The cycle of the explosion is audited in brackets. This is to say that one has the preclear run the cycle as happening to himself several times, then run it as though someone else were running it and run the cycle that way several times, and then run the cycle for others confronting others. There is a mirror effect running the cycle of the explosion which gives some therapeutic value to having the bracket repeated as though the preclear were sitting about twenty yards in front of himself and doing it there, which is to say the preclear would be far in front of himself, putting it up for himself, having others put it up for others, and then others putting it up for himself; and then the preclear, where he is, would put it up for himself, would have another put it up for himself, and have others put the cycle up for themselves.

What exactly is the cycle of the explosion? One gets the preclear to get nothingness, then a growing expansive whiteness, then turn the whiteness black, have the black dwindle and get nothingness again. You will readily see the similarity of this to Black-and-White Processing

and, indeed, this is the furthest extension of Black-and White Processing, but is many times more effective and useful.

In a case which has a direction reversal (confuses left and right) one should run the cycle backwards, having the preclear get first nothingness then blackness, then whiteness, then nothingness. This runs out regret.

When a case has a weak heart or is chronically ill, one should be careful to run this cycle lightly and on such things as the chronic somatic only, or on words coming from the preclear's mouth (in brackets), getting the words absent, then black, then white, then absent. At any event, be careful of a case that is very ill. On such a case perhaps SSSA or SOP 8 (omitting Step IV) would be best.

This cycle, forward or backwards, used in brackets, betters chronic somatics well enough to prevent their return—an important gain, for chronic somatics sometimes return when audited with older techniques.

In PAB No. 8 you saw that masses of mock-ups could be run in brackets, and that the most important of these were changes in space. The explosion is the most forceful change in space. Thus from the high echelon mechanic of theta's purpose in changing things in space, one can go immediately into the first pattern theta uses in the MEST universe, which is the explosion, and he can run this in brackets.

Remember to do the cycle of the explosion exactly as given. Nothingness, then growing whiteness, then the whiteness turning black, the black receding and nothingness again. *It does not matter how poorly the preclear runs this. It does not matter if his nearest approach to whiteness is simply the idea that something might be white if he could see it.*

The cycle is run without effort, which is to say one does not permit the preclear to strain and use effort while running the cycle of the explosion.

One can expect an occasional electrical discharge, but if the cycle of the explosion is run in brackets and in masses, this discharge will be minimal. It should be remembered that you are not trying to *run out* basic-basic, you are trying to feed an enormous hunger. In other words, you are trying to feed enough explosions into the bank to satiate the scarcity of explosions.

Any and all thinkingness, reasoningness, moralness and ethicalness is derived from the cycle of the explosion. This becomes immediately apparent for, while running the cycle of the explosion on circuit cases, it will be found that they tend to philosophize considerably. This should be ignored. But, for the interest of the auditor, it should be noted that all moralness and ethicalness are directed towards minimization of the wild uses of explosions. Things are right or wrong connected with explosions depending upon whether or not the explosion favors or disfavors oneself or one's group.

Certainty is knowledge. Knowledge is basically an impact. After a sharp impact, it will be found that a person believes himself to be possessed of knowledge. When this is coupled with anaesthesia—which is to say, when a patient is anaesthetized and given a sharp and terrible explosion such as that occasioned by the stab of a surgical knife or the yank at a tooth—he will awake from the operation in the confusion of something nothingness and be certain that there is knowledge for him to discover.

After the brightness of an explosive blast, people wonder about the significance of the blast. The most uninformative thing there is is darkness. Darkness is greatly intensified in its blackness after a bright explosion has appeared. Thus, all the times one has looked into darkness and wondered whether or not something was there are, so to speak, collected together into this great wonder about the significance. The blackness is a concern about “What is the significance of it?” As an investigatory process but not for the purposes of therapeutic processing, one can have an occluded preclear simply run in brackets “**What is the**

significance of it?" and he will find the preclear quite taken with the process, for the preclear is trying to do just this: he is trying to discover the significance of the blackness.

This simplicity brings upon us a very grim jest. Soldiers, after an explosive war, are deeply concerned with the significance of it all. Men, after operations or bad accidents, are quite often concerned with the significance of things. But, much more important than this, the entire field of learning is today dramatizing the significance of blackness.

The jest is terrible, when one realizes how he has been betrayed by education. Print is in black, the page is white. In order to read, one has to put forth an effort to suppress the whiteness of the page. This keys in gradually the suppression of the brightness of an explosion, a thing which is automatic, and which is succeeded by darkness. The black letters apparently contain knowledge—and actually often do—but they lead the poor student deeper and deeper into “What is the significance?” And the more he studies, the less he knows, until he is left at length in a complete mystery of darkness. You can run this just to see how it is, not for therapeutic value, and find that Effort Processing on reading will bring out letters on pages. One lets the blackness come through, one suppresses the whiteness of the page. Further, in that the scholar is seeking more knowledge, and in that the knowledge is written in blackness, the scholar is led to suppress the whiteness of the page consistently until he is suppressing all whitenesses. This makes him suppress the whiteness on the cycle of an explosion and thus moves him on the time track past the peak of youth long before his time. The continuous suppression of whiteness retards the metabolism of the body and reduces energy. Educators uniformly dramatize the cycle of the explosion, of course, for their field is thought, and the first thought consists of energy particles not of concepts. Thus the processing of concepts on an occluded case does not resolve occlusion. Processes which utilize and multiply energy are far superior to and infinitely more effective than processes which look for postulates or concepts.

And, mentioning education brings one to the most terrible thing which can happen to the thetan. This is to have a guarantee of no explosions. Once the thetan cannot have, either by manufacture or acquirement, explosions or facsimiles of explosions, he is finished. Prison is so terrible merely because it denies the thetan explosions. The interim after death is terrible to the thetan because it is without explosions. Education as done on the public school system guarantees long periods in cubicles which contain no explosions; and education free from the printed page for long years in cube space is easily the most destructive and effective method of destroying the vitality of a race and the initiative and energy of those who should be its leaders and is, to say the least, rather typical of the MEST universe.

This is the seventh of the series on self-auditing the auditor's own case. These steps, of course, apply equally to the auditing of preclears. Our task at the moment, however, is to bring about as high a state of case as we can in all of our auditors. Not long ago an auditor in an area where many early auditors had practiced told me that the certificate was degraded in that area. This is not surprising if these auditors have not followed through with processes and have not given their own cases attention; but it is surprising that the auditor who wrote me has not taken over the responsibility of remedying this situation, for this auditor is quite well trained in Scientology. It would be extremely simple to discover the HDAs and HCAs in one's own area and bring them together for the purposes of mutual betterment and use on them Short 8, Six Steps to Self-Auditing on a group level and, on those cases which are particularly occluded, cycles of explosions with SSSA. This would at once establish a better reality on the part of any auditor who has slipped away and would give him some of the benefit for which he hoped when he studied Dianetics. In fact, I cannot conceive a man being interested in Dianetics and Scientology and knowing these techniques and knowing as well that in his area there are people who have not utilized their training and yet who would not gather these people together—with a blackjack if necessary—and see that they receive group auditing. If one does not like to have himself compared unfavorably with an inexpert auditor who is yet practicing, then the thing to do is to bring up the case level of the inexpert auditor and to give him at least the rote procedure to use on preclears of SSSA.

Auditors have been quite confused here and there in the past because they got their techniques and news of new techniques by rumor and because they did not possess the insight to see that all of this work is of a piece and that the goals we are now attempting are simply higher goals than those we first attempted and yet, though higher, more easily attained. But it would be very difficult for an auditor to fail to understand all the uses involved in Six Steps to Better Beingness (PAB No. 7) and to use these steps with success. He would only have to know this much and he would have well cases. There is no slightest excuse today for an auditor not to get rapid results with Scientology. Because I continue to put out techniques is no reason that old techniques do not work. These new techniques are developed and codified out of experience in auditing by myself. They do the work faster. I am even getting complaints from auditors that some of these processes work so rapidly that after a one or two-hour session the preclears are so well they never come back for a second session. I cannot see how this would be hard on an auditor's pocketbook unless the auditor had not applied the techniques to himself and was unable to go out and dig up preclears. There are today on earth in excess of two billion human beings. In that active auditors number about a thousand, this would seem to give one auditor a fairly good-sized practice. I myself doubt that I could audit more than two or three million people a year and still keep up with my hobbies. So I feel very sorry about these techniques working so fast and ruining people's practices. (The auditor who wrote me the above should receive all this as humor, not criticism.)

L. RON HUBBARD

October 28, 1953

STEP III AUDITING COMMANDS

The preclear is not supposed to think of anything while he is doing this process. If he thinks of something do not stop him from thinking of it in such a way as to cut communications with him as a preclear, but let him know that this is part of the process.

1. Put eight anchor points around yourself, for yourself (if case is occluded have him put eight black anchor points around himself).
2. Have somebody else put eight anchor points around himself.
3. Have other people put up eight anchor points for other people, with you in the space.
4. Have other people put up eight anchor points for other people, with somebody else in the space.
5. Have somebody else put up eight anchor points for you.
6. You put up eight anchor points for somebody else.
7. From where you are hold on to the eight comers of the room.
8. Have somebody else hold on to the eight comers of the room.
9. Have other people hold on to the eight comers of the room for other people.
10. Have somebody hold on to the eight corners of the room for you.
11. You hold on to the eight comers of the room for somebody else.

ON HUMAN BEHAVIOR

It greatly facilitates the work of the auditor to know the most aberrated and most aberrative types of personality.

Kraepelin in Germany a long time ago made a long and varied psychotic classification. This has been refined and made, if anything, even more unwieldy in modern times. It is valueless since it does not lead to the immediate remedy of the situation. Further, we are not very interested in types. There is really no such thing as a special type of psychosis or neurosis, beyond those types which are quite aberrative around the preclear.

If we could isolate a particular set of traits as being the most aberrative traits, we could more quickly process the preclear by using Acceptance Level Processing or Viewpoint Processing on such people.

Probably the truly aberrative personalities in our society do not number more than five or ten percent. They have very special traits. Where you find in the preclear's bank a person with one or more of these characteristics, you will have the person who most thoroughly tried the preclear's sanity.

What we will call the aberrative personality does the following things:

1. Everything bad that happened to the preclear was (a) ridiculous, (b) unimportant, (c) deserved.
2. Everything the preclear and others did to the aberrative person was (a) very important, (b) very bad, (c) irremediable.
3. Those things which the preclear could do (a) were without real value, (b) were done better by the aberrative personality or by others.
4. Sexual restraint or perversion.
5. Inhibition of eating.

Such people would be better understood if I called them the "merchants of fear." The most degraded control operation of which the GE is capable is utilized by these people for their sole method of getting on in the world. They have lost all ability themselves to create, they cannot work themselves, they must either amass money which is never to be spent or must prevent others from amassing money. They produce nothing, they must steal one way or another, and then devalue whatever they obtain. They speak very sternly of honesty or ethics and put on a formidable front of complete legality. They are impartial, which is to say they are incapable of decision but ride continually a maybe. They close terminals easily with courts, for courts are, sad to say, more or less of this disposition themselves. They feel called upon at no pretext to become adjudicative on subjects where their opinion has not been invited.

Probably a society could be cleared and allowed to bloom if these people were simply rounded up and removed from contagion with the remaining populace, for they are not numerous. Yet they are in sufficient number that it is doubtful if your preclears who are more seriously badly off have not had at least one in their past. It is particularly true of the occluded case that he has been victimized by one of these “merchants of fear.”

Although there are many characteristics which are undesirable in such aberrative people, it is remarkable that only those listed above are aberrative. These wind sinuously as a threatening thread through all of their conversations. Such people are a mixture of paradoxes to the observer who does not understand the basic ingredients of human character.

Such people are themselves a continuous maybe, and therefore will be found very easily in the bank, for they appear most often. Where you find one, two or three people appearing almost continuously in the preclear’s bank, or his lamenting conversation, you will find that these people answer the above-numbered characteristics.

The method of processing these people is to have the preclear mock them up in large masses with the certainty that they are there, and then, with them unmocked, with the certainty they are not there. Then, mocked up again, with the certainty that they will be in the future, and, unmocked, with the certainty they will not be in the future. One also runs the above concepts in masses and in brackets.

A case cannot be said to be well so long as these aberrative personalities continue to reappear in his thoughts and processing. Therefore the auditor will find it extremely profitable to use all available means to process these people out of the preclear’s bank. When the auditor has succeeded in doing this, he will find that the preclear now believes himself to be very much better than before and, indeed, he will be.

It should be remembered that such people have invited many overt acts. The “merchants of fear” specialize in being offended themselves and, even though the overt acts against them are slight, these have become magnified in the preclear’s bank until such people, on the overt act phenomenon alone, occupy a major role in the preclear’s thinking.

It will often be discovered by the auditor that the preclear has “swapped terminals” with these aberrative persons. The weight of aberration is such that the preclear has been swung into the valence of such people, for they have obviously won.

The truth of the matter is: such people never win. If one traces out these people, as I have done occasionally after processing a preclear, he will discover that the aberrative personality is very close to the brink of a crack-up, has a very low survival level, and quite commonly goes insane.

It should be understood that anyone going down tone scale in moments of anger is apt to use the above-numbered steps one way or another. But this is a momentary thing; the above steps belong, of course, on the tone scale and are significant of a level on the tone scale. Thus, one going down tone scale into anger or into apathy, is inclined to use these operations momentarily. This is quite different from the aberrative personality. The aberrative personality is at work with this operation 24 hours a day. Ceaselessly, relentlessly, calculatingly, with full knowingness, the aberrative personality continues this onslaught against those around him.

The entire computation of this aberrative personality is that he is worthless, he himself knows himself to be completely worthless. One might feel a little pity if the harm were not so great, for there is nothing more terrible than this knowledge. The aberrative personality feels he cannot succeed unless he drives others away from him with fear, preferably with terror. He assumes aspects of ugliness in matters of clothing; he is quite prone to ugliness. Very often this personality does not bathe, his breath is very often foul, his feet become odorous, the endocrine system has failed one way or another, the person has considerable bowel trouble.

Other people than the aberrative personality occasionally manifest these difficulties; unfortunately, it all stems from the same idea—to drive other people away.

The communication lag of the aberrative personality is his easiest clue. These people are slow to respond, they are very thoughtful about what they say. They “think twice before speaking once,” if they speak at all. When they do speak it is very often not on the subject. Their favorite phrase is “You do not understand.” They preface their statements with, “Well, I don’t know but....” There is no decision in such people; they do not know whether to go up the street or down the street. Put into a certain routine and forced into that routine they will carry on, but they do not themselves produce anything, they are entirely parasitic. This parasiticism is gained either by the inheritance or other accumulation of money or by a direct and forthright nullification of those around them into the status of slaves. For this person knows above all other things that he cannot produce an honest day’s work.

Now in case you err and try to apply this classification too widely, there is one definite characteristic you must not overlook. This characteristic makes the difference between the aberrative personality and run-of-the-mill human beings. The secrecy computation is the clue. The best index to a secrecy computation is a refusal to be audited. Because of this factor of the secrecy computation, and for no other factor, it chances to follow that the aberrative personality can be known by his refusal to have any auditing of any kind, or, if he has any auditing, accepts it very covertly and will not permit it to have any effect upon him. He will not have a second session. He has all manner of excuses for this such as “altitude,” but in any way, shape or form he escapes auditing. If your preclear’s unwilling to be audited, he himself may fall into this classification.

Because justice in this society prides itself upon impartiality, these impartial people—the aberrative personalities—are quite often listened to by those around them. The pose of being impartial is an effort to escape decision. People who get things done or who are worth anything to the society make decisions. The impartial people make no decisions if they can possibly avoid them, and at the very best put off decisions as long as possible, as in the case of a court of law. These people, being well downscale, are very close to MEST and have a very solid agreement with MEST.

Very often you will find aberrative personalities addicted to religion, but the addiction will not be accompanied by any belief in the human spirit. Just how this paradox is accomplished a professed avowal of Christianity and a complete unwillingness to accept any effort to heal or help the human spirit as opposed to the body—is just another one of this bundle of paradoxes which mark the aberrative personality. For, you see, the person is such a complete maybe that anything about him is indecisive, and people trying to make up their minds about this person, of course, fall into the state of maybe, because that is the clue to the personality. Impartial personality—the maybe personality—and the “merchant of fear” are more or less of the same order and are alike aberrative.

Men in the field of the arts are very often victimized by these aberrative personalities. The “merchant of fear” closes terminals rapidly with any area which contains a great deal of admiration. Since the person is actually incapable of decision, this is a mechanical closure. The presence of admiration around anyone else begins to dissolve some of the completely stultified bank of the “merchant of fear” and this finds him very close to the source. Orchestra leaders, painters, writers are always having the terrible misfortune of closing terminals with such personalities. There is hardly a man of art or letters who does not bear on him the scar of having associated with a “merchant of fear,” for these are vampire personalities. They are themselves so starved of admiration and of sensation that they drink out of others around them any possible drop of admiration in any form. Where a woman becomes a “merchant of fear,” sexual starvation is continually attempting satiation and all the while the “merchant of fear” will protest and, to all visible signs, follow a life of complete celibacy.

While it is not my purpose here to revile, I wish to impress upon the auditor that the “merchant of fear” is extremely dangerous, both to creative impulses and to sanity. One could

say airily, “Why don’t we just audit these people upscale, since they are so few,” but these people will never present themselves for auditing and will discourage anyone else from having any auditing. A solution to the “merchant of fear” probably does not lie in the field of auditing.

The society at large is so accustomed to association with MEST and the “merchant of fear” so closely approximates some of the characteristics of MEST—the maybe, for instance—that the public quite commonly misassigns strength to such aberrative personalities and thinks of them as strong people or as wise people. They are neither strong nor wise, and before an even indifferently forceful attack quickly capitulate. They live their whole lives in terror of attack.

One often finds these characteristics in company with paresis or hears the aberrative personality has actually contracted a dreadful disease to add to his repulsiveness.

The auditor should not err in thinking that these people always present a repulsive appearance; repulsive conduct precedes a repulsive appearance. At first they operate only mentally in trying to make everyone afraid. Then this begins to show up more and more in their own MEST and finally will demonstrate itself in their personal appearance. Thus one can mark the state of decay of these aberrative personalities.

Now and then some violent man in one country or another has undertaken programs to rid a society of these points of contagion. Kings in olden times handled the problem by decapitating people who continually brought them bad news—this was a very wise measure. In more recent times it has been said that Gomez, late dictator of Venezuela, discovered that the contagion point of leprosy in the country was the beggar. He found that the beggars of Venezuela were using leprosy in order to beg. People would pay in order to have the ugly thing taken away from them (the basic philosophy of the beggar is to be paid to go away). Gomez had the beggars told that they were going to be taken to a very fruitful part of Venezuela and given a colony of their own; he had them collected on a river bank and loaded aboard two large river boats. The river boats proceeded into midstream, their crews left them in skiffs and the boats blew up with a resounding explosion. This was the end of leprosy in Venezuela. I am not telling you this to advocate the immediate slaughter of the “merchants of fear”; I am merely giving you an historical note. The extreme impatience of people trying to get something done in a society will eventually center upon those who will not work and, in the case of kings or tyrants, such people have very often been done away with. Thus the precedent is very old of a society cleansing itself by removing from its ranks the non-workers.

Revolutions very often have this as an objective. The French Revolution recognized in the existing aristocracy a state of will-not-work, and saw in these people the character of the “merchant of fear,” and for several years there in France, shortly after America became free, the tumbrils formed an assembly line to the guillotine. People in societies are extremely punitive about those who will not work and about those who depend on fear for their sustenance. But society going downscale can become more and more apathetic toward the “merchant of fear” until the “merchant of fear” predominates as a class.

Just as the king or the society revolted against the “merchant of fear,” so has your preclear tried to get the “merchant of fear” to work and to contribute something besides bad news. This effort, of course, was bent toward an organism which was already rotten at the core. Whether the “merchant of fear” used money or beauty to excuse his own lack of labor, only added to the maybe. The law forbade the preclear to use the measure of the tyrant or the Gomez, for the law is utterly infatuated with such people and defends them at every turn just as such people use almost exclusively the law. As your preclear was balked in his natural impulse to clear the way he was brought into staring recognition of the fact that the necessary act—murder—was halted by the existence of police and courts. This brought the preclear to the point where he conceived himself to be put upon by the society and the law. Many of your preclears, as a result of this, are startled to find, when it is run on them, that they believe themselves under arrest, even though any arrest they have been subjected to was as minor as a traffic pick-up. I am not advocating, again, violence; I am merely trying to explain to you the state of mind

of the preclear and the most aberrative person he has confronted. He wanted to, and didn't, kill these people. If your preclear is of the kind who produces or creates or who works and makes his way in the world in general, you can find the aberrative personality in his bank immediately by asking him—with an E-Meter, of course, because he probably won't tell you direct—if he wanted to kill anyone. The E-Meter will say that he did, and on discovery of this identity the auditor will find the aberrative personality. This even follows through with women, although women go more quickly into apathy when confronted with an aberrative personality than do men.

You should understand that the aberrative personality has not become an aberrative personality by being confronted by another aberrative personality. You are not getting here the pattern of stimulus-response, you are getting the decay of a human spirit to complete inactivity so that the entire modus operandi becomes that of the body itself, and a body, in the case of the aberrative personality, which itself is too deteriorated or exhausted to work. Not all bodies becoming so exhausted and unable to work turn into aberrative personalities, but the aberrative personality is born entirely out of the decline of the ability of the individual to produce. When the individual really recognizes his utter worthlessness to the society, he becomes an aberrative personality. Many people who cannot work physically turn to other lines of progress. They are getting on one way or another. The aberrative personality is so badly off that he can lead only a parasitic existence. You will understand, then, that people going down tone scale do not immediately and automatically become aberrative personalities, in our definition as here used. People become aberrative personalities out of a malevolence which insists on a high level of survival without the production of anything.

P.A.B. No. 14
PROFESSIONAL AUDITOR'S BULLETIN

From L. RON HUBBARD

Via Hubbard Communications Office
163 Holland Park Avenue, London W.1

[1953, ca. late November]

Why has Man chosen to degrade himself below the level of the beasts which serve him?

In the past a knowledge of his own character was an unpalatable fact to Man since people sought to force him to achieve that knowledge solely through condemnation. He resisted what he was and he became what he resisted and ever with a dwindling spiral he reached lower dregs. If ever once a man were to realize with accuracy what he was, if he were to realize what other people sought to make him, if he could attain this knowledge with great certainty, there are no chains strong enough to prevent his escaping, for such would be his astonishment that he would brave beasts, gods and Lucifer himself, even governments and churches, to become something better than what he had beheld in his own heart.

The only tragedy of all this is that Man has lacked any method of estimating himself with certainty so as to know what it was he was trying to improve. In this PAB you will find such a method and, in applying it, you will also find improvement; if you also find vileness and rottenness beyond the most base ravings of Dostoevsky or Sigmund Freud, you have the comfort of knowing that you already possess in 16-G and in these PABs the means of bettering that condition and of rising once more toward the sun rather than sinking further into the sewer.

ON HUMAN CHARACTER

As you will find in The Factors, and as the actual application of processing will rapidly prove, the basic impulse is to produce an effect.

In relatively high-toned beings, the very upper range of Man and above, the impulse is to produce something out of nothing: one can only cause a creative effect by causing nothingnesses to become something.

Lower on the tone scale, the effect most desired is to make nothing out of something. The general range of Man occupies this area of the scale.

Man on the lower ranges is entirely dedicated to the goals of the body itself. The body, to exist, must make nothing out of something. This, as the simplest illustration, is the goal of eating. It may or may not be necessary to life to eat; it may not even be necessary for the body to eat. In Para-Scientology there is some evidence that the stomach once produced sufficient life energy to motivate the body without any further "food," but the body of man and beasts in general is not equipped so today, and of that we are very certain.

The body's single effort to make something out of nothing is resident in sex, and in this culture at our time sex is a degraded and nasty thing which must be hidden at best, and babies are something not to have but to be prevented. Thus even sex has been made to parallel the something-into-nothing impulse.

Exactly as the body by eating seeks to make nothing out of something, so does the general run of Man in his conversation and interpersonal relationship seek to make a nothingness out of friendship, acquaintances, himself, art and all other things. He much more readily accepts a statement or a news story which reduces something further toward nothing than he accepts a story which raises from a relative nothing to a higher something. Thus we

find out that scientific achievements for the good of Man occupy a very late place in the newspapers and stories of murders and love nests, wars and plagues gain first place.

Man in his present debased form is held on the road to survival by his culture alone. This culture has been policed into action by brute force. The bulk of men are surviving against their own will. They are working against their own desires, and they seek wherever possible and ever so covertly to succumb.

This could be called, this MEST universe, a Love-Hate universe, for these two are the most prominently displayed features, and neither one has any great altitude, although many claim that love is all and that love is high on the tone scale, which it is not.

To live, Man must eat. Every time a Man eats, no matter the kindness of his heart or disposition, something must have died or must die, even though it is only cells. To eat, then, in this MEST body culture, one must be able to bring about death. If eating is motivated by death, then digestion would be as good as one is permitted to kill. Digestions are bad in this society. Killing is shunned in a degraded and covert fashion, and man eats only those things which not only have been killed elsewhere and out of his sight, but have as well been certified as dead through scalding cookery. Killing even food is today far above the ability of the majority of our culture.

The characteristics of love could be said to be No-Kill, stomach trouble, hunger but can't eat, work, flows, heavy emphasis on ARC, inhibited sex. Hate as a personality could be said to characterize, at least on a thought level, kill, bowel trouble, hungry but eats covertly, no work, hold, pretended ARC, enforced sex. These are two personality classes. Many people are compounded of both.

There is another scale which one should have if he is to understand human character.

Thought as Man thinks it, is not the highest level of the scale but the lowest level. High on the scale above 20.0 we have fully creative thought—by which is meant the ability to create actual energy—free emotion and a wide knowingness as opposed to understanding, which is low on the scale. At 20.0 we have force; below that as we go down we find force restrained, then overt gesture, overt gesture restrained, overt emotion, overt emotion restrained, and overt thought and overt thought restrained. The last few are ranging down to and around 0.0. The scale is constructed in the given order.

Thought in Man is largely born out of impact and is not free. It is an effort to know before he knows, which is to say, to prevent a future. The phenomenon of going into the past is simply the phenomenon of trying to take the knowledge which one acquired through force and impact and held after the event, and place it before the event so as to prevent that thing which has already happened. "If I had only known," is a common phrase. This gets bad enough to cause Man to want to know before he looks at anything, for in his debased state it is dangerous not only to use force, not only to use emotion, not only to think, but also to perceive things which do. Thus the prevalence of glasses in this society.

The body—and that means, of course, Man in this culture—must have a reason for everything. That which has the most reason is the body. A reason is an explanation, the way Man interprets it, and he feels he has to explain himself away and to explain every action which he makes. Man believes he must have force but receives force, that he must not perceive or be perceived, that he must kill but must not be killed, that he must not have emotion, that he must be able to wreak destruction without receiving it. He can have no pain, he must shun work and pretend that all work he does has a definite goal. Everything he sees he feels must have been created by something else and that he himself must not create. Everything has a prior creation to his own. All things must be based on earlier things. Thus he shuns responsibility for whatever he makes and whatever destruction he may create.

This animal has equipped himself with weapons of destruction far superior to his weapons for healing and in this low-toned mockery whines and pleads that he is duplicating saintliness and godliness; yet he knows no meaning of ethics and can follow only morals. He is a meat animal, a thing in the straitjacket of a police force, made to survive, made to stay in check, made to do his duty and performing most of it without joy and without, poor thing, even actual suffering. He is a meat animal, he is something to be eaten. If he is to be helped, he must either learn where he is and find better, or be duped or forced into helping himself.

In our current age, cowardice is an accepted social pose, self-abnegation a proper mode of address, hidden indecency a proper method of survival.

It may be that my statement of this does not carry through with an entire conviction. Fortunately, although these data are based on a wide experience with Man, particularly in the last few years as well as during a terrible and cataclysmic war, my statement of the case does not have to stand, for there exists a process which, by its astonishing workability, signifies the accuracy of this observation on human character. This process will be given in the next PAB.

ACCEPTANCE LEVEL PROCESSING

Man is a duplicity. He is at once a body and a spirit. The personality which we know as the individual is a spirit by its contagion with the body. The body, as a very small amount of processing will demonstrate, is not the personality or the being, but a used thing.

The body is a very craven and degraded thing in an unprocessed state and rather rapidly debases its spirit, so that when one first begins this process of Acceptance Level, it would seem to him that he, as the spirit, is actually at the level where he finds himself. True enough, he conducts his affairs at the level of the body, not at the level of the spirit. But the spirit can be freed, decontaminated, and the body itself, by this process, can be healed of its depraved thirsts and hungers so that it becomes almost fit company for a spirit.

Acceptance Level Processing is that process which discovers the lowest level of acceptance of the individual and discovers there the prevailing hunger and feeds that hunger by means of mock-ups until it is satiated. The process is not a separate process itself, but is actually a version of Expanded Gita. It is, however, Expanded Gita used in a very particular way, and because one has successfully applied Expanded Gita, he should not think as well that he has a command of Acceptance Level Processing.

The process is done in brackets. A bracket is very simply done. The pattern of the bracket is for the preclear, via the preclear for others, and via the preclear others for others. One has the preclear mock up, no matter how blackly or how crudely, items for himself to accept, then have others in his mock-ups mock up things for them to accept, and others to mock up things for others to accept. In Acceptance Level Processing this bracket, which is the technical name of this pattern, extends to having the preclear also mock up things for others to accept and others to mock up things for him to accept. Thus there are five stages in the bracket.

Acceptance Level is what the preclear himself accepts, what the people around him in mock-up form accept, and what others will accept from others, and included as well what others have wanted him to accept and what he has wanted others to accept. Be very alert to this difference and to this particular phase of Acceptance Level: that people have wanted him to accept something does not mean that he accepted it, but it does mean that he will gain an insight into their motives.

Acceptance Level is a voyage of discovery. It is the method of making a MEST clear. It is the method of clearing the genetic entity. There is no other method of which I know which will accomplish this. The running of concepts, the running of engrams, straight Creative Processing, will not any of them accomplish this clearing of a thoroughly degraded MEST body; and, so long as the body remains thoroughly degraded, the task of rehabilitating the spirit connected with it is difficult at best.

The process of Acceptance Level can be combined with Expanded Gita, in which case wasting good things in brackets in the five steps (which is: what did people waste, what do

people waste, what did the preclear want others to waste and what did others want him to waste) resolves the occasional stalls which occur; for it often happens that the preclear must waste something good for a short time to discharge an accumulated charge in the bank brought about by a continuance of “feeding by mock-ups.”

Nowhere in Acceptance Level Processing, except in the form of wasting, does one seek to eradicate an engram, a thought, an emotion or a circuit.

The entire process is built upon feeding the apparent cravings of the body. These have come about because of the mechanism of resistance. The MEST universe is built upon the theory that one must resist. When one starts resisting something, he engages upon it until it finally breaks down his resistance and he then goes into the cycle of actually craving it. A hunger is therefore created for various things which would not be suspected in the absence of this process. It is the object of this process to feed these hungers until they are satiated and until they depart.

A very thorough and strong warning must be injected here by calling your attention to this apparent law. **ACTION IN THE MEST UNIVERSE DOES NOT RUN OUT ACTIONS WHICH HAVE OCCURRED IN THE MEST UNIVERSE. THE ONLY THERAPEUTIC FACTOR POSSESSED BY MAN IS HIS OWN SPIRIT. ACTIONS WHICH HAVE OCCURRED IN THE MEST UNIVERSE ARE ALTERED OR ERADICATED ONLY BY ADDRESSING THE MATTER IN ONE’S OWN UNIVERSE IN THE FORM OF MOCK-UPS DONE BY THE PRECLEAR.** By living a life of debauchery, in other words, one does not heal the debaucheries he has committed. By feeding his hungers in terms of the MEST universe, whether these be liquor or much baser things, one accomplishes only a further degradation and a further thirst. Such things are healed by the only process of healing which we have, which is the spirit itself. The spirit accomplishes this by direct address of energy as in the case of a Step I reaching in and patching up parts of the body or by mock-ups which themselves alter the condition of the body. More whisky can only make a worse drunkard out of a drunkard. A constant and continuous stream of mock-ups of bad whisky can satiate the craving and restore to him his ability to drink when he wants to drink or not at all.

Basically this process is a learning process. It brings to the individual an understanding of the motives of himself and others who have been around him. These enter as sudden flashes of insight as the process is continued. They are not given to the preclear as evaluation.

This matter of Acceptance Level is of far more use in understanding one’s past than one would immediately suspect, for one sees immediately that if something is being healed by the process, the hunger must have existed.

Acceptance Level is also extremely useful in the MEST universe in evaluating and understanding the why of the actions of those around him. One can understand at last why cheap and dirty hotels are patronized, why in some cities garbage is not collected, why a person dresses as he does and acts as he does; and, indeed, an understanding of Acceptance Level gives one an enormous command of his fellow beings.

There is one thing you should know about ARC. The most ARC there can be is a complete identification: the person is the person with whom he has the ARC. One sees this in valence shifting. This goes down a dwindling spiral until the most complete ARC there is exists in the form of eight anchor points enclosing no space: in other words, a particle. Thus, trying to understand, purely as such, from data offered is in itself a perilous undertaking, for the end of the road is zero space, and that in itself is the opposite end of the tone scale. That is the end where MEST is. “Trying to understand” run as a concept—even that is quite startling. Knowingness has to do with certainty, and understanding which advances along the lines of certainty creates more space, not less space. Thus there is the low funnel end of ARC as well as an upper end of ARC. Trying to understand by reason of data before one looks brings about the vanishing point of existence. The psychotic often confuses his terrific stress on circuit-prompted thought as telepathy and thinking itself. Thus in running this process we are not

trying to understand anything, but simply going through with the process to satiate hungers. One can very easily go off and plot the entire evolution of everything by running this process, but one should move along rapidly, gaining only his insights as they seem to apply to him. Only the preclear knows when these insights have taken place.

The process is best run on an E-Meter, for as long as the E-Meter rises slowly and gradually, further mock-ups are necessary; when the E-Meter sticks or stutters, a change in bracket is necessary or, in some cases, something good on the same subject has to be wasted before the process can continue.

The process works best on severely occluded cases—the case we have called a Resistive V. It works least on a Step I, and is, indeed, not needed in the running of a Step I save only to clear up his MEST body, in which case it is run while he is exteriorized.

One can take the list in Issue 16-G of the *Journal of Scientology* of Step IV, Expanded Gita—that being the most complete list published—and pick out the most revolting items as they occur or the most dangerous items as they occur and have the preclear accept them, have him have others accept them, and others have others accept them until the subject does not have charge. One can take any of the good items of this list and, by prefacing them with *no*, attain an additional source of acceptable objects.

As soon as one starts to run this process (and it can be self-audited) he will wonder at first when he starts to mock the thing up for others what other person than himself could possibly have had such a hunger for the thing. After it has been fed into the space before him as destined for others, the personnel will come to view who had the acceptance level of the object; and when others run for others these mockups (via the preclear, of course), various groups and ideas will display themselves.

In various instances, as in the matter of running blame, the process may stop moving, at which moment it is up to the auditor, or, if the process is being self-audited, to oneself, to begin to waste praise. One will occasionally be astonished when praise is wasted in the form of brackets how violent the wasting can be.

In Expanded Gita, by the way, all the wasting and forcing upon and desiring, giving and taking, is done in brackets.

The reason you had Viewpoint Processing in an earlier PAB was so that you could understand the source of evaluation and why evaluation was important and so that, even more, you would get the idea of mocking things up in masses. Just, then, as in the practice you got in Viewpoint Processing, you mock up in Acceptance Level vast hordes of things: for oneself, for others, and others for others. Large masses of others for large masses of others mocking up large masses of the desired thing is very good processing.

What an Auditor Should Know

L. Ron Hubbard

In the hectic days while research and investigation were in full swing, it would not have been possible for me to have stated with accuracy what an auditor should know to be a good auditor with any expectancy of the answer remaining valid for more than a few months.

Running Engrams, Black and White processing, Beauty and Ugliness, technique followed technique, each one more workable than the last, each one issued solely on the valid excuse that it was better than anything we had before it.

I can greatly sympathize with anyone attempting to follow what must have appeared to some, scraps of knowledge and disrelated material, and who yet expected to know a whole subject.

After this year's work in Europe and some six months after the current techniques were last polished, it can at last be stated with security what an auditor is expected to know of Dianetics and Scientology to consider himself adequate to his task, and in order to assure himself of excellent results upon his preclears.

Probably even more important organizationally, certification boards of experienced auditors can be set up who can have before them unchanging standards of examination, to the end that when auditors are at last certified the organization can feel secure that they have "the latest information" securely at work in their hands. It is highly possible that America, with its craving for change, may not find this very acceptable, but it is certain that auditors putting out hard money for training and preclears putting out their dollars for processing will be assured of knowledge and results which are standard and predictable.

Many things have changed, but many things remain the same. To those who stayed with me for three years—and these number the majority—the shifting panorama and emphasis have at last begun to make sense. These people, in effect, have been studying a gradient scale of technology. They have been studying life, human behavior, and psychotherapy. It is astonishing to many of them now on reviewing *Dianetics: The Modern Science of Mental Health*, to find most of what they know stated in the first place in the first book.

This graduated scale enters with the most basic knowledge man has, as represented by the Asclepian Priests of Greece, continues through the work of Freud and is continually back-shadowed by the knowledge of the wise men of the East. It goes then into what we now call facsimiles (which is to say mental pictures) and all techniques which address the past, and into processes which directly adjust the future.

The marriage of the deepest knowledge of India with the latest technologies of nuclear physics could not help but result in a swift climb upwards into the understanding of the behavior of life in the physical universe, and could not help but deliver into our hands technologies with which to resolve the immediate problems of Mankind.

In a recent book *On Auditing* by Martha Courtis, the gradient scale of Dianetics and Scientology is made extremely apparent, and it is shown there quite expertly how each advance only extended knowledge already held, and the inevitable consequence of Standard Operating Procedure in Scientology.

It could be said that those auditors who entered early have spent those three years studying the same thing, and they now can look back upon an integrated picture. Indeed, it is a necessity for auditors contacting Scientology now for the first time, without any background

knowledge of Dianetics, to review the entire process of the evolution of the science. Just as an auditor would be foolish indeed to know nothing more than the running of engrams now that far faster techniques such as those contained in SOP exist, so would it be foolish for an auditor to study SOP only, and with no knowledge of earlier processes find himself adrift, alone and incapable some dark night with a preclear who is stuck in and is looking straight at an engram. Just because phenomena have been more adequately handled in these later months is no reason why phenomena discovered earlier have ceased to exist, and auditors in training are confronted by each and every phenomenon observed in the last three years. While this makes, apparently, a complex picture, the simplicity lies in knowing the entire story of the preclear, and then in applying techniques so simple that they could be used by a child upon children, and indeed often are.

What should an auditor know? He should know how to run engrams and secondaries, he should know effort processing, he should know how to apply, in its entirety, *Advanced Procedure and Axioms*, *Handbook for Preclears*, and *Self Analysis*, old and revised editions. He should know the 50 Course Books. He should have a good understanding of the axioms as they appear in the *Handbook for Preclears*. He should know *Scientology 8-8008*, and he should have a command of all the SOP's from 1 to 8L. He should know Formula H, Acceptance Level Processing, Change of Space Processing, he should know the theories of randomness, and automaticity and the processes by which these are remedied.

If that is an appalling lot of knowledge, be assured that the auditor who knows it knows it well—and who is himself cleared will have excellent results, and that an auditor who knows only fragments of it will continue to run into cases which he cannot solve, even though he may solve by rote procedures over 50% of the cases he addresses. The question of training is the question of how many cases is the auditor going to resolve out of the hundred cases presented, and the length of time the preclear must spend in processing.

What the auditor should know is answered by what the auditor wants to expect in terms of results on himself and preclears.

An auditor who knows and knows well SOP-8, Short 8, and Six Steps to Better Beingness, and yet does not know other phenomena as it may appear in a case, may find some 30% of his cases unsolvable. What might happen to render a case unsolvable? A preclear in 1953 can be expected to be stuck in at least one place on a time track just as in 1950. The preclears haven't changed, the techniques have. Generally, the preclear is in a "secondary engram." While there exist techniques in advance of SOP-8 which run secondaries rapidly, the auditor is poorly equipped if he cannot discharge a "grief charge" which is lying there waiting for him, the discharge of which will in itself entirely alter the attitude of the preclear toward the world. The auditor may have before him someone who actually does not have sufficient randomness to interest himself in further living, and who is yet incapable of creating more, the auditor may come up against in this what is termed "the speed factor" a subject discussed and covered in late 1951. Only by "increasing the speed potential" of the preclear can the auditor place the preclear in a situation to engage in sufficient action to discard his boredom. There are fifty reasons why a case can hang fire. The auditor who doesn't know at least ten of them will often find himself staring into an enigma past his understanding. Further, he may be astonished by the material if he does not know the strange adventures of preclears as they rise on the tone scale.

All too often an auditor is so set on enforcing his own concept of existence upon the world at large that he insists that a science agree with him, and lays down the boundaries that the science must not exceed what he himself, before he studied the science, believed to be true. The auditor who is not trained through all the data is prone to make errors which will cost him the resolution, not only of his own case, but case after case if, in ignorance of earlier data, he is seeking to warp theta clearing into some tract of mysticism where it does not and cannot belong.

I recently resolved the case of an old man whose trouble was that he desired no more of life. Observedly, his body could no longer serve him, and his hope in being audited was that he would die. I have recently seen several such cases. The auditor who is not sufficiently wise to establish the actual goal of his preclear will continue to try to make this person physically well, while the entire attention of this preclear is absorbed in using auditing to assist his dying. The only thing one can do for such a person is to bring him into a situation where he is no longer

entirely dependent upon his body, but does not need to destroy it in order to be interested in life.

What does an auditor need to know? What he could know is formidable. What he must know is easier to face.

Abstracts of all past data have been prepared at this time, and the courses available from the HAS are now highlighted by the necessary knowledge.

The difference amongst auditors is the difference of what percentage of cases is the auditor capable of solving. It can be observed that any psychotherapy in the past could have reached, and did reach and remedy a certain level of case (Step 1). This case continues to be resolved with great ease and in a few minutes with Scientology today, no matter what is wrong with it. The same case was resolved, within two years, by psychoanalysis. Earlier the same level of case was solved with great ease by Asclepian Priests. Analytical Procedure will solve such a case. Lock scanning will solve such a case, as can any elementary and shallow process, including a changed environment which promises a good present time. And so an auditor who has little command of the subject, obeying most of the rules of the Auditor's Code, can solve it.

But immediately adjacent to that is the one which doesn't quite solve, which improves a little, but not a lot. This one (a Step 2) also improved after many years of psychoanalysis. This one was solved also by the first techniques of Dianetics, even when they were crudely used.

The third level of case (a Step 3) was the one which psychoanalysis hoped about, but never improved, which Dianetics kept from deteriorating, but seldom (in the hands of average auditors) stabilized, and with this level of case we have departed completely from the past abilities of man, and the abilities of Dianetics as used in the field.

We have reached at this point some 50% of the populace. We have 50% remaining. The intriguing thing about this is that these first three grades (or 50%) number amongst them sane, insane and neurotic alike, for these step levels are not established by sanity, but by the ease with which they recovered.

The remaining 50% were never touched by the Asclepians, the psychoanalysts or auditors using Dianetics in the field. These 50% numbered amongst them some of the most able people, but not necessarily all the able people in the society. They were sane, neurotic and psychotic, just as the first three types of cases I have mentioned, but the workability of the case exceeded the ability of all.

The three cases mentioned above are referred to in Scientology as Step 1, Step 2 and Step 3. The remaining four steps, as represented in Standard Operating Procedure 8, are resistive to any betterment regardless of the sanity or ability of the case.

What we are gazing upon here is, distasteful as it may seem, the ratio of the potential of the individual being met by the environment. The last four cases are not necessarily more able, but they have met more resistance than their reality potential could accommodate, and although they continue to function, their certainty is insufficient to their environment. Their native ability permits them to continue their performance, to exceed former skills. We are now handling these cases in Scientology. All but a few of them, in the hands of an able auditor, resolve with the use of SOP-8. The few require even more advanced techniques, such as those being given to the Clinical students in the East.

What should an auditor know? He should know enough to resolve those cases which come to him and to retain and increase his own stability. Now at last we can write down in specific detail the exact data which he must command in order to do his job well.

ACCEPTANCE LEVEL PROCESSING

Some people who have exteriorized and have not gone any higher in processing are held down because the genetic entity in other words, the body itself—must be processed. A good process for the body itself is this process of Acceptance Level. The motto of the body is that it has to be acceptable, that other bodies have to be acceptable to other bodies, that other bodies have to be acceptable to it and that it must stay in a general state of agreement with the MEST universe. This tells you, by the way, that a country where equality was stressed would start out the bottom all in a mass and in a hurry once it began to go, for everyone being equal to everything and everybody obsessed with the idea of equality, as soon as the society discovered the existence of one psychotic, it would have to moderate itself to that degree in order to remain equal. This is a very hideous sort of an outlook, but is the end product of equality. There is a political creed known as Equalitarianism; a society adopting it would find itself caving in rapidly and all at once. Equality is a characteristic of cells, not of free beings. But you will see all this as you use Acceptance Level Processing.

Quite aside from the list of Expanded Gita, which is actually a list of buttons rather than a list of things, there is a list of the Acceptance Level run on a Resistive V by myself some time ago. I have kept this list against the time when I would release this technique, and I give it here. These items were run in this order on this case. The data was arrived at through E-Meter testing. I have no reason to believe that this Resistive V was really any worse than many who pass for higher on the tone scale. I have tested the list twice since without adding anything, although in the following two cases after the origin of the list, I had to put some of the things in worse form and had to change the order slightly. In the remaining cases where I have used Acceptance Level, I have worked straight from the Expanded Gita list as contained in 16-G. All the preclears on whom I have used this have been fascinated with the process and their interest in the world it opened to them has, so far as I know, not declined.

Instead of Acceptance Level Processing, I might as well have labeled this short essay for the PAB “How to Make a MEST Clear.” This is the best method I know of to make a MEST Clear, and people who have an antipathy to discovering they are a spirit and people who are hanging grimly to earlier work or to P-therapy will not, I can guarantee, accept any faster route than Acceptance Level Processing in order to achieve the state of clear.

Self-audited—and I give you this purely as a guess—a very rough case would probably need a couple of hundred hours of this, but after only an hour or two of it, the case would have advanced remarkably, and it would be a continuing surprise from there on how high one can go, for there are very few people who have any concept at all of the higher range of sanity than those they have seen around them, and those they have seen around them during their lifetime have been, at best, meat animals, meat animals who wore clothes and who pretended they were not trying to make nothing out of every human contact and person.

When using Acceptance Level Processing, please realize that it is a technique which cannot be audited indefinitely without interspersing it with direct perception technique such as

the first five of the Six Steps of Beingness as given in an earlier PAB [No. 7], or at least Spacation as contained in SOP 8 as Step III. Any time the going gets too rough, if one is self-auditing this, or too rough for the preclear if one is auditing one, a shift into holding the two upper corners of the room behind the preclear for a little while will nullify the effect. Formula H applied to present time will also nullify the effect, but not as well as holding the two upper corners of the room with the eyes closed. You understand that the preclear closes his eyes and “finds” the two upper corners of the room behind him and holds these without thinking. There is no more to that process than just that. It will re-stabilize a case which has been thrown out of stability by this process.

You must realize that this process is strong meat and the things which are fed to the preclear to mock up and accept in vast multitudes must be stronger meat than you would occasionally encounter in polite social conversation. One of my associates—and I will not mention any names—published the Expanded Gita list from an early issue of SOP 8 and carefully omitted from it the most vital factors in it, because, I suppose, he considered these too strong for the American stomach. From what I know now in processing, I would consider them, if anything, too weak, for they are not in a depraved form as bad as they are themselves.

One need not expect that the preclear will immediately rush off and engage in strange liaisons because of this process. His morality level will come up to a point where he can be moral. Most of these people who worry about morality, particularly in others, are themselves so low morally that they could not find satisfaction in a society of cannibals.

Here is the specialized list that was first evolved for Acceptance Level Processing. These items were fed in brackets. Large numbers of them were mocked up to the best ability of the preclear, even though he could not see his mock-ups for some time. They were mocked up for himself, others mocking them up for themselves, and others mocking them up for others, and others trying to get him to accept them, himself trying to get others to accept them, and, a few times, others trying to get others to accept them, and, occasionally, good items similar to these being wasted in the same bracket. Because this list worked uniformly on this Resistive V, it would be said immediately that the Acceptance Level of his body was this list. Running this list resolved hungers and cravings, blackness and somatics which he had long combated.

Most of these items had to be put into a depraved, diseased or decayed form in order to run them at all.

Now we have the list:

A TERRIBLE PAST, A DANGEROUS ENVIRONMENT, A TERRIBLE FUTURE, A MISSING PRESENT, NO HELP, INDEPENDENCE, INABILITY TO ACCEPT PRESENTS, DEATH, KILLING, EATING, SLEEPING, ANAESTHETICS, AGREEMENT, DISAGREEMENT, LOW REALITY, LOW AFFINITY, LOW UNDERSTANDING, NO COMMUNICATION, CAUTION, LOW SPEED, SUPPORT, NO FALLING, NO LOOKING, REASONS, EXPLANATIONS, THINKING, NOT THINKING, TALKING, NOT LISTENING, SERVICE, CONVICTION, KNOWING, PRECISE COMMUNICATIONS SYSTEM, DESIRE FOR EXPLANATIONS, ANSWERS, REPLIES, TRUTH, NO LIES, SOLID MEST, NO SPACE, NO GEOGRAPHY, CRITICISM, NO CRITICISM, ABERRATIONS, SANITY, PERFECTION, HIDDEN ENGRAMS, HIDDEN BETRAYALS, HIDDEN RIDICULE, DEFAMATIONS, THINGS BEING STOPPED, CHANGE, HELP, CONSEQUENCES, FEAR OF CONDITIONS, AN ACCEPTABLE LEVEL OF BEING ILL, AN ACCEPTABLE LEVEL OF BEING CRAZY, THREATS, ARRESTS, COURTS, HONORS, MEDALS, IDENTITIES, FACES, POLICE, TORTURE, BACTERIA, SYPHILIS, GONORRHEA, BLACK PEOPLE, THINGS TOO HORRIBLE TO PERCEIVE, EFFORTS TO GET COMMUNICATIONS OUT, EFFORTS TO GET COMMUNICATIONS IN, FORGETFULNESS OF MEN, FORGETFULNESS OF WOMEN, FORGETFULNESS OF PAST, ACCEPTANCE OF WRONGNESS, THE GOAL TO GET BIG, THE NECESSITY TO UNDERSTAND, FATHERS (IN THE WORST FORM), MOTHERS (IN THE WORST FORM), ALLIES (IN THE WORST FORM),

GRANDPARENTS (IN THE WORST FORM), FRIENDS (IN THE ACT OF BETRAYAL), BUSINESS ASSOCIATES (IN THEIR WORST FORM), BEING BABIES, BEING BODIES, TEACHERS IN FRONT OF ONE, LEARNED BOOKS, ACCEPTANCE OF AN IN-BETWEEN LIVES AREA, DEATH, FAILURE, BEING VARIOUS PROFESSIONS, BEING VARIOUS PARTS OF THE BODY, NERVOUSNESS, SERIOUSNESS, A GOOD JOB, WANTING THINGS GONE, HAS-TO-BE-TOLDNESS, TIREDNESS, ANXIETY, WANTING PEOPLE TO WORRY, LONG DAYS, FAST TIME PASSES, SLOW TIME PASSES, CLOCKS, SCHOOLS, FACES, LEARNING, MINDS, POOR MORNINGS, BAD NIGHTS, NO-TIME, ARRIVALS, COMPLETIONS, NO AFFECTION, LOVE, NO KILL, STOMACH TROUBLE, HUNGER, INABILITY TO EAT, WORK, FLOWS, INHIBITED SEX, CLOSED COMMUNICATION LINES, HATE, KILL, BOWEL TROUBLE, COVERT EATING, NO WORK, HOLDS, PRETENSE, ENFORCED SEX, LONELINESS, WOMBS, HOT WOMBS, BIRTH, KIDNAPPING OF BABIES, STERILITY, EMPTY WOMBS, BLACK WOMBS, ABSENT GENITALIA, FIGHTING SOMETHING, NEVER FIGHTING NOTHING, FIGHTING WORDS, FIGHTING DIRECTION, ACCEPTING DIRECTION, HATRED OF MUSIC, HATRED OF SIGHT, HATRED OF SOUND, ACCEPTABLE LEVEL OF PAIN, NO PETS, BEING GOD, ASSOCIATING EVERYTHING WITH EVERYTHING, HATING TO BE REMINDED, SEMEN, EXCRETA, NOTHINGNESS, POVERTY, NO MONEY, NO FOOD, NO HOME, EXPECTING SOMETHING BAD TO HAPPEN, KNOWING IT IS WRONG, BEGRUDGED FOOD, THE WEIGHT OF OBLIGATION, NO RESPONSIBILITY, REFUSAL TO BE CAUSE, DESIRE TO BE AN EFFECT, GUIDING SPIRITS, STRANGE SCIENCES, FORTUNE-TELLING, CRYSTAL BALLS, DEMONS, STRANGE SEXUAL PRACTICES, SELF-DENIAL, WRONGNESS, LOSING, ACCIDENTS, AND BEING A HUMAN BEING .

The case was then run on the Expanded Gita list in addition to the above.

Much of the auditing done on Acceptance Level Processing is done by the preclear following the procedure by himself in a room near the auditor, or simply by self-auditing. However, a very low-toned preclear is incapable of the persistence necessary to follow through the process and needs auditor supervision.

The ingenuity of the auditor lies in discovering just what the acceptance level of his preclear is. Persistence of the auditor and the preclear is vital to carry through the process item by item until each and every item is itself entirely surfeited.

It will be found that some preclears will rise so rapidly in tone at the lower levels offered, that they do not find any area to “feed.” In this case, higher-toned objects must be fed to the preclear just as these low-toned objects are fed.

What we are doing here is “remedying the scarcity in all things.”

The main thing the preclear will discover is that he has been carefully taught that certain things are bad and therefore not enjoyable and that he has set up resistances to these things and that they at length—these resistances—have become a sponge for the things they were set up to counteract and the resistance caving in has created a hunger for the object which was at first resisted. This is the MEST universe at work in its very best operation: make one fight something, then so arrange it that one winds up craving for what one was fighting. You can use this formula in general on any aberration which the preclear has. If he is fighting something, feed it to him in mock-up form, done, of course, by the preclear. And then finish off the bracket by feeding it through the preclear to others, and others to others, and then going on getting the preclear to get others to accept this thing to fight, and then others getting the preclear to accept this thing to fight, and thus the item is discharged.

This is Acceptance Level Processing. You can, if you look about you, see acceptance level dramatized in every activity of life. You can understand now why so-and-so will not clean up a living room: a living room is not acceptable except in a cluttered fashion to this person. You can understand also why this fellow leaves a beautiful and helpful girl and runs off with a

maid or a prostitute: his acceptance level was too far below the beautiful girl. You can understand, too, some of you, why you were not acceptable in your own homes when you were young: you were too bright and too cheerful and this was too high above those around you. You can understand, as well, why the newspapers print the stories they do, and most and foremost you can understand that everybody in a body is being subjected to the body's craving to be acceptable, a thing which in itself will end one up at the bottom of the tone scale.

You might think that running Matched Terminals or Matched Terminal Brackets on being acceptable will remedy this; unfortunately, this is above the body's level of acceptance. It is raw meat; it wants raw meat. Trying to run something out of the body which it craves is a difficult thing indeed.

On lower-toned cases the reason Dianetics often worked was because instead of running through the engram, the case was permitted to go over and over some unsavory incident which it actually considered extremely savory, and so was able, by these repeated "returns" to this muck, to feed the bank to some degree and adjust and surfeit its craving for such incidents even when they had not occurred. Thus one was actually feeding the body numbers of mock-ups rather than running out engrams, even though at that time it was supposed that an engram was being run out.

Where engrams were exhausted from the body with a betterment of the case, it was because the body did not have an extensive hunger. Where running an engram out did not remedy the condition it was because a hunger existed for that engram and it was being offered. Thus we have the case which insatiably ran engrams but which would not get well. That case had a level of acceptance of not-too-sick and not-too-well, the level of acceptance of the general society today.

