Major actions started never completed.
12. Overrepair.

There can be combinations of these.

So there aren't many. It's really knowing what is right so well that the wrong shows up like skywriting.

Sometimes the errors are silly. A bogged Dianetic case had gotten tons of VI repair.

The C/S, an VIII, had never realized Dianetic C/Sing is its own brand of C/Sing. He didn't shift gears to Dianetic C/Sing when C/Sing Dianetics sessions. The auditor way back had not known that when the pc originates "It's erased" and the TA remains high, his correct action is one more A B C D. This C/S had then tried Class VI remedies instead of telling the auditor "Flatten or rehab the last chain".

When the chains left unflat were rehabbed all was suddenly well.

Another case was interrupted for a year on a major action and when returned to auditing was begun on a long, long repair program. Inches of folder later the interrupted program was found and resumed and the case did great. All that "hopeful" repair was lost work. Ten minutes of case study would have saved twenty hours of useless repair.

The stable datum is CASES MODERATELY WELL PROGRAMMED, C/SED AND AUDITED RUN WELL.

So cases that don't run well (unchanging Exam natter comment, Non F/N) have a BIG error in Programming, C/Sing and Auditing.

Look well and you will find it. And if that isn't it, there was another to be found as well.

If you can't find the folder or data in it you should take every imaginable measure to acquire more data. D of P Interviews, 2wc sessions, telexes to his last org and telegrams to his auditors. But get data from somewhere somehow.

Soon, when hours pick up and skill, all auditing will be sold by package not by hours. So learn economy of hours!

An auditor or C/S who really knows his theory and has a good grasp of practical application knows the right way. From that he can easily see how things are wrong.

An ounce of case study is worth ten pounds of wasted sessions.

**L3B**

**DIANETICS AND EXT RD REPAIR LIST**

This list includes the most frequent Dianetic errors. Use up to Question 28 as the usual use. Then if the situation does not solve, use the rest of the list.

A high or low TA and a bogged case can result from failures to erase a chain of incidents.

DO NOT ATTEMPT TO REPAIR A CHAIN OR ENGRAM WITHOUT USING THIS LIST as it can have different or several errors.

REMEMBER THAT YOUR PC MAY NOT BE SUFFICIENTLY TRAINED TO UNDERSTAND ALL THESE QUESTIONS: IF ONE READS AND HE SAYS HE DOESN'T UNDERSTAND IT, CLEAR IT AND REASSESS (don't explain it and take it as it read on a misunderstood not on a fact).

RUNNING PCS ON DIANETICS WITHOUT A FULL AND COMPLETE DN C/S 1 INDOCTRINATION IS A FOOLISH ACTION.

TAKE ANY READ FOUND TO F/N BY INDICATION OR FULL REPAIR OF IT.

1. The Item or symptom being run had no charge on it. \_\_\_\_\_  
Indicate it was a false read, spot when it was run, where it was run and get an F/N.
2. The same incident or pictures were run before. \_\_\_\_\_  
Indicate that an overrun has occurred. If no F/N spot when, spot where and get an F/N.
3. A session was started on a new item while an old one was not erased. \_\_\_\_\_  
TA would have been high on an old item or the Interiorization Rundown and the auditor went on anyway with a new item. Find what the old item was and repair it with a new assessment on the earlier chain. Indicate fact to the pc.
4. The item being run described just one incident. (Narrative Item.) \_\_\_\_\_  
Find the somatics, emotions, attitudes of the incident and run them as chains as per Standard Dianetics.
5. The incident had an earlier beginning. \_\_\_\_\_  
Move the pc to the earlier beginning and proceed as per Standard Dianetics R3R.
6. There were earlier incidents stirred up and not erased. \_\_\_\_\_  
Find what chain or item and run it to completion by R3R. This condition sometimes leaves pc with the ARC Brk effect of by-passed charge and is a basic example of by-passed charge.
7. Stirred up earlier unrun incidents. (Same as 6.) \_\_\_\_\_
8. When running one item went into another instead and ran a different set of pictures. \_\_\_\_\_  
Jumped chain.
9. When you said it was erased it still had a mass. \_\_\_\_\_  
Auditor does ABCD again on the item one or two more times to get BD F/N. If TA goes up ask for earlier beginning or earlier similar on same incident to F/N.

10. You were protesting.  
Find out what was being protested and handle it. \_\_\_\_\_
11. You were still taking drugs or medicine that had not worn off. \_\_\_\_\_
12. You had a misunderstood on the commands.  
Clear them up. \_\_\_\_\_
13. You had a misunderstood on what you were supposed to be doing.  
Clear it up, get it done right. \_\_\_\_\_
14. A wrong item was given.  
This could also be a listing error. If not sure what it is, shift to L4B. Otherwise find it and indicate it as a wrong item and that all other actions connected with it were wrong. You can also date the session in which it occurred. And you can also find earlier similar wrong items. \_\_\_\_\_
15. Has an earlier Dianetic upset been restimulated?  
Find the earlier one and straighten it out. Also it can go back 2 or 3 more earlier mix-ups. Straighten out as you go back. Then always check for "any earlier Dianetic upset" if you get no F/N. \_\_\_\_\_
16. There was an Incorrect date. Correct it. \_\_\_\_\_
17. There was an Incorrect duration. Correct it. \_\_\_\_\_
18. There was a false date.  
Find the real date despite the false date in the incident. \_\_\_\_\_
19. There was a false duration.  
Find the real duration despite the false duration in the incident. \_\_\_\_\_
20. Is there a stuck picture? Do 1—19 again on the picture and handle. \_\_\_\_\_
21. Is there a persistent mass? (Handle as in 24.) \_\_\_\_\_
22. Was this or an earlier action unnecessary? \_\_\_\_\_
23. Was there nothing wrong in the first place? \_\_\_\_\_
24. Did you have trouble with a pressure item or with pressure on an item?  
Date it *exactly* by meter and find out *where* it occurred in the universe. If done exactly right, it will blow up and vanish and F/N. If this doesn't work, do this list 1 down to 24 on it and correct it to F/N. \_\_\_\_\_
25. Did you move out of your head earlier in auditing? Do Ext RD. \_\_\_\_\_
26. Was your Exteriorization Rundown messed up?  
Check folder on each flow and on the 2wc next day to be sure each flow was run to erasure and the 2wc to F/N. Remember that an auditor report can be a false report, and if you can't find the error in the folder, then do I to 24 on each flow. **DO NOT AUDIT A PC FURTHER UNTIL THE EXT RD IS TOTALLY CORRECTED. IF YOU DO THE TA WILL RISE, WON'T COME DOWN AND PC WILL BE UPSET OR ILL.** \_\_\_\_\_

IN CHOOSING WHICH OF THESE READING ITEMS TO HANDLE, ALWAYS HANDLE EXT RD ITEMS *FIRST*. THEN HANDLE THE REST.

DO NOT CONTINUE AUDITING A PC WHOSE EXT RD WAS MESSED UP AND NOT CORRECTED.

ANY ERROR REMAINING ON AN EXT RD IS DEADLY.

27. Were you being asked things you couldn't answer? \_\_\_\_\_
28. Did the auditor refuse to accept what you were saying?  
Get this and earlier similar instances until you get an F/N VGIs. \_\_\_\_\_

FROM HERE ON ASSESS FURTHER ONLY IF PC TA OR UPSET REMAIN UNHANDLED.

IF ANY OF THE FOLLOWING READ, INDICATE IT, GET AN F/N OR GET AN EARLIER SIMILAR UNTIL IT F/Ns.

29. Has an Item read under protest? \_\_\_\_\_
30. Was there no interest in running item? \_\_\_\_\_
31. Was there no charge on item in the first place? \_\_\_\_\_
32. Has an item been misworded? \_\_\_\_\_
33. Were you more interested in running another item? \_\_\_\_\_
34. Was the item suppressed? \_\_\_\_\_
35. Was the item invalidated? \_\_\_\_\_
36. Was more than you could see demanded? \_\_\_\_\_
37. Were 2 or more engrams found on the same date? \_\_\_\_\_
38. Did you skid into another incident? \_\_\_\_\_
39. Did you move to another chain? \_\_\_\_\_
40. Did you change the item while running it? \_\_\_\_\_
41. Were you running an item different from that assessed? \_\_\_\_\_
42. Was an Implant restimulated? \_\_\_\_\_
43. Were earlier errors on engrams restimulated? \_\_\_\_\_
44. Was important data by-passed? \_\_\_\_\_
45. Was an incident skipped? \_\_\_\_\_
46. Did 2 or more incidents get confused? \_\_\_\_\_
47. Has a withhold been missed? \_\_\_\_\_
48. Has an incident been left too heavily charged? \_\_\_\_\_
49. Has a chain been abandoned? \_\_\_\_\_
50. Has an incident been abandoned? \_\_\_\_\_
51. Were you prevented from running an incident? \_\_\_\_\_
52. Were processes changed on you? \_\_\_\_\_
53. Has basic on a chain been by-passed? \_\_\_\_\_
54. Has an erasure been denied you? \_\_\_\_\_
55. After it was erased did you have to put it back to erase it? \_\_\_\_\_
56. Were you running copies of the original after it had gone? \_\_\_\_\_
57. Have you gone past erasure into another chain? \_\_\_\_\_
58. Have several different chains been pulled in? \_\_\_\_\_
59. Has a cognition been chopped? \_\_\_\_\_

- 60. Has an F/N been indicated too soon? \_\_\_\_\_
- 61. Has the somatic gone but picture still there? \_\_\_\_\_
- 62. Should a basic be run through one more time? \_\_\_\_\_
- 63. Have you been held up by the auditor? \_\_\_\_\_
- 64. Were you distracted in session? \_\_\_\_\_
- +65. Did you go exterior in an incident? \_\_\_\_\_
- 66. Was an incident overrun? \_\_\_\_\_
- +67. Did you go exterior in session? \_\_\_\_\_
- \*68. Have you not wanted to go earlier than this life? \_\_\_\_\_
- 69. Has it been all black? \_\_\_\_\_
- 70. Was it all invisible? \_\_\_\_\_
- 71. Was the incident really a false or implanted occurrence? \_\_\_\_\_
- \*72. Have you had constantly changing pictures? \_\_\_\_\_
- 73. Have you never had any pictures? \_\_\_\_\_
- 74. Are you having to put it there to run it? Get Earlier Similar times to F/N VGIs. \_\_\_\_\_
- 75. Are incidents being overrun? \_\_\_\_\_
- 76. Has some Major auditing action been done twice? \_\_\_\_\_
- 77. Has there been an unnecessary action? \_\_\_\_\_
- 78. Was there nothing wrong in the first place? \_\_\_\_\_
- 79. Was the real reason missed? \_\_\_\_\_
- 80. Was something else wrong? (Do a Green Form.) \_\_\_\_\_

NOTE:

+ If questions 65 or 67 read and the pc has not had Interiorization Rundown and the associated 2 way comm the auditor ends off and sends folder to C/S so it can be C/Sed for Ext RD.

\* If questions 68 or 72 read, after indicating BPC, the auditor would end off and return folder to C/S.

WARNING:

Do not use any Prepcheck-type buttons during engram running or add overts to this list as they will "mush" engrams.

*C/S Series 35*

**EXTERIORIZATION ERRORS**

(Reference HCO B 11 Apr 71, "L3B". Reference  
HCO B 27 Mar 71, "Dianetic Erasure".)

Almost all the Errors in an Exteriorization Rundown are Dianetic errors. Most are very ordinary, even corny.

IT IS VITAL TO CORRECT AN EXT RD ERROR AS A FIRST ACTION.

There is one Ext RD error that is not a purely Dianetic error and that is the error doing anything else at all before an Ext RD is done properly or an Ext RD error is fully corrected.

When a pc is exteriorized by auditing and is then audited further without being given an Exteriorization Rundown, his TA will go high or low and he may be very upset. Heavy masses may come in and he may also get ill.

Ext RD errors also may go back to earlier Dianetic errors. A number of unflat incidents invite the overrun of these if they also occur on a Dianetic Chain.

To clean up a balled-up Ext RD chain or incident one may have to find and clean up the Dianetic error it is sitting on *during* the clean-up of the Ext RD error.

Using the new List L3B on every flow of the Ext RD up to Question 26 of L3B will in extreme cases (where all else fails) locate the trouble even where the auditing report is false or incorrect.

Auditors who can't run ordinary R3R with great success should not be let near an Exteriorization RD as their lack of smoothness in handling Dianetics will wreck the Ext RD.

DIANETIC AUDITORS

An excellent Dianetic Auditor can easily repair a messed-up Interiorization Rundown after a folder study and by use of L3B.

A Dianetic Auditor with an excellent Dianetic record of wins can be given an Ext RD to do or to correct IF HE IS STARRATED ON THE EXT PACK AND THE TWO-WAY COMM PACK. If a Dianetic Auditor does an Ext RD, the recall steps may be omitted.

REPAIR

Wherever you see a TA high and a pc in trouble your first suspicions should be

1. Audited past Ext in Auditing without an Ext RD being done.
2. Ext RD botched.
3. A previously messed-up Dianetic action has gotten fouled up with the Ext RD.
4. The Ext Command was improperly cleared (such as "means go in and out again" "means trapped" "meant leaving" etc).
5. Firefights and worries over the high or low TA have ensued after an Ext ball-up has occurred.
6. Some major action like Grades or items or Power has been run twice.
7. A C/S has hopefully kept on getting the pc audited without detecting the real reason as a flubbed Ext RD.

PERCENTAGES

The percent of misrun Ext RDs is high.

The liability of leaving them unrepaired is high.

Reasons for high TA are averaging out close to 100% as an unrun or a flubbed and unrepaired Ext RD.

## EXT IN SESSION

When a pc Exteriorizes in session it is the End Phenomena for that process or action. One gently ends off in any case.

If the pc is now given or if he has had a completely okay Ext RD he can be audited further. Otherwise no.

If even years after an Ext RD the pc has a high TA or a low TA then Ext trouble is at once suspected and the original Ext RD and any repair of it is suspect and *must be handled*.

L3B has been redesigned to straighten out Ext RDs or ANY Dianetic errors.

There is no real trick to either running a correct Ext RD or repairing a flubbed one. The whole clue is whether or not the auditor can audit plain ordinary garden variety R3R.

So when ANY auditor audits a pc past Exterior he should be checked out fully on the Ext RD checksheet so he won't continue to commit the error.

And when ANYONE REGARDLESS OF CLASS is going to run an Ext RD he must

- (a) Be an expert Dianetic Auditor.
- (b) Be Starrated on all the Ext RD pack.

And when any C/S is confronted with high TAs or low TAs and doesn't handle at once by getting an Ext RD properly run or properly repaired he must be re-checked on the Dianetics Pack and the Ext RD pack.

## DN C/S 1

A very careful Dianetic C/S 1 must be done on a previously unindoctrinated pc before he is run on an Ext RD.

Otherwise it's all too new.

A C/S 1 isn't auditing.

The pc who can't do what the auditor says or can't correct an erroneous action is lost.

A fully safe pc would be one who when he goes Ext in Auditing is made to do an HDC at once before he even gets any ruds put in and not audited again until he *is* an HDC. He'd be a pc who was relatively safe.

A pc who does what an inexperienced auditor says without question can really get fouled up! Uneducated pcs require really flawless topnotch auditors. The auditor who can audit an uneducated pc is a jewel. He really has to know his business. Because the pc does whatever he says. And if he says wrongly, then there goes the session. Ever notice pc corrections in a worksheet? "I think you by-passed an F/N." "This feels overrun." "I *had* Grade I last year." Such auditors are not fully enough trained to handle wholly green pcs!

## SIMPLICITY

Honest fellows, it's as easy to run an Ext RD as it is to run "an ear pain". It isn't even mysterious or tough.

IT IS ONLY VERY IMPORTANT TO DETECT WHEN IT NEEDS TO BE DONE OR REPAIRED.

There are no mysteries.

Some auditors have got me feeling like I'm trying to teach them to chew soft bread!

*C/S Series 36*

**QUADRUPLE DIANETICS  
DANGERS OF**

(Applies also to INT-EXT Rundown)

(Ref HCO B 4 Apr 71, C/S Series 32  
and HCO B S Apr 71, C/S Series 33)

In observing Quad Dianetics in the hands of Scientology Auditors not specially briefed or who had additives and figure-figure on how to move a case already run on singles and triples into Full Flow,

*INVARIABLY THEY OVERRAN.*

This makes getting Quad Dianetics in on a case dangerous unless the auditor has the hang of it.

The flagrant (and I do mean flagrant) errors found consisted of (a) not being able to run precise Standard Dianetics in the first place; (b) re-running already erased chains "to find if they were flat"; (c) Out TRs to a wild extent; (d) refusing utterly to accept pc's data; (e) faulty metering; (f) complete ignorance of the Auditor's Code, notably committing the crime of Invalidating the pc.

**REQUIREMENTS**

Anyone essaying to run Quad Dianetics **MUST BE CRAMMED** on his R3R, the use of L3B, all data on Quad Dianetics (as per references above and including HCO B 27 Mar 71, "Dianetic Erasure"), his basic TRs, his metering and the Auditor's Code, and this HCO B.

**TRs**

TR Zero exists so an auditor is not ducking the session but can sit there relaxed, doing his job.

TR One must be done so the pc can *hear* and understand the auditor (without blowing the pc's head off either).

TR Two must be done so that the pc gets acknowledged. This can be so corrupted that the auditor doesn't ack at all but gives the pc meter reads! Instead of acks! Or keeps saying, "I didn't understand you" etc.

TR Three basically existed so that the auditor would continue to give the pc commands and not squirrel off or pack up with total silence.

TR Four exists so that the pc's origins are accepted and not Qed and Aed with or invalidated.

And, surprise, surprise, TRs are for use in the session itself, not just a drill. They are *how* one runs a session.

Metering can miss every F/N or give "F/Ns" with high or low TA. And one *never* feeds meter data to the pc: "That read", "that didn't read", "that blew down" just must not exist in session patter. "Thank you. That F/Ned" is as far as an auditor goes. And that's the end of the cycle and says so.

Floating needles can be overlooked by an auditor. In Quad Dianetics this fault is *fatal*.

Auditor's Code must be in on all points and particularly Invalidation. Pc says, "That's so and so." An auditor who says, "I'm sorry. You are wrong," or any other

invalidation is going to wreck a pc's case. A full knowledge of the Auditor's Code and actually applying it saves endless troubles. It is an auditing TOOL, not just a nice idea.

### REHABBING CHAINS

One rehabs a Dianetic Chain that, according to a previous worksheet, erased, by saying, "According to session records (flow direction) (item) erased." That's all. One does not say, "Did the chain giving others a headache erase?" One does not run it again to find out. One does not run a single command "to see if it F/Ns again". One can say, "Do you agree that the chain giving another a headache erased?" But the more you ask the pc to look for an erased chain the more messed up things will get. It isn't there. But the auditor by his action can imply it *should* be there or *might* be there. A totally wrong approach would be "Look around your bank and see if what isn't there anymore isn't there."

Dianetics is NOT Scientology. A Dianetic Chain is *not* a release. If you try to use Scientology rehab tech on a Dianetic Chain, you have had it. It isn't a "release" (which is a key-out). A Dianetic Chain is an erasure. You can't rehab erasures with "How many times?", etc.

The test of this is the doing. If you try to use Scn rehab on Dianetic Chains, the PC MIGHT TRY TO FIND SOMETHING. This causes him to key in other unrun or similar items.

It is a dangerous action at best to try to handle old erased chains. The best you can do is to tell the pc what the old W/S said. If no W/S exists leave the already erased flows alone!

### FLUBBED CHAINS

Many times, a Folder Error Summary will give a flubbed chain and then fail to note it was repaired in the next session!

A C/S and auditor would have been pretty irresponsible to just go on auditing past flubbed chains.

The only safe way to handle some previous flubbed chain is to

- (a) Verify in the folder if it was repaired.
- (b) If still unrepaired assess the first 28 Questions of L3B on it and handle according to the L3B.

### L3B

Using the new L3B (HCO B II Apr 71) is a Dianetic action.

A Scientology Auditor erroneously can try to use it as a 2 way comm type of list. If a chain needed one more ABCD, then 2 way comm on it with no ABCD is not going to complete it.

L3B has its own directions. Questions not marked with directions are used to indicate the fact. This can amount to 2 way comm as the pc chews it over. But L3B where marked is handled by Dianetics actions. Look over the list and its directions for each question and you will see that some are given directions that are NOT 2wc.

Example: "Earlier beginning" reads. You can't just say "the incident had an earlier beginning" and you can't say, "Tell me about the earlier beginning." The pc will go up the wall. There'll be no F/N. You have to use R3R and get him to the earlier beginning and then run it and if it still doesn't erase, get him to an Earlier Similar and erase that.

L3B is a Dianetics List. It is not a Scientology List that is cleared each question to F/N by 2 way comm.

### OVERRUN

Overruns are demonstrated by a rising TA.

If as you seek to get in Full Flow Dianetics the pc's TA begins to average higher, overrun is occurring.

Example: While doing FFD pc's TA has been riding at 2.2 and F/Ns. After a new FFD action it begins to ride at 2.5 and F/Ns. Something is being overrun. Find it and indicate it. And cease to stir the bank up so much! The fault is going over items already run.

*Already flat zero flows are not uncommon.* The zero flattened on the original triple. Thus getting in that Zero flow again is an overrun.

In doing a Full Flow Table you often find that the same or similar have been run in the past. Sometimes you find that a previous attempt to run the item a second or third time has resulted in an ARC Break, the reason for which was never detected.

The right action is to note the session date it was *first* run and just tell the pc, "Feeling Surprised was run three times. On (first date it was erased) it was erased. When later run it was an overrun." This tends to blow the later charge laid in by trying to run the same item again.

It sounds so strange that erased chains can be overrun. But it is true. What happens is that pcs try to cooperate and put something there.

### FIREFIGHTS

The action of a quarrel between an auditor and a pc is called a firefight.

Restimulating earlier unrun engrams or overrunning chains upsets a pc. The best action, as soon as a pc is disturbed, is to do an L3B fast and handle what reads the way it should be handled according to the L3B.

The wrong way is to argue or try to go on.

The pc does NOT know what it is. He just feels awful. He tries to guess. He will ARC Brk or get sad if the auditor continues.

The correct action is an L3B.

L1C is not of great use in a Dianetic ARC Brk. L3B is.

If the pc remains ARC Broken, try L3B again, particularly the *whole* L3B not just 1-28.

A Scientology session would be handled with some other list (L1C, L4B, etc). A Dianetic session including and especially FFD, is handled with L3B.