Remember that evaluation depends upon the preclear having been actually moved or directed from one space to another by something. Change in space is the basic on all evaluation and thinking as it is known to Man. Remember that change in space in geographical area is like an evaluation of those areas. Thus you will find the most aberrative people in the bank, those people who have most changed the preclear in space. In running Acceptance Level Processing, be sure to stress accepting exterior direction, and be sure to stress acceptance in various forms of those people who have greatly directed the preclear and who then created a scarcity of direction either by not being there or by stopping direction.

You must also be aware of the fact that this technique, this process, is to a large degree an informative process and is addressed to the MEST body; it does not dispense with or displace other processes we now have.

The bracket method of accepting is also the method of wasting which could be run in Expanded Gita. In other words, in running wasting in Expanded Gita one should waste in brackets and have material forced upon in brackets. Acceptance Level Processing is a variation of Expanded Gita.

As a note which may be of interest: Expanded Gita was developed from phenomena discovered after I developed Creative Processing. It was originally plain Give-and-Take Processing, hence the Gita. Acceptance Level was developed by observing Expanded Gita in action. Expanded Gita and Acceptance Level are in effect the same process and so we are not dealing here with anything new.

There are a great many of these levels and one could easily compose a chart—and, indeed, I have composed a chart—called Character Processing—which is as yet of no enormous value, which lists the following levels: Acceptance (Grasp), Determent (Withdraw), Deprivation (Let Go), Interest (Reach), Intention, Enthusiasm, Spiritual, Applause, Death, Sonic, Visio, Tactile, Friendship, Enmity, Physical Strength, Emotional Strength, MEST Aid, Obedience, No Sympathy, Fear, Propitiation, Grief, Apathy, Agreement, Communication, Affinity, and Responsibility levels, by which a character could easily be read. An auditor who

knows his Scientology could without much trouble draw up this chart using as a guide the chart in *Science of Survival* or *Self Analysis*. As the use of these things comes to view or takes on sudden value, they may be included in later PABs. For instance, only somebody interested in control would be interested in specified levels; in processing we are only trying to raise the Acceptance Level of the individual high enough so that he can finally accept himself on all eight dynamics.

The apathy case resolves with this Acceptance Level, and much to many a preclear's surprise he finds apathy on the road up rather than below his operating level.

FUTURE PROCESSING

There is a basic rule which is covered in the first book and which was more specifically delineated by Fellow of Scientology Dick Halpern, that the psychotic is concerned with the past, the neurotic is barely able to keep up with the present, and the sane, as we jokingly called homo sapiens in 1950, are concerned with the future.

This division could be more specifically made by realizing that the neurotic is barely able to confront the present but that the very, very sane confront the present entirely and have very little concern for the future, being competent enough in handling the present to let the future take care of itself. Looking into the past and looking into the extreme future alike are efforts to avoid present time and efforts to look elsewhere than *at* something.

You have known people who would reply on an entirely different subject when asked about anything; when consulted concerning the weather, they would reply about a meteorologist. The inability to look *at* something becomes first manifest by thinking before looking; and then the actual target at which one should be looking is more and more avoided until it is hidden entirely in a mix-up of complications comparable to a government bureau. This is the mechanism of the post-hypnotic suggestion as covered in Book 1.

Here basically we have people's fear of things exploding. Any and every serious injury which has left the preclear hung up on the time track appeared to him at the time as an explosion and actually might have contained an electrical discharge. You will find preclears with ailing stomachs who will trace the moment when they began to have stomach trouble to the feeling that something had exploded in their stomachs. Thereafter they will be trying to keep the explosion from happening again and will avoid looking at the explosion. Running cycles of explosions as covered in PAB No. 12 resolves this condition. It permits people to look straight at things again without fear. People who wear glasses and, indeed, people who are blind, cannot look straight at something but must either avoid looking at it or not look at it at all.

The avoidance of reality is merely an avoidance of present time. Theta could be considered to be a sort of scanner which is motionless. It is not moving. The MEST universe is changing and interchanging, and the products and forms constructed and organized or regulated by theta change, and this change is in itself time. Time depends mainly upon the creation of new space in the MEST universe. It could be hazarded that new space is created in the MEST universe at the rate of $1/c$,* which is to say that each new motion of a particle is a creation of new space. What is happening is that the particle seems to be moving in space and the space is motionless. Space disappears at the rate of $1/c$ and new space is created at this rate. This gives to particles apparent motion. The boys in nuclear physics will be discovering this in a couple of hundred years but there is no harm in giving a tip-off of it here. This is of no great concern to the auditor but might clarify for him the apparent change of theta itself. If theta itself is apparently changing, remember that it is visible only because particles change. The theta is not moving; it is a true static.

An individual who will not look at the MEST universe must look either ahead of it into the future or behind it into the past. One of the reasons he does this is because there is insufficient action in the present to begin with; and then this thirst for action develops into an inability to have action and he decides that all must be maintained in a constant state and he seeks to prevent action. This also applies to pain. People who are somewhat out of present time have a horrible dread of pain, and people who are truly out of present time—as in a psychotic state—have a revulsion towards pain which could not be described. A person entirely within present time is not much concerned with pain and even might create some for the sake of randomness. Although people have hard words for the sadist, it must be remarked that the sadist rarely permits any pain to happen to himself.

The avoidance of work is one of the best indicators of a decayed state on the part of a personality. There are two common denominators to all aberrated personalities; one of these is a horror of work and the other is a horror of pain. People only mildly out of present time, which is to say, people who are categorized as sane, have already started to apologize about work in that they work toward an end reward and no longer consider that the output of effort itself and the accomplishment of things is sufficient reward in itself—thus the whole network of gratitude or admiration as necessary pay for energy put forth. The parental demand for gratitude is often reflected in a severely aberrated preclear who is given to feel he can never repay the enormous favors conferred on him by being worked for by his parents. Actually, they need not be paid; for, flatly, if it was not sufficient reward to do the work of raising him, they are beyond being paid; in other words, they could not accept pay.

Taking the very, very sane person in present time, one would mark a decline of his sanity by a shift from an interest in present time to an overwhelming interest in the future, which would decline into considerable planning for the future in order to avoid bad things happening in it, to, finally, a shunning of the future because of painful incidents, to a shuddering and tenuous hold on present time, and then an avoidance of both the future and present time and a shift into the past. This last would be a psychotic state and is, indeed, the definition of a psychotic state in Scientology.

An extremely effective remedy for a person whose concern about the future is great is the application of Creative Processing in brackets, having him mock up repeatedly and in great quantities, as in PAB No. 8, horrible things happening to himself, to others, and others making horrible things happen to others, all in the future. One would find out what this person had originally worked toward in the future, and then would discover its decline. One would then have horrible things mocked up to make the goal impossible and unreachable. In the case of a mechanic, one would have him mock up being fired, being mangled by the machinery, being left by his wife and children because he was only a mechanic, being shunned by the factory, making terrible mistakes which brought death to his fellow workers, having other people have similar things happening to them, and other people making other people undergo similar future experiences.

One holds on to things in the past on the postulate that they must not happen in the future. This sticks the person in the past. This is, in essence, the whole goal of education and experience. One is trying to instill into somebody sufficient fear of the future in order to cause him to be cautious. This, of course, holds the individual on the track.

The ultimate failure, of course, is death, and an auditor will be surprised how avidly a preclear will mock up his own death, death for members of the family now living, and how rapidly this will bring into view grief charges on people who are already dead. But one should not merely have the preclear mock himself up dead; one should have him dying several varieties of deaths; and then, of course, being put into a coffin, stuck in the body and unable to get out and lying there in a mouldering or formaldehyded corpse for aeons and aeons and never escaping. Edgar Allan Poe, by the way, is a wonderful source of such mock-ups.

This method of processing the future can be combined with SSSA.

Inaction and indecision in the present is because of fear of consequences of the future. Once one has made the preclear mock up these consequences in quantity, he can more comfortably face present time.

OVERT ACTS

Earlier material in Scientology has adequately covered the phenomenon of the overt act. More is known about this phenomenon today.

The overt act is the manifestation of retaliation. There are two types of overt acts. One is the simple motivator-overt act whereby something is done to the preclear and then the preclear does the same thing to somebody else. There is the second type called the DED-DEDEX wherein the preclear all out of his own imagination has done something to somebody else and then it has been done to him. In both of these one will find the motivator and overt act in a bundle and the DED-DEDEX in a bundle; in other words, the overt act phenomenon is the interlocking of incidents so that both incidents become more or less obscured.

There are several ways of undoing these. One of them is with Acceptance Level Processing. Where a person continues to complain about the things another person has done to him, all the auditor has to do is to discover what the preclear did to that person. In other words, a preclear who complains about A in actuality is suffering from a hunger of overt acts from A. The preclear has done something to A (or thinks he has done something to A) which makes it possible that A will retaliate. The retaliation has not occurred. This leaves the preclear with a hunger of overt acts from A. All the auditor has to do is listen to the complaints the preclear makes about the various people, and then have the preclear mock up as happening to himself these people causing dreadful things to occur to the preclear. This solves the bulk of overt act cases. Remember that the things happening to the preclear have to be done in quantity.

Another method of handling overt acts is to finish off the cycle of action. The preclear has wanted to kill somebody. He has wanted to kill somebody repeatedly and yet has not done so. The matter is obvious. One uses Creative Processing and has the preclear sufficiently and often in large quantities kill this other person. This finishes the cycle of action.

Yet another method is simply to have the preclear, without any further investigation of his case, start mocking up the side of the overt act phenomenon which seems to be missing. If this preclear is complaining about terrible things having happened to him, the auditor can be sure that the preclear has a hunger for things to happen to him. The preclear is started then on a process of simply having things happen to him. All manner of terrible things are made to occur to him at other people's hands. His father shoots him many times, his mother repeatedly strangles him, his dog bites his head off, his wife runs off with another man and so on and so on until the starvation is remedied.

In the opposite case where the preclear is tremendously pugnacious and very threatening toward all the world, the auditor can be certain that the preclear, by this dramatization in present time, is trying to fill in a stagnation of action against other people. In this case one simply has him kill, maim, blow up and generally dispose of in many ways, shapes and forms, a great many people, particularly those he says he would like to murder.

One must not omit the overt act phenomena concerned with spirits, ghosts and God. People who spend too much time propitiating God are in actuality certain beneath the surface that they deserve a great deal of punishment from that being. People get to such a level of identification with Christ that they will run the Crucifixion complete with somatics and, indeed, there are several instances in history where on the holiday of the Crucifixion persons spontaneously bleed from the “thumbs.”

Where you have an individual going into the valence of another individual, you have the overt act phenomenon so interchanged and mixed up that you are only certain of the fact that the preclear is in the valence of the other person. Handling this overt act phenomenon one would simply create with mock-ups many things happening to the person whose valence has been taken, and then, in reverse, the person whose valence has been taken making many things happen to the preclear. This is run back and forth, back and forth, first with the preclear receiving overt acts, then as the other person receiving overt acts, until the gap between the two personalities widens sufficiently to inhibit further identification. Where you have a preclear solidly in grandmother’s valence, you can be certain there was a lot of trouble between the preclear and grandmother. The way to run this is to have the preclear injuring, maiming and killing grandmother in various ways and then having grandmother injure, maim and otherwise harm the preclear. This is helped out by having grandmother injure others than the preclear and having others than the preclear injure grandmother.

In this manifestation of sudden assumption of valence on the death of an ally, the preclear is certain he is responsible for the death of that ally. He does not know how this can be, but he is certain that it has taken place. An auditor can be certain that the preclear, prior to the death of the ally, actually was guilty of many overt acts towards the ally. The death will not come to view until the auditor has run the preclear doing many things to the ally and the ally doing many things to the preclear as above.

In some of the very difficult cases, the most serious problem is this assumption of another person’s identity in this lifetime. The solution of this affords great relief to the preclear.

In honest truth, the reason the preclear is stuck in the MEST universe is the overt act phenomenon. Space, energy, objects and time have done so many overt acts to the preclear and the preclear actually has done so many overt acts in the opposite direction, that the preclear now considers himself MEST. If you happen to be processing a scientist, be sure to remember this: he is not only studying the significance which immediately followed the explosion (the total of which significance is that there has been an explosion), but is also guilty of a great many activities which he at least thought were detrimental to the MEST universe at large; and the MEST universe in the form of inflicted accidents, explosions and so forth, has done many acts to him. We find these fellows, quite ordinarily, with many physical attributes of the MEST universe; which is to say, impartiality, a rotund body (imitating planets) and in a situation of stopped motion which would do credit to a policeman, or a Federal court judge.

SOP-8-C: The Rehabilitation of the Human Spirit

Scientology, the science of knowing how to know, has been developed for various applications in the field of human experience.

Where it is utilized by skilled persons to enhance the personal ability and knowledge of others, the recommended process is Standard Operating Procedure 8-C.

SOP-8-C was developed after almost a year of observing SOP-8 in action in other hands than mine, and after observing the frailties and talents of human auditors. SOP-8-C might be called SOP-8 modified for clinical, laboratory and individual human applications.

The goal of this system of operation is to return to the individual his knowledge, skill and knowingness, and to enhance his perception, his reaction time and serenity.

It is entirely incidental that SOP-8-C is effective on "psychosomatic" illness, on human aberration and social difficulties. It is not the intent or purpose of Scientology to repair. The science is a creative science. Despite the fact that human illness, disability and aberration uniformly cease to be because of Scientology, the effect is not intended to be primary and the goal of SOP-8-C is not their remedy. Indeed, if SOP-8-C is used to remedy these only, it fails as a system. SOP-8-C succeeds only when it is addressed toward higher knowingness and beingness—ironically, in using it, human ills vanish only when the auditor concentrates on the goals of the system and neglects the obvious physical disabilities of the preclear.

In that one creates that which one concentrates upon, a treatment of illness which validates it in treatment will always tend to be unsuccessful.

SOP-8-C was the subject of the Camden Indoctrination Course B [2nd American ACC], from November 16 to December 23, as well as the subject of the Phoenix International Congress of December 28, 1953.

Specifically, the use of these processes obtains, when correctly used, without further evaluation for, or indoctrination of the preclear, the knowledge that he is not a body, that he is a creative energy production unit, and demonstrates to him his purposes and abilities.

This energy-space production unit we call a "thetan," that being a coined word taken from a mathematical symbol, the Greek letter "theta" [θ]. This is the preclear. One does not send "one's thetan" anywhere. One goes as a thetan. When a preclear is detected being in one place and finding "his thetan" in another ("I'm over *there*") he is not exteriorized. To be "exteriorized" the preclear must be *certain* that he is outside his body. An uncertain "exteriorization" requires more work before it becomes an exteriorization.

SOP-8-C brings about a condition designated as "theta clear." This is a relative, not an absolute term. It means that the person, this thought unit, is clear of his body, his engrams, his facsimiles, but can handle and safely control a body.

The state of Operating Thetan is higher than Theta Clear and means that the person does not need a body to communicate or work. It is accomplished with SOP-8-0.

The highest theory of SOP-8-C is that the being is engaged upon a game called Physical Universe. This is a game requiring barriers, which is to say, walls, planets, time and vast distances (which last two are also barriers). In engaging upon this game he has at last become so conscious of barriers that he is limited in his actions and thoughts. He thinks, in the case of

homo sapiens, that he is a body (a barrier) hemmed in by vast distances (barriers) and pinned in a time stream (a system of moving barriers) so as to reach only the present. These combined barriers have become so formidable that they are not even well perceived, but from being strong have become unreal to him. The matter is further complicated by “invisible barriers” such as the eyes or glasses.

In actuality, the thetan is a knowingness, total in a cleared state, who yet can create space and time and objects to locate in them. He reduces his knowingness only to have action. Knowingness is reduced by assuming that one cannot know or knows wrongly. Knowingness is reduced by assuming one must be in certain places to perceive and so know, and that one cannot be in certain places.

Space is, but does not have to be, the first barrier of knowingness. With Scientology we have the first definition of space—*Space is a viewpoint of dimension*. Given a viewpoint and four, eight or more points to view, one has space. Space is a problem of observation, not of physics.

There is no question here of whether space, energy or objects are real. Things are as real as one is certain of their reality. Reality is, here on Earth, agreement as to what *is*. This does not prevent barriers or time from being formidably *real*. It does not mean either that space, energy or time are illusions. It is as one knows it is. For one makes, by a process of continuous automatic duplication, all that one perceives. So much for theory-in application this theory obtains results of considerable magnitude in changing beingness.

The thetan is continuously engaged upon cycles of action. The basic cycle of action is “Create, resist effects (survive) and destroy.” This can be stated in various ways: “Create an object, have it resist effects (survive) and then destroy it.” Or, “Create a situation, continue it and change it, and destroy or end it.” When a thetan leaves a cycle which is important to him unfinished, he tends to strive to finish it elsewhere or later in disrelated circumstances. Further, he can become overly concentrated upon creating or persistence (surviving) or upon destroying and so form an unbalanced state of beingness.

Time exists in those things a thetan creates. It is a shift of particles, always making new space, always at an agreed upon rate. A thetan does not change in time, but as he can view particles (objects, spaces, barriers) from many viewpoints, he can consider himself to be in a “time stream,” which he is not. A thetan’s ideas (postulates, commands, beliefs) change; particles change; the thetan does not change either in space or in time.

Just as he is making an effort to do something he cannot help but do—*Survive*—he is also fighting against doing the only thing he does—sit fixed in one “position.”

The thetan, to produce interest and action, operates as a paradox. He cannot die, so he firmly insists and proves continually that he can die. He never changes location, but only views new locations and constantly lives in horror of being fixed in time and space. Above that, he knows the past and the future and all of the present, and so fights to obscure the past and guess the future.

Less theoretically, the individual who is processed is at first, usually, “in” the body and perceiving with the body’s eyes. When exteriorized (placed “three feet back of his head”) he is actually out of the body and still “in” physical universe space. He can, exteriorized, move about and be in places just as though he had a body, seeing without eyes, hearing without ears, and feeling without fingers—ordinarily better than with these “aids.” This is not like “astral walking” which is done by the individual who “sends a body” or a viewpoint to some other place and perceives with it. A thetan is as much present where he is as if he were there in body. He isn’t “somebody else” than the preclear moving dimly about. He is the preclear, he is there. At first he may be uncertain as to what he is seeing. This faculty becomes better as his ability to look, hear and feel while exteriorized improves. SOP-8-C improves this perception. Because the body only perceives what the thetan is perceiving anyway, looking, feeling, hearing of the body is also better with SOP-8-C but this is only incidental.

When a thetan believes too thoroughly he is a body, he is generally unhappy, afraid, doubts his own (and validates the body’s) existence and worries about his inabilities. When he is out of the sphere of influence of the body (a very small one) he becomes serene, confident and knowing. He can handle a body better, can act faster, can recall more and do more while exteriorized than he can while in a body.

Society, thirsting for more control of more people, substitutes religion for the spirit, the body for the soul, an identity for the individual and science and data for truth. In this direction lies insanity, increasing slavery, less knowingness, greater scarcity and less society.

Scientology has opened the gates to a better world. It is not a psychotherapy, nor a religion. It is a body of knowledge which, when properly used, gives freedom and truth to the individual.

It could be said that Man exists in a partially hypnotized state. He believes on other-determinism in many things, to his detriment. He will be as well as he is selfdetermined. The processes of Scientology could be described as methods of “unhypnotizing” men to their own freer choice and better life.

THE USE OF SOP-8-C

This process is designed to be administered by one person (the auditor) to another (the preclear).

SOP-8-C is first used step-by-step from Step I on until the person to whom it is addressed *knows* he is back of his head and no longer in the body. If the preclear is very difficult to exteriorize, the person should be referred to an auditor trained at the HAS Clinical Center (for there are special methods of exteriorization for difficult cases which are contained in but are not at once visible in SOP-8-C). The first three steps are exteriorization steps. They should be repeated over and over until certain exteriorization takes place.

The auditor can go through the first steps many times one after the other with the preclear until exteriorization occurs. Doing Steps IV to VII on a person not exteriorized should be minimized. (Earlier SOPs used all seven steps for exteriorization, a practice not followed in SOP-8-C, where only the first three steps are used.)

When the preclear has exteriorized one then begins again with Step I and continues to Step VII, in order, with the preclear exteriorized. Here in SOP-8-C the emphasis is upon an exteriorized thetan. When the auditor has taken the exteriorized preclear thoroughly, and *correctly*, through Steps I to VII at least twice, one has then what may be considered a theta clear.

To repeat, one uses SOP-8-C Steps I to III in that order. On one of these, the first time through, the majority of people exteriorize with certainty. As soon as exteriorization takes place, the auditor starts with Step I again, does it thoroughly on the exteriorized preclear, then the auditor applies Step II thoroughly and so on until all seven are done.

The auditor knows when the preclear exteriorizes by asking him or by the preclear volunteering the information. **CAUTION:** Do not ask the preclear to look at his body .

If the preclear fails to exteriorize sometime during the first three steps, the auditor should simply do them again. If the preclear fails the second time, the auditor patiently goes through them a third time, and so on. If the matter then seems too difficult, contact an auditor trained during late 1953 at Camden, by the HAS itself.

The least possible result in going over these first three steps many times will be a considerably bettered condition of the preclear, superior to all past results. Only a very few preclears fail to exteriorize after Steps I to III have been several times repeated. **CAUTION:** Although this process is as foolproof as it can be made, it can be maliciously used in this wise: by giving the preclear constant losses—by giving him no chance to win—by bullying him—by evaluating for him—by insisting he is “outside” when he is not—by invalidating him—by pretending to see him or his mock-ups or saying that one does if he does.

SOP-8-C FORMULAS AND STEPS

Opening Procedure: (10 minutes to two hours—with MEST body)

- (a) Send preclear to exact places in room, one place at a time.
- (b) Have preclear select places in the room and move to them one at a time, still under auditor’s direction.
- (c) Have preclear drill in physically holding on to and letting go of objects and spaces on his own decision to hold on, decision to let go.

Step I: Location

PRE-LOGIC: *Theta orients objects in space and time. AXIOM: In life experience space becomes beingness.*

FORMULA I: *Permitting the preclear to discover with certainty where people and things are not in the present, past and future recovers sufficient orientation to establish his knowledge and certainty of where he is and they are; the application of this is accomplished by negative orientation of beingness, havingness and doingness on each of eight dynamics in the present, past and future.*

STEP I

(a) Ask preclear to be three feet back of chair. Ask him for things, people which are not giving him directions (orders). For things, persons he is not giving orders to. For things, persons which are not giving directions to other things. Ask preclear for goals he does not have. For goals others do not have for others. For goals another does not have for him. For goals he does not have for another. For persons he is not. For animals he is not. For places where he is not. Where bacteria are not. Where objects are not. For places where he is not thinking.

NOTE: All of the above are done in "brackets" for present, past, and future.

(b) (If exteriorized) Have him drill while exteriorized into holding on to and letting go of objects on his specific decision. Ask him to be in places which are safe, dangerous, pleasant, unpleasant, beautiful, ugly.

Step II: Bodies

AXIOM: *In life experience energy becomes doingness.*

AXIOM: *Compulsive position precedes compulsive thinking.*

AXIOM: *That which changes the preclear in space can evaluate for him.*

FORMULA II: *Permit the preclear to discover that he handles bodies and allow him to handle bodies in mock-ups and actuality; and remedy his thirst for attention which he has received by contagion from bodies.*

STEP II

(a) Have preclear mock up bodies and un-mock them. Have him get somethingnesses and nothingnesses of bodies until he feels better about them. Ask him to be three feet back of chair.

(b) (If exteriorized) Have him complete II(a) many times and then move body while he is outside.

Step III: Space

PRE-LOGIC: *Theta creates space and time and objects to locate in them. DEFINITION: Space is a viewpoint of dimension.*

AXIOM: *Energy derives from imposition of space between terminals and a reduction and expansion of that space.*

FORMULA III: *Permit the preclear to regain his ability to create space and impose it upon terminals, to remove it from between terminals and to regain his security concerning the stability of MEST space.*

Step III

(a) Have preclear hold two back comers of room and not think.

(b) (If exteriorized) Have preclear complete spacation.

NOTE: If not exteriorized return to Step I.

Step IV: Havingness

AXIOM: *In life experience matter becomes havingness.*

OBSERVATION: *To a thetan, anything is better than nothing.*

OBSERVATION: *Any preclear is suffering from problems of too little havingness and any reduction of his existing energy, if not replaced, will cause him to drop in tone.*

FORMULA IV:

(a) *The remedy of problems of havingness is accomplished by creating an abundance of all things.*

(b) *As the preclear has rendered automatic his desires and ability to create and destroy, and has thus placed havingness beyond his control, the Auditor should place in the control of*

the preclear his automaticities of havingness and unhavingness and permit him, on his own self-determinism, to balance his havingness.

(c) How to make havingness: Have preclear put out eight anchor points of size, thus creating a space. Have him pull in these eight to the center and have him retain the resulting mass. Do this using large and various objects for anchor points. Do this until he is willing to release such old energy deposits as engrams and ridges but still continue to make havingness.

STEP IV

Have preclear remedy problems of havingness by mocking up and pulling together sets of eight anchor points. Do this many times. Do not have him make anchor points explode in this fashion. Have him save masses thus created. Have preclear adjust anchor points in body.

Step V: Terminals

AXIOM: Space exists by reason of anchor points.

DEFINITION: An anchor point is any particle or mass or terminal.

AXIOM: Energy is derived from mass by fixing two terminals in proximity in space.

AXIOM: Self-determinism is related to the ability to impose space between terminals. AXIOM: Cause is a potential source of flow.

AXIOM: Effect is a potential receipt of flow.

AXIOM: Communication is the duplication of the receipt point of that which emanated at a cause point.

AXIOM Wrongness in terms of flow is inflow.

FORMULA V: The thetan is rehabilitated as to energy and terminals by remedying his postulates about outflow and inflow and drills relating to the outflow and inflow of energy according to the above axioms.

STEP V

(a) Ask preclear for times he could do something. Times when he couldn't do anything. For things he can do. For things he can't do. For things other people can, can't do. For things other people can do for others. For things another specific person can't do for him. For things he cannot do for another or others.

(b) Ask preclear for objects, actions, persons, ideas he is not destroying. For objects, actions, persons, ideas he is not making survive (persist). For objects, actions, persons, ideas he is not creating. Present, past, and future in brackets. (NOTE: Ideas are the most important here, in brackets.)

(c) Ask preclear for objects, persons, energies, times which are not touching him. Which he is not touching. Which are not reaching for him. For which he is not reaching. For objects, persons, times from which he is not withdrawing. Which are not withdrawing from him. In brackets.

(d) Ask preclear for sights which will not blind him. For people he will not blind if they see him. For noises which will not deafen him. For people he will not deafen. For spoken words that will not hurt him. For spoken words which will not hurt others. In brackets.

(e) Ask preclear for ideas that will not destroy, cause to survive (persist), create, or upset others. In brackets.

(f) Ask preclear for ideas, sounds, sights that will not fix people or unfix them from specific places.

(g) Ask preclear for ideas he is not trying to fix in things. For ideas he is not trying to unfix from things. In brackets.

(h) Have him unmock and mock up terminals and move them together and apart until he can make them generate currents.

Step VI: Symbolization

DEFINITION: A symbol is an idea fixed in energy and mobile in space.

FORMULA VI: The thetan who has been moved about by symbols is strengthened by mocking up and moving about and fixing in space ideas which have formerly moved him.

STEP VI

Have preclear create symbols which mean nothing. Ask pc for ideas he is not trying to destroy. For ideas he is not trying to make survive (persist). For ideas he is not trying to create.

NOTE: The above are done in brackets. Have him mock up ideas and move them about.

Step VII: Barriers

AXIOM: The MEST universe is a game consisting of barriers.

DEFINITION: A barrier is space, energy, object obstacles, or time.

FORMULA VII: Problems of barriers or their lack are resolved by contacting and penetrating, creating and destroying, validating and neglecting barriers by changing them or substituting others for them, by fixing and unfixing attention upon their somethingness and nothingness.

STEP VII

(a) Have preclear reach and withdraw (physically; then as himself) from spaces, walls, objects, times.

(b) Have preclear do six ways to “nothing.”

(c) Have him create and destroy barriers.

Step VIII: Duplication

FUNDAMENTAL: The basic action of existence is duplication.

LOGIC: All operating principles of life may be derived from duplication. AXIOM: Communication is as exact as it approaches duplication.

AXIOM: Unwillingness to be cause is monitored by unwillingness to be duplicated. AXIOM: Unwillingness to be an effect is monitored by unwillingness to duplicate.

AXIOM: An inability to remain in a geographical position brings about an unwillingness to duplicate.

AXIOM: An enforced fixation in a geographical position brings about an unwillingness to duplicate.

AXIOM: Inability to duplicate on any dynamic is the primary degeneration of the thetan.

AXIOM: Perception depends upon duplication.

AXIOM: Communication depends upon duplication.

AXIOM: In the MEST universe, the single crime is duplication.

FORMULA VIII: The primary ability and willingness of the thetan to duplicate must be rehabilitated by handling desires, enforcements and inhibitions relating to it on all dynamics.

STEP VIII

(a) Ask preclear for actions, forms and ideas which do, do not duplicate specific other people. For actions, forms, ideas by which specific other people do, do not duplicate specific other people. For actions, forms, ideas of others which do, do not duplicate him.

(b) Have preclear duplicate physical objects and people and possess himself of duplicates.

(c) Have him make “no-duplicates” of objects and people.

(d) Have him duplicate somethings and “nothings.”

GROUP C

“Group C” is a process used on large numbers of people. It is composed of the following steps of SOP-8-C: Step I(a), Step II(a), Step III(a), Step V(a) to (h), Step VI, Step VII, Step VIII.

GLOSSARY

Pc stands for “preclear,” a person being processed.

Mock-up: A self-created image the preclear can see.

Bracket is done as follows: For preclear, for another, others for others, others for self, another for preclear, preclear for another. See Step I(a).

Special note: The first three steps of SOP-8-C could be classified as beingness steps. The remaining five steps of SOP-8-C could be classified as havingness steps. SOP, itself, in all eight steps constitutes doingness, thus approximating as described in *Scientology 8-8008* the space-be, energy-do, time-have triangle.

Special note: In its entirety, SOP-8-C could be considered as various exercises in Formula H, which involves the most basic action of the thetan, which is reaching and withdrawing.

Special note: It will be noted that the negative orientation techniques are done in such a way as to make the preclear, without his being told to do so, create space. The auditor should pay specific attention when the preclear is discovering where things are *not* that the preclear be caused to note specifically each time the exact location and position where the thing does not exist. This calls the preclear's attention to various positions which in themselves, thus located, create space. Thus, throughout SOP-8-C, the rehabilitation of space is also to be found, the definition of space being "space is a viewpoint of dimension."

Special note: In his auditing, if the auditor does not get a communication change on the part of the preclear, whether better or worse, every five or ten minutes, either the auditor is using the wrong step at the time, in which case he should progress on into the steps; or the preclear, even if he says he is, is not complying with the auditor's orders. The auditor, thus, should remain in continuous communication with the preclear so far as possible and should ascertain with great care what the preclear is doing after he indicates that he has complied with the direction and discover every five or ten minutes if there has been a change in certainties or communication. The commonest source of failure in any step in SOP-8-C is a failure on the part of the preclear to execute the order given as it was intended to be executed, or on the part of the auditor in failing to ascertain whether or not the preclear is executing properly or if there has been a communication change. A careful check of auditors and preclears utilizing SOP-8-C has demonstrated in each case where its use was becoming lengthy that the auditor was failing to ascertain from the preclear whether or not there had been communication changes, and it was also uniformly discovered that the preclear who was failing to get results while being audited with SOP-8-C was not doing the steps as directed but was either avoiding by not doing them at all, although he said he was doing them, or was failing to understand the direction and so was executing the step in some other way.

The first goal which an auditor must achieve is willingness in the preclear to receive directions. The condition of the preclear is such, in nearly all cases, that he has chosen, as a main point of resistance in life, direction of himself other than his own. Because the physical universe is designed to resist and overcome that which resists it, a continuous resistance to other direction than one's own results finally in a loss of ability to greater or lesser degree to direct oneself. In that it is the ability to direct himself which the auditor is seeking to return to the preclear, it must be demonstrated to the preclear solely by the process of good auditing that other direction is not necessarily harmful or in the worst interest of the preclear. Thus, to some degree, he ceases to resist incoming direction, and by ceasing to resist it, no longer validates it as a barrier, and so is not concentrating attention on resisting direction but is able to use it freely in his own self-direction. The self-determinism of a preclear is proportional to the amount of self-direction he is capable of executing and deteriorates markedly when a great deal of his attention is devoted to preventing other direction. Directing himself, the preclear becomes capable of execution; preventing direction of himself (resisting the direction of others) brings about a condition where he is mainly devoted to resisting his environment. The latter results in a diminishing of space of the preclear.

The first step in the rehabilitation of the preclear in self-direction is therefore a limiting of the amount of resistance he is concentrating on "other direction" and demonstrating to him that his following of the steps of SOP-8-C under the direction of an auditor is not harmful but, on the contrary, increases his command and control of himself and brings him at last to the point where he can neglect and ignore the continuous stimulus-response operation of the physical universe.

It can be seen clearly then that the auditor who sets himself up to be resisted will fail, for the preclear is mainly concentrating upon resisting the auditor. This is the primary factor in all auditing.

The preclear is brought to a point of cooperation in terms of direction without the use of hypnosis or drugs and without argument or "convincingness" on the part of the auditor, by which is meant overbearing demeanor. At the same time it should be the sole intention and operation of the auditor that his own directions be carried out explicitly by the preclear, and that these be performed with a minimum of communication break and with a maximum of affinity, communication and reality.

Using the formula that that which changes the individual's position in space can evaluate for the individual, the auditor in using SOP-8-C should use, at the beginning of the first session and in any session where the preclear becomes unreasonably uncooperative in

following simple directions, the following procedure. The auditor has the preclear walk to specific points in the room, touch, hold and let go of various specific objects. The auditor should be very exact in his directions. The auditor should do this even on an apparently cooperative case at least twenty minutes before going on to the next step in Opening Procedure.

When the preclear, drilled in this fashion, has at length realized without being told that the auditor's directions are quiet, reliable, exact and to be performed, and not until then, the auditor uses this process:

Preclear is asked to send himself to various parts of the room and do specific things. The auditor is very specific and exact about this, in that he has the preclear decide, on his own determinism and before moving from the spot where he is standing, what part of the room he is going to send himself to. When the preclear has decided this, and only then (but not necessarily telling the auditor), the preclear then takes himself to that part of the room. The auditor must be very exact that the decision to go to a certain part of the room and to reach or withdraw from a certain thing is made before the preclear takes an actual action. And then the auditor should make sure that the preclear has done exactly what he decided he would do before he moved. In such a wise, coached by the auditor, the preclear is led to direct himself to various parts of the room until he is entirely sure that he is directing himself to certain parts of the room and that the orders are coming from nobody but himself. Of course, before each new place is chosen, the auditor tells the preclear to choose a new place and tells him when to go there.

The third stage of this Opening Procedure is then as follows:

The auditor has the preclear be in one spot in the room and then has the preclear decide there to go to another spot in the room. The preclear leaves. The auditor has the preclear change his own mind, and go to yet another spot. This last is done to lessen the preclear's fear of changing his mind, to strengthen his decision and to lessen his reaction to his own mistakes.

The last two steps of Opening Procedure are done at some length. It is profitable by the experience of many auditors to spend as much as an hour on Opening Procedure even in a case which is not in poor condition. When Opening Procedure is omitted or is not carried on far enough, the auditor may discover that it will take him from five to ten hours to "get the case working." This time is saved by the expenditure of much less time in using Opening Procedure. Even when the preclear is complacent, even when the preclear is an obvious "Step I," even when the preclear shows no outward sign of resistance to other direction than his own, the first communication lag lessening which the auditor will perceive on the case will probably occur during the use of Opening Procedure. Further, the certainty of the case is heightened. Further, Opening Procedure is, for any level of case, an excellent process.

The preclear who is familiar with SOP-8 may conceive that he is doing a step which is "reserved for psychotics." The preclear should be disabused of such a concept, since the step is used today on all cases.

In the case of a preclear who is very resistive, Opening Procedure can be used with considerable profit for many hours. For such activity, however, an auditing room of the usual dimensions is usually too constrictive and the drill may be carried on as well out of doors even if only on a street.

THE CIRCUIT CASE

The auditor will encounter many cases which resolve very rapidly. These account for fully 50% of the people who come to him, but he will also encounter many people whose cases are resistive, and he will encounter a small handful who wouldn't let anything happen if the auditor used a shotgun on them. These last are classified as "Circuit Cases."

The characteristic of these cases is that they are occluded—which is to say that they are studying the significance of things, that they always think before they look, that they want to know before they go, that they are relatively motionless in space, and that they are holding motion in many ways.

The resolution of such cases as outlined in PAB No. 12 is not difficult, but there is a trick about these cases which the auditor should understand.

I would no more audit one of these people without an E-Meter than I would use psychiatry on them. For this case very often pretends to run one thing when it is running quite another, and only the response of a needle will tell the auditor whether or not the case is doing anything. The case merely might be lying there agreeing about it and thinking.

The Iroquois Indian had an illness which he called "the sickness of long thinking." The auditor would do well to keep this illness firmly in mind when processing resistive cases. These cases are sick of thinking and they will go on thinking and go on computing until they are quite dead, for they cannot be brought to look without rather extraordinary means. Acceptance Level Processing is quite welcome to these cases. Formula H is extremely welcome to them and these, indeed, get the case up to a point where it can be run on such things as SOP 8.

The auditor knows he is looking at a circuit case when, during auditing, the case does not demonstrate a physical reaction as a result of the auditor's processing; that is to say, the case does not move around. In old-time Dianetics the case which said it was running a prenatal and yet which had no tendency to curl up in a ball, no matter how slight, was actually thinking about running a prenatal.

I wish to state this very strongly about such cases: they are often very convincing and can be mistaken by the auditor for a wide-open case. On reviewing a number of cases in processing which have been reported to me as wide-open cases and on looking at these cases themselves, I find that the auditor was actually auditing a Resistive V, which yet had learned enough patter to go on and run things.

Some cases which actually did have sonic and visio were another type which falls into the same category. These are what we call the "wide-open case." The wide-open case is actually a psychotic who duplicates continuously and psychotically.

Anyone has a time track and anyone duplicates. The wide-open case is thoroughly sure that it is duplicating, is actually under a compulsion to duplicate, but doesn't duplicate. It doesn't look at things enough to duplicate. It dubs in an entire track.

We have today very little concern with all this beyond a very important fact. The auditor is there to audit the preclear. The preclear is there to be audited. At that point where cases become difficult, this is what is happening: the auditor's auditing the preclear, and then the preclear is auditing something else. The preclear isn't being audited; the auditor is doing a second-hand audit of a circuit. This doesn't get a case anywhere. The auditor in this wise is actually sitting there watching the manifestation of self-auditing.

In *Six Steps for Self-Auditing* we have more or less licked the problem. An individual can now with some success audit his own case. But this is still difficult on very low-toned cases, for these people will put the *Six Steps for Self-Auditing* to work so remotely from themselves that they will actually find the two upper corners of the room with a ridge; and, indeed, I have discovered a preclear doing this. I asked a preclear after nothing had happened for ten minutes what he really was doing and made him go into it in detail. (Any success I have in auditing is the result of communicating with the preclear, a procedure which is recommended.) The preclear finally permitted it to be beaten out of him verbally that he was taking a ridge which was across his chest and had put two corners of this ridge up to the two corners of the room and was making the ridge hold on to the two corners of the room. Astonishingly enough, this did not entirely defeat processing because this ridge consisted of overt acts and motivators and these were flowing off and the preclear was sitting there looking at them. But this was not auditing the preclear, this was auditing via the preclear a circuit in which I was not even vaguely interested. The preclear is so used to being employed by life as a servomechanism that he will very often simply relay the commands he is given to a something else; and this is the condition for which an auditor must be alert.

Back in 1947 I was using anything that worked and was employing hypnotism and psychoanalysis in addition to what I had learned about engrams and other factors in life. The psychoanalyst learned from Freud that there are some cases who simply stand back and look at themselves and who do not participate in the activities. The homosexual, according to Freud, is one of these. I do not know as to that, as the finding has not been borne out in my own work, but I do know that I had many preclears who did not actually participate in the process of being processed. I solved this in some of these cases rather drastically by misdirecting the preclear's attention. One case I remember of a young man who never seemed to audit anything I asked him to audit and who was far too alert to his surroundings to be interested at all in remedying his attitude towards those surroundings. I put a vase of flowers on my desk and knocked them off with a crash and immediately said, "You're perfectly safe; now let's really run through this." I know now that this Indian technique of getting immediate attention snaps the effort of the preclear which is being devoted to holding an engram at bay away fast enough for the engram to collapse. Good or bad, the young man got well. It is not a process I would particularly recommend. On a test case using this, about a year ago, I had a preclear have a ridge blow up with a considerable explosion which immediately thrust the preclear into apathy and it took me about three hours of heavy slogging with what I knew then to bring the preclear back up to normal. At least, however, the preclear was not in the same attitude.

If you have any reason to suspect that you are auditing somebody who is auditing somebody else, all you have to do is to get into very close contact with the preclear and guide him through very carefully the *Six Steps to Better Beingness* as contained in PAB No. 7. This can be varied with PAB No. 12's cycles of explosions. Just be sure the preclear is actually doing what you want him to do and do it in such a way that the preclear actually gets interested in doing it and you will find the case advancing rapidly.

If the condition still continues, use Step VII of SOP 8. You will find that it is very productive and should be used on such a case for a rather long time.

THE ENTIRE PURPOSE OF THINKING IS TO COUNTERACT THE LOSS OF THE ABILITY TO GENERATE FORCE. ONLY IN THE ABSENCE OF FORCE IS THINKING NECESSARY.

**TWO ANSWERS TO CORRESPONDENTS:
THE NON-PERSISTENCE CASE AND RIDGE RUNNING**

Here are two answers to correspondents which are of interest to other auditors:

1. THE NON-PERSISTENCE CASE

“You write about a preclear that cannot persist for more than half a second. You say that it does not matter whether he is attempting to do a mock-up, a concept, a matched terminal or a feeling. I have not had this complaint from other auditors, but there is a general type of case known as the ‘non-persistence case.’ This is a gradient scale, of course, which starts in with the preclear who puts up a mock-up but, due to blackness, the thing disappears almost immediately. It disappears so fast he cannot see it. Of course, he himself will go on putting up mock-ups as long as you tell him to go on putting up mock-ups, and soon he will have one that he can perceive. The energy he puts up there is too slight when in contest with the tremendous saturation abilities of the blackness with which he is surrounded. Now your statement here is quite unique. I would say offhand that this person is in extremely bad condition and is actually a Step VII. I would start in training this person on reaching and withdrawing from MEST, and I would keep him on this until he had a wonderful sense of reality about being able to hold on to MEST. Just use Step VII as given in Issue 16-G.

“The basic trouble with this preclear is, of course, in the matter of location. If you recall the Prelogics, theta locates things in time and space and creates space and things to locate in space. Close order drill for a military squad on the part of the sergeant eventually places the sergeant in the position of being able to evaluate for every private there. This is probably the only reason privates can be made to attack machine gun nests. Now the trouble with your preclear is impersistence. He cannot locate anything anywhere, but actually he cannot stay anywhere. He is racing around in his mind at such a mad rate that he is unable to take a stand anywhere against anything. This sounds like a very severe dispersal case running on enough fear to defeat the Russians. His solution is to keep running. You are asking him to stand still and hold something. He knows he cannot hold anything. The obvious thing to do with this preclear is to give him some close order drill yourself until you are able to evaluate enough for him to make him start evaluating a little bit for himself.

“The way I would handle this case would be to have the preclear move to various parts of the room and stop still while I counted ten. Then I would move him to another part of the room and have him stop still while I counted ten again. In other words, I would move him around until he would listen to me. He would do this with his physical body well enough, and after that one could tell him with some effect upon him that he should do this or that. Now I would have him take his hands and reach towards the realest thing in the room to him and pick it up and examine it and then put it down and withdraw from it. I would have him go and pick it up and move it to some other part of the room and withdraw from it again. I would have him do this with numerous objects until he was perfectly confident of being able to reach and withdraw from MEST. I would keep this up until this preclear was stable beyond stable. Only then would

I go into processing with him. I would have him do mock-ups and then go straight into SOP 8. He could use, of course, ‘remembering something real’ and so forth with great effectiveness.

“This brings to mind the fact that the occluded case is too fixed, he is fixed in position and does not conceive himself able to move. He also could use a lot of reaching and withdrawing, but in the case of an occluded case who tended to persist too long and was very slow in his replies, who insisted on holding his mock-ups endlessly, I would ask this case to put himself in various parts of the room or the yard, and I would move him this way and that, until he suddenly realized he could control his own body. The occluded case really does not realize he can control his own body. A very funny and effective method of bringing him into this realization is to have him sit down and flap his hands vertically up and down with considerable violence, and simply to keep on flapping his hands until he realizes fully and completely that it is he who is flapping his hands. You would be surprised at the reaction on this even when used on a very sane individual.

“In closing let me assure you that when you hit on work in any form, run best with Expanded Gita in brackets, you are heading into the center of what’s wrong with a human being.”

2. RIDGE RUNNING

“An interesting variation of ridge processing is to consider the ridge, as preclears often do, as an entity or a being with a life of its own. This is generally used when the preclear says that he has a spirit or a guiding angel or is haunted by a dog at his throat or some such thing, which the auditor knows is only a ridge activated by the preclear himself.

“Instead of trying to disabuse him of the idea, the auditor makes the preclear process the ridge as an auditor, which is to say he makes the preclear into an auditor for the ridge. Circuit cases and occluded cases are always sitting way up above the case processing something else as though they were an auditor, and an auditor auditing them is actually an auditor auditing a person who is auditing a ridge. Hence the slow progress of such cases.

“In any event, in this method of handling ridges, the auditor has the preclear make the ridge find the two upper corners of the room, just as Step III in SOP 8, and make the ridge hang there from the two upper corners of the room and not think (that is to say, the ridge isn’t supposed to think). The astonishing part of this technique is that it will generally show up some sort of a double overt act mechanism. This will immediately come to view. The auditor should resist the temptation to audit the overt act but just continue with this process. The ridge may turn into some kind of a bird, or some horrible figure with a gruesome face, but after a while the preclear loses his fear of the thing. After all, he does have it hanging up there, black and ugly though it may be, on the two upper corners of the room. The preclear may have removed this thing from his own eyes or from his mouth or from his chest or from his stomach and hung it up.

“After the ridge has been suspended there for some time (for ridges of this character do not easily dissipate when grounded), the auditor then has the preclear move it all around the room, turn it upside down, put it behind him, put it under his feet, until the preclear is at length entirely contemptuous of the thing and bored with it, at which time he will throw it away.

“This does not resolve the case but it takes considerable pressure off the case and is one of the steps of upward progress. There are no instances on record yet of the ridge exploding when treated in this fashion, and no particular reason why there should be such instances.”

PROFESSIONAL AUDITOR'S BULLETIN

From L. RON HUBBARD

Via Hubbard Communications Office
163 Holland Park Avenue, London W.11

[1954, ca. early March]

The following is a report as submitted giving some idea of what can occasionally happen in running Certainty Processing.

I am publishing this report mainly because it demonstrates the essential ingredient of a successful auditor—nerve. An auditor who doesn't have nerve—the clean, cold courage necessary to plough through and blast a case to ribbons when it starts to run that way, and bring the preclear up all in one piece—has no business auditing.

REPORT ON CERTAINTY PROCESSING
July 11th, 12th and 13th, 1953

Preclear — Student, aged 24
Auditor — Eileen Hibberson HPA, of "Magic Casements"

Auditor's postulate "to take a shortcut across the case" by deliberately finding the buttons and working on the fundamental certainties, and with the preclear's agreement and co-operation the techniques to be intensified, i.e. to work preferably on double terminals instead of matched terminals.

Saturday, the 11th July. Tone scale first on auditor (on double terminals) then tone scale on himself—in each case changing colors of mockups—gradient scale from apathy up tone scale to clear theta clear.

Ran certainty on double terminals "I am in my body" (positive and negative in brackets). Maybe's and breaking down of ridges indicated on E-Meter. Needle seemed to be making sudden rising jerky thrusts on the upper end on the tone scale. Session completed by anchor points, Spacation, Geographical and then ARC list, followed by tone scale as commencement of session.

Second session same day. Tone scale gradient scale on double terminals. Certainty "Mother is there" (positive and negative in brackets). At one time preclear got a swift facsimile of a distant past life. Ended with anchor points and tone scale gradient scale on auditor and preclear ARC list.

Sunday, the 12th July. Tone scale gradient scale to clear theta clear auditor and preclear—double terminals. Anchor points.

CERTAINTIES: Double terminals all way through.

"I can begin life anew" (positive and negative in brackets)—slight shivers, coldness, some yawning. Little somatic. Probably some prenatals suggested by restless side-to-side head movements. This also turned up earlier on "Mother is there" (positive and negative in brackets).

“I can make life persist” (positive and negative in brackets). This bounced preclear straight into *violent* electronic discharges all over the body and convulsions. Tone dropped, in all 5 dials, and later rose steadily. At one break preclear’s hands and arms were completely paralyzed and anaesthetic. “Shrinking” of flesh observed by auditor. This was run out on double terminals “Can’t let go” (positive and negative in brackets) and preclear holding hands opposite each other to aid discharge. It took 3/4 hour for complete recovery of movement and sense of touch. The “can’t let go” postulate came out with sudden violence as the auditor switched 9-V meter on after unsticking the jammed needle after the violent swinging; and after the meter was switched off again the cans still stuck to the hands which were open wide and rigid, and had to be pulled off by the auditor. A red patch was observed on the right side of the forehead; this came and went twice. During the paralyzed state, balance and co-ordination were gone also (probably the cerebellum knocked out) and hands showed athetoid movements (extrapyramidal system).

Visio: Black screen—preclear had the concepts perched on the corners of it. Sensation of terrific torrent of high frequency waves coming from behind screen striking the three FAC 1 points and spreading all over the body.

Auditor had impression once during this of sperm track incident.

This CERTAINTY was run for three consecutive sessions with breaks for rest and warm drinks between, and tablets of concentrated B1. At the finish of these three sessions, the preclear could hold the positive and negative certainties at high tone level, with no reactions.

During the running the emotional curves were “WILD” (LRH). The preclear’s eyes seemed to be focussed in centre of the forehead upturned and bloodshot—especially after the first session.

The 9-V switch—on during the run, sent the preclear nearly up to the ceiling, head jerking forward onto the knees.

Total running time of this CERTAINTY was 3 hours.

Same day—early evening: Certainty double terminals “I can stop life” (positive and negative in brackets) brought evidence of electronic shocks in a much milder form, yawns and shivers and coldness of body. After a fall on the E-Meter, there were constant steady rises.

Later same evening: Ran Certainties: “I can change life,” “I can start life” (positive and negative in brackets). Preclear was completely bored all through and there were gradual rises indicated on the meter with occasional “flicks.” Auditor’s impressions to say the least were terrific when preclear got up from the settee. Preclear just “oozed” high-toned vitality from his body and eyes were shining from an inside source.

Conclusions: (a) The energies of (Electric shock
are identical (Nerve [e.g. funny-bone]
(Pins and needles
gradient scales (Cramp
(Sex
(Electronic implants

(b) The five Dynamic 2 Certainties will send preclear straight into electronics—connection of D2 and implants as above, provided preclear is at a sufficiently high enough level of the tone scale and can get a strong enough certainty.

- (c) Once started these electronics should be run right out (therefore plenty of time is required).
- (d) Be aware of the tone of the preclear. A preclear with high selfdeterminism will detach himself and plunge through (auditor's free theta will help).

A low-toned preclear will *either* pull out analytically and won't face it, or go unconscious—reactive escape (this latter might require hours of ARC work).
- (e) Don't switch on E-Meter when preclear is holding the cans when preclear is highly charged; he probably discharges through the meter rather than the reverse.
- (f) Don't run violent physical stuff (electronic convulsions) or any chance of it on a full stomach. This is a good principle broadly for all processing.

Monday, the 13th July, 1953. Tone scale on double terminals gradient scale, auditor and preclear up to clear theta clear. Head front somatic turned on.

Certainties: "I can survive" (positive and negative in brackets) double terminals, turned on the same effects, only mildly and was soon run out.

(Preclear recalled that during group processing "I'm their mock-up" [positive and negative in brackets] gave similar mild effects.)

The remaining three Dyn. 2 Certainties buttons, stop start and change life which were run again to see if all reaction was cleared, were boring and shewed only a few flicks on the meter.

The black patch which came up between the four terminals when running "I can make life persist" the previous day was put up again by the preclear running the Certainty "There is something there" (positive and negative in brackets). This was run for two consecutive sessions, with somatics, shudders and mild convulsions, when suddenly it burst into blazing white light. Immediately got preclear to mock up his head four times facing four squares of bright light with the same certainty (working on the previous week-end's finding that when preclear was twelve years old had measles and each day suffered extreme discomfort when the sun poured in at a window slantwise. It was after this when it was found he had defective vision). This white patch persisted until the final bracket when it turned black.

It was at this point of processing the preclear reported that his terminals had changed from four to eight (i.e. three dimensions).

(Auditor's question to LRH. "Is this to be the next step for faster and more intensive techniques?")

CERTAINTY "Woman there" (positive and negative in brackets) and the meter indicated what appeared to be ridge explosions, sudden and violent with increasing rise in tone.

Over the three days, the sessions leading up to "Electronics" and making certain that nothing of a restimulative nature was left behind, the time spent in actual processing was approximately ten-and-a-half hours.

After a break of seven days before further sessions, it was decided to run some of the foregoing Certainties again together with other fundamental certainties, and it was found there was no tendency towards dramatization of the “Electronics,” with little power of restimulation left behind. Flows, although rapidly downward after first contacting the Certainty, made very quick uprisings and the preclear during them had quick “shock” movements swiftly at one point of the body after another. Therapy there afterwards moved very swiftly.

Preclear reported an uprising of confidence maintained ever since as he had never had before. Also a sense of detachment from everything—no sense of exteriorization—but from the inside of his head.

Observations: Preclear found it of immense help to do the tone scale on double terminals especially in clarifying ideas and concepts of theta clear and clear theta clear. Had the feeling of easily getting to the upper theta levels.

Auditor’s conclusions on this were:

1. It helped to release any charges of emotion accumulated during the day by preclear, probably dissipating worries, etc., to a great extent.
2. It “attacks” emotional charges and aberrative material in connection with the eight dynamics.
3. There is the freeing of emotion at all levels thus making preclear more “fluid.”
4. It exercises “thetan” in higher level concepts of knowingness, beingness and “clears,” etc.

Although preclear may not at first get these higher level concepts, it has been noticed that after a few sessions with this gradient scale, preclear has had sudden awareness of higher attitudes, knowingness and goals to aim for.

5. It also helps to keep ARC between preclear and auditor at the very highest level and improves mutual co-operation.

This processing of Certainties reveals a whole field of speculation, research to be made, and since that week-end of processing masses of data have come tumbling in both from the minds of the preclear and the auditor, also from outside sources.

There was a rather interesting piece of confirmatory data regarding the advisability of running “electronics” completely out when contacted by “Certainty” processing. A fellow auditor was called in on an epileptic case, and during running contacted the “halver” with electronic convulsions. After a long session where the preclear came up tone scale and could exteriorize, use beams on fingers pulling them up etc., went back to her home in a very excellent condition. The same night took part in a home social evening, during which a friend of the family tried to force unwelcome attention on her, with the result that during the night she had three very violent fits. The point here I wish to make is that once the charge of electronic force is “started” and not thoroughly run out through lack of time and opportunity, there will be the risk of attracting the opposite poles of force and thereby leave the preclear “open” to undesirable experiences at the sexual level.

The electronic implant most definitely was meant to degrade the thetan and GE, e.g. people’s change of physical appearance during epilepsy.

End of Report.

I call to your attention the fact that even when people are not trained to expect electronics they are encountered. One noted incident of this character came about when a preclear being run by an auditor who “didn’t believe in electronics” had such a fac explode with sufficient violence to burn a hole through the preclear’s hand and through the cans of the E-Meter itself. In several other cases, E-Meters have been blown out.

Ridges, as differentiated from electronics, very often themselves explode and send the preclear rapidly from the top of the tone scale, where he might be, down to the very bottom depths of apathy. A little more auditing and handling of the ridges is all that is necessary to bring the tone on up again. I have seen a green auditor become so frightened at the explosion of a ridge that he left the preclear in apathy, and as auditor Hibberson reports, failure to run out an incident properly can result in an easier restimulation of it.