You NEVER prepcheck while doing Dianetics. This mashes up the engrams.

### INTERIORIZATION

ALL these cautions apply as well to an Interiorization-Exteriorization Rundown, when restim occurs one uses an L3B quickly.

Int-Ext RD is essentially a Dianetic, not a Scientology action.

### SAFE ACTIONS

A fully genned-in auditor, well crammed, well drilled, well skilled, can be trusted with Dianetics, Dianetic Quads and an Int-Ext RD. Auditors not so handled can get pcs into serious trouble with these things.

A safe course is to use Quad only on new never audited before pcs. Those begun on triples, use then only triple flows.

Another safe way is to use FFD only on OT IIIs or OT IVs and done only by fully qualified FFD auditors who are also OT III.

The safest course is to require special drilling and cramming on auditors who are already known for their results by actual success story stats and call FFD and Int-Ext RD a skilled specialty.

### C/S RESPONSIBILITY

Any trouble a C/S is running into comes from the factors of TRs, metering, Code and incomplete or false auditor's reports.

If when I am C/Sing I ever find an auditor has omitted key session actions or has falsified a report, I order that auditor not to Cramming but a full retrain HDC right on up.

A C/S does not see these points. He can get the pc asked what the auditor is doing or did. He can get sessions monitored. This helps him fill this gap in his data.

It's what isn't in the auditor's report that is often the trouble. Auditors omit what they said, omit the firefight, omit session alter-is in their worksheets.

All this sticks the C/S's neck out for the axe of failure.

So particularly in FFD, Int-Ext and other such actions, a C/S has to act to obtain confidence in the auditor's TRs, Metering, Code Use and accurate Worksheets.

#### RISK

In FFD, Int-Ext RD and Power, experience has proven that if the auditor is not top grade, if the C/S is not alert, we put a pc at risk.

The USUAL is what keeps the pc safe.

A thorough study of his case, looking for obvious bugs (such as Int-Ext RD done twice, the case a druggie but Drug engrams never run, Int done but its 2wc flubbed, FFD grossly overrun, to name a few serious ones), sending auditors to Cramming for the slightest flub, insisting on standard TRs USED IN SESSION, good metering, use of the Code, accurate and complete worksheets, use of standard tech, all guarantee the safety and progress of the pc.

#### INTRODUCING FFD

FFD (like the Int-Ext RD) requires flawless C/Sing and auditing or the case goes wrong.

When these actions were introduced they showed up any flaws in case studying, TRs, Metering, Code and worksheets.

There are two ways to handle. (a) Cancel FFD and Int-Ext as actions. Obviously that is going backwards and is impossible. (b) Begin and continue a serious, effective campaign in the org to (1) Train auditors better (2) Cram expertly on every flub (3) Raise quality of TRs and metering.

As you can see, my approach is to improve quality of training, cramming and delivery.

Please help me out in getting this in.

Issue I

**TRs AND COGNITIONS**

In the presence of rough TRs cognitions do not occur.

Cognitions are the milestones of case gain.

Rough TRs, rough metering, Out Code and a distractive auditor then make no case gain.

When an auditor has smooth, usual TRs, does his metering expertly and without attracting the pc's attention, when he follows the Auditor's Code (particularly regarding Evaluation and Invalidation) and when he is interested, not interesting as an auditor, the pc cognites and makes case gains.

Further, according to the axioms, a bank straightens out by AS-ISING its content. If the pc's attention is distracted to the auditor and meter his attention is not on his bank so AS-ISING cannot occur.

The definition of In Session is INTERESTED IN OWN CASE AND WILLING TO TALK TO THE AUDITOR. When this definition describes the session in progress, then of course the pc will be able to AS-IS and will cognite.

By *The Original Thesis*, the auditor plus the pc is greater than the pc's bank. When the auditor plus the bank are both overwhelming the pc then the bank seems greater than the pc. It is this situation which gives a pc a low Tone Arm.

An auditor who can't be heard, doesn't ack, doesn't give the pc the next command, fails to handle origins, simply has OUT-TRs.

The auditor who is trying to be interesting to the pc, who over-acks, who laughs loudly, is putting the pc's attention onto himself. So the pc's attention, not being on his bank, doesn't as-is or cognite.

The auditor whose metering by-passes F/Ns or calls F/Ns at wrong points, or who tells the pc "That reads" "That blew down" etc, or who any other way uses the meter distractingly (the pc knows when he is being under- or over-run and knows when he is being mismetered), is of course violating the definition of IN SESSION. The pc's attention goes to the meter, not his bank, so he doesn't AS-IS or cognite.

Auditor Invalidation and Evaluation is just plain villainy. It interferes with pc cognitions. Other Code breaks are similarly distractive.

**A PERFECT SESSION**

If you understand the exact definition of IN SESSION, if you understand the pc's necessity to have his attention on his bank so as to AS-IS it and work out what is really going on in a session that brings about a cognition (as-ising aberration with a realization about life), you will then be able to spot all the things in TRs, metering and the Code that would prevent case gain.

Once you see that out-TRs, mismetering and Code breaks would PREVENT the IN SESSION definition you will see what would impede a pc from AS-ISing and Cogniting.

When you have this figured out you will then be able to see clearly what are IN-TRs, CORRECT METERING and CORRECT CODE APPLICATION.

There can be an infinity of wrongnesses. There are only a few rightnesses.

Recognition of right TRs, right Metering and right Code use depend only on:

- (a) Understanding the principles in this HCO B, and
- (b) Their practice so as to establish habit.

This mastered, one's pcs will get cognitions and case gain and swear by "their auditor" !

### EDUCATION, DEFINITION OF

This definition of education was devised in the Mid-fifties as the first entrance to the subject.

EDUCATION IS THE CONVEYANCE OF IDEAS, PATTERNS AND CREATIONS FROM ONE PERSON TO ANOTHER FOR KNOWING RETENTION AND CONSCIOUS USE BY THE SECOND PERSON.

By patterns was meant designs, forms and sequences of motion.

Knowledge can be conceived to be ideas, patterns and creations and can include any concept or understanding.

It would then be seen to be vital that the Educator be as well a Communicator and that his cycle of communication be as nearly perfect as possible.

The formula of Communication is:

CAUSE, DISTANCE, EFFECT WITH INTENTION AND ATTENTION AND A DUPLICATION AT EFFECT OF WHAT EMANATES FROM CAUSE.

(The best published discussions of Communication are found in *Dianetics* '55!.)

As UNDERSTANDING plays its role in Education, one has to know the components of understanding. These are AFFINITY, REALITY and COMMUNICATION. These three elements together make up understanding and so play their role in EDUCATION.

(Basic Data on A, R and C may be found in *Notes on the Lectures* and *Dianetics* '55!.)

If the Educator is deficient in his Communication cycle (as exemplified and practiced in the Training Drills of the HAS Course—TRs 0-1-2-3-4) the result will be “blown students” which is to say students who leave and do not finish the course. As their own comm and originations are not handled, they “ARC Break” (become upset) and so leave.

Anyone teaching a course whether in kindergarten, college or Scientology should have as a minimum the following:

Mini Course Supervisor's Course (much more preferably the full Course Supervisor's Course).

HAS Course with TRs.

A starrate command of *Notes on the Lectures*.

The 7 Study Tapes and

A starrate command of *Dianetics* '55!.

Only then could he hope to put the basic definition of education into actual effect and obtain educated students who can use the information and patterns being taught.

Franchises

**OKAYS TO AUDIT IN HGCs**  
(Effective 60 days from Receipt in every HGC)

It is Mandatory that HGC auditors follow the "okay to audit" system. It is in addition to the required courses and any class, org or field experience.

Tech quality in orgs and auditor morale (which depends on wins) depend upon flubless auditing.

A Cramming must exist in any org which sells auditing.

The Qual Auditor Cramming Section issues the okay to audit after rigorously following this essentially interne program.

Franchises may adopt this system.

An "okay to audit" must be signed by the Cramming Officer and attested to in C & A by the auditor.

No former experience counts. Courses, while required, do not give an *HGC* okay to audit.

Auditors hired after a course must go through this entire procedure.

Okays to audit, issued in a qualified org, are valid on going to a different org if duly certified and presented but may be lost by a poor demonstration on pcs, at which time the okay to audit steps must be undertaken again.

An HGC okay to audit is a high recommendation for a field auditor.

There is no compromise with auditing quality.

**HGC REQUIREMENT**

Before any auditor, HDC or above, is okayed to audit anything on Flag or in an AO or Org, in addition to course training or other auditing, the following minimum requirement must be done in Cramming and attested to at C& A as having been thoroughly done in the Qual Internship (Cramming), with Liability for False Attest and a possible action on org executives who fail to enforce its vigorous and thorough application.

1. HCO B 26 April 71 , Issue I, in Clay on each part to total certainty.
2. TRs 0 to 4 with no short-cut on 0 and the rest in line with the above HCO B.
3. Metering, its basic drills, its positioning so it can be read while looking at report and pc and clarification of what is a read.
4. The Auditor's Code including clay demo of "Invalidation" and "Evaluation" meanings. Demonstration of how each line in Code can violate HCO B 26 April 7 1, Issue I, and how keeping each one in promotes HCO B 26 April 7 1, Issue I.
5. TRs 101 to 104 resulting in precision giving and getting execution of each command.
6. How to assess a list such as L3B Method 3 and handle.

The above gives a certified HDC or above provisional okay to audit Assists, Dianetics Singles and Triples.

7. A flubless record on Dianetic auditing in an HGC.
8. All Quad HCO Bs.

This gives a provisional okay to audit or repair Quad.

9. A flubless record repairing or doing Quad.
10. Dating drills, precise.
11. How to fly each rud to F/N.
12. How to fly each reading item on a list Method 3.
13. How to assess a list Method 5, one time through, marking reads and any BDs.
14. How to do a GF+40 Method 5 and handle.
15. Laws of Listing and Nulling Verbatim and for use and how to get a BD F/N item on any list.
16. C/S Series complete.
17. How to trouble-shoot cases from studies of FSEs and FESes.
18. Neat perfect session admin.
19. Necessity to have an F/N before starting a major action.
20. How to rehab by count.

The above is required in addition to Academy or SHSBC certificate for a temporary okay to audit on any level up to Class IV or Class VI including zero, one, two, three and four.

21. Experience in an HGC with a flubless record on Level 0 to IV auditing.
22. Exteriorization checksheet and pack.

The above gives an auditor a temporary okay to audit Exteriorization Rundowns.

23. A flubless record auditing Exteriorization Rundowns in an HGC.
24. Class VII Internship in an SH with all relevant Power materials.

The above gives a temporary okay to audit Power in an SH HGC.

25. Experience showing a flubless ability to audit Power and Power Repair.
26. Class VIII Course in an AO.

The above gives an auditor an okay to audit Class VIII.

27. HGC Auditor's Checksheet.
28. Experience in an HGC flublessly applying Class VIII.

29. Class IX Course in an AO.

The above gives one a temporary okay to C/S.

A temporary okay to audit becomes a permanent okay to audit when flubless results are being uniformly obtained. That one has had one of the courses is credited at the level called for above but does not permit waiving any other requirement from the bottom on up.

Course graduation does not give an *HGC* okay to audit. Student co-auditing does not give an HGC okay to audit. It is expected that auditing practice has existed on the course and that the student may have audited in the field. By following this HGC okay to audit program and a liberal use of Cramming for HGC auditors and keeping abreast of current issues in Cramming, auditors will obtain many wins and greatly increased morale and HGC tech quality will be improved.

### AUDITING COMM CYCLE

(Reference HCO B 26 Apr 71,  
"TRs AND COGNITIONS")

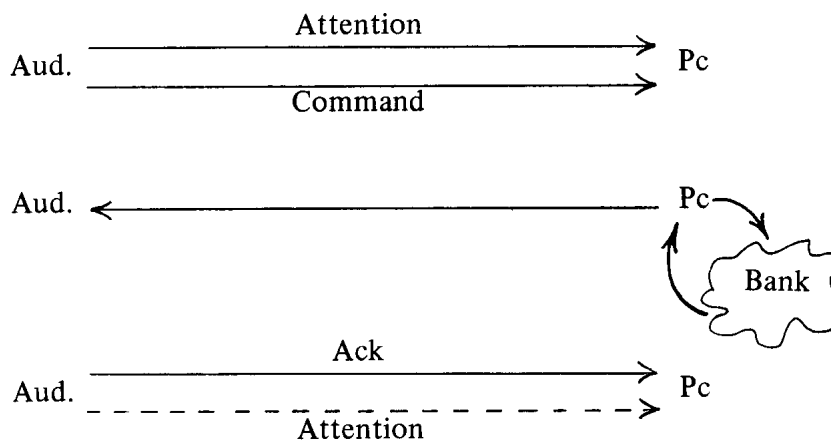

The following AUDITING comm cycle is taken from SHSBC tapes.

An auditor runs the session. He gives the pc the session action without pulling the pc's attention heavily on the auditor. He does *not* leave the pc inactive or floundering without anything to do. He does not leave the pc to make a session out of it. The auditor makes the session. He doesn't wait for the pc to run down like a clock or just sit there while the TA soars after an F/N.

The auditor runs the session. He knows what to do for everything that can happen.

And this is the Auditing Comm cycle that is *always* in use.

1. Is the pc ready to receive the command? (appearance, presence)
2. Auditor gives command/question to pc (cause, distance, effect).
3. Pc looks to bank for answer (Itsa maker line).
4. Pc receives answer from bank.
5. Pc gives answer to auditor (cause, distance, effect).
6. Auditor acknowledges pc.
7. Auditor sees that pc received ack (attention).
8. New cycle beginning with (1).

Course Supervisor Checksheet  
Students

**STUDENT GRASP OF MATERIALS**

When students are new to Tech study (or have been badly trained elsewhere) they lay a trap for the unwary supervisor who, if he falls for it, will thereafter turn out dud auditors.

In the beginning a new student will often ask lots of technical questions.

He hasn't read the material well, he doesn't know its scope, he is going through a maze of preconceptions and is often looking only for an answer to his own case or agreement with fixed ideas.

He often makes up for all this with a "I don't understand it. Would you please explain".

The Course Super who hasn't caught on is sometimes foolish enough to "explain it". In that moment he may lay in an out-tech evaluation. He has also shifted source.

The student now doesn't have to study the materials as it's all being "explained".

Result. Flub-Auditors who go out and butcher pcs and blow.

The top classic on this was a student who "couldn't understand the HCO B on TR 0!" After he'd done it, he found it was perfectly ok. "Ron's HCO B is not contradictory and does not need to be rewritten," was the real quote.

The Course Super is there to get the student's confront up on the materials not to lessen it by "explaining".

When I am teaching a group of students I often catch some screwball out-tech datum going around. I run such down vigorously. What I find is that the student is so unable to confront HCOBs or data that some other student's comment or the examiner or someone has messed it up with an "explanation" that was out-tech.

On Flag we get in students from all around. They have had courses. In the first few days we have asked for any questions. When these come up, we handle by handling the *study* ability of the student.

Students will ask questions that are answered right on the page in front of them.

It is no effort to make them guilty or wrong. It is an effort to correct their ability to confront, duplicate, absorb and *use* the data they are studying.

When there are errors in that student's ability he will not use what he is given. He will not become an auditor.

The only reason we can do this is: **THERE IS NO DATA OF IMPORTANCE ABOUT THE MIND THAT IS NOT FULLY COVERED IN THE MATERIALS OF DIANETICS AND SCIENTOLOGY.**

That is a very definite statement isn't it. Well, 21 years and millions of cases have shown it to be true.

The important data the student is seeking at his course level is IN the materials.

The only way he will fail is by not confronting, duplicating, absorbing and using the materials before him exactly like it says.

The Supervisor who doesn't furnish the materials and then doesn't spend his time getting the student through those materials will of course fail his students totally. If he begins to "explain" data he will mess it up and not make auditors.

In the current world scene education is generally an interpretation and students are childhood trained to get marks, not learn. The Supervisor has to overcome this handicap of teaching people priorly "trained" in this age.

Beware the trap. "This HCO B seems contradictory....." "Would you please explain....."

The right action is to find the *word* he didn't understand. The error is usually his own vocabulary inadequacy. Get more and simpler dictionaries. Don't start explaining.

The materials are adequate. If confronted, duplicated, and absorbed, they will be used.

**THE MAGIC OF THE COMMUNICATION CYCLE**

*From the LRH Tape 6 February 1964,  
"Comm Cycle in Auditing"*

If you look over communication you will find that the magic of communication is about the only thing that makes auditing work.

The Thetan in this universe has begun to consider himself mest and has begun to consider himself mass and the being that considers himself mass of course responds to the laws of electronics *and the Laws of Newton. He is actually incapable of generating very much or as-ising very much.*

An individual considers himself *mesty or massy* and therefore he has to have a second terminal. A second terminal is required to discharge the energy.

Here we have two poles. We have an auditor and a pc and as long as the auditor audits and the pc replies we get an exchange of energy from the pc's point of view.

Many auditors think they are being a second terminal to the degree that they pick up the somatics and illnesses of the pc. Actually there is no backflow of any kind that hits the auditor but if he is so convinced that he is mest he will turn on somatics in echo of the pc. Actually nothing hits the auditor, it has to be mocked up or envisioned by him.

You have set up in essence a two pole system and that will bring about an as-ising of mass.

It isn't burning the mass, it is as-ising the mass and that's why there is nothing hitting the auditor.

Now that is the essence of the situation. The magic involved in auditing is contained in the communication cycle of auditing. You see now you are handling *the SMOOTH INTERCHANGE BETWEEN THESE TWO POLES.*

When you look over the difficulties of auditing realize that you are handling simply the difficulties of the communication cycle and when you yourself as the auditor do *not* permit A SMOOTH FLOW BETWEEN YOU AS A TERMINAL AND THE PC AS A TERMINAL, AND THE PC AS A TERMINAL BACK TO YOU, you get a no as-ising of mass. So you don't get TA action.

Part of the trick of course is what has to be as-ised and how do you go about it, but that we call technique—(what button has to be pressed). *We find, oddly enough, if the auditor is actually capable of making the pc willing to talk to him, he wouldn't have to hit a button to get tone arm action. (He cannot make the pc get tone arm action basically because a communication cycle doesn't exist.)*

The person who is insisting continuously upon a new technique is neglecting the basic tool of his auditing which is the *communication cycle of auditing.*

When the communication cycle does not exist in an auditing session we get this horrible compounding of a felony of trying to get a technique to work but the technique cannot be administered because there is no communication cycle to administer it.

Basic auditing is called *basic auditing* because it goes PRIOR to the technique.

A communication cycle *must exist* before the technique can exist.

The fundamental entrance to the case is not on a level of the technique but is on a level of the communication cycle.

Communication is simply a familiarization process based on reach and withdraw.

When you speak to a pc you are reaching. When you cease to speak you are withdrawing. When he hears you, he's at that moment a bit withdrawn but then he reaches toward you with the answer.

You'll see him go into a withdraw while he thinks it all over. Then he reaches the reason. Now he will reach the auditor with the reason and he will say that was it.

You have made an exchange from the pc to the auditor and will see it reflect on the meter because that exchange now is giving an as-ising of energy.

IN THE ABSENCE OF *THAT* COMMUNICATION YOU DO NOT GET METER ACTION.

So THE FUNDAMENTAL OF AUDITING IS THE COMMUNICATION CYCLE. *That's* the fundamental of auditing and that is really the *great* discovery of Dianetics and Scientology.

It's such a simple discovery but you realize that nobody knew anything about it.

REVISED 6 DECEMBER 1974

*Basic Auditing Series 2R*

**THE TWO PARTS OF AUDITING**

*From the LRH Tape 2 July 1964,  
"O/W Modernised and Reviewed"*

In order to do something for somebody you have to have a communication line to that person.

Communication lines depend upon reality and communication and affinity and where an individual is too demanding the affinity tends to break down slightly.

Processing goes in two stages.

1. To get into communication with that which you are trying to process.
2. Do something for him.

There is many a pc who will go around raving about his auditor, whose auditor has not done anything *for* the pc. All that has happened is that a tremendous communication line has been established with the pc and this is so novel and so strange to the pc that he then considers that something miraculous has occurred.

Something miraculous *has* occurred but in this particular instance the auditor has totally neglected *why* he formed that communication line in the first place. He formed it in the first place to *do* something for the pc.

He very often mistakes the fact that he has formed a communication line, and the reaction on the pc for his having formed one, with having *done* something for the pc.

There are two stages.

1. Form a communication line.
2. Do something for the pc.

Those are the two distinct stages. It is something like (1) Walking up to the bus, and (2) Driving off. If you don't drive off you *never* go anyplace.

It is a very tricky and no small thing to be able to communicate to a human being who has never been communicated to before. This is quite remarkable, and is such a remarkable feat that it appears to be an end-all of Scientology to some.

But you see that's just walking up to the bus. Now you have got to *go* someplace.

Any upset that the individual has is so poised, it is so delicately balanced, that it is difficult to maintain. *It is not difficult to get well.* It is very hard to remain batty. A fellow has to work at it.

If your communication line is *very* good and *very* smooth and if your auditing discipline is *perfect* so you don't upset this communication line and if you just made a foray of no more importance than saying something like—What are you doing that's sensible and why is it sensible?—and kept your communication line up all the while and kept your affinity up with the pc all the while, did it with perfect discipline, you would see more aberration fall to pieces per square inch than you ever thought could exist.

Now that's what I mean when I say *do something for the pc.*

You must audit well, get *perfect* discipline and get your communication cycle *in*. Don't ARC Break the pc, let your cycles of action *complete*.

All of that is simply an entrance. You see, the discipline of Scientology makes it possible to do this, and one of the reasons *why* other fields of the mind never *got anyplace and could never* get near anybody was because they couldn't communicate to anybody.

So that discipline is *important*.

That is the ladder that goes up to the door and if you can't get to the door you can't do anything.

The perfect discipline of which we speak, *the perfect communication cycle*, the perfect auditor presence, perfect meter reading—all of *these* things are just to get you in a state where you *can do* something for somebody.

So when you're real slow picking up the discipline, real slow picking up keeping in the communication cycle, when you're pokey on the subject you are still 9 miles from the *ball*. You're not even attending yet.

What you want to be able to do is audit *perfectly*. By that we mean keep in a communication cycle, be able to approach the pc, be able to talk to the pc, and be able to *maintain* the ARC. Get the pc to give you *answers* to your questions. Be able to read a meter and get the *reactions*.

All of those things have to be *awfully good* because it's very difficult to get a communication line in to somebody anyway. They all have to be present and they all have to be *perfect*. If they are all present and they are all perfect, *then* we can *start* to process somebody. *THEN* we can start to process somebody.

I'm giving you an entrance point here of, if all your cycles were perfect, if you were able to sit there and confront the pc and meter that pc and keep your auditing report and do all these multiple various things, and keep a pleasant smile on your face and *not chop his communication*, well then there is something you *do* with *these* things. *It takes a process now*.

*We used to have it all backwards. We used to try and teach people what they could do for somebody. But they could never get in communication with him to do it, so therefore you had failures in processing.*

*The most elementary procedure would be—"What do you think is sensible?"—or anything of that sort. The pc says, "Well, I think **horses sleep in beds**. That's sensible. "The auditor says, "Alright Now why is that sensible?" The pc says, "Well ... ah .... Hey! . . . That's not sensible. That's nuts!" You actually wouldn't have to do anything more than that He's cognited. You've flattened it. It's so easy to do, but you keep looking for some magic.*

*Well, your magic is in getting into communication with the person. The rest is very easy to do, all you have to do is **remain** in communication with the person while you are doing this, and realize that these huge aberrations he's got are poised with the most fantastically delicate balance on little pinheads. All you have to do is to phooph and these things crash*

Now if you're *not* in communication with this person he doesn't cognite. He takes it as an accusative action. He tries to justify thinking that way. He tries to make himself look good to you and tries to put on a public front of some kind or another. He tries to hold up his status.

Anytime I see a bunch of pcs around who want to jump happily to something else because sane people run on that and crazy people run on something else, and they never have to be run on the crazy one, I right away know their auditors are *not* in communication with them and that auditing discipline itself has broken down because the pc is trying to justify himself and trying to uphold his *own* status. So he must be defending himself against the auditor.

The auditor couldn't possibly be in communication with him.

So we are right back *to* the fundamental of why didn't the auditor get into comm with the pc in the first place.

You get into communication with the pc in the first place by doing proper Scientology discipline. *That is not any trick. It goes off 1, 2, 3, 4*

You sit down and you start the session and you start handling the pc and his problems and that sort of thing and you DO IT BY COMPLETING YOUR COMMUNICATION CYCLES AND NOT CUTTING HIS COMMUNICATION—*THE VERY THINGS YOU ARE TAUGHT IN THE TRs*, and you find you are in communication with the person. *Now you've got to do something for the person.*

Unless, having gotten into communication, you *do* something for the person, you lose your communication line because the R-Factor of why you're in communication with the pc breaks down. He doesn't think you're so good, and you go out of communication with him. That having happened, the person will be in a sort of status defensive and wonder why he is being processed.

*On the other hand*, if you *have* done something for the pc and he has *had* his cognition, and you try and go on and get more TA action out of the fact that "all horses sleep in beds"—you don't get there as you've *already* flattened the process.

You can over-audit and you can under-audit.

If you don't notice that *one* answer come your way, that indicates you *have done* something for the pc and if you keep him working on that same thing, your TA *action will disappear*, your pc will get resentful and you'll lose your communication line.

He's already *had* the cognition you see. You *are now restimulating* the pc. You have gotten your key-out destimulation factor—it has occurred right before your eyes. You have *done* something for the pc. One more mention of the subject and you've had it.

There are a lot of things you could do *with* the pc, without doing anything for him. You can turn on some very very handsome somatics on a pc at one time or another without turning them off either. You've got to do something *for* the pc, not *to* him.

Now you can be doing something (A), and the pc is doing (B), and you go on doing (A), while the pc is doing (B) then somewhere on down the line you wind up in a hell of a mess and you wonder what happened.

Well the pc never did what you said so you didn't do anything for the pc. There was in actual fact no barrier to your willingness to do something for the pc *but there must have been a tremendous barrier to your understanding of what was going on.*

That you could ask (A), while the pc answered (B), in itself showed the auditor observation was very poor so therefore the auditor *wasn't* in communication with the pc.

So again the communication factor was out and once more we weren't doing anything for the pc.

It requires of the auditor discipline to *keep* in his communication line. He has got to *stay* in communication with his pc. Those cycles have got to be *perfect*. He can't be distracting the pc's attention onto the TA, e.g. "I'm not getting any TA action now." That's not staying in communication with the pc—has nothing to do with it. You're distracting the pc from his own zones and areas.

Don't put the pc's attention out of session. Keep him going and keep that communication line *in*. And the next requirement is to do something productive for the pc *using* the communication line.

**THE THREE IMPORTANT COMMUNICATION LINES**

*From the LRH Tape 15 Oct 63,  
“Essentials of Auditing”*

When you are sitting in an auditing session what are the 3 important communication lines and what is their *order of importance*?

1. The first is the Pc's line to his bank. The *Itsa Maker* line.
2. The second is the Pc's line to the Auditor. The *Itsa* line.
3. The third is the Auditor's line to the Pc. The *What's-it* line.

Now the definition, “*Willing to talk to the Auditor*”, is very easy to interpret as “*Talking to the Auditor*”. So the Auditor *cuts the line the Pc has to the bank* in order to get the Pc to talk, because “It's the *Itsa* line that blows the charge,” he says.

So the Auditor *cuts the Pc's communication line* with his bank in order to *bring about* an *Itsa* line—and then he wonders why he gets no TA action and why the Pc ARC Breaks.

This cut communication line is not perceivable to the naked eye. It's hidden because it's from the Pc—a Thetan unseen by the Auditor—to the Pc's bank—unseen by the Auditor.

The Auditor is simply there to use the *What's-it* line in order to get the Pc to confront his bank. The charge blows off it to the degree that it's confronted and this is represented by the *Itsa* line.

The *Itsa* line is a report on what has been as-ised, that gives it its flow.

The *sequence* of use of these lines in an auditing cycle is 3, 1, and then 2.

Where the Auditor neglects this hidden line from the Pc to the Pc's bank, where he doesn't understand that hidden line and can't integrate it or do anything with it he is going to fail.

Issue IV  
REVISED 4 DECEMBER 1974

*Basic Auditing Series 4R*

**COMMUNICATION CYCLES WITHIN THE  
AUDITING CYCLE**

*(Taken from the LRH Tape, "Comm Cycles  
in Auditing", 25 July 1963)*

The difficulty that an Auditor gets into is normally found in his own *auditing cycle*.

There are basically two communication cycles between the Auditor and the Pc that make up the *auditing cycle*.

They are cause, distance, effect with the Auditor at cause and the Pc at effect, and cause, distance, effect with the Pc at cause and the Auditor at effect.

Cause-----Distance----->Effect

Auditor

Pc

Effect<-----Distance-----Cause

These are completely distinct one from the other. The only thing that connects them and makes an auditing cycle, is the fact that the Auditor, on his communication cycle, has calculatingly restimulated something in the Pc which is then discharged by the Pc's communication cycle.

What the Auditor has said has caused a restimulation and then the Pc needs to answer the question to get rid of the restimulation.

If the Pc does not answer the question he doesn't get rid of the restimulation. *That is the game that is being played in an auditing cycle and that is the entirety of the game.* (Some auditing breaks down because the Auditor is unwilling to restimulate the Pc.)

*There is a little extra communication cycle on here.* The Auditor says, "Thank you" and you have this as the acknowledgement cycle.

C-----Command----->E

Auditor

E<-----Answer -----C

Pc

C-----Acknowledgement----->E

*Now there are some little inner cycles that can throw you off and make you think that there are some other things to the auditing cycle.* There is another little shadow cycle: it is the observation of "Has the Pc received the auditing command?" This is such a tiny "cause" that nearly all Auditors who are having any trouble finding out what's going on with the Pc are missing this one. "Does he receive it?" *Actually there is another cause in here and you're missing that one when you're not perceiving the Pc.*

You can tell by looking at the Pc that he didn't hear or understand what you'd said or that he was doing something peculiar with the command he was receiving. *Whatever that message is in response, it rides on this line.*

```

                Did Pc receive,
c-----Understand and-----c
                answer command

                C-----Command----->E

Auditor      E<-----Answer -----C                Pc
                C-----Acknowledgement----->E

```

An Auditor who isn't watching a Pc at all never notices a Pc who isn't receiving or understanding the auditing command. Then all of a sudden somewhere along the line there is an ARC Break and then we do assessments and we patch up the session and all kinds of things go wrong.

Well, they actually needn't ever have gone wrong in the first place if this line had been in. *What is the Pc doing completely aside from answering? Well, what he is doing is this other little sub-cause, distance, effect line.*

Another of these tiny lines is the cause, distance, effect line of—"Is the Pc ready to receive an auditing command?"

This is the Pc causing and it rides up the line across distance, *is received at the Auditor* and the Auditor perceives that the Pc is doing something else.

It is an important one and you find that Auditors goof that one very often; the Pc's attention is still on a prior action.

Now here's another one—"Has the Pc received the acknowledgement?" Sometimes you violate this one. You have been acknowledging but you've never seen that he didn't receive the acknowledgement. *That perception has another little tiny one in it that actually comes on this line; it is—"Has the Pc answered everything?"*

The Auditor is watching the Pc and the Auditor sees that the Pc has not said all that the Pc is going to say. You sometimes get into trouble with Pcs that way. Everything at "cause" hasn't moved on down the line to effect and you haven't perceived all of the "effect" and you go into the acknowledgement one before this line has completed itself.

That's chopping the Pc's communication. You didn't let the communication cycle flow to its complete end. The acknowledgement takes place and of course it can't go through as it's an inflowing line and it jams right there on the Pc's incomplete outflowing answer line.

```

                Is the Pc ready
e<-----for the command?-----c

                Did Pc receive,
c-----Understand and-----c
                answer command

                C-----Command----->E

Auditor      E<-----Answer -----C                Pc
                C-----Acknowledgement----->E

                Did Pc complete the
e<-----answer and receive-----c
                acknowledgement?

```

*So if you want to break it all down, there are six communication cycles which make up one auditing cycle. Six, not more than six unless you start running into trouble. If you violate one of these six communication lines you of course are going to get into trouble which causes a mish-mash of one kind or another.*

There is *another* communication cycle inside the auditing cycle and that is at the point of the Pc. It's a little additional one and it's between the Pc and himself. *This is him talking to him. You're listening to the inside of his skull when you're examining it. /t actually can be multiple as it depends upon the complications of the mind.*

*This happens to be the least important of all the actions except when it isn't being done. And of course it's the hardest to detect when it isn't being done. Pc says: "Yes. " Now what has the Pc said yes to? And sometimes you are insufficiently curious. And that in essence is this internal perception of line. It includes this cause, distance, effect backlash here—"Is the Pc answering the command I gave him?"*

*So with this, there are seven communication cycles involved in an auditing cycle. It is a multiple cycle.*

A communication cycle consists of just cause, distance, effect with intention, attention, duplication *and understanding*. How many of these are there in *one* auditing cycle? You'd have to answer that with how many *principal* ones there are *because some auditing cycles contain a few more*. If a Pc indicates that he didn't get the command (*cause, distance, effect*), the Auditor would give a repeat of it (*cause, distance, effect*) and that would add 2 more communication cycles to the auditing cycle, *so you've got 9*—because there was a flub. So anything unusual that happens in a session adds to the number of communication cycles in the auditing cycle, but they are still *all* part of the auditing cycle.

Repetitive commands as an auditing cycle, is doing the same cycle over and over again.

Now there is a completely *different* cycle *inside the same pattern*. The Pc is going to originate and it's got *nothing to do* with the auditing cycle. The only thing they have in common is that they both use communication cycles. *But this is brand new*. The Pc says something that is not germane to what the Auditor is saying or doing and you actually have to be alert for this happening at any time and the way to prepare for it is just to realize that it can happen at any time and just go into the drill that handles it. Don't get *it* confused with the drill that you have as an auditing cycle. Consider it its own drill. You *shift gears into this drill when the pc does something unexpected*.

*And, by the way, this handles such a thing as the Pc originates by throwing down the cans. That's still an origin*. It has nothing to do with the auditing cycle. Maybe the auditing cycle went to pieces and this origination cycle came in. Well, the auditing cycle can't complete because this origin cycle is now here. That doesn't mean that this origin has precedence or dominance but it can start and take place and have to be *finished off* before the auditing cycle can resume.

So this is an interruptive cycle and it is cause, distance, effect. *The Pc causes something. The Auditor now has to originate as the Auditor has to understand what the Pc is talking about—and then acknowledge. And to the degree that it is hard to understand, you have the cause, distance, effect of the Auditor trying to clarify this thing; and every time he asks a question, he's got a new communication cycle.*

*You can't put a machine action at that point because the thing has to be understood. And this must be done in such a way that the Pc isn't merely repeating his same origination or the Pc will go frantic. He'll go frantic because he can't get off that line—he's stuck in time and it really upsets him. So the Auditor has to be able to understand what the devil the Pc is talking about. And there's really no substitute for simply trying to understand it.*

There is a little line where the Pc indicates he is going to say something. *This is a line (cause, distance, effect) that comes before the origination takes place so you don't run into a jam and you don't give the auditing command.* The effect at the Auditor's point is to shut up and let him. There can be another little line (*cause, distance, effect*) where the Auditor indicates he is listening. Then there is the origination, the Auditor's acknowledgement of it and then there is the perception of the fact that the Pc received the acknowledgement.

That's your origination cycle.

An Auditor should draw all these *communication* cycles out on a scrap of paper. *Just take a look at all these things; mock up a session* and all of a sudden it will become very straight how these things are and you won't have a couple of them jammed up. What's mainly wrong with your *auditing cycle* is that you have confused a couple of *communication cycles* to such a degree that you don't differentiate that they exist. That's why you sometimes chop a Pc who is trying to answer the question.

You know whether the Pc has answered *the* question or not. How *did you* know? Even if it's telepathy it's *cause, distance, effect*. It doesn't matter how that communication took place, you know whether he's answered the command by a communication cycle. I don't care how you sense this.

If you are nery on the subject of handling the basic tool of auditing and if that's giving you trouble (and *if you* get into trouble *by suddenly breaking it down and analyzing it*) then it should be broken down and analyzed *at a time when you're auditing something nice and simple*.

I've given you a general pattern for an auditing cycle; maybe in working it over you can find a couple of extra communication cycles in the thing. But they are all there and if you made someone go through each one painstakingly, you would find out where his auditing cycle is jammed up. It isn't necessarily jammed up on his ability to say "Thank you". It may *very* well be jammed up in another quarter.

**THE COMMUNICATION CYCLE IN AUDITING**

*From the LRH tape 6 Feb 64,  
"Comm Cycle in Auditing"*

The ease with which you can handle a communication cycle depends on your ability to observe *what* the pc is doing.

We have to add to the simplicity of the communication cycle OBNOSIS (observation of the obvious).

Your inspection of what you are doing should have ended with your training. Thereafter it should be taken up exclusively with the observation of what the pc is doing or is not doing.

Your handling of a communication cycle ought to be so instinctive and so good that you're never worried about what you do now.

The time for you to get all this fixed up is in training. If you know your communication cycle is good you haven't any longer got to be upset about whether you're doing it right or not. You *know* yours is good, so you don't worry about it any more.

In actual auditing, the communication cycle that you watch is the *pc's*. Your business is the communication cycle and responses of the *pc*.

This is what makes the auditor who can crack any case and when absent you have an auditor who couldn't crack an egg if he stepped on it.

This is the difference, it's whether or not this auditor can *observe* the communication cycle of the pc and repair its various *lapses*.

It's so simple.

It simply consists of asking a question that the pc *can* answer, and then observing that the pc answers it, and when the pc has answered it, observing that the pc has completed the answer to it and is *through* answering it. Then give him the acknowledgement. Then give him something else to do. You can ask the same question or you can ask another question.

Asking the pc a question he *can* answer involves clearing the auditing command. You also ask it of the pc so that the pc can *hear* it and knows what he's being asked.

When the pc answers the question be bright enough to know that the pc is answering *that* question and not some other question.

You have to develop a sensitivity—when did the pc finish answering what you've asked. You can tell when the pc has finished. It's a piece of knowingness. He looks like he's finished and he feels like he's finished. It's *part sense; it's part his vocal intonation; but it's an instinct that you develop. You know he's finished.*

Then knowing he's finished answering you tell him he's finished with an acknowledgement, OK, Good, etc. It's like pointing out the by-passed charge to the pc. Like—"You have now found and located the by-passed charge in answer to the question and you have said it." *That's* the magic of acknowledgement.

If you don't have that sensitivity for when the pc is finished answering—he answers, gets nothing from you, you sit there and look at him, his social machinery goes into action, he gets onto self auditing and you get no TA action.

The degree of stop you put on your acknowledgement is also your good sense because you can acknowledge a pc so hard that you finish the session right there.

It's all very well to do this sort of thing in training and it's forgivable, but *NOT* in an auditing session.

Get your own communication cycle sufficiently well repaired that you don't have to worry about it after training.

**AUDITOR FAILURE TO UNDERSTAND**

If a pc says something and the auditor fails to understand what the pc said or meant, the correct response is:

“I did not (hear you) (understand what was said) (get that last).”

To do anything else is not only bad form, it can amount to a heavy ARC Break.

**INVALIDATION**

To say “You did not speak loud enough\_\_\_\_\_” or any other use of “you” is an invalidation.

The pc is also thrown out of session by having responsibility hung on him or her.

The *Auditor is* responsible for the session. Therefore the auditor has to assume responsibility for all comm breakdowns in it.

**EVALUATION**

Far more serious than Invalidation above, is the accidental evaluation which may occur when the auditor *repeats* what the pc said.

NEVER repeat anything a pc says after him, no matter why.

Repeating not only does not show the pc you heard but makes him feel you're a circuit.

The highest advance of 19th Century Psychology was a machine to drive people crazy. All it did was repeat after the person everything the person said.

Children also do this to annoy.

But that isn't the main reason you do *not* repeat what the pc said after the pc. If you say it wrong the pc is thrown into heavy protest. The pc must correct the wrongness and hangs up right there. It may take an hour to dig the pc out of it.

Further, don't gesture to find out. To say, pointing, “You mean this item, then,” is not only an evaluation but a nearly hypnotic command, and the pc feels he must reject very strongly.

Don't tell the pc what the pc said and don't gesture to find what the pc meant.

Just get the pc to say it again or get the pc to point it out again. That's the correct action.

## DRIVING IN ANCHOR POINTS

Also, do not shove things at a pc or throw things to a pc. Don't gesture toward a pc. It drives in anchor points and makes the pc reject the auditor.

## ROCK SLAMMER

The reason a person who Rock Slams on Scientology or auditors or the like can't audit well is that they are wary of a pc and feel they must repeat after the pc, correct the pc or gesture toward the pc.

But Rock Slammer or not, any new auditor may fall into these bad habits and they should be broken fast.

## SUMMARY

A very high percentage of ARC Breaks occur because of a failure to understand the pc.

Don't *prove you* didn't with gestures or erroneous repeats.

Just audit, please.

**PREMATURE ACKNOWLEDGEMENTS**

Here's a *new* discovery. Imagine my making one on the Comm Formula after all these years.

Do people ever explain to you long after you have understood?

Do people get cross with you when they are trying to tell you something?

If so, you are suffering from Premature Acknowledgement.

Like body odor and bad breath, it is not conducive to social happiness. But you don't use Lifebuoy soap or Listerine to cure it, you use a proper comm formula.

When you "coax" a person to talk after he has begun with a nod or a low "yes" you ack, make him forget, then make him believe you haven't got it and then make him tell you at GREAT length. He feels bad and doesn't cognite and may ARC Break.

Try it out. Have somebody tell you about something and then encourage before he has completely told you all.

THAT'S why pcs Itsa on and on and on and on with no gain. The auditor prematurely acknowledged. THAT'S why pcs get cross "for no reason". The auditor has prematurely and unwittingly acknowledged. THAT'S why one feels dull when talking to certain people. They prematurely acknowledge. That's why one thinks another is stupid—that person prematurely acknowledges.

The quickest way to become a social pariah (dog) is to prematurely acknowledge. One can do it in *many* ways.

The quickest way to start the longest conversation is to prematurely acknowledge for the person believes he has not been understood and so begins to explain at greater and greater length.

So this was the hidden ARC Break maker, the cognition wrecker, the stupidifier, the Itsa prolonger in sessions.

And why some people believe others are stupid or don't understand.

Any habit of agreeable noises and nods can be mistaken for acknowledgement, ends cycle on the speaker, causes him to forget, feel dull, believe the listener is stupid, get cross, get exhausted explaining and ARC Break. The missed withhold is inadvertent. One didn't get a chance to say what one was going to say because one was stopped by premature acknowledgement. Result, missed w/h in the speaker, with all its consequences.

This can be counted on to make you feel frightened of being "agreeable with noises or gestures" for a bit and then you'll get it straight.

What a piece of tech to remain incompletely explained. Fair scares one it does. And in the Comm Formula too!

**“LETTING THE PC ITSA”  
THE PROPERLY TRAINED AUDITOR**

The most painful thing I ever hope to see is an auditor “letting a pc Itsa”.

I have seen auditors let a pc talk and talk and talk and talk and run down and talk and run down and talk again until one wondered where if anywhere that auditor had been trained.

In the first place such an auditor could not know the meaning of the word ITSA.

The word means “It is a .....

Now how an auditor letting a pc talk believes he is getting a pc to spot what IT is is quite beyond me.

This pc has been talking all his life. He isn't well. Analysts had people talk for five years and they seldom got well.

So how is it supposed to happen today that a pc, let talk enough, will get well.

It won't.

The auditor does not know the very basics of auditing skills. That's all. These are the TRs.

An auditor who can't do his TRs can't audit. Period.

Instead he says he is “letting the pc Itsa”.

If by this he means he is letting the pc drive all over the road and in both ditches, then this isn't auditing.

In auditing an auditor guides. He gives the pc something to answer. When the pc answers the pc has said “IT IS A .....

If the pc answers and the auditor acknowledges too soon the pc tends to go into an anxiety—he has been chopped. So he talks more than he wanted.

If the pc answers and the auditor does not acknowledge, then the pc talks on and on, hoping for an acknowledgement that doesn't come, “runs dry”, tries again, etc.

So premature or late-or-never acks result in the same thing—the pc running on and on and on.

And they *call* it “letting the pc Itsa”. Bah! If a pc talks too much in session he either is getting cut off too fast by the auditor or hasn't got an auditor at all. It isn't “Itsa”. It's

lousy TRs. (The one single exception is the pc who had years in analysis but even he begins to get better with proper TRs used on him.)

The proper cure is to drill the auditor until the auditor realizes:

1. The *auditor* asks the questions.
2. The pc says what is the answer, "It's a ....."
3. The auditor acks when the pc has said it to the pc's satisfaction and
4. The auditor acks when the pc has finished saying "It's a ....."