In a covering letter auditor Hibberson says of this report: “When we first touched this ‘thing’ and came up for a ‘breather,’ we both said that Ron is wrong, it is not sex that these certainties are the push buttons for. The second plunge into it, however, soon indicated what Ron had meant—crude primitive stuff with full impact, as even I felt it in the lower abdomen and base of spine, and then culminating in the chest of each of us like a psycho-physical hysteria. At that point I said to myself, ‘Get out of this, be apart from it,’ and after that I was able to observe in a quite detached way. Incidentally, quite by ‘accident,’ my little ginger cat jumped up on my knee during a session and I found him to be a perfect terminal. I can see now why witches had cats as their ‘familiar.’ The preclear at some point during this second jump found himself viewing everything in a very detached manner and was quite certain that it was from the centre of his head When things were going at their ‘hottest,’ a remark of Ron’s just dropped into my mind to the effect that ‘Ron did say that despite what you are seeing, we never did have a dead preclear on our hands,’ also ‘Never to leave a technique half-run.’ “

I am reproducing this report in this PAB not simply as an example of nerve, although that is a thing which I find most wanting in auditors before their cases are in good shape, but because it is just a plain, good, down-to-earth job of excellent auditing.

HAVINGNESS

(From the Researches and Notes of L. Ron Hubbard)

Starvation for energy is the keynote of any case which maintains facsimiles in restimulation.

The thetan who holds facsimiles to the body has chosen to have the energy in *spite of* the perceptions and significances in it. He is attempting to have the energy and not have the aberrative quality of it. Thus he is posed the problem of trying to reject the thought and accept the energy and thus he cannot do either.

In Dianetics we gave him the energy by processing out the significances (perception) in it.

When well exteriorized a thetan may have his energy so far reduced that he becomes unhappy. Having him create and snap in anchor points upon himself (not the body) will remedy this unhappiness.

Matched Terminaling, Admiration Processing and any other process which reduces energy, at length "starve" the thetan for energy.

All these conditions are remedied by remedying the "havingness" of the thetan.

As we saw in Acceptance Level Processing (PAB No. 15) only certain energy forms may be acceptable to the thetan. This is regulated by the screens he has erected against things. By setting up a resistance to certain energies, he creates an eventual appetite for them. He sets up screens to resist the form and the screen becomes plus for the form on the far side and negative for the form on the near side. As the screen caves in upon him (by being pounded by the unwanted form) it eventually causes an appetite (vacuum) for the form. Thus he actually starves for a form he once detested. This is the dwindling spiral of the MEST universe. The thetan believes he has to have the form to survive.

The remedy of havingness is necessary for all cases at and below Step IV of SOP 8.

An auditor remedies havingness by "starting an avalanche," by making the preclear begin an automatic inflow of acceptable things, then graduates the preclear rapidly to avalanches of stars, planets, heavy masses and spaces.

It is density and mass which count, not specific items.

Degradation begins when the thetan is interiorized into unwanted mass. It is completed when, having developed an appetite for heavy mass, he is exteriorized from it.

In this lifetime the downfall of any thetan began with his loss of some heavy mass. The heaviness of the mass *was* the value of the mass. For instance, an auditor wishing to trace the feeling of degradation in a preclear would look for a time when the preclear lost or was removed from a massive object. The auditor then has the preclear mock up the object and change its quality better or worse until it “snaps in” automatically on the preclear. Then the auditor has the preclear mock up enough of the object to create an avalanche. The preclear must then add more and more to the inflow, then add planets, stars and black stars until the preclear can comfortably throw several dense objects away in mock-up. A reverse (outflowing) avalanche is then begun and

Outflowing and inflowing avalanches are run on the preclear until his “hunger” is satiated.

Numerous facsimiles may appear. The auditor continues with the dense masses in avalanches, not the facsimiles. The facsimile will “blow.”

This process, run for four or five hours, will create a Book 1 MEST Clear.

Perceptions are turned on by running “acceptable” smells, lights and sounds in avalanches. Masses are more important than perceptions.

CERTAINTY OF EXTERIORIZATION

Are they exteriorized?

Perhaps one never appreciates the benefits which result from exteriorization until he runs, with a case which has been exteriorized, a drill of exteriorization-interiorization with solid objects. This step, the principles and operation of which will be covered in an early PAB in greater detail, demonstrates the great difference which can be achieved in a preclear who is made able at last to exteriorize from and interiorize into any and all objects and spaces at will.

An individual has to *have*, as long as he believes objects can be forced upon him and pushed around him—whatever his own determinism on the matter may be.

After a thetan has been unable to separate himself from a group or object for a considerable length of time he begins to believe that whatever it is is something he must have. He will then figure-figure a reason why he has this object.

After a thetan has been a body for a long period of time, he believes he cannot separate himself from a body, and believes, therefore, that he has to have a body. He will then add many reasons why he has to have a body.

Reasons always follow the fact. The fact occurs, and then purposes are originated in order to account for the fact. Explanations ensue from incidents. Necessities in havingness ensue from possession.

If an individual has to have something, it is certain that he has once possessed the object or one similar to it, or he is in the valence of something which has to have the object.

Contrary to all the rationale connected therewith, all possession derives on the basis of “Now that I’ve got it, what can I do with it?” “Now that I am doing something with it, I have to have it.”

The basics of this are contained in the Theta-MEST theory. This was the original theory of somethingness-nothingness. A thetan, being nothing, attempts to achieve nothingnesses. A body, being something, attempts to achieve somethingnesses.

The effort of a body to achieve somethingnesses continues long and arduously even into the field of reason. The effort to achieve somethingnesses includes “having to have a reason for.”

A person who is firmly convinced he is a body and is therefore being a body always has to have a reason for or a significance. Hence we get figure-figure-figure.

Given a fact, there must always be a reason for the fact. Thus there must be other facts. And in this wise we get somethingness adding up to greater somethingnesses. In the case of the thetan we get a continuous effort to knock out the somethingnesses and achieve greater simplicities or nothingnesses. Basically this is a problem in communication. A perfect communication demands that that which is sent from the source point must be duplicated perfectly at the receipt point. The graph of communication is therefore C- - - E. Here we have cause, a distance, and effect. A perfect communication would be one which found at the E point a perfect duplication of that impulse or particle which emanated from the C point. It should be very plain, then, that communication is, in a purity, a complete duplication.

Any communication resulting from a cause point which has no form, if perfectly duplicated, would contain as an integral part of its message "no form." Thus at the effect point of the communication line one would discover the message to be without form. Thus the impulse of the thetan in communicating is to make no form. In other words, being a nothingness so far as form is concerned, if balked in communicating one way and another, the thetan would eventually become obsessed with the idea of having no form at any effect point he was trying to reach.

Similarly, when there is a mass at the cause point of a communication line, the effect point would be expected by the cause point then to have mass. In other words, a body talking to a nothingness would tend, if it became obsessed upon the subject, to become upset because there was no mass at the effect point of its communication line. A thetan would tend to become upset if there continued to be a mass at the effect point of his communication line.

Completely rational behavior naturally permits a nothingness to communicate to a somethingness and a somethingness to communicate to a nothingness, a nothingness to communicate to a nothingness and a somethingness to communicate to a somethingness. These, being all possible combinations so far as mass and communication are concerned, are of course the requisites if anybody is to have a free feeling about communication itself.

Let us take, though, the case of a body obsessively communicating with a spirit. Here we have John Doe addressing a nothingness. John Doe believes he is a mass, therefore he seeks to give all of his communication mass. He continually seeks to communicate with a no-mass at the effect point. Inevitably he will begin to believe that there is something wrong with his communication since no mass appears at the effect point. Talking to God, John Doe would be most pleased if God were to step forward in a massive form, for this would be a more or less perfect communication. But John Doe, going on talking to God without God appearing, will eventually become obsessed and will believe, then, that he cannot communicate. Believing he cannot communicate, he believes that the line is now reversed and that the cause point is at the nothingness and the effect point is at himself. Therefore he will seek to become a nothingness. A nothingness will be communicating with John Doe. And this will make it necessary for John Doe to achieve a no-mass state if the communication is to be perfect. Thus John Doe could liberally interpret this communication system in various ways, and the least of his interpretations would be that he was unworthy or degraded, or that he should repent or abase himself—which is to say in all cases become nothing by the common interpretation of nothing.

But let us say that John Doe is totally aware of himself as a thetan. He begins to communicate to a mass such as an idol or a body or some other solid object. If he continued such a communication line without realizing the fundamentals of communication, he would soon begin to expect a nothingness to appear where the idol or the body or other mass was. The persistence of the mass at the E point would make Doe feel that he had never communicated. He would therefore believe that his power to communicate was less, and he would believe that he therefore must become something. Thus he steps out of the role of being cause and becomes an effect on this communication line. This, at the very least, would tend to interiorize John Doe, the thetan, into the mass he was trying to communicate with, for he would not consider himself capable of reaching the distance necessary to communicate and would believe that this mass, now considered to be senior to himself, would have the power to reach him; therefore he would interiorize.

These, basically, are the mechanisms of communication. But they are also the mechanisms of interiorization-exteriorization. Duplication, you see here, is the effort. And duplication becomes the effort solely because communication is the effort. When a being loses grip on these principles he is then in for considerable trouble, for he will find himself unable in this universe to achieve a perfect duplication and so will be unable to achieve a perfect communication.

Now let us take this matter and apply it to auditors, and let us discover that an auditor who is not himself exteriorized and who still believes that he is a somethingness would actually feel thwarted and unsuccessful if he achieved an exteriorization on a preclear. His effort would be to continue to make something of the preclear, in other words a mass of the preclear. That the preclear was still interiorized would be gratifying to an auditor who is not exteriorized. You should see this very easily, then, that an auditor who is not exteriorized and who has no actual subjective proof of exteriorization would, whether he knew it or not, work towards more thoroughly interiorizing the preclear. In other words, he would continue to try to have something at the E point of the communication line between auditor and preclear. The auditor being something auditing from source point would attempt to gratify his desire for a perfect communication to have something always at the effect point.

Similarly, an auditor who was exteriorized would find it more or less intolerable, if he had forgotten these principles and had become obsessed about communication, that the preclear's body continued to sit there in the auditing chair.

In either of these cases, a conflict may possibly arise and the theta clear and the auditor still interiorized might alike (forgetting these principles) dispute whether or not the preclear was exteriorized, since either one of them would find fault with the preclear's condition. The basic fault that they would be finding, in the case of the theta clear auditing, would be that the preclear's body continued to be there, and in the case of the person not yet exteriorized, that the preclear maintained that he was not any longer there and was not in his body. An auditor, then, whether a theta clear or one still thoroughly interiorized, is likely to raise a very large point over exteriorization itself. This point would rise to the same violence that the individual himself would feel toward communication itself. If an individual, whether exteriorized or interiorized, has any arduous or frantic feeling about communication, he is likely to manifest that arduousness or franticness on the exact point of "Are they exteriorized?"

If any damage is to result in auditing it will be on the lines of invalidation of the certainty of exteriorization. By invalidating this, particularly to a preclear who has just achieved it, one is complementing thoroughly a continuous communication problem of the preclear; which is to say, he is a nothingness continuously in communication with somethingness. In order to remain cause on this communication line, and in order to be an effect and relaxed about it, the preclear has to attain a considerable serenity on the subject of being a nothingness trying to communicate with somethingnesses. People who are still interiorized have lost that serenity and find the communication with a nothingness intolerable.

Only an auditor who is ignorant of these principles and is still obsessed on the subject of communication would make the effort of invalidating exteriorization on the preclear's part a major activity.

How can you tell if they are exteriorized? The most recent and delicate E-Meters will register the fact. But much more than this, DOES THE PRECLEAR KNOW HE IS EXTERIORIZED? This last is the only true test. By questioning his certainty and by beating him into an uncertainty, one has undone a considerable amount of his knowingness.

BASIC PROCEDURES

There are several processes in use by professional auditors at this time which reach into and resolve even those cases which we used to consider difficult. As I have developed these one after another, I have discovered that each one missed on a small percentage of cases. A combination of these processes which I organized while teaching the Advanced Clinical Courses is apparently achieving, in the hands of capable auditors, the uniform resolution.

The auditor should realize something about case percentages. About twenty-two percent of all cases, which is to say all people, resolve, at least partially, with the application of almost any process Man has ever had. A new drug, a new tom-tom, a new god, anything serves to right any wrongness in these cases. Witch doctoring, medicine, psychoanalysis, when they advance case histories, normally have selected from this twenty-two percent. But then this twenty-two percent would have resolved on any process.

The first major break-out from this percentage was evidently Dianetics. Here we advanced sweepingly up to fifty percent. The first treatise on Scientology written in 1947 and entitled *Scientology: A New Science* (Issue 28-G, *Journal of Scientology [Dianetics: The Original Thesis]*) contains within it sufficient know-how to attain this fifty percent resolution. This percentage was bettered somewhat by *Dianetics: The Modern Science of Mental Health*, *Science of Survival*, *Handbook for Preclears* and *Advanced Procedure and Axioms* (all but *Science of Survival* available from the HAS).

On my discovery and use of the first exteriorization techniques it was found that the same fifty percent who would respond to Dianetics easily would exteriorize almost immediately. The effort of Standard Operating Procedures from 1952 forward was to better this percentage in the hands of a competent auditor.

In the hands of most auditors, SOP-8 still left more than ten percent of the cases unsolved.

By continuing to work while instructing the Advanced Clinical Units, and particularly through the discoveries of the basic principles of communication itself, I evolved SOP-8-C (*Journal of Scientology*, Issue 24-G, available from the HAS, 806 North Third Street, Phoenix, Arizona, 50¢). According to reports which continue to be received from auditors, any honest application of SOP-8-C resolves extremely difficult cases as well as very easy cases. The reason for this is that SOP-8-C reaches closer to truth, which is the reason for any efficacy in processes. SOP-8-C takes into account very fully the fact that the ability of a thetan to make postulates is senior to his concerns over space, energy and objects. In fact, so far as the thetan is concerned, all he has is an ability to make postulates. Certain postulates, agreed upon, have apparently become the various universes we know about. That certain of the postulates became "solid" is no reason that the thetan is incapable of making other postulates. The conclusions forced upon him by objects, energy and space are not the only conclusions there are, and these conclusions do not make the thetan junior to objects, energy and space. Thus we could study

the behavior of space, energy and objects for a very long time indeed without freeing our preclear.

However, the percentage of cases who do not resolve easily have to have addressed in them the problem of havingness—which is to say, the problems of objects, energies and spaces. We also discover now that we are reaching a much higher state with those on whom the techniques originally worked. Our problem has been heightened by the fact that we are achieving states which are greatly superior to any states ever achieved by any therapy in the past. By reaching up toward higher states of beingness, we are actually exceeding our original proposition that we were trying to make men well. However, if these states are there to be reached then they should be reached, for unless we reach them our preclear cannot be guaranteed to be stable for the many decades to come. Thus our goals are now higher levels and greater stability.

In an effort to achieve these goals, I have been combining the most effective processes I know into an operating procedure called Unit IV Procedure.* This process, that is to say combination of processes, does not exceed the proposition that the thetan operates on postulates and does not exceed SOP-8-C. It simply reaches deeper into the strata of preclears available to an auditor's skill.

The keynote of any process is the skill of its application. Processes applied with variation are usually applied without knowledge of the background of the process. The safest way to apply a process is exactly as set forth. Of course, persons who are not yet exteriorized and who are not relaxed about communication will inevitably take a simple process and try to make it more complicated. In this effort it is quite commonly made ineffective. Processes are as good as they are simple. The direction toward simplicity is the direction toward nothingness. It happens, in life, to be the direction of workability because the individual himself is a static without mass or place in time. Thus, truly a very basic simplicity. Auditors who try to multiply and complicate processes are auditors who have not themselves been properly processed and who are not free from communication compulsions. The existence of these auditors and their twisted use of processes is responsible in large measure for their inability to obtain results with the processes.

Should auditors who have been having difficulty with cases simply take Issue 24-G of the *Journal of Scientology* and use exactly it as set forth, they would discover that their preclears whom they considered difficult would become extremely easy to work and would become theta clears.

In view of the fact that 8-C will achieve this result in competent hands and in view of the fact that it is very easily applied, one would seem to need no further advance in Scientology. But there are two problems into which a preclear can fall which are not immediately resolved by 8-C. These are the problems of BEINGNESS and UNIVERSES.

The preclear who is difficult to process is not in contact any more with his own universe. And the auditor processing him is actually processing the universe of somebody else for the preclear.

There is a rule involved in universes to which an auditor must pay attention, and that is that the universe is subject to the postulates of the god of that universe. In other words, in the case of mother's universe, mother's postulates are effective and the preclear's postulates are not. When a preclear has closed terminals with and is existing in mother's universe (even though mother has been dead for fifty years) he is not operating on his own postulates. Therefore a technique which immediately and intimately approaches postulates, where it encounters somebody deeply enmeshed in somebody else's universe, of course has limited workability.

In the case of Beingness Processing we find that preclears are very often being things. A preclear who is being a bedpost may act perfectly rational but at the same time will think much

as a bedpost thinks—which is not at all—and will have some flaw connected with trying to act with and use the characteristics of somethingness which he is compulsively being. A preclear who is in good condition can be anything at will. A preclear who is in poor condition waits for the environment to give him consent to be something or actually succumbs to the fact that the environment wants him to be something. Here again we have a failure of postulates, since a bedpost does not make very good postulates.

Unit IV Procedure handles such problems and includes within it as well many of the drills which swiftly heighten the awareness and ability of the preclear. Unit IV Procedure includes SOP-8-C in its entirety, but is an extension of other workable processes which I have used to free individuals.

As the first requisite of auditing is a communication line and as the worst thing wrong with a preclear is his communication system, it will be discovered that the earliest processes to be used are those of getting a preclear into communication. In view of the fact that his communication probably reverses on the principle of duplication (see last PAB), the auditor will often discover that the preclear is changing or altering or reversing directions given to him. This is an immediate failure on the part of communication, not on the part of the process being used. There is an additional process which remedies this fairly well, and that is the handling of machines which reverse communications. One simply tells the preclear to do one thing, and has the preclear consciously do something else until the machine is keyed out. As an example, one tells the preclear to lift his right hand and the preclear consciously having heard the command, walks across and lays his left hand on the table. This done for a considerable length of time will throw out of existence the command reversal machinery of the preclear. This is actually an integral part of Opening Procedure as contained in SOP-8-C, but is not covered in 24-G.

Auditor competence is the keynote in handling any process. But auditor competence depends upon the auditor being able to receive and give forth a process as it has been found to work. Thus we are apt to find difficulty with certain auditors simply in that they do not deliver the processes which are placed in their view. They take these processes, complicate them, and obeying some communication obsession or compulsion seek to make more of the preclear instead of exteriorizing him, or seek to make nothing of the preclear where the preclear is perfectly entitled to have something.

There is no question about the workability of Scientology in the hands of those trained in the Advanced Clinical Course. Nor is there any question of its workability in the hands of those who audit straightforwardly from the material presented. But there is a question of the workability of Scientology when a case which cannot receive a communication complicates or deranges some process and then delivers it in such a way as to complicate the case of a preclear.

Auditors have many explanations when they do this, and amongst these explanations is the fact that they do not like “to be a follower.” These people are under the delusion that I have “invented” Scientology and that “Hubbard’s theories and ideas” are Hubbard’s. Scientology happens to be a description born out of twenty-five years of investigation of how life and universes are put together. It is a description of a great deal of observation. There have been discoveries, yes, on the order of somebody suddenly seeing a mountain and telling somebody else about it. In addition to this description, a communication system has been originated in order to bring home to the preclear the truth of a situation so that by recognizing it he may alter it. One can only be lost in puzzles. A puzzle fully described ceases to be a puzzle.

It can be said now that a hundred percent of the cases are solvable given competent and interested address to the problem. Some cases take longer than others, depending upon how thoroughly mired down a case may be. Because of the time factor—wherein an auditor refuses to audit a case for fifty or eighty hours in order to remedy a psychosis—a percentage of non-solution will continue to result. But in eighty percent of the cases today we are auditing on an auditing span of twelve to fifteen hours where a competent auditor is involved. And there is a finite end to any case, a fact which I have been consistently demonstrating, and which

Advanced Clinical Course people have been consistently demonstrating, for many months. However, in that one cannot force people (and there is no reason whatever to force people) to stay with cases as long as they remain unsolved, it can be expected that cases which go above twenty or thirty hours of auditing time will tend to remain unfinished. This does not, however, mean that such cases will not have received all those benefits which were ever expected from psychotherapy. For a competent auditor can achieve these with any case now in a dozen or two hours whether he finishes the case off to operating thetan or not.

We have arrived at the goal of operating thetan where we consistently strove forward to that goal. But more important, we have reached and passed any goal psychotherapy ever entertained as much as a year ago. Those goals on which we are now working with preclears so far exceed any goal set by Man that it is not fair to call Scientology any more a developing science, for we are well above the level of science and we are working with the factors which create sciences.

In subsequent PABs I will set forward the various steps of Unit IV Procedure, some of which can be self-audited. Seeing that Scientology can embrace a science, a religion, a psychotherapy, one of the wittier DScns recently invented Scientocracy, which is "Government of the people, by the thetans."

PROFESSIONAL AUDITOR'S BULLETIN

From L. RON HUBBARD

Via Hubbard Communications Office
163 Holland Park Avenue, London W.11

11 June 1954

Mr. D. M. Clouston, President
The John Howard Society
St. John's, Newfoundland

My dear Mr. Clouston:

I wish to thank you for your forceful letter on the subject of your testimony as it may be given before a Royal Commission of Canada on the subjects of "Insanity as a Defense" and "Criminal Sexual Psychopaths."

You state that the Royal Commission of Canada has been set up for the purpose of inquiring into and reporting upon two questions:

1. Whether there should be any amendment to the Criminal Law of Canada relating to "Insanity as a Defense."
2. Whether there should be any amendment to the existing Laws of Canada relating to "Criminal Sexual Psychopaths."

As I understand it, you intend to advance the fact that only a trained therapist with those detectors which may be at his disposal is competent to make a fair analysis of a person's degree of sanity and in the second case that you intend that, for arbitrary punishment now being imposed, periods of detention should be set during which the prisoner should receive therapeutic treatment (preferably Scientological) and discharged only when found free from the criminal tendencies for which he was detained.

It is very encouraging that a Royal Commission should see fit to inquire into these ranges of justice, and it is quite heartening to find that it would invite a man of your caliber to express his views. It may be that something definite may emerge from this and it would appear to be a very hopeful view.

You asked me whether or not I think your approach is sound and invited appropriate suggestions as I may care to make. And I wish to thank you for this opportunity and your courtesy.

On page 401 of *Dianetics: The Modern Science of Mental Health* there begins a three-page essay on "Judiciary Dianetics" with which, I believe from your letter, you seem to have some acquaintance.

For whatever they may be worth to you, may I give you my general comments on this matter.

The whole subject of "insanity" in law is adrift since it is a chip launched into the already existing definition of criminality. Any confusion as to where to place insanity in law comes about through the basic definition in law itself of insanity and criminality.

Law defines criminality more or less as “action despite knowledge of right and wrong” and “insanity” as an inability to differentiate between right and wrong. If law is based upon the idea that all people are selfish and self-centered, then we can differentiate between criminality and insanity. But if law were to consider Man a social animal, basically it would have to consider that any act which was intentionally harmful would stem from a frame of mind which omitted differentiation of right from wrong. No man, in other words, who was sane in the fullest sense of the word would be motivated by actions which victimized his group or community since he would realize that he, with the others, would suffer for these activities. And even in a practical sense it is apparent that the thief in committing criminal acts strengthens the necessary force of law in the area and so further inhibits his own freedom.

This is a problem, mainly, of the degree of enlightenment of law itself. It is a matter of what standard the law or the society, the will of which is represented by the law, is willing to recognize—a higher standard of conduct than that enforced by law these many years past. Society is more and more inclined toward the understanding of criminality as “antisocial.”

Jurisprudence may content itself to remain with its definition that insanity is the inability to differentiate right from wrong. But this view may be broadened through such inquiries as that of the Royal Commission and by the public’s own pressure, which actually such a Commission represents, to account insanity as, simply, the inability to differentiate.

In the United States certain patterns of thought of recent years have obstructed the growth of justice. Chief amongst these has been a dwelling upon the “criminal mind” as a mind which is strangely distinct and different from the minds of others who are not criminal. But a slightly clearer view should demonstrate that even the “criminal mind” falls within law’s own definition for insanity: the inability to differentiate right from wrong. It is obviously wrong for a being to harm his own species, his own group, his own society. Therefore, a being who would commit harmful acts is not differentiating between right and wrong and must at least savor of insanity.

Here we have a problem of “where to draw the line.” At what point does an individual cease to be sane and become criminal? At what point, then, does he cease to be criminal and become insane? Custom from which law itself was born has long proposed the solution to this problem in its own definition for insanity.

In order to classify criminals, we would have to classify crime. We would discover that crime was subdivided into accidental and intentional crime. Society punishes crime only when it considers the crime to be intentional. If the crime is intentional, then the intent also included the intention of harming the society. Thus a criminal action, by a broad sweep, could be said to be an insane action—and all within the definition of law itself. It could be defined that when a man descends to intentionally harmful action against his fellow he has descended at least into the upper band of insanity. Law could cleave open a path for itself by applying the classification of “insane” to criminals. In view of the fact that past systems of punishment have not reformed criminality or abated it, law seems more inclined to take this view and would take it could it be demonstrated to them that this inability to differentiate right from wrong could be altered to the betterment of society. As prison systems have been found to produce even more hardened criminality than they have remedied, it is entirely possible that law might comfortably entertain a change of view on the subject and treat criminals for what they are: mentally deranged persons.

With this other choice law finds itself often betrayed. That choice is the permitting of criminals to escape law by reason of “insanity.” If a criminal is proven insane he is permitted, at least to some degree, to escape the penalty which would ordinarily be incurred by his act. Law, by retaining this segregation, defeats its own ends and deprives itself of its prey. Only in the face of an almost complete misunderstanding of insanity could the people engaged in government be persuaded that the label “insane” should permit criminals to escape punishment. Thus, to that degree, insanity itself seems to be feared and is tolerated.

The blunt and terrible truth is that so long as insanity can continue to be used as a defense it will invite criminals into that state of being. Further, such laws as provide an escape from punishment thus unharness the energies of many against their fellow men who would otherwise be curbed. For example, a slightly insane person by reason of his "mental state" might feel it unnecessary to obey law which actually was within his full understanding. It is far from right that law should provide an escape for the guilty on such grounds.

By concentrating its attention upon the fact that insanity, if proven, will permit a person to escape justice, law is overlooking the fact that crime apparently stems uniformly from an inability to differentiate to a degree which a sane man would ordinarily consider sane. Law is faced with the enigma of insanity as a means of thwarting justice. And thus insanity must continually be disproven in the field of criminality. Whereas, it is time that criminality be proven to be insanity. I have worked with many criminals and have been, in order to observe criminality, a police officer for a short time. And it is my very close observation that anyone subject to criminal tendencies is, in a much broader sense, insane, and that his insanity reaches much wider than the field of crime, but invades hallucination, persecution and mental disabilities which are in themselves symptoms of insanity.

The insanity of the criminal has its incidence in a conviction that the first group, the family, has no function or need for him and develops upon the recognition that the society does not want him. This is apparently the genus of that antisocialness we call criminality. The insanity is further developed by continuous association with others who are of the same conviction and who form groups, which groups are motivated by a need for revenge against the society. Current methods of punishment and police handling only deepen this conviction, and it can be said so far as jail sentences are concerned that the more punishment a criminal receives, the more insane he becomes on the very subject of his criminality. Thus the society victimizes itself by bringing from the realm of delusion into the starkness of reality the fact that the individual is not wanted by any of his fellows save a few of his most intimate associates. By joining hands in their thirst for revenge against the society which rejects them, these criminals then form societies of their own. And the final result of this dwindling spiral is the deterioration of the society as a whole under duress of laws which, seeking to repress the few, suppress the many. Without such criminal gangs people such as Hitler, who depended utterly upon them for his ascent to power, would themselves be powerless. Thus the subject of criminality moves intimately into the field of government.

We might find then that insanity should be prohibited as a defense, but that at the same time all criminality defined as intentional harm against the society should be classified as a greater or lesser extent of insanity and that the criminal should be, as you suggest, uniformly detained for treatment. And we find also, as we examine this problem and see the disastrous effects of early and unqualified releases from prison upon the society, that a criminal should be detained until it could be ascertained with great certainty that he would not further victimize the society. This last strikes directly at the parole system which is an unhappy one at best, and would make it the complete responsibility of parole boards to insure the society against further criminal acts on the part of the released prisoner.

In the absence of a remedying treatment and practical means to effect it, such a course as this would be considered inhuman in the extreme. Even a hardened judge might recoil from the idea that insanity should never be used as a defense, and the intention to incarcerate criminals for their lifetime, if necessary to insure society against their depredations. These are very strong measures.

Today, however, several experiments have demonstrated that treatment for criminality can be administered at very little cost to the state. This cost is as small as a few cents per prisoner. By means of group processing a great deal has been done in this field. The treatment itself is administered by magnetic tape recordings. The problem could not have been solved as long as individual application of therapy remained a necessity by reason of technology. But with the advance of group processing, the majority of criminals could be rehabilitated and freed

by parole boards using sanity as their criteria without injury to the society. Even though this processing would not be effective upon all criminals to which it was administered, according to present standards and practices, it would at least be effective upon the majority.

With regard to the second part of the purposes of the Royal Commission of Canada, it is my own opinion that laws relating to “Criminal Sexual Psychopaths” should be no different from laws relating to other criminalities. For the sexual psychopath, as Sigmund Freud long ago recognized, is a mentally ill person.

In both these matters, we find the law capable of advancing to the degree that it is willing to accept its responsibility to the society at large. It is the purpose and function of law to safeguard the citizens of the society against the depredations or criminal practices of the few. If the law is totally responsible it would act to totally insure the citizenry against crime. This cannot be done by suppression of the citizenry at large, for this is the regulation of the many to monitor the few.

Even without Scientology, without adopting its practices, law could be far more effective in safeguarding the society as a whole simply by reclassifying what it means by “criminal” and firmly observing its own definition for “insane.” With Scientology, once it has segregated out the criminals and the insane, once it has made its purpose distinct and clear, its detention of criminals until they were once more social could be resolved by the administration of tested processes to the criminals and the release of those who had responded on a group level. This, however, is a very long view and is far too firm a stand to expect from the judiciary, as these cannot but go by the customs of the people whom they serve. A long mile could be commenced upon this road, however, by demonstrating that groups of prisoners detained in prisons could undergo individual change by a rearrangement of their ideas and by releasing those so benefitted into the society and by tracing their course until it was firmly established whether or not they had become social. With this step and with the evidence thus brought into being it might very well follow that a broad evolution in law would ensue.

I wish to thank you very much for writing me. I hope you will let me hear more about this as I am intensely interested.

My very best,

L. RON HUBBARD

5406C04 6ACC-37 The Know-to-Sex Scale -- The Mind and the Tone Scale

There's a line breaking existence in half, above and below which is a know to sex scale. The upper of the two scales has something good about each level; the lower one has something bad about each level [See Fig. 1]. E.g. a person who knows sex is bad is at the bottom. Next they will know eating, then symbols, etc. is bad. The tone scale is a [logarithmically] dwindling scale; it has wide spaces at the top and narrow ones at the bottom. The know to sex scale has a distance factor to it. The particles are progressively further apart as you ascend the scale, until you reach know, where you don't have any particles. For instance, at emotion, the particles are twice as many and half as far apart as at look. Thus, according to this gradient scale, you can't go straight from bad sex to good sex, so you have to go some to convince a person who thinks sex is bad, that it's good, or vice versa. Suppress = condense. That's why auditing appears to produce gradual results. A PC is fixed or dispersed about life, and life is divisible into these factors. Before you can get an individual to change his mind about some subject, you have to get him to change across a lot of categories. Also, all parts of the scale except the knowingness band contain particles. As long as the individual is allergic to space and particles he'll tend to cross-connect the different bands of the scale [as per restimulation] whenever he runs into space or particles. So our procedure is to get him to change his mind about various kinds of particles (gradiently) until we can get him to change his mind about all particles.

Below sex is mystery, which is like a lower level knowingness. In his study of dreams, Freud started with mystery, then proceeded to sex. If you could reveal to a patient that a mystery was not unsolvable, he would improve, but sometimes Freud would take too many mysteries from someone who had a scarcity, And he'd go down to lower level looking. With most people, Freud would get them through sex up to eat. Theorists got stuck trying to figure whether eat or sex was the basis of everything. None of them was up to effort themselves; they were in awe of anyone who could indulge in sports. Psychologists with their intelligence tests were at the level of symbols. At thinkingness, a man figure-figures to avoid effort. Engineering is the study of how to make effort use effort. This is very covert and is not a confront of effort. Psychoanalysis never got above the area of stimulus-response, with their theory of association. They didn't believe in independent thinking.

A person who reacts to Op Pro by Dup is way down the know-sex scale. He will, in the course of processing, go up and down the scale, only hitting prominent points on his way up. This is crossing barriers which the individual has put up to protect himself in the business of livingness. The names of these barriers are Looking, emoting, etc. The barrier of looking is space. Next comes a barrier of a barrage of emotional states, for instance of serenity or enthusiasm. Each lower emotion could be considered a protection against the upper ones. He uses boredom to protect himself from enthusiasm. Antagonism is a barrage of particles used to fend something off; anger is a ridge. Fear is a defense: who wants to close terminals with someone who is in fear? E.g. animals in fear taste bad. People in fear smell bad. Grief goes like this: "I'm solid here; I can't move: take care of me." It's a barrier you mustn't do certain things to a person in grief. The upper edge of apathy is the barrier, "I don't care"; the lower edge is, "Eat me." Being sick to one's stomach is an apathy of eating: vomiting. This is evidence that below the band of emoting you get increasingly deeper emotions connected with each step down. Hence the apathy of eating = vomiting; the apathy of effort would be wanting to be less than inert. This is what people experience who are having a rough time with the mind.

Efforting is observably a barrier: force used to protect. Thinkingness is figuring out where he will be when something else is elsewhere or where he will put something when he himself is not there. He's placing things in terms of force. So at this level, you can't carry a revolver; you have to figure out where money is safe, how to keep people from tripping you up, predict their intentions, etc. If you had a weapon, you could protect yourself at the efforting band and you wouldn't have to think.

At symbols we get, "Don't look in here -- it might be dangerous. I'm really not here; I'm elsewhere. Attack this symbol if you like, because it isn't I." Eating is a way of getting attention [and admiration] from what one eats and as such may be very satisfying. Sex protects one from the present by providing an escape into the future. A symbol that can't be in the present can appear on the future track. You could process someone with, "Get the idea of putting something there; now [get the idea of] moving out; now [get the idea of] coming back and finding what you have put there." That is the action of sex; it is very satisfying to the PC. Sex also says, "Don't eat me." It's something else to do.

The individual felt unsafe without these barriers. When he put something out as a barrier to protect him, he made it senior to him. Hence it's a dwindling spiral.

So far, we have discussed each of these levels as a defense against motivators. But we can also use each of these barriers as an overt level. Here, we get dispersal manifestations down the line. Tears, as a defense, are a flow. But there is an unnamed dispersal at grief that is offensive. Similarly, there is an unnamed dispersal at apathy.

Actually, what you have is a series of know to sex scales (Fig. 2). You can see this in running Op Pro by Dup. Someone might start at effort, then go to emotion, to knowing it's silly, to a sex impulse, then a figure-figure, then a new know, then eat, emote, a new look, etc. He is hitting high points going upscale through ridges. He will linger in the upper ones longer, with more manifestations as he differentiates better and better. At the bottom, everything identifies with everything: effort = sex = the way you look, etc.

One could draw the scale to indicate a dropping dominance.

At the highest level, each band has about the same emphasis. At the first harmonic down, the emphasis will be on knowingness; at the next harmonic down, what you do with all the levels is look (a high-tones thetan loves to do this); at the next harmonic down, the whole scale is colored by emotion; at the next lower, it is colored by effort (as in German society, as opposed to Italian society, which is colored by emotion); next we get the figure-figure that is characteristic of Latin American societies, southern California, or universities; next we get the whole scale colored by symbols (here you get erudition, e.g. the idea that mathematicians have done it all for you; there's no need to think); similarly with eating, then sex. Below that level, it gets undifferentiated into an identification of everything with everything.

It all gets very compressed -- effort is sex. If he is below this level, he is nuts. This scale provides a method of predicting how long it will take the PC to recover and how long it will take him to differentiate.

GROUP AUDITING SESSIONS

July 23, 1954

Group Auditing Sessions to audiences which contain new people must always begin with a talk about Scientology, giving its definition, purpose, goals and background. This talk must occupy at least ten minutes of the first hour. The descriptive material of 31-G of the *Journal of Scientology* is acceptable. The auditor should not encourage floor discussion but should then promptly begin his processing.

Floor discussion is avoided by informing the audience member who wants to talk, "I would be happy to discuss that but these others wish to get down to the serious business of processing," and so begin.

The group auditor before he begins his talk must get everyone's individual name on a card. If husband and wife are present, each writes his name. The cards are always collected promptly on being filled out and a piece of literature must go out to people attending within 24 hours.

WHY DOCTOR OF DIVINITY?

There has been some stir amongst auditors concerning the fact that Scientology has allied itself with the Church of American Science, why a Church of Scientology has come into existence and why auditors qualified by training and personal attainments are applying for and have received ordination as ministers in these churches.

To some this seems mere opportunism, to some it would seem that Scientology is simply making itself bulletproof in the eyes of the law, and to some it might appear that any association with religion is a reduction of the ethics and purposes of Scientology itself. The broad majority of those interested have accepted this step, but not all have entirely understood it.

First, let me briefly take up with you the history of knowledge on this, our planet Earth, in the last three and one half millenia. At the beginning of our written history there was only one trace of workable knowledge which had been handed down from prehistoric times. This was contained in the Vedic hymns. The Vedic peoples are directly responsible for that principle known to us in Scientology as the Cycle of Action. The invaluable observation that birth proceeded into growth, that growth proceeded into an unchanging state and that this unchanging state then proceeded into decay and finally concluded with death, gives to us in Scientology our create-survive-destroy curve. Although it was not originally apparent that our dynamic principle of survive was an inherent part of this cycle of action, the usability of survive was discovered some time ago to be materially expanded by the recognition of the beginning and end of the cycle-of-action curve. Here we find a principle extended to us from a religion. The Vedic hymns are religious hymns. Yet the material in them contains all that is to be found in the works of Charles Darwin and even in the works used today by nuclear physicists. A survey of these hymns as they are now written and available in your local library would astonish you. It demonstrates clearly that our earliest indebtedness was to a religion.

The next single most important philosophic advance within our written history was accomplished by Gautama Sakyamuni. This work was part of a religion known as the Dharma. The Dharma, existing some time before the advent of Gautama, is a religion preached by individuals known as Buddhas. The Western world knows this as Buddhism and variously believes it to be a superstition or idolatrous practice or believes that it was founded by a man named Buddha, none of which are true. A Buddha is simply one who has attained *Bodhi*. A *Bodhi* is "one who has attained an ideal state of intellectual and ethical perfection by purely physical means." There have been many Buddhas and there are expected to be many more.

A very cursory glance at the Dharma discovers that it embraces these facts. "All that we are is the result of what we have thought; it is founded on our thoughts, it is made up of our thoughts." "By oneself evil is done; by oneself one suffers; by oneself evil is left undone; by oneself one is purified. Purity and impurity belong to oneself; no one can purify another." "You yourself must make an effort; the Buddhas are only preachers. The thoughtful who enter the way are freed from the bondage of sin." "He who does not rouse himself when it is time to rise, who, though young and strong, is full of sloth, whose will and thoughts are weak, that

lazy and idle man will never find the way to enlightenment.” “Strenuousness is the path of immortality, sloth the path of death. Those who are strenuous do not die; those who are slothful are as if dead already.”

In the “Surangama Sutra” giving a discourse to one Ananda, Gautama said, “If you simply do not follow after these twelve notions of conditioning phenomena, namely: motion and stillness, separation and contact, variability and constancy, appearing and disappearing, passing or impenetrability, brightness and darkness, or should ignore any pair of them you will be freed from bondage to all mental contaminations. “

Although the Dharma does not give and does not contain, as it is handed down to us, any real or workable methodology to accomplish the state of *Bodhi*, it cleaves very strongly to a scientific rationale which, coming to us from two and one half millenia ago, is startling in view of the fact that it is more delineative, more exact, more comprehensive and more comprehensible than any and all psychological doctrine as known to us in this Twentieth Century.

Here is an amazing body of scientific-philosophical-religious truth. These texts written about 600 B.C. outline a scientific religion of compassion and magnitude.

What has been the fate of the Dharma in these past centuries? What mark has it left upon Earth? The Dharma rose in an Asia enslaved by animism, superstition, idolatry, cannibalism and slavery. It was a barbaric world in 600 B.C. Gautama Buddha and his handful of followers, pretending nothing to the supernatural, using only wisdom, teachings and the technologies of civilization, spread through India the doctrines of the Dharma and brought to these hundreds of millions a much greater civilization than they had known. Penetrating into China, the Buddhist priests spread civilization before them. Penetrating into Japan, they taught the Japanese to read and write, to weave and sew, until two-thirds of the Earth’s population had attained higher levels of wisdom. Spreading westward, the Dharma came into the Middle East and there presented its message of “love thy neighbor” and general compassion for life. And the parables of Gautama Buddha were re-expressed with some differences and additions to spread westward again as Christianity. And today, the entire Western Civilization lies under the spell, if at a lower intellectual level, of the teachings of the Dharma.

You are left to conclude what you will concerning the actual foundation of religion on this planet and of the factual structure underlying Christian churches. Our only concern here is with the fact that religion is basically a philosophic teaching designed to better the civilization into which it is taught. Backed fully by the precedent of all the ages concerning teachings, a Scientologist has a better right to call himself a priest, a minister, a missionary, a doctor of divinity, a faith healer or a preacher than any other man who bears the insignia of religion of the Western world. And remember that it is precedent which masters the opinion of multitudes and nations.

Why should Scientology ally itself with religion or use the word religion in connection with its philosophy?

There are many, many reasons. Amongst them is that a society accords to men of the church an access not given to others. Prisons, hospitals, and institutions, and those who manage them, cannot do otherwise than welcome men of the church. We are talking now about more than simply expediency or protection under law. We are talking about urgency indeed. For to my hand is a document written to me by one of our auditors concerning a woman who had remained senseless for three months following an accident. Her husband was desperate and desired a Scientologist to do what he could to return this woman to consciousness. The Scientologist did so and made excellent progress simply by putting the woman into communication by hand pressures. Although she could not speak, she could yet express herself and respond and even do mock-ups. The terrible condition of her body bettered and when she was returning to the world of speech and action, the medical doctor in charge of the hospital who heretofore had granted grudgingly, on the husband’s persuasion, interviews between the

Scientologist and the patient, seeing the improvement, turned on the Scientologist and forbade him to touch the patient or see the patient or have anything more to do with the patient even though he could find nothing in the case but improvement and although no incident of any kind other than improvement had occurred. The Scientologist was turned out of the hospital and a few weeks afterwards the woman, relapsing into the apathy of unconsciousness, died. We will not charge this medical doctor with murder. We can only charge him with ignorance and barbarism. For we live today in what is at best, so far as social usages are concerned, a barbaric society. Those who profess to heal more often than not exist to collect. Those in charge of the insane are little better themselves than their patients. We live in a society where dreadful and terrible weapons and controls are commonplace, yet which is without many of the benefits of compassion, mercy and charity.

If we in Scientology had to hand only the weapon of better knowledge, if we had no technologies, if we could not—other than give him wisdom and hope—make any man well, we could still take what we know about life and with that as our message effect a wide and compelling influence upon the civilization of our times. For any message carried forward to a people which gives them hope cannot but reflect to the betterment of their culture.

But we have more than a message. We have more than a handful of axioms or explanations of behavior. We have in this year of 1954 processes which, even when worked upon groups, produce en masse a state of beingness which 2500 years ago was being groped for by the select few. We have more command over the phenomena of life than any have ever had before.

Were we to accept our rightful role, were we to accomplish our teachings and deliver to our culture this bettered state of beingness, we would have changed at least the entire pattern of the Western world.

If we can accomplish psychotherapy, this does not mean that we are psychotherapists. If we can accomplish better communications in business, this does not mean we are business specialists. It may be that we could conceive ourselves as emissaries to a barbarism grown lawless in the possession of weapons too powerful for the understanding of their wielders.

In another time, in another place, those men (the Buddhas) responsible for what Western culture calls their religion, called themselves priests. I do not see, then, any inconsistency of any kind in the issuance to those well-schooled and well-skilled in Scientology the degree of Doctor of Divinity as a passport into those areas where they are needed. Only a barbaric minister is a “Man of God.” In all enlightened religions such men are called “Men of Wisdom.”

I do not mean to tell you that Scientology is an extension of the Dharma, or that the forecasts of the Tibetans concerning the Western world are now coming true, or that you should embrace Asiatic philosophy, or even that the efforts of the Buddhas and the Scientologists are comparable. I am telling you this mainly because Western civilization is extremely ignorant of its sources and because these facts, no matter how true, are probably very little known in America and Europe. And I am telling you this to dispel some of your shyness and to increase your boldness and overtness where the society itself is concerned. No door need be closed to you, nor need you apologize should you accept through the Church of American Science or the Church of Scientology any degree or title for which you are qualified. Western civilization is engaged in a worship of superstition, the supernatural and the miraculous even as other nations long ago. Its only other worship is that of the machine. Where else could men and women of compassion and skill serve better, and what else should they call themselves but Teachers of Wisdom?

PROFESSIONAL AUDITOR'S BULLETIN

From L. RON HUBBARD

Via Hubbard Communications Office
163 Holland Park Avenue, London W.11

4 September 1954

With this issue of the Professional Auditor's Bulletin begins a new series by L. Ron Hubbard entitled A BASIC COURSE IN SCIENTOLOGY. The bulletins in this series are planned to cover the period of at least one year. This Basic Course consists of numerous articles by Ron on the theory and techniques of present day Scientology. The experienced professional auditor will find this an excellent source of review; the newcomer will have available a wealth of new data in easily used and highly understandable form.

OPENING PROCEDURE, SOP-8-C

A Basic Course in Scientology—Part 1

Because many people write to me requesting information on how to run a particular technique, and because the greater portion of such inquiries are on how to get a case running, this process is here outlined for your use as the first part of the Basic Course. Having once run this Opening Procedure, SOP-8-C on a so-called "tough case," you will not require any further reassurance or sales talk about it. And having it run thoroughly on yourself by an auditor skilled in its use will adequately demonstrate its workability.

IMPORTANT: IN PROCESSING PSYCHOTICS AND NEUROTICS OF WHATEVER DEGREE OR THOSE HAVING PSYCHOSOMATIC AILMENTS OF ANY TYPE, USE ONLY OPENING PROCEDURE, 8-C, EACH PART, UNTIL THE PERSON IS SURE WHO IS DOING IT. USE ONLY OPENING PROCEDURE, SOP-8-C UNTIL THE CASE IS FULLY SANE. USE NO OTHER PROCESS OF ANY KIND.

The entire modus operandi of Opening Procedure 8-C consists in having the preclear move his body around the room under the auditor's direction until (a) he finds he is in actual communication with many spots on the surface of things in the room, (b) until he can select spots in the room and know that he is selecting them and can communicate with them, and (c) select spots and move to them, decide when to touch them and when to let go. Each one of these steps is done until the auditor is well assured that the preclear has no communication lag.

The auditing commands for part (a) are as follows: **"Do you see that chair?" "Go over to it and put your hand on it." "Now look at that lamp." "Now walk over to it and put your hand on it."** This is done with various objects, without specifically designating spots of a more precise nature than an object, until the preclear is very certain that he is in good communication with these objects and walls and other parts of the room.

The above is run until the following manifestations of communication lag (and any others you may encounter) are well erased: the preclear just brushing the object he is told to touch, looking away from it very quickly, not looking at it at all, looking at the auditor instead of the object he was told to touch, carrying out the command before it is given such as going over to touch the lamp when all the auditor has said is **"Do you see that lamp?"**, complaining

about the process in any way, objecting to being ordered to do the actions, unwillingness to touch the items designated, putting all his attention on creating an effect on the auditor, and apathy, grief, anger, fear and boredom turned on by this process.

When the above has been accomplished the auditor can say anything he pleases, or seemingly introduce any significance he wishes to so long as he hews very closely to the actual thing in this method which makes it work—which is to say perceiving the physical universe and making contact with it. At this time the auditor can become very specific about the selection of spots for the preclear to touch. **“Do you see that black mark on the left arm of that chair?” “Go over and touch it with your right index finger.” “Now take your finger off it.” “Do you see the lower bolt on the light switch plate?” “Now go over to it and touch it with your left ring finger.” “Now take your finger off it,”** and so forth until the preclear has a *uniform perception* of any and all objects in the room including the walls, the floor and the ceiling. This step can be kept up for a long time. It has an infinity of variations. But it is not the variations which work, it is the making and breaking of communication with the actual designated spots. You *can* do the following at this point: make certain the preclear is doing the process by asking questions such as, **“Are you touching the door knob?” “Where is the door knob?” “What is its shape?” “What is its color?” “What sort of texture does it have?” “Are you sure you are touching it?” “Can you feel it?” “Look at it.” “Who is touching it?” “Whose hand is on that door knob?” “Who is holding your hand there?” “Where is that door knob?” “When is it there?”** You can badger the preclear in the above fashion until his actions show that he is in communication with the object and until he is not angered by your questioning and direction.

IF AT ANY TIME THERE IS ANY DOUBT ABOUT THE PRECLEAR’S CASE DO THIS STEP [PART (a)] UNTIL SATISFIED THAT COMMUNICATION IS GOOD. A CASE WHICH WILL NOT OBEY 8-C (a) ORDERS WILL ALWAYS PERVERT OR ALTER COMMANDS TO BE PERFORMED WITH LESS SUPERVISION THAN PERCEPTION OF HIS BODY.

Part (b) has these auditing commands: **“Find a spot in this room.”** No further designation is necessary for this spot. Spotting procedure gives the preclear determinism of selection. When the preclear has done this the auditor says, **“Go over to it and put your finger on it.”** When the preclear has done this the auditor says, **“Now let go of it.”** It must be emphasized that the preclear is not to act upon a command until the command is given and must not let go until told to let go. The preclear is permitted to select spots until such time as all communication lag is flat and until he is freely selecting spots on the walls, objects, chairs, etc., with no specialization whatsoever— which means that his perception of the room has become uniform. Many things turn up in running this procedure such as the fact that the preclear cannot look at walls, etc.

Part (c) of this procedure is run with these auditing commands: **“Find a spot in the room.” “Make up your mind when you are going to touch it and then touch it.” “Make up your mind when you are going to let go of it, and let go.”** A variation of this process is to have the preclear make up his mind about a spot and then have him change his mind and select another spot.

The trouble with most cases, and the trouble with any case which is hung up and is not progressing, is that an insufficient quantity of Opening Procedure 8-C has been used by the auditor. This has been found to be an invariable rule. Preclears will pretend to run commands of a subjective nature but not run them at all. In other words, the auditor is saying do one thing and the preclear is doing quite another. Thus the process is not actually being used on the preclear. The difficulty in this case is a specific difficulty in communication where the preclear cannot duplicate. But more important than that, any preclear whose case is hanging up is out of touch with reality and the environment to such an extent that he has begun to do processes on mock-ups rather than on the actual physical universe. It will be discovered that doing processes on mock-ups such as finding spots in them, finding distances to them, and so forth is

productive of no gain, and even negative gain. Only processes which directly address the physical universe are found to raise the tone of the preclear. He has to come to full tolerance of it before he can get out of it. Thus any case bogging down somewhere in more intricate procedures can be relieved and brought into present time by Opening Procedure 8-C. The only caution on the part of the auditor is that he must be very precise about giving his orders and must insist on the preclear being very certain that he is actually seeing spots and touching them and inhibiting the preclear from executing the commands before they are given.

“WHAT I LEARNED IN TRAINING”

A Basic Course in Scientology—Part 2

For the last ten months, ever since the Philadelphia Congress in 1953, I have been engaged in a research as thoroughly fundamental as the actual subject of Scientology. This research was directed toward the training of auditors. The immediate question asked in this research was one which has remained relatively unanswered for four years: “How do we train an auditor so that he will apply the processes known to be workable in such a way as to make the subject work for him?”

A major difficulty lay in the subject itself, for it was in a state of change. Certain processes would be found quite workable, better each time, and these would be published, but this continuing parade of processes had a tendency to invalidate auditors who had been trained earlier. Thus it began to appear, I am well aware, that an auditor was expected to be in a constant state of training, and that unless he had the “latest dope,” he was not to be considered top-notch. At almost any time from Book One on I could have levelled off in research and investigation, as each Foundation Board pleaded with me to do, out of their financial desires, and could have trained intensively on the processes which existed so that auditors would do them as they were given. There is no doubt, however, that this would have been a losing program, for life kept unfolding new data before me, and a greater and broader understanding of the entire picture was progressively easier to view, and the actual goal of processing kept advancing. Processes, when issued, if done by an auditor as issued, each time would have raised the majority of individuals to whom they were addressed up to the goal which was at that moment envisioned for Man. But the goal kept advancing, higher and higher levels of beingness continued to come into view, and so there was no choice for it. One could not agree with people who, out of financial need, sought to stop research; and although one was very conscious that a hardship was being worked upon trained auditors by releasing continually new processes for them to learn, there was no choice for it but to continue in the research and investigation of the subject of Man and of Life.

We passed out of the field of homo sapiens in late 1950, for it was obvious that we could make people saner than people had ever been. After I had completed, through 1951, my examinations of the whole track, it was obvious that the individual, the “I,” the personality, was not the body, and in early 1952 I was able to make the first announcements concerning exteriorization. By September of 1952 processes had been developed which made exteriorization much better and more stable, and using these processes I had no great difficulty in exteriorizing cases. After training the first group of auditors in Great Britain (September, 1952, the time of issue of SOP-1) I began to realize that there was a considerable nervousness on the part of auditors to face the fact of exteriorization. Indeed, exteriorization as an accomplishment or an existing state has never been very acceptable simply because the average public, indoctrinated to believe that one stepped out of the body at death and went to Hell or some such thing, found it too incredible. Man had been trying to do this thing for at least 2500 years, and although he had some cognizance of it he had never achieved any uniform success in

making it come about at will. The experience of training these British auditors demonstrated that whenever an individual is low on havingness the effort to get him to face the no-mass character of a thetan becomes impossible unless one brings up the havingness of such people to a point where they can bear to view “nothing.” Such people, those low on havingness, actually get sick at their stomachs physically, and very uncomfortable, at the thought of exteriorization, or the exteriorization of others.

Then proceeded the various Standard Operating Procedures from 1 up through 8, and more recently, including 8-C and 8-D. All of these were routine, aimed in the direction of bringing up a person’s ability to handle space and nothingness to a point where he could bear the thought of exteriorization, and so exteriorize. But having many auditors, and being unable to process each one individually, there was a considerable scramble of ideas and technique applications. As an example of this, for a while in Great Britain all of the thoroughly “stuck in” cases had a general agreement amongst them that there was such a thing as a “white five.” This strange beast was actually a psychotic who merely had the idea that he could exteriorize, but actually wasn’t exteriorized, but anybody who did exteriorize was crazy. This stemmed immediately from the discomfort entailed for a no-havingness case in viewing “nothing.” Any time they were asked to view nothing, they became sick and so they invented an explanation to keep them from looking at nothing, which is to say, to keep them from exteriorizing people.

In view of the fact that exteriorization alone brings about a rapid recovery of a case, and in view of the fact that the thetan stuck in a body is not unlike a thetan stuck in a theta trap to a degree where he has inverted and become the trap, one had to carry forward with exteriorization if one were going to deal with illness on any broad scale at

In training over a hundred auditors in America in the Advanced Clinical Courses, I was learning every day, every week, every unit, better means of bringing an auditor up to exteriorization as a case, and bringing up his willingness to audit people into an exteriorized state. By the time we had reached Unit VII [7th ACC], and well before it was completed, I discovered that we actually had achieved, not a process designed to immediately exteriorize people, not even a process to run out engrams, but a process which could be handled by an auditor after relatively little training. So here we had a slight disparity of goals. Here we had my goals, which consisted of an achievement of an understanding of Life sufficient to bring about a higher level of beingness and livingness, here we had exteriorization, here we had all the SOPs, and here we possessed techniques innumerable with which to achieve these goals, and on the other hand, an abrupt dichotomy, I discovered I had invented a process some months previously which could actually be communicated with sufficient ease to auditors so that they would use it as given, and with which they could produce some astonishing results. But this process actually was not aimed at exteriorization. This process would be recognizable to anyone thoroughly conversant with Dianetics. This process could have come into existence in June of 1950 except that then one would not have had the least idea of keeping this process up long enough so that it would actually work.