And that's Itsa.

Scientology auditing is a precision skill, not a gag blip goo slup guck blah.

1. The auditor wants to know .....
2. The pc says it is .....
1. 2.1. 2.1. 2. etc.

### TECH SAVVY

Now an auditor who doesn't know his technology about the mind and his processes of course never knows what to ask. So he or she simply sits like a lump of sacking hoping the pc will say something that makes the pc feel better.

A sure sign that an auditor doesn't know an engram from a cow about processes is seeing a pc "Itsa" on and on and on.

In Scientology we *do* know what the mind is, what a being is, what goes wrong in the mind and how to correct it.

We aren't psychoanalysts or psychiatrists or Harley Street witch doctors. We do *know*.

The data about beings and life is there in Scientology to be learned.

It isn't "our idea" of how things are, or "our opinion of" ....

Scientology is a precision subject. It has axioms. Like geometry. Two equilateral triangles aren't similar because Euclid said so. They're similar because they are. If you don't believe it, look at them.

There isn't a single datum in Scientology that can't be proven as precisely as teacups are teacups and not saucepans.

Now if we get a person fresh out of the study of "the mystical metaphysics of Cuffbah" he's going to have trouble. His pcs are going to "Itsa" their heads off and never get well or better or anything. Because that person doesn't know Scientology but thinks it's all imprecise opinion.

The *news* about Scientology is that it put the study of the mind into the precise exact sciences. If one doesn't know that, one's pcs "Itsa" by the hour for one doesn't know what he is handling that he is calling "a pc".

By my definition, an auditor is a real auditor when his or her pcs DON'T overtalk or undertalk but answer the auditing question and happily now and then originate.

So how to tell an auditor, how to determine if you have trained one at last, is DO HIS PCS ANSWER UP OR DO THEY TALK ON AND ON.

If I had an auditor in an HGC whose pcs yapped and yapped and ran dry and yapped while the auditor just sat there like a Chinese pilot frozen on the controls, I would do the following to that “auditor”:

1. Remedy A, *Book of Case Remedies*.
2. Remedy B, *Book of Case Remedies*.
3. Disagreements with Scientology, technology and orgs and Scientology personalities all found and traced to basic and blown.
4. A grind study assignment of the Scientology Axioms until the “auditor” could DO THEM IN CLAY.
5. A memorization of the Logics, Qs (Prelogics) and Axioms of Dianetics *and* Scientology.
6. TRs 0 to 4 until they ran out of his or her ears.
7. Trs 5 to 9.
8. Op Pro by Dup until FLAT.
9. A hard long study of the Meter.
10. The ARC triangle and other scales.
11. The Processes of Level 0.
12. Some wins.

And I’d have an *auditor*. I’d have one that could make a Grade Zero Release *every* time.

And it’s lack of the above that causes an “auditor” to say “I let the pc Itsa” with the pc talking on and on and on.

Scientology is the breakthrough that made the indefinite subject of Philosophy into a precision tool.

And pcs get well and go Release when it is applied.

**COMM CYCLE ADDITIVES**

There are *no* additives permitted on the Auditing Comm Cycle.

Example: Getting the pc to state the problem after the pc has said what the problem is.

Example: Asking a pc if that is the answer.

Example: Telling pc "it didn't react" on the meter.

Example: Querying the answer.

This is the WORST kind of auditing. Processes run best MUZZLED. By muzzled is meant using ONLY TR 0, 1, 2, 3 and 4 by the text.

A pc's results will go to HELL on an additive comm cycle.

There are a hundred thousand tricks that could be added to the Auditing Comm Cycle. EVERY ONE of them is a GOOF. The ONLY time you ever ask for a repeat is when you couldn't hear it.

Since 1950, I've known that all auditors talk too much in a session. The maximum talk is the standard model session and the TR 0 to 4 Auditing Comm Cycle ONLY.

It is a serious matter to get a pc to "clarify his answer". It is in fact an Ethics matter and if done habitually is a Suppressive Act, for it will wipe out all gains.

There are mannerism additives also.

Example: Waiting for the pc to look at you before you give the next command. (Pcs who won't look at you are ARC Broken. You don't then twist this to mean the pc has to look at you before you give the next command.)

Example: A lifted eyebrow at an answer.

Example: A questioning sort of ack.

The Whole Message is

**GOOD AUDITING OCCURS WHEN THE COMM CYCLE ALONE IS USED AND IS MUZZLED.**

Additives on the Auditing Comm Cycle are ANY ACTION, STATEMENT, QUESTION OR EXPRESSION GIVEN IN ADDITION TO TRs 0-4.

They are Gross Auditing Errors. And should be regarded as such.

Auditors who add to the Auditing Comm Cycle never make Releases.

So, that's Suppressive.

Don't do it!

**RECOGNITION OF RIGHTNESS OF THE BEING**

*Taken from the LRH Tape  
"Good Indicators", 7 January 1964*

An auditor's tendency is to look for wrongnesses. He is always trying to find something wrong with the pc. That's the nature of Scientology; we assume that there is something wrong with somebody otherwise he wouldn't be here and be dead in his head, and he would be *capable of* doing a great deal more than he is *doing at the particular moment*.

An individual is basically and routinely good, capable of many actions and considerable power.

In the state of a Free Thetan or Native State he is a far more powerful individual than when *he's been* complicated up.

It's the idea of the additive data to the Thetan. Try to give somebody something he doesn't want and you are going to overthrow his power of choice. His power of choice is the only thing that he had to begin with, which gave him power, capability and anything else *and* that power of choice has been consistently and continuously overthrown by giving him things he didn't want and taking away from him things he didn't want to get rid of *back and forth*. You get the individual pretty overwhelmed and he goes down in power.

What happened to him *actually is* he solved something that didn't need solving. There was something he couldn't confront so he *solved* it and he fixed the solution.

Anytime you fix these solutions, for ever and ever you put the individual down *grade*. An individual becomes aberrated by additives. His experiences in this universe are usually calculated to degrade and depower him. Now all you have to do is pick up all of *these* criss-crosses and you return him to power.

Man is an added-to being and everything that has been added to him has decreased his ability to cope. *When you add something to the Being he gets worse*.

We are in the business of deleting wrongnesses from the individual.

Even the Freudian Analyst realized that some additive had been added that should be deleted. So the idea of deleting something to bring about a recovery is not new with us.

Because we are in the business of deleting wrongnesses from the individual we seldom look at rightnesses and that's what's wrong with most auditors. They are so anxious to find the wrongness—and quite properly—and they never really look at the rightness. If they don't look at the *rightnesses that are present*, then they aren't appreciating the degrees of truth that are present *that can be promoted into more truth*.

In other words they are starting at a level of no truth present all the time so of course they never make any forward progress.

You must realize that there must be truth present and that this truth must be *recognized* and that this is hand-in-glove a part of auditing—*the recognition of the fact that truth is present*.

If you only look for *wrongnesses* and only recognize *wrongnesses* then you will never be able to pull anything up a gradient because you won't think you have any *rightnesses* to work with. It just all looks wrong to you.

You have to be *able* to look at the wrongnesses in order to right them but we also have to be able to look at the rightnesses in order to *increase* them.

*We are only trying to find wrongnesses in order to increase rightnesses, and that's very important. If you have no rightnesses present in a session you will never be able to make any progress of any kind. Progress is built on a gradient scale of rightnesses by which you delete wrongnesses and they drop and fall away.*

*Therefore, Processing is an action by which wrongnesses can be deleted from the case to the degree that rightnesses are present in the session. You cannot take a case that doesn't have any rightness present and delete a wrongness. So you have to realize that there are rightnesses present and then you increase those rightnesses. That makes it possible for you to pick up the wrongnesses and that's what auditing consists of.*

*Auditing is a contest of maintaining rightnesses so that we can delete wrongnesses. If you keep on deleting wrongnesses, all the while maintaining and increasing the rightnesses you eventually wind up with a very right being. You are trying to get a *right being*, therefore if you don't continually encourage right beingness you never wind up with a right being.*

You must learn to observe an auditing session. You want your pc to wind up in a right state—in a more native, more capable, less overwhelmed, higher power of choice sort of state. You want him to wind up with more *rightnesses*.

Therefore, if you audit so that you do not encourage and increase *rightnesses* then you won't wind up with a right pc.

The degree of rightness you have present must *exceed* the wrongness you are going to pick up. It's a proportional action. If you've got as much *wrongness* in a session as you've got rightness you're not riding on any cushion. It makes a very difficult job of auditing. If you want to pick up this little wrongness, you have to have rightnesses present *which are big enough* to engulf it. That makes easy auditing.

If the rightnesses in the session are very minor and the problem is a tiny one, there isn't enough rightness in the session to handle the problem and the pc cannot erase it.

**THE PC'S ABILITY TO AS-IS OR ERASE IN A SESSION IS DIRECTLY PROPORTIONAL TO THE NUMBER OF GOOD INDICATORS PRESENT IN THE SESSION.**

And his inability to cope in a session rises proportionally to the number of bad indicators present in a session.

*Any process has its own series of bad indicators. And the bad indicator moves in when the good indicator moves out. So you have to have a primary knowledge of good indicators.*

*Don't look for bad indicators on and on and on; you'll drive the pc around the bend and suppress the good indicators. What you want to do is know your good indicators for the level you are running so well that when one of them disappears out of*

*the session, your ears go up and you instantly look for the bad indicator. Don't look for the bad indicator until you see the vanishment of the good indicator. Otherwise you're continually prowling around looking for wrongnesses in a session and you keep a pc very upset and you get no auditing done of any kind whatsoever.*

Remember this next time you see a pc start to bog and drag *and flounder one way or the other*. You've got to get the pc's good indicators back in before you can get the pc to handle what you want him to handle.

What influences the attitude of the pc is an ARC Break (that of course is influenced earlier by the *auditor's* behavior), or the pc has an overt on the auditor or the pc has a missed withhold.

An auditor who never gets in and finds out what is wrong in the session—the reasonable auditor—messes up pcs like mad.

If all the good indicators are present the auditor *knows* he is doing a good job of auditing.

***Basic Auditing Series 11***

**METERING**

One does NOT tell the pc anything about the meter or its reads ever, except to indicate an F/N.

Steering a pc with “That—That—That” on something reading is allowable. But that isn't putting attention on the meter but on his bank.

Definition of “In Session” is “Pc interested in own case and willing to talk to the auditor”.

Saying “That reads”, “That didn't read”, “That blew down” is illegal. It is no substitute for TR 2. It violates the In Session definition by putting pc's attention on the meter and can make him very unwilling to talk to the auditor!

**TRS COURSE AND AUDITING  
MIXING MAJOR ACTIONS**

With the use of TRs The Hard Way on basic courses, auditors and students, a rule must be laid down:

A PERSON ON A TR COURSE OR IN PROGRESS  
ON A TR CYCLE MAY NOT ALSO BE AUDITED.

And a second rule:

HGC ADMIN AND THE D OF P MUST BE  
INFORMED OF ENROLLMENTS ON TR COURSES  
OR TRS IN CRAMMING AND MUST SO MARK A  
PC'S FOLDER WITH DATE.

And a third rule:

IN AN ADVANCED ORG THE ADV CSE ADMIN  
MUST ALSO BE INFORMED OF STUDENTS  
ENROLLING ON A TR COURSE.

And a fourth rule:

A SIGN MUST BE PLACED IN QUAL AND IN A TR  
CLASSROOM "WHILE WORKING ON TRS AND  
UNTIL THEY ARE PASSED, DO NOT ACCEPT  
AUDITING." IN AN AO OR SH THIS READS  
"WHILE WORKING ON TRS AND UNTIL THEY  
ARE PASSED, DO NOT ACCEPT AUDITING OR DO  
SOLO."

The reason for these rules lies in the major C/S rules:

DO NOT BEGIN NEW PROGRAMS TO END OLD.

DO NOT START A NEW ACTION BEFORE  
COMPLETING THE EXISTING ONE.

And the auditor rule:

OBTAIN AN F/N BEFORE STARTING THE NEXT  
C/S ACTION. IF UNABLE TO DO SO, NEVER  
BEGIN THE NEXT C/S ACTION BUT END  
SESSION AND RETURN THE FOLDER TO THE  
C/S.

The surest way in the world to bog a case is to:

1. Begin a new process without obtaining an F/N on the one just run.
2. Begin a major action without completing the old one.

3. Begin a major action without setting up a case with ruds and F/Ns.
4. Begin a new program without completing the old one.
5. Start several programs without finishing any.
6. Enter a new major action into a case already in progress on another incomplete major action.

I have seen a case on as many as *five* major actions with none complete. And when I see this the first thing I take up is the first unflat incomplete program and get it finished, then the next, then the next. The case comes out all smooth.

Example: Case is on but not complete on Dianetic auditing. Switched to grades. Incomplete on grades, gets a Prog Pgm. Incomplete on a Prog Pgm, shifted to Power.

The only apparent exception is a repair. A case can be repaired if bogged **PROVIDING THE ORIGINAL ACTION IS REHABBED IF O/R OR COMPLETED TO EP.**

A Progress Pgm may reach EP before the *written up* program is completed.

Thus a Process Completion is defined as the END PHENOMENA of the process. A Program is complete when the END PHENOMENA of the Program is attained.

#### TRs

Any course or program containing TRs 0-4, 6-9 or Admin TRs is a major program in itself. It produces case gain—if run right—and has an End Phenomenon.

Further, by actual experience when a person is on a real (not a patty-cake and weak) TR Course and is also being audited at the same time, the C/S and Auditor if they don't know the person is also on TRs can be utterly baffled and worried as the case does not run right. "What did I do?" "What C/S was wrong?" "Look, his TA is high." "Now it's low." "Last session he \_\_\_\_." And the C/S and auditor engage in efforts to handle the odd case behavior. But the person, unknown to them, was *also* on a real TR Course and his case was changing!

#### INTERJECTED PGMS

You can also run into this same oddity with a mystic who does "bathe the body in light" every night or a wife whose husband audits her between HGC sessions or a self-auditor.

The principle is the same. The C/S and auditor are going down Well being Street and hidden trucks keep dashing out of alleys and running into the pc.

#### LIFE

The reason auditing should be done in intensive packages, not 1 hour a week or a session a month lies in the fact that LIFE can run a new action in on a pc.

It's a great way to waste auditing to let a pc have a session once a week. You can't even keep his ruds in if he lives in any confusions.

So nothing is done for the *case*, all the auditing goes to handle the life interjections!

#### CROSS PROGRAMMING

A case runs on cycles of actions. This is true in the auditing comm cycle. It is true in a process cycle. It is true in a program cycle.

New things being crossed into old incomplete things make a sort of ARC Break situation like a cut comm cycle.

One could do everything with a process or a program OR A COURSE that you find on an L1C. It would not be very wise.

No case gain can be created by lack of a comm cycle in an auditor, lack of an action cycle in processes or messing up a program cycle.

If you don't believe it, run an L1C on a pc with "Processes" and "Programs" and "Courses" as a prefix. You'd be amazed. Further the fellow who doesn't reach the EP of a *Course* is likely never to use that material or be faulty with the subject.

Usual study courses like admin or tech give case gain. One can carry on with auditing parallel to them. But still expect a case to change a bit by study and baffle a C/S once in a while. But a *real* TR Course produces changes up and down and up that are not possible to *also* audit around. So they don't mix.

VISUAL IDEA

To get a visual idea of this:

Optimum:

Ghastly:

Where's the End?

Why, here, of course:

Got it?

*Study Series 2*

**CONFRONTING**

The first requisite of any subject is the ability to confront the various components (things) (parts) (divisions) of the subject itself.

All misunderstandings, confusions, omissions, alterations of a subject *begin* with failures or unwillingness to confront.

The difference between a good pilot and a bad pilot depends of course on consistent study and practice, but underlying this, determining whether the person *will* study and practice, is the ability to confront the components of study and airplanes.

A “quick study”, by which is meant a student who learns rapidly or a person who grasps a subject quickly, has a high ability to confront that subject.

In a dramatic profession, the wild animal trainer who could confront wild animals remained alive. The one who couldn't confront was too slow of perception to live long.

In a more common line of work, the *fast* typist could confront study and typing in the first place and the slow typist couldn't and can't.

The confusions about “talent” and “native ability” and such are resolved to no small extent when one recognizes the role played by the ability to confront.

Basically, if one can just be there with it, he can *then* achieve the skill of communicating with whatever “it” is and handling it.

Thus, before communicating with the components of a subject can properly begin, one must be able to be there comfortably *with* the components of the subject.

All power depends upon the ability to hold a location. To communicate one must be able to hold to a location.

This is even true in the physical universe. You can't move a chair unless you can hold a position yourself near the chair. If you don't believe it, try it.

Thus the ability to communicate with *precedes* the ability to handle. But before one can communicate with something one must be able to *be* in a location near it.

The age-old puzzle of how some scholars can get “A” on a subject they have studied and then not be able to *apply* even a scrap of the data is resolved by this fact of confronting. They can confront the book, the class and the thought. But they haven't attained the ability to confront the *physical objects* of the subject.

At least such “glib” students can confront the book, the paper, the thought. They are partway there.

Now all they need to do is confront as well the physical things to which the subject is applied and they would be able to apply what they know.

Some people are not so lucky as to be “glib” students. They have to work up to “being there” with the book, paper, classroom and teacher.

Thus “confronting” is actually the ability to be there comfortably and perceive.

Amazing reactions occur when conscious effort is made to do this. Dullness, perception trouble, fogginess, sleep and even pains, emotions and convulsions can occur when one knowingly sets out to BE THERE AND COMFORTABLY PERCEIVE with the various parts of a subject.

These reactions discharge and vanish as one perseveres (continues) and at last, sometimes soon, sometimes after a long while, one *can* be there and perceive the component.

As one is able to confront one part he then finds it easier to confront other components.

People have mental tricks they use to get around actual confronting—to be disinterested, to realize it’s not important, to be sort of half dead, etc—but these discharge (run out) as well eventually and at last they can just be there and comfortably perceive.

Eye blinks, swallows, twitches, aches, pains, are all systems of interrupting confronting and are the symptoms of discomfort. There are many of these. If they are present then one is not just being there and perceiving.

Confronting on a via (using a relay point) is another method of ducking out of it.

The worst off cannot even tolerate the idea of being there and perceiving anything. They run away, even go into emotional fits rather than be there and perceive. Such people’s lives are a system of interruptions and vias, all substitutes for confronting. They are not very successful. For success in life depends not on running away from it but by being there and perceiving it and then being able to communicate with it and handle it.

## TERMS

“A gradient scale” means a gradual increasing condition of, or a little more of, little by little.

A “skipped gradient” means taking on a higher degree or amount before a lesser degree of it has been handled. One has to go back and handle the missed degree or thing or else one will have just losses on a subject thereafter.

“Flattening” something means to do it until it no longer produces a reaction.

“Overrunning” something means accumulating protests and upsets about it until it is just a mass of stops. Anyone can do anything forever unless he begins to stop it.

“Invalidation” means a refuting or degrading or discrediting or denying something someone else considers to be a fact.

## GRADIENTS

Some of the things one would have to be able to be there and perceive in order to study, placed on a graduated scale of increasing difficulty are:

Beginning at all.

The classroom or work space.

Paper.

Books.

Writing materials.

Sounds.

A Student.

The Supervisor.

The area of the study subject's physical components.

The motionless equipment of the subject.

The moving equipment of the subject.

*Masses* connected with the subject.

The subject as a whole.

-----

The next stages would have to be confronting while moving. This requires a consecutive being there and perceiving even though one is occupying different locations.

The next stages would be confronting selectively while moving despite other things seeking to distract.

-----

This Bulletin is not an effort to set out the numerous confronting drills. It is intended to set out the various axioms or laws necessary to an understanding of the subject of confronting itself.

From these brief notes all the axioms can be derived.

The fundamental and basic simplicities of confronting itself is the first thing that must be grasped. All complexity surrounding any subject or action is derived (comes from) a greater or lesser inability to confront.

**MUST BE CHECKED OUT \*RATE  
AND IN CLAY BEFORE USE!**

**HIGH AND LOW TA BREAKTHROUGH**

High and Low TAs have been a longtime puzzle and stumbling block to Auditors.

The usual definition of OVERRUN is “gone on too long” or “happened too often”. This causes high TAs to occur.

In examining a few failures on using “overrun”, I have found that underlying this there is a more basic principle.

When a thetan believes something is “overrun” or “has gone on too long” or “was done too often” he is expressing only a symptom of another mechanism.

The truth is A THETAN CAN DO ANYTHING FOREVER.

To Audit “overruns” is auditing toward an untruth. Thus if carried on as a process it is really an out of ARC Process.

That which makes a thetan *believe* something can be overrun is the EFFORT TO STOP or THE EFFORT TO STOP HIM.

The effort to stop something, when generalized, becomes a “stop everything” and IS the entrance point of insanity. This has been known since 1967. But I did not earlier connect it with the OVERRUN phenomenon.

When a thetan has a long chain of efforts to stop or a chain of efforts to stop him (mixed up with protest, of course, and shame, blame and regret and other human emotion and reaction) he accumulates ridges. These make mass.

This mass makes the high TA.

In truth it is not possible to kill a thetan, so therefore any effort to stop a thetan would only have partial success. So the chain is also full of INCOMPLETES.

An incomplete cycle of action causes ARC Breaks.

Thus an OVERRUN is full of MASS and ARC Breaks!

As you possibly recall from the material of about 1955 the one process you must not run on a pc is “Look out of here and find something you can go out of ARC with.” This sends him into a dwindling spiral.

The common denominators of a bank are OUT OF ARC and STOP!

Thus if too long a list of “What has been Overrun” is required to obtain the first BD F/N item the listing action may very well restimulate much more bank than can easily be handled on some pcs.

As these are *also* the pcs with very high TA, if one lists for overrun and runs much too long a list to get his first BD F/N item, the pc can be heavily restimulated.

Listing errors or upsets can make this, then, too uncomfortable a proceeding for a pc and should NOT now be done.

And if it doesn't work on some pcs in the hands of some auditors, it must therefore be cancelled. Any recommendation on VIII Course to do it is cancelled.

The theory is correct as given on the VIII Course. There, a *few* items were intended. But now some very long lists have come up on some pcs which made the pc uncomfortable and were hard for the auditor to handle. Thus the BD F/N item overrun list must not be done.

CONTINUE is then the Reverse Action to overrun. Continue equals Survival.

The REVERSE to overrun therefore can be run as a process, to wit, “What would you be permitted to continue?” or “What could be Continued?”

This however would not be very successful. Thus the listing action is recommended as the process to use.

#### LISTS

SEVEN Lists can be done on Overrun itself by using the in-ARC Approach.

- Assess
- A. Self to another
  - B. Another to self
  - C. Others to others
  - D. Others to self
  - E. Self to self
  - F. Another to others
  - G. Others to another

Ordinarily the biggest read or any read has located a flow that will run and will be most real to the pc. But this is not true in handling overruns. The most stopped or rising read is where he's really hung. To get a TA down list the most stopped read or the *rise* of the read or the item that raised the TA when called. This is ONLY true of Overruns.

The list questions for the above are:

If A stopped: “What could you continue to do to another?”

If B stopped: “What could another continue to do to you?”

If C stopped: “What could others continue to do to others?”

If D stopped: “What could others continue to do to you?”

If E stopped: “What could you continue to do to yourself?”

If F stopped, list “What could another continue to do to others?”

If G stopped, list “What could others continue to do to another?”

The “Most stopped read” would be one that really froze the needle or caused it to rise or caused the TA to RISE such as 3.5 to 3.6.

The lists would be listed to a BD F/N item, Cog, VGIs. Actually the list could be listed forever. But the pc will get an item he likes and that F/Ns. He is then given his item. One does NOT null such lists unless one has really goofed.

ALL the lists A, B, C, D, E, F and G can be listed. To get a TA DOWN you list the flow that sends the TA UP. Then reassess for the next that sends the TA up, etc.

#### LOW TA

The same exact thing causes LOW TAs. The flow could be said to have overwhelmed the pc.

Exactly how you read the list for Low TA will be given in another HCOB after further tests are made. In theory it would go lower on assessment.

Please note that OUT TRs on the part of auditors is the most frequent cause of low TAs. TR 1 that drives the pc out through the back of his head can cause a low (below 2.0) TA on a lot of pcs.

#### END PHENOMENA

The End Phenomena, the “EP” of a TA HANDLING RUNDOWN would be all lists assessed or listed to F/N and the pc’s needle doing a persistent continual F/N for *days*. This means an F/N, wide, that nothing can kill.

#### DEPT 10

The Department of Special Cases should have auditors who can do this rundown by the book and with perfect results. It is really a Dept 10 technique.

#### FLOWS NOTE

There are about seven flow directions that can be used or listed. (1) Self to another, (2) Another to self, (3) Others to others, (4) Self to others, (5) Others to self, (6) Another to others, (7) Others to another.

“Flow” is an electronic flow in a direction. In Phoenix, Arizona, in 1952 an “Oscilloscope” (has a face like a radar, shows wave patterns and directions) was once hooked up to an E-Meter movement and showed that a mental flow will flow just so long in one direction. By reversing the repetitive commands when the left-right directional flow slowed, the flow turned around and flowed right-left then slowed, etc. So actual electrical flow occurs in response to the directional command (like “self to another”). Also it jams up when run too long on an average human because his mind has “overruns” in it already.

“Ridges” and masses come about from a conflict of flows opposing or being pulled back as in withholds.

High TAs are caused by two or more flows opposing thus making a mass or ridge.

Low TAs are caused by overwhelm by flows.

The thetan thinks of them as overruns and so quits on a subject or wishes he could.

This is why the TA behaves as it does on life and certain subjects.

There is no real reason why a flow can't go on forever in one direction unless a thetan tries to stop it. Then it ridges and makes mass which then reads on a TA.

#### AUDITOR QUALIFICATIONS

An Auditor must be a master at Listing and Nulling in order to touch such Actions as these lists. To foul up on listing on an already fouled-up pc is quite out-tech !

An auditor's TRs should have been passed the Hard Way.

His metering must be excellent and flawless.

His command and use of the Auditor's Code must be complete.

He should himself have had case gain.

He must have a full checkout on this HCO B and be able to do it in clay.

And as I say, he must know the subject of Listing and Nulling so well, he can always list smoothly to a BD F/N item with never a quiver.

#### INTERIORIZATION RUNDOWN

This HCO B does not change the Interiorization Rundown in theory or in practice.

It does however give this procedure.

1. On a high or low TA pc check for Exteriorization in auditing.
2. If pc has gone Ext in Auditing make *sure* he has not had an Ext-Int RD earlier before giving him another.
3. If an earlier Int RD exists repair, complete or rehab it. Often an Int RD is itself overrun. An L3B on it will show what is wrong with the earlier one. Some poor High TA pcs have had 2 or 3 Ext-Int RDs! All run past the EP.

Some Ext-Int RDs went totally flat on the secondaries! Or on the recalls. All else was overrun.

4. If no earlier Ext-Int RD was done, then do one.
5. If the check of the Ext-Int RD situation shows it not to be the reason, or was the reason but the TA goes high or low days later, then **DO THIS TA HANDLING RD.**

As pc high and low TAs have been blocking auditing for a lot of auditors this discovery and its remedy is Delightful news!

Remimeo

*C/S Series 40*

**LOW TAs**

As per C/S Series 37R, further work was done on low TAs.

LOW TAs ALSO ASSESS ON RISE JUST LIKE HIGH TAs.

There is no difference of procedure except that a low TA can blow UP to 2.0 + and F/N.

Thus one can't say using 37R on a low TA case, "List to a BD F/N item" as it may be a Blow UP F/N item.

The TA may be at 1.8 in listing and when the F/N item goes on the list, the TA will blow UP to 2.0 or 2.1 and F/N.

Further if the F/N promptly dies, and the TA falls, one lists further until one blows up, the F/N continues and the pc is pleased with it.

Assessment on a low TA is done on RISE for the item listed or a Blow UP, just as in the case of high TAs.

When you list a low TA's falling flow (in assessing the seven flows) and use it for the Continue list the pc can get very unhappy and will get even more overwhelmed.

Thus low TA or high TA, list the 7 flows for *rise* or blow UP and list the one that rose most. This is true of the first and every other flows assessment.

Realize this blow UP rule only applies to 37R and the Continue list and is not used in any other listing.

37R works on low TAs like a bomb!

*C/S Series 41*

**C/S TIPS**

LISTS

*Always C/S to correct lists first when lists are out or suspected to be out.*

Don't do ARC Brks first in a case of out lists as an out list can make an ARC Break that can't be handled by ARC Brk but only an L4B.

On a GF when lists show up or overlists you should handle that (first action in handling the GF) but also you must order an "L4B Method 5 and Handle." Method 5 is the once through for assessment.

NO READ AUDITORS

When auditors can get no reads on things you get their

- a) TRs checked to see if they can even be heard.
- b) Their metering checked for meter position on auditing table, can they see meter, pc and write without shifting eyes? And can they see pc's hands on the cans?

And was the meter turned on and charged and can an auditor work the Tone Arm smoothly with his thumb?

- c) Does the auditor discount reads gotten on clearing commands? (They are the reads.)
- d) Can the auditor read out a list and see the meter reads as a coordinated action?

CRAMMING

Send auditors to cramming on all flubs, insist they GO to cramming, insist cramming calls them in and crams them and insist on a carbon copy of the fact that cramming has been done. *All* the hard work of C/Sing comes in when auditors are flubby.

It takes weeks to make an auditor after he has had a course and it's only done by Cram-Cram—Cram.

R FACTORS

Never order an R Factor that takes pc into future or past as he then won't be in session. Example: C/Ses "R Factor we are setting you up for Dianetics." Promptly the pc is up ahead not in *this* session.

## MIXING STARTS

There are many ways to start a session. Don't mix them.

It's "2 wc what do you have your attention on?"

"Fly a rud if no F/N."

"Fly all ruds."

"2 wc the TA down."

"Fly a rud or GF + 40 Method 5 and handle."

It's not a mixture of frantic efforts to get a TA down.

If the auditor can't on what the C/S says THE AUDITOR ENDS OFF.

Interiorization is undone or out, there may be list errors, there may be overruns, but for sure it's a case for FOLDER STUDY, not for an auditor C/Sing in the chair.

## HIGH TA & ARC BRKS

Train your auditors NEVER TRY TO GET A TA DOWN FROM 3.5 OR ABOVE ON ARC BREAKS.

## LOW TA QUILTS

Some auditors see a TA sink below 2.0 and then won't continue the 2 wc or process to get the TA back up.

"The TA sank so I quit" is a common auditor note.

Compare this: "The TA rose above 3.0 so I quit."

See? Doesn't make sense.

If a TA sinks below 2.0—and the auditor's TRs are good—the same action will usually bring it up to 2.0 and F/N.

Come down hard on auditors who do this.

Get their TRs checked, make them continue.

## EXAM F/Ns AFTER FLUBS

Pcs whose TAs are high in session or low in session and get F/N at the Exams put the finger on the auditor. They are protesting or being overwhelmed.

Always C/S "Examiner! Ask pc what auditor did in session."

Then you know it's the auditor or the case. The pc will say the auditor was okay. So it's case. But usually *when cases are puzzles* there's weird things going on with TRs.

Also the auditor may be noisy or laugh hard or is boisterous and being "interesting".

## C/S VIA

The C/S is handling cases on the via of an auditor.

If the auditor is *perfect* the C/S can handle the work out of the case. If the auditor is not perfect in TRs, metering, Code, reports and doing the C/S then the C/S is solving a factor unknown to him, not the pc's case.

So, be a perfect C/S. Demand perfect auditing. Cases fly.

### HIGHER LEVELS

A C/S who assesses a pc to higher levels to solve lower ones is really asking for a wreck.

It's always the earlier actions that are out.

Trying to cheat a case up to Grade 2 when he won't run on Grade I is like trying to run the whole grade chart to cure a cold.

A pc can always be solved in or below where he is.

"Oh, we'll put him up a grade and cure his high TA" is like "He can't pass kindergarten so we'll enroll him in college."

### C/S EXPERTISE

A C/S has to know his auditing materials, HCO Bs and texts MUCH better than an auditor.

If a C/S is not being successful, get a retread on VI and VIII materials.

A C/S also must be confident HE could crack the case as an auditor.

When a C/S is shaky on his materials then the world of auditing looks very unstable.

The tech is very exact, very effective. If any errors existed in it they've been corrected.

So the variables are the knowledge of the C/S, his discipline and demands of auditors and the actions of the auditor.

If THESE are stable then the cases that come along are easy as can be.

The successful C/S knows his materials. If he wants to be even more successful he keeps his study up.

Then he is steady and calm for he is totally certain.

*C/S Series 42*

**C/S RULES**

**COMPLETE CYCLES**

Don't leave cycles incomplete on a case.

If a C/S starts a 37R and the auditor goofs, correct the auditor and then get the 37R completed. Don't disperse and do something new.

If you have a program going and it's goofed, repair the auditor and the goofed pc and continue the program you began on the case.

Repair (Progress) Programs are ended when the pc is flying nicely. When a repair hits that, don't re-repair.

On Advance Programs, take each step to its EP. Don't suddenly start something new.

A sure way to solve a case is go back and find the earliest incomplete program, complete it and so on up to PT.

Keep your "finger in the book" on a case. Don't lose your place. That's done by having the current pgm on the inside front cover, paper clipped on, and checked off with each step done. When it's done, put a new pgm on top of it.

Insist that auditors keep up the inside front cover folder summary each session with their auditing time and admin time in the box. This FS is a 2 column set of boxes, date, what's run, F/N or bogged and time.

By seeing Admin is in you can keep your place in the book or study back rapidly to find what's been done.

**DOUBLE ACTIONS**

The deadliest faults on cases are running the same action or grade twice. This drives TAs up through the roof.

Example: Power done in '65. Done again in '69!

Example: Grade IV done in '69, done in '70.

You find the case isn't doing well or find the error. In doubles, rehab by date of the first time it was done.

I've seen Interiorization done three times on one pc, Power twice and the same Dianetic Chains run over and over. And people wondered "Why is the TA high" !

So when you order a major action always check to see if it's ever been done before! Save you grief. And if a major action won't run, suspect it may have been done before.

## SET-UPS

Always set up a case fully for the next major action.

Don't overrepair. But be sure the case is not sick, has had good exam forms and does well.

Then C/S the next major action.

## BLAMING THE PC

Never blame the pc. Many it is true are dog cases.

But even dog cases can be handled.

When you find auditors (or feel yourself) blaming the pc, get the overts and withholds run out.

Once I got the most splendid sessions out of an HGC. I had the auditor's overts and withholds checked on each auditor before he went into session. It was just research, but my it worked! Those were the smoothest sessions! Pcs began to fly!

Too many times one blames the pc only to find later that the auditor's TRs were ghastly and that a major action had been run twice. Such discoveries make a C/S out of a C/S.

*C/S Series 43*

**C/S RULES**

**TROUBLE FOR THE PC**

Never make trouble for the pc.

When a pc is running well let it roll. The C/S can spot a *possible* error but the pc is Wide F/N VGIs at the Exam, let it go.

Chew the auditor, send to Cramming. But don't throw the well running pc into extensive repair—don't break into a winning program harshly. It gives the pc a loss.

The pc who *isn't* running well is the one you repair. Don't keep a pc going on and on, running badly with no case study. Study the case folder, find the right why by going back to where the pc was running consistently well and then come forward for the error. It will be in the exact next session.

If the pc wasn't ever audited before, you go into his life of course, with a GF + 40 Method 5 and handle and other Life repairs.

**OVERREPAIR**

Any Repair or Progress action has reached its End Phenomena when the pc is running well again.

This is peculiar to the Repair or Progress program.

Wrong Example: Pc was on Grade III, fell on his head. C/S studied case, found out lists, wrote an extensive Repair Pgm and C/S. Half way through repair the pc again was flying. C/S continued the repair. Pc bogged. C/S C/Sed the pc to flying again. C/S continued the repair. Pc bogged.

Right Example: Pc falls on his head on Grade III. C/S writes a Repair Pgm and C/S. Auditor finds the out list, corrects it. Pc flies. C/S puts pc at once back on Grade III to complete.

**AUDITOR INVAL**

An auditor can be invalidated by a C/S by having a lot of questionable tech points thrown at him.

The auditor's *data* gets shaky.

If no decision was ever made—is not in HCO Bs and tapes—is not to hand and can't be referred to by HCO B and tape, then a C/S should not be making the point.

Example: Auditor extends a list three more items beyond an F/N. C/S chops him. There is no such rule. The pc maybe wouldn't accept the item until he listed a few more. Result is a firefight between C/S and auditor, simply because it isn't a valid point.

HCO Bs and Tapes *are* the stable data that form the agreement between the auditor and the C/S. "If it isn't written (or spoken on tape) it isn't true."

Don't wander off known tech points in C/Sing.

Never shake an auditor's data by advancing data not on HCO Bs and Tapes.

Always know your data, your HCO Bs and Tapes and refer the auditor to them in Cramming.

Cramming **MUST** have a library of all materials.

A hidden data line can build up in C/S-Auditor lines (or course lines or Cramming lines) that **CAN UNSTABILIZE ALL TECH AND DENY FURTHER RESULTS.**

The decay of tech in areas begins with hidden data lines that **ARE NOT TRUE.**

So use and refer to HCO Bs and Tapes and leave all other points alone. Your auditors will become confident and certain and Tech will improve.

It's enough just to insist on the usual.

Then auditors and cases will fly.

*C/S Series 44R*

**C/S RULES**

**PROGRAMMING FROM PREPARED LISTS**

There are many vital prepared lists.

King of these is the Green Form. The additional No. 40 items are the original Seven Resistive Cases. The best way to do a GF + 40 is Method 5 (once through), lengths of reads and BDs marked and C/S to then write a C/S for it.

Hi-Lo TA is also such a list, also done Method 5.

Any such prepared list can be done Method 5 and the C/S to then write a C/S.

But L4B (Lists correction), L3B (Dianetic errors) and L1C (ARC Brks and bypassed charge) are usually done Method 3 (auditor assesses to a read, gets the action done, and/or earlier similar to an F/N, not going on until his action has resulted in an F/N and then going on to complete handling and F/Ning each read he gets).

When the C/S has a list assessed Method 5 he expects usually to get it back with the reads and then write the C/S for it. Sometimes he asks for a GF + 40 and a Hi-Lo TA both to be done Method 5.

Now the question comes up, which reads does the C/S write up to be handled first? And second? And third? Etc. In other words how does he arrange the C/S the auditor is to do now? What sequence are the items handled in?

These rules apply:

Handle an Out Int RD first.

Handle anything connected with "Lists" (meaning Listing and Nulling Lists) first if Int isn't out. Like "Listed past right item," reads. The C/S would get that handled FIRST. Always handle list errors first. And usually do an L4B additionally, Auditor to handle. A pc can get sick after a listing error and you can't get auditing done when lists are out.

Doesn't want auditing, why, is then handled if it read.

Next C/S to handle anything to do with rudiments. ARC Brks, PTPs and W/Hs take precedence in that order.

(Listing errors are first, before ARC Brks because an apparent ARC Break after a listing error can only be handled by getting the charge off the list.)

Anything that *looks* like a withhold comes next.

After that one just takes the lengths or BD of reads. Take the biggest reads before you take the smaller ones, once you have C/Sed for Lists, doesn't want auditing and Ruds and evident other withholds.

The only confusion that one can get into is a very high TA. But List errors can cause high TAs. Next in frequency is withholds.

Never C/S to take a TA down with an ARC Brk rud or an L1C. *Never.*

You can C/S to “talk a TA down” only when there are no list errors or withholds reading on a GF.

Of course an Interiorization Rundown error is a primary target. But you don’t have that once it’s handled. You will get a soaring TA if Int is out. L3B is a potent tool to order for Int outnesses, the auditor handling as he goes, Method 3.

-----

So the above gives you the rules by which you C/S from assessed prepared lists.

Basically—when Int is out, auditing will drive the TA up.

When lists are out nothing will handle but lists and L1C won’t nor will ruds.

When ruds are out nothing else will straighten up and you mustn’t order auditors to audit with out ruds.

Doesn’t want auditing can come from a bad L & N list. Or out Int. Or out ruds. Previous bad auditing can be cured by L1C on previous bad auditing. The craziest out auditing I ever ran into was an auditor using reads and F/Ns when there were none and failing to take up or flatten reads he did get. So there can be variations on bad auditing and there can be, to our shame, false auditing reports. The best C/S is to find what auditor and find out what the error was. Bad TRs on a poor TR Course where the pc was a student (False passes and invalidated wins) can also cause “doesn’t want auditing”.

“Protest” is a frequent reason for high TA and is a cousin to “doesn’t want auditing” and is handled by checking “Lists” for read and doing an L4B if it reads or finding the out ruds or other BPC as in L1C.

-----

As there are so many combinations of reading items from prepared lists, you have to C/S according to these general principles.

These rules serve as a steadying guide that you’ll find win for you.

HCO BULLETIN OF 15 JUNE 1971

Remimeo

*C/S Series 37R*  
*Addition*

**HI-LO TA ASSESSMENT RULES**

In assessing and listing the Continue process it is VITAL to continue to assess the seven flows and list until the entire list widely F/Ns.

There can be more than seven lists taken from the seven flows.

One finds a rise or blow up item, does a list on it, then reassesses ALL seven flows, finds the next most rising item, lists then and assesses ALL seven flows and finds the next most stopped or rising item and lists that. One just keeps this up.

Eventually on assessing the seven flows you can only get a stopped needle. Then a slowed or killed F/N. One uses these for lists. Sometimes toward the last they blow on indication and cog.

The end of it all is the auditor assessing the seven flows without being able to disturb a wide wide persistent F/N.

THAT is the EP of the 37R process. There is no other EP. If not done to that EP the 37R process is incomplete.

**CLEARING FLOWS**

The idea of *flows* should be cleared with the pc before assessment is done.

One can do this by getting the pc to draw them.

Don't confuse the pc with this clearing and make sure he is not confused before assessing the seven flows.

**REPEATED ASSMT**

One can take a sheet of paper lengthwise and write the seven flows along the left edge with lines to the right. By putting in dividing vertical lines one then has 10 or 12 assessments laid out ready to do.

**LOW TA**

Unless one does a THOROUGH JOB to the 37R End Phenomena on a low TA case the TA will continue to go low in future sessions.

A low TA takes more times through the assessments and listing than a high TA.

**CRAMMING**

Auditors who can't do this well must be fully crammed on reading a needle and TA on stops, rises and blow *ups*.

The result, if properly done, is invariably good.

(Corrected and Reissued)

*C/S Series 37R*

*Addition 2R*

**LOW TA ASSESSING**

If after an apparent EP of a wide F/N on the last assessment, the pc then has a low TA at the Examiner or subsequently has a low TA, one must NOT start a new program as the existing one (37R) is incomplete.

The correct C/S for an apparent 37R EP which then went sour would be

1. L4B Method 3 and handle.
2. Ask if there is another flow not yet touched. Note its read as it is described and list it.
3. Reassess the existing and the additional flows for any slightest slow or choke and list it.

-----

Should there still be trouble with low or high TA subsequently, it lies in the area of overts and withholds which blow loose on the Continue process. This is true because overts and withholds add up to stopping something which is discontinuance.

The next process (when all possible thoroughness has been taken with 37R yet trouble of high or low TA persists) has not yet been released.

*C/S Series 45*

**C/S RULES**

A C/S never C/Ses exclusively for result. He C/Ses for exact tech application. If *that* occurs he'll also get his result. If a goof still wins, the C/S stomps on the goof.

This prevents auditors getting hung on an accidental win. The wins a C/S wants are exact tech application.

If a C/S can finally get auditors exactly auditing the exact processes with exact TRs, metering and Code everybody then wins all the time.

So the pc got an F/N at the Exam after the auditor failed to do the final run through, leaving the TA high at session end. That's a goof. To hell with the F/N at Exams or how PR the pc was. *That is* a goof. The C/S stomps on it.

Never give a "very well done" on wins only. Give them on tech exactness. Got an Exam F/N not quite by the book. That's only "well done". Got an Exam F/N *and* did it by the book is the "Very well done".

We know the tech works. That's no surprise. Perfect application by the Auditor is what the "Well Dones" and "Very Well Dones" are for.

The moment a C/S loses sight of this point he has started his team on a downgrade that will wind up with everyone losing, org, auditors and pcs.

That's the secret of how I as a C/S make star auditors. If it's by the book, hurrah. If it isn't by the book then a pc dial-wide F/N VGI rave at Exams gets, from me, a flunk! on the auditor. With a good plain why.

The Very Well done means "You applied the tech splendidly". It does *not* mean "You helped the pc". We know the standard tech will do that.

So watch this point. It's an awful big one. It will make your auditors into stars or bums.

Auditor runs a narrative chain. Gets away with it. Pc F/N VGIs at Exam. My C/S includes "Auditor to cramming on HCOBs covering types of items."