Now let me tell you something about this process. I have known since 1947 that getting an individual into present time was the most convincing and abrupt therapy which could be performed. I have been in institutions and have told inmates simply, “**Come up to present time**” with a resultant regaining of a stable sanity on the part of these inmates. Anyone in the field of Dianetics was familiar with “**Come up to present time.**” One always ended sessions that way. But after a considerable study, I had found by 1949 that the anatomy of present time consisted of the ground, sky, walls, objects, and people of the immediate environment. In other words, the anatomy of present time is the anatomy of the room or area in which you are at the moment when you view it, and this is present time. Putting a person thoroughly into communication with this environment, which was present time, was, of course, indicated. But processes of that time were mainly subjective, addressed to the mind, on the mistaken idea that the mind was a brain, and that the body had something to do with thinking processes and personality, and so, beyond bringing people to present time by telling them to be aware of their surroundings, as I was doing in early 1950, this principle was not used.

Actually, not until I developed SOP-8-C did I begin to understand what it might take to put a person into communication with their immediate environment, simply by looking at it, touching it and becoming aware of it. All manner of liabilities ensued in the way of somatics and various other phenomena, and it was not until I had made many exhaustive tests that I was willing to accept the fact that somebody could be brought into present time by making him contact the walls, floor, ground, ceiling, sky, trees, people, of the exact moment in which he was, for many, many hours, with stable therapeutic results.

Applying this broad awareness and communication with the environment for tens or scores of hours as a total process, Scientology came into possession of Opening Procedure of 8-C.

In Issue 24-G of the *Journal of Scientology*, we find SOP-8-C complete, but we find, heading it, the following:

OPENING PROCEDURE: (Ten minutes to two hours, with MEST body).

Part (a): Send preclear to exact places in room, one place at a time.

Part (b): Have preclear select places in the room and move to them one at a time, still under the auditor's direction.

Part (c): Have preclear drill in physically holding on to and letting go of objects and spaces on his own decision to hold on, decision to let go.

In the *Auditor's Handbook* as published by the HASI, printed edition, \$5.00 [incorporated in *The Creation of Human Ability*; see page 44], we find "R2—16: RUN PRECLEAR THROUGH OPENING PROCEDURE OF 8-C, Parts (a), (b), (c), EACH ONE UNTIL THE PHYSICAL COMMUNICATION LAG STABILIZES." Now go over to the end of Intensive Procedure in the *Auditor's Handbook* [*The Creation of Human Ability*, page 166] and find that we are not now running Opening Procedure of 8-C from "ten minutes to two hours," but we find: "As a summary comment on these processes, it cannot be indicated too strongly that a preclear who is psychotic, neurotic, or who is having any psychosomatic difficulty must be run on Opening Procedure of 8-C (R2—16) for many, many, many, many hours."

Thus we have considerable importance being placed today, as a direct result of my experience with the Advanced Clinical Units, on Opening Procedure of 8-C. If it were not effective I would not put any stress upon it. But continuous test has demonstrated that the final remark at the end of Intensive Procedure in the *Auditor's Handbook* means exactly what it says. Anyone who is psychotic, neurotic, or who is having any psychosomatic difficulty can best be run, and should only be run, on Opening Procedure of 8-C, with the commands as given in the *Auditor's Handbook* and in the PAB prior to this one. *But*, the most cheering and wonderful thing about this process is that for the first time in all these years we came into possession of something which could be *taught*, and which auditors, as represented by those in the Advanced Clinical Units, could use, would use, which they understood, which they did not vary, which they would keep up with, and with that process we entered into training.

Immediately after this discovery, I found that "Duplication: Difficulties of" was the bugbear back of training. Thus, Opening Procedure by Duplication, completely aside from its terrific therapeutic values, brings a person upscale to a point where he is actually able to follow and duplicate processes.

Thus, with these two Opening Procedures we discover that we are indeed into the strata of training, and today we can guarantee that processes released are effective and, more important, that they will be done as released. And now, and only now, is Scientology capable of going forward as Scientology, and only now can we consider that an auditor, when he has been trained, will not have to shift and vary that training.

As a result I am devoting the next many PABs to the subject of training, and making out of them what amounts to a course to be used by auditors who themselves are doing training, and for the use of auditors who wish to come up to date, in such a way as to be from there on "in date."

Thus I feel that we have accomplished something.

THE USE OF SCIENTOLOGY MATERIALS

A Basic Course in Scientology—Part 3

The first thing a Scientologist should know about Scientology is the use of its materials.

The materials of Scientology are not its tools. Its tools are processes—its materials are books, tapes, *Professional Auditor's Bulletins*, *Journals*, letters and experience.

Now that we are operating from the standpoint of a known subject and known processes, we can handle material much better than before. Now that we know that auditors can be trained rather easily to use Standard Operating Procedure 8-C, Opening Procedure, and that they are happy to learn it, and that it will produce results for them, we would be very foolish, as schools, as auditors, as individuals, to abandon this gain.

The materials of Scientology are designed to communicate. That is all very well, but TO WHOM—AND WHEN? Certain of the materials of Scientology can be communicated with ease to people that never before heard of the subject. Certain others can be communicated to people who have been in association with Scientologists but who are not auditors. The higher level of material and data can be communicated to people who are in training to be auditors. Certain other material can be communicated to people who have been trained as auditors. And if we do not recognize this fact, and if we do not follow it, then we are going to produce a confusion with Scientology, and we are going to turn people away from Scientology, and we are going to defeat Scientology in doing what it is trying to do.

For a long time Scientology was in a state of change sufficiently rapid to be bewildering unless viewed as an orderly whole, taken with cognizance from the *Original Thesis* through *Book One*, up *through Advanced Procedure and Axioms*, through 16-G, 24-G, and Professional Course Tapes. But now there is no further excuse for using this material in a muddled fashion. To give you some example of this, I recently received a bulletin from an area in the United States which has a history of being confused and introverted on the subject of Scientology. This bulletin was from two auditors who should know better. It was an announcement. It had been mailed to a hundred and fifty people who were more or less interested in Scientology, including some auditors in that area. And this bulletin proclaimed that the Professional Course Tapes, July, 1954, intended for the training of HCAs, would be played as public lectures for these people over a few evenings. A telegram was sent to these two auditors, telling them that if they committed this crime against themselves and Scientology, their training privileges would be suspended for five years.

What would happen if they did this thing? Here are the Professional Course Tapes, designed to be played to a student after he has been thoroughly taught Opening Procedure 8-C, Opening Procedure by Duplication, Remedying Havingness, and Spotting Spots in Space, as

well as Significances. After the many weeks which would be spent in teaching the student these named items, it would then be possible to communicate to him with the Professional Course of July, 1954, and only after a student has been so trained would he be further trained by playing these tapes to him.

Why is this? It is because one is talking as an instructor when he is talking to any public audience. He is talking as a teacher. Is his purpose, then, simply to confuse his audience and make them turn their backs on something which is confusing, or is his purpose to degenerate what he knows into the same level with all other confusions, or is it his purpose to inform his audience? If we in the HASI have learned over ten arduous months of communicating Scientology directly, face to face, with people who are there solely for the purpose of learning, and in communicating Scientology less directly to the American public (as in Operation Phoenix*); if we know now, and assert that we must either communicate data as data and skill through the stages of Opening Procedure, Opening Procedure by Duplication, and the rest, to bring a student into any understanding of what Scientology is all about; and if we assert that we have not been able to communicate to the general public intelligently except by using the mildest and most permissive data—then this, representing the combined efforts of myself and some of the most trained and skilled auditors in Dianetics and Scientology, should be taken with some weight.

Bluntly, you cannot avalanche data onto the heads of partially trained, poorly comprehending people, or people who have no real conversance with auditing at all. And if you try to do so, you will fail, and Scientology will fail, and the people in the area will not have the least idea what you are trying to do. And they will walk away from your meetings, and they will walk away from your group sessions completely confused and vowing to themselves to have nothing further to do with Scientology. And they will not tell their friends about it, and people who should be brought in to be helped will not be brought in to be helped. And so a great many people, by this misunderstanding of the uses of the materials of Scientology, are being denied the benefits of Scientology simply because these materials have not been handled with intelligence.

Yes, I know that we have just learned this, but that we have just learned it makes it no less emphatic. However, one supposes that somebody who has been trained should have better sense than to use something with as much dynamite in it as the Professional Course of 1954 as fit diet for cursorily interested people.

Another shocking incident occurred in another area where a person who had finished an Advanced Clinical Course Unit actually permitted a mailing piece to go out to a great number of auditors from old Dianetic days, which had scrawled all over the back of it in large letters, "The meat of an \$800.00 course for \$38.50," and this refresher course pretended that it would, in five evenings, bring these auditors up to date on Scientology, and pour into them material which it had taken this graduate of the course four hundred and thirty-two hours of hard study to begin to assimilate. The course graduate did not do this, but permitted it to be done. Of course there were considerable repercussions because of this. A Professional Course graduate was an HCA or BScn before he began the Advanced Professional Course. Most of the people in these units extended their training from the six weeks minimum up to twelve and fifteen weeks, since this could be done without further charge. Nobody is going to relay the material these people received in any five casual evenings.

In the first instance, where the Professional Course was going to be played in four or five nights as social entertainment, only chaos would have resulted. The two auditors doing this have often wondered what was the matter with their area, why more auditing was not done in their area, why, when they brought groups together the groups did not stay together. The reason is very plain. Instead of actually teaching these people something, these two auditors had been falling back on material taken from courses designed for people who were there to be trained and who had already spent considerable time in training. These auditors had done, previously, with other material, the same thing they were trying to do with the Professional Course. As a net result, the people in their area who came to them for a night, or two nights,

would find only a steady avalanche of data far too technical for their assimilation. And out of those recordings would come sufficient restimulation to send them away, never to return.

On the other hand, think what would happen to an auditor, interested in the quality of auditing and the reputation of Scientology in an area if, after leaving such a thing as the Professional Course or finishing his training with a Doctor of Scientology, he should reach out for all the people who had ever been interested in auditing in the area, bring them in, and teach them how to run Opening Procedure of 8-C. In other words, to teach them, step by step, painfully and painstakingly, until they had it as a complete purity, until they had it drilled and ingrained into them so that they could not avoid doing it right, think what would happen to the auditing skills, and think what would happen to the reputation of Scientology as an immediate result.

Where public lectures are concerned, the HASI has a series of eight hours of tapes which describe Scientology, its various efforts and benefits. These are designed for the public at large. They do not so deluge individuals that they create a confusion, but simply spark their interest and curiosity sufficiently to bring them to a level where they will at least wish to experience some of the benefits of Scientology or desire to pursue it further.

There seem to be certain rules forming here about the use of such material, and these would be more or less as follows:

1. Express to the general public only as much concerning the benefits, organization and practice of Scientology as would give it hope, without confusing it or embattling it with its prejudices.
2. When giving Scientology to people to use, give them only the simplest tools, render them completely practiced and conversant with those tools, and only when they are expert in them give them data.
3. Instead of talking about Scientology, apply it.
4. The simplest processes are the best processes.

One could say that Man was a complicated animal simply because he is a simple animal and will not face it. When you have seen what we have seen here at the International Headquarters of the HASI, result from a continuous application to a psychosomatic illness, to psychosis and neurosis, of Opening Procedure 8-C, you will only *then* begin to understand what an essentially simple mechanism Man is, and how hard he works to be a complex one.

But only when you have been trained to use such a thing as Opening Procedure of 8-C, arduously enough to demonstrate that it is done just exactly the way it is done and no other way for hours and hours and hours and hours, will you understand what we mean by training, and will you discover that people can be trained.

The Director of Training in London who is, at this writing, completing the first course of this new type of training writes: "The present course is going well. The students have had days of Opening Procedure, both of 8-C and by Duplication. It has been exceedingly interesting to watch. We have spent about a month now getting across the simplicities in actual practice, spending, for example, a whole day on 'Something you wouldn't mind remembering' and 'Something you wouldn't mind forgetting' and two whole days on Spotting Spots in Space and Remedying Havingness. The spirit is very high and I think we will turn out the best bunch of HPAs ever. We have hammered home auditing by observation of communication lag. It certainly is a wonderful system, because auditors surely cannot miss with it. I know the students going through now will not."

The grades of Scientology are: General Member, HASI; Scientology Group Leader; HCA (HPA); BScn and DScn. These are grades of knowingness of the subject. They demonstrate levels of skill in the subject and they very adequately demonstrate the results which can be expected, for these skills show up in terms of preclears.

Group auditing sessions, when done by the simplest of commands, reducing every communication lag for every member of the group, are the most effective group sessions. Here again we have simplicity at work. Here we have processes being used right.

If we expect Scientology to communicate itself throughout the populace of the world, it had certainly better be communicated as it can communicate. If this is not done we will be standing here talking to ourselves.

L. RON HUBBARD

5410C20 8ACC-14 The Parts of Man

This is a discussion of the parts of Man as understood through R2-61 and R2-62. The parts of Man are related to overts and motivators. [This is because a thetan as such cannot be harmed and therefore cannot receive a motivator. So he would have to have a confusion of identity to receive a motivator.]

Man consists of four distinct, separate, though related, parts:

1. Thetan
2. Body
3. Thetan machinery
4. Reactive/somatic mind.

Dianetics covers the first four dynamics. Even the first dynamic can be split into these four parts. When you thought you were treating the first dynamic, you were actually treating the third. The absolute Book 1 clear would be the awareness of awareness unit.

Around the end of 1951, LRH mentions that erasure of all facsimiles would result in demolition of the body (See Advanced Procedures and Axioms). In Book 1, we were talking about engrams of this lifetime. Erasing these would give a relative clear. The only trouble was that the awareness of awareness unit, after a few years of this research, kept insisting on exteriorizing, and it turned out to be the person himself. If he felt bad when he was out -- sort of with no character -- he is not stabilized.

So the first dynamic is the awareness of awareness unit, as modified by various things. Pieces of thetan machinery are his creations, hidden and forgotten by him. All the energy used by the machines really comes from the thetan, though, for randomness, he may consider that he needs to eat to keep on going. He can also understand something from someone else, add it to his own machinery, and blame someone for giving him a machine.

The thetan invests the body with characteristics, then he is afraid of losing these characteristics. But this is really no problem. He can invest himself with these characteristics.

The thetan can also duplicate himself. He can create a new, different life unit with full determinism, power, personality, etc. It could have more power than he if it is set up that way. Sex is the super-condensed, many-times-via'd activity of creating other life forms. It is only more complex because it is considered to be. The Thetan actually needs no system to create a living being.

Thetan machinery is not intended to have a life of its own, but sometimes the thetan endows machinery with life. In DMSMH, LRH talks of the possibility of setting the mind alongside the body. This was misinterpreted worst in E-therapy. One can do this and get himself haunted by living beings. He can create them, then go off and leave them. This is basic life multiplication -- a 1D creating a 3D through a 2D. So mankind could have one common ancestor. It would not make that one superior, however, since the offspring could just as well be the superior ones. Furthermore, an individual could just repostulate himself back into his creative unit and thus disappear, especially since, in reality, there is no time. All one could lose would be the knowingness that he had done it. One would have to shut that off for oneself. Now do you think you understand valence a little better?

Having multiplied himself often, an individual had laid aside this ability, begun to hang on to the "only one" computation, and is holding his ability to be himself closely to himself. He tries hard to maintain an identity as a 1D. He becomes too involved in his own agreements and thinks he needs sex to create a being, but even that creates only a body, which is the granted

beingness of many individualities, based upon one individuality that started that genetic line. The thetan got so complex, with all his machinery, and so interlocked with so many other individualities; he granted so much beingness in all directions that he forgot who and what he was and just knew he was supposed to be this identity and repeat the manufactured creation of this identity. This would make him solid, and his machinery would have composited. At this point, he would be a body, and his machinery would become the reactive/somatic mind. The thetan gets so solid as a body that he can be taken over and controlled by another thetan and his machines. The reactive mind that goes along with a body cannot be controlled unless another thetan comes along and takes over the body. However, the body can control the reactive mind. There is no difference between the reactive and the somatic mind.

A thetan can create another thetan. From this, we can get a species, which implies other species, hence a 5th dynamic. Thetans are generally not as anxious to control animal bodies as human bodies, since men's affairs are complex enough to be interesting to control. So animals are generally body + reactive mind: a condensed thetan + machinery.

By addressing the alter-ised complexity, as in psychotherapy, we would never get an as-is-ness, but just more mass. The auditor thus must address the right part: the thetan. Otherwise he might as well try to process a rock as a body: the rock is more complex, being denser (therefore it has more vias on the comm lines). The distance from cause to effect in a rock has so many vias and complexities in it that it loses both cause and effect for the rock. The impulse towards religion in most people is to discover basic cause; however, it leads them to go through vias, which gets them lost. The way to find cause is to find the highest level of freedom, assume it, and then know, because you will be cause and will therefore be capable of being an effect.

As processing improves, we find that the better we understand something, the better we can control it, and the less need to process it so that it can be controlled. So, in modern scientology and dianetics, it is only necessary to knock out the factors you don't want to process because you understand them well enough to control them. The first of these is the reactive mind. There is no sense in processing it since we know how to control it. Also, there's no use in processing the body -- medicine will take care of that. Machinery is interesting, but it's not necessary. So we're left with only the thetan to process, and we process the thetan just enough so that he can take control of his other parts, having recognized them. "Right thought", as in Christian Science, would work fine if you had a clear to begin with. The Christian Scientists have limits on what "right thought" is. But actually, right thought is optimum survival on all dynamics.

So, in processing, we can start with "Be three feet back of your head." For those who don't respond to that, the overt-motivator sequence is a good place to start; it's the mechanical process by which a thetan becomes solid enough to be a body, surrounded by his machinery, which has become the bank. Behind the overt-motivator sequence lies the consideration that matches the overt and motivator. You must be downstairs from pan-determinism to self-determinism for this to happen.

A justifier is the mockup or overt act demanded by a person guilty of an unmotivated act. It is something nonexistent, as an effort to justify the unmotivated act. It's a false motivator. There's nothing really wrong with the motivator-overt sequence; it balances out; no one gets insane or even hurt by it. But the unmotivated act - justifier sequence is the villain! thus the thetan is doomed, because he can never really receive a motivator. That's the whole reason for the dwindling spiral. A thetan can never be harmed, but he can consider he's been harmed, act harmed, and dwindle. Everything the PC tells you is a search for a justifier. His search through his bank quickly as-is-es his few true motivators. So he has too many overts and must get himself sick, downtrodden and betrayed [motivator hunger]. He gives justifiers and pretends they're motivators.

The way you could get him into this dwindling spiral is to define harm for him. This gets into good and evil: R2-61 and R2-62. It only requires the consideration that harm can take place to

set off the unmotivated act/justifier sequence. You just get this consideration from yourself. A person must have intended harmful destruction and succeeded to define the concept, "harmful" for himself. Only when someone destroys something he's created does he define harm for the other fellow. He had to do it first himself, because he had to communicate first to be communicated to, since otherwise he couldn't have been located.

Any solidity or departure from the static is a lie. The way we depart from the absolute truth of static is via the lies of justifiers. This is the source of all inability's and deficiencies.

The thetan also has an anxiety about creating an effect. Another thetan can never get a motivator; a thetan knows he can never receive an effect except as he considers it and agrees, so he knows he can never create an effect on another thetan. So he must consider life units as solids. He gets upset when he considers them thetans. Hence people turn away from Scientology because they are afraid of exterior beings. The thetan wants to create an effect but can't without being guilty of an unmotivated act. All he had to do to get messed up was to discover he could harm others; he then tried to justify his unmotivated acts and got solid, and his whole past track would be nearly all hallucination. The insane pack along an enormous number of mocked up facsimiles = justifiers = pictures of things that never occurred.

A good violent fast way to handle this state of affairs is to have the PC mock up things that anything on the seventh dynamic could do to him. This remedies his havingness [motivator hunger]. You can actually use all dynamics. Another process: the PC spots all the spots where he or anyone considered that harm could be or had been done. [R2-61 and R2-62, in Creation of Human Ability, pp. 153-154].

THE COMMUNICATION LINES OF SCIENTOLOGY

A Basic Course in Scientology—Part 4

There are several levels of communication in Scientology, and these should be known and observed by an auditor in his selection and use of materials.

The first of these which we should consider is the communication from the general public to the general public. Here we have word of mouth. This is the most important communication channel where promulgation and dissemination are concerned simply because it is the broadest and is the one which ultimately will reach the most people. Thus it is that we must be intensely interested in what Scientologists release, and what Scientologists do, and what the press says about Scientology. It would be thought by many with no great background in public relations that the proper method of obtaining word of mouth is through the public presses. This is not the case. Newspapers and magazines do not furnish the material which the public is discussing. The newspaper would love to think that it furnishes all the material which people talk about, but this is not the case, and actually on a check-up you will discover that you have today spent only a moment or two mentioning current events to your neighbors. It is of considerable interest to Scientology and Scientologists that no news stories be released. In the first place newspapers and magazines are incapable of duplication and cannot put forth a straightforward story, and have no cognizance whatsoever of ethics. The level of journalism today, if you care to look it up on the Chart of Human Evaluation, is found to be 1.5 and below, and I invite your attention to the accompanying columns of that level. This is a highly untrustworthy form of communication. It is not a particularly broad form.

What the public says to the public, if it were to be duplicated, and if it were to be regulated in any way by Scientologists and the organizations of Scientology, would have to be brief indeed, and would have to be uncomplicated. Otherwise it would not be duplicated by word of mouth. A central message, properly formulated, would be distributed by word of mouth if it could be embroidered into sufficient material to permit discussion. Without discussion being possible no word of mouth would ensue, since people use word of mouth material simply to be interesting themselves, and their method of being interesting is by taking some simple principle which is being talked about, which is yet controversial and embroidering it. Thus, by adding their opinions to it, they themselves become interesting. Thus, if you have something to which no opinions can be added you have something which will not be talked about.

For example, we have one piece of information, which, variously stated and in various forms, seems to communicate and which is communicated, and that is to the effect that for two thousand years Man has not had health, happiness, or immortality, yet these were promised to him two thousand years ago, and Scientology is delivering them today. Well stated, poorly stated, summed up, rephrased, this is still something that people will talk about. They may only use part of it, to the effect that Man has not had health, happiness, or immortality for two thousand years. Another piece of information which people will talk about, when it gets into

circulation, is that a nuclear physicist, in trying to research matters of physics, found the human soul and discovered how to free it. One rather astonishing piece of information which was handed out was found to travel fairly well, and that was to the effect that God did not like unhealthy people. He made Man to be healthy, and Man got unhealthy. This, without any Scientology connected to it, was found to travel. Thus, the information which is put on the communication line from the public to the public has to be simple enough at its core to bring about discussion, so that by being embroidered it yet does not lose its core.

The Scientologist subscribing to the Code of Scientology is also subscribing to some control over this communication line from the public to the public. By staying out of the press, by refusing to engage in unseemly conversations over the subject, he is aiding and abetting the flow of word of mouth.

As any science which betters people gathers unto itself considerable numbers of people who can dramatize only how bad it is over there, we get a great deal of crank, squirrel, neurotic, and psychotic communication flow. We have an incidental communication line, then, which does not at all help the public's word-of-mouth communication from this entheta line. We call this an entheta line simply because people use Scientology to explain to others how bad it all is over there, how bad auditors are, how bad courses are, how bad Hubbard is, how bad rain is, how bad cats are, how bad the other person is, etc., etc. We even have publications which pretend to be part of Dianetics and Scientology which couldn't possibly print anything but bad news. That there is not one word of truth in all this news so far detected by the most searching inspection here, that these rumors and perjuries and falsehoods haven't even the dignity of a background in fact, does not stay their passage.

For instance, a character in that city of characters, Los Angeles, recently wrote to a publication which had no better sense than to print it, that the Supreme Court had many times decided that ministers who charged a fee for whatever they did were practicing medicine without a license. The writer of that letter refuses processing and happens to be connected with persons of a religious faith which is not Christian, and to be himself no Christian, and has a definite stake in religion which he does not mention in his letter. This is overtly slanderous, stated with malice and intention to squirrel up the field. However, many people, simply by driveling along about how bad it all is, put out unconscious dramatizations about how bad it all is, put out unconscious dramatizations about Scientology.

But the HASI, having been free to a large degree of the burden of investigation, has come alertly forward to police these lines, for there is a great deal of difference between free speech and slander. The first notable example the HASI made has come off very successfully. A piece of uncalled-for publicity which, like all the rest, was nothing but a lie, was published; its author was promptly and immediately threatened with suit if he did not instantly apologize, and seeing for the first time the difference between slander and free speech, this person hastily apologized and cut his communication line.

But unless all Scientologists fall into the habit of ascertaining the source of their information, and policing this entheta line, then the word-of-mouth advertising from the public to the public is seriously threatened, and there will be no great advance of Scientology in the public itself. For the very best communication line there can be for Scientology is being continually destroyed by irresponsible, if not insane, people who may not know anything else, but they certainly know how bad it is over there.

THE AUDITOR'S CODE 1954

A Basic Course in Scientology—Part 5

1. *DO NOT EVALUATE FOR THE PRECLEAR.*

The main difficulty of the preclear is other-knowingness. An auditor auditing a preclear has before him someone whose last stronghold of owned knowingness is his engram bank and various mental phenomena. As much as possible, the preclear should be permitted to discover the answers to this phenomena through the process of auditing. What the auditor is doing is steering. If he tells consistently what is to be found or what will happen, the preclear will not get well. The steering, of course, is a covert but highly acceptable method of inviting the preclear to find out. Giving a process's commands is an invitation to this discovery. The auditor is working from a body of knowledge as to how all minds and spirits function. The preclear could even be trained in this high generality without harm, and certainly can be audited in such a high generality, but its particularities and peculiarities, the phenomena which occur, must not be "telegraphed" to the preclear before they occur, and when something has occurred to the preclear the auditor should not then come up with its explanation. This was the entire failure of psychoanalysis. The preclear would say something, and the analyst would then tell the preclear what it meant.

The auditor should confine himself to giving the proper auditing commands and engaging in enough "dunnage" (extra and relatively meaningless talk) to maintain a two-way communication line.

2. *DO NOT INVALIDATE OR CORRECT THE PRECLEAR'S DATA.*

After a preclear has informed the auditor of an incident in his life it would be a fatal error, so far as the preclear's case is concerned, for the auditor, using other data, to inform the preclear that he did not have a proper recall on the incident. This is the main trouble with husband and wife auditing teams, and why they normally do not work. Both have been present under various circumstances, and the husband or the wife doing the auditing on the other may find it impossible to repress his or her own version after the other one has delivered up an incident. Today's type of auditing enters incidents minimally; therefore opportunities of this kind are not as frequent as in earlier days. Verbal invalidation is, of course, the symbolic manifestation of force. Invalidation, when expressed in emotion and effort, is force. When the preclear is invalidated he feels as though he has been struck by some force. One of the lowest levels on this line of invalidation is criticism. Lacking the effort or energy to hit somebody, a covert person criticizes or otherwise invalidates.

3. *USE THE PROCESSES WHICH IMPROVE THE PRECLEAR'S CASE.*

In a series of tests conducted to discover why certain co-auditing teams had failed to effect an improvement, it was found that the auditor in each of these failed teams had been auditing out of the preclear what should have been audited out of the auditor. Top-flight Scientology processes minimize this difficulty, for they audit the common denominator, as nearly as it can be approached, of the difficulties in any and all minds. Nevertheless, auditors have a tendency to do to the preclear what should be done to the auditor in the way of processing. Furthermore, there are processes which effect improvement only after a great deal of auditing, and although this might be considered remunerative, it is actually not efficient since an auditor tying himself to one case is not benefiting the society as a whole, and is so defying his own third dynamic.

4. *KEEP ALL APPOINTMENTS ONCE MADE.*

Many a case has failed, not because of processing, but because the auditor was so irregular in keeping appointments that he introduced into the case an anxiety about waiting or unpunctuality. By failing to keep an appointment the auditor is actually telling the case that the case is not important, therefore not interesting, and the case will not run for an auditor who will not keep appointments. If an auditor has, himself, difficulty in keeping appointments, then he should not make specific appointments.

5. *DO NOT PROCESS A PRECLEAR AFTER TEN P.M.*

Utilizing all the experience of four years, it has been discovered that items 5, 6 and 7 of the Auditor's Code were the only actual causative agents in spinning preclears. Whenever a preclear markedly worsened under processing, the process itself was found to be guiltless, and it was discovered that items 5, 6 and 7 of this Code had one or all been present. In every case where a psychosis or neurosis was restimulated by bad auditing, all these factors, 5, 6 and 7, were present. Because the body is built of cells which contain in their experience line, evidently, the pattern of plankton, energy level actually drops after sundown, but for a while there is a certain franticness which can be mistaken for energy. In other words, when the sun went down the source of energy was no longer present, therefore auditing during any of the dark hours is not as effective as auditing during daylight. However, a person can be audited safely up to 10 p.m. regardless of the state of his case. After 10 p.m. the curve of ability to handle energy drops quickly and hits its low at 2:00 a.m. But any auditing after 10 p.m. has been found to be at least ineffective, and might as well not have been done.

6. *DO NOT PROCESS A PRECLEAR WHO IS IMPROPERLY FED.*

It is an unhappy thing that occasional hidden factors such as lack of sleep, lack of food, or an urgent present time problem may defeat the efforts of an excellent auditor. The best process will not benefit a preclear who, still interiorized, is being drained down as a thetan by a body which is badly in need of food. Every bit of energy which the thetan puts out is being absorbed by the body, which is improperly fed. A body suffering from malnutrition, or even lack of a proper breakfast, will thus inhibit auditing.

Sometimes a preclear who has come from a distant area to be audited is sufficiently short of cash that he will attempt to subsist during the week of an intensive upon sandwiches and coffee. He might as well have stayed home, for his body, being hungry, will pull in engrams, which are after all edible energy, will drain down every beam which a thetan throws out, and will in general defeat processing.

An improperly fed preclear demonstrates on a basal metabolism test, even when sane, the same oxygen burning rate as a psychotic. You can take any preclear, have him omit eating breakfast, and a psychotic, and test the two of them, and you will discover their metabolism and breathing behavior to be similar.

It is not prescribing a diet to demand that your preclear eats as a normal human being should during an auditing intensive or before any auditing. Preclears who are not adequately fed can be spun if bad auditing and some other factors are added into the session. This does not

mean that a body can get so starved that it cannot benefit from auditing, but it does mean that a proper diet, as is normal with the preclear, should be observed during an intensive. Diet, by the way, is nowhere near as large a factor in the recovery of cases as nutrition “ads” would have you believe, and today no HASI auditor is allowed to prescribe diets if he is to continue in the protection of the organization. However, number six must be observed during auditing.

7. *DO NOT PERMIT A FREQUENT CHANGE OF AUDITORS.*

Although it is almost impossible for a case to escape having two or three auditors, when the number gets up to six or eight over a relatively short space of time, such as a few months, the case is seen to suffer by reason of the change. As much as possible a case should be run by one auditor. The basic reason for this is that one auditor running a case has a better chance of completing what he starts. A frequent change of auditors nearly always means a frequent change of estimates of a case, and a frequent change of processes none of which get finished.

8. *DO NOT SYMPATHIZE WITH THE PRECLEAR.*

There are three ways of handling those who need help. The first and most senior of them is to be effective and remedy the condition once and for all. The second method would be to make the person comfortable. If you cannot be effective, and you cannot make the person comfortable, only then would you be justified in giving the person sympathy. At the same time cases can be retarded by the auditor’s being far too domineering, but if one has to err, err in the direction of being too domineering, not in the direction of being sympathetic. Sympathetic auditing invites the preclear to dredge up more data about which the auditor can be sympathetic, and finally becomes a mutual sympathetic society.

9. *NEVER PERMIT THE PRECLEAR TO END THE SESSION ON HIS OWN INDEPENDENT DECISION.*

With such processes in existence as Opening Procedure by Duplication, it becomes important that the auditor carry through what he starts. You will discover that a preclear very often will get up to a point where he desires to fight the auditor, and then will walk off from a session. It is the auditor’s responsibility to bring the preclear back and to finish the session. Sessions end when the auditor says they are over, not when the preclear says they are over. However, in order to continue the session it is not legitimate to abuse the preclear or disobey any other sections of the Code.

THE AUDITOR'S CODE 1954 (Concluded)

A Basic Course in Scientology—Part 5 (Concluded)

10. NEVER WALK OFF FROM A PRECLEAR DURING A SESSION.

Although no auditor of any decency or attainment would believe that a person applying Scientology processes would need number ten, it has happened often enough that auditors have walked off from preclears who were in the midst of long communication lags to make it necessary that this be included in the Auditor's Code. The auditor's effort to punish the preclear for not obeying his command is responsible for this. One notable case, a poorly trained person practicing Scientology—you would hardly call him an auditor—became incensed with a psychotic girl he was auditing, got her into the middle of a long communication lag, raged at her, and then walked off from her. It took fifteen hours of extremely good and clever processing on the part of a top-flight auditor to regain the ground lost.

11. NEVER GET ANGRY WITH A PRECLEAR.

What must be the level of self-confidence of an auditor who feels that the introduction of misemotion into a session is necessary to express his inability to cope with his preclear?

12. ALWAYS REDUCE EVERY COMMUNICATION LAG ENCOUNTERED BY CONTINUED USE OF THE SAME QUESTION OR PROCESS.

Numbers 12 and 13 of the Auditor's Code 1954 are the essential difference between a good auditor and a bad one. If you want to know who is a bad auditor, then discover the auditor who fails to reduce communication lags encountered in the preclear by a repetition of the same question or process. This auditor is expressing his own inability to persist, and is expressing as well his own inability to duplicate, and he is more under the control of the preclear than the preclear is under his control. An auditor not only has to understand communication lag, he must reduce every communication lag brought into being by a question or a process before going on to a new question or a new process.

13. ALWAYS CONTINUE A PROCESS AS LONG AS IT PRODUCES CHANGE, AND NO LONGER.

Here is the other way you tell a bad auditor. A person whose case is in poor condition will express his state by changing every time the preclear changes. Here is the auditor being the effect of the preclear. The preclear changes his condition, changes his communication lag, changes his ideas, and if, between auditor and preclear, he is actually cause, the auditor will then change the question or change the process. You watch some auditor auditing who is ordinarily not reputed to get results, and you will find out that in the course of an hour he is likely to use ten or twelve different processes. Each time some change occurs in the preclear,

instead of pursuing it and reducing the communication lag on the process the auditor promptly changes. He excuses this to himself by saying some other process is needed or necessary.

It so happens that the process which brings about a change will probably bring about further change. There is an auditing maxim concerning this: "The process which turns on a condition will turn it off." This is true within limits, but it is true enough to drive home the fact that a person should use a process as long as it produces change. This can also be true of an auditing question. An auditing question should be used as long as it continues to produce change. But if one has used a question or process for some little time—in the case of a straight wire question five or eight minutes, in the case of Opening Procedures two or three hours—with no real change in the preclear, it is time to change the process. If the auditor does not change a good process, the process will then produce a change in the preclear.

A bad auditor will use a process until it turns on a somatic, will then change to another process, will run it until it turns on another somatic, and then change it, and so on until he has thoroughly bogged a case. In spotting spots to get rid of old auditing in preclears who have been audited between 1950 and 1954, the plaint is often heard from the preclear, "Oh, if only just one engram had been run a second time, or if one secondary had been run again, or if any auditor had said 'go through that again' how wonderful it would have been."

It was the inability of the auditor to repeat the process of erasure which prevented Dianetics from being all we would ever have needed. The inability of the auditor to duplicate is mirrored in the fact that he cannot duplicate over and over the same question or the same process. This also comes into view in another way. An auditor who is unable to duplicate must always give the given and standard process with his own slight twist. He is given an auditing phrase, but he finds that he cannot use it unless he gives it a small curve. This auditor is worried about his own thinkingness and is using other thinkingness as his randomness. You can always tell a good auditor. He uses and abides by 12 and 13 of this Code.

14. *BE WILLING TO GRANT BEINGNESS TO THE PRECLEAR.*

An auditor who is unwilling to grant beingness to those around him will find himself unable to run a process which is effectively producing a change for the better in the preclear. This auditor will try to discover all manner of processes which reduce the status of the preclear. Whatever rationale he uses to explain this, he will not use an effective process if he is himself unwilling to grant beingness or life to the preclear. Thus we get two sharp divisions amongst auditors: those who are using the preclear as an opponent in a game, and those who are using the preclear as though the preclear was something being created by the auditor. The latter state of mind will produce remarkable results, the earlier will produce chaos. An auditor who needs preclears in order to have a fight would probably also beat children or small dogs—not big dogs, small dogs.

15. *NEVER MIX THE PROCESSES OF SCIENTOLOGY WITH THOSE OF OTHER PRACTICES.*

Auditors in general have considerable contempt for those who mix Scientology with some other practice or who use Scientology, change it around, and out of position or cowardice call it something else. Auditors do not like this because they almost invariably, one or another of them, will inherit at least some of the preclears of people who disobey this line of the Code. There follows then an auditor's effort to unscramble a case which has had its spine adjusted while running engrams or which has discovered an incident only to have discovered immediately after that it has tremendous mystic significance or psychoanalytic bearing. An auditor who mixes Scientology or miscalls it has never learned Scientology. If he knew Scientology he would not feel it necessary to do something else, for Scientology is nothing if not extremely effective—certainly more effective than any other existing practice today.

Sometimes auditors encounter people who "really use Scientology, but because of the acceptance level of the public" mix it with something else. The public has no difficulty and has

never had any real difficulty in accepting or using Scientology under that name practiced according to its own procedures. In a particular instance, an auditor who prescribes diets or who does other things of a material nature additive to the practices of Scientology immediately divorces himself from the protection of the HASI and is subject to action by the CECS.* An auditor who has to mix Scientology to make it work didn't know Scientology in the first place and so wasn't really an auditor anyway.

This is the Auditor's Code of 1954. It supersedes any earlier Codes. It has been developed by the CECS as its standard of practice, and latterly was adopted by the Hubbard Dianetic Research Foundation for use in the field of Dianetics. It is the official Auditor's Code.

It is required of students under training that they know this Code by heart, know what it means, and as they process, practice it. It is one thing to know it—another thing to practice it. A good auditor does both. It is not something to be read, agreed with and forgotten. Following it means success in cases. Neglecting any part of it means failures. It combines the arduously won experiences collected during four years from the practices of three thousand auditors.

We want successes.

THE CODE OF HONOUR

A Basic Course in Scientology—Part 6

1. Never desert a comrade in need, in danger or in trouble.
2. Never withdraw allegiance once granted.
3. Never desert a group to which you owe your support.
4. Never disparage yourself or minimize your strength or power.
5. Never need praise, approval or sympathy.
6. Never compromise with your own reality.
7. Never permit your affinity to be alloyed.
8. Do not give or receive communication unless you yourself desire it.
9. Your self-determinism and your honour are more important than your immediate life.
10. Your integrity to yourself is more important than your body.
11. Never regret yesterday. Life is in you today, and you make your tomorrow.
12. Never fear to hurt another in a just cause.
13. Don't desire to be liked or admired.
14. Be your own adviser, keep your own counsel and select your own decisions.
15. Be true to your own goals.

Scientology is itself the microcosm of a civilization. It contains two moral codes: one is the moral code of practice which is the Auditor's Code of 1954, the other is the Code of a Scientologist, which will be given at greater length in the next PAB. It also contains an ethical code, and that is its Code of Honour.

The difference between ethics and morals is very clearly known in Scientology, if not in a modern dictionary. This merging of morals and ethics has occurred in recent times, and is symptomatic of a general decline. An ethic is practiced on an entirely self-determined basis. An ethical code is not enforceable, is not to be enforced, but is a luxury of conduct. A person conducts himself according to an ethical code because he wants to or because he feels he is

proud enough or decent enough, or civilized enough to so conduct himself. An ethical code, of course, is a code of certain restrictions indulged in to better the manner of conduct of life. If one Scientologist started to punish or berate some other Scientologist and called for an enforcement on the grounds that the Code of Honour had been disregarded, the punitive act itself would involve and violate the Code of Honour. The Code of Honour is a Code of Honour as long as it is not enforced. If a person is big enough, or strong enough or sane enough, then he can indulge himself in the luxury of holding upon himself freely and of his own decision the Code of Honour. When such an ethical code begins to be enforced it becomes then a moral code.

A moral code is enforceable. Mores are those things which make a society possible. They are the heavily agreed-upon, policed codes of conduct of the society. If an auditor were to flagrantly and continually violate the Auditor's Code or the Code of a Scientologist, then other auditors would have a perfect right to demand, and through the HASI effect, the suspension or revocation of certificates or memberships, or both. However, no such action is possible with the Code of Honour. A person could continually and flagrantly flaunt the Code of Honour and experience no more than perhaps the slight contempt or pity of his fellows.

The Code of Honour clearly states conditions of acceptable comradeship amongst those fighting on one side against something which they conceive should be remedied. While anyone practicing "the only one" believes that it is possible to have a fight or contest only so long as one remains "the only one" and confronts as that single identity all of existence, it is not very workable to live without friends or comrades in arms. Amongst those friends and comrades in arms one's acceptability and measure is established fairly well by his adherence to such a thing as the Code of Honour. Anyone practicing the Code of Honour would maintain a good opinion of his fellows, a much more important thing than having one's fellows maintain a good opinion of one.

If you believed Man was worthy enough to be granted by you sufficient stature so as to permit you to exercise gladly the Code of Honour, I can guarantee that you would be a happy person. And if you found an occasional miscreant falling away from the best standards you have developed, you yet did not turn away from the rest of Man, and if you discovered yourself betrayed by those you were seeking to defend and yet did not then experience a complete reversal of opinion about all your fellow men, there would be no dwindling spiral for you.

Indicative of this is a process which is rather easy to work and which has some workability. Sit down in a public place where many people are passing by and simply postulate into them, above them, around them, Perfection—no matter what you see. Do this person after person as they walk by you or around you, doing it quietly and to yourself. It may or may not occur that you would bring changes in their lives, but it would certainly occur that you would bring about a change in yourself. This is not an advised process—it is simply a demonstration of a fact that he who lives believing wrong of all his fellow men lives, himself, in Hell. The only difference between Paradise on earth and Hell on earth is whether or not you believe your fellow man worthy of receiving from you the friendship and devotion called for in this Code of Honour.

CHAPTER ONE <i>Scientology, its general background (part 1)</i>	1
CHAPTER TWO <i>Scientology, its general background (part 2)</i>	6
CHAPTER THREE <i>Scientology, its general background (part 3)</i>	11
CHAPTER FOUR <i>Consideration, mechanics and the theory behind instruction</i>	16
CHAPTER FIVE <i>Consideration and is-ness</i>	21
CHAPTER SIX <i>Is-ness</i>	27
CHAPTER SEVEN <i>The four conditions of existence (part 1)</i>	32
CHAPTER EIGHT <i>The four conditions of existence (part 2)</i>	38
CHAPTER NINE <i>The four conditions of existence (part 3)</i>	43
CHAPTER TEN <i>The four conditions of existence (part 4)</i>	48
CHAPTER ELEVEN <i>The four conditions of existence (part 5)</i>	54
CHAPTER TWELVE <i>Time</i>	59
CHAPTER THIRTEEN <i>Axioms (part 1)</i>	65
CHAPTER FOURTEEN <i>Axioms (part 2)</i>	72
CHAPTER FIFTEEN <i>Axioms (part 3)</i>	78
CHAPTER SIXTEEN <i>Axioms (part 4)</i>	85
CHAPTER SEVENTEEN <i>Two-way communication and present time problem</i>	91
CHAPTER EIGHTEEN <i>Opening procedure of 8-C</i>	96
CHAPTER NINETEEN <i>Opening procedure by duplication</i>	102
CHAPTER TWENTY <i>The importance of two-way communication during opening procedure by duplication</i>	107
CHAPTER TWENTY-ONE <i>Viewpoint straightwire</i>	112
CHAPTER TWENTY-TWO <i>Remedy of havingness and spotting spots in space</i>	118
CHAPTER TWENTY-THREE <i>Description processing</i>	124
CHAPTER TWENTY-FOUR <i>Group processing</i>	128
CHAPTER TWENTY-FIVE <i>Scientology and living</i>	134
GLOSSARY.....	139

CHAPTER ONE

SCIENTOLOGY, ITS GENERAL BACKGROUND

(Part 1)

The word SCIENTOLOGY is one which you might say is anglicized. It comes from the Latin SCIO and the Greek LOGOS, with SCIO the most emphatic statement of KNOW we had in the western world. And OLOGY (from LOGOS) of course means “study of”.

SCIO is “knowing in the fullest sense of the word” and the western world recognizes in it and in the word science something close to a truth.

This is not “science-tology” -- and it is not “scio-tology”, simply because that is not close enough to English.

So we use a word which is fairly easy to say, which is simply Scientology.

For quite some time we have not used the word Dianetics, but certainly not because Dianetics does not belong to Scientology. It does, one hundred per cent. It is the subject of the mind and says so. It says DIA-NETICS from DIA NOUS (with an engineering twist on it -- “ETICS”) and DIA NOUS means no more and no less than through mind.

Of course the western world thinks of mind as something that mental cases have, something of that kind, and we weren’t particularly interested in continuing to concentrate upon this thing called mind, although mind is a perfectly useful word.

In Scientology we are not going “through mind”, we are talking about knowledge. Dianetics was a study of the mind, there’s no doubt about that, and there is no doubt about it that it is a very legitimate ancestor of Scientology, but Scientology is a thing of considerable amplitude, where Dianetics in comparison was a very narrow thing indeed. And Dianetics belongs, in a sense, in the world of psychology, and Scientology does not belong in the world of psychology and is not “an advanced psychology” and cannot be defined in the framework of psychology. Psychology is an anglicized word, not today true to its original meaning.

Psychology is composited from psyche and ology, and psyche is mind or soul, but leading psychological texts begin very, very carefully by saying that today the word does not refer to the mind or to the soul. To quote one, it “has to be studied by its own history”, since it no longer refers to the soul, or even to the mind. So we don’t know what psychology refers to today. It simply got lost. And so we have to step out and take a word which actually means what we mean, which is a study of knowingness, a study of wisdom. We have to take the word Scientology because that is what we are doing.

Now philosophically, there is a word called epistemology, and epistemology is quite separate from ontology, another word in the same category. In philosophy matter is considered to be separate. The physical universe is considered one direction thought another direction and so it goes. The available words do not encompass enough.

Thus we are already looking at a cloudy vocabulary when we look at the field of western philosophy. In fact, nowhere in the west can we find any qualification for a study which assumes to reach the highest possible level of knowledge which can be attained by Man or Life. We find nowhere in the western world a word or a tradition which will embrace Scientology. This makes some difficulty for an auditor (Auditor: trained Scientologist. Auditor means “one who listens” and is a person who applies Scientology auditing technology to individuals for their betterment) when he is trying to communicate to people in the society around him, since they want to know what Scientology is, and then he speaks to them, in the west, without this tradition.

They assume that the word psychology embraces all sorts of eccentrics found in mental behavior. They assume this so they could not possibly understand how anything related to thought could be said to exceed or not be the same as psychology, and they are left in the dilemma of non-recognition. You have just not communicated in the west when you have said "we study wisdom". You see, if you just said that, they would say, Oh yes, that's all very well, I did that in third grade.

Now, in view of the fact that you go out of communication, in a society which has no standard of communication on the subject about which you are talking, it is necessary to resort to various shifts in trying to describe what you are doing. You have to find the background which actually leads to an understanding of your subject.

There would be many ways in which this could be accomplished, but let's take up something that is quite important to us and is not limited to any ignorance that we discover in western civilization. Let us take up what amounts to probably ten thousand years of study on the part of Man of the identity of God or gods, the possibility of truth, the inner track mystery of all mysteries. In other words, the mystery of life itself. We find that for ten thousand years, which figure, by the way does not agree today with certain historians (but then they don't know much of the data I am referring to) man has been on this track. We find that the material which is extant even in western civilization and in Asia, has gathered to itself an enormous verbiage, you might say. There are somewhere between -- and I think it would be adventurous to state an exact number -- 125,000 and 150,000 books which comprise the Vedic and Buddhist libraries. Now that's a lot of books. Here is a tremendous amount of data.

One could say, if all this data is in existence, then why doesn't the western world know more about it? And we have to go back and take a brief look at what happened about ten thousand years ago, and of course, that's rather cloudy too, but let's put it into the field of anthropology rather than in to the field of history. And we discover that perhaps much earlier than ten thousand years ago, there was a division of peoples here on earth, and the division point was evidently the Ural Mountains. This is material that was given to me by a Professor of Ethnology at Princeton University.

There was evidently a split of races somewhere in the vicinity of the Ural Mountains. Part of the population which is now in the northern hemisphere went east, and part of it went west. The borning spot of the human race has been variously disputed but if we don't worry about the borning spot and just say -- that is more or less what occurred at that time, that there was a sharp division, and that part of the northern hemisphere's people went east and part of them went west -- we discover that a singular difference of personality occurred which is in the northern hemisphere the most observable difference.

The people who went into the steppes, into the Gobi, into China, India, and into the various islands, were faced by an enormous chain of deserts. They were faced by privations of great magnitude, and they developed a philosophy of enduring. That was the keynote because that was what their environment demanded of them. They had to endure and so we find these races colored in a certain way so as to thwart the onslaught of sun and snow. We find them without natural protection in their environment and therefore we find them able to survive long after those who went in the opposite direction.

And so it is, their colorations, their customs, and so on, are different from ours just to the degree that they can survive in tremendously arduous surroundings, and the surroundings of those lands is arduous. They are, those races that are there, able to endure. And if you said anything about them, this is certainly a clear statement of fact.

They also are tremendously practical. Their practicality is such as to stagger a westerner. The explanations that they will suddenly and innocently voice to a query are always of such sweeping simplicity that they leave a westerner standing there staring with a slack jaw.

Now the races which went in the opposite direction from the Urals, evidently went in to a country which had a heavy forestation. It had a great deal of game and the philosophy of the western world became that of striking a hard blow. If you could strike a blow of great magnitude hard enough and fast enough you could kill game and so you could live. Because of the vegetation and because of many other factors, they did not particularly need coloration. Their own customs did not need to be as thoroughly practical and they were able to dispose of their lives much more easily, you might say, since food was plentiful, as it was not in Asia. And we discover western philosophy building up on the behavior pattern of striking a hard blow. Get in quick, hit hard, your game drops and you eat. And beyond that, not very much thought or practicality.

However the truth of this may be, here certainly is something which is said to have preceded a period of 10,000 years ago. It might or might not have truth. But it is a very fast explanation of this -- and we discover immediately, as we look at these two worlds, that one of these worlds, having to endure, being faced with enormous privation, would of course develop a certain patience and an ability to philosophize. An ability to think. It would take a long time for anyone to think all the way through something. And a man who is merely accustomed to striking a hard blow is not likely to think all the way through something. When we are up against philosophy, we are fortunately or unfortunately up against an Asian tradition.

This is a tradition which is not necessarily that of colored peoples or strangers. This by the way, would come as a great shock to some people in the western world, to discover that in India the ruling caste is quite as white as any Norseman.

Well, they have, because they have a tradition of enduring, preserved records. We do not know what went on in North America. We can only guess. We do not know what went on in South America. There are a few ruins kicking around but beyond, this we don't know very much. We get down in to the Mediterranean basin and we discover that there was a certain traffic with Asia and therefore there is quite a bit known about the Mediterranean basin. This philosophy of endurance came forward into the Middle East -- very poorly, but it was to be found there. The records of Europe we can hold in tremendous question. They do not, for instance, know where or when they had ice ages. They actually cannot trace from one millennia to the next, who was where and owned what. Every now and then they have to write a history, so everybody gets in a good state of agreement and somebody writes a history -- but so unreliable that Voltaire dubbed history A Mississippi of Lies. Now where the western world is concerned, we have records which go back -- written records -- supposedly 3,500 years. This may or may not be true but certainly the schools in the western world teach us that we can go back that far with written records. And in Egypt they go back to Isis, I think, which for the west is quite early. And they have found records in that particular area and they hold these up as being very old. But be very careful, be very, very careful that you do not leave the western world, if you are looking for early records. In order to have a blackout of history and a blackout of knowledge, you have to stay west of the Ural Mountains.

East of the Urals you discover no such blackout. You discover a recorded tradition of wisdom which reaches back about 10,000 years. And that is the oldest trace that we have.

Now true enough we don't necessarily have to recognize that there are written works any older than any anthropologist in the western world knows about. It does happen, however, that there is a set of hymns which as I recall were introduced into the societies of earth in about 8212 B (The favorite western figure puts it after Egyptian!) These are hymns, and it would seem that if we spoke of hymns then they would contain largely modes or rites of worship, since they are religious, but that would only be our western interpretation of what is religious. These were religious hymns and they are our earliest debt in Scientology. Our earliest debt, because the very early hymns contain much that we know today and which checks against what we have rediscovered, or what we have followed back to, and this material included such a common thing as the cycle of the physical universe, known to you in Scientology as the Cycle of Action (Cycle of Action: the creation, growth, conversation, decay and death or destruction of energy and matter in a space. Cycles of Action produce time.) And

this is contained in “The Hymn to the Dawn Child”, variously captioned and translated by western translators, but all this information is there.

Furthermore, we find in that same set of hymns, the theory of evolution which was brought forward in the west only a hundred years ago, or slightly less, by Charles Darwin. In fact, as we look at these hymns, we discover almost any information you want to discover later. Whether you call it science or what you wish, here is a tremendous body of knowledge. They are supposed to have come forward in spoken tradition, memorized, from generation to generation, and finally to have been set down. Now this is a western interpretation of what happened to them. I would not care to say how exactly correct this is but I can tell you that today these hymns are still in existence. They are very hard to acquire in the western world. You have to find the specialized translations of them and they are studied as *curiosa* more than anything else, but we do not know what sciences would suddenly open their doors should someone sit down and begin to study the Veda. We don’t know what would happen. But information seems to have leaked from that direction into the Middle East and into Europe rather constantly over the thousands of years.

Man is fond of believing that yesterday’s man was unable to walk, to travel, to move. We find, however, that as late as 1200 B certainly, he had horses, and horses can go almost anywhere. He was able to make his way here and there across the surface of Earth and naturally when you get this, you get a transplanted information. For instance, today anyone who knows China discovers nothing very strange in Italian cookery. And he would not discover it very strange that Italian cookery suddenly came into being shortly after the return of Marco Polo and many other travelers who had been in the same area. Just because one person wrote about it, is no reason a lot of people weren’t there. It is always a matter of astonishment to some member of the Explorer’s Club to go in and pick up all the information he needs about an area which is now wild and “completely unexplored”, from a white man or a Chinese -- particularly the Chinese -- who has been living there for the last forty years. And the explorer brings back the information and publishes it in journals and makes it available to people. The information collected by that white man or Chinese on the ground, collected by that white man or Chinese on the ground, would probably only be told to his family when he got home and not particularly broadcast at all. So we have to recognize that certain information is broadcast broadly and some is merely carried around. Marco Polo and even Batuta happened to be writers, and like writers, they wrote, but that is no reason to assume they were the only people in motion during the last 3,500 years.

Thus it is no wonder that we discovered the various wisdoms of Egypt appearing as the earliest wisdoms of Greece. It is no wonder why we look into the Christian bibles and find ourselves reading the Egyptian Book of the Dead. It is no wonder that we look into the middle of the Romantic period of Europe and find that the Arabian Nights had just been translated and discover that European literature did a complete revolution at that point. We’re not stressing that nothing has ever been thought up in Europe -- but Europe has made tremendous strides forward, immediately that its doors were opened to Eastern information.

Because the Eastern tradition says that you can sit and think, and sometimes somebody in the western world is reminded of this, and when he is reminded of it, he is struck by the fact that he can sit down and think too.

And if we have been taught anything, it is the patience of the East which permitted itself to stop acting long enough to find out how and why.

And it’s that tradition alone for which we are most indebted to Asia.

But are we indebted to Asia? Is it to Asia at all, or is it merely to man on this planet, who, breaking into two halves, you might say, went east and went west -- the common ancestors of Man. All of us have the same potentials, but it happens that the information which has been collected over the years is available in Asia. It has not been preserved in the Western world. Therefore, we look to such things as the Veda. We look to such things as the Buddhist

text, to the Tao-Teh-King and other materials of this character from Asia, to carry forward to us information of the past. Who knows but what these materials did not come out of Europe in the first place and go over to Asia. We could follow very dubious tracks in all directions, but we do know as we sit here in the western world, that man has a tradition of wisdom which goes back about 10,000 years, which is very positively traceable. And we find Scientology's earliest certainly known ancestor in the Veda. The Veda is a very interesting work. It is a study of the whereins and whereases and who made it and why.

It is a religion. It should not be confused as anything else but a religion. And the very word Veda simply means: Lookingness or Knowingness. That is all it means. That is all it has ever meant. And so, we can look back across a certain span of time, across a great many minds and into a great many places where man has been able to sit still long enough to think, through this oldest record, and find where it joins up with the present and to what we, in Scientology, are rightly indebted. For to say that out of whole cloth and with no background, a Westerner such as myself should suddenly develop all you need to know to do the things they were trying to do, is an incredible and an unbelievable and an untrue statement. Had the information of the Veda not been available to me, if I had not had a very sharp cognizance of earlier information on this whole track, and if at the same time, I had never been trained in an American university, which gave me a background of science, there could not have been enough understanding of the western world to apply anything Eastern to and we would have simply had the Eastern world again. But the western world has to hit with a punch. It has to produce an effect. It has to get there. Nobody urged Asia to get there. You could sit on a mountain top for a thousand years and it was perfectly all right with everybody in the whole neighborhood. In the west, they pick you up for vagrancy. So, we combine the collective wisdom of all those ages with a sufficient impatience and urgency, a sufficiency of scientific methodology. I think, by the way, that Gautama Sakyamuni probably had a better command of scientific methodology than any of your Chairs of Science in western universities. We had to depend, though, upon scientific methodology and mathematics to catalyze and bring to a head the ambition of 10,000 years of thinking men.

And if I have added anything to this at all, it has simply been the urgency necessary to arrive, which was fairly well lacking in the Eastern world.

CHAPTER TWO

SCIENTOLOGY, ITS GENERAL BACKGROUND

(Part 2)

Of the great body of work comprising the Veda, the Dhyantic and Buddhistic written tradition of ten thousand years, very, very little, actually, has arrived in the western world. Only a small amount of the material has been translated.

It would take someone a long time to get through the 125,000 to 150,000 volumes, and it has not been done, so that the totality of what is in those books is just not known.

The Veda itself means simply Knowingness or sacred lore and do not think that that is otherwise than a synonym. Knowingness has always been considered sacred lore, has never been otherwise than sacred lore, and has only been present a relatively short time in the western world, which is just growing up now and beginning to come out of the level where sacred lore is equated with superstition.

The Veda, should you care to look it over, is best read in a literal translation from the Sanskrit. And there are four major divisions of the Veda, all of them quite worth while. A great deal of our material in Scientology is discovered right back there. This makes the earliest part of Scientology, its sacred lore.

The next written work, which is supposed to be the oldest written work, according to various frames of mind, is a book called The Book of Job. It is Indian and quite ancient. It probably predates what is called early Egyptian. And we discover that this Book of Job contained in it simply the laborings and sufferings and necessity for patience of one man faced with a somewhat capricious god. Now other such works, like the book of Job are scattered along the time track, and are known to us here in the western world as sacred works. They are thought to have come to us from the Middle East but that would be a very short look.

Actually, we're looking, in the Middle East, at a relay point of wisdom, from Indian and from Africa into Europe. And as you see, it follows a trade route in both directions and so you have the roadways of the world crossing through the Middle East. So we would expect such things as the Book of Job to turn up in the Middle East as holy scripture. You would expect such things as the Book of the Dead of the Egyptians to turn up in the Middle East as part of the New Testament, and so on. There could be a great deal of argument about this. Someone who is passionately devoted to practice rather than wisdom (there are two different things here that embrace religion) would argue with you. But Scientology has no interest in arguing along that line because we can make this very, very clear differentiation right here and now. The word religion itself can embrace sacred lore, wisdom, knowingness of gods and souls and spirits, and could be called, with a very broad use of the word, a philosophy. So we could say there is religious philosophy, and there is religious practice. Now religious practice could take the identical source and by interpretation put it into effect and so create various churches, all dependent upon the identical source, such as St. John. If we think of the number of Christian churches there are and we look at one book of the New Testament and realize that just one book was productive of Baptists, Methodists, Episcopalians, Catholics, we find that a tremendous number of practices, can debase upon one wisdom.

So let's get a very clear differentiation here between religious philosophy and religious practice. When someone who comes to you and says so-and-so-and-so is actually the way you're supposed to worship God, you can very cleanly and very clearly and very suddenly bring this to a halt by merely mentioning to him that he is talking about religious practice and you are talking about religious philosophy.

Now, just coming down the track in a little more orderly fashion, we get to the Tao-Teh-King, which is known to us in the western world as Taoism. And we may have heard of this religious practice in China. Taoism, as currently practiced today may or may not ever have heard of the Tao-Teh-King. It may or may not ever have connected. But we are certainly talking about religious philosophy when we mention the Tao-Teh-King.

It was written by Lao-Tzu in approximately 529 B, something around that period. He wrote it just before he disappeared forever. And his birth and death dates are traditionalized as 604 B, born, to 531 B, died. This is the next important milestone in the roadway of knowledge itself.

Now what was the Tao: it meant the way to solving the mystery which underlies all mysteries. It wasn't simply "the way", as the western world generally thinks of it. I would suppose this would only be the case if they were unfamiliar with the book itself. It is a book and it was written by a man named Lao-Tzu when he was ordered to do so by a gatekeeper.

Lao-Tzu was a very obscure fellow. Very little is known about him. His main passion was obscurity and he started to leave town one day and the gatekeeper turned him around and told him he could not leave town until he went home and he wrote this book. It is a very short book. It must not be more than six thousand characters. He merely wrote down his philosophy and gave it to the gatekeeper and went out the gate and disappeared. That is the last we ever heard of Lao-Tzu.

Well, when we have this book, we begin to see that here was somebody trying to go somewhere without going on something. We have the western world defining this work as "teaching conformity with a cosmic order" and "teaching simplicity in social and political organization". The Tao-Teh-King did do this and this would be a very finite goal for it, but this was actually not the Tao. The Tao simply said you can solve the mystery that lies behind all mysteries, and this more or less, would be the way you might go about it, but of course, what you're trying to solve, itself, does not possess the mechanics which you believe to be inherent to the other kinds of problems which you solve. It says that a man could seek his Taohood in various ways but he would have to practice and live in a certain way, in order to achieve Taohood.

This is an amazingly civilized piece of work. It would be the kind of thing you would expect from a very, very educated, extremely compassionate, pleasant people of a higher intellectual order than we're accustomed to. It is a very fine book. It's sort of simple. It's sort of naive and it tells you that one should be simple and economical and it tells you what would be a wise way to handle things. That, by the way, is about the only flaw there is in it, from a Scientological point of view -- that you must be economical.

And if we took the Tao just as written, and knowing what we know in Scientology, simply set out to practice the Tao, I don't know but what we wouldn't get a Theta Clear. (Theta Clear: An individual who, as a being, is certain of his identity apart from that of the body, and who habitually operates the body from outside, or exteriorized.) Actually the Tao is merely a set of directions on how you would go down this way which itself has no path and no distance. In other words it teaches you that you had better get out of space and get away from objects if you're going to achieve any consciousness of beingness, or to know things as they are, and it tells you that if you could do this then you'd know the whole answer and you'd be all set. And this is exactly what we are doing in Scientology.

Tao means Knowingness. That is again a literal translation. In other words, it's an ancestor to Scientology, the study of "knowing how to know". The Tao is the way to knowing how to know but it isn't said that way -- it's inverted. It's said, This is the way to achieve the mystery which lies back of all mysteries. Now, however crude this might seem to someone who has specialized in the Tao, that's really all we need to know about it, except this one thing: there is a principal known as Wu-Wei which is odd because it goes right in with the Tao, which also means the way, and you are probably vaguely familiar with a practice known as Judo, or

Ju-jitsu. Wu-Wei is a principle which crudely applies to action more or less in that fashion. We find that this principle is non-assertion or non-compulsion, and that is right there in the Tao: self-determinism. You let them use their self-determinism. (A little later on with Judo, you find that if you let a man be self-determined enough, you can lick him every time, but this is outside the scope, actually, of the Tao.) That's an interesting thing to find sitting there as one of the practices which emanated from the Tao-Teh-King.

Well, it must have been that there were a lot of very, very clever people on Earth at that time because we find in the lifetime of Lao-Tzu one called Confucius, of whom you have heard so much, but unfortunately Confucius evidently never wrote a single word. Confucius is reported by those who were around him -- his disciples. And he took most of his material from, or gave credit to, some ancient Chinese works, and one of them if I remember rightly, is the Book of the Winds. And these are very, very ancient and I have seen some fragmentary translations of them. Of course Confucius himself was the great apostle of conservatism, and as such, has ever since been the very model philosopher to have in a government. He is worshipped in this century by many many levels in China and you could buy his statue with great ease throughout North China.

Now the amount of superstition which has grown up around Confucius is considerable but we had in both Lao-Tzu and Confucius two people who never otherwise than pretended to be human beings who were simply pointing out a way of life. Now Confucius is of no great interest to us because he was codifying conduct most of the time, and the great philosopher of that day, if less known, was Lao-Tzu.

We come then into the main period of the Dhyana. The Dhyana has, as a background, almost as legendary a distance as the Veda, appearing in India in its mythological period, legendary in its basics. Dharma was the name of a legendary Hindu sage whose many progenies were the personification of virtue and religious rites, and we have the word Dharma almost interchangeable with the word Dhyana. But whatever you use there, you're using a word which means Knowingness. Dhyana again means Knowingness and Lockingness. The Veda, the Tao, the Dharma, all mean Knowingness. This is what they are, and these are all religious works, and this is the religion of about two thirds of the population of earth. It is a tremendous body of people that we're talking about here. We erroneously know about it as and call it Buddhism in the western world and it has very little to do with Buddha. The Dhyana is what the Buddhists talk about and is their background.

We first find this Buddha called actually Bohdi, and a Bohdi is one who has attained intellectual and ethical perfection by human means. This probably would be a Dianetic Release (Dianetic Release: One who in Dianetic auditing has attained good case gains, stability and can enjoy life more. Such a person is "Keyed out" or in other words released from the stimulus-response mechanisms of the reactive mind) or something of this level. Another level has been mentioned to me -- Arhat, with which I am not particularly familiar, said to be more comparable to our idea of Theta Clear.

There were many Bohdis, or Buddhas. And the greatest of these was a fellow by the name of Gautama Sakyamuni and he lived between 563 and 483 B I won't go so far as to say he'd ever read the Tao-Teh-King because there is absolutely no evidence to that effect at all, except that they certainly were riding on the same pathway. So much so that when Taoism turned into Buddhism later on they never abandoned the Tao. Taoist principles became Chinese Buddhist principles, in very large measure. And what we have just talked about in terms of knowing the way to Knowingness is very, very closely associated here with Buddha or Lord Buddha, or Gautama Buddha, or the Blessed One, or the Enlightened one. He is looked upon, and according to my belief in the line, erroneously, as the founder of the Dhyana. I think that this was in existence for quite a long time before he came along, but that he pumped life into it, he gave it codification, he straightened it up and made it run on the right track and it has kept running in that direction ever since, he did such a thoroughly good job. He was such an excellent scientific philosopher, and he himself was so persuasive and so penetrative in his work, that nobody has ever managed to pry apart Dhyana and Gautama Buddha. This

identification is such a very close one that even in areas that have no understanding whatsoever of the principles laid down by Gautama Buddha, we find him sitting there as an idol, which would have been a very, very amusing thing to Buddha, because he, like Lao-Tzu, never said that he was otherwise than a human being.

He didn't ever announce any revelations from supernatural sources, there were no guardian angels sitting on his shoulders preaching to him, as in the case of Mohammed and some other prophets. Nobody was ever giving him the word. But he went around giving what he had to people, he never intended to be anything but a human being, and he was a teacher. A tremendously interesting man. Now we find, however, some of the things that were written by Gautama, find them very significantly interesting to us, completely aside from Dhyana (which could be literally translated as "Indian for Scientology", if you wished to do that).

We find in Dharma-Parda:

"All that we are is the result of what we have thought. It is founded upon our thoughts. It is made up of our thoughts."

Interesting, isn't it? And:

"By oneself evil is done. By oneself one suffers. By oneself evil is left undone. By oneself one is purified. Purity and impurity belong to oneself. No one can purify another."

In other words, you can't just grant beingness to, and over-awe the preclear (Preclear: A person who through Scientology processing is finding out more about himself and life). It means you've got to have him there working on his own self-determinism or not at all -- if you want to give that any kind of an interpretation. In other words, you've got to restore his ability to grant beingness, or he does not make gains, and we know that by test.

"You yourself must make an effort. The Buddhas are only preachers. The thoughtful who enter the way are freed from the bondage of sin."

"He who does not rouse himself when it is time to rise, who though young and strong, is full of sloth, whose will and thoughts are weak -- that lazy and idle man will never find the way to enlightenment."

The common denominator of psychosis and neurosis is the inability to work.

And the next verse:

"Strenuousness is the path of immortality, sloth the path of death. Those who are strenuous do not die; those who are slothful are as if dead already."

This is some of that material, and by the way, a little bit later on in his work, in a discourse with one Ananda, we discover him announcing the fact that you have to abstain from the six pairs of things, in other words, twelve separate things, and we in Scientology would recognize them as the various fundamental parts of things such as space, making and breaking communication and so forth. They're all just named there one right after the other. But he said you had to abstain from them, and the main difficulty is of course the interpretation of exactly what he said. What did he say? What was actually written?

Because the truth of the matter is, that successfully abstaining from these things would mean that you had to get into a position where you could tolerate them before you could abstain from them. And that is the main breaking point of all such teachings -- that one did not recognize that one didn't simply negate against everything and then become pure, and the way it's been interpreted is: if you run away from all living, then you can live forever. That's the way it has been interpreted. But understand that was never the way it was said.

The religion of Buddhism, carried by its teachers, brought civilization into the existing barbarisms, as of that time, of India, China, Japan, the Near East, or about two thirds of the earth's population. This was the first civilization they had had. For instance, Japan's written language, her ability to make lacquer, silk, almost any technology which she has today, was taught to her by Buddhist monks, who emigrated over to Japan from China -- the first broadcast of wisdom, which resulted in very, very high cultures. Their cultures, which ensued from Buddhism, were very easily distinguishable from those superstitions which had existed heretofore. No light thing occurred there. It was just some people who had the idea that there was wisdom, and having that wisdom, you went out and told it to people and you told them that there was a way that you could find a salvation and that way was becoming your own mind essence. And if you lived a fairly pure life, lacking in sensuousness and evil practices, in other words, overt acts (Overt act: a harmful or contra-survival action), quite possibly you could break the endless chain of birth and death, which they knew very well in those days. And in other words you could accomplish an exteriorization (Exteriorization: The state of the thetan, the individual himself, being outside his body. When this is done, the person achieves a certainty that he is himself and not his body.)

Now all this knowledge up to this point, was given to a world which was evidently clearly cognizant of the manifestation of exteriorization, and that one was living consecutive lives. Twenty-five hundred years later, you would expect a race to be ploughed in far enough below that level as to no longer be conscious of consecutive lives but only single ones, and so Man is. But to reach salvation in one lifetime -- that was the hope of Buddhism. That hope, by various practices, was now and then, here and there, attained. But no set of precise practices ever came forward, which immediately, predictably, produced a result. You understand that many of the practices would occasionally produce a result. But it was a religion which to that degree, had to go forward on hope -- a hope which has extended over a span of a great, great many years.

The material which was released in that time is cluttered with irrelevancies. A great deal of it is buried. You have to be very selective, and you have to know Scientology, actually, to plot it out, get it into the clear, but much less than you might expect. It was wisdom, it was really wisdom and is today the background of the religious practices, but don't think for a moment that a Buddhist in the western hills of China knows the various words of Gautama Sakyumuni. He doesn't. He has certain practices which he practices. The basic wisdom is thinned. With that as a background they have certain religious rites and they follow these. So even in China, very close to India, where this came forward -- and it was sent directly into China from India -- we have that immediate division from the wisdom into the practice, and we have almost all of China in one fashion or another, bowing down to some form of Buddhism and a very little of the intellectual world knowing actually the real background of Buddhism. But we have there a civilization where before Buddhism we didn't have one, which is quite important to us.

Now there, so far, is your track of wisdom, which merely brings us up to the beginning of two thousand years ago.

CHAPTER THREE

SCIENTOLOGY, ITS GENERAL BACKGROUND

(Part 3)

When we look at Buddhism, we don't wonder that a great change took place in the operating climate of Man, which it certainly did. Rome went under just 800 years later. Now that's fast, because their whole philosophy shattered. The philosophy of every state operating on force alone and every barbaric society that Buddhism touched -- shattered. The first one to go by the boards was, however, India itself. India at that time was a savage and barbaric area, as was China. Japan is still characterized very impolitely by the Chinese, and the civilization of Japan by Buddhism took place almost in modern times. It was completed by America. So there they meet very closely.

But now, moving forward on the time track over all of these ages, we discover that it took an awfully long time for the Veda to walk forward and emerge as a new knowledge called the Dhyana. And it took quite a little while for the work of Buddha to move out of Asia. But we see the work of Asia itself -- not the work of Buddha necessarily -- moving out into the Near East.

Now there were trade routes that had existed since time immemorial. Man has no real trace of his own roadways, but the trade routes were quite wide open from very, very early times. We find the Phoenician, for instance, trading very neatly and very nicely up around Great Britain and sailing out through the Pillars of Hercules. And I was just last year standing on the edge of a Phoenician ruin which was advertised as a Roman ruin but wasn't a Roman ruin. It had its inscription in cuneiform, which was a Phoenician script. And this was 1,000 B A Phoenician ship then demonstrated at least ten thousand years of sea-faring technology. It was a very complex ship. And Phoenicia spread its empire out through Europe and just from where and what and why, we have no real trace, but Phoenicia is very well within our own teachings, our own history. Well, it was a thousand years after the Phoenicians that we first began, in the western world, to actually aver to a higher level of civilization. For some time, the Hebrew in the Middle East had been worshipping in a certain direction, along certain lines, and they had as one of their sacred books, the Book of Job, and many other of their sacred works were immediately derivable from similar sources. And into this society, apparently, other teachings suddenly entered. Their holy work, known to us as the Old Testament, leans very heavily on the background of philosophy we have been looking at, but it has a rather barbaric flavor, with all due respect to the holy book. It was a long way from home.

And we discover the civilized aspect of that religion which we know of in the western world as Christianity, taking place of course at the year 1. Now we find that that's of no importance to us except that everybody who writes a date out is taling about the man we're talking about, when he puts down A.D. Now when he puts down B we are dating our very calendar from this incident I am discussing here.

The principles known as Buddhism included those of course of love thy neighbor, abstain from the use of force. These principles appeared in Asia Minor at the beginning of our own date, and I am not, by the way, discounting even vaguely the work of Christ, or Christ himself.

Traditionally Christ is supposed to have studied in India. One doesn't hear of him until he is thirty years of age, and he was a carpenter and so on -- one hears of a lot of things, but we also hear this persistent legend that he had studied in India. Well, this would, of course, be a very acceptable datum, in view of the fact that the basic philosophy about which he was talking was a philosophy which had been extant in India, at this time, for about 500 years. Little less than 500 years. It was about that time that it moved out of that area, having taken over, by that time, two thirds of the earth's populace, but we don't quite recognize our Europe,

if we think of it as a thriving culture. It was not a culture even twelve or thirteen hundred years after Christ.

A mighty conqueror stopped abruptly at the borders of Europe because he was leaving all areas of civilization and he saw no slightest gain in attacking an area where everyone was cloaked in fur loin-cloths. That was Tamerlane -- Timuri Lang.

Now when we look at the Middle Eastern picture we find ourselves looking at the rise of a philosophy which, however interpreted, however since utilized, is nevertheless a thoroughly interesting philosophy. You have told a preclear, I'm sure, to get his attention off those energy flows and to get some space. And when he could tolerate that, he then could change his considerations.

Do you suppose for a moment that a preclear can actually get anywhere if he continues to use force? Well whether we try to put this in to a public practice, such as turn the other cheek, or use it for Theta Clearing -- the emancipation of exteriorization of a soul -- we are certainly looking at the same fact. And we are looking at the words of Gautama Buddha, however we wish to interpret this.

Now the parables which are discovered today in the New Testament are earlier discovered, the same parables, elsewhere in many places. One of them was the Egyptian Book of the Dead, which predates the New Testament considerably. This is love thy neighbor. This is in effect be civilized. And it is abandon the use of force.

But at the same time, we are talking straight out of the mouth of Moses, so we evidently are at a crossroads of two philosophies, but these two philosophies are both the philosophies of wisdom.

Now the Hebrew definition of Messiah is One Who Brings Wisdom -- a teacher. Messiah is from "messenger", but he is somebody with information and Moses was such a one. And then Christ became such a one. He was a bringer of information. He never announced his sources. He spoke of them as coming from God. But they might just as well have come from the god talked about in the Hymn of the Dawn Child, who, by the way, is rather hard to distinguish from gods talked about later on. The god the Christians worshipped is certainly not the Hebrew god. He looks much more like that one talked about in the Veda.

And we come on down from there and we find that we are talking about a meeting place, a sort of melting pot of religious practices stemming from various wisdoms, but the highest amongst those wisdoms is apparently the Veda and the teachings of Gautama Buddha. The parables coming from the Egyptian Book of the Dead and from various other places, were probably not original with the Book of the Dead, so it would not be true that the parables of Christ necessarily came from Egypt, while we know full well that Moses escaped from Egypt, and that the Jewish peoples stem their history from their freedom from bondage in Egypt -- not all of their history, but the history which they speak of most in the New Testament.

Now here we have a great teacher in Moses. We have other Messiahs, and we then arrive with Christ, and the words of Christ were a lesson in compassion and they set a very fine example to the western world, compared to what the western world was doing at that moment.

What were they doing at that time? They were killing men for amusement. They were feeding men to wild beasts for amusement. In the middle reign of Claudius, we find 3,500 men being turned loose, four abreast, divided half and half across a bridge of boats, slaughtering each other for the amusement of the patricians. How long can a society stand up when it is worshipping force to this degree? However these teachings were interpreted, the vein of truth was still here: that an exclusive reliance upon force will bring about a decay and a decadence which is unimaginably terrible. And that was the truth which came through. And so

we find the Buddhist principles of brotherly love and compassion, then, appearing in the west 2,000 years ago.

Now Christianity spread like wildfire throughout Europe. But it was necessary to achieve a certain agreement, and in order to achieve that agreement, many of the practices which you know of today were incorporated into this worship. Basic and early Christianity is not recognizable today in many church practices. It's just not recognizable. It is very clouded. But these churches themselves recognize as their original source the New Testament, which contains, aside from a few court records and a few legends, all that we know of this particular transition.

But here we have this information poorly interpreted, badly carried, through areas which did not know how to read and write, which is quite different from Asia. And we find this church and that church having to pick into and adopt customs in order to gain any entrance into these new areas. We discover today the worship of the Winter Solstice, in our Christmas. That is German and that is also other barbaric societies. Almost every barbarism that ever existed has worshipped the departure and return of the sun in the northern hemisphere and we find this incorporated into Christianity, and over there we find something else incorporated into Christianity and each time a certain amount of superstition coming into the information line -- until we don't know what was on the information line unless we go back to sources and trace it through clearly and purely.

Then we are again, however, working with wisdom. What wisdom? The wisdom of knowing how to know one's self to resolve the mystery of life.

And when this Christianity was interpreted and imported into Europe, there was considerable speculation and resurgence and an enormous amount of hope. The very same thing that the Buddhists hoped for (and this is what is very interesting) became the hope of the Christian world. Emancipation -- from the body. The survival and immortality of the human soul.

And although there was a cult in Rome which had this idea, it itself had no great antiquity, and it had evidently stemmed over from Persia, which was closer yet. The Christian impact wiped out this other cult but that's because actually they were just alike and one couldn't distinguish one from the other and the Christians won.

Now we have this immortality, this hope of salvation, being expressed throughout Europe and they expound it and they find it expedient to keep extending it, because they keep promising people that it was just about to occur, the day of judgment was just about to occur. Now we can get this as a sort of barbaric interpretation of what Gautama Buddha was talking about, the emancipation of the soul from the cycle of births and deaths. And then we get the fact that there is going to be a day when somebody blows a horn and it's all going to occur. We don't know what barbarism that superstition came from, but we have that superstition today in our society. The Day of judgment.

At first, Hell was only the fact that Rome was going to disappear in a sea of lava -- and everyone wanted to see Rome die. And that recruited people left and right. They promised them that Rome was going to disappear in a sea of molten lava. And they tried to prove it in Nero's reign, by burning the place down. Well, they didn't have a great deal of success doing it. Rome went on surviving and was finally taken over entirely and has since been the orientation point of Christianity.

A thousand years or so after Christ they started to try to take back the actual birth place of Christ in Jerusalem, and there's been a considerable argument going on about it, back and forth, ever since.

But the orientation point was placed at the only stable point, because that was the part of the world to which all roads led, and that became the dissemination point of all this

information. But Rome split off and went back to Constantinople and we had then the Constantinople branch of this church and it, however, received its biggest blow when Russia suddenly turned completely atheist. We don't hear too much of that church any more.

But we still hear a great deal in the western world of this church at Rome. It is still there.

The use of Christianity was to produce a certain civilized state and many people would blacken Christianity by saying it reduced people down to a very low level indeed. This is not true. It took an entire world of slaves and it made free men out of them. This in itself was quite a gain. It took a world which worshipped exclusively force and matter and made it recognize that sooner or later one would have to turn to the fact that he had a soul.

Now, remember that Christianity in its basic wisdoms is still available to us in the New Testament, and that this, no matter how it has come through the line, is quickly and swiftly traceable back to the Veda. We have a consistent track here. The same message is coming through. The Christian god is actually much better characterized in the Vedic Hymns than in any subsequent publication, including the Old Testament. The Old Testament doesn't make nearly as good a statement of what the Christians think of as God as does the Veda.

We have the loss of the trade routes somewhere in the vicinity of 1,000 A.D. Now, there was an enormous period of non-communication there. What had happened was Ghengis Khan, the various hordes which had been trying to pour out of Russia had cut the trade routes time and time again, and the amount of unrest in the area, and the taking of Baghdad and Jerusalem by such people. Of course, it kept these routes cut. You couldn't travel safely between these two worlds. And we find that communication doesn't open up again, not really, until some time in the 17th century.

In the middle of the 17th century, we find certain eastern practices beginning to show up in France, and there are many books being published saying you could do this and you could do that and you'd achieve something more closely related to religious philosophy than Europe was accustomed to.

Now, quite incidentally, during this period, a navigator who should have taken more lessons but fortunately didn't, by the name of Christopher Columbus, discovered America. He was simply trying to get to Asia, because everybody knew everybody in Asia knew everything and had everything and so you had to get to Asia. And he ran into America, fortunately, because he miscomputed the size of the earth so grossly that he would have perished out in the endless oceans if there hadn't been a continent there to receive him.

He was a very wise man -- he discovered among other things a variation of the compass -- but he failed. It was up to the Portuguese to continue around the bottom of the Cape of Good Hope and open the lanes to Europe and as soon as we get them open, we first find all of this information flooding in, information suddenly starting to appear, parts of the Veda starting to appear, various practices of Buddhism, Zen-Buddhism, other things start to crop up in Europe and right along with this, we begin to get such things as The Arabian Nights and in the middle of the 18th century, we get what you might call a renaissance of literature, the birth of the novel and so forth, coincident with the introduction of The Arabian Nights into France. A fascinating flood of information came in at about that time and the culture had already, during the Renaissance, picked up considerably, but the Renaissance was right in there with Marco Polo and we find some other interesting routes were open during that time. People had managed to get through. This is no attempt to tell you that everything was invented by Asia, but Asia had a tradition of information. They had kept their records, which was not true of the western world, and so the information was there and you might say it was a depository of knowledge which might just as well have originated in the western world, gone to Asia, been put on file and come back again. I don't care how you would trace this one way or the other, but we still find that it was the repository of all the wisdom there was in the world at that time. And it has more or less continued so.

Philosophers, from the early Greeks on forward, made the first division in wisdom: they said there is wisdom about the soul, and there is wisdom about the physical universe, and there is some speculation about life. And this is the tradition of the Greek philosopher and it has come forward to us as represented in people like Kant, Schopenhauer or Nietzsche -- interesting material, and oddly enough those writings are coincident with new releases of Asian information in Europe. If you had ever convinced Schopenhauer he was writing nothing but sacred lore he probably would have committed suicide, but he never wrote anything else.

Now where did we get this artificial breakdown? We got it right there in the Middle East. The Greek came forward, went through Rome, and the philosophic scholarly consecutive line has come to us through barbarisms. What we call science today came to us from a barbarism, Greece, which civilized itself. It's largely an independent shoot of information.

Now the western world specialized in this, and never made enough advance in the humanities with it to bother about. So that today it would gladly -- just to fill another test tube full of guck -- it would very, very happily blow all of Man off the face of the earth. It is completely divorced from the humanities.

Where we come to the humanities and where we have to do anything for the humanities or with the humanities, we go straight back, all the way back, as far as we can go, to the Veda, and the come on forward and as long as we're on that track, we're on a track which means better men.

And when we go on the other track, we're talking about dead men. We're talking about dead men in an arena. We're talking about dead men on battlefields. We're talking about dead men in cities under atomic bombs. That is the tradition of barbarism. The only thing that has let the western world survive at all was an entirely different track which went back to the sacred lore of 10,000 years ago.

Scientology, then, today, could not possibly be characterized as a science the way the western world understands science. Scientology carries forward a tradition of wisdom which concerns itself about the soul and the solution of mysteries of life. It has not deviated.

The only reason why I would suddenly come up and do something like this in a western culture is a very simple one. I studied in my earliest years, and the first thing I was exposed to in this life, was a rough tough frontier society. Montana. There was nothing tougher than Montana, either in terms of weather or in terms of people. And from there I went over to the completely soft Far East and heaved a long sigh of relief and found out what it meant to be in part of a civilization and the shock was so great to me that I was very deeply impressed.

And so, although I was a young American, I did pay attention. I had many, many friends in the western hills of China, friends elsewhere, friends in India, and I was willing to listen. I was also willing to be very suspicious and I was willing to be very distrustful but I was never willing to completely turn aside from the fact that there was some possible solution to the riddle of where man came from.

Any work that I am doing or have done, and that any Scientologist is doing, has a tremendously long and interesting background. We are delving with and working with the oldest civilized factors known to Man. Anything else is Johnny-come-lately. Scientology is a religion in the very oldest and fullest sense. Anybody who would dare try to make religion in to solely a religious practice and not a religious wisdom would be neglecting the very background of Christianity. Wisdom has no great tradition in the western world.

But if we are very industrious, it will be up to us to make one.

CHAPTER FOUR

CONSIDERATION, MECHANICS AND THE THEORY BEHIND INSTRUCTION

Here we go into some items quite rapidly which we find are of considerable importance to us in Scientology. It is demonstrable material, or doctrine. This is the basic theory which underlies instruction and indoctrination.

Considerations take rank over the mechanics of space, energy and time. Considerations are senior to these things.

These mechanics are the products of agreed-upon considerations which life mutually holds. The reason we have space, energy, time, objects is that life has agreed upon certain things, and this agreement has resulted in a solidification. And so our agreed-upon material is then quite observable.

Mechanics have taken such precedence in Man that they have become more important than the considerations. "Doesn't matter what you think," is the theme. The mechanics of space, energy, objects, time, rooms, houses, earth, electricity, Ivory Soap -- these things have a greater value than Man's considerations. In other words, Man has become inverted. Having agreed upon these things so long -- that they are so solid -- he is now below the level of making agreements upon them, so his considerations do not apparently pack as much power as his immediate environment. This is what over-powers a man's ability to act freely in the framework of mechanics although he invented them. His considerations are now of less impressiveness than the mechanics with which he is operating. The agreement is more solid than his new consideration. And so as he makes a new consideration he runs into the mechanics of existence -- his agreements with people, space, energy, objects and time.

A primary goal of processing in Scientology is to bring an individual into such thorough communication with the physical universe that he can regain the power and the ability of his own postulates. We discover an individual in an inverted state -- that is to say, his considerations have now less value than the wall in front of him. And in processing, for example, in Opening Procedure 8C, we put him into sufficient communication with the wall that's there in front of him -- that he can then see that there is a wall in front of him. And at that exact point he has graduated upstairs, you might say, to a cognition of what his postulates have created. He can go on from there and can graduate up to where his considerations again have precedence over mechanics.

The mechanics are so much in his road, they are such observable barriers, that he has become unacquainted with them.

Now it would seem as if it shouldn't be necessary to do this at all. All one would really have to do would be to get an individual simply to change his mind -- all of a sudden to have an individual who could change his mind -- but that is just not the way it is. It just doesn't work out that way. The principle here is: get an individual into though communication with something, and then, when he has lost his fear of it, is no longer flinching, to demonstrate to him that he can change his mind about it.

But unless you get him over his blindness, his unreality about something he's already agreed to, he is working against himself -- he's fighting his own agreements. He has agreed that there is a wall there so there's a wall there -- and now he's fighting that agreement, and he's saying there is no wall there. He is fighting his own postulates, so his own postulates are therefore very weak. Because the wall is there -- that's his own postulate. And now without undoing that postulate, he's trying to change his mind about it and say "There is no wall there, there is no wall there". And there is a wall there, all right.

So this is the state in which we find Man. He has agreed that there is a physical universe, and then having agreed upon it he's sorry about it and now he wants to change his mind about it but to change his mind about it would make him wrong. An individual who has already said that there is something there, if he now says, without changing the first postulate, that there is now nothing there -- of course he has got to make himself wrong before he can be right, and if you're wrong, your postulates don't stick. That's what Man is up against.

Scientology is the science of knowing how to know answers. That's extended a little bit. We have defined it as the science of knowing how to know, but we'd better say what we're trying to know. We'll just add that it's the science of knowing how to know answers.

A Scientologist is expected to be able to resolve problems in a great many specialized fields, of which auditing is the first field he addresses. If you know the principles such as, for instance, the principle of A-R-C (Principle of A-R-C: The "A-R-C" triangle is Affinity, Reality and Communication. The basic principle here is that as one raises or lowers any of the three, the others are raised or lowered, and that the key entrance point to these is Communication) -- when you know this as the modus operandi and the mechanism of agreement (which has been agreed on itself) you can do many things. You can take an organization, an industry, a store, a troop of Boy Scouts, or whatever, and you will certainly know "how to straighten out this mess".

We know the anatomy of confusions: an unpredictability, followed by a confusion, which then goes into a mystery. There is a mystery because someone didn't predict something and this made them wrong. The only reason a person thinks things are mysterious is that the amount of unpredictability became too great. So he closed it all off and said: "It's a mystery!" and, "I now don't know anything about that".

If an individual knew that, and ARC -- a few of the principles and applications of Scientology -- he would see that in the case of this troop of Boy Scouts or this business or this disaster area, or anything else that he might be dealing with, it would be necessary to bring the individuals in it to follow a certain pattern in order to regain a communication, and having regained communication, why, he knows that other matters would remedy themselves. He would not have to be an expert in turbines to straighten out a factory which made turbines. All he'd probably have to do would be to get management in touch with the foreman and the foreman in touch with the workman and the workman in touch with the management, and the plant would make turbines. He would be a specialist in knowing how to know answers but this does not mean that he would have to accumulate an enormous amount of specialized information. What he would do would be to get the people who had the specialized information and put them into communication and the job would get done.

The world is every day more violently impressed with mechanics. The little wheel that goes spin, spin, spin is far, far more important than the little boy who is going spin, spin, spin. The care of the body and the transport of the body, the conducting of electricity -- these are far more important than any activity of Life itself. The world is terribly impressed with space and energy and machines and objects which, any of them seem to be more important than a mind -- the mind which makes them. And this is curious, but it brings a person down, as he gets more and more impressed with mechanics, to lower and lower levels of being mechanical. So, if you could conceive it, the individual, the thetan, a life-energy-production unit, has actually dropped out of sight to such a degree that people don't even know they are one any more. Now that is attributable to a dependency on mechanics and the validation of mechanics. It isn't that you should just withdraw from mechanics and leave them all alone and let's all go off and quit. No, an individual has to be put back into communication with them, mostly because he's afraid of them, and after he's done this he says, "Now, lookee here, I don't have to depend on these things. That's nonsense!"

And the next thing you know he has regained some of his own power and ability.

Now, when it comes to atomic fission, there is produced in this society an enormous mystery. It couldn't help but do so. It's unpredictable. The first bomb, for example, was dropped without any warning and this was certainly an unpredictability. Nobody even knew one was being made. That's nice and unpredictable, isn't it? So that the world is living in an expectancy of an unpredicated atomic attack. Well, that looks interesting, too, doesn't it? No more unpredictability. Now let's take up subject of confusion a bit further.

What do you suppose is the picture of all of these electrons and protons and morons exploding in all directions on a random pattern -- would you possibly look upon that as a confusion of particles? What would be your chance, by the way, of tracing each of these particles individually, all through the entire mass? Well, your chance of doing that, if you're in very good shape, is very good. But Johnny Q. Public knows that he can't trace one card while it's being dealt across the table (that's what card sharks thrive on) and much less billions, and billions to the billion power, electrons and morons exploding all over space. And that is a confusion to him. So here you certainly have an unpredictability and then a confusion.

What follows is mystery. And so we have everybody being very secret about all the formulas of fission. They're only available in all of the library text books that are in all of the libraries in all the world. They're very secret. They are so secret, that the notebooks of anyone who has taken a course in nuclear physics abound with the basic formulas, the material of atomic fission. It isn't something suddenly discovered. They just decided to do it. It took billions of dollars to do it and it took a long time for somebody to put up that much money. But they're being very secret about formulas that have been public property -- some of them -- for fifty years. And all of the material that the U.S. had on the manufacture of the atomic bomb has already been transported over to Russia by spies, who were since executed for it. So who are we keeping it secret from? Well; maybe we're not keeping it secret from anybody. Maybe it's just a mystery because it is unpredictable and confusing and therefore we'd better lower all our communication lines -- and before you know it, government is going to be almost totally out of communication with its own people, just on this basis. You get more and more cut communication lines. There's a big mystery building up. Well, how would you solve this? The way one might solve it would be to simply point out the fact to the government and to people that atomic disaster was not going to ruin the entire world and that if you accepted the disaster and predicted what was going to happen, then you could resolve the situation. Next, one would ask that the study of the manufacture of atomic fission be made a third or fourth grade subject, and get the children indoctrinated into this great mystery immediately -- so it wouldn't scare the kids. Actually all they're doing is scaring the kids these days -- which is not an honorable activity for big, grown men.

Now the role of Scientology is, to impede any disintegration which is going on in the realm of knowingness. Just to impede it. But if a disintegration does occur, why, people who know Scientology ought to just be ready to pick up the pieces. You could have a society so organized and with such enlightenment and so functioning that it didn't disintegrate people so quickly.

You could have one where freedom itself could be achieved.

But if you, all of a sudden, were looking at the complete smearing of a state or a country or a nation, you still, knowing the principles of communication -- and just what a trained Scientologist knows -- could play a very large role in picking up the pieces resulting from any disintegration.

The disintegration you would be dealing with would be one not of mechanics but would be a disintegration of knowingness.

Now as far as any politics would become a concern of Scientology, I would say off-hand that it would probably hew to a democratic line -- not Democratic Party -- but democratic principles -- because of our datum of self-determinism, but that does not make Scientology necessarily possessed of a political opinion. A body of knowledge cannot have an opinion on

something. It simply extends what is found to be true, wherever it is found to be true -- into greater truths. That's all. And if something is true, that's all right. And if something is false -- well, one simply recognizes that it is false. So far as political opinion is concerned, Scientology as such, could not have, and does not have one. It knows that certain types of government could be very disintegrative to a people. It knows, for instance that facism, military control of areas, and so forth, would result in a knockdown of communication lines, which would be very, very unhealthy for that particular area.

But this is in the field of Scientology, not in the field of politics. And one should remember well that Scientology has no political opinions or allegiances. If one political practice works better than another one, according to Scientology, that's fine, but what's working is Scientology -- not the political practice. Don't ever get detoured on this one, because if you do -- you get lost.

Now the next one that comes up is -- does Scientology have any religious conviction? Well, again we have the fact that a body of data does not have an opinion. I've known a lot of witch doctors who make more sense than a lot of priests. And I know a lot of priests who make more sense than a lot of preachers. I've seen the historical records and found that the Roman Empire didn't kill many Christians. As a matter of fact in one year of that confusion Christians killed more Christians in the city of Alexandria than the Roman Empire executed during all its existence. One hundred thousand Christians were killed in one year by Christians in Alexandria. Well that's because of a conviction -- force without wisdom. There must have been some kind of a conviction running counter to some kind of a conviction, and -- as far as having an opinion on this sod of thing is concerned, you can look at it on the basis of: this demonstrates that there must have been real bad ARC around there someplace! But beyond that it might be slightly amusing to you as a datum but it actually means nothing in relation to the body of data.

So a Scientologist's or anyone's social, religious and political convictions would be those that he held to be true and that he had been oriented to. Trained to be democratic in his viewpoint, and trained to be a protestant, why then he's certainly democratic in his viewpoint, and a protestant, unless he sees fit to alter his convictions to some degree because a greater wisdom seems to have penetrated those very convictions. What would he do in that case? He'd probably simply modify for the better his convictions.

But one of the oldest things that was ever given into the training of wise men that I know of was simply this -- the basic faith in which the individual has been trained and the basic political allegiance of the individual must not be tampered with by the Order training him. And it was the Order itself which laid that down. That's an old, old one. They were training very wise men and that was the first thing that they made sure not to do. They did not tamper with these things. If the individual cared to alter these things himself nobody was going to tell him to or tell him not to. Nobody was even vaguely persuading him. It might be in the course of his study that he found certain things that men did laughable, or confusing, or he found certain things that men did remediable -- but nobody was standing there trying to lead him into a higher religious or political conviction. And that is the case with Scientology.

If you were to teach a tribal population on the banks of the Yap-Yap River Scientology, and they believed in the Great God Boogoo-Boogoo you would just be wasting your time to start in by training them on the basis that the great God Boogoo-Boogoo was nine feet tall not twelve feet tall. That's about all you'd probably accomplish, too. You'd probably convince them he was not quite so tall, or something of that sort. A Scientologist has no business fooling around with a savage tribesman's political or religious convictions or a very, very cultured, super-cultivated Oriental Potentate's religious or political convictions. His customs are definitely his. You would produce at best new convictions, but that's force, and that's not the way to free a thetan!

There are very, very many ways to live. All of them can be derived from the same source and the same sources. Just because they can be so derived doesn't mean they're not

different, one from another. So Scientology does not tamper with an individual's religious or political convictions. The total empire of a Scientologist and of Scientology and its organizations is an empire of wisdom.

Now on the basis of mechanics, an auditor is expected to follow the Auditor's Code of 1954. That is a very solid compilation of things an auditor can do wrong and it says don't do them. Each one of those things has considerable importance. There is the one which tells you to run an auditing command until the Comm Lag is flat ("Comm Lag is flat": Comm Lag is Communication Lag: the time it takes for a preclear to give an answer to the exact auditing question or to carry out the exact auditing command. "Flat Comm Lag" is the point at which the auditing question or command is no longer producing change of communication lag). And then there is the one which tells you to run a process until the process is flat. ("Process is flat": A process is continued as long as it produces change and no longer, at which time the process is "flat").

These are the two most important parts of that Code. Very, very much the two most important parts of the Code. You should know that Code. It was put together to keep us from making mistakes. It depends for its authority only upon this -- that when it is disobeyed in processing an auditor has a lot more work to do. That's its total authority. It enforces itself.

Not so the Code of a Scientologist. The Code of a Scientologist is put together on this basis: an aberrated society has in it a few who would try to keep the organization and organizations of Scientology from doing their job -- by cutting their affinity lines. And the first part of the Code of a Scientologist, To hear or speak no word of disparagement to the press, public or preclears concerning any of my fellow Scientologists, our professional organization or those whose names are closely connected to this science, is simply an arbitrary slid in front of that one. When we don't allow our affinity lines to be cut, auditor to auditor, auditors to organizations, and organizations to auditors, we certainly thrive much better and we survive much better and we are certainly a lot happier. And as we go down the line, on the various parts of this Code, this again is simply knowledge which if we had started following from the very beginning, we would have had far less difficulty than we sometimes have had.

And the last paragraph of the Code of a Scientologist says don't engage in unseemly disputes on the subject of Scientology with the uninformed. That is no effort to keep the material of Scientology closed up. That's not what it's about. We keep the lines open and flowing. But when somebody comes along -- perhaps he's a major in Phrenology at the university of something or other -- and starts protesting, "Well, I don't believe," and "Is your conviction...?" -- why don't you just start talking about the weather. That is, please, an invitation not to go into a fight on the subject of demonstrating to somebody who doesn't have any awareness to talk to anyhow -- all about Scientology. We have always gotten ahead faster when we haven't sat down and entered into verbal fisticuffs with everybody who disagreed with us on the subject of Dianetics and Scientology. He hasn't any information on it, and now you're going to sit there and give him a complete Professional Auditor course? Well, do you have any idea of how much work and organization it requires to bring somebody up along through the level of HCA? (HCA: Hubbard Certified Auditor) A lot of work is expended to bring someone that far. Nowadays, with codified training, it can be done easier, but you're not going to do that in a drawing room. And this part of the Code says in effect: please recognize this and don't make the party awful for eight other people while you and a psychology student argue.

A reporter comes in -- he "wants to know all about it," although he's going to write something different entirely or more likely -- his story is already written before he comes to "find out all about it". He comes from a profession which works this way. You'll do best telling him all about the weather. You should never depend on anybody's industry with regard to a society at large or carrying the word in the society. Never depend on anyone's industry but your own. Other people, organizations and so forth are going to help you all they can. But don't depend on that help. Depend on yourself.

CHAPTER FIVE

CONSIDERATION AND IS-NESS

Now here is the most fundamental fundamental that there can be fundamental below the level of consideration. I haven't written very much about considerations. There really isn't very much to say about the subject of consideration. If anyone is confused on the subject it is because consideration is consideration and all things are a consideration of the consideration so that if you consider something which is considerable, why -- you have considered it.

Phenomena such as space and energy, time, matter and so forth are produced on the basis of consideration.

Consideration of A is senior to A. Consideration of R is senior to R and consideration of any and all parts of C are of course senior to any and all parts of C.

When you're dealing with A, R and C (Affinity, Reality and Communication) you have entered into a very early level of anatomy as far as the business of life is concerned, but you are not into the first and immediate level of anatomy as far as mechanics are concerned.

There is a level lying between considerations and A, R and C and this is Is-ness. It's the consideration of Is-ness. Things are because you consider that they are and therefore something that is, is considered is. If you don't consider that it is, it of course can be considered to be something else. But if you recognize that it is a consideration you only have to recognize that it is. And if you recognize that something is, then you have recognized merely that it is a consideration. As soon as you have recognized that something is, IS, you have reduced it to a consideration, and that's that. One has affinity because he considers he has affinity. One has reality because he considers he has reality. One has agreement because he considers he has agreement. One has disagreement because he considers he has disagreement. One has a Dynamic (A Dynamic: any one of the eight subdivisions of the Dynamic Principle of Existence -- SURVIVE -- which are: The urge to survive as, or to the survival of, (1) Self, (2) Sex and family, (3) One's group, (4) Mankind, (5) Any life forms, (6) MEST: Matter, Energy, Space, Time -- the physical universe, (7) Theta, spirit; the Thetan, a spiritual being, thought, etc., (8) Supreme Being -- the "Infinity Dynamic") -- one has a Dynamic because one considers he has a Dynamic.

Any of the eight parts of the Dynamic Principle of Existence, any part of the Cycle of Action, of Create-Survive-Destroy, of Affinity-Reality- Communication (The ARC Triangle), the Chart of Attitudes top and bottom -- (Chart of Attitudes: a chart on which in 1951 L. Ron Hubbard plotted with the numerical values of the Emotional Tone Scale the gradient of attitudes which fall between the highest and lowest states of consideration about life. Example : top -- CAUSE; bottom -- FULL EFFECT.) the entire scale of emotions (The Emotional Tone Scale), the Know-to-Mystery Scale (Know-to-Mystery Scale: the scale of Affinity from Knowingness down through Lookingness, Emotingness, Effortingness, Thinkingness, Symbolizingness, Eatingness, Sexingness, and so through to not-Knowingness -- Mystery. The Know-to-Sex scale was the earlier version of this scale) -- all these are preceded by a consideration. In other words they are postulated into existence. But right with consideration we have the most native and intimate mechanic which precedes all other mechanics and that mechanic is Is-ness. We have to consider that we can consider before we can consider an Is-ness. One considers that one considers and therefore what one considers is, IS!! Anything that is, is considered as being. What is, is, as it is considered to be.

Now the moment you recognize, then, the Is-ness of anything, it will disappear. To have something, to have anything over a long period of time particularly, you have to beware of recognizing what it is. Because if you look at it with a recognition of what it is, simply its Is-ness, this simple recognition will of course vanish it. So you have to be careful, if you want something, not to recognize what it is. Now one of the best ways to have something for a

long time is to put something in your pocket and then forget that it is there and you'll have something in your pocket. You'll have something in your pocket even though you've forgotten it's there. And that's the safest method of possession, to forget that you have it, because if you remember that you have it you won't have it.

Now this would all be hopeless if there weren't another factor way above consideration, and that is Knowingness. You know anything you want to know and you know anything that has gone on.

Now let's take the person who is using facsimiles (Facsimile: A mental image picture) in order to tell him what has happened. He looks at the facsimile, the facsimile has certain pictures and symbols in it, so then he knows what took place. Well, he had to know what took place in order for a facsimile of that incident to be created. Now, he did know what took place, so he could create a facsimile of the incident, and he does this on an unknowingness level. And above this level he can then look at the picture and know what took place. But he had to know what took place before he made the picture.

Now if the picture was gone utterly and completely he would still know what took place, unless he had the consideration that he has to have a picture in order to prove to himself what took place.

Anybody would know anything that was going on if he didn't have to prove it. Proof, conviction, is itself a very early level of aberration. As soon as you have to start proving things and convincing people of things, why then you have to get into agreement with them and in order to do this -- you have to Alter-is. You have to have something persist long enough for them to see it, so that they can then understand what it is. So in order for them to really understand what it is you can't possibly put up something that they understand what is, because if they saw completely what it was it would disappear, so you would not have been able to have proven it.

I hope you follow this very closely! Because actually what I am talking about here makes sense easily if strung together and looked at in a rational way. But if you try to Alter-is it, if you try to change it around, then you'll be able to remember it perfectly, but if you merely accept exactly what I am saying at each and every point, you know this already, so it won't exist. Now this is a very bad thing, I realize, so the best thing for me to do would be to color, if I really wanted this material to be remembered, to color the material so that it appeared to be something else than what it was. I could do that, for instance, by talking about your egg libidol, and your re-conscious. I could quote authorities who didn't exist. That's always best, you know. That's really a curve, you see. Nobody could ever see those, so they can't ever disappear. And I could quote these authorities which didn't exist but which you couldn't disprove and we could go on about the counter-reflex of the seratopol palsy and the og libidol, the bog libidol, the sog libidol and the mog libidol and how we would categorize these things as explanatory to the behavior of a feeshee preservation on the part of young alligators, and this nonsense of course would then be utterly comprehensible because it could be so remembered in every detail particularly if it were altered from what I was really talking about -- in trying to talk to you about turbo-electric systems, for example, with that amount of data injected into it.

We could go that far afield and you would find that you would start hanging up on these non sequitur facts. You have experienced this sort of thing.

As a person becomes unable to recognize the Is-ness of things he can't get jokes any more. Every datum that comes in must have a significance. It never occurs to him that it doesn't have a significance, and he is sure there must be a deeper significance so that something will remain. This accounts for the badly jammed facsimile bank (Facsimile bank: mental image pictures; the contents of the reactive mind; colloquially, "bank") of an individual, particularly when that facsimile bank of the individual is badly jammed.

He will add significance to everything and he will certainly achieve a preservation of data. He, in adding all that significance to things, is Alter-is-ing. So he gets: preservation of facsimile bank.

Now let's look at the various categories of Is-ness. We find that each one has a gradient scale and first there is As-is-ness. This is the first level that we encounter and is actually the disappearance level.

As we are content with and can accept things as they are, they won't exist. That is absolute.

Why? The simple recognition of their existence would blow them into a consideration. A wall. What wall? When we really know what a wall is, there isn't going to be a wall. That's As-is-ness, and we can see that mechanically. We have a lower, mechanical strata on that which is a perfect duplicate. If we make a perfect duplicate of a wall -- boom -- no wall. All right, that may be just for the thetan but it's certainly no wall. Anyway, I at least will lead you down the track to believing that you are not about to destroy the physical universe.

I wouldn't want you to shy off from the processes which come from this data just because they knocked out the physical universe.

The next stage down the line from As-is-ness is Alter-is-ness, the effort to preserve something by altering its characteristics. We make it as a simple consideration and then we alter the method by which we made it. In other words "Let's dodge on it." Having mocked it up we will now dodge and say Joe mocked it up. Well this is just as far from truth as is necessary, to get something to exist, but you have altered an As-is-ness slightly in order to keep it from being perfectly duplicated in its own time, its own space, with its own energy and mass, thus ceasing to exist.

So we enter into the field of Alter-is-ness as a method of preservation. And one seeks, when he makes an object or a space, to get it to exist simply by saying somebody else did it, or it is a different kind of space, or its method of construction was different. The consideration is altered just enough so that one will get a continuation of it.

We say "God made it", or anything that would throw somebody off this track. Well, supposing God did make it, that would be all right. It would then cease persisting if you looked at it recognizing that God made it.

People get in to Alter-is-ness -- simply by the experience of having had too many things disappear.

So we see a person who has lost many things then trying to change everything. He's trying to shift the As-is-ness of everything. He's trying to shift from As-is-ness to Alter-is-ness and he's got to change the significances and structure and background and everything around him so that then these things will continue to exist, and that is his first impulse.

For example, we build a brick house and then cover it up with shingles, and then insist that it is built out of lumber. You would get into enough of an argument with people trying to buy the house who could observably see that it was not totally a lumber house for them to get upset and worried about it, and that house is likely to persist in one's ownership for some time, if he just did that sort of thing. So we see Alter-is-ness then, totally mechanically, as a method of getting things to continue their existence, and that's an important fact.

Although the nomenclature here is simply chosen at random it's a pretty good nomenclature because it says exactly what it means.

The control case, the person obsessively controlling things, and himself, is an Alter-ist. He's got to change, change. Well he's lost too much. Now he's got to change everything but

he's not satisfied with anything. If he were walking down the street in a limber and loose fashion he would think he had to walk in a tight fashion, etc. He's become anxious about things disappearing so he of course has to alter everything he sees in order to keep these things from disappearing.

Now let's get to the next category -- Not-is-ness. Here is someone who has altered things up to the point where they are beginning to persist. In fact he's upset about their continuous persistence. He doesn't think this is a good thing, to have a black box staring him in the face all the time, or to have the walls of the room appear to be 180 feet tall although they're only nine feet tall. It's not a good thing, that Alter-is-ness, he has concluded. He has changed too many things and lost track. He isn't quite secure about what the things were in the first place, he's shifted them so often. He's like the small boy who's told so many lies that he can no longer remember what lies he has told and so he's stuck with the lies -- and so becomes a human being. Now the next step along that line, Not-is-ness, is manifested as and is in itself the mechanism we know as unreality.

There is a category of just plain Is-ness. This of course is not a bad thing. This, in its highest level, is what we call reality. But we could spell this with bigger and bigger caps. We could keep spelling "IS" there with bigger caps and bigger caps and finally give it an exclamation point -- which would represent a psycho. There is a dragon in the middle of the room, and he knows this. There are many other things which he doesn't know, but he knows this. If you ask him to mock up an anchor point to define a space he makes a pyramid out of solid iron. And when he is asked to move one of his own mock-ups, a knowingly created object or space, he knows he doesn't have that much strength. The world is too real.

Once in a while when somebody's just about to kill you or cut your throat or eat you up or arrest you or do something of this sort you get an enormous flash of Is-ness, a recognition of the situation. Boy, this is it is real -- GULP! A moment after that you're likely to get or postulate an immediate reaction of Not-is-ness. "It's not real". A fellow will flare up and daze from Is-ness to Not-is-ness very swiftly in a sudden emergency.

Now Alter-is-ness, Not-is-ness and Is-ness would be then the categories which can be aberrated but remember these are not basically aberration. They become aberration only when they go entirely beyond the ability of the person to re-recognize As-is-ness. When a person has lost his ability entirely to recognize As-is-ness, he's gone. He's stuck with and has only Alter-is-ness, Not-is-ness and Is-ness -- all three, or one or two of the three -- some such combination -- with no As-is-ness left. Therefore he gets everything persisting around him. He gets everything less and less changeable, and he goes into a dwindling spiral, because he has lost his quality of As-is-ness. That is all he has lost.