Now please recognize that auditors for whom I C/S *do* make it and go on making it. Well, in addition to knowing the subject, this is the one thing I do that is not always done by C/Ses.

*C/S Series 46*

**DECLARES**

It is the C/S's responsibility that a pc or Pre OT is sent to Declare?

This is *not* an Admin point I'm making. It is a technical point.

Every so often a pc is found hung up in not having declared and attested the state attained.

A Declare Completes his cycle of action and is a *vital* part of the action.

One never forces or feeds one to the pc. I recall one org where the entire tech and income structure crashed, the C/O and several personnel had to be removed because they were forcing "clear cogs" on their Dianetic pcs who hadn't had them (and then telling them they couldn't be audited further on Scientology) (Connie Broadbent, ASHO, March '70).

So this goes 2 ways.

THE PC OR PRE OT WHO KNOWS HE MADE IT MUST BE SENT TO EXAMS AND C & A TO ATTEST.

THE PC OR PRE OT WHO HASN'T MADE IT MUST NEVER BE SENT TO EXAMS TO DECLARE AND ATTEST.

This gives us a third:

PCs AND PRE OTs WHO HAVEN'T MADE IT MUST BE HANDLED UNTIL THEY HAVE MADE THAT SPECIFIC DECLARE, EVEN THOUGH IT MEANS SIGNING UP FOR MORE AUDITING.

TRUTH is the keynote, the essence, the point here.

All the "PR" (slang for promotional talk) in the world will not supplant truth.

The pc KNOWS he made something. Therefore he must be sent to declare it whether it's a standard grade or not!

The pc who hasn't made it KNOWS he hasn't and so when forced to declare or ordered to attest tends to cave in.

His concept of the validity of the org and honesty of Scientology depends on this, and really on this alone.

The correct declare or not declare decision of the C/S is a vital C/S action.

TR Course

**STUDY DEFINITIONS**  
**FOR THE TR COURSE**

**CHECKSHEET:** A list of materials, often divided into sections, that give the theory and practical steps which, when completed, give one a study completion. The items are selected to add up to the required knowledge of the subject. They are arranged in the sequence necessary to a gradient of increasing knowledge of the subject. After each item there is a place for the initial of the student or the person checking the student out. When the checksheet is fully initialed it is complete, meaning the student may now take an exam and be granted the award for completion. Some checksheets are required to be gone through twice before completion is granted.

**CHECKLIST:** A list of actions or inspections to ready an activity or machinery or object for use or estimate the needful repairs or corrections. This is erroneously sometimes called a "checksheet", but that word is reserved for study steps.

**CHECKOUT:** The action of verifying a student's knowledge of an item given on a checksheet.

**SUPERVISOR CHECKOUT:** A checkout done by the Supervisor of a course or his assistants.

**THEORY:** The data part of a course where the data as in books, tapes and manuals is given.

**PRACTICAL:** The drills which permit the student to associate and coordinate theory with the actual items and objects to which the theory applies. Practical is *application* of what one knows to what one is being taught to understand, handle or control.

**TWIN:** The study partner with whom one is paired. Two students studying the same subject who are paired to checkout or help each other are said to be "Twinned".

**TWO WAY COMM:** The precise technology of a process used to clarify data with another for the other. It is not chatter. It is governed by the rules of auditing. It is used by Supervisors to clear up blocks to a person's progress in study, on post, in life or in auditing. It is governed by the communication cycle as discovered in Scientology.

**METER CHECK:** The action of checking the reaction of a student to subject matter, words or other things, isolating blocks to study, interpersonal relations or life. It is done with an E-Meter.

**COURSE SUPERVISOR:** The instructor in charge of a course and its students.

**COURSE ADMINISTRATOR:** The course staff member in charge of the course materials and records.

**BLOW:** Unauthorized departure from an area, usually caused by misunderstood data or overts.

**LEAVE OF ABSENCE:** An authorized period of absence from a course granted in writing by a Course Supervisor and entered in the student's study folder.

**ROLL BOOK:** The master record of a course giving the student's name, local and permanent address and the date of enrollment and departure or completion.

**QUAL:** The Qualifications Division (Division V of an org) where the student is examined and where he may receive cramming or special assistance and where he is awarded completions and certificates and where his qualifications as attained on courses or in auditing are made a permanent record.

**CRAMMING:** A section in the Qualifications Div where a student is given high pressure instruction at his own cost after being found slow in study or when failing his exams.

**PROGRAMMING:** The overall planning for a person of the courses, auditing and study he should follow for the next extended time period.

**STUDENT CONSULTATION:** The personal handling of student problems or progress by a qualified consultant.

**HC: A HUBBARD CONSULTANT** is skilled in testing, two-way comm, consultation, programming and interpersonal relations. This is the certificate especially awarded to persons trained to handle personnel, students and staff. These technologies and special training were developed to apply Scientology auditing skills to the field of administration especially. An HC is not an auditor but a consultant. HC is a requisite for Course Supervisors and Student Consultants.

**SCHEDULING:** The hours of a course or the designation of certain times for auditing.

**OUT:** Things which should be there and aren't or should be done and aren't are said to be "Out". I.e. "Enrollment Books are out."

**IN:** Things which should be there and are or should be done and are, are said to be "In". I.e. "We got scheduling in."

**PACK:** A pack is a collection of written materials which match a checksheet. It is variously constituted—such as loose leaf or a cardboard folder or bulletins in a cover stapled together. A pack does not necessarily include a booklet or hardcover book that may be called for as part of a checksheet.

**MANUAL:** A booklet of instruction for a certain object or procedure or practice.

**POINTS:** The arbitrary assignment of a credit value to a part of study materials. "One page equals one point." "That drill is worth 25 points."

**POINT SYSTEM:** The system of assigning and counting up points for studies and drills that give the progress of a student and measure his speed of study. They are kept track of by the student and Course Administrator and added up each week as the student's statistic. The statistic of the course is the combined study points of the class.

**FLUNK:** To make a mistake. Fail to apply the materials learned. Opposite of pass.

**DEMO KIT:** Demonstration Kit. Consists of various small objects such as corks, caps, paperclips, pen tops, batteries—whatever will do. These are kept in a box or container. Each student should have one. The pieces are used while studying to represent the things in the material one is demonstrating. It helps hold concepts and ideas in place. A demo kit adds mass, reality and doingness to the significance and so helps the student to study.

**PINK SHEET:** Pink Sheets are issued by a Course Supervisor as a corrective measure. A student is given a Pink Sheet when something earlier was missed that should have been learned. The principle of the Pink Sheet is that a student is responsible for all the

material he has studied earlier. If he is unable to apply or use any of this material then the Pink Sheet is issued to remedy the situation. It gives the student a study assignment calling for re-study and checkout of the specific materials pertaining. It is a quick and precise remedy.

**TR: Training Regimen or Routine.** Often referred to as Training Drill. TRs are a precise training action putting a student through laid out practical steps gradient by gradient to teach a student to apply with certainty what he has learned.

**COACH:** To train intensively by instruction, demonstration and practice. In training drills, one twin is made the coach and the other the student. The coach, in his coaching actions, coaches the student to achieve the purpose of the drill. He coaches with reality and intention following exactly the materials pertaining to the drill to get the student through it. When this is achieved the roles are then reversed—the student becoming the coach and the coach becoming the student.

**COMPLETION:** A “completion” is the completing of a specific course or an auditing grade, meaning it has been started, worked through and has successfully ended with an award in Qual.

**SUCCESS STORY:** The statement of benefit or gains or wins made by a student or a preclear or Pre OT to the Success Officer or someone holding that post in an org.

*C/S Series 47*

**THE SUPREME TEST OF A C/S**

(Reference HCO B August 19, 1967, *The Supreme Test*  
which must be read with this HCO B)

A C/S or auditor who knows his tech is able to hold the line on any given action in auditing or C/Sing and not mix up.

One C/Ses Dianetics purely. Not Dn, Cl VI, Class VIII, Dn, Class VI.

One C/Ses or audits a Rundown as itself, not as a botch of several actions run into it.

So this brings to view that some can run the process or program for A to B.

And some, worse luck,

- (a) Go from A to G to Q to A and wonder why they don't arrive at the B of result.
- (b) Some go from A to B all right but when at B go right on past it.

Both, actually, are a type of non-confront. The A.G.Q.A can't confront and disperses off arriving at B. The A beyond B hasn't confronted B and so doesn't recognize B.

The ability to confront the pc and the session and parts of the session permits one to accurately go from A to B.

Proving this, perception reduces in ratio to overts. Accept that fact as it's true. If you run O/W on an auditor regarding the pc he is to audit, the auditor will give a perfect session to that pc. Why? He can confront because he can see.

Programming is simply an A to B action. The road is all laid out.

Auditing a process is a simple A to B Action.

What if you had an auditor who half way through Level Zero with no completion found a picture, did Dianetics on it, didn't flatten the R3R because pc cogged it was like his mother and the auditor did O/W on mother in the middle of the engram!

The pc would be a mess! B was run away from.

Same way with programming that isn't handled.

What if you had an auditor who got an F/N Cog VGIs and continued the same process to TA 5.6? He got to B and kept right on going.

You should look into some folders where the C/S or auditor dispersed off B or where B was reached with no halt.

The most recent examples I've seen have been taking processes out of one Rundown and using them in another Rundown all in an effort to achieve a maximum effect when the error that was present came from failure to complete 2 earlier programs.

The correct action would have been to complete the earliest program left incomplete and then complete the next incomplete program, not scramble parts of two *new* programs.

A to B is a cycle of action. A clean one.

It is best to keep it so.

The Supreme Test of an Auditor or a C/S is to make Auditing go right—by the book.

## **AFFINITY, REALITY AND COMMUNICATION**

(Extracted from *Problems of Work & Dianetics '55!*)

There are three factors in Scientology which are of the utmost importance in handling life. These three factors answer the questions, How should I talk to people?—How can I sell people things?—How can I give new ideas to people?—How can I find out what people are thinking about?—How can I handle my work better?

We call this in Scientology the A-R-C triangle. It is called a triangle because it has three related points. The first of these points is Affinity. The second of these points is Reality. The third of these points and the most important is Communication.

By Affinity we mean emotional response. We mean the feeling of affection or lack of it, of emotion or misemotion connected with life. By Reality we mean the solid objects, the *real* things of life. By Communication we mean an interchange of ideas between two terminals. Without affinity there is no reality or communication. Without reality there is no affinity or communication. Without communication there is neither affinity nor reality. Now these are sweeping statements but are nevertheless very valuable and are true.

Have you ever tried to talk to an angry man? An angry man's communication is at a level of misemotion which repels all terminals from him. Therefore his communication factor is very low, even though very loud. He is attempting to destroy something or some other terminal, therefore his reality is very poor. Very likely what he is being angry about apparently is not what has made him mad. An angry man is not truthful. Thus it could be said that his reality, even on the subject he is attempting to voice, is poor.

There must be good affinity (which is to say affection) between two people before they are very real to each other (and reality must here be used as a gradient, with things being more real than other things). There must be good affinity between two people before they can talk together with any truth or confidence. Before two people can be real to each other there must be some communication between them. They must at least see each other, which is in itself a form of communication. Before two people can feel any affinity for each other they must, to some degree, be real.

These three terms are interdependent one upon the other, and when one drops the other two drop also. When one rises the other two rise also. It is only necessary to improve one corner of this very valuable triangle in Scientology in order to improve the remaining two corners. It is only necessary to improve two corners of the triangle to improve the third.

These three items, Affinity, Reality and Communication, can be demonstrated to equate into Understanding.

It is a truism that if we could understand all Life we would then tolerate all Life.

When we say "Life" we mean Understanding, and when we say "Understanding" we mean Affinity, Reality and Communication. To understand all would be to live at the highest level of potential action and ability. The quality of Life exists in the presence of Understanding—in the presence, then, of Affinity, Reality and Communication.

Word Clearers

*Word Clearing Series 2*

**WORD CLEARING**

If anyone has “word cleared” you without these steps it is incorrect.

(1) By Meter in Session: A full assessment of many many subjects is done. The *auditor* then takes each reading subject and clears the chain back to earlier words and/or words in earlier subjects until he gets an F/N VGIs.

(2) By Meter in Classroom: The earlier passage is read by the student while on a meter and the misunderstood word is found. Then it is fully defined by dictionary. The word is then used several times in sentences of the student’s own verbal composing. The misunderstood area is then reread until understood.

(3) Verbal in classroom: The student says he does not understand something. The Supervisor has him look earlier in the text for a misunderstood word, gets the student to look it up, use it verbally several times in sentences of his own composition, then read the text that contained it. Then come forward in the text to the area of the subject he did not understand.

If any other word clearing is going on it is OUT tech.

There is a C/S on HCOB 30 June 71 to be followed exactly on word clearing in a session. Do not follow any other version or excerpt. There is NO other way to do it.

If you are not auditing this way or using word clearing this way or if words are not being cleared this way, report it to Ethics.

Once development and issue has occurred the next step is to get it understood and applied EXACTLY.

Then in both Tech and Admin we have successes.

REVISED 25 NOVEMBER 1974

*Word Clearing Series 3R*

**BARRIERS TO STUDY**

There are three different sets of physiological and mental reactions that come from 3 different aspects of study. They are three different sets of symptoms.

( 1 ) Education in the absence of the *mass* in which the technology will be involved is very hard on the student.

It actually makes him feel squashed. Makes him feel bent, sort of spinny, sort of dead, bored, exasperated.

If he is studying the doingness of something in which the mass is absent this will be the result.

Photographs help and motion pictures would do pretty good as they are a sort of promise or hope of the mass but the printed page and the spoken word are not a substitute for a tractor if he's studying about tractors.

You have to understand this data in its purity—and that is that educating a person in a mass that they don't have and which isn't available produces physiological reactions. That is what I am trying to teach you.

It's just a fact.

You're trying to teach this fellow all about tractors and you're not giving him any tractors—well he's going to wind up with a face that feels squashed, with headaches and with his stomach feeling funny. He's going to feel dizzy from time to time and very often his eyes are going to hurt.

It's a physiological datum that has to do with processing and the field of the mind.

You could therefore expect the greatest incidence of suicide or illness in that field of education most devoted to studying absent masses.

This one of studying the something without its mass ever being around produces the most distinctly recognizable reactions.

If a child felt sick in the field of study and it were traced back to this one, the positive remedy would be to supply the mass—the object or a reasonable substitute—and it would clear it up.

(2) There is another series of physiological phenomena that exist which is based on the fact of too steep a study gradient.

That's another source of physiological study reaction because of too steep a gradient.

It is a sort of a confusion or a reelingness that goes with this one.

You've hit too steep a gradient.

There was too much of a jump because he didn't understand what he was doing and he jumped to the next thing and that was too steep and he went too fast and he will *assign* all of his difficulties to this new thing.

Now differentiate here—because gradients sounds terribly like the 3rd one of these study hang-ups, definitions—but remember that they are quite distinctly different.

Gradients are more pronounced in the field of doingness but they still hang over into the field of understanding. In gradients however it is the *actions* we are interested in. We have a plotted course of forward motion of actions. We find he was terribly confused on the second action he was supposed to do. We must assume then that he never really got out of the first one.

The remedy for this one of too steep a gradient is cutting back. Find out when he was not confused on the gradient, then what new action he undertook to do. Find what action he understood well. Just before he was all confused what did he understand well—and then we find out that he didn't understand it well.

It's really at the tail end of what he understood and then he went over the gradient you see.

It is most recognizable and most applicable in the field of doingness.

That's the gradient barrier and one full set of phenomena accompanies that.

(3) There is this third one. An entirely different set of physiological reactions brought about through—a bypassed definition. A bypassed definition gives one a distinctly blank feeling or a washed-out feeling. A not-there feeling and a sort of nervous hysteria will follow in the back of that.

The manifestation of "blow" stems from this 3rd aspect of study which is the misunderstood definition or the not comprehended definition, *the undefined word*.

That's the one that produces the blow.

The person doesn't necessarily blow on these other two—they are not pronouncedly blow phenomena. They are simply physiological phenomena.

This one of the misunderstood definition is so much more important. It's the make-up of human relations, the mind and subjects. It establishes aptitude and lack of aptitude and it's what psychologists have been trying to test for years without recognizing what it was.

It's the definitions of words.

The misunderstood word.

That's all it goes back to and that produces such a vast panorama of mental effects that it itself is the prime factor involved with stupidity and the prime factor involved with many other things.

If a person didn't have misunderstands his *talent* might or might not be present but his *doingness* would be present.

We can't say that Joe would paint as *well* as Bill if both were unaberrated in the field of art, but we can say that the *inability* of Joe to paint compared with the *ability* of Joe to do the motions of painting is dependent exclusively and only upon definitions—exclusively and only upon definitions.

There is some word in the field of art that the person who is inept didn't define or understand and that is followed by an inability to act in the field of the arts.

That's very important because it tells you what happens to doingness and that the restoration of doingness depends only upon the restoration of understanding on the misunderstood word—misunderstood definition.

This is very fast processing. There is a very swift wide big result obtainable in this.

It has a technology which is a very simple technology.

It enters in at the lower levels because it has to. This doesn't mean it is unimportant, it means it has to be at the entrance gates of Scientology.

It IS a sweepingly fantastic discovery in the field of education and don't neglect it.

You can trace back the subject a person is dumb in or any allied subject that got mixed up with it. The psychologist doesn't understand Scientology. He never understood a word in psychology so he doesn't understand Scientology.

Well that opens the gate to Education. Although I've given this one of the misunderstood definition last it is the most important one.

*C/S Series 37R*

*Addition 3*

37R is a very beefy process.

It has been combined into L9S, HCO B 17 June 71, and is best done as part of this full rundown.

37R works on anyone, regardless of TA or state of case. Neither it nor L9S are used only on bad off cases. They work on both the worst and the best.

In doing 37R the items are sometimes very heavy and it takes the pc a bit to accept them. Therefore when one gets a BD F/N item, one asks "Is \_\_\_\_\_ your item?" If he says yes, indicate it to him by saying "\_\_\_\_\_ is your item." The meter should give a fall and the F/N will widen.

If the pc says it is NOT his item, ask the question again and continue to list. The pc will put the item back on the list usually for it *was* his item. But he has to list further to realize it. He can also fail to put it back on the list and if so and he is getting restless in listing, give him the BD F/N item again and he'll buy it.

A very big item that alters the pc's whole concept of things with big cogs and 2 wc is a good place to stop a session. 37R doesn't all have to be done in one session. When you begin a new list before the last item is discharged the pc can get a bit overwhelmed. This is a "nice" point, not a vital one.

Also the big item will often cause the next assessment to be a bit hard as the pc's attention remains tied up in it for a while.

If after 37R the pc's TA later goes up or down again out of normal 2.0 to 3.0 range the action to do is an L4B in general on 37R. It usually picks up the cognitions and confirms rather than corrects. L4B reads on wrong item. Auditor says which one. Pc gives it. Quite usually it's a right item pc hasn't clogged on.

After the L4B, one can again run 37R. However, a better action is to

Fly all ruds Continue with L9S.

RUDS

When Ruds are out during 37R a pc can feel strange. Of course with a high or low TA you can't get the ruds *in*.

So you can do a list of 37R and as this will F/N the meter, you can get in all ruds.

FLAWS

The pc may have NO idea of flows. So before assessing the first time one must clear "flows". The pc must understand that these words self to another mean a *flow* from himself to any another, etc.

If while clearing the word "flow" and "flows" you watch your meter also you will get your first blow up of the TA.

## ASSESS SLOWLY

By reading a flow and waiting a moment, you give the TA time to rise.

You can assess too rapidly and find that the TA has gone up, but which of the last items did it go up on? By proceeding a little more slowly you will be sure.

## ADDITIONAL FLOW

There is another flow.

H. ANOTHER TO ANOTHER.

This should be added to your assessment sheet.

## ASSESSMENT FORM

An assessment form can be printed. The flows A to H (adding the new one above) are put in on the left-hand edge of the paper held the long way. They can be repeated A-H and A-H. Lines and boxes lead out for repeated assessments.

This makes it easier for the auditor.

## STEPS 37R

1. Clear the word "flow".
2. Clear the idea of flow (watch meter) for each flow A to H so you have no misunderstandings.
3. Assess the listing sheet. Take the biggest Blow Up or speeded rise (if no big Blow Up).
4. Mark it on the assmt form and W/S.
5. Fit it into the Q on a separate listing sheet, What could \_\_\_\_\_ continue to do to \_\_\_\_\_ ?
6. Ask the Question of the pc.
7. Get the pc to give you items.
8. Write the items down while watching the meter. Mark needle reads or BDs. Put down TA reads regularly on the list.
9. Get the first item that Blows down (or up) and F/Ns.
10. Ask pc if \_\_\_\_\_ is his item.
11. If pc says Yes, say, "\_\_\_\_\_ is your item." Circle it on listing sheet and mark the F/N and "Ind" for Indicated to pc. If pc says No, continue to list. Pc will put item back on the list, at which time do 10 and 11 above. Pc will accept it. If he goes on and begins to protest, give him the first BD F/N item and do 11 and 12. He will accept it.
12. Mark item and TA and any 2 wc on the item or cogs on the W/S.

## DON'TS

Don't do this process without

- (a) Checking out on C/S Series 37R, with Additions 1, 2 and this one, 3.

- (b) Do 1 hrs confront and I hour reach and withdraw on your meter.
- (c) Dummy running the 12 steps above with no pc but all the paper and tools until it is a faultless action.
- (d) Don't call pc's attention to the meter with comments or stares or looks of horror or edginess or fumbles.
- (e) Have smooth, perfect TRs.
- (f) Follow the Auditor's Code.

### USING L9S

If used in conjunction with L9S then L9S should also be drilled on dating and locating and dummy run.

### SESSION FORM

These processes and rundowns are done in a streamlined session form.

### SPECIAL 37R

The various flows of Auditor to pc can be run and indeed an assessment of many subjects or dynamics can be assessed by rise and then flow patterned as in Auditor-pc below.

This Special 37R is mentioned here but will be laid out in full for other subjects in another issue.

Pcs who have protest on auditing can be done in this way.

The flows are

- Auditor to pc \_\_\_\_\_
- Pc to Auditor \_\_\_\_\_
- Auditors to pc \_\_\_\_\_
- Pc to Auditors \_\_\_\_\_
- Pc to Self \_\_\_\_\_
- Auditor to Self \_\_\_\_\_

Aside from list change—Auditor-pc is done like general 37R.