Have him touch a few walls. You just have him go around and touch walls for a little while and all of a sudden he'll say, "It's a wall!" And right then he feels much better.

He knows he's in communication. Well, he has a case of Not-is-ness -- "There are no walls" -- or Is-ness -- "There are walls all through the room and all through my mind and I have barriers everywhere, everywhere, everywhere", or "There are no barriers anywhere, anywhere, anywhere". Just variations of Not-is-ness and Is-ness. And you've now shown him that there were walls and these were agreed upon walls and of course that's way up scale because you have demonstrated to him something closer to an As-is-ness. Now each one of these is a gradient scale and you know that you can recognize poorly enough the actual As-is-ness of something. You just draw back just a tiny bit from the As-is-ness of something, in other words indulge in just a little bit of Alter-is-ness or just a little bit of Not-is-ness or just a little bit of Is-ness -- making it a little bit more -- and it'll persist with great satisfactoryness. Of course if you walk up to it and simply hit it with As-is-ness it's not there any more.

Follow this very carefully, because it's quite important, and the technology which we're using is elementary, and you discover that many philosophies could be adjudicated out of these four categories. And believe me, any philosophy there is has been adjudicated from these

four categories. This is the make-route of all philosophy as well as all existence and you're standing right there at the tiniest co-point between mechanics and considerations that we have so far attained.

You could then develop many philosophies out of this and the first and most dangerous of them would simply be this one: "Well, I just have to accept everything as it is and therefore what we're really supposed to produce out of this is an apathy, because if I had to accept everything as is there would be nothing left but apathy because if I can't... or... something or other..., but I'll go into apathy. Yeah, I know what the auditor wants, he wants me to be apathetic about the whole thing." This is too easy a philosophy. This is the philosophy of Zeno. You can't do anything about it so you might as well accept it and everybody go into apathy and cut his throat anyhow.

We have an enormous number of things which we could say, list or categorize in terms of the philosophy of this and this is only one of those which will hit your preclear. You see he has to be able to accept his own restlessness before he can be restless. He has to accept his own dislike of things before he can dislike things. He has to accept something before he can have it, because he has to get back some As-is-ness before he can have any As-is-ness. He has to get back some As-is-ness before he can become fluid in his practice of As-is-ness, Alter-is-ness, Not-is-ness and Is-ness.

The business of life requires that he be quite able in all four categories, not just As-is-ness.

You're not particularly specializing in this. But when it comes to this universe you will discover that as you return your preclear to As-is-ness things disappear. That may be regrettable, it may be interesting, it may be this and that but those things too, just like opinions of art are merely considerations.

Now the first step that we would adventure upon in this would be a step which would be immediately addressed to such a thing as exteriorization. Recovering the thetan's ability to be, outside the body. You would merely in auditing find what part of the body was acceptable to the preclear. What part of the body was he able to accept as is. And we would go on asking this question and asking this question and asking this question.

We could vary it by asking what part of the body would he be at liberty to alter as to its position or shape.

Or what part of the body would be acceptable to him on an absent basis. What part of the body would be acceptable to him on a much more present basis -- for instance, just a hand walking around all by itself.

Indicated processes. Actually this processing is so good that you can almost take any part of it and just work with that. An indicated process on As-is-ness is simply done with that command, "What part of your body is acceptable to you?" or, "What part of the environment would be acceptable to you?" And you merely have him improve his considerations, and if he hangs up too long you could say, "Can you accept your dislike of ...?" and of course it just involutes. He could just watch it. It just sort of goes away. It's terrible! The first thing he can recognize is the fact that he disliked the environment? All right. Well can he accept his dislike of the environment? The second he does this he has recognized the As-is-ness of his dislike, at which moment it will blow. You can get him to recognize the existence of anything as such and it'll disappear. Just getting him to accept parts of the body on this simple auditing command, "What part of the body could you accept? Give me another part of the body you could accept" -- there are tremendous comm lags on this. You could say, "How would it have to be altered for you to accept it?" or "What would it be fine to have absent about this body?" Then we can turn around and say, "What's the acceptance level (Acceptance level: the degree of a person's actual willingness to accept people or things, monitored and determined by his consideration of the state or condition that those people or things must be in for him to be able

to do so) of your body about a thetan?" He doesn't do this by mock-ups, you understand. That's the trick. Get him to concentrate on the actual body. Does it accept the thetan this way or that way or how? "What distance could your face tolerate to a thetan?"

What distance could your face tolerate to a thetan?" We already have this on exteriorization processing, but without this one fact stressed, which in this case makes the difference between a workable technique and a non-workable technique. What distance is acceptable? What distance would be comfortable from your face to the thetan? Where would your face accept a thetan? And the first thing you know you have spotted the preclear (the face seems to have spotted him) then he spots himself. But the whole thing would run out without any such complexity of command at all. You would merely complexity of command at all. You would merely ask him, "What is acceptable to you in the environment?" Look around, and simply go over it one item after another item and his considerations will improve, which is the modus operandi behind 8C Opening Procedure. Do this long enough on a preclear and he would find the entire environment, even working in it, certainly very, very acceptable to him. We could just continue to run this as "What part of the environment is acceptable to you?" and he would begin to check them off and he would eventually get down to his body and having gotten down to that and taken care of the space around the body -- we'd take it by parts of the body -- what parts of the body are acceptable to you, and just on and on and on -- and he'd be out there standing in back of his head. Now that's the easiest method of exteriorization I know and the method which I commonly use when I am balked by a preclear. It's an easy and certain process. It's a rather short process, really. You just ask him to pick up the As-is-ness of his environment and body and if he really recognizes it believe me he will be outside. Once in a while he says, "Well, I really dislike" this and that. Run "Can you accept your dislike of it?" This'll involute it, which is the only additional command I have ever used. So we have As-is-ness, Alter-is-ness, Not-is-ness and Is-ness. All cases fall into these categories.

CHAPTER SIX

IS-NESS

We start out at the beginning or anywhere along the road with this as the highest truth. We are dealing with a static which can consider. That it can consider and then perceive what it considers, makes it a space-energy-mass-time production unit.

Now don't ever get hung up on whether or not the actuality that is made is an actuality. This is the wrong way to approach this problem. It's the way people have been approaching this problem for so long that the problem has remained wholly abstruse. That you can perceive something and that you can perceive that somebody else also perceives something qualifies only one of these conditions of existence, and that's Is-ness. And that is reality: Is-ness.

Now, that you simply say something is there, and then perceive that it is there, means simply that you have put something there and perceived that it is there. That's what it means. It's no less an Is-ness. That nobody is there to agree with you at the time you do this does not reduce the fact that you have created an Is-ness. It is an Is-ness. It exists. It exists, not "just for you". It just exists, you see. Now if you were to desire that that persisted, you would then have to go through a certain mechanical step, you would have to make sure that you did not perfectly duplicate it. That is: create it again in the same time in the same space with the same mass and the same energy -- because it would no longer be there.

But what have you done really when you've done that?

You've just taken a thorough look.

And what you create will vanish if you simply look at it, unless you pull this trick: unless you pull the trick that it is alterable, and that you have altered it. Now if you say that you have altered it, and now that you have forgotten the exact instant it was made and the character of it, it of course then can persist. Because you can look at it all you please -- with your first look, you might say -- and it won't vanish.

Don't look at it however with your second look because it will be gone.

For instance -- if we looked at the front of a room and saw an object we would simply have to look at it and conceive ourselves to have made its exact duplicate, or counterpart, which is to say conceived ourselves to have made it. No more, no less than that. And of course it will get rather thin. To some who are having a rough time with conditions of existence it will first get brighter and brighter and brighter, and then get thinner and thinner and thinner, and it'll disappear for one. This is a curious thing, but is immediately subjected to and you can subject it to a very exacting proof.

Let's look at this very carefully -- at what reality is. Reality is a postulated reality.

Reality does not have to persist to be a reality. The condition of reality is simply Is-ness. That is the total condition of reality.

Now we get a more complex reality when we enter into the formula of communication because this takes somebody else. We have to say we are somebody else now viewing this and that we don't know when it was made or where it was made, to get a persistence of the object for that somebody else.

But let us say we just more or less accidentally go into communication with somebody else, and we have an argument, a chitter-chatter back and forth, about what this thing is.

If that other person perfectly duplicates exactly what we have created, it will, again, disappear. It doesn't matter really who created it, he only has to assume that he created it for it to disappear for him. In other words he has to duplicate it in its same space, same energy, same mass at the same instant it was created and it will disappear for him. So you and he had better alter this thing which you made so that you can both perceive it. And then we get what is known as an agreed upon reality, and that is an Is-ness with agreement.

Now actually the word reality itself is commonly accepted to me on that which we perceive. This then is the real definition for reality, the one which is commonly used, and that would be: an agreed upon Is-ness. That would be a reality.

A NOT-IS-NESS is a protest. The common practice of existence of course is to try to vanish Is-ness by using it to destroy itself -- taking a mockup such as a building or something of the sort and trying to destroy it by blowing it down with dynamite. This is very practical application, this material. It isn't esoteric, it doesn't apply only to the Engram Bank (Engram: A mental image picture of an experience containing pain, unconsciousness, and a real or fancied threat to survival; it is a recording in the reactive mind of something which actually happened to an individual in the past and which contained pain and unconsciousness, both of which are recorded in the mental image picture called an engram. "Engram bank" is a colloquial name for the reactive mind. It is that portion of a person's mind which works on a stimulus-response basis) -- this is just existence.

Is-ness can be translated quite generally as existence. We get a Not-Is-ness being enforced upon an Is-ness by the quality of the Is-ness itself, or, by a new postulate with which the individual is saying it's not there.

This new postulate, in which you simply say "It's not there" does not pattern itself with the mechanics of the creation of the Is-ness, the exact time of creation, the exact space, the exact continuance, same mass, same space, same time. And as a consequence, saying, "All right it's not there", it will probably dim down for you. But you have to do something else. You have to put a black screen up or push it away, or chew it up, or do anything to it here rather than giving it a perfect duplicate.

So its a Not-is-ness when we say something doesn't exist which we know full well does exist.

Now you have to know something does exist before you can try to postulate it out of existence and thus create a Not-is-ness.

The definition of Not-is-ness would be simply: trying to put out of existence by postulate or force something which one knows priorly, exists. One is trying to talk against his own agreements and postulates with his new postulates, or is trying to spray down something with the force of other Is-nesses in order to cause a cessation of the Is-ness he objects to.

And this is the use of mass to handle mass, of force to handle force, and is definitely and positively wrong if you ever want to destroy anything.

That is the way to destroy yourself, which is why nations engage in it. Force versus Force. We see a very badly misunderstood rendition of this in early Christian times with the introduction of the idea that if you were hit you should turn the other cheek. The truth of matter is that if it were rendered in this wise it would have made much more sense: when you encounter force don't apply more and new force to conquer the force which has been exerted because if you do you will then be left with a chaos of force, and pretty soon you won't be able to trace anything through this chaos of force. So turn the other cheek is actually very workable if it's simply translated to mean force must not be used to combat force. The way to properly handle such a situation is just to duplicate it perfectly.

Now, let's go into this business of a perfect duplicate. A perfect duplicate, again, is creating the thing once more in the same time, in the same space with the same energy and the same mass. A perfect duplicate is not made by mocking the thing up alongside of itself. That is a copy, or more technically a facsimile, a made facsimile. Copy and facsimile, by the way, are synonymous, but a facsimile we conceive to be a picture which was unknowingly or automatically made of the physical universe, and a copy would be something that a thetan on his own volition simply made of an object in the physical universe with full knowingness. In other words, he copies it and knows he is copying it. A facsimile can be made without one's knowledge by mental machinery or the body or something of that character.

What we are talking about here is a perfect duplicate, mechanically, but it is more important to recognize it in the terms of our four categories of existence. It's AS-IS-NESS. If we can recognize the total As-is-ness of anything, it will vanish. Sometimes, if it had many component parts, we would have to recognize the total As-is-ness as including the As-is-ness of each component part of it. And in that lies the secret of destroying actual matter. And actual matter can be destroyed by a thetan if he is willing to include into the As-is-ness which he is now postulating toward any objects which exist -- toward any Is-ness -- the As-is-ness of each component part.

A thetan created a mockup, and this mockup was agreed upon very widely, and another process, Alter-is-ness was addressed to it and it became more and more solid and more and more solid -- and then one day somebody cut it in half and dragged part of it up the hill to make somebody's doorstep.

That's already, you see, out of location. Same place is part of a duplication, and it's already been removed from the place where it was mocked up and moved up to the top of the hill and now it's making somebody's doorstep. Those people themselves wouldn't quite remember where the doorstep came from if asked suddenly, but after a while those houses up there -- by the way, just mockups like everything else -- are torn down, and somebody picks up this doorstep and chews it up for road ballast, throws it out in the road to be used as road.

And the road they make with it just runs just fine, and it runs alongside of some wharves, and one day the road is no longer being used. They now have a big long steel pier coming out there, and somebody uses a steam shovel to pick up a load of rocks and gravel, dumps them into the hold of a ship which is going to South Africa, and they unload this ballast in South Africa, and the natives use it to gravel the garden, and at length there's a volcanic explosion it's buried under twelve feet of lava, and time marches on, and this thing is getting more and more remote from its agreed upon time, its agreed upon original position -- and the moment it was postulated, as related to the time span of the people who were agreeing upon it.

You see they've agreed upon a time span, so this thing is aging and they've agreed upon this space too and it's getting moved around in this space, and here atom by atom as the eons move along, this object which was part of an original mockup is now distributed all over the planet.

It would all be fairly hard to trace unless as a thetan you suddenly took a good look at it and sort of asked it -- or just located it easily.

And the law of conservation of energy blows up right here.

In view of the fact that the time itself is a postulate, it's very easy to reassume the first time of anything. Just as you ask a person in Dianetic auditing to "go back to the moment when", he could reassume the time, and if we had just added "the place where" and then said "Okay, now duplicate it with its own energy", why it would have blown up.

This is not a process we would use today particularly, but is one you should know about.

To create an As-is-ness one would have to create the As-is-ness of the object itself and all of its parts, and only at that moment would he escape the law of conservation of energy. Conservation of energy depends upon the chaos of all parts of all things being mixed up with all the parts of all the things. In other words we couldn't have any conservation of energy unless we were all completely uncertain as to where this atom or that atom originated. And if we were totally uncertain as to the original creation spot in the space of the atom, molecule, proton, whatever -- if we were to remain totally ignorant we of course could not destroy it, because force will not destroy it. Force will not destroy anything made of force.

In view of the fact that you would have to make as many postulates, practically as many As-is-nesses, as there are atoms in the object, why it looks awfully complex unless you could span your attention that wide and that fast, at which point you would be capable of doing an As-is-ness of it and your operational level would be such that the conservation of energy (itself a consideration) is exceeded.

Now we've taken care of As-is-ness by the mechanics of a perfect duplicate. The As-is-ness would be the condition created again in the same time, in the same space, with the same energy and the same mass, the same motion and the same time continuum.

This last, the same time continuum, is only incidentally important. It only comes up as important when you're crossing between universes, and particles do not cross between universes. A particle is only as good as it's riding on its own time continuum. Destroy the time continuum, and of course no activities can take place from that moment forward.

Let's say that Group A has made a set of postulates which gives them certain energy and mass, and over here is Group B, and they get together and mutually agree to accept each other's masses. This would never get to the point where the mass created by Group A and the mass created by Group B would interchange. Somebody has to be around always who was part and parcel of the creation of the mass looked at, at least by agreement -- and then we would get a time continuum, we would get a continuous consciousness. It's this they are talking about when they talk about Cosmic Consciousness, which is a very fancy word for saying, "Well, we've all been here for a long time".

Now let's take this As-is-ness and let's discover that a thing will disappear if a mockup will disappear, and that too can be subjected to proof very easily.

If a mockup can be vanished simply by creating it in the same time and the same space with the same energy and the same mass, in other words by just repeating the postulate, if it would disappear the moment you applied As-is-ness, then people would begin to avoid As-is-ness in order to have an Is-ness, and that is done by Alter-is-ness.

We have to change the character of something, we have to lie about it for it to exist, and so we get any universe being a universe of lies.

When this universe of lies compels you to tell its truths you can get very confused.

Going back in history, we find people on every hand telling us, "Well, maybe there was such a person as Christ, and maybe there wasn't, and maybe he said this and maybe he didn't and maybe the material came from here or came from there", and boy are they giving him survival! Survival itself is dependent upon Alter-is-ness.

In order to get an As-is-ness to persist it is absolutely necessary that its moment of creation be masked. Its moment, space, mass and energy, if duplicated, would cause that to cease to exist. The recognition of As-is-ness will bring about a none-ness -- a disappearance. In other words, a return to the basic postulate. You'd have to make the postulate all over again, and then, to get it to exist any further, why you would then have to go forward and change it in such a way that people would not actually be able to recognize its source at all. You have to

thoroughly obscure the source to get a persistence. Be sure you see that. You'd have to say it came from somewhere and someone other than the actual source.

People have done this with such things as Dianetics.

One rave on the subject claimed it was really invented in the late part of the eighteenth century by a fellow by the name of Hicklehogger or Persilhozer or something of the sort. This is a fact. Here we had something which could be unmocked very easily because it was set up to be unmocked, to get at the As-is-ness of things, and in view of the fact that it was set up to unmock, then it becomes very, very easy to simply say that its As-is-ness was such and such and so and so, and it would have practically disappeared if you'd continued to assert that its As-is-ness was what its As-is-ness actually was. In order to get a persistence of it of any kind, we would have had to have done something very strange and peculiar, we would have had to alter it. We would have had to enter the practice of Alter-is-ness. And if we try to alter something bad -- then, too, we'll make that persist.

Knowing that life is basically a consideration of a Static which is not located in time-space, which has no mass, energy or wavelength, and knowing also that As-is-ness is a condition which will unmock or disappear, that you have to practice Alter-is-ness in order to get an Is-ness, and that after an Is-ness has occurred the mechanism of handling it is to postulate a Not-is-ness, or use force to bring about a Not-is-ness, and that any further Alter-is-ness practiced on it will only continue to create an Is-ness of this new condition, and that every new Is-ness is going to be met by the postulated or force-handled Not-is-ness, and that every Not-is-ness is going to be followed by an Alter-is-ness which is going to result in a persistence of what we now have, we begin to see after a while that there is no way out of this giddy little maze of mirrors except this recognition that we have a static that can consider, and that the pattern by which we arrived at what we call reality, solidity, is contained in these four conditions.

The cycle of existence is, then, for a static to consider an Is-ness as an As-is-ness. It just says: There is. And then to alter the As-is-ness even to his own recognition and obscure his knowingness as to that As-is-ness to procure an Is-ness. Then, having procured an Is-ness, he usually can be counted upon sooner or later to practice a Not-is-ness, and not liking the result since the Is-ness he was contesting doesn't disappear, it simply hangs up, and he gets unhappy about it. He now would practice a new Alter-is-ness, which would get a confirmation of the Not-is-ness he now has, which would then persist.

And we find that life can enter itself upon a very, very dizzy cycle and these inversions then follow: the new Is-ness is treated with an Alter-is-ness, is followed by a Not-is-ness, and is followed again by a new condition, which is persisting -- a new Is-ness. And so we get this back-and-forth and see-sawing around.

Now all this depends upon a basic postulate that we agree that things proceed in a fairly orderly fashion or uniform rate of spacing or at speed or at tolerance or something of the sort.

Time has to be entered in there, and we must have had a postulate right in there ahead of all of these Is-nesses that would determine when, and in the absence of that one you'd get no time continuum, so there'd never be any such thing as a persistence. So time fits right in there.

Now do you see this progress of these various conditions? I think that the problem of existence now narrows down just to this: an examination of Is-nesses. But the agreements as to time itself are conditional upon what was created in the time stream, and we get a basic postulate in there resistant to all effects as being time itself.

Well, these are the four conditions of Is-nesses and the various definitions which accompany them and will explain any manifestation of life, human behavior, matter, energy, space or time.

CHAPTER SEVEN

THE FOUR CONDITIONS OF EXISTENCE

(Part 1)

All we need to know about existence is that it is. Whatever complexity it has, it still is. It isn't ever was, which is a most interesting thing about this particular nomenclature. There isn't any will-be-ness and there is no was-ness. There is simply Is-ness. Speak about existence, and people spontaneously add to it will-be-ness and was-ness. So existence is not the word we want. We want the word Is-ness. We want just the word we're using. We want that which is.

The Dhyana makes the error of "beginningless and endless time" but that's not really an error. Probably it is an error as far as the translation of the symbols is concerned. We don't know that the symbols that were used by Gautama to describe this manifestation add up into English as beginningless and endless time. We've already crossed one language jump and so we know that much less of what he was actually saying. But it was an interesting thing that you could represent this by a continuous line which joined itself. Any kind of a complexity of circle, in other words, would represent the fact that we had a beginningless and endless somethingness.

Now, that is too complicated an explanation. In view of the fact that time depends upon a postulate you could say, yes it is beginningless and endless. You could say as well that it is linear. You could say, as well, that it is continuous. You could say as well that it is Eastern Standard, or Sidereal -- it doesn't matter now how you qualify it, having once made the postulate, you can then go on making further postulates. Nobody is going to limit anybody in making postulates.

But there happens to be, strangely enough, a true flying back of time. Time is a postulate. It doesn't even have to be agreed on. You could have a time span all by yourself. You could shut your eyes and say, "and now I've sat here for a million years".

"In the next two seconds", you could say, "I'm going to sit here for a million years". There's nothing unheard of about this -- that's real time. Don't be too baffled if you dream for five seconds about a five hour time span. You've just repostulated some time, that's all.

Unless you continue to postulate time, you haven't got any. And that's the first and foremost thing you can know about time.

That fellow who depends on a clock up there to move time for him, is going to get in trouble sooner or later. He's going to get, "stuck on the track", and "out of pace with his fellow man", because he's depending upon their agreement on time to give him time. The only way he can have time is to continue to postulate time.

One of the roughest things that you will discover with anybody who is having trouble with his case is to have him put something on the future time track. He'll look at that and say, "OH NO!" You say to someone, "Let's make an appointment. Let's make it at 2.05 this afternoon".

Oh no. That's upsetting. That's why when you talk to somebody on the street, you don't tell him to come around to "see you later at your office". You've undoubtedly picked up somebody who has attention on the subject of postulating time. The thing for you to do is take him right over to your office right now, if you possibly can. Don't put something on the future time track for him any more than you can help, because the person here who is really in difficulty, who has all the usual human difficulties, psychosomatic ills and so forth, has stopped postulating time. And the moment he stops postulating time, he doesn't have any.

Now, how much time has the fellow got and how much time is he rushing and how much time is he sitting still with -- all these questions are very interesting except that it all depends on just this one fact: your individual is or is not postulating time for himself.

Looking over a very busy career I can see definitely the speed factor of composition as derived from strictly one postulate. I used to write about 100,000 words a month by writing three hours a day three days a week. Now, that's a lot of words, but it never occurred to me that it was a lot of words. If you simply postulate that there's that much action and it can fit into that much time, you have postulated the time. There's nobody sitting there agreeing with you or disagreeing with you. Actually, you're just walking free. Well, one might as well postulate eight million words in one hour per month. This was just saying how much physical universe time could be allocated to the time span which I was using in which to compose. You get that as a difference.

Let's take somebody doing a job of work -- you will find something very, very peculiar. You find somebody who is working like mad, he's just working, working, working, he's just got to get it all done got to get it all done -- and the end of the day comes and he's got nothing done. It's all in a confusion. He was awfully busy all day but nothing happened.

And the next day he goes out and he's so busy, he's just got to do this and he's got to do that, and eventually you find him just sitting still, presenting a very funny and silly picture. He's sitting still, not even moving, not even talking, not even writing, accomplishing absolutely nothing, and now he is telling you how awfully busy he is and how he hasn't got any time and he'll eventually collapse down to the point where he has no time of any kind whatsoever to employ on anything, and that's why he's sitting there. But that is perfectly reasonable to him. That's perfectly reasonable.

He'll get so that he can't start anything. He has no time in which to start it, much less to finish it. So he starts in originally by saying, Well, I haven't got time to finish it, then, I haven't got time to do it well, then, I haven't got time to do it, then, I haven't even got time to start it. Then finally, I can't think about doing it.

And that's what happens to a person's doingness. It's his ability to postulate the amount of time, and the only confusion that you get into about this is the fact that we have an agreed upon time span.

But you might recognize that the time for an entire nation and an entire earth could thereby go awry.

How much can you do in an hour? What's an hour? An hour is the length of time it takes for the sun to move fifteen degrees in the sky. Now the sun isn't doing anything. What's this co-ordination?

When a country can still postulate time or a world can still postulate time, then an hour would be a tremendous amount of doingness. They would have a festival at sunrise and a couple of games, and then along about noon, why, have a feast, and that leaves them all afternoon, that leaves them all afternoon completely empty and that would be a good time to go boating, and then they would have time to practice up for the dance they were giving that night. And then they would finish up about midnight and say, my, what an idle day! This is the amount of time they could postulate in terms of doingness.

Do we have time to do it, or don't we? That is the question.

Now in view of the fact that time itself is merely a postulate this is very simple to understand. If it's a postulate -- does it have an anatomy as such? Well, yes -- it's a complexity of postulates, the way you look at it in this particular universe at this time, but not really very complex. Time depends on change. In order to have time, you have to alter things, because Is-ness has a condition following it called Alter-is-ness -- which has to take place for something

to persist. This is the way the postulates have gone together which make up this universe -- not the theoretical way in which they could go together to make up a universe.

Get these as different things. You could go about this just all out in an entirely different fashion and postulate time and still have time, but it would not necessarily be the postulates which were made, and are made, and are in this universe right here and now. It wouldn't necessarily be the same set of postulates, if we suddenly just dreamed it up.

So we have to subject the postulates of time to a little subjective proof, and get ourselves a test on it. And we find that we can make things persist by changing them. If we keep on changing something and change it and change it and change it and change it we're getting persistence. But actually, what we're doing is postulating the time for it to persist in.

And when an individual has stopped postulating time he has stopped perceiving. Perception and the postulate of time are identical phenomena. Perception and postulation are the same thing here.

You should recognize, in auditing, very clearly, that time is a postulate. When you are working with a preclear who is having difficulty perceiving, you know that there is something wrong with the time postulate. Therefore there is something wrong with change.

Alter-is-ness is that part of the time postulate which we can most evenly and closely observe. And we find that changing things brings time into being. It causes a persistence and the mechanism of Alter-is-ness gives us a perception of time.

We find that somebody who is in a state where he believes he is about to perish will then try to change everything in his vicinity, right up to the point where he knows certainly that he is perishing, at which moment he will simply succumb, bang, and he will cease to exist or persist as that particular individuality and he as himself without that individuality will proceed on and pick up another body.

We get the tremendous amount of change or accomplishment which has to take place immediately before death. Here we have people all around the place who aren't doing anything. Their affairs are in horrible condition.

If we were to carry a little black bag and a stethoscope (that's the Badge of Office -- a little black bag and a stethoscope. One doesn't quite know what they do with the stethoscope but it's interesting. It won't detect even whether a person is dead or not. A stethoscope is actually a reactive dramatization of the Serpent of Caduceus) and we walk up to somebody and say, "My dear fellow I must inform you," having tapped the stethoscope against his chest so he knows he's being hit by a snake, "I must inform you that we have just learned through this diagnosis that you only have three months to live." The odd thing about this is that you would see a busy man promptly. He'll really get busy. He'll sit down in a slump for a moment or two. That's just the impact. And then he'll say, Let's see. Time. Time. Oh. Alter-is-ness, Alter-is-ness, Alter-is-ness, Alter-is-ness, Alter-is-ness, change, change, got to get my will straight, got to get this straight, got to get that straight, got to get Mary moved out of that house into the other house I'm having built. Gotta have this and that, and the months go by and the years go by and he's still alive.

Well, he'd say the doctor was wrong. No, the doctor wasn't wrong, as of the conditions of that moment, the experience of the doctor demonstrated to him that people who had this illness (who had not been told that they had only three months to live) died in three months. What he's left out of it is the factor on people who have been told they only have three months to live. You tell somebody that he has only three months to live and he will throw into gear the only mechanism available to him to cause persistence in this universe. And that is Alter-is-ness. And he would change, change, change. He right away has to change his condition. That is the first thing he thinks of. One might think that it is just natural that he would do that. No. We're talking on a higher echelon of philosophy. You tell him he's only

got three months to live, this is an unacceptable fact to him you say, therefore he's got to change his condition. No -- worse than that. Worse than that. If he has no time persistence he has to change his condition. The one thing he can do from which he can gain persistence is Alter-is-ness. If he would simply change the furniture around in his office because he can do that successfully, he'd live a little longer. It's unsuccessful changes which fixate a person and cause a Not-is-ness to occur.

Now unsuccessful and successful are themselves postulates. "I am this individual and this individual is supposed to persist" versus "I am this individual and this individual's not supposed to persist". You could make up your postulate that way just as well as the other way.

But the accepted chain of considerations which go to make up, for example, art criticism, appreciation, win-lose and so on -- we just have a set of considerations. These changes are successful as long as the individual is doing it, and the changes are unsuccessful as long as somebody or something else is doing it. And that's very much part of the win-lose factor and also of the time factor. That's self-determinism. One merely has made the postulate that as long as one does it one is successful. As long as one is able to accomplish the postulate this makes up wins. I am now going to pick up my right finger. I pick up my right finger. I won. That is, I made the postulate good.

What has happened to the preclear is that he has made the postulate and then something has contraried the postulate to such a degree that he is fixed. He is fixed and cannot change.

It just works out that way in this universe -- not necessarily the most optimum set-up that could be made. When you made a postulate and then didn't accomplish the goal postulated in that postulate (remember you were postulating time to postulate a goal) when you were unable to reach that particular attainment, then, of course, you hadn't changed anything.

Time is made by changing the position of something in space and so we get all of the neutrons and the morons vibrating at a vast rate of speed, but a uniform rate of speed, changing their positions in space. Well then we can look around at several of these particles such as the sun, earth and other things, see that they're changing their relationships to each other in space at a uniform rate, and having perceived this, why then of course, we are looking at a change in time.

There is no such commodity as time, it isn't anything that could be poured from one bucket to the other but then this does not take place until a postulate is made concerning it. And in this universe the postulate had to do with change of location in space. And when it occurred, then time occurred.

You could change -- the location of something in space simply by lying about it. And you'd get a persistence. You'd come off of the As-is-ness. The moment you change something's location in space you come away from As-is-ness and it doesn't unmock and so you get persistence.

Now an individual is as well off as he can change things in location in space. Looking at the Pre-Logics, which precede the Logics and Axioms of Dianetics, we find that they have to do with an energy, and they tell you that a thetan is an energy-space production unit, that a thetan can change objects in location in space, and right next to that we have the fact that a thetan can create objects to change in space of his own creation. In other words, he can do all of these things and we get, in this universe (and this is pretty common in universes) those postulates as the conditional postulates upon the universe. Then one makes another postulate, that something can persist, and this postulate is represented as time, so when we locate something in space we are actually working with the time postulate. Persistence.

If you observe that somebody has failed often, then what do you mean by failed? He has decided to move something in space and then hasn't. In this universe, that's the total anatomy of failure.

Of course, he could simply postulate that he'd fail and that's another anatomy of failure. He's always free to do that. You can yourself do that. Not to remedy anything as an auditing procedure or anything of the sort -- just simply say to yourself that you failed, for any cause, reason or anything else, just, "I failed and therefore I have to feel a certain way" and then feel that way.

You could do that, or you could simply postulate, I've won, I've not won something, just postulate that you've won, and the conditions of winning are feeling good, which is part of the woof and warp of postulates, "And therefore I feel good" -- giving you a reason to feel good.

Why don't you just postulate that you feel good?

It doesn't matter whether you are a winner, doing this. There is no sensible concatenation here, we are only talking about an agreed upon concatenation. This universe, and the postulates which formed it, is not necessarily the best universe that could be made. It just happens to be the universe we're sitting in and it happens to be the universe in which our postulates are being made and unmade and it just happens that it went together on these four conditions of As-is-ness, Alter-is-ness, Is-ness and Not-is-ness, and these four conditions woven together make this universe act as it does and behave as it does and give you ideas of what a win is and what a lose is and it's all on a postulate basis.

But the most curious manifestation in all of this is the manifestation of time, and we have this matter of time occupying a considerable part of the field of aberration. And that is because time is the one postulate when an individual begins to depend on other-determinisms more than any other.

We see the sun moving and we take our cue from the sun as to how much time we have. We see clocks moving and we take our cue from them as to how much time we have. And that tells us how much persistence we have. So we're being told by these objects whether we can live or not. And that's just the most curious of things in this universe, that one would take his cue as to whether or not he was going to persist, from whether or not the sun moved a certain direction and distance. It's idiotic. So the sun did a figure eight. If I'm not dependent upon sunlight I am certainly not going to cease to live just because of the sun. And a thetan is not dependent upon sunlight. Quite the contrary, a thetan is dependent for his well-being on manufacturing his own jolly old energy. He's not dependent on the sun manufacturing his energy for him. That's just an intricate hook-together. And that again depends on postulates.

The postulate of time could be simply cleanly made, in some universe, saying "Well, there will now be a continuance for one and all", and that would be that. But that wasn't the way it was made in this universe. It was made on the basis that when As-is-ness is postulated, in order to get a persistence, we have to practice Alter-is-ness. We have to change the location of something to get a persistence.

People get inverted on this in this universe, so that they take an Is-ness and they change it in location and it starts disappearing.

Suppose you have a person move a postulate around with a mass of energy. He starts moving it around -- and the energy mass starts disappearing.

But what started disappearing was the energy mass, wasn't it? It was not the postulate, particularly. He just got used to that postulate and he finally took it over as his own postulate. And a person could finally say, well if I move something around, it will disappear.

He has made a counter-postulate.

He is perfectly at liberty to make a counter postulate, but this is not the postulate on which this universe is made. This universe is rigged so that that postulate will avail not, to an individual. That's part of the considerations that make it up. If you've got something and then you say it doesn't exist -- you're stuck with it.

That's this universe.

Alter-is-ness produces a persistence, but then we get two types of persistence. We get persistence as Is-ness and we get a persistence as Not-is-ness. The fellow is persisting but he doesn't want to be there. Well, he's persisting because he doesn't want to be there. This, too, is a change, although he's fixed in a locale. And secondly there is the fellow who is persisting because he wants to be there and he's persisting because of change. They're both Alter-is-nesses. An individual's desire to change continues his persistence in the spot he's in, if he continues his persistence in the spot he's in, if he cannot move. But he had to postulate that he couldn't move before this could happen. And so we get the dwindling spiral of the MEST universe.

We sometimes see the manifestation of accumulating energy on a preclear. Every time a preclear has said, Now I am going to move, and hasn't moved, or has said, Now I am moving and I am going to continue moving, and he is stopped (walking down the street, walks into a lamp post) -- any time this has occurred, he has lost, which is to say, he has got a counter-postulate. So he adds up loss as stationary.

This universe, you see, brands everything which isn't moving as innocent. And things that are moving are guilty, always. So he's lost. Well how do you lose, then? By getting fixed in a location. That's how you lose. An individual who is unable to move objects out of a certain location eventually gets to a position where, when he is trying to move these objects out of this location, he recognizes a failure and so he goes into apathy. He says, "I don't have enough energy to do this".

What nonsense! If he doesn't have energy enough to move energy, why doesn't he just postulate it some place else? But that's another thing. He could say it is as it is and it would disappear and then he could postulate its existence somewhere else, and then change that around so it couldn't be disappeared again and he'd be all set. What's he doing picking things up?

A drill -- simply in moving things and putting them back in the same place again -- will resolve this consistent continuous failure and so you get a process such as Opening Procedure by Duplication and its tremendous effectiveness. If it is done with a little bit heavier objects than is ordinary then an individual recognizes very thoroughly that he can pick up and put back into place the same object and win, not fail. You've changed the basic postulate by which he is working in this universe, which is saying that if he can't move, and that he has failed.

However that may be we have these various conditions and the immediate point here is that time depends, in this universe, on Alter-is-ness. At least the desire to change. Anybody who is desiring to change is persisting in time, and people who do not want to change do not persist in time.

The whole universe is rigged around these postulates.

CHAPTER EIGHT

THE FOUR CONDITIONS OF EXISTENCE

(Part 2)

There are extremely elemental processes we discover could be designed when we look at the various factors in Scientology which we would call very upper echelon factors.

How much in the way of processes could we get just out of the concept of Is-ness? Just that one datum. Well, actually we could get a very great many.

But let me call your attention abruptly to the singular fact that to give a thetan exercise in getting ideas is of minimal use. A thetan can always shift around his considerations one way or the other, but it all depends upon the scope he is willing to shift them around on.

An individual on one point, let's say the receipt point in the communication formula, would feel himself limited to the degree that he had to be on receipt point. So he would then feel that the consideration that he was on receipt point or was being the effect of existence would monitor his ability to make considerations.

That is to say: he would not feel then that he was free to make any other considerations above the level of the fact that he was on receipt point. And all of his other considerations would fall below this level.

The formula of communication -- "Cause-Distance-Effect" is the most elementary statement of it -- "and involving attention and duplication". We would discover that if an individual were monitoring himself with one basic consideration, his considerations would then fall below, and his ability to change his mind would then fall below, that basic consideration.

A basic consideration could be "I am on an effect point. I am being the effect of many blows" -- and messages and that sort of thing -- "and this is very bad". His considerations are various. "I must get off this point". Or, "I am on this effect point and I do not like this". Therefore he makes the consideration that he must get off of this point. Well, what is monitoring the consideration that he must get off that point?

The fact that he's on it, of course.

Now let's take it reverse end to, and let's get an individual who finds himself on source point. There he sits on source point and he's being cause. He's being the source of the impulses or particles which are going across the distance and hitting effect point. And then this individual is saying: "Well now I mustn't cause anything bad. I must cause only good things" and he must do this and that for this or for that.

And what is this host of considerations being monitored by? Of course, the fact that he is on a cause point. He's on a source point of a communication. (Synonymous here: cause and source, effect and receipt.) And if he discovers himself suddenly on the receipt end of something, this fellow is really dismayed. Here he has this basic consideration that he's being cause point, and then all of a sudden he receives something! Now that would be a breakdown -- basically and primarily -- of his Is-ness. His reality.

He then can have a break of reality only to the degree that other-determinism brings into question the postulate on which he is operating. You see, you could have a break of reality only to the degree that other-determined-hammer-pound brings about an invalidation of the postulate on which he is basically running.

He says, I am cause and I am being a good fellow and I am doing this and doing that -- and all of a sudden he gets jailed. My, this is upsetting. But what is his basic consideration? That he is occupying a cause point.

Let's take the example of somebody who is in a condition and who is trying to change this condition. Now we've entered into another level. We've entered into Not-is-ness and then we've entered into Alter-is-ness, you see. He has a terrible ill. He has this mental difficulty. He has some other difficulty or other and he now says it mustn't exist. And in his next statement he says, All right now, don't exist.

Well, what do you know, it keeps on existing. Well, all right, he says, I'll change it on a gradient scale. I'll chip away at the corners of it.

He'll at length decide that he can't do anything about it.

One of the actions that he would finally do would be to draw a black curtain over the whole thing. That's one of the basic reactions of Not-is-ness. He says, Now, look, I can't change it at all, so he's trying to effect a Not-is-ness by using Alter-is-ness. Not-is-ness would not take place by a postulate, he discovered (or thought he discovered), so the basic thing he must do immediately then is start changing it on a gradient scale, which is to say Alter-is-ness -- and it just stays right there. And he is already running on a failed postulate of Not-is-ness. His activity of change is then proceeding from the basic postulate that it must not be, which is proceeding from another basic postulate that it is, which is proceeding from the basic postulate that he's there in the first place. You see that we're just proceeding from the basic postulate that there must be a there for him to be at.

So we trace back these basic postulates and we discover a little rule here. An individual has a condition and the condition continues to exist as long as the individual has a condition. It sounds like an idiotic little rule but it's a very, very true little rule. It will continue as long as he has a condition. So every time you find a condition? He must have a postulate about the condition before he has the condition. So every time you find a condition there's a postulate.

In order to get over something you have to have postulated that you have it. In order to recover you must postulate that you have something from which to recover. In order to go through the actions of emptying a pocket-book you had to have postulated that it was full and should be emptied.

One is all too prone to look at existence and say, well, there's existence there and now we'll make some postulates. No. This is not quite the direction of drift. You'd have to make the postulate to have existence there so that you could make some postulates to recover from having the existence there. And any condition to have any existence or persistence must be based on time of some sort. There must be a time postulate.

And we find that an individual doesn't have time unless he continues to postulate it and ceases to have time to the degree that he ceases to postulate it.

When I say cease to postulate time, I wouldn't want you for a moment to get the idea that there is any witchcraft involved, that you have to go out with spider-webs and mix them up with four quarts of morning sunlight and stir them all up with a whisker. There's no witchcraft involved in making this postulate. It's simply this kind of a postulate: Continue: Just get the notion of continuing something and you'll have a time continuum. Get the idea of a piece of space out in front of you and have the notion, Continue, about this piece of space. That's making time. You've made time. That's all the postulate there is. There isn't even the words, "Now I am going to make some time and I am going to cause the time to persist and continue." No, its just continue. You didn't say continue.

This time continuum is a tremendously interesting thing particularly in view of the fact that so many people have agreed upon it, but their apparent agreement with it leads them to

depend on other people, finally, to carry on the agreement while they just sit there. And what do you know, eventually they do just sit there. You'll find many a person in this state, simply sitting at home in his bedroom, just sitting there. Well, he couldn't have any motion, he says.

Motion consists of this: consecutive positions in a space. He'd have to conceive that he had some space, and that he'd have consecutive motions in it.

If you could just ask such a person to go out and trim the hedge, just no more and no less than that, or if you asked him to go out and put pieces of chalk on the sidewalk all the way around the block every five feet -- you would see considerable recovery in his case. Why? Well, he knows that he'd have to go all the way around the block or he knows that he would have to finish trimming the hedge, or he would have to come around to his door again in the block, or come around to the other side of the yard. In other words, he can continue to postulate a time continuum against the objects that are already there.

You could just say to this fellow, Get the idea of moving this dish. Now move it. Now get the idea of moving this dish again. Get the position you're going to move it to now. Now move it. Now get the idea of moving this dish, now get the place you're going to move it to, and move it. Surprisingly enough an individual will sometimes turn on a violent body reaction on this.

What's kicking back there? It is the thetan's agreement with the body, to the point where he's saying he is the body, the body is himself -- therefore everything that happens to the body is what happens to himself and everything that happens to himself happens to the body. In other words, he's in a super-identification. And he would come through this to where he could have some future.

What postulate is this individual already riding with? Let's take a look at the Is-ness of this. He has to conceive that he has a body before he can recover from one.

And we get the salient and horrible fact that this whole thing is monitored by Is-ness. No matter how much Not-is-ness is taking place, you see Not-is-ness always pursuant to Is-ness. No matter how much Alter-is-ness takes place -- you've got an As-is-ness, then Alter-is-ness has to take place to get an Is-ness. Is-ness is something that is persisting on a continuum. That is our basic definition of Is-ness. As-is-ness is something that is just postulated, or just being duplicated -- no alteration taking place.

As-is-ness contains no life continuum, no time continuum. It will just go -- every time you postulate a perfect duplicate for anything: same space, same object, same time -- boom! If you postulated it all the way through, without any limiter postulate hanging around at all, it would just be gone and that's all there is to it. It would be gone for everybody else, too.

Now this, then, Is-ness, is your monitoring postulate. An individual couldn't possibly get into trouble with As-is-ness. Unless you considered losing everything trouble -- but it would be losing things which you either now didn't want, or had just postulated into existence.

All As-is-ness is doing is merely accepting responsibility for having created it, and anybody can accept the responsibility for anything. That's all As-is-ness is, when it operates as a perfect duplicate.

There are two kinds of As-is-ness:

There is the As-is-ness where you postulate it in the space and time -- you postulate it right there, and there it exists.

And then there is the As-is-ness where you repostulate it. You just postulate it again.

The object already exists, there is an Is-ness being approximated as an As-is-ness, and then it becomes an As-is that isn't. It becomes, then, an actual Not-is-ness. So if you created it, if you just created it as an As-is-ness, unless you altered it rapidly you'd get this Not-is-ness. And if you exactly approximated an Is-ness as an As-is-ness, you would again get the same result. Same result both times -- Not-is-ness. As-is-ness, perfectly done, if not followed by Alter-is-ness, becomes a Not-is-ness. Quickly and immediately. You've seen that as an auditor, erasing parts of the reactive bank -- facsimiles, etc.

It hasn't occurred to anybody yet, fortunately, to simply exactly approximate the body! Treat the body as an As-is-ness and go your way. Well, you say the body has a lot of facsimiles and so forth. All right, treat them as the same As-is-ness, all in one operation -- boom. Of course you had to assume you had a body before you could possibly As-is it.

Now, existence goes this way -- this is the only error you could make, and this is another method, slightly, of getting a continuation, because it is an Alter-is-ness. There is an Alter-is-ness right there between Is-ness and Not-is-ness. The moment you say, "There it is, now I don't want it and it doesn't exist", you've postulated that you're changing it. It's a very abrupt and particular kind of Is-ness -- it's a Not-is-ness.

If instead of following Is-nesses with Not-is-nesses, we followed them with As-is-nesses, nobody could ever possibly get into any trouble. The way you get into trouble is to follow an Is-ness with a blunt, thud, Not-is-ness. (1) There it is. (2) I don't want it. (3) It isn't. Oh ho! What's the difference between these two operations? It's a very interesting difference:

You've got an Is-ness. You have an ash tray, you don't want the ash tray any more, so the one operation, a correct one as far as you are concerned if you just really didn't want it any more, would be simply to do an As-is-ness. A perfect duplicate. Gone. You haven't got an ash tray any more. To follow an Is-ness with an As-is-ness, brings you into an actual Not-is-ness right there.

Or, on the other hand, you didn't do an As-is-ness. And you've done what? You have refused the responsibility for having created it, and you have said, Somebody else creates it and I don't want it. You've said somebody else. You've postulated the existence of somebody else with regard to this thing and you've said, "Another determinism is placing this thing before me and therefore I don't want it, so I'm going to say that it isn't, but it really belongs to somebody else. We have to postulate another determinism, which is to say, refuse the responsibility for having created the object, before we can get such a thing as a Not-is-ness.

Now, an individual can fail utterly. This is a very curious lot of phenomena that we are looking at here, and of course, we had no serious intent with this phenomena, which is a fortunate thing. Otherwise, somebody realizing exactly how this is done, would sooner or later perhaps unmock the Republican Party or Russia, leave a hole, and of course to do that, you would have to accept the viewpoint of 200 million Russians. You could unmock Russia if you did that, but you would have to take full responsibility.

What is full responsibility? Full responsibility merely says: I created it. When you ask somebody to make a perfect duplicate of it he's going through the mechanics of creating it, therefore it disappears. He knows, unless he throws Some other-determinism in on the thing, in other words practices some Alter-ism on its creator, that it's not going to exist at all.

The physical universe as we look at it right around us here is an Is-ness for one reason only. We all agree that somebody else created it, whether that is God or Mugjub or Bill. We agree that somebody else brought these conditions into existence, and so long as we are totally agreed on this, boy have we got everything solid. And the moment we agree otherwise, and we say, Well, we made it -- it starts to get thin. This will worry a preclear for a moment. It's just as if he feels he could never make another one. It'll get thin.

In the processing of reality, then, if you handled Is-ness all by itself, you would simply have an individual start looking at what he considers to exist. And the most solid manifestation of that would be the space in the vicinity, the walls in the vicinity, and so on. That would be the most elementary process that we could do. Just start spotting spaces and walls, and let what happens happen. That's all. Just ask the individual to keep on spotting things, very permissively. Suppose he kept on looking at them with his physical vision -- we find that he would get up to a certain level and then he'd start to have body somatics (Somatics: perceptions, stemming from the Reactive Bank, of past physical pain or discomfort, restimulated in present time) because making the body do this continually is actually processing a reality vaguely in the direction of an As-is-ness. It's not bluntly or sharply in the direction of As-is-ness. It's just asking them to process it a little bit in that direction:

"Let's take the spaces around here just as you see them." And of course after a while, the walls are going to get brighter and brighter and duller and duller and -- gone.

Well, when they get brighter, that's all right. The body will still feel all right, but when it starts dulling down the body doesn't like this. It does not think this is the best thing to do. It would not recommend this as subject matter for an article in a body-building magazine. Because the body knows it will fall if it stands in space. Therefore this very, very simple process would not necessarily have to be completed by remedying havingness, but just by getting the fellow to close his eyes, and spot anything he could see, no matter how vaguely, as a thetan. Just spot anything he sees. If he sees a nothingness, O.K., if he sees a somethingness, O.K. Just get him spotting. We don't care what he sees. We might indicate various directions but we would make a very bad mistake if we indicated them as body directions. On your right. On your left. Above your head. Oh no, no. We just ask him to look around, and what he sees, spot a couple of spots on it. Did you do that? Now something else, spot a couple more spots on that. Well, we know already that if we've run it permissively in the environment, he's had to point them out and walk around to them. He will obey orders. Now that we've got him to a point where he will physically obey commands we can trust him to close his eyes and spot spots or spot spaces or spot anything he wants to spot with his eyes closed. We just simply keep on spotting them, and that would be the most elementary process there is in Scientology.

CHAPTER NINE

THE FOUR CONDITIONS OF EXISTENCE

(Part 3)

The four conditions of existence are actually variations of existence itself. They are certain attitudes about existence, and they are the basic attitudes about existence. Now we could include a great many more attitudes, and we would find that we were deriving them all from these four. But we could take these four and find out that we were deriving them all from one -- Is-ness, or reality.

There has to be an Is-ness before you can do an Alter-is-ness. There has to be an Is-ness before you can do a Not-is-ness -- unless of course you want to postulate it in reverse.

But we are talking now about this particular universe and how it got here and we discover as we look along the track, that these four conditions of existence, that all existence, presupposes the postulate known as TIME.

Now time is just a plain ordinary postulate which says that out of a non-consecutive beingness, which doesn't exist forever, we would get then a parade of time. A time continuum.

There's no forever, it would just be there -- no forever, no instant involved. There just isn't any consecutive existence at all. And then out of this we would have to make a postulate that there would now be consecutive existence, existences, or a consecutive series of states.

Now an individual who is simply occupying space without any energy involved whatsoever doesn't have a good feeling about this. Without any space he could have a good feeling about it. No space, no energy, no continuum -- he could have a fairly good feeling about this, but when he gets into the occupying of a space, now he has this feeling of foreverness unmocked. He makes that uncomfortable for himself, so he will now go on creating consecutive states of existence. He can have a game. Space is necessary to start this game but when you've just got space and nothing else, it's rather unbearable. You're already occupying, so there is an existence there, but it isn't an existence which has any consecutive difference of state. And that's real poor. This is a kind of feeling you run into in space-opera.

Here we have, then, a state of existence being conditional upon a time postulate which would include a space-energy manifestation, and this would be a simultaneousness.

There would be no question about whether you made the postulate for space and energy before you made the postulate of time. There is no question of any postulate before or after because you have not postulated the postulate which causes a before or after, and that postulate would be time. So actually, to have a game, there must be a simultaneous action whereby you postulate space-energy-time -- space, energy, continuous existence. Which is an As-is-ness of space -- altered, energy -- altered, time -- altered. So these items have to have the time postulate with Alter-is-ness in them in order to get a persistence. That's how it's done in this universe. You don't "just have to do this all the time". But when those three consecutive postulates are made simultaneously, why we then have a continuum of existence, demarked by differences of position of the particle in the space and we have time being marked out for us very neatly. We have to alter positions in order to get a continuousness. We have to say it is here, now it's here, now it's here, now it's here.

There's another way of making time come true. We say space, no space, space, no space, space, no space, space, no space. You're postulating, however, that you can do this before you can say space, no space, space, no space. Well now, this postulate is so easy for a thetan to make, it might be considered a native part of his makeup. So we have before this an

ideal state, that is to say an idealized or theoretical state. We have this theoretical state whereby we merely have a Static which has no space, no mass, no wave length, no motion, no time, which has the ability to consider, and we are dealing with the basic stuff of life. Just by definition.

It is very peculiar that: “We, mixed up in all of this energy and so forth and way on down the track from the time this postulate was made” -- do you see anything specious about the way that remark hangs together -- “Way on down the track from the time this postulate was made” -- “Very difficult and very strange that we could even discuss this higher state of existence which was made trillions of years ago”? No. You see, it must have been concurrent with this, right here, and so we don’t use the word existence, we use the word “is”. We don’t use the word “then” or “will be”, we don’t go back into the past or go into the future for this continuousness at all. It just is.

Now, in past ages it was just: “Well, reality is reality and you’ll have to accept it. There’s nothing more you can know about it than that.” Oh yes, there is a lot more you could know about reality than simply, it is.

So, is is not a complete and embracive definition of reality. It’s not complete and embracive because reality has a certain mechanical structure and that structure is composed of these four states of existence. And it would actually take all these four states of existence to make the kind of existence which we are now living and that is to say, we would have to have Is-ness then Not-is-ness and Alter-is-ness and did it strike you before that we might have forgotten and might never have known about and it might not have had called to our attention directly, this other state? We’ve always had these three states, Alter-is-ness, Not-is-ness and Is-ness.

Alter-is-ness and Not-is-ness, of course, are variations of Is-ness and depend upon Is-ness. But there is a fourth one and that is As-is-ness. And that condition natively exists at an instant of creation, yet it also can be made to exist again any time anybody wants to make it exist again, simply by saying AS IS. If anybody had truly and actually accepted reality and had got all of his fellow beings to simply accept reality, we wouldn’t have any. But whose reality? Whose reality in each case? Somebody else’s. So this reality was actually another condition, other-determined As-is-ness. Other determined. Which is Not-is-ness!

The way you get Not-is-ness is to say “as is created by you”. That’s an awful one, that’s a big curve, and that is Not-is-ness. It’s an As-is-ness created by somebody else, which of course isn’t an As-is-ness at all. It’s a very specious As-is-ness, and naturally the world would sort of look unreal to everybody if Joe Blow and Doctor Stinkwater and the Heavily Laden Order of Pyramids all said “This is reality and this is As It Is and you’d better accept it.” That’s a Not-is-ness, isn’t it?

So if everything starts to sort of dim down on you and you kind of find things going out, and getting sort of resistively thin -- all transparent-but- they’re-there, or, they’re “all hung with black sheets” -- you must assume at that time that you have faced up to too many As-is-nesses which somebody else created.

Somebody else says, “This is the way things are.” And you’ve had that. You get that operation in conversation: “And yesterday you said to me, just when I got up, you said to me, you never work, you are a dirty loafer, you remember that, don’t you?” I think every familial unit of thetans should always have, not a Bible, but so and so’s Rules of Evidence, lying right there to be resorted to at any time, and there ought to be a Court in every neighborhood to which you could repair and decide whether or not this was an As-is-ness or a Not-is-ness.

Now what is a Not-is-ness? A Not-is-ness comes about in that exact manifestation, or simply by the separate postulate: “Well, it is and I regret it. It isn’t.” You know, you could have made it and then said it wasn’t. Oddly enough, if you made it and you know you made it, you have a special case of being in a position to say any time, “It doesn’t exist now,” and it

won't -- if you have also accepted responsibility for having created something and said, "I made it." So we see that there are two different conditions of Not-is-ness.

One is just vanishment.

The other one is an Is-ness which somebody is trying to postulate out of existence by simply saying "It isn't."

A Not-is-ness, in our terminology, would be this second specialized case of an individual trying to vanish something without taking responsibility for having created it. Definitive, positive and precise definition.

And the only result of doing this is to make it all unreal. To make it forgotten. To make it "back of the black screen". To make it transparent. To make it dull down. To give it over to a machine. To wear glasses. Anything that you could possibly do to get a dimming-down of an Is-ness.

And that is done by saying just this, just this precise operation and no other operation: "I didn't make it. It isn't." "I didn't do it, so it doesn't exist.",

And that will always bring about this second condition, the one we give the term of Not-is-ness.

"I didn't create it. I had nothing to do with it. I have no responsibility for this at all, so it doesn't exist as far as I am concerned."

An individual doesn't have to operate on these postulates at all, but he is running on this makeup of postulates. He, of course, then will trigger in all the rest of his postulates and they'll cross-reference in to sticking him right there with it. He's Not-ised it and he's got it.

Now he thinks the only way he can get rid of it is to dim it down, dim it down.

You can process a preclear on a gradient scale of change on something -- and this is of great interest to us -- if the gradient scale is back toward his acceptance of responsibility for having created it. It would not be far enough to go, as in Dianetics, simply to find out that your mother did it, that "it was what your mother said". That wouldn't be far enough to go. This is built into the woof and warp of the track, the very composite of postulates on which an individual is running.

You would have to go back this far: you would have to postulate: (1) that the time Mother said it was NOW, and, (2) that the time when Mother said it caused the time when I said it (a million or fifteen billion years ago) to key in. (key in (Verb): An earlier moment of upset or painful experience is activated, restimulated, by the similarity of a later situation, action or environment to the earlier one.)

Every time somebody else can put one of your own pieces of mental machinery or one of your engrams into restimulation, it is only because he can work on something which was natively created by yourself. All things carry the germ of their own destruction.

So any engram, as we were operating with it in Dianetics, was actually a key-in. When I discovered that the whole track ran back, back, back, back, BACK, it was, "Oh! We're back to where the guy did it in the first place!" Well, that was very interesting, and one result was the essay on responsibility in Advanced Procedure and Axioms.* The essay on full responsibility.

Well, a fellow did. He created the condition from which he is now suffering, and he didn't even create it in other wise than he is now suffering it. But it has been keyed in and he has consented even to its being keyed in.

Nothing, really is sneaking up on anybody. That's a horrible thing, isn't it? People haven't even made it worse. But we're having a good game. If that game is a game called psychosomatic illness, bereft lover, neglected baby, it's still a game. And as such, the individual is still playing all roles.

Now what happens is that as an individual goes along the line, he starts identifying himself with the source point and receipt point of the communication line. As a child, he identifies himself as the one who is talked to. Very seldom do you discover a little child giving mother a good lecture. If you had, you probably would remember with great satisfaction, the good lecture you gave your mother.

Here is a condition in which the individual has identified himself with a continuous effect point, or a continuous cause point, and having said "I am now on this point," he now makes his considerations below the level of that point. He has considered he is on that point. Henceforth all further considerations are monitored by this consideration that he's on the point, as long as he considers he's on that point. And he would have to recognize that he was on the point (an As-is-ness) before he would come off the point.

A process immediately occurs to us on such a level. If you just simply ask an individual a question such as this over and over and over and over:

"Where could you be, where you would be willing to recognize and realize that you were?"

And you would just run a gradient scale all the way back up the line, to the point where the individual recognizes, finally, "You know, I'm sitting right here!" There wouldn't be any mysticism involved in this.

Now, these conditions of existence are composited up in an inter-dependency one upon another. An Is-ness exists only because of As-is-ness. As-is-ness took place in the first place. It got created. Then we had to alter it slightly to get an Is-ness. We had to give up some responsibility for it and we had to shift it around. A Not-is-ness then exists in order to provide a game.

A game is an Is-ness which is being handled by Not-is-nesses. A football game could be added up in terms of these conditions of existence. One side has the ball and the other side must Not-is the side that has the ball, and the side that has the ball has to win -- in other words, has to arrive at a receipt point.

We get the communication formula itself as being below the conditions of existence and we get affinity, reality and communication as simply being the methods by which existence is conducted. It is not the interplay of existences. So we're dealing with a higher echelon than ARC right now.

Affinity really is merely the consideration of how well it's going. In the agreement or reality itself we're talking about Is-ness and that is the corner where we enter this ARC triangle. We just slide into that triangle of Affinity-Reality-Communication on that Is-ness point of reality, and then it is modified by affinity and communication, which of course come in simultaneously with it. We discover then that these conditions of existence would add up to all manifestations of behavior. There would be a great many of them. There would be a finite number, however. It would be the number of possible combinations, singly, doubly, trebly or quadruply, of these four conditions of existence. We get this individual who in only 75% of his life is trying to say Not-is to, another 10% of his life he's giving an Alter-is, one hundredth of one per cent he's giving an As-is, or trying to give an As-is to -- and the remainder is Reality. Acceptable reality. And that would be just one makeup of a personality.

If we say that there is a gradient scale of Is-ness, a gradient scale of Alter-is-ness, a gradient scale of As-is-ness (which there isn't) and a gradient scale of Not-is-ness, why we can

see then that you could take these gradient scales and in one combination and another, have a character composited from them.

Characterization must be made up, in great degree, from these conditions of existence. Some space, some energy, and his considerations of Is-ness, Not-is-ness and Alter-is-ness. We would not say that any part of his characterization was made up of As-is-ness, because if it was it wouldn't be there.

One also has been trained to believe that loss is bad. This is just a reverse postulate, made just to keep life interesting. Loss is bad, therefore he has a tendency to avoid As-is-ness. Therefore he will avoid duplication -- he'll avoid all kinds of things. He's afraid he'll unmock. He's afraid he'll vanish. Here he is struck in, eighteen feet thick, and you couldn't get him out with a pneumatic drill, all scheduled to go back to the between-lives area (Between-lives area: The experiences of a thetan during the period of time between the loss of a body and the assumption of another. See *A History of Man* by L. Ron Hubbard) and pick up another baby. Silly, isn't it? But it doesn't matter too much. Any life or continuance, to him, has begun to be better than no life at all.

You could say, well then why would you process somebody? Well, let's look at that. In order to accomplish a two way communication, just after the basic and most rudimentary chitterchat, I would start asking somebody why he was being processed. And you know, I'm just wicked enough to go on asking the person why he is being processed for hours. Until he can at least find one reason why he is being processed. It's a very interesting process. A preclear comes in saying, "Process me," and you have always supposed they knew. Well, at this point they don't have any idea at all why they want to be processed.

A process which would be quite powerful would be: "What wrongness or what wrong thing would you find other people would accept from you?" or "What could you do that was wrong that other people would accept?" and then "What wrongness could you accept from other people?" -- back and forth and back and forth. Here goes the guy's manners, his social pattern, his behavior pattern, and everything else will just go by the boards running that process but he won't be able to tell you, first and foremost, why he's being processed.

He won't be able to tell you he wants to feel freer. He won't articulate any of these things. He'll just sit there and want to be processed. What toward? Until you've gotten him to put a little time on the track, he will use "forever" in processing, because he's sitting in forever.

He isn't moving on the time continuum. Well, if you can't get him processing toward some goal or other or in some direction, he just makes processing the end all of everything and he'll just go on being processed forever. But if he's going to be processed forever, he'll have to hold onto his aberrations forever, otherwise he couldn't be processed forever, could he? And that's why some cases stay so long in processing. It's actually as elementary as that.

So I have been sorely tempted to alter that early auditing step to just this: "Well now, give me some goals you have in processing."

And just keep it up until it's no longer forever, and the preclear has a future.

CHAPTER TEN

THE FOUR CONDITIONS OF EXISTENCE

(Part 4)

Here we take up the various reasons why.

We have in Scientology a lot to do with reasons why, but the fact is that a fellow who goes around always looking for reasons why is usually not in particularly good shape.

But there are a lot of reasons why the states of existence and conditions of existence are put together the way they are in this outrageous fashion in which As-is-ness followed by Alter-is-ness gives us Is-ness, followed by an Alter-is-ness, or desire to, which brings us into Not-is-ness, and which then brings us into Alter-is-ness, which brings us into Not-is-ness which brings us into Alter-is-ness, which brings us into Not-is-ness.

There's a good reason for all this. An excellent reason for all this.

We are talking right here about the fundamental of all aberration, which is incidentally the fundamental of all existence.

There is found a strange condition here. If a thetan were to remain with an As-is-ness, he would thereafter have nothing. Therefore, immediately after the postulation of some object, it is necessary, by mechanics, and it is just happens to be so in this universe it's not reasonable, it's just the way it is in this universe -- which puts you right in the field of mechanics) that the As-is-ness must immediately be altered in order to become what we call a reality. And thus people attempt various mechanisms.

One of those mechanisms is the device of God. Now then, we're not saying that there is not a God. But if there were never any type of alter ego of this character there wouldn't be any permanent reality.

It's one thing for there to be a God and quite another thing for everybody to blame everything on him. The most barbaric manifestations that we have, generally includes a deity. The savage out in the Gullaby Isles is practicing this -- he says that the fault is the trees and the River Sprite and so forth. I'm talking to you now about the mechanism of use of, rather than the identity of, when I mention God.

All right, God, then, is to blame. If we make something and have some hard luck, something like that, the way it looks to us here at this stage of development, we can then say, "Well, God did it to us and He has afflicted us."

Quite in addition to that, every primitive people has the legend of a creator. They have to have a legend of a creator, otherwise they would never have anything. The immediate and intimate use of the legend of the creator is to continue in existence.

Whether you built it or not, you can cause something to vanish simply by looking at it as it is. Somebody else can put up a mock-up of one kind or another and merely by your perceiving it and making a perfect duplicate of it, you can vanish it. It is not necessary that you exclusively devote yourself to the vanishment of those things which you yourself have made. That is not necessary in order to carry through this cycle. Somebody else could have made it and you could have made a perfect duplicate of it -- an As-is-ness -- and it would have vanished.

Now we are talking about something which is very easy to work with and which can be put to objective proof. I can ask you to make a perfect duplicate of something, which is to say,

get it in the same space, same time continuum, using the same mass, and your perfect duplicate will cause it first, probably, if you're having a hard time of it, to brighten up -- and then it'll fade. Well, the next thing you know, even though you've made very poor perfect duplicate, why, you sort of get the idea, of looking through this item -- and so it is with all of existence. Unless, in other words, there was a legend of other creation than your own, you would not at any time be able to have anything.

The first and most fundamental principle of havingness is: it must have been created by somebody else. And thus we get Is-ness. When you ask a person to remedy his own havingness, this is perfectly all right. You're asking him to make nothing of something. He actually can. But the reason it does him so much good is he's forgotten that he can.

In a Remedy of Havingness you ask the preclear to mock something up and pull it in. In other words, you ask him to mock it up and alter it. Why doesn't it remedy a person's havingness simply to mock something up -- just get a mockup? It doesn't remedy his havingness because if he leaves it there, it will simply disappear. Many a preclear gets very upset because his mockups all disappear. He puts up a mockup and it disappears. Well, that's because he doesn't alter it in position. He puts the mockup up and leaves it right where it is and of course it dissipates and disappears. Now those preclears who put up a mockup and leave it in the same place, which does not disappear, are working on mental machinery which does their mockups for them and for which machine they have "No responsibility". He's doing them with a machine not because he's crazy but because this is the only possible way he could make them persist. The machine changes them and he himself knows that he did not put up the mockup. He knows this. If he didn't know that, the mockup again would disappear. So it is not a very undercover fact with which we are working.

Let's take this legend of the creator. We discover that it is quite uniform. It is found in every savage tribe. It is found across the face of the world. And it is found throughout this universe. The legend of the creator. Very well, we can say there was a creator and he created everything and that's fine. And if this were the case, why, that's fine, too, because it wouldn't unmock. In other words, things would not disappear if there were a creator who made everything. You could even use this as a tremendous argument to prove that there was such a thing as a creator and he made everything, just by the fact that it's here and if you had made it and continued to accept your responsibility for it, it wouldn't be here, so there must have been a creator. You could go at it with this type of logic. However, it works this way: if somebody else, other than yourself, made a mass of energy, all you would have to do would be to come along and fish around for its approximate moment of creation and duplicate it and it would then disappear. So whether the creator created everything or not, it's a certainty that you, in order to continue with a physical universe, have to, to some degree, lay the blame on some other identity.

Therefore this postulate, he created it or you created it, does not enter the question at all. If you duplicated it, it would go away regardless of who created it. We're talking now about a very basic fundamental, that it is necessary for you to carry around the postulate that somebody else created it in order for it to exist.

Now it's a little bit difficult to prove this. You have to work with a preclear for a short time. But the main difficulty of proof which lies on this track is simply proving who made the mockup in the first place. You see, if it disappeared because you duplicated it, why then, you probably made it. But it doesn't matter then whether we use this one way or the other. We don't have to admit that you could make anything disappear whether you made it or not. We don't have to admit that, to continue along with this proof. What we are coming down to here is this matter of responsibility.

We learned in Dianetics that people would not accept responsibility for their own acts, and actually they're as bad off as they will not accept responsibility for their own acts. And individuals are other-determined to the degree that they will not accept such responsibility.

As a matter of fact, you discover a complete dianometry, scientometry, anything you want to call it, a complete set of tests, which will demonstrate that there is a direct ratio between the health and ability of the person and his willingness to accept responsibility. But the funny part of it is, this only goes up to a certain point and when you achieve that point of acceptance of responsibility, then havingness as such, and the universe, or that part of one's interest in the universe, would vanish.

Now here is the Bodhi. Here is the individual who aspires to the attainment of perfect serenity -- he can't have perfect serenity and have something, because he'd have to give away a certain amount of his responsibility in order to continue it in existence. Havingness would only persist so long as he felt somebody else had had a hand in creating it. And the moment he said "I created this" one hundred percent all the way along the line, he wouldn't have a thing. The perfect duplicate here is what we are looking at, again. Therefore, the condition of becoming a Bodhi is the condition of having nothing.

A thetan is very able to have something or nothing at will. But it happens that he is appealed to very often on the basis that all somethingnesses, including space, would vanish. He thinks this might be a good thing. The only protest a thetan has, actually, is somethingness.

If you want to say what is wrong with a thetan, you'd say, "somethingness", and you have stated it. He has something. There is something in existence.

He is perfectly willing to have many somethings, but after a while, the communication formula comes into effect, and he becomes frantic about it. This is something that is terribly elementary. In spite of the fact that it is as deeply pervasive as it is in life and existence, it is terribly simple. It is one of these idiotically elementary factors that everybody could have overlooked forever. They would have had to have overlooked it. They didn't even dare tread on the edges of it for fear that everything would blow up or disappear.

All right. A thetan makes something, and he himself natively is a Static, capable of consideration, has no mass, no form -- as a spirit he has no form -- he has no wave-length, he only has potentials. He has the potential of locating objects in space, and the potential of creating space, energy and objects and the action of locating those objects in that space.

And with this as his potential, the moment that he makes something, he violates his own communication formula.

A thetan in excellent condition is able to communicate easily with something. He can simply change his mind about anything and work it around. But the formula of communication becomes native to the creation of space, energy and mass, and that formula is, of course, Cause-Distance-Effect, with a perfect duplication taking place at Effect of that which emanated from Cause.

That is the Communication Formula. And that becomes the formula the moment you have space. Up until that time, you have all cause and all effect capable of occupying exactly the same location, since there is no location.

So a thetan is perfectly able, way up the scale, to occupy the space of anything, and so duplicate that thing. But his formula when he's doing this is not cause-distance-effect. It's just cause, effect. That would be the formula he's operating with because he wouldn't communicate across a distance to something, since he wouldn't be occupying any cause or effect points.

But he can't have a game if he does this.

He can't have mass if he does this.

If every time he selects out an enemy and then communicates to the enemy and simply becomes the enemy at that point, he couldn't have an enemy very long, could he?

If he said I am fully responsible for everything and I will now make a plot of land, and he mocked up some space and a plot of land, and he's fully responsible for it -- what happens?

It's gone. If he had mocked it up and altered it or changed it, he could then bring about the phenomenon of persistence, which is itself time.

When you say survive, you're saying time. Just put those together and make them synonyms and you understand all you want to know about time. It's a consideration which leads to the persistence of something, and you can enter all the mechanics into time that you want to, and you can paint it up in any way you want to and you can write textbooks on it and test it and buy very fancy watches and chronometers and set up observatories to measure the movement of the stars, and you still have "Time is a consideration which brings about persistence". And the mechanic of bringing about that persistence is, by alteration. And so we have Alter-is-ness taking place immediately after an As-is-ness is created, and so we get persistence. In other words, we have to change the location of a particle in space.

Let's get back to this communication formula.

A perfect duplication would be cause and effect in the same point in space, wouldn't it? So communication as we consider it through space is not a perfect communication system.

You on one point in space communicate with something at another point in space and if you continue to interpose a distance in between the things or space in between the things, you get even then the basic of persistence. All you've got to do is get that distance in there, and we have this taking place.

A thetan cannot duplicate a mass. That is to say he cannot himself actually be a mass. He can conceive that he is by saying now look at all this mass that somebody else put on me. I didn't create this mass.

He can conceive himself as mass. But he starts to get very unhappy about communicating with somethingnesses because here is this distance factor and he is a nothingness. Now if he can be the somethingness on the same point in space where that exists, then he feels very, very good about things. He feels all right simply because he's occupying the same space. Well that's perfect communication for him. That's a perfect duplicate. But if he totally occupied it at its instant of inception it would disappear.

So he gets caught between not wanting to communicate with something and wanting to have something. You see, that to really have something he would have to occupy the same space. To communicate with something he has to stand off at a distance and pretend to be a something. Communication, as we know it in this universe, is cause, distance, effect. Perfect communication, like a perfect duplication, is: the point, the point, there's something on this point. The thetan can also occupy this point, therefore he can have something, he can communicate with something, but if he says it belongs utterly to him and he's occupying its basic point, it will disappear.

Therefore, he has to have another creator. He has to have some other author of the universe. If he doesn't have, why, it will disappear.

Now, we could enquire at some length into the tremendous complexity of this and why is this. A thetan should simply be able to say by postulate, well, it's as it is, and it's going to persist as it is, and we'll just make this postulate and that will be that. But the funny thing is that it just doesn't work this way, and it looks here as though we have an arbitrary which has been entered in from one quarter or another, which we don't fully comprehend even at this moment. But this universe went together on this basis of: AS-IS equals VANISHMENT.

You make one just as it is -- all you have to do is pretend as if you were making it at this moment -- and boom, it's gone.

You then see the necessity, at least in this universe, to have another determinism at work. Well, that's just one point. We see it in terms then of the Creator. That's fine. This does not enter the question of whether there is or is not a God. We are talking about whether or not people blame God, or why they blame God, or why they put things onto God.

Well, if they didn't they wouldn't have anything.

The other point involved here is people blaming each other. They stand there and one says: You said that, and That's your fault, and this is why we have this fight, and so forth. And the other person says, No, that wasn't the way it was, that's an entirely different situation, you actually were the one that started all this.

We talk to a preclear and we want to know what's wrong with this preclear. Well, it's "what Mother did" to him, not what he did to himself. We can't conceive that an individual could actually become aberrated without his own consent, and sure enough he can't. He can't become aberrated or upset, or thin or lean or fat or thick or stupid or anything else without his own consent because he is part of the agreement pattern, and unless he has agreed himself to other entities of agreement, why he won't get stuck with any kind of a pattern.

Now let's look at how that adds up. We find that if an individual to have something went into agreement with other determinisms and said these other determinisms caused all this, he could sit there comfortably with something persisting. But what did he have to do? Basically he said: in order to have anything I've got to go into communication with these other-determinisms and blame them or fix the responsibility of causation upon these others.

So the child blames his parents. He gets up into the age of puberty, he runs into sex, sex tells him he can't survive -- that's the basic manifestation of sex -- tells him he can't survive and he begins to worry about this fact. Why, here he is all equipped to make another generation, he's hardly started living this one, and that's a confusing and upsetting fact. He's already warned in advance that some day he's going to die. To see something really morbid, read some teen-age writings. You never saw such complete sadness anywhere. Well, they've been told they can die, and the appearance of sex, physiologically, told them they could die. They become anxious then about surviving, so they have to turn around and blame somebody for something, anything, and simply by blaming somebody they obtain a continuance of whatever condition they are in at the moment. In other words, they can continue to survive simply by turning around and saying, Well, the trouble with me is all what my father and mother did to me. So if you were to take somebody and bring him very, very close to death and cause the chilly breath to draft down his neck, you would find him very shortly blaming something else but himself. But he runs in a cycle on this. He discovers that the situation is untenable. Then he'll blame himself.

Why does he blame himself at that point?

He wants to unmock it. And he actually has forgotten the mechanisms of unmocking. By blaming himself, by taking it upon himself, by holding it all close to his own bosom, he thinks: Now that it's my fault it will all unmock, and he's a very surprised person when it doesn't unmock. He merely gets upset. And the other one is, he finds his condition of survival desirable, and when he finds it even vaguely desirable -- it doesn't matter if he's a slave in the bottom of a salt mine working out a sentence for having voted, or whatever -- the fact is that this individual obtains continuance by blaming others. So he goes through a cycle of Blame somebody else, that means I've got to or I want to, or I haven't any other choice but to, survive, and the best answer is survive, therefore I'll just blame everybody else.

And the mechanism of blaming oneself is unmocking oneself. Unmocking oneself and the mass with which he is immediately and intimately surrounded. People go through these

two cycles and they invert, and that is the basic inversion. They start in by saying, Somebody else was responsible for the creation of all this. They're quite happy about all this and they stand off and look at it and then they begin to get tired of communicating with these somethingnesses, because they cannot enter into a perfect duplication. They are nothing, that's a something, they begin to get impatient about it after a while, so they decide to unmock it. They look at it and say: I did it. Well, there's something wrong here. Come on, come on, come on. I did it. It goes right on. They don't mock it up in the same part of a space in which it was initially mocked up, they don't try to duplicate it with its original mass.

They omit some of the basic steps of saying I did it and they're trying to go up against the postulate with which they did it.

Having made this postulate and said already that it belonged to somebody else, now they try to take it back, and their next move is to try to squash up these energy masses, use more force in order to flatten force, and he is on his way, this thetan, right away, you see, he's on his way. Because the more he tries to use energy to knock out energy, the more energy he's going to have, and the more dislocated the basic particles of that energy are going to be, and he'll just get more and more and more persistence, and if he keeps on protesting all the way on down, it will just become more solid, and more solid and more solid, and more solid, because he's protesting that it's other-determinism then he protests by saying it's my fault. Now I'm going to disappear and die and that will make you sorry. But again he's entering a protest into the line.

So we get this basic thing of other men's responsibility, or "God is responsible", as the fundamental of persistence and survival. We have to have other-determinism at work or we get no persistence whatsoever.

And so we get these postulated other-determinisms, and when you recognize this clearly in your preclear and in creation itself, it will cease to be as entirely baffling as it may have been in the past.

CHAPTER ELEVEN

THE FOUR CONDITIONS OF EXISTENCE

(Part 5)

With the data we have on these conditions we can talk a little bit here about how your preclear might possibly recover from the state which he conceives himself to be in.

We consider now that the pattern of existence through which he has been is a very definite track. It is a track which starts with As-is-ness, and this of course includes space. You might possibly completely miss in auditing a preclear if you didn't realize that As-is-ness has to start with space. One could get so concentrated on and frantic about objects and energy, this factor of space might be completely missed. A thetan can communicate with space with great ease. The body has gone too far on this track to do this easily. The body finds it quite sickening to communicate with space, but a thetan can communicate with space rather easily, and the As-is-ness begins with space, and then it gets into, of course simultaneously, energy, and mass.

Now space, energy, mass, consideration of, are all simultaneous. There is no consideration here related to time.

We have to move the anchor points of the space, in order to get a continuance of the space, and move the energy itself in the space, and change them in one fashion or another in order to get a continuance of that energy, and when this has not been introduced we have not postulated time. A thetan doing this would theoretically pass from As-is-ness into Alter-is-ness just immediately. He'd have to, or he would have no continuation of any kind.

In other words it wouldn't exist unless he intended to change it. He would have to make the intention of change simultaneous with the action of creation. And if he did not he would get a disappearance immediately of that mass.

He passes then into Alter-is-ness, which is a simultaneous action with As-is-ness at first, and then of course immediately becomes an action of continuation, and we get Is-ness, which is this reality that we talk about -- space, energy, objects.

Just exactly why we consider this combination to be a reality, that reality is Is-ness, is a little bit dull, because the fact of the matter is that reality itself to continue as a reality would not be an Is-ness at all but a continuous Alter-is-ness.

So we get Is-ness actually as a hypothetical state.

Now the fact that the thetan is a Static -- that's not hypothetical or theoretical. The fact that he is a Static that can consider, and can produce space and energy and objects, is not hypothetical. That's true.

We have facts, facts, all the way along here, until we get to this thing called reality and we suddenly discover that Is-ness is hypothetical.

In the whole field of As-is-ness, the creation of space, energy, objects, of Alter-is-ness, Is-ness, Not-is-ness and more Alter-is-ness, there is only one hypothetical state. And that's Is-ness. It never exists. It can't ever exist. It has to be Alter-is-ness or As-is-ness, and of course As-is-ness can exist. As-is-ness can exist. It really would have to be able to exist, if you can repeat it. It must be in existence if you can repeat it and cause a vanishment of mockups or objects or spaces, so it obviously exists.

But this is not true of Is-ness.

Reality does not exist. Because it says there is a stop. And there just isn't any stop. It is continuous Alter-is-ness and when people stop altering the positions of things and stop altering anchor points, and stop pushing things around one way or the other whether they say they're doing it or they say it's being done on another determinism, or however, the moment they just relax on this whole thing, they get the condition which your preclear quite commonly is found in, of no longer postulating time. You see, the mechanism of saying "It will continue because I'm saying someone else is responsible" is of limited use. It's of very limited use.

Let's go into that a little more clearly -- you set up this machine -- or something to go on and shift and change the anchor points of the space, manufacture the energy involved and take care of the objects. You set up this machine and you say: I'm no longer responsible for this. I have no further responsibility for this now, and therefore it's other space and it will go on happening, and therefore I can continue to have this space because somebody else is making it. You see we could get into that rather shifty by-pass, and so we could then have -- not over too long a time -- but we could have a consistent Alter-is-ness, and this alteration would continue to take place as long as he at least kept one tiny little fingernail on the machine over here. We weren't looking to see that we had, but as long as we had that fingernail just touching that machine we were all right. We said just that much of it is ours.

The moment that an individual entirely relaxes and he says I have everything all set up, it's beautifully set up, and it will all run automatically, and I don't have to worry about it any more, after all a fellow created this universe, other people are the ones who caused time to take place, they tell me when to get up, when to go to bed and I've just got everything all set and it's totally other-determined now -- it becomes just that totally other-determined, but it also, for the individual, passes by the board.

He's no longer postulating a persistence, he's no longer changing any objects in space, and so he will simply sit still. Everything gets very dim, everything gets very thin. Well, the funny part of it is that in that state he couldn't even keep an aberration going. But his Alter-is-ness has been practiced so long after the fact of Not-is-ness that even though he sits still he'll keep on changing something, and that condition is known as figuring, thinking, thinking. He tries to change something, and he feels, Well, I will just sit here and think, and that will keep the universe moving, it will keep time going. The only one trouble with this is, he is dealing basically with the root stuff of what makes universes but now that he is sunk into that category where he is doing nothing but consider again, not creating or moving anything, he is going to have a very difficult time of it. In fact everything is going to get dimmer and dimmer and less real and less real.

What will persist there is that which he is still changing, which is his worry about aberrations.

This is not esoteric or difficult. The only thing which goes on persisting is that which a person is actively working to change. You can only have those things which you handle. You can only have those things which you move around.

But an individual gets into a tremendous protest against mass. He has decided that the continuous survival of things is very bad. In other words he starts to fight survival itself with Not-is-ness. Now, as you know, Not-is-ness is a highly specialized activity. It is the activity actually of causing something to vanish or dull down or become less, simply because It IS too much. There's too much Is-ness, the fellow considers. He's got too much persistency, too much survival -- Joe Jinks that got him across the barrel in a bank and took all his money away from him, and, well, there was just too much Is-ness, and the best thing to do about that is to cause a Not-is-ness, and let's just fight everything.

For an example, let's take a war. A war is just simply each side saying the other side must cease to exist, and they are doing it with shot, shell, lead, dynamite, spears, arrows, deadfalls, and they're using energy to make other things cease to exist. Well, it was perfectly all right as long as you were building your camp, you see, but if you suddenly started to fight a

war with somebody on the other side of the mountain, whereby you were saying he must cease to exist, you were fighting persistence by causing persistence. If you want to know why a war which shouldn't take more than a couple of days, goes on and on, and on, and on, and on -- they got so bad a few centuries ago that they had a hundred years of nothing but war -- everybody was saying everybody else mustn't exist, and they kept moving objects around to cause existence to cease. Now you see how these postulates could become completely tangled.

And the thetan does this because he so loves the problem, and that is the most problem there is. The thetan loves a problem, and that is the basic of problems. You move masses around, which basically causes persistence, in order to cause persistence to cease. One hundred per cent paradox. Cannot exist, can't ever happen, never has happened, and yet he will do this. But he is never happy doing it. There is no serenity involved in this. It becomes nothing but a complete chaos. Probably the only joy any soldier ever gets out of a war (and don't spread this around, because the society doesn't believe you should tell this) the only joy anybody ever gets out of a war is by kidding himself that he has made absolutely nothing out of something. Whether it's enemy troops or tanks, or ships, or anything, there's a big WHEE in there some place, a big thrill. Combat troops know about this. It's only when they cease to make nothing at will, apparently, that they become very downhearted.

Hardly anybody would be able to comprehend what is known as a military rout, whereby a body of troops, suddenly, and instantly and immediately disheartened, just completely, completely quits. It's a strange phenomenon. It has been rather incomprehensible how fast they keep shooting at a castle on a hill. And they just keep shooting at this castle, and shooting at this castle, the castle keeps shooting back, and they keep firing at the castle, and the castle keeps shooting back. Well, they start to go to pieces in morale. They can't make nothing out of something. Observably -- the castle continues to live. They bog down on that rather badly, they get to be rather 1.5, and actually that is the manifestation of 1.5 on the Tone Scale. People using force to make nothing of something which continues to exist in spite of it. And they'll suddenly drop. It isn't a slow curve. They enter it rather slowly, and then they will just suddenly go to pieces, because the only compensation they have for war is the fact that as thetans, you see, they can observe that they are at least going through the motions of and have the manifestation of making nothing of form.

And the sadness underlying it to them is the fact that they don't make nothing of it really.

Beyond this point still, all kinds of suffering takes place, and sadness, and it goes on and on, but you start moving that many particles with that much velocity, such as a German 88, and you'll get persistence. That shell bursts, and we don't find that the fellow in whose vicinity it hit is still there, but there's persistence. Somebody's got to go through his effects, and then somebody's got to write a letter home and say he died a hero, and somebody else has got to carry the news through, and then there are people at home, and he's left a hole in the society one way or the other, and this goes on and on and on, and then years later they dig up what's left of him and ship him back over and put him into a cemetery. There's persistence occasioning here. And what's persisting?. Well, there was that particle -- it certainly was moving fast, and when we get a particle moving with this much velocity, we get some persistence, and in a war all they can think of is terms of more and more and more particles, moving with more and more velocity to cause less and less persistence on the part of the enemy.

If you wanted to know why the German nation keeps fighting and keeps overrunning its borders, well it can't do anything else by this time. From Legion times forward people have been going in there saying, "You mustn't persist, and these fast-moving particles which we're making you handle will make it so." Oh really? This can't be, you see.

When we find anything about which Man is extremely puzzled, we lead directly into the one little formula which is the mechanism of making things persist: we're going to use particles to make things not persist.

And any time you find anybody in difficulty or in the middle of a problem, just look at the basic anatomy of a problem which is that anatomy. It's, "We're going to cause a non-persistence by the use of the mechanisms which cause persistence."

And you're going to get a game -- there's undoubtedly going to be a game occur here. There are going to be lots of problems.

If you want to know how to take apart a problem, just look where the person is using particles which you know by changing them will cause persistence, in order to make a non-persistence.

He'll be using Alter-is-ness to create a Not-is-ness, and of course will be getting consistently and continually an Is-ness. Which is a continuous state. It's a hypothetical state, because you can never stop it, you can never arrest it, you can never take a look at it. You know that any time you really recognize an Is-ness -- not in a state of change -- why, it will disappear, it will vanish or it will dim down, something will happen with relationship to it, so you always have to look at the change.

This is the fellow living up the time track, this is the fellow living in the past. He's looking at the changes and he isn't looking at the reality. Actually that's a very healthy state of mind.

The fellow's looking at the changes, he's looking at what will be, he's very cheerful about how many particles he can move around and cause to come into existence or persist. Or he knows the proper modus operandi for mocking things up that he wants to destroy, just As-is-ness. And that would destroy it perfectly adequately, and he could start in again.

To look at the basic mechanics of any problem which is causing any trouble, just find the matter of the particles, the particle motion, the Alter-is-ness in other words, which is aimed with the goal of Not-is-ness and is an impossibility. You'll find that's your preclear who's hanging fire in processing. He's doing this. He's using particles to knock down ridges (Ridges: Solid accumulation of old, inactive mental energy suspended in space and time), something on this order.

Actually he'd feel a lot better if he'd simply go out and trim the hedge. Let him move something around not quite as damaging but with the same goal, because if he's all messed up with his engram bank, and he's all messed up with tremendous ridges and black ridges and that sort of thing, and he sits there as a thetan creating particles and bombarding these ridges, what is he going to get? He's going to get a persistence of ridges. That's why we never use flows in processing. You can process objects you want to, you can process space if you want to, but we'll just stay away as a general principle from flows.

Now your thetan has a great objection, because of the communication formula as used in this universe, a great objection to somethingnesses. He looks across a distance and he sees a somethingness and this begins to tell him after a while that he has to be a something too, and he doesn't like this. He doesn't enjoy this really, because it's an other-determined something that he has to be. It's looking at a wall, he has to be a wall, you see. And that's what this universe is dictating to him. Well, actually, because it's all a consideration in the first place, he doesn't have to fall into that little grave. He doesn't have to do that kind of a shift, at all. He could simply say I'm looking at the wall, you see. But after a while he gets into the mechanics of perception, the mechanics of communication. He's using energy in order to communicate with energy. There's nothing wrong with that, except to the degree that he loses his fluidity on it. As long as he could maintain the idea that he was simply communicating by postulate, that he was communicating, he's doing all right, but when he drops below that level -- and you get him forced to communication, when he's made to stand still and be talked to, when he's made to stand to and hold that ridge, when he's made to sit there and absorb that textbook, any of these things, he gets under this bombardment, and he starts fighting the communication formula.

Of course we get a persistence then of this universe's communication formula.

Remember that this universe has a communication formula, and that that formula is based on the fact that two things can't occupy the same space, so immediately we fall away from cause, effect and no distance. Cause-and-effect with no distance is not the same thing as the bottom-scale manifestation, where complete identification never actually occurs. There's still a slight distance no matter how downscale you go; it's only way upscale that you can get a perfect identification between cause point and effect point. These two points can be coincident way upscale. Well, if they can be coincident way upscale, the individual could put a distance on them or whatever he liked, but to the degree that he began to agree with this universe, we would get the manifestation of "have to have a distance across which to look" because he can't occupy the same space as the object at which he's looking.

That is this universe's formula, and that by the way is native to a lot of universes -- it's how you keep everything stretched apart. You say two things can't occupy the same space, therefore we've got to have a lot of spaces and things more or less fixed in these spaces, and we've got to keep them all apart and therefore they are separate objects and we go into the communication formula. Cause, Distance, Effect.

As the individual agrees that two things can't occupy the same space, and as he agrees with this communication formula, he then gets into a situation where he says, "Now look at all these somethings around here. And I am actually basically a nothing, and therefore if I have to duplicate these by becoming a something, I don't like that. I can't retain my own native form. I'm in a bad shape here. I can't fly around and be a spirit. I've got to be pinned down here. I've got to be an energy mass in order to look at those energy masses," and he doesn't like it. He objects to it. And so we get to the other manifestation on the track.

The only objection a thetan has to anything, if he's having a big objection, is to something. Just any something. Then this of course will invert and having objected to a something hard enough, you see, he'll turn around after a while and start objecting to a nothing.

Now how is it then that we get any change at all if Not-is-ness doesn't work? Well, there is the system known as valences: one ceases to be himself and becomes something else as his sole method of change. You see that? He is causing a persistence by saying things mustn't persist, and he keeps saying, mustn't persist, mustn't persist, and it goes on persisting, and he uses more particles and more particles and more particles -- and pretty soon the United States Army is wearing coal-scuttle helmets. Just like that. And the Government says, "Down with Karl Marx, down with Karl Marx, down with Karl Marx -- and everybody is now going to be taxed according to his ability to pay."

So we get another type of change. Two things can't occupy the same space, therefore we are an identity persisting, therefore the best way to get it changed and get an utter change is simply to be somebody else. In other words completely shift the valence, and because we want to win all the time, why naturally, shift to winning valences compared to oneself. If one thinks one is losing then anything can start looking like a winning valence. A beggar utterly penniless about to die would look like a winning valence to some people. And we get valence-shifting going right along with "two things can't occupy the same space". So an individual goes out of one spot and over onto another spot and when he is running a lot of Not-is-ness you can expect him to do a lot of valence shifting. He can't continue to be himself, because he's in communication with nothing.

At that time he will start to believe that he must have nothingness. And he goes from there into having to have somethingnesses and he goes from there into having to have nothingnesses by change of valence, and actually there is no other deep significance to it.

CHAPTER TWELVE

TIME

Time is the subject which was introduced very early into this universe, and it has been with it ever since.

The very obviousness of time has obfuscated time.

Time is something that one can easily not have enough of and at the same time have too much of.

And at the same time not be in.

The whole subject of time is a confusing subject because it is a consideration which took place along with -- not after or before -- because there wasn't any time at the moment the consideration called time was made. It took place along with space-energy.

So it was space-energy-time or energy-space and time.

Time was created immediately after these basic postulates with the postulate of change, or the introduction of policy, and as soon as policy comes in or new considerations come in then we begin to get consecutive time.

The first few Board Minutes of any corporation are more or less nebulous with regard to time. They might as well have all taken place in zero minutes at the beginning of the world. You see that it doesn't matter. The people who elect the Board of Directors are the Board of Directors before they elect the Board of Directors.

Now you are the space before you make the space. You are the energy before you make the energy. After you make the energy you are before the energy. The time which is postulated at that point is postulated at a time when there is no time, which is not any time at all, which might as well be now as then. You might as well be postulating time just this very instant which is the time you postulated at the beginning of this universe.

This instant in absence of the consideration called time is the instant of the creation of this universe, is the instant of the end of this universe. If no time has been postulated, then all time would be one time.

A preclear who ceases to postulate time ceases to have time. And that's the first thing you can learn about time. Unless you're putting things on the future time track consistently and continually, you will not have any time track, because -- was there a Board of Directors or a single Director at the beginning of track of this universe who made all the postulates, then elected you to the Board afterwards? Or were you part of the Board?

Well, you could be running on this very well simply being recruited to this particular organization called Physical Universe. You could be -- and have been -- recruited to it afterwards, but the moment you were recruited to it you could only have been recruited to it if you had agreed to its time continuum. In other words, if you had agreed to a uniform rate of change, and had you agreed to this uniform rate of change you would then have a uniform rate of change. Otherwise you'd be in 1776, or 2060, while everybody else was in 1954. You see, you'd be somewhere, something, and sometime.

Well, in view of the fact that the particles themselves of this universe are a matter of consideration, stem from consideration, are themselves consideration -- the space in which those particles exist are themselves considerations -- we are not then at any time dealing with anything else but considerations.

We're dealing with considerations, and these considerations are only complicated and fixed to the degree that they are agreed upon.

If you have agreed solidly with these considerations why then, you have the considerations with which you've agreed.

It was not necessary for you to be the prime mover to be part of this universe.

The moment you have agreed to the considerations which compose this universe, you are at its inception, you are at its end, you are at its present, but you are running under the consideration that time is taking place. And as long as you are running under that consideration you say fine, we'll go along the time track. Wonderful. Time is progressing. You start looking at clocks. Clocks are keeping time for me, the bus schedule's keeping time for me, the motion of the earth is keeping time for me, the precession of planets and stars are keeping time for me, everything is keeping time for me, my wife keeps time for me by serving breakfast at a certain time, everybody keeps time for me... time? Time? Time... what... what time? What time is it? Do I have any time?

No, you've become motionless. You became dependent on everything else to keep time and make the considerations and then you didn't continue to agree with those considerations that are made. All you'd have to do is just go on agreeing with those considerations -- you'd move right on along the time track, just as nice as you please. But if you just drop out of the basis of consideration, drop your own consideration of the fact that time is taking place -- at that moment time ceases to take place.

Because time is a consideration and these other things are consideration, it doesn't mean then that after this consideration was made all considerations start moving. Should we make a consideration that there is time, then this doesn't immediately put all considerations in motion or create anything more than that which is already created with considerations, with the changing factor of time.

The definition of time itself is very important to you. Time is the co-action of particles. You can't have action of particles at all unless you have space. If you have space, then you can have change in space, and when you have a change in space then you have a different time.

There's the time from the moment the particle was at position A -- that's one time, now another time when the particle has been moved to position B. There could have been no motion taking place whatsoever unless you had made a postulate of motion from position A to position B, and if you had made this consideration "from position A to position B", then you would have motion and you would have time, because you said position B is then a later time than position A.

A later time -- what is this word time? You might as well have said this: "there's a consecutive shift of position". You ask somebody, "What consecutive shift of position is it?" And if he answered you truly, he would say, "It is the 15th degree position past zenith of the sun on its 200th revolution since its Winter Solstice." Quarter after twelve to you. 200th day of the year. That's time. If the sun hadn't shifted 200 times you wouldn't have had 200 days.

But it isn't that that is making it simply because it marks it. Let's look at that now. Just because it's doing it is no reason it is creating it. It is simply a particle which is moving in space. Earth is a particle which is revolving in space.

And the sun wouldn't be there, unless we were running on the basic consideration and agreement that it was there.

Here is an example of that simple change-of-position idea: I pick up a book, and just consider at this moment everything's static, no motion at this instant -- no time, no motion. A new instant. You see that it does not require articulation or verbalization or anything else. It's

so simple that it is overlooked. In order to conceive that this book can move from a position on the desk over to a second position, one must simply have conceived a new set of considerations which are consecutive in each position of motion over to this new position. And each one of these is after the consideration that the book was here. Now it's very embarrassing when an auditor is running the process Opening Procedure by Duplication and he tells the preclear, every time he picks up an object, to duplicate it -- if the auditor forgets to have him consider that it's there again, because it's an invalidation of the preclear -- the preclear makes a perfect duplicate of it and the object isn't there. When going back to that object a new time the auditor, if he's using "make a perfect duplicate of it" as part of his routine, had better then also say just before he sends him back toward this book: "Consider there's a book over there". Because as far as the preclear's concerned he's just unmocked it, and if you're working with a preclear who's getting into good shape, that book will be invisible. So he has to consider there's a book there, then he has to consider that he has moved across to it there, and he has to consider that all these things are taking place, and if he does he has time. Time is the co-action of particles.

Now the time that we're dealing with is a time with which we can stay in good agreement. It's a uniform rate of change. In other words, we are considering and considering and considering and considering and considering. We could be doing it very rapidly with regard to a particle for instance in the wall. We consider that it's there, and let's say the wall is being pulled this way -- we consider it's there, it's there, there, there, in other words we keep considering that that particle is coming closer. It takes a brand new consideration every time to have a particle and to have a space to move it in. Every time you see a particle move, actually somewhere in some automatic fashion and so on, we don't care about the mechanism, you have to consider: space-particle- position, space-particle-position, space-particle-position, space-particle- position. You get motion. You'll get an airplane going overhead, and for you to see it go overhead you'll have to be saying space-airplane-position, space-airplane-position, space-airplane-position, space-airplane-position -- and you'll see a jet plane go across the sky. But if you aren't at least agreed to this, you won't see any airplane go across the sky, you won't have any space, and it certainly will have no position.

Now what happens to an individual when his time factor starts to go to pieces? He gets stuck in time. He gets stuck at those moments when he is sufficiently rattled, confused or upset, in other words is given a new consideration that all is confused, and he doesn't at that moment have time to make new considerations that there is time or agree with the fact there is time. Or he resents the fact that there is time, and so he loses time, so he gets stuck on the time track.

It isn't energy that sticks anybody on the time track. It's this fact. Somebody told him to move, and he resented it, so he didn't move. What's he done? He has fallen out of agreement about the progress of particles.

Communication itself has been used to shift his consideration about considerations. Somebody demonstrates to him completely that these are time. They tell him to stay in one place. You can demonstrate that to an individual very easily with a bullet. He's going ahead, beautiful automaticity, just mocking up things flying here and things flying there, regiments of soldiers marching here and marching there, and in one way or another why he's just as much part of the enemy as he is part of himself, but he's got a new consideration that he is part of himself, and this bullet comes through space, and if he were able to see it -- a Civil War cannonball for instance he could have seen very easily, they only travel about sixty miles an hour -- and he would have done this space-particle-position, you know, space-cannonball-position, space-cannonball-position, space-cannonball-position, space... BOOM. He has just considered himself into a complete confusion, hasn't he? He's considered himself right on down the line to an impact, so he says, "Now look, the best thing to do -- when you see anything that even faintly resembles a cannonball -- you don't say 'space-particle-position, space-particle-position'. No you don't. You say, Nothing." The fellow's learned to keep his mouth shut.

“We don’t see cannonballs.” Nope. But he’s in agreement with the man on the right and he’s in agreement with the man on the left, and they’re in agreement with the man on the right and the left, and he’s standing on the ground and he’s in agreement with the body, and all these things are thoroughly in agreement with the fellow who fired the cannonball, and so the cannonball will come across anyway. And boy, is he invalidated now! On his right and his left and behind him and below him he stayed in agreement with all other things which were in agreement on the subject of rate of change. He stayed in agreement with all these other things which were saying space-particle- position, so he’s saying “space-particle-agreement”, unwillingly unwittingly. And this will leave him really hung. This will leave him with a certain unreality.

Well, he’s postulated no time, and so he can get stuck on the time track. You see that? Only his mockup is kind of thin, because he depended for the solidity of mockups such as the material universe on all these other people mocking ‘em up too. Everybody’s mocking them up. He’s just staying in agreement with everybody, and he doesn’t quite have to mock them up, so what has he got now? He’s got a dependency upon the agreement to keep time for him. So if he’s done this then he’s lost his power to completely unmock everything, hasn’t he?

Time as you conceive it, the time that is running on your watch, is simply the motion of a bunch of little wheels and a couple of hands and a second hand. And that’s just consecutive motions. Those are changes in space. And everywhere you look, mechanically you will find that time never amounts to anything else than a change of position of a particle in space. You see we have two conditions here. If something is postulating the change of position of a particle in space, and you’re agreeing with that something, then you will get a change of position of particle in space. It’s just a consecutive consideration, but that is all time ever is. The change of position of particle in space. To see anything you have to have space-particle-position.

Now in order to stay in good agreement it would be a very, very good thing to have a uniform rate of change, wouldn’t it? “Let’s all together now chant” -- the universe is saying -- let’s all together chant space-particle-position, space-particle-position, space-particle-position, and we’ll chant it together so that we are all uniformly saying it and we will then have time because we’re saying it and not for any other reason. We are postulating it. And so we’ve got space-particle-position, space-particle-position, space-particle-position as the hymn of time itself. And it goes right on running all the way down any years that are because those are the years.

Let’s not get divided up again on the subject of, “Well, now there’s thought”. The old Theta-MEST theory is a terrifically interesting theory simply because it led into this. The idea that there was a universe and that there was thought -- theta without wavelength, without mass, without time, without position in space: this was Life. And that was impinged upon something else called the physical universe, which was a mechanical entity which did things in a peculiar way, and these two things together, theta-MEST interacting, gave us life forms. But then we get a further refinement of that.

We find that the physical universe itself is simply this chanted space-particle-position, so MEST is coming from thought itself, so what do we get? We get the appearance of the physical universe having a seniority in mechanics. It appears to be above consideration, because of the agreements you have made with so many people concerning the continuation of it.

Continuation itself is another word which could be supplanted for time and so is survival. Now, what then would we say is the common denominator of time? Consideration.

Below this level, in the field of mechanics, what would we say is the common denominator of time? Change. That is the one thing we could say was the common denominator of all kinds of time anywhere, anyhow, in any universe.

Now let's not lose that one. A certain set of particles or a certain body of individualized life forms, or an automaticity postulated by such life forms, could go on saying that there are a certain set of particles, they're moving in a uniform rate of change, and they're postulating the same space over and over again -- and we would get at that moment a uniform time continuum. And that is a condition which has to exist in a universe and it is that which makes a universe peculiar. It's the time continuum for that universe. In other words, it's this agreed upon chant. It's where we are chanting and with whom we are chanting, that makes the universe.

So we have the people of earth and this universe chanting or simply agreeing with something that is chanting space-particle-position. And so we've got time, time, time, time, time.

If all of a sudden the chant stopped, nothing would move. You might still have some space on a hangover of a past consideration or something, but you wouldn't have any new particles moving anywhere. The walls would simply vanish, the space go, to a very marked degree. Everything would kind of look like a Black V (Black V: a heavily occluded case characterized by mental pictures consisting of masses of blackness. This is a "Step V" in early procedures such as Standard Operating Procedure 8.) caving in on himself. That's the way things would look if this stopped. It would look just like that because that's what he's done.

Then in order for a person to have time, to be in present time, it is necessary to be in contact, at least in contact, with those particles which are being formed by this continuous hymn to time. It's at least necessary to be in contact with the particles. If we're not, we're out of time.

If we're simply agreeing, then we're out of time, and we get stuck on the time track, stuck in old facsimiles, all messed up -- we're not postulating any time at all, and we're not looking at any time particles, not looking at any particles or their change, and as a result -- where's anybody going to get any time?

He has to either himself start chanting space-particle-position, space-particle-position, space-particle-position, until he gets time going again for himself, or you have him feel the walls, and feeling the walls, he'll say, "Ah, what do you know!" He's getting into time.

Agreement is a very important thing because the thetan begins to depend upon the universe keeping its own chant and stops chanting himself.

What happens if he does things? He has to agree with something which is vibrating, doesn't he? So he himself becomes mass. And that's how a thetan becomes mass. He's not chanting any more, so he goes one hundred percent into agreement with something that is doing the chanting and then he falls away from agreement with what he was depending on to keep on agreeing with him for.

He depends upon that wall, decides that wall is harmful to him, and he's no longer chanting. He's no longer now in contact with the wall because it's dangerous.

Where's he going to get any time?

He isn't going to get any. He may fish around and contact another time continuum in another universe and be to some vague degree in contact with that time continuum -- another entire body of beings and automaticities chanting space-particle-position, space-particle-position, space-particle-position, space-particle-position. Another song going on.

A preclear gets out of time. He himself is sort of mocked up in agreement, therefore he gets to vibrating and he as a thetan vibrates out of phase with. He's vibrating bobobobobop, and the walls are vibrating bap bap bap bap bap. Oh, he'd say, what time is it?

He'd have to get some kind of a duplication to run this out or straighten it out. Just by having him contact the walls of any universe by the Opening Procedure of S.O.P. 8C you get him straightened out on his vibrations and he stops being so much mass -- simply by getting him into good agreement.

If the common denominator of time is change, then why do you think a preclear is so anxious to change? What is his anxiety about change? Well, he is doubly inverted -- he finally depended on just agreement alone. He wasn't postulating time any more and he was just depending on this universe alone to say change change change change change -- change of position of particle in space, change of position of particle in space, change, change, change.

He has (1) depended on that, (2) stopped depending on that, (3) fallen away from it, and (4) says:

"Look. Wait a minute. To have any survival or to go on with any of these items or any of these responsibilities or anything, something has got to change around here. So let's change, change. Let's change other things. Oh, I can't change those. People are easy to change, so let's try to change those.... Well, I can't change those. I'll change myself, change myself, change myself, I'll change myself, change, change, change, change, change, chan, chan, cha, cha, cha, chachacha BOOM."

Totally-fixed-self-personal-time-track-with-no-agreement-any-place-else which looks like a solid mass, because it's changing so fast and there's nobody agreeing with it -- and he's gone out the bottom.

And that is why people get into compulsive change.

8-C Opening Procedure will get people out of that. Opening Procedure by Duplication will resolve this because you're changing at a uniform rate, and you, the auditor, are in agreement with him, and as a result he will be able to come on up out of it until he has re-timed.

A preclear who is having any difficulty at all, the first thing that would be wrong with him is that he'd be out of time as a car gets out of time and its motor doesn't run well. He's going off on his own time factor which to he aberrative to him would have to be totally automatic. He'd have to have set it up and now be unconscious of it. And he's out of time, and that's why he's obsessively changing, and why the individual who is worst off will want to change the fastest and the hardest and has the most compulsion and obsession about it.

So we see what this subject of time is all about, how it is possible to process it, and we see that we have been processing it all along.

CHAPTER THIRTEEN

AXIOMS

(Part 1)

The Axioms of Scientology are a list of usable or self evident truths and are a major part of the technical information of a Scientologist.

Having these we are now operating on just fifty axioms and definitions, where the Dianetic Axioms of 1951 were in excess of two hundred and ninety. We arrived at these fifty Axioms of Scientology through a great many changes, a great many major developments -- all of them in the direction of higher workability and simplification.

A student in training in Scientology is not expected to read these Axioms. He is expected to absorb them, quote them verbatim and by number, understand and apply them.

Webster's says that an axiom is a self evident truth.

Comparing the Axioms of Scientology with axioms in another subject, these are certainly as self-evident as those of, for instance, geometry, which is actually a relatively crude subject in that it proves itself by itself, which is a limitation that Scientology does not have.

The Axioms of Scientology prove themselves by all of life.

In geometry we find the Aristotelian syllogism arbitrarily cutting across the whole subject. In Scientology we needed a better base than the syllogism and we have a better one. The platform on which we base our understanding is, if something doesn't work when applied we change what we are doing and find something which does work. We are certainly not bowed down to the great god No Change.

Well, true enough, these Axioms are self evident truths. But they are not so thoroughly self evident that they leap out of the page and introduce themselves to you. You have to introduce yourself to them.

The first of the Axioms is a bit of understanding which if you did not have and did not actually understand very well you would not be able to do anything with Scientology.

It's just as blunt as that.

AXIOM ONE: LIFE IS BASICALLY A STATIC.

And what is this static?

Definition: a Life Static has no mass, no motion, no wavelength, no location in space or in time. It has the ability to postulate and to perceive.

This is a peculiar and particular static, having these properties and a further peculiarity, which we find in the next Axiom.

AXIOM TWO: THE STATIC IS CAPABLE OF CONSIDERATIONS, POSTULATES, AND OPINIONS.

You can't measure this Static.

When you find something which has no mass, no location, no position in time and no wavelength -- the very fact that it can't be measured tells you that you have your hands on Life itself.

You can't measure it, yet all things measurable extend from it. From this Static all phenomena extend.

You cannot measure a dog by his biscuits and you cannot measure this Static by the phenomena extending from it.

Space is one of these phenomena. You could say that Life is a space-energy-object production and placement unit because that is what it does. But when you measure these you do not measure Life.

A thetan is very, very close to being a pure Static. He has practically no wavelength. Actually a thetan is in a very, very small amount of mass. From some experiments conducted about fifteen or twenty years ago -- a thetan weighed about 1.5 ounces! Who made these experiments? Well, a doctor made these experiments. He weighed people before and after death, retaining any mass. He weighed the person, bed and all, and he found that the weight dropped at the moment of death about 1.5 ounces and some of them 2 ounces. (Those were heavy thetans.)

So we have this thetan capable of considerations, postulates and opinions, and the most native qualities to him -- in other words the things which he is most likely to postulate -- are these qualities which you find in the top "buttons" of the Chart of Attitudes. "Trust", "Full Responsibility", etc.

So we have then actually described a thetan when we have gotten Axioms One and Two. Without these known well an auditor would have an awfully hard time exteriorizing (Exteriorizing: exteriorization: the state achieved in which the thetan can be outside his body with certainty) somebody -- because if you thought that you reached in with a pair of forceps and dragged someone out of his head, well, this is not the way it is. You would not be thinking of a thetan. To exteriorize something that can't possibly be grabbed hold of, that's quite a trick.

A thetan has to postulate he's inside before you can have him postulate that he's outside. But if he heavily postulated that he's inside, now your trick as an auditor is to do what? Override this thetan's postulates? That would fit into the field of hypnotism, or maybe you could do it with a club, but the way we do it in Scientology is a little more delicate than these. We simply ask him to postulate that he's outside, and if he can and does, why, he's outside. And if he can't, why, he's still inside.

Thetans think of themselves as being in the MEST universe (MEST universe: the physical universe, from the initial letters of matter, energy, space, time). Of course, this is a joke, too. As the Static they can't possibly be in a universe.

But they can postulate a condition and then they can postulate that they cannot escape this condition.

AXIOM THREE: SPACE, ENERGY, OBJECTS, FORM AND TIME ARE THE RESULT OF CONSIDERATIONS MADE AND/ OR AGREED UPON OR NOT BY THE STATIC, AND ARE PERCEIVED SOLELY BECAUSE THE STATIC CONSIDERS THAT IT CAN PERCEIVE THEM.