**Word Clearing Series 4R**

**SUPERVISOR TWO-WAY COMM AND  
THE MISUNDERSTOOD WORD**

(From LRH taped briefing to Lt. Bill Foster  
14 June 71)

Two-way comm where it has been described has been described for the use of an auditor, not a Supervisor of a Course.

Supervisors not knowing this then run around itsa-ing students.

They let the students itsa and they think they are going to get some place.

It's the most incredible scene that you ever heard of and the boom could go bust *only* on this one point. *I've got it narrowed down to this.*

*Apparently* no matter how many times the study tapes have been played, nobody has ever heard of them.

I watched a recent course run to find out how deep they would let the students struggle—how long it would stay bogged—and it would have stayed bogged from here on out !

And do you know what's out?

It's the study data tapes just that—and that's all that's out on a course.

So when *they* say "2-way comm the students" you'll find the Supervisors instantly start to itsa them and are using *auditor* 2-way comm on these courses. It doesn't belong on these courses.

I'll give you now the total dialogue of a Supervisor:

The Supervisor shows interest. There can be a little bit of chatter, like—"I see you've just completed. Great!"—something like that, or he shows interest—"How are you doing?"

Student replies—"Ah well, I'm doing all right."

Supervisor—"Now are there any words there in that, that you have misunderstood?"

Student—"No ... no ...."

Supervisor—"Well what is the word that you didn't quite understand?"

Student—"Ah well . . . ah . . . this one."

Supervisor—"Good. Now look that word up.... Now what's the word in the paragraph above that, where's that? . . . Alright let's look that up. Now use it in a sentence a couple of times and I'll be back in a minute."

He comes back, the student gives him the sentences for it and straightens it out and he sees the student's got it.

That's the 2-way comm of a Supervisor.

If a Supervisor does any other thing you've got a wrecked course. I've got the proof of it.

The way you teach a TR Course is you give the student the bulletin and you have him read it. You *don't check the guy out on the bulletin, he just reads it*

When you come back you say, "Alright, have you read it?"

"Yeah. I've read it."

"What word *don't* you understand on it?"

You will find things like HCO B and TR, and you get those *cleared* up, etc.

I am having some roaring success stories from FEBC students who are through this.

One had gone through the bulletin 10 times and had found words he didn't know all 10 times, and he was all of a sudden finding new things on the bulletin that he'd never heard of before.

Another student had gone through it 20 times with the same result and they were doing fine and getting down to TRs and passing them.

On a TR Course you give them the bulletin and let them read it and you find what word they didn't understand. That's the routine.

Now that sounds so impossible—and it's been on the study tapes for so long—that you wouldn't believe that this thing is the key.

Do you know there were students there for 15 or 20 days until we started doing this, then all of a sudden there was a breakthrough and their enthusiasm started coming up.

They had been just going lose, lose, lose, out the bottom because Supervisors were letting them itsa.

Maybe Supervisors thought they were auditors.

They aren't.

Neither are they supposed to give advice or tell students how—or ask them if they blinked or anything else.

The other thing they were doing was *only* emphasizing all the "can'ts".

The students just went into despair.

This was because the Supervisors were inviting all kinds of itsa and criticizing and so forth.

You may say, "Gee! Everybody knows it's a misunderstood word."

Yeh—but they don't use it.

Now I'll give you another one.

I set up a test so that each student was brought up to the D of T who had a meter on his desk and he'd ask them if they had anything they misunderstood—and see if they got a read on the meter.

If it didn't clear up at once he'd send them back to get the definitions and look the thing up and of course use the word in a couple of sentences and *then* if it didn't

clear up he'd send them to the word clearer and really let them get worked over because it goes way back.

They even found a student who had a misunderstood word clear back into his last life.

There wasn't any other 2-way comm and no other interest and they just about blew the roof off with student stat points.

*This is* the action of a Supervisor and that's ALL the action a Supervisor does—and he *can do that*.

The course has plenty of dictionaries and so on.

*But*, the main point is, it is the misunderstood word. This has been proven again.

On a TR practical course it's the misunderstood word and the misunderstood action.

On other courses it's just misunderstood words and misunderstood words and misunderstood words, one right after the other.

As fast as they clear this up—up the student's production goes.

It's painfully slow on some of them at first and I suppose the Supervisors have so many misunderstood words of their own that they just won't key into doing this action and that's what's wrecking courses.

It's elementary, and it's the wildest discovery of all time but they don't use it.

If it is used, your courses start running fast, your students start learning quickly *and all starts* going well.

Other course outnesses like Supervisors not giving anybody a pack or no one to give checkouts are all Administrative outnesses.

As far as actual Supervision is concerned it's this other *line* of handling misunderstood words.

The second that line is in there are wins all over the place.

The second that line is out there is no delivery.

If auditors are goofing, then in their training they have not been made to look up the misunderstood word and a lot of itsa has gone on and people have evaluated for them. Then these auditors having made mistakes they never corrected with this tech, think they need something new to run on pcs, but they just wreck new tech too.

We are shooting for a target, using just this misunderstood word tech, of a reduction of time by about a third on all major courses.

Just using this misunderstood word tech. That's all.

If some student is a totally slow student, you can get him back to the first bulletin or book he ever read and make him get every word in it he didn't understand, and it will go up in a chain.

People on courses were being itsa'd to death.

**SUPERVISOR TWO-WAY COMM EXPLAINED**

*(From LRH Lecture Tape 16/6/71  
Briefing to Aides Council)*

I don't think from the day they were spoken until now, anybody has understood or used "The Study Tapes".

This is the *only* piece of Technology that you *use* on a course.

There is no other teaching technology of any kind used on a course.

The 2-way comm HCOBs are *Auditor 2-way comm*.

The *Supervisor* has to know 2-way comm simply so that he can ask these burning questions:

"How are you doing?" (Not with a lot of student it'sa.)

"Is there any word you haven't understood?"

"Look it up."

"Use it in a sentence a few times."

That's the *TOTALITY*. That's *all* there is to teaching a course as far as the technology goes.

It's contained in *the few words which I have just given you* and there's *no* other technology.

That's all there is to teaching a course because that's all that's wrong with students.

You can monitor it this way. You can watch a student's stats *day to day*. His stats are down today compared with yesterday's so you go over and talk to him. He says, "Yes. I had a hard night last night, up all night arguing with my wife," etc-which could go on for hours.

*But* the Supervisor says, "Now yesterday or today what word did you run across that you didn't understand?"

The meter gives a LF.

He says, "Yes! Well I didn't understand the word 'waffle-waffle'."

The Supervisor says, "Well let's look it up and get it defined."

The student says, "Well it wasn't *that* word, it was the word before that."

Supervisor, "Good—let's get this looked up *and used a couple of times in a sentence.*"

The student does and he gets an F/N and it's all fine.

His study stats go back up.

That's *all* there is to it!

There are two ways to fail to communicate the tech. One is not to read the HCO Bs and the other is not to use the misunderstood word tech.

(Of course you can have no course and nobody there even trying.)

*The worst thing would be to pretend to have a course but have missing materials and Supervisors giving verbal advice or tech. That is deadly and will turn any Academy sour.*

*Verbal tech comes about when course materials are not available to students and no or faulty Word Clearing is used.*

As long as the Administration of the course *is in and all the course materials are available*, the *sole* course Tech is this misunderstood word tech.

HCO BULLETIN OF 30 JUNE 1971 R  
REVISED 1 DECEMBER 1974

*Cancels HCO B 3 Dec 71, Handling Sheet*

Remimeo

**EXPANDED GF 40 RB**

This list is assessed Method 5 and fully handled. Must be done by an Auditor who has checked out on the Qual OK to Audit Checksheets, BPLs 14 Nov 74, Issues I-IV, and BPL 20 July 70R, Issue III, "Two-Way Comm Checksheet", and can make a prepared list read.

Where R3R (and Recalls) is done it can be done Triple or Quad, depending on what is C/Sed for the pc.

*SECTION A*

- A-1 DO YOU NOT WANT AUDITING? \_\_\_\_\_  
(2wc and find out why not. It will be an out rud or an out list. Handle to F/N.)
- A-2 ARE YOU REFUSING AUDITING? \_\_\_\_\_  
(2wc and find out why. Get pc to explain. Handle any out rud or out list to F/N.)
- A-3 ARE YOU PROTESTING AUDITING? \_\_\_\_\_  
(2wc E/S to F/N.)
- A-4 DO YOU DISLIKE TALKING TO AN AUDITOR? \_\_\_\_\_  
(If so run "Look at me. Who am I?" to F/N. Then "What could you say?" to F/N.)
- A-5 HAS NO ONE ASKED WHAT YOU REALLY WANT? \_\_\_\_\_  
(E/S to F/N.)
- A-6 HAS THERE BEEN ANYTHING WRONG WITH F/Ns? \_\_\_\_\_  
(Find the fault and handle with False TA HCO Bs. Rehab any overruns due to false TA.)
- A-7 HAS THERE BEEN ANYTHING WRONG WITH YOUR TONE ARM OR METER? \_\_\_\_\_  
(Find the fault and handle with False TA HCO Bs. Rehab any overruns due to false TA.)

*SECTION B*

- B-1 HAVE YOU BEEN AUDITED WITH RUDIMENTS OUT? \_\_\_\_\_  
(Find out which. Handle E/S to F/N.)
- B-2 HAVE YOU BEEN AUDITED OVER AN ARC BREAK? \_\_\_\_\_  
(2wc What was the ARC Brk? ARCU CDEINR E/S to F/N.)
- B-3 HAVE YOU BEEN AUDITED OVER A PTP? \_\_\_\_\_  
(2wc What was the PTP? E/S to F/N.)
- B-4 HAVE YOU BEEN AUDITED OVER A W/H? \_\_\_\_\_  
(What was the W/H? Who missed it? E/S to F/N.)
- B-5 HAVE YOU BEEN AUDITED OVER AN OVERT? \_\_\_\_\_  
(What was the overt? E/S overt to F/N.)
- B-6 ARE YOU LYING TO PEOPLE? \_\_\_\_\_  
(2wc E/S to F/N.)
- B-7 DO YOU HAVE SECRETS? \_\_\_\_\_  
(2wc What Secrets? E/S to F/N.)

- B-8 ARE YOU HERE FOR REASONS NOT DISCLOSED? \_\_\_\_\_  
 (If so, L&N “What was your original reason for coming here?”  
 R3R Triple/Quad if an E. Purp.) (Pgm for Ex Dn.)
- B-9 DO YOU HAVE AN EVIL PURPOSE? \_\_\_\_\_  
 (L&N “What Evil Purpose do you have?” R3R Triple/Quad.)  
 (Pgm for Ex Dn.)

*SECTION C*

- C-1 ARE YOU CONTINUOUSLY COMMITTING OVERTS ON \_\_\_\_\_  
 SCIENTOLOGY?
- C-2 DO YOU KEEP ON GOOFING? \_\_\_\_\_
- C-3 ARE YOU COMMITTING CONTINUOUS OVERTS IN LIFE? \_\_\_\_\_

Handling on each:

- (a) L&N “What are you trying to prevent?” R3R Triple/Quad  
 preventing
- (b) 2wc Committing continuous overts and pull them E/S to  
 F/N.

*SECTION D*

- D-1 HAVE YOU NOT HAD AUDITING? \_\_\_\_\_  
 (a. L&N “Who or what would prevent auditing?”  
 b. Triple/Quad Ruds & Overts on the item.)
- D-2 HAVE YOU BEEN SELF AUDITING? \_\_\_\_\_  
 (2wc E/S. Get when pc 1st started self auditing. Do L1C on  
 prior upset.)
- D-3 HAVE YOU BEEN AUDITED IN AN EARLIER LIFE? \_\_\_\_\_  
 (2wc E/S to F/N.)

*SECTION E*

- E-1 HAVE YOU BEEN OVERWHELMED BY AUDITING? \_\_\_\_\_  
 (R3R “When have you felt overwhelmed in auditing?” E/S to  
 EP. “Have you ever overwhelmed another in auditing?” E/S  
 to EP. “Have others ever overwhelmed others in auditing?”  
 E/S to EP. F-0 if necessary.) (Repair Pgm.)
- E-2 HAVE YOU BEEN OVERWHELMED BY LIFE? \_\_\_\_\_  
 (R3R “When have you felt overwhelmed in life?” E/S to EP.  
 “Have you overwhelmed another in life?” E/S to EP. “Have  
 others overwhelmed others in life?” E/S to EP. F-0 if Quad.)  
 (Repair Pgm.)
- E-3 HAVE YOU BEEN OVERWHELMED BY FAMILY CON- \_\_\_\_\_  
 NECTIONS?  
 (R3R “When have you felt overwhelmed by family connec-  
 tions?” E/S to EP. “When have you used family connections  
 to overwhelm another?” E/S to EP. “When have others used  
 family connections to overwhelm others?” E/S to EP. F-0 if  
 Quad.) (Repair Pgm.)
- E-4 ARE YOU CONNECTED TO SOMEONE HOSTILE TO SCI- \_\_\_\_\_  
 ENTOLOGY?  
 (PTS Interview.)
- E-5 ARE YOU RESTIMULATED IN YOUR CURRENT ENVIR- \_\_\_\_\_  
 ONMENT?  
 (R3R Triple/Quad times he felt restimmed in his environment  
 to EP.) (Repair Pgm.)
- E-6 ARE YOU ANTAGONISTIC TO WHAT YOU ARE DOING? \_\_\_\_\_  
 (3 S&Ds—see below.)

E-7 HAVE YOU BEEN SUPPRESSED BY ANOTHER? \_\_\_\_\_  
(3 S&Ds—see below.)

3 S&Ds

Assess: Withdraw From  
Stop  
Unmock  
Suppress  
Invalidate  
Make Nothing Of  
Suggest  
Been Careful Of  
Failed to Reveal

Take the 3 that read best. Use the one that read the most first.  
Test in these two questions:

“Who or what has attempted to \_\_\_\_\_ you?”  
“Who or what have you tried to \_\_\_\_\_?”

List the best reading question to BD F/N item. Use each of the  
3 this way.

### SECTION F

F-1 ARE YOU SEEKING THE SAME THRILL ATTAINED FROM DRUGS? \_\_\_\_\_

(2wc. E/S “Is there an earlier time you were seeking the same thrill  
attained from drugs?” to F/N.) (Drug RD or complete it.)

F-2 HAVE YOU TAKEN DRUGS? \_\_\_\_\_

List each type taken and rehab each by counting number of times.  
L3RD on his Drug RD if he had one.) (Verify or do full Drug RD  
all steps.)

F-3 DO YOU WANT TO CONTINUE TO TAKE DRUGS? \_\_\_\_\_

(List each type taken and rehab each by counting number of times.  
L3RD on his Drug RD if he had one.) (Verify or do full Drug RD  
all steps.)

F-4 HAVE YOU NEVER TAKEN DRUGS? \_\_\_\_\_

(2wc “Is there an earlier time you never took drugs?” to F/N.)

F-5 ARE YOU CURIOUS ABOUT DRUGS? \_\_\_\_\_

(2wc E/S “Is there an earlier time you were curious about drugs?”  
to F/N.)

F-6 HAS MEDICINE ACTED AS DRUGS? \_\_\_\_\_

(List the type of medicines pc has taken. Rehab each by counting.  
L3RD on his Drug RD if he had one.) (Verify or do full Drug RD  
all steps.)

F-7 HAVE YOU DRUNK ALCOHOL? \_\_\_\_\_

(List the types of alcohol pc had. Rehab each by counting.  
L3RD on his Drug RD if he had one.) (Verify or do full Drug RD  
all steps.)

### SECTION G

G-1 HAVE YOU HAD A FORMER THERAPY BEFORE SCIENT-  
OLOGY? \_\_\_\_\_

3-Way or Quad Recall: (Each repetitive to F/N Cog VGIs.)

F-1 “Recall another giving a former therapy to you.”

F-2 “Recall giving a former therapy to another.”

F-3 “Recall another giving a former therapy to another or others.”

F-0 “Recall giving a former therapy to yourself.”

*3-Way or Quad Engrams: (R3R each flow to F/N Cog VGIs and Erasure.)*

- F-1 "Locate an incident containing pain and unconsciousness of another giving a former therapy to you." *E/S "Is there an earlier incident containing pain and unconsciousness of another giving a former therapy to you?"*
- F-2 "Locate an incident containing pain and unconsciousness of you giving a former therapy to another." *E/S "Is there an earlier incident containing pain and unconsciousness of you giving a former therapy to another?"*
- F-3 "Locate an incident containing pain and unconsciousness of another giving a former therapy to another or others." *E/S "Is there an earlier incident containing pain and unconsciousness of another giving a former therapy to another or others?"*
- F-0 "Locate an incident containing pain and unconsciousness of you giving a former therapy to yourself." *E/S "Is there an earlier incident containing pain and unconsciousness of you giving a former therapy to yourself?"*
- G-2 HAVE YOU HAD MEDICAL THERAPY? \_\_\_\_\_  
(3-Way or Quad Recall/3-Way or Quad Engrams as in G-1 substituting "Medical Therapy".)
- G-3 HAVE YOU HAD PSYCHIATRIC THERAPY? \_\_\_\_\_  
(3-Way or Quad Recall/3-Way or Quad Engrams as in G-1 substituting "Psychiatric Therapy".)
- G-4 HAVE YOU HAD PSYCHOLOGY THERAPY? \_\_\_\_\_  
(3-Way or Quad Recall/3-Way or Quad Engrams as in G-1 substituting "Psychology Therapy".)
- G-5 HAVE YOU HAD DENTAL THERAPY? \_\_\_\_\_  
(3-Way or Quad Recall/3-Way or Quad Engrams as in G-1 substituting "Dental Therapy".)
- G-6 HAVE YOU HAD ELECTRIC SHOCK? \_\_\_\_\_  
(3-Way or Quad Recall/3-Way or Quad Engrams, followed by AESPs separately listed and R3Red.)

### SECTION H

- H-1 ARE YOU CURRENTLY DOING ANY BODY PRACTICES? \_\_\_\_\_  
*3-Way or Quad Recall. (Each repetitive to F/N Cog VGIs.)*
- F-1 "Recall another forcing body practices on you."
- F-2 "Recall you forcing body practices on another."
- F-3 "Recall another forcing body practices on another or others."
- F-0 "Recall forcing body practices on yourself."
- 3-Way or Quad Engrams: (R3R each flow to F/N Cog VGIs and Erasure. )*
- F-1 "Locate an incident containing pain and unconsciousness of another forcing body practices on you." *E/S "Is there an earlier incident containing pain and unconsciousness of another forcing body practices on you?"*
- F-2 "Locate an incident containing pain and unconsciousness of you forcing body practices on another." *E/S "Is there an earlier incident containing pain and unconsciousness of you forcing body practices on another?"*
- F-3 "Locate an incident containing pain and unconsciousness of another forcing body practices on another or others." *E/S "Is there an earlier incident containing pain and unconsciousness of another forcing body practices on another or others?"*
- F-0 "Locate an incident containing pain and unconsciousness of you forcing body practices on yourself." *E/S "Is there*

an earlier incident containing pain and unconsciousness of you forcing body practices on yourself?"

- H-2 ARE YOU CURRENTLY DOING ANY EXERCISES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Exercises".) \_\_\_\_\_
- H-3 ARE YOU CURRENTLY PRACTICING ANY RITES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Rites" .) \_\_\_\_\_
- H-4 ARE YOU CURRENTLY PRACTICING YOGA?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Yoga".) \_\_\_\_\_
- H-5 DO YOU HOLD ANY EASTERN BELIEFS?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Eastern Beliefs".) \_\_\_\_\_
- H-6 ARE YOU DOING ANY MENTAL EXERCISES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Mental Exercises".) \_\_\_\_\_
- H-7 DO YOU CURRENTLY PRACTICE MEDITATION?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Meditation".) \_\_\_\_\_
- H-8 HAVE YOU TAKEN PART IN EARLIER PRACTICES BEFORE SCIENTOLOGY?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Practices Before Scientology".) \_\_\_\_\_
- H-9 HAVE YOU TAKEN PART IN EARLIER RELIGIONS?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Religions".) \_\_\_\_\_
- H-10 HAVE YOU TAKEN PART IN EARLIER RITES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Rites".) \_\_\_\_\_
- H-11 HAVE YOU TAKEN PART IN EARLIER EXERCISES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Exercises".) \_\_\_\_\_
- H-12 HAVE YOU TAKEN PART IN HYPNOTISM?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Hypnotism".) \_\_\_\_\_
- H-13 HAVE YOU HELD EARLIER BELIEFS?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Beliefs".) \_\_\_\_\_
- H-14 HAVE YOU TAKEN PART IN EARLIER INDOCTRINATIONS?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Indoctrinations".) \_\_\_\_\_
- H-15 HAVE YOU TAKEN PART IN EARLIER SCIENTIFIC PRACTICES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Scientific Practices".) \_\_\_\_\_
- H-16 HAVE YOU TAKEN PART IN EARLIER ELECTRONIC PRACTICES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Electronic Practices".) \_\_\_\_\_
- H-17 HAVE YOU TAKEN PART IN EARLIER THOUGHT PRACTICES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Thought Practices".) \_\_\_\_\_
- H-18 HAVE YOU TAKEN PART IN EARLIER SPIRITUAL PRACTICES?  
(3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Spiritual Practices".) \_\_\_\_\_

- H-19 HAVE YOU TAKEN PART IN EARLIER EASTERN RITES? \_\_\_\_\_  
 (3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Eastern Rites".)
- H-20 HAVE YOU TAKEN PART IN EARLIER EASTERN PRACTICES? \_\_\_\_\_  
 (3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Eastern Practices".)
- H-21 HAVE YOU TAKEN PART IN EARLIER IMPLANTING TECHNIQUES? \_\_\_\_\_  
 (3-Way or Quad Recall/3-Way or Quad Engrams as in H-1 substituting "Earlier Implanting Techniques".)
- H-22 HAVE YOU PRACTICED WITCHCRAFT? \_\_\_\_\_  
*3-Way or Quad Recall:* (Each repetitive to F/N Cog VGIs.)  
 F-1 "Recall another practicing witchcraft on you."  
 F-2 "Recall you practicing witchcraft on another."  
 F-3 "Recall another practicing witchcraft on another or others."  
 F-0 "Recall practicing witchcraft on yourself."  
*3-Way or Quad Engrams:* (Each flow to F/N Cog VGIs and Erasure.)  
 F-1 "Locate an incident containing pain and unconsciousness of another practicing witchcraft on you." *E/S* "Is there an earlier incident containing pain and unconsciousness of another practicing witchcraft on you?"  
 F-2 "Locate an incident containing pain and unconsciousness of you practicing witchcraft on another." *E/S* "Is there an earlier incident containing pain and unconsciousness of you practicing witchcraft on another?"  
 F-3 "Locate an incident containing pain and unconsciousness of another practicing witchcraft on another or others." *E/S* "Is there an earlier incident containing pain and unconsciousness of another practicing witchcraft on another or others?"  
 F-0 "Locate an incident containing pain and unconsciousness of you practicing witchcraft on yourself." *E/S* "Is there an earlier incident containing pain and unconsciousness of you practicing witchcraft on yourself?"
- H-23 HAVE YOU CAST SPELLS? \_\_\_\_\_  
*3-Way or Quad Recall:* (Each repetitive to F/N Cog VGIs.)  
 F-1 "Recall a time a spell was used on you."  
 F-2 "Recall a time you used a spell on another."  
 F-3 "Recall a time another used spells on another or others."  
 F-0 "Recall a time you used spells on yourself."  
*3-Way or Quad Engrams:* (Each flow to F/N Cog VGIs and Erasure.)  
 F-1 "Locate an incident of pain and unconsciousness when a spell was used on you." *E/S* "Is there an earlier incident of pain and unconsciousness when a spell was used on you?"  
 F-2 "Locate an incident of pain and unconsciousness when you used a spell on another." *E/S* "Is there an earlier incident of pain and unconsciousness when you used a spell on another?"  
 F-3 "Locate an incident of pain and unconsciousness when another used spells on another or others." *E/S* "Is there an earlier incident of pain and unconsciousness when another used spells on another or others?"  
 F-0 "Locate an incident of pain and unconsciousness when you used spells on yourself." *E/S* "Is there an earlier incident of pain and unconsciousness when you used spells on yourself?"

H-24 ARE YOU DOING SOME EXERCISE BETWEEN SESSIONS?  
(Handle as in H-2 with 3-Way or Quad Recall/3-Way or Quad  
Engrams. ) \_\_\_\_\_

*SECTION I*

I-1 DO YOU HAVE AN ENGRAM EXACTLY MATCHING PT  
DANGERS? \_\_\_\_\_

*3-Way Engrams:* (R3R each to F/N Cog VGI's and Erasure.)

F-1 Ack what the pc says then continue with the R3R commands  
2-9, etc. E/S "Is there an earlier similar engram?"

F-2 "Locate a time when you gave another such an engram." E/S  
"Is there an earlier time you gave another such an  
engram?"

F-3 "Locate a time when another gave another or others such an  
engram." E/S "Is there an earlier time another gave another  
or others such an engram?"

F-0 "Locate a time when you gave yourself such an engram."  
E/S "Is there an earlier time you gave yourself such an  
engram?"

*SECTION J*

J-1 ARE YOU SERIOUSLY PHYSICALLY ILL? \_\_\_\_\_

(2wc Find out what the illness or symptoms are: BTB 28 May  
74R, "FULL ASSIST CHECKLISTS FOR INJURIES AND  
ILLNESSES".)

J-2 IS YOUR BODY ILL? \_\_\_\_\_

(2wc "What seems to be wrong with your body?" to F/N.)  
(BTB 28 May 74R, "FULL ASSIST CHECKLISTS FOR  
INJURIES AND ILLNESSES".)

J-3 ARE YOU MENTALLY ILL? \_\_\_\_\_

(2wc E/S "Is there an E/S time you were mentally ill?" to F/N.  
Handle as a W/H.) (R3R Narrative and AESPs R3R.)

J-4 DO YOU HAVE ANY BROKEN BONES? \_\_\_\_\_

(2wc E/S "Is there an E/S time you had broken bones?" to F/N.)  
(Medical Treatment. BTB 28 May 74R, "FULL ASSIST  
CHECKLISTS FOR INJURIES AND ILLNESSES".)

J-5 DO YOU HAVE ANY INFECTIOUS DISEASES? \_\_\_\_\_

(2wc Get the Data on what it is. E/S "Is there an E/S time you  
had an infectious disease?" to F/N.) (Medical Treatment. BTB  
28 May 74R, "FULL ASSIST CHECKLISTS FOR INJURIES  
AND ILLNESSES".)

J-6 DO YOU HAVE ANY HIDDEN ILLNESSES? \_\_\_\_\_

(2wc E/S "Is there an E/S time you had a hidden illness?" to F/N.)  
(BTB 28 May 74R, "FULL ASSIST CHECKLISTS FOR  
INJURIES AND ILLNESSES".)

J-7 DO YOU HAVE ANY TOOTH DECAY? \_\_\_\_\_

(2wc E/S "Is there an E/S time you had tooth decay?" to F/N.)  
(Dental Treatment. BTB 28 May 74R, "FULL ASSIST  
CHECKLISTS FOR INJURIES AND ILLNESSES".)

J-8 DO YOU HAVE ANY PHYSICALLY DAMAGED PARTS? \_\_\_\_\_

(2wc to find out what. BTB 28 May 74R, "FULL ASSIST  
CHECKLISTS FOR INJURIES AND ILLNESSES".)

J-9 DO YOU HAVE ANY BODY PARTS MISSING? \_\_\_\_\_

(2wc to find out what. BTB 28 May 74R, "FULL ASSIST  
CHECKLISTS FOR INJURIES AND ILLNESSES".)

J-10 HAVE YOU HAD ANY BODY PARTS REMOVED? \_\_\_\_\_

(2wc to find out what. BTB 28 May 74R, "FULL ASSIST  
CHECKLISTS FOR INJURIES AND ILLNESSES".)

SECTION K

K-1 ARE YOU OUT OF VALENCE?

LX Lists 3, 2, 1. Ref: HCO B 2 Aug 69, “ ‘LX’ Lists”, HCO B 5 Nov 69, “LX3”, HCO B 3 Aug 69, “LX2”, HCO B 9 Aug 69, “LX1”, BTB 26 Nov 71, Issue III, Corrected 30 Dec 71, “Out of Valence—220H”. Triple or Quad. If no valence change on the above do std Class VIII 220H as follows:

*3-Way or Quad Recall.* (Each repetitive to F/N Cog VGIs.)

F-1 “Recall another causing you to be someone else.”

F-2 “Recall you causing another to be someone else.”

F-3 “Recall another causing another or others to be someone else.”

F-4 “Recall causing yourself to be someone else.”

*3-Way or Quad Engrams:* (R3R each flow to F/N Cog VGIs and Erasure.)

F-1 “Locate an incident containing pain and unconsciousness of another causing you to be someone else.” *E/S* “Is there an earlier similar incident containing pain and unconsciousness of another causing you to be someone else?”

F-2 “Locate an incident containing pain and unconsciousness of you causing another to be someone else.” *E/S* “Is there an earlier similar incident containing pain and unconsciousness of you causing another to be someone else?”

F-3 “Locate an incident containing pain and unconsciousness of another causing another or others to be someone else.” *E/S* “Is there an earlier similar incident containing pain and unconsciousness of another causing another or others to be someone else?”

F-0 “Locate an incident containing pain and unconsciousness of you causing yourself to be someone else.” *E/S* “Is there an earlier similar incident containing pain and unconsciousness of you causing yourself to be someone else?”

K-2 ARE YOU BEING SOMEONE ELSE?

(Handle as in K-1 above. LX3, 2 & 1 and 220H if necessary.)

SECTION L

L-1 ARE YOU PRETENDING?

*3-Way or Quad Recall:* (Each repetitive to F/N Cog VGIs.)

F-1 “Recall another pretending to you.”

F-2 “Recall you pretending to another.”

F-3 “Recall another pretending to another or others.”

F-0 “Recall pretending to yourself.”

*3-Way or Quad Engrams:* (R3R each flow to F/N Cog VGIs and Erasure.)

F-1 “Locate an incident containing pain and unconsciousness of another pretending to you.” *E/S* “Is there an earlier incident containing pain and unconsciousness of another pretending to you?”

F-2 “Locate an incident containing pain and unconsciousness of you pretending to another.” *E/S* “Is there an earlier incident containing pain and unconsciousness of you pretending to another?”

F-3 “Locate an incident containing pain and unconsciousness of another pretending to another or others.” *E/S* “Is there an earlier incident containing pain and unconsciousness of another pretending to another or others?”

F-0 "Locate an incident containing pain and unconsciousness of you pretending to yourself." E/S "Is there an earlier incident containing pain and unconsciousness of you pretending to yourself?"

- L-2 ARE YOU PRETENDING TRAINING NOT ATTAINED?  
(3-Way or Quad Recall/3-Way or Quad Engrams of Pretending.) \_\_\_\_\_
- L-3 ARE YOU PRETENDING ATTAINMENTS IN LIFE NOT REALLY ATTAINED?  
(3-Way or Quad Recall/3-Way or Quad Engrams of Pretending.) \_\_\_\_\_
- L-4 ARE YOU PRETENDING GRADES NOT ATTAINED?  
(3-Way or Quad Recall/3-Way or Quad Engrams of Pretending.) \_\_\_\_\_

*SECTION M*

- M-1 HAVE YOU BEEN AUDITED WITH PRIOR GRADES OUT?  
(2wc Find what grades pc feels are out. Indicate it. E/S "Is there an earlier time you were audited over that/those out grade(s)?" to F/N.) \_\_\_\_\_
- M-2 IS YOUR DIANETICS INCOMPLETE?  
(2wc E/S to F/N.) \_\_\_\_\_
- M-3 DO ENGRAMS FAIL TO ERASE?  
(L3RD Rundown.) (R-Factor: "We are looking for engrams contacted in early auditing and not fully handled." Assess L3RD Method Five with the preface "In your early Dianetics ?" and handle with R3R over and over until it F/Ns.) \_\_\_\_\_
- M-4 IS YOUR COMMUNICATION GRADE OUT?  
(2wc E/S to F/N.) (Pgm for Exp Gr 0.) \_\_\_\_\_
- M-5 IS YOUR PROBLEMS GRADE OUT?  
(2wc E/S to F/N.) (Pgm for Exp Gr I.) \_\_\_\_\_
- M-6 IS YOUR O/W GRADE OUT?  
(2wc E/S to F/N.) (Pgm for Exp Gr II.) \_\_\_\_\_
- M-7 DO YOU HAVE PERSISTING ARC BREAKS?  
(2wc E/S to F/N.) (Pgm for Exp Gr III.) \_\_\_\_\_
- M-8 ARE YOU ANXIOUS ABOUT CHANGE?  
(2wc E/S "Is there an E/S time you were anxious about change?" to F/N.) (Pgm for Exp Gr III.) \_\_\_\_\_
- M-9 DO YOU HAVE SERVICE FACSIMILES?  
(E/S to F/N.) (Pgm for Exp Gr IV.) \_\_\_\_\_
- M-10 DO YOU HAVE FIXED IDEAS?  
(2wc E/S to F/N.) (Pgm for Exp Gr IV.) \_\_\_\_\_
- M-11 ARE YOU CONCERNED ABOUT BEING RIGHT OR WRONG?  
(2wc E/S "Is there an E/S time you were concerned about being right or wrong?" to F/N.) (Pgm for Exp Gr IV.) \_\_\_\_\_
- M-12 HAVE YOU FAILED TO ATTAIN OTHER GRADES?  
(2wc E/S to F/N.) (Note for C/S.) \_\_\_\_\_
- M-13 HAVE WINS ON GRADES BEEN BY-PASSED?  
(Rehab each to F/N.) \_\_\_\_\_

3. Take each reading item from the best read on down and with E/S pull each one to F/N.

“In the subject of \_\_\_\_\_ what word has been misunderstood?”

He may look them up, so have a good dictionary handy.

It isn't an earlier time he misunderstood *that* word. It's an earlier word in that subject and it can be an earlier subject.

Considerations about it and other questions are not touched.

Overts, W/Hs, etc are neglected.

Just do the process and it will eventually F/N on each chain.

A persistent F/N should be attained as the EP.

*Word Clearing Series 13*

**WORD CLEARING CLARIFICATION**

Reference HCO B 24 June 71, "Word Clearing"

Method No. 1 Word Clearing has yet to foul up any other auditing. When Method No. 2 is done it is far more likely to foul up auditing.

Persons just reporting to courses are the first candidates for Word Clearing.

Qual usually gets itself across numerous lines when it begins to Word Clear. I don't know why it should. The most fantastic figure-figure occurs around this action.

It is wholly unlimited. If No. 1 Method is done on Monday, it can be done again, same actions, same list assessed, same items left on the list, on Tuesday—and Weds and Thurs !

It can even be done with no folder to hand.

The only change would be to *add* some subjects if one wishes. But even that isn't vital.

A pc has spoken millions of languages.

The EP is not "He was word cleared once". It would be a persistent F/N on the whole list.

Who knows what the word clearing will lay bare in other languages or when one will attain the EP forever.

But there are too many strings being put into it like needing a folder, using tech pages, etc, etc. The action is in V. Well, why is Div IV getting in on it unless Div V is pulling it in?

You frankly have no idea what it takes to get tech really applied. The simplicity of hats, lines and tech actions gets overlaid with complexities.

Probably misunderstands attract complexities.

**AUDITING BY LISTS REVISED**

(Note: We now F/N everything. We do NOT tell the pc what the meter is doing. This changes "Auditing By Lists" in both respects. We do not say to the pc, "That's clean" or "That reads".)

**AUDITING BY LISTS**

(Reference: HCO B 14 Mar 71, "F/N Everything")

Use any authorized, published LIST. (Green Form for general review, L1C for ARC Brks, L4B for listed items list errors.)

**METHOD 3**

Use meter at a sensitivity so meter needle is loose but it is easy to keep needle at "Set". If sensitivity is too high the needle will be in constant motion as one tries to set the TA. If too low, the instant read will not be visible. 5 is usual for upper grade cases. 16 is usual for lower grade or Dianetic cases.

Have your meter in a position (line of sight) so you can see the list and the needle or you can see the needle and the pc. The meter position is important.

Hold the mimeoed list close beside the meter. Have your worksheet more to the right. Keep record on your worksheet. Mark the pc's name and date on it. Mark what list it is on the W/S with Time. It remains in the folder stapled to the W/S.

Read the question on the list, note if it reads. Do NOT read it while looking at the pc, do NOT read it to yourself and then say it while looking at the pc. These are the L10 actions and are called Method 6, not Method 3. It is more important to see the pc's cans than his face as can fiddle can fake or upset reads.

TR 1 must be good so the pc clearly hears it.

You are looking for an INSTANT READ that occurs at the end of the exact last syllable of the question.

If it does not read, mark the list X. If the list is being done through an F/N and the F/N just continues, mark the Question F/N.

If the question reads, do *not* say "That reads". Mark the read at once (tick, SF, F, LF, LFBD, R/S), transfer the number of the Q to the W/S and look expectantly at the pc. You can repeat the Q by just saying it again if pc doesn't begin to talk. He has probably already begun to answer as the Q was live in his bank as noted by the meter.

Take down the pc's remarks in shortened form on the W/S. Note any TA changes on the W/S.

If the pc's answer results in an F/N (Cog VGIs sometimes follow, GIs always accompany a real F/N), mark it rapidly on the W/S and say, "Thank you. I would like to indicate your needle is floating."

Do NOT wait endlessly for the pc to say more. If you do he will go into doubt and find more, also do NOT chop what he is saying. Both are TR errors that are very bad.

If there is no F/N, at the first pause that looks like the pc thinks he has said it, ask for an Earlier Similar \_\_\_\_\_ whatever the question concerned. Do NOT change the Q. Do NOT fail to repeat what the Question is. "Was there an Earlier Similar Restimulation of 'rejected affinity'?" This is the "E/S" part of it. You do *not* leave such a Question merely "clean".

It does not matter now if you look at the pc when you say it or not. But you can look at the pc when you say it.

The pc will answer. If he comes to a "looks like he thinks he said it" and no F/N, you ask the same Q as above.

You ask this Q "Was there an earlier similar \_\_\_\_\_" until you finally get an F/N and GIs. You indicate the F/N.

That is the last of that particular question.

You mark "F/N" on the list and call the next question on the list. You call this and other questions without looking at the pc.

Those that do not read, you X as out.

The next question that reads, you mark it on the list, transfer the question number to the W/S.

Take the pc's answer.

Follow the above E/S procedure as needed until you get an F/N and GIs for the question. Ack. Indicate and return to the mimeoed list.

You keep this up until you have done the whole list in this fashion.

If you got no read on the list Question but the pc volunteers some answer to an unreading question, do NOT take it up. Just ack and carry on with your mimeoed list.

**BELIEVE YOUR METER.** Do not take up things that don't read. Don't get "hunches". Don't let the pc run his own case by answering non-reading items and then the auditor taking them up. Also don't let a pc "fiddle the cans" to get a false read or to obscure a real one. (Very rare but these two actions have happened.)

## BIG WIN

If half way down a prepared list (the last part not yet done) the pc on some question gets a wide F/N, big Cog, VGIs, the auditor is justified in calling the list complete and going to the next C/S action or ending the session.

There are two reasons for this—one, the F/N will usually just persist and can't be read through and further action will tend to invalidate the win.

The auditor can also carry on to the end of the prepared list if he thinks there may be something else on it.

### GF AND METHOD 3

When a GF is taken up Method 3 (item by item, one at a time and F/Ned) it can occur that the TA will go suddenly high. The pc feels he is being repaired, that the clearing up of the first item on the GF handled it and protests. It is the protest that sends the TA up.

This is not true of any other list.

Thus a GF is best done by Method 5 (once through for reads, then the reads handled).

L1C and L4B, L7 and other such lists are best done by Method 3.

The above steps and actions are exactly how you do Auditing by List today. Any earlier data contrary to this is cancelled. Only 2 points change—we F/N everything that reads by E/S or a process to handle (L3B requires processes, not E/S to get an FIN) and we never tell the pc that it read or didn't read, thus putting his attention on the meter.

We still indicate F/Ns to the pc as a form of completion.

L1C and Method 3 are NOT used on high or very low TAs to get them down or up.

The purpose of these lists is to clean up by-passed charge.

---

An auditor also indicates when he has finished with the list.

An auditor should dummy drill this action both on a doll and bullbait.

---

The action is very successful when precisely done.

HCO B 12 Aug. 69 (HCO B 10 Dec. 68 Updated)  
Confidential—Case Supervisor Actions  
(Page 24 Resistive Case 220D)

A person who has been on Drugs is one of the “seven types of resistive cases”. (These types are found on the Scientology Green Form No. 40.)

In other words, someone who has been on drugs does not make good case gain until the drugs are handled. The same somatics will come back again. The case roller coasters-goes up and down.

Drugs since 1962 have been in very widespread use. Before then they were rare. A worldwide spread of drugs occurred. A large percentage of people became and are drug takers.

By drugs (to mention a few) are meant—tranquilizers, opium, cocaine, marijuana, peyote, amphetamine and the psychiatrist’s gift to Man, LSD, which is the worst. Any medical drugs are included. Drugs are drugs. There are thousands of trade names and slang terms for these drugs. ALCOHOL is included as a drug and receives the same treatment in auditing.

They are supposed to do wonderful things but all they really do is ruin the person.

Even someone off drugs for years still has “blank periods”. The abilities to concentrate or to balance are injured.

The moral part of it has nothing to do with auditing. The facts are that:

- (a) People who have been on drugs can be a liability until the condition is handled in auditing.
- (b) A former drug user is a resistive case that does not make stable gains until the condition is handled.
- (c) Auditing is the only successful means ever developed for handling drug damage.

**THOSE ON DRUGS**

On persons who are currently on drugs, it is necessary to take them through a special TR Course while they are still on them. They gradually come off of them voluntarily in most cases without painful “withdrawal symptoms” (which is the term for the agony and convulsions caused, particularly in the case of heroin takers, by just stopping the drug. Alcoholics are of course included.)

## DRUG ENGRAMS

People who have been on drugs are sometimes afraid of running engrams.

In fact, it is almost a way to detect a “druggie”.

The drugs, particularly LSD and even sometimes antibiotics or other medicines to which the person has an allergy, can turn on whole track pictures violently.

These tend to overwhelm the person and make him feel crazy. Some of these people are afraid to confront the bank again.

The TR and other steps of the special TR Course improve their confront.

If a person “doesn’t like Dianetics” and doesn’t want to be run on engrams, it is necessary to put them on the special course. If Dianetics *has* been run but poorly, it should of course be repaired fully with an L3B (List used to correct Dianetic errors). But if the person still flinches, the special course successfully completed will handle. It contains recall steps giving the pc a chance to confront the bank more easily and get used to it.

## FULL AUDITING RUNDOWN

A full auditing rundown on drugs, all done on the same pc, would be:

1. Special TR Course for ex-drug users or alcoholics.
2. Pc Assessment Form.
3. Class VIII Drug Rundown Quad (done by a Class IV or VI).
4. By a Dianetic Auditor: Pains, emotions, sensations, attitudes connected with drugs (or alcohol), R3R Quad.
5. Prior Assessment to Drugs, Quad R3R, Dianetic Auditor.

This can be followed by routine Quad Dianetics to EP for the grade.

## DONE FIRST

Drugs are done first. They are NOT done after the Health Form and regular Dianetics.

Why? Because Drugs make a resistive case! Regular Dianetics will get loses.

Any current Dianetic case failures are from flabby Dianetic auditing or the person has been on Drugs or alcohol which were not handled by Dianetics.

It hasn’t harmed anyone to omit drugs. But it made it hard or impossible to get stable case gain.

**THUS ANY DIANETIC PC WHO HAS HAD DRUG HANDLING OMITTED MUST BE RUN ON DRUGS AS SOON AS POSSIBLE BEFORE MORE AUDITING IS GIVEN.**

I repeat, drugs or alcohol in most instances make a resistive case so the point must be handled before the case will attain and hold case gain.

**ANY PC WHO IS NOT MAKING IT IN AUDITING SHOULD BE CHECKED FOR A DRUG OR ALCOHOL HISTORY.**

## DISCOVERY

In investigating a series of cases who were not making it, I found in each one that the person had been on drugs or alcohol and that drugs or the alcohol had not been run out.

Drug data was not covered fully enough in the Dianetics pack. Only Prior Assessment to Drugs was given.

Thus I find several Dianetic pcs were only run on the Prior Assessment to Drugs. This is not good enough.

## DIANETICS ONLY

Where Dianetic auditing only is available and the rest of the rundown given above is not, drugs can still be handled by a Dianetic Auditor in this way with this Dianetic Pgm.

1. Pc Assessment Form.
2. Full C/S 1, also doing the TRs well with the pc.
3. Write down the drugs from the Pc Assessment Form. Take the one that reads best on the meter.
4. List, what pains, emotions, sensations or attitudes are connected with taking (the drug).