The whole secret of perception is right there. Do you believe that you can see? Well, all right, go ahead and believe that you can see but you'd certainly better believe that there's something there to see or you won't see. So there are two considerations to sight, and they are covered immediately here in that you have to believe there is something to see and then that you

can see it. And so you have perception. All of the tremendous number of categories to perception come under this heading, and are covered by that Axiom. So that Axiom should be known very, very well.

AXIOM FOUR: SPACE IS A VIEWPOINT OF DIMENSION.

Do you know that physics has gone on since the time of Aristotle without knowing that! Yet we read in the Encyclopedia Britannica of many years ago (the Eleventh Edition, published in 1911) that space and time are not a problem of the physicist. They are the problem of one working in the field of the mind. And it says that when the field of psychology solves the existence of space and time why then physics will be able to do something with it. And all those fellows with their Ph.D.'s -- not for centuries actually but a number of decades (it seems like centuries if you've ever listened to their lectures) -- going back to the days of Wundt, The Only Wundt -- about 1867 -- they didn't read the Encyclopedia Britannica and find out that they held the responsibility for identifying space and time so that physics could get on its way.

And because they avoided this responsibility we have to pitch in here and discover and develop Scientology -- not to work in the field of physics, however, but to work in the field of the Humanities. But it so happened that I discovered very, very early while I was studying nuclear physics at George Washington University that physics did not have a definition for space, time and energy. It defined energy in terms of space and time. It defined space in terms of time and energy, and it defined time in terms of energy and space. It was going around in a circle. I first moved out of that circle by putting it into human behavior -- be, do and have, which you'll find in Scientology: 8-8008*, but the point is here that without a definition for space, physics was and is adrift. One of our auditors was recently talking to an engineer in an Atomic Energy Commission plant, and happened to remark, "Well, we have a definition for space." This engineer said, "Uh, you do?" and got instantly interested. Of course we didn't make this definition for nuclear physics, but they could certainly use one. The engineer asked, "What is the definition of space?" and the auditor said, "Space viewpoint of dimension." This fellow just sat there for a moment, and he sat there, and then all of a sudden he rushed to the phone and dialed a number and he said, "Close down number five.!" He had suddenly realized that an experiment in progress was about to explode and one of the reasons he knew it was about to explode is that he had found out what space was. This is of great interest to nuclear physicists, but they will get one of these definitions and then they will start to figure, figure, figure, figure, figure. They don't take the definition as such and use it as such. They figure-figure, and they lose it.

Using the process R2-40: Conceiving a Static gives an understanding of exactly why, every time they get rid of one of these definitions they lose it.

AXIOM FIVE: ENERGY CONSISTS OF POSTULATED PARTICLES IN SPACE.

Now, we've got space: a viewpoint of dimension.

You say: "I am here looking in a direction." We've actually got to have three points out there to look at, to have three dimensional space. If we only had linear space we would have only one dimension point. One point to view. And energy consists of postulated particles in space, so we'll demark these three points out there to have some three dimensional space and we'll have these particles which we will call Anchor Points, and we'll have energy.

And so we come to objects.

AXIOM SIX: OBJECTS CONSIST OF GROUPED PARTICLES.

If we just kept putting particles out there and pushing them together, or if we suddenly said, "There's a big group of particles out there," we'd have what is commonly called an object. When an object or particle moves across any part of a piece of space -- in other words a viewpoint of dimension -- we have motion.

And we come to the subject of time.

AXIOM SEVEN: TIME IS BASICALLY A POSTULATE THAT SPACE AND PARTICLES WILL PERSIST.

Time in its basic postulate is not even motion. The apparenacy of time -- an agreed upon rate of change -- becomes agreed upon time. But for an individual all by himself is simply a consideration. He says something will persist, and he has time. Now if he gets somebody else to agree on what is persisting, the two can then be in agreement. And if the items are motionless then they can't have agreements about how fast or how this gives them a clock or a watch. And so you carry a watch around on your wrist.

But time is not motion. Let's escape from that one right now. It is an error. We'll call that a heresy.

But this gives us another Axiom:

AXIOM EIGHT: THE APPARENACY OF TIME IS THE CHANGE OF POSITION OF PARTICLES IN SPACE.

Now if we see particles changing in space we know time's passing, but if you had a piece of space and some particles, and you were simply sitting there looking at those particles and there was absolutely no change in them whatsoever, you would be very hard put to describe even to yourself whether any time was passing or not.

And so the apparenacy of time is the change of position of particles in space.

AXIOM NINE: CHANGE IS THE PRIMARY MANIFESTATION OF TIME.

If you were looking at motionless particles you would not be able to tell whether time was passing or not because you might be looking at one time or another. Then to prove time you could say they moved this far at such and such a speed or something of the sort. And you could say, "Therefore this much time has gone by." So we can say that change is the primary manifestation of time. Now, oddly enough you have your "Black Five", occluded case ("no pictures, only blackness") right there. A Black Five is trying to change himself simply because he's in agreement with particles in motion. That's all. He's simply acting on compulsion or obsession to change, and if you asked him very suddenly in which direction he's trying to change he would not be able to tell you. He has no real goal. He doesn't particularly want to be better, he doesn't particularly want to be worse, but he's got to change. He's frantically got to change. Well, why has he got to change? Because he has these particles all around him which are dictating change to him. They're saying, "Time ... time... time... time... time... change... change... change."

In other words, he's in agreement with the apparenacy of time, and he has fallen far, far away from the mere consideration of time. So he doesn't conceive what time is. He becomes a nuclear physicist.

AXIOM TEN: THE HIGHEST PURPOSE IN THE UNIVERSE IS THE CREATION OF AN EFFECT.

We could do a tremendous amount with just that one Axiom, and in processing we would discover then good reason to have space and to have particles and how all these things get there. People want to create an effect, and they get into very interesting states of mind about this sort of thing. They say to themselves, well, let's see now -- I caused that effect but that effect is horrible, Therefore I can't admit that I caused that effect, so I'll introduce a lie here and say I didn't cause that effect. And then -- they become an effect. If they can't be at cause they become an effect. They are the effect of what they have caused without admitting they

caused. But it can get even worse than that -- worse than being at total effect. They get way down the line, to the point where they're the cause of any effect. They blame themselves, in other words. A man in Sandusky falls down and breaks a glass of pink lemonade and cuts his little pinky, and this person who is in San Diego at the time hears about that and knows he must be guilty. That's complete reversal.

A person can get into a state where he's cause and effect simultaneously. That is to say any effect he starts to cause he becomes that effect instantly. He says, I think I'll kill him, and he feels like he's dead. Just like that. Now we've got to have time in order to witness an effect. As an example of this one could observe that science is dedicated to observing an effect and does not have any other real goal. Once in a while you see a scientist who is also an idealist. He wants to use his materials to improve Man. But science at large and particularly when it got over into the field of the mind. was simply a goal-less, soul-less pursuit, the totality of which is just to observe an effect. They are not really even causing an effect. They just go around observing effects. And they fill notebooks and notebooks and notebooks full of effects, effects, effects, effects, and you find they carry on experiments -- not to prove anything, not to do anything, but just to observe an effect. They go around and put a pin in the tail of a rat, and the rat jumps and speaks, and so they say "Ah," and they note it down carefully: "When you put a pin one inch from the end of the tail of a rat he moans". Actually the rat squeaked. Well this was observing an effect -- the way it's recorded by science. This goes so far that a leading scientist of the day -- an Einstein -- says that all an observer has any right to do is look at a needle. If they were just going around observing effects, eventually they could build an atom bomb, and say "Well it isn't my fault. I'm not to blame." The few scientists who did feel badly about this and joined organizations to try to do something were promptly fired by the government. They had some responsibility.

AXIOM ELEVEN: THE CONSIDERATIONS RESULTING IN CONDITIONS OF EXISTENCE ARE FOURFOLD.

And here they are in exact axiom form:

- (a) AS-IS-NESS is the condition of immediate creation without persistence, and is the condition of existence which exists at the moment of creation and the moment of destruction, and is different from other considerations in that it does not contain survival.
- (b) ALTER-IS-NESS is the consideration which introduces change and therefore time and persistence into an AS-IS-NESS to obtain persistency.
- (c) IS-NESS is an apperency of existence brought about by the continuous alteration of an AS-IS-NESS. This is called, when agreed upon, Reality.
- (d) NOT-IS-NESS is the effort to handle IS-NESS by reducing its condition through the use of force. It is an apperency and cannot entirely vanquish an IS-NESS.

AXIOM TWELVE: THE PRIMARY CONDITION OF ANY UNIVERSE IS THAT TWO SPACES ENERGIES OR OBJECTS MUST NOT OCCUPY THE SAME SPACE. WHEN THIS CONDITION IS VIOLATED (PERFECT DUPLICATE) THE APPARENCY OF ANY UNIVERSE OR ANY PART THEREOF IS NULLED.

Alfred Korzybski in *General Semantics* was very careful to demonstrate that two objects could not occupy the same space. In other words, he was dramatizing "Preserve the universe, preserve the universe, preserve the universe". Now this statement tells you that if two objects can't occupy the same space you haven't got a universe, and sure enough if you just ask a preclear repetitively: "What object can occupy the same space you're occupying?" he'll work at it and he'll work at it and work at it, and the first thing you know, why, he's capable of doing many things which he was not able to do before. His space straightens out. He can create space again -- merely because this MEST universe has been telling him so often

that two objects cannot occupy the same space that he has begun to believe it. And he believes this is the most thorough law that he has. So we find a person perfectly contentedly being in a body believing he is a body. Why, he knows that he, a thetan, could not occupy the same space as a body. He knows this is impossible. Two objects can't occupy the same space. He's an object, and his body's an object, so the two can't occupy the same space.

This is very interesting because you'll find that two universes can occupy the same space and actually do occupy the same space. You'll find the universe of a thetan is occupying the same space as the physical universe, but once he declares that the both of them are occupying the same space, you get an interesting condition.

Now, I'm not going to try to take up at this point the perfect duplicate but it's enough just to say that two objects are occupying that space -- identically occupying that space -- and poof, it's gone. That's the way you make things vanish. That is to get its As-is-ness, and this is why As-is-ness works and why things disappear when you get their As-is-ness. This is an important Axiom.

Now here is the oldest thing that Man knows:

AXIOM THIRTEEN: THE CYCLE OF ACTION OF THE PHYSICAL UNIVERSE IS: CREATE, SURVIVE (PERSIST), DESTROY.

Now, that's the oldest thing Man knows, but it went on the basis of death, birth, growth, decay, death, birth, growth, decay, death, birth, growth, decay and so on. He knew he had time involved here, on a linear line. The odd thing here is that you've got to postulate death to get a cycle of action, and you've got to postulate time to get a lineal line, so we're dealing here with one of the most intimate things of existence. We find this by the way in the Rig-Veda. It's been with Man about 10,000 years that I know of and we find that this is the cycle of action of the physical universe -- create, survive destroy.

In Dianetics, I isolated just one portion of this line as a common denominator of all existence, which was Survive, and sure enough any life form is surviving. It is trying to survive and that is its normal push forward. And that has, incidentally, terrific impact, but this has two other parts and those are create and destroy. Create, survive, destroy. And survive merely means persist. So all of these things are based on time, and we have underlying Axiom Thirteen this primary consideration that there is time.

Now we can go on and find that the conditions of existence fit these various portions of the survival curve. And this would be given as follows:

AXIOM FOURTEEN: SURVIVAL IS ACCOMPLISHED BY ALTER-IS-NESS AND NOT-IS-NESS, BY WHICH IS GAINED THE PERSISTENCY KNOWN AS TIME.

That's a mechanical persistency. In other words we keep changing things, saying they aren't, and changing them, and then pushing them out and reforming them and trying to vanish them. Using energy to fight energy, we'll certainly get survival. We'll get persistency.

AXIOM FIFTEEN: CREATION IS ACCOMPLISHED BY THE POSTULATION OF AN AS-IS-NESS.

Now all you have to say actually is: "Space, energy, time, As-is. That's the way it is, and, it's now going to persist." You've added time to it. If you immediately after that simply looked at it and got its As-is-ness again it would vanish. All you had to do is get it in the same instant of time with the same type of postulate and it would disappear. You could create it again and it would disappear. It would As-is.

AXIOM SIXTEEN: COMPLETE DESTRUCTION IS ACCOMPLISHED BY THE POSTULATION OF THE AS-IS-NESS OF ANY EXISTENCE AND THE PARTS THEREOF.

Complete destruction would simply be vanishment. You wouldn't have any rubble left. When you blow something up with guns you get rubble. Ask anybody who was in the last war. There were certainly an awful lot of broken bricks lying around. If anybody had really been working at this in a good sensible way, and he'd really meant total destruction, he would have simply gotten the As-is-ness of the situation and it would have been gone and that would have been the end of that. If he'd wanted to declare the whole As-is-ness of a country, if he'd been able to span that much attention and trace back that many particles that fast to their original points of creation, he would of course have a vanishment and that is complete destruction. So complete destruction is As-is-ness, and As-is-ness is simply a postulated existence.

What we're looking at most of the time in this universe is:

AXIOM SEVENTEEN: THE STATIC, HAVING POSTULATED AS-IS-NESS THEN PRACTICES ALTER-IS-NESS AND SO ACHIEVES THE APPARENCY OF IS-NESS AND SO OBTAINS REALITY.

In other words we get a continuous alteration, and we get this apparency called Is-ness.

AXIOM EIGHTEEN: THE STATIC, IN PRACTICING NOT-IS-NESS, BRINGS ABOUT THE PERSISTENCE OF UNWANTED EXISTENCES, AND SO BRINGS ABOUT UNREALITY, WHICH INCLUDES FORGETFULNESS, UNCONSCIOUSNESS, AND OTHER UNDESIRABLE STATES.

Quite an important Axiom and very true one.

AXIOM NINETEEN: BRINGING THE STATIC TO VIEW AS-IS ANY CONDITION DEVALUATES THAT CONDITION.

CHAPTER FOURTEEN

AXIOMS

(Part 2)

It is a remarkable thing that life itself can be codified in terms of Axioms. It has not been done before. The first time it was even attempted was in 1951 when I wrote the Logics and Axioms, which I did simply to give an alignment to thought itself. And as a matter of fact copies of these Axioms were sent over to Europe and in 1953 I found them in Vienna fully translated into German. It's quite remarkable. Over there they were terribly impressed simply because it had not been done before. Nobody had before codified life to this degree and nobody had codified psychotherapy. And they were not impressed with whether the Axioms were right or wrong, it was only that nobody had done it before. In these Scientology Axioms we're not quite doing the same thing. Those 1951 Axioms of Dianetics were quite complicated and these fifty Axioms we now have are nowhere near as lengthy, but their reach is greater and they pack a great deal more punch.

We come here to the interesting subject of a proof of ultimate truth. If we have reached an ultimate truth, then we have reached an ultimate solution, and who would ever suspect, really, that an ultimate truth or an ultimate solution could be subjected to mechanical proof. We have done just that. We have discovered the phenomenon of a perfect duplicate.

AXIOM TWENTY: BRINGING THE STATIC TO CREATE A PERFECT DUPLICATE CAUSES THE VANISHMENT OF ANY EXISTENCE OR PART THEREOF.

If you can bring someone to make a perfect duplicate of anything it will vanish. We have a perfect duplicate clearly defined:

A perfect duplicate is an additional creation of the object, its energy, and space, in its own space, in its own time, using its own energy. (And we could append to that "the considerations which go along with it", because it couldn't be anything but considerations.)

And: This violates the condition that two objects must not occupy the same space, and causes vanishment of the object.

If you ask somebody to simply make a perfect duplicate of, for instance, a vase, just exactly where it sits, it will begin to fade out on him, and he can do that to almost anything.

Why doesn't it fade for somebody else? This is quite remarkable. Everything in this universe is displaced or misplaced. When we talk about a lie, we really don't mean that simply changing the position of something is a lie. We have to alter the consideration regarding it to make a lie. It isn't really a lie that everything is so scrambled in this universe. It is scrambled. Just in the last moment or two several cosmic rays went through your body. Those were particles which emanated from somewhere and they arrived where you are -- they had been en route for a hundred million years. To get one of those cosmic rays to vanish we would have to find its point of creation, and we would have to make a duplicate of that ray at the moment of its creation, and then we would have to make a duplicate of having done so. At that instant that cosmic ray would vanish.

This is very interesting to the physicist, it's very interesting to almost anybody, and it is demonstrable. You can do this. I asked an auditor one afternoon simply to "look to the garage wall over there" and to choose a very small area, and "find the atoms and molecules in the wall there, and put an attention unit" -- a remote viewpoint -- "next to each one, and follow it immediately back to where it had been created." He was leaning on the fender of the car, and he did this -- and he came off the fender of that car as though he had been shot. The object itself,

this tiny portion of the object, had started to disintegrate. And he rushed over to it to hold it in place with his hands!

Why doesn't the whole universe vanish? Well, probably on the very site of this building there was another building once and that building has been broken up and the bricks have been moved and part of it is out there in the street, and part of it is still in the ground below and part of it -- maybe some brick dust -- got on somebody's suitcase who went to World War II, and part of it's in Germany and it's spread all over the place, and here are all these cosmic waves and rays going all over the universe -- and to get each one of those at its moment of creation in the time and space, and to make a perfect duplicate of all this, would be quite a job. It's not an impossible job. It requires an ability to span attention. You would get a physical object to disappear so thoroughly that everybody else would know it was gone.

You see that it isn't true that an object sitting before you at this moment, or your chair, has always been in that position. Nor is it true that the materials in that chair have always been in that position, nor is it true that the atoms which made up the chair in raw material form were always in that particular ore bed or in that particular tree. So you see it's quite complex. This universe is scrambled.

That doesn't mean you can't make it vanish, however.

As we can produce this phenomenon, we know we have an ultimate solution. The perfect duplicate was the little latch string hanging out that opened the door to an ultimate truth. Well, what would an ultimate truth be? An ultimate truth is a static, and an ultimate solution is a static. In other words, an ultimate truth and an ultimate solution is nothing. Get the As-is-ness of any problem, make a perfect duplicate of any problem, and the problem will disappear. You can subject that easily to proof. So if you can make a problem disappear by simply getting its As-is-ness, then you've got the solution to all problems, or the ultimate solution. Well, the MEST universe itself is just a problem, and so if you could get its As-is-ness, it would disappear. It would disappear for everybody. Well, let's study that and, and get that very well and get what the definition is there, in the Axioms and Definitions. This is the total solution, by the way, to the vanishment of engrams -- what we were handling in Dianetics. The vanishment of ridges, of all energy forms and manifestations, all these can simply be accomplished by making perfect duplicates of them. That doesn't mean that you should now make nothing out of everything or get your preclear to try to make nothing out of everything, but that it just can be done.

AXIOM TWENTY-ONE: UNDERSTANDING IS COMPOSED OF AFFINITY, REALITY AND COMMUNICATION.

We understand understanding a bit better when we see that it is simply the ability to get the As-is-ness of something. For example we could say "I don't quite understand this car. Don't quite understand what's wrong with it. It just won't start." And we walk around it and look at it and then we find out that we haven't turned on the key. And we turn on the key. We've understood it, in other words. We have unmocked the fact that the key was not turned on and we have turned on the key (which actually is practicing Alter-is-ness). If we walked around a car and said "I don't understand what this object is... I don't understand what this object is ... AH! it's a car!" We would feel immediately relieved. We'd feel a lot better about the thing, but if we were to get its total As-is-ness there would just be a hole sitting there.

So understanding is As-is-ness and understanding in its entirety would be a Static and so we have the fact that Life knows basically everything there is to know before it gets complicated with lots of data, merely because it can postulate all the data it knows. All knowingness is inherent in the static itself. A thetan who is in good shape knows everything there is to know. He knows past, present and future. He knows everything. This doesn't mean he knows data. This merely means that he can As-is anything and if he can As-is anything believe me he can understand it.

Man's salvation I've said several times depends upon his recognition of his brotherhood with the universe. Well let's misinterpret that just a little bit and say Man's salvation -- if you want to save him from the universe -- would depend upon his ability to make an As-is-ness of the physical universe at which moment he wouldn't have a universe, and this would be total understanding.

Understanding has three parts: Affinity Reality and Communication.

You can actually compose from ARC all the mathematics there are. You can combine ARC into mathematics. You can accomplish anything with ARC that you want to do. Symbolic Logic, even calculus, could be extrapolated from ARC.

Affinity depends upon reality and communication. Reality depends upon affinity and communication. Communication depends upon affinity and reality. If you don't believe this try to communicate sometime with somebody without any affinity at all. Get real mad at somebody, and then try to communicate with him. You won't. Try to get somebody to be reasonable when he is very angry and you'll find out that his reality is very poor. He cannot conceive of the situation. He'll give you some of the weirdest things. There is no liar lying like an angry man.

If you raise somebody's affinity you will raise his reality and communication. If you raise somebody's reality, you'll raise his affinity and communication. And the keynote of this triangle happens to be communication. Communication is more important than either affinity or reality.

AXIOM TWENTY-TWO: THE PRACTICE OF NOT-IS-NESS REDUCES UNDERSTANDING.

In other words, something is there, and we say it's not there.

Someone is driving down the road like mad and there's an enormous boulder lying in the middle of the road, and almost anybody, just before the crash, will say the boulder's not there. And by golly it's there. And this makes him feel he's a weak thetan. He failed. And the funny part of it is that if he were to immediately As-is the boulder down the road, instead of denying it's there, and if he could make this a perfect duplicate, the boulder would disappear.

He doesn't do it that way. He sort of puts some energy up and pushes against the boulder, and says, "It's not there, it's not there. I deny it."

Well, he'll have a mighty thin understanding of the whole thing.

He doesn't want to communicate with it, so he says it's not there. He doesn't want to have any affinity for it at all, so he says it's not there. And believe me his reality cuts down. The practice of Not-is-ness reduces understanding, and that is what Man is doing constantly. He's trying to avow that something that isn't there is there, and he's trying to avow that something that is there isn't there, and between these two things, giving it no As-is-ness at all or new postulates of any kind, he's having quite a time of it.

AXIOM TWENTY-THREE: THE STATIC HAS THE CAPABILITY OF TOTAL KNOWINGNESS. TOTAL KNOWINGNESS WOULD CONSIST OF TOTAL ARC.

Here we have a condition of existence which is As-is. That would be total knowingness. Well, if we had somebody who could say "As-is" to everything, and trace all parts of everything back to their original time, location, and simply got them as they really were, we of course would have nothing left but a Static. We would have zero. We wouldn't even have space.

If you wanted, by the way, to make this whole universe vanish, you would have to be able to span this whole universe. You would have to be as big as the universe. You could drill somebody up to the point where he could do that.

AXIOM TWENTY-FOUR: TOTAL ARC WOULD BRING ABOUT THE VANISHMENT OF ALL MECHANICAL CONDITIONS OF EXISTENCE.

All mechanical conditions of existence. It wouldn't bring about the sudden death of everything. It would bring about the exteriorization of everything. It would mean the vanishment of all space and all form. Mechanics.

Differentiate between a consideration -- a postulate -- and a mechanic. Be sure to get the difference between a quality such as complete trust, a quality such as full responsibility, in other words the qualities along the top of the Chart of Attitudes -- and the mechanics. A person who is all out for mechanics, and won't have anything to do with considerations, believes completely that considerations are of no worth and that mechanics are the thing ("You can put your hands on it, you can feel it, you can touch it") -- this person would have to be made thoroughly acquainted with the existence of these mechanics before he could As-is them sufficiently to reach a level where he would have the ability to consider. He has sunk below the level of mechanics.

That's why 8C Opening Procedure, which acquaints the person with his immediate environment, works as it does.

Well, when we say mechanics, we mean space, energy, objects and time. And when something has those things in it we're talking about something mechanical. That's all that would vanish if you As-ised all of existence -- just the mechanics -- and you could turn right around and postulate them all back again too with great ease.

AXIOM TWENTY-FIVE: AFFINITY IS A SCALE OF ATTITUDES WHICH FALLS AWAY FROM THE CO-EXISTENCE OF STATIC, THROUGH THE INTERPOSITIONS OF DISTANCE AND ENERGY, TO CREATE IDENTITY, DOWN TO CLOSE PROXIMITY BUT MYSTERY.

Affinity, in terms of mechanics, is simply a matter of distance. Affinity is basically a consideration, but it does represent itself mechanically. For instance, Total Knowingness goes down to Lookingness. You have to look to find out. Well that's different from simply knowing without looking. We go down to Looking, now we go just a little bit lower than that. (This Know-to-Mystery scale is by the way an Affinity scale.) We go into Emotion, and then we no longer have knowledge by looking. We have to have knowledge by emotion. Do we like it -- do we dislike it. There are particles in emotion: "I don't like it" -- in other words "I have some anger particles about it" or "I have some resentment particles" -- and by the way a preclear has his reactive mind full of these emotion particles.

Now if I "have to feel it to know it is there", I've gone immediately into Effort. And my affinity for something would be good if I could feel it and it would be no good at all if I couldn't feel it. You get a Step V, a Black V, who is swearing by mechanics (and swearing at all life forms) and builds atom bombs and such things -- and he tells you that he cannot contact life. He can't contact this thing called the Static, therefore he "can't believe in it". This is very interesting. You ask him why, and he says, "Well I can't feel it." He's twisting the snake around so it'll eat its tail. He's proving it all upside down and backwards. He says he can't get the existence of something he can't feel. And the odd part of it is that we can measure electronically the existence of life. There is a little meter on which we ran some tests, and we can actually demonstrate that one individual can turn on in another individual at some great distance from him a considerable electrical current, enough to make this little machine sit up and sing. And the other person can turn it on at will, and the person on whom it's being turned can't stop it. Here is a manifestation that can be measured. We've done the impossible there

too. We've done the impossible in many places in Scientology. You can't measure a Static but we've done so by having a person, at a distance, bring a mechanic into being.

When a person gets down to Effort on this scale then he's into a level where he's "gotta work", everything has got to be work. He's got to touch everything and feel everything before he can know anything. A person in the Effort band, by the way, as he gets to the lower part of that band, has facsimiles. He's got mental image pictures. He'll even do weird things like this: he will get a picture to know what's happening to him. In other words, he'll get a mental image picture of a past incident in order to get an idea. He gets the picture and then he gets the idea, he doesn't get the idea and then get a picture. You want to watch that. Sometime you'll find a preclear who's doing this. You'll be saying "All right, get the idea of being perfect." And your preclear will sit there and say, "I got it." You want to ask him, "How did you do that?" That's a wonderful question to ask a preclear at any time. "How did you do that?" And he'll say, "Why, of course, just like everybody else. I got this picture and this picture came up and I looked at it and the picture said, 'Be perfect,' and it showed me a circle, and a circle -- well, that's perfect." That's how your preclear was doing that. He wasn't making the postulate at all. He was waiting for a picture to come and tell him what it was all about.

Now we go down from Effort into Thinking, and we get our "figure-figure" case. This case is hard to get along with -- he can't work. Life is not composed of thought, particularly. It's composed of space and action and all sorts of things. The Static can do all these things and is not necessarily "all pure thought". Thinkingness comes in down the scale at the level below Effort. And it comes in as figure-figure-figure-figure-figure. Now a person can postulate without thinking about it, and if that's what we mean by thought, that's fine. But usually what people mean by thought is figure-figure. "I'll just figure this out and I'll get a computation and a calculation and I'll add it up to... now let me see... can you go to the movies? I don't know," -- the kind of answer a little kid gets. "Now let me see. I'll have to think it over. Give me a couple of days."

We don't know how all of this mechanic got into a postulate, but they've let it get in there. So that's the level, Thinkingness.

Now we go downstairs from Thinkingness on this scale and we get into Symbolizingness. A symbol contains mass, meaning and mobility. A symbol is something that's being handled from an orientation point -- a point which is motionless in relationship to the symbol. It's motionless, and the symbol is in motion, and has mass, meaning and mobility. "Where are you from?" "I am from New Jersey." This fellow is telling you that he is from an orientation point called New Jersey. It's motionless and as he runs around the world, he is always from New Jersey. He has mass, meaning and mobility. He has a name. When a person drops down the scale below figure-figure, he is into a point where he figures with symbols. Now that's a condensation, isn't it. Each of these was a condensation.

The next one down the line, below Symbols, is Eatingness. Animals eat animals. Animals are symbols and they eat other symbols and they think they have to stay alive by eating other symbols. This is real cute and eating is quite important of course and it can be a lot of fun, but here you have a real condensation. In other words, Effort got so condensed that it turned into an inverted kind of Thought, and that became so condensed that it packaged thinking -- that's what took place there -- it became so condensed it became a Symbol. A word, for instance, is a whole package of thought. So packaged thinking is a symbol and packed symbols are a plate of beans.

Below that, when a person doesn't believe he can eat any more, when he thinks he is not going to survive, he will go into the Sexingness band. If you starve cattle for a while they'll start to breed, and if you feed them too well they'll stop breeding. Quite irrational, but then who said any of this was rational? Cattle who are starved or lacking certain food elements will decide, well, we'll live again in some other generation -- and they'll breed up a lot of calves. Of course there's nothing to feed the calves on but they haven't paid much attention to that. In Arizona we have an interesting fact -- we have some very beautiful cattle who have

stopped breeding. They've just been too well fed. The way to get those cattle breeding again would be to simply start starving them. Freud by the way was so condensed he had to get way down there to that condensation level of Sex "in order to find out".

Below Sex we have a new level of knowingness, the level of Mystery.

Mystery of course is the complete displacement of everything, and everything in a terrific confusion. The anatomy of Mystery is unpredictation, confusion and then total blackout. First he couldn't predict some particles, and then it all seemed awfully confusing to him and then he just shut it all off and said "I won't look at it anymore". That's what Mystery is, and your Step Fives by the way are very, very concerned about Mystery. They're very concerned about Thinkingness and trying to solve the Mystery. Well the Mystery is already solved in an ultimate truth. The ultimate solution of course is simply the As-is-ness of the problem. And the As-is-ness of a Mystery is simply the Mystery. That's really all there is to it. There really is nothing to know back of a Mystery, except the Mystery itself. It's just As-is-ness. But Mystery is the level of always pretending there's something to know earlier than the Mystery.

To sum this up we have, under Axiom Twenty-five:

By the practice of Is-ness (Beingness) and Not-is-ness (refusal to Be) individuation progresses from the Knowingness of complete identification down through the introduction of more and more distance and less and less duplication, through Lookingness, Emotingness, Effortingness, Thinkingness, Symbolizingness, Eatingness, Sexingness, and so through to not-Knowingness (Mystery). Until the point of Mystery is reached, some communication is possible, but even at Mystery an attempt to communicate continues. Here we have, in the case of an individual, a gradual falling away from the belief that one can assume a complete Affinity down to the conviction that all is a complete Mystery. Any individual is somewhere on this Know-to-Mystery scale. The original Chart of Human Evaluation was the Emotion section of this scale.

CHAPTER FIFTEEN

AXIOMS

(Part 3)

These Axioms of Affinity, Reality and Communication are inherent in everything we are dealing with in Scientology.

They are of extreme importance and usefulness. If you want to find where a break in a communication line is coming from, why, look for some affinity that is off, and if you want to audit somebody who is having a rather rough time, then you had better audit them with considerable affinity. If you demonstrate enough affinity one way or the other, you will be able to overcome their communication reluctance.

It's very important to understand that all these things are basically a consideration. We have to consider that they exist before they exist. We are covering on this track the considerations which Man has composited into an existence.

Man has decided that certain things exist and he has agreed upon them very thoroughly and so they exist for all of men. And if he had never decided upon these various existences, they wouldn't exist.

So we look at Affinity, Reality and Communication. We are looking at a long series of considerations which Man holds in common. These are not considerations simply because we in Scientology consider that they exist. We can do enormously important things with this information, this codification of the organization of this universe which has spanned a period of something on the order of magnitude of seventy-six trillion years, and to be able to bust it loose and knock it apart is quite an interesting feat.

In looking at the subject of affinity we see that the first thing to know about it is that it is a consideration, and then that in the ARC triangle the distance of communication is represented by affinity to a marked degree, and the type of particle.

They say that absence makes the heart grow fonder. That happens to be a lie, but you could postulate it that way and make it come out. You could also say that if you get two people far enough apart, they're likely to get mad at each other. A country wars with another country as a result of being far enough apart to afford to get mad. Somebody very furious at you as long as they are on the other end of a telephone line -- when you went around to see them they weren't mad at you any more. That's an inversion on the situation. You closed the distance, and so you achieved a better affinity. There are many ways that you could handle this but again basically it's a consideration.

AXIOM TWENTY-SIX: REALITY IS THE AGREED UPON APPARENCY OF EXISTENCE.

The whole subject of Reality is a baffling one to people who do not add into Reality Affinity and Communication. It's not "This is my reality and that's your reality".

The person can postulate anything he wants to postulate, and he does have a personal reality. He could simply say, "It's there", or "That's real". Or he can have a facsimile appear which is more real to him than the actual universe around him -- the psychotic to whom facsimiles are far far more real than anything else that exists. Well these are two conditions which we don't recognize as reality. On the one hand the person merely postulates a reality, and so that's his reality and other people don't agree upon it. The other is also a not-agreed-upon reality and that is an other-determined reality. Somebody's given him a facsimile and has really impressed him with it, and so this looks more real to him than reality. In other words,

we have complete self-determined postulation, and complete other-determined postulations, neither one of which is what we consider to be reality. Those are extremes.

What we actually consider to be reality is in the mean of these. That is: what do we agree is real. You and I agree that there's a wall there -- and there's a wall there. We agree there's a ceiling there, and there's a ceiling there. That's real simply because you and I safely have agreed that that's how it is. Now if somebody came into the room and looked at forty people sitting down and said, "What are you all standing up for?" why, you'd have rather a tendency to believe there was something wrong with this fellow. As a matter of fact, the society uses natural selection to take out of the line-up people who have too much personal reality and too much other-determined reality. If this person walked in and said, "What are all you people standing up for?" -- if he did that consistently about a number of things and said, "What is that lion doing walking on the ceiling?" there would be a tendency for him to get locked up. In other words, he would be moved away from survival where he wouldn't procreate. In other words, we'd move these people actually out of at least the genetic line-up. These are called the insane.

Now here we have in Reality a very embracing subject, because Reality is actually Is-ness. And unreality is Not-is-ness. An effort of trying to make things disappear with energy. Trying to make things disappear with energy was talked about amusingly in such places as the Bible and they used to say "He who lives by the sword dies by the sword" and somebody said once "Turn the other cheek", and what these people were actually saying was: fighting force with force does not bring about anything like a perfect duplicate.

Maybe they didn't know they were saying that. But using force to fight force brings about an unreality. Oddly enough using force to build force brings about a reality.

Continuous alteration gives us an Is-ness. A Not-is-ness -- saying it doesn't exist -- gives us an unreality. So there we have Reality and Unreality defined.

Now how could you use this principle of Reality in auditing:

Reality is basically agreement. A mechanical agreement is: for two forms to be exactly similar. In other words, one's a copy of the other form. That's mimicry, and we learn by mimicry, which is the lowest level of entrance to ARC, and is a very good thing for an auditor to know in any case. What we know then as reality is: the agreed upon apparency of existence.

AXIOM TWENTY-SEVEN: AN ACTUALITY CAN EXIST FOR ONE INDIVIDUALLY, BUT WHEN IT IS AGREED WITH BY OTHERS IT CAN BE SAID TO BE A REALITY.

And we find that those things which have become solid to us, very fixed, must have been agreed upon by others.

The anatomy of Reality is contained in Is-ness, which is composed of As-is-ness and Alter-is-ness. Is-ness is an apparency, it is not an Actuality. The Actuality is As-is-ness altered so as to obtain a persistency. Unreality is the consequence and apparency of the practice of Not-is-ness.

This agreement is part of the total As-is-ness of this universe.

If you ask a preclear for "some things you wouldn't mind agreeing with," or "something that you could do that other people would agree with", and so on, you'll notice a change in the case. Why? We're improving his level of agreement. He is actually bound by certain considerations, and until he postulates otherwise, he will continue with those considerations. This is how somebody gets fixed into something.

The whole of existence in this universe actually is run very much like a hypnotic trance.

The worse off a group is, which is to say the less communication they have, actually the more communication can be forced on them, and you see a form of hypnotism there, but the interesting thing is that they must have been prepared by an enormous number of agreements before they got into that state. In other words somebody else prepared them, so they didn't care who they agreed with after a while. When someone of higher rank in a uniform walks up to a soldier and says do something, the soldier will do it. Well, this is a form of hypnotism. You could get a group to agree first that you were simply standing there, and then the next thing that you could get them to agree to is the fact that they were listening to you, and then you would give them a few little things on which they would agree, and at some point you could tell them that the world was on fire, and the audience would rush out to find out or maybe they'd just sit there and burn.

Now what is this all about? Does that mean that anybody bringing about an agreement would bring about hypnotism? Oh, no.

The reason why, in Scientology, we do not bring about a hypnotism even in Open Procedure by Duplication, is that we are undoing the agreements which people have been making for seventy-six trillion years. We're undoing these, thus auditing makes a person freer, and freer, and freer.

Now, this fellow on the stage who simply gets the audience to agree and agree and agree and agree, and then tells them the place is on fire, isn't really going in the direction of making them freer, is he? His intention for this is entirely different. It isn't that an intention is above agreement, it's that consideration is always above agreement, and he is trying to work them into a situation where they will accept what he says without question. In Scientology we're not interested in anybody accepting what we say without question. We ask them to question it. We ask them to please look at the physical universe around you, please look at people, at your own mind, and understand thereby that what we are talking about happens to be actual. This is the series of agreements. These are. I could get people to agree with me about a lot of things and every once in a while throw them a curve. I could quite imperceptibly introduce a false datum into the science, and people have done this sort of thing but one can trace back in this development and see that what we're doing here is laying out the map of what has happened in seventy-six trillion years of a universe.

Your agreements have finally mounted up to a point where you believe this universe is all here and what you're agreeing to fortunately are the very things which you agreed to. We aren't giving you new things, we're giving you old things, and by understanding these old things which we have re-discovered, you become free.

What is this feeling of unreality that people get this unconsciousness and upset and forgetfulness and so on down the list of discomforts of beings. Actually forgetfulness stems from an effort to make things disappear by pressing against them with energy. You can imagine that if we push against a thought hard enough and say it isn't there while it's still there, why, we will surely become forgetful. And if we push hard enough we will become unconscious. But remember we had to postulate that we could forget and we had to postulate that we could become unconscious before either of these things could happen. People toss around waiting to go to sleep, then they say "I am going to sleep." Well, inspect R2-40 and you'll understand why the proper thing to do is to simply say, "I'm asleep." "Well," they say, "that's a lie." No, it isn't a lie unless you consider that you're awake. Now, if you said, "I'm awake, and now I am going to sleep," why of course you wouldn't go to sleep. The point here is that you could make at any moment a prime postulate.

We come to the formula of communication.

AXIOM TWENTY-EIGHT: COMMUNICATION IS THE CONSIDERATION AND ACTION OF IMPELLING AN IMPULSE OR PARTICLE FROM SOURCE-POINT ACROSS A DISTANCE TO RECEIPT-POINT, WITH THE INTENTION OF BRINGING

INTO BEING AT THE RECEIPT-POINT A DUPLICATION OF THAT WHICH EMANATED FROM THE SOURCE-POINT.

Now understand this word duplicate as copy, and we have perfect duplicate which means As-is. When we talk about a duplicate we merely mean a copy. Copy, facsimile, duplicate, are pretty much the same thing, and when we're saying perfect duplicate we mean the object created again in its place, in its time, with its own energy. So we send a telegram from New York City which says, "I love you" and it arrives in San Francisco saying "I loathe you". Something has happened there, that we don't get a duplication. Well the more mechanical an individual becomes the less he can duplicate and the less he can make perfect duplicates -- so he can't As-is anything. He falls off to a point where he can't make a copy. You say, "Go around the corner and tell Betty I love her", and he goes around the corner and says, "Joe said uh... to tell you he loathes you". In a line of soldiers we whisper a message, "H hour is at 10 o'clock," and when it goes through a dozen soldiers this way we find at the other end that "We had beans for supper". This is the inability to make copies. And this is a most disruptive thing, and the most important thing in communication. A workable statement of the formula of communication is simply: cause, distance, effect with a good copy at effect of that which was at cause. That's all you really need to know about communication.

AXIOM TWENTY-NINE: IN ORDER TO CAUSE AS-IS-NESS TO PERSIST, ONE MUST ASSIGN OTHER AUTHORSHIP TO THE CREATION THAN HIS OWN. OTHERWISE, HIS VIEW OF IT WOULD CAUSE ITS VANISHMENT.

Any space, energy, form, object, individual, or physical universe condition can exist only when an alteration has occurred of the original As-is-ness so as to prevent a casual view from vanishing it. In other words, anything which is persisting must contain a "lie" so that the original consideration is not completely duplicated.

If Joe created something and then said "Bill made it," that's a lie, so he gets persistence stemming out of a second postulate, the lie.

AXIOM THIRTY: THE GENERAL RULE OF AUDITING IS THAT ANYTHING WHICH IS UNWANTED AND YET PERSISTS MUST BE THOROUGHLY VIEWED, AT WHICH TIME IT WILL VANISH.

If only partially viewed, its intensity, at least, will decrease.

AXIOM THIRTY-ONE: GOODNESS AND BADNESS, BEAUTIFULNESS AND UGLINESS, ARE ALIKE CONSIDERATIONS AND HAVE NO OTHER BASIS THAN OPINION.

AXIOM THIRTY-TWO: ANYTHING WHICH IS NOT DIRECTLY OBSERVED TENDS TO PERSIST.

It's true that if you don't As-is it and you've already said it's going to be there, why naturally it will be there. But this is worse than that. You find somebody working and paying some attention to the work but never paying any attention to his machine. And you'll find he has facsimiles of the machine just all stacked up everywhere. He's never As-ised the machine. Or you find somebody who has always looked at lighted objects in dark rooms and has never looked at the darkness eventually seeing nothing but darkness when he closed his eyes. He'll have a "black bank", in other words.

AXIOM THIRTY-THREE: ANY AS-IS-NESS WHICH IS ALTERED BY NOT-IS-NESS (BY FORCE) TENDS TO PERSIST.

AXIOM THIRTY-FOUR: ANY IS-NESS, WHEN ALTERED BY FORCE TENDS TO PERSIST.

AXIOM THIRTY-FIVE: THE ULTIMATE TRUTH IS A STATIC.

A Static has no mass, meaning, mobility, no wavelength, no time, no location in space, no space.

This has the technical name of "Basic Truth".

AXIOM THIRTY-SIX: A LIE IS A SECOND POSTULATE, STATEMENT OR CONDITION DESIGNED TO MASK A PRIMARY POSTULATE WHICH IS PERMITTED TO REMAIN.

Examples:

Neither truth nor a lie is a motion or alteration of a particle from one position to another.

A lie is a statement that a particle having moved did not move, or a statement that a particle not having moved, did move.

The basic lie is that a consideration which was made was not made or that it was different.

AXIOM THIRTY-SEVEN: WHEN A PRIMARY CONSIDERATION IS ALTERED BUT STILL EXISTS, PERSISTENCE IS ACHIEVED FOR THE ALTERING CONSIDERATION.

All persistence depends on the Basic Truth, but the persistence is of the altering consideration, for the Basic Truth has neither persistence nor impersistence.

Now we come to something which is tremendously interesting because it is the proof of the fact that we have reached an ultimate truth and an ultimate solution. And that ultimate truth is itself very, very important to an auditor because that tells you whether or not Scientology is a total subject.

We could show this by a line representing knowledge, going upward from no knowledge as follows:

ALL DATA KNOWN

ONE NEW DATUM KNOWN

NO DATA KNOWN

From no data to one new datum to eventually at top ALL data known.

But this is actually a circle. At the top is NO DATA KNOWN. Just before the top is ALL DATA KNOWN, and as we move to the top and then return to NO DATA we then move to the next point of ONE NEW DATUM KNOWN and so on around the circle to more and more, then ALL data, then again none:

ALL DATA KNOWN

NO DATA KNOWN

ONE NEW DATUM KNOWN

You see that on this circle everything known and nothing known are adjacent.

Well, we have reached that point in Scientology because we know that the ultimate truth, the ultimate solution, is the Static.

The solution to a problem is the As-is-ness of the problem, because by solution is meant: what will cause this problem to dissipate and disappear. With As-is-ness we have reached the solution to all problems. We have reached an ultimate truth. So that we know we have in Scientology a total subject.

AXIOM THIRTY-EIGHT:

- 1: STUPIDITY IS THE UNKNOWNNESS OF CONSIDERATION.
- 2: MECHANICAL DEFINITION: STUPIDITY IS THE UNKNOWNNESS OF TIME, PLACE, FORM, AND EVENT.

He knows something happened, but he doesn't know what happened. He can't add it up. He can't do anything with it. We call that stupidity.

- 1: TRUTH IS THE EXACT CONSIDERATION.
- 2: TRUTH IS THE EXACT TIME, PLACE FORM, AND EVENT.

Thus we see that failure to discover Truth brings about stupidity.

Thus we see that the discovery of Truth would bring about an As-is-ness by actual experiment.

Thus we see that an ultimate truth would have no time, place, form or event.

Thus, then, we perceive that we can achieve a persistence only when we mask a truth.

Lying is an alteration of Time, Place, Event, or Form.

Lying becomes Alter-is-ness, becomes Stupidity.

(The Blackness of cases is an accumulation of the case's own or another lies.)

Anything which persists must avoid As-is-ness. Thus, anything, to persist, must contain a lie.

He says: "I am a man," so he's a man. That's the exact consideration. He is not telling a lie until he has said I am a man -- and then has masked or hidden the fact that he is a man, and says, "I am a woman", Now the odd part of it is that he made a truth when he made the first postulate. And that which denied that truth then persisted. The second postulate always persists. I give you R2-40. The dissertation in R2-40 in the Handbook makes this much clearer. The second postulate introduced time. Persist is time -- that's all. Mortality, immortality -- this is a matter of time. It's also a matter of Identity, but it's basically time. That which is persisting means that which is time-ing. And if you have assumed that after you made a postulate you then had something which permitted you to make another postulate, you'd have to postulate time there, wouldn't you? It's quite interesting. So that your second postulate then introduced time, merely because it's the second postulate. You had to introduce time. You see, there is no time in the Static, natively. Time is just a consideration. All right. So you introduce time. You get a lie. Now any time the first postulate is masked (this is mechanical by the way, this is the way it works) and you put a second postulate in front of the first postulate it's the second postulate which persists, but it derives its strength from the first postulate.

Entered into the solution of this subject of Scientology and life was this datum, that stupidity is the unknowness of consideration. Well, then truth is the knowness of the consideration, isn't it? Right back there we have that perfect duplicate. We found out that when you got the As-is-ness of anything, if you made a perfect duplicate of it it would disappear. So truth is a perfect duplicate. But that's a disappearance. Well, if that's a disappearance then all you've got left is the Static. So that truth is the Static. And it follows through just as clearly as that. It's a mechanical proof. It's as mechanical as any kind of proof you ever wanted in any field of mathematics. It's totally mechanical.

Now again a problem is a solution only when you get the As-is-ness of the problem. We get the As-is-ness of the problem, therefore what have we got left? We've got the As-is-ness of the problem and we have nothing left. Oh, but we don't have nothing -- we have a Static. So we find out that the ultimate truth is also the basic truth, contains no time, no motion, no mass, no wavelength, and we find also that the ultimate solution contains no time, no motion, no mass, no length. So we come back to something which is not an imponderable: does and can one of these Statics exist? Yes, that too we can subject to proof, and we can subject it to proof immediately, instantly and easily. Nothing to it.

You just ask somebody who's in not too bad condition to "Be three feet back of your head." You can ask him to be anywhere, to appear anywhere in the universe, and he can. You ask him to manufacture space and energy, and he can. You can inspect actually whether or not this is taking place. And you'll find out that it is taking place, and you'll find out that Man is basically a Static. So he doesn't move. He appears. Therefore we have this thing called the Static. We have the perfect duplicate -- the As-is-ness. We have an ultimate truth and we have an ultimate solution. At this point in Scientology we have wrapped it up. There are a great many strong points on the track where there's a lot of data hidden, and chaos and confusions and that sort of thing which we've by-passed, a lot of things which we haven't described adequately -- for instance I'm not even satisfied at this moment completely with our description of Affinity, but I can tell you this, that they are knowingly by-passed points.

The other evening (at two o'clock in the morning) I suddenly found that I had arrived at the edge of a cliff, looking at End of Track. There isn't any more road out there, that's all, because we've come back to the Static, and we have found out what this Static is, we can demonstrate its existence, we can demonstrate what it does, we can prove it and we can all agree upon that proof, and we can do wonderful and miraculous things with it. The forty processes contained in the Auditor's Handbook* can do those things just like that.

When you know well this material and can apply it in the first few of these processes, you will be doing very, very well. * Auditor's Handbook: 1954 edition of the book which, greatly expanded, became The Creation of Human Ability by L. Ron Hubbard. See book list in back pages.

CHAPTER SIXTEEN

AXIOMS

(Part 4)

Having these Axioms we are now particularly interested in this whole subject of truth and its actual use in auditing. We see immediately that any problem of any character or scope is the basic business of a Scientologist. If you have someone who wants to know about solutions, you had certainly better give him not a solution to a problem but the solution to problems, and that of course would be a basic and ultimate truth. Well, if you can describe a basic and ultimate truth, and describe it exactly, you have no problem at all in solving problems.

We see that failure to discover truth brings about stupidity. A person begins to believe he's stupid if he can't As-is.

We see that the discovery of truth would bring about an As-is-ness, by actual experiment, and thus we see that an ultimate truth would have no time, place or form. Whatever we had there would simply disappear if we discovered an ultimate truth. The ultimate truth is a perfect duplicate and therefore a Static. And, operationally, to achieve a Static would be to make a perfect duplicate.

We see that a lie as we understand it is an alteration of time, place, event or form, and that only lies persist.

We have to have a basic postulate, and then another postulate, before we get time. Two postulates. We can't have time with one postulate unless it is the postulate that there will be time. That could be one postulate. But normally in operation we find that two postulates are necessary to achieve time.

Now which one of these postulates is going to persist if the two postulates deny each other: the second one is going to persist, because it is the time postulate.

Lying becomes an Alter-is-ness, and becomes stupidity. In other words, we don't discover where the thing is, we don't discover exactly how it is, so we can't unmock it, and there we are. The only thing that we can do with it possibly is to Not-is it or Alter-is it some more or do what a Black V does -- just stir it around and hope it will disappear. He doesn't As-is it. It doesn't disappear.

Oddly enough, lying will develop into a stupidity. It also develops into a mystery -- into this blackness which individuals are so upset about. It's just an alteration of time, place, event or form after the fact of its having been created.

There would be two kinds of lie here. A mechanical lie does not lead to blackness. Mechanical lie: we mock up some space, and we put an object in that space and then we move it. The moment we've moved it we've lied about it. We've said it's over there when as a matter of fact it was created in the first location. Now in view of the fact that there is only consideration this of course would bring about mechanically a lie. It doesn't disappear, it doesn't do anything peculiar simply by moving it around. The mere handling of energy does not bring about a stupidity. It takes another consideration than simply moving something to bring about an occlusion.

Now, anything to persist must avoid As-is-ness, and thus anything to persist, really to persist, must contain a lie. And we get the next Axiom:

AXIOM THIRTY-NINE: LIFE POSES PROBLEMS FOR ITS OWN SOLUTION.

Now what do we find here, in a problem? We find something which is persisting, the As-is-ness of which cannot readily be obtained, and would be the definition of a problem. Now to solve that problem it would be necessary to get its As-is-ness. Well, how do we prevent something from being As-ised, in other words vanished? We introduce a lie into it.

AXIOM FORTY: ANY PROBLEM, TO BE A PROBLEM, MUST CONTAIN A LIE. IF IT WERE TRUTH, IT WOULD UNMOCK.

When the preclear is being a problem, we know very well that there's a lie somewhere on the track that he's trying to obtain the As-is-ness of. It's not necessarily his lie, but it certainly is a lie. And under Axiom Forty we get:

An "unsolvable problem" would have the greatest persistence.

It would also contain the greatest number of altered facts. To make a problem, one must introduce Alter-is-ness.

In other words, this problem must have been moved and shifted and shoved around considerably to be unsolvable.

AXIOM FORTY-ONE: THAT INTO WHICH ALTER-IS-NESS IS INTRODUCED BECOMES A PROBLEM.

Any time you Alter-is something you've got a problem on your hands.

This whole universe, then, is a problem. Therefore this whole universe must contain a lie to go on persisting the way it does. It certainly does contain Alter-is. It certainly does contain a lie. It contains a variety of lies about its creation, and there are all sorts of things about this universe which cause its persistence, and all of those things boil down to the one fact that it must be based upon a lie and it must be very definitely altered.

Axiom Forty-one tells us that it was alteration which brought the preclear into a problem, thus we find any child who has moved extensively, who has had his home changed, who has been shoved around to various parts of the world, eventually becomes a problem, first to the environment and then to himself.

AXIOM FORTY-TWO: MEST (MATTER, ENERGY, SPACE, TIME) PERSISTS BECAUSE IT IS A PROBLEM.

It is a problem because it contains Alter-is-ness.

Your physicist is busily at work trying to unmock it but he is unmocking it by Not-is-ness. He's using force to alter force, and because he keeps altering it, it all naturally just gets worse and worse. He will solve nothing with an atom bomb. He will simply make things go worse, more complicated, more confused, more dispersed. The atom bomb is a dead-end track and is folly, it is great folly.

If an atom bomb were introduced into a war the number of particles and the amount of MEST which would be altered, we would discover immediately, would have introduced a great number of lies into the situation, it would have deteriorated the society and everything else. If we were foolish enough, for instance, to atom bomb Russia, or if Russia were foolish enough to atom bomb the United States, enough confusion would have been introduced into the cultures of earth so that probably there would be no other choice but to sink into a barbarism, in the absence of an understanding of life itself.

AXIOM FORTY-THREE: TIME IS THE PRIMARY SOURCE OF UNTRUTH.

Time states the untruth of consecutive considerations.

I call your attention to interest, as an interesting thing to observe. There are two classes of interest, and we want to know why we're thinking about this in terms of time, and this is because time is the basic lie behind all lies. We believe there are consecutive moments. We see consecutive motions and this all very pleasant -- we agree to this -- and it's only when we have masked them with some vicious intent that we really get a kick-back from the progress of time.

But we discover here in the matter of interest that we have two facets: one is "interested", and the other is "interesting".

A thetan is interested, and an object is interesting. A thetan is not interesting. He is interested. And when a person becomes terribly interesting he has lots of problems, believe me. That is the chasm that is crossed. That is the chasm which is crossed by all of your celebrities, anybody who is foolish enough to become famous. He crosses over from being interested in life to being interesting, and people who are interesting are really no longer interested in life. It's very baffling to some young fellow why he can't make some beautiful girl interested in him. Well, she is not interested, she is interesting.

AXIOM FORTY-FOUR: THETA (THE STATIC) HAS NO LOCATION IN MATTER, ENERGY, SPACE, OR TIME. IT IS CAPABLE OF CONSIDERATION.

We have put it right in there again just to drive it home well. There's no time in this Static. Time is a lie.

Time can be postulated by the Static but is only a consideration and thereafter a thetan gets the idea that he is persisting across a span of time, and he is not.

He is not persisting. Objects are going across time, and energies and spaces are changing, but he is not. At no time does he actually change. He has to consider he is out of his head before he can be out of his head.

A Step V, or Black Five, is quite interesting in this regard. He is always thinking the auditor's going to reach in and pull him out of his head. He's waiting for something else to do it! Of course you could probably hypnotize him and tell him that he was, and he'd probably react in various ways, but he has to say, "I am now out of my head," and then he will be out of his head. But "waiting to see" whether or not he's out of his head is complete nonsense. The only way that he can get anything done, is to consider that it is done, or consider that that is the condition which exists.

AXIOM FORTY-FIVE: THETA CAN CONSIDER ITSELF TO BE PLACED, AT WHICH MOMENT IT BECOMES PLACED, AND TO THAT DEGREE A PROBLEM.

Any time we fall away from Axiom One, which is repeated as Axiom Forty-four, we discover that we have less of a Static than before. In other words we just place this Static, and it's less of a Static. A thetan, then, can have a problem, just by being placed. Quite in addition to that he ceases to be quite as interested.

He himself, placing himself, can get away with it. This isn't very hard for him to do. And he can perceive from this new place, and so forth, but as long as he is placed, he will be less than the Static. Just remember that. He is to that degree a problem.

AXIOM FORTY-SIX: THETA CAN BECOME A PROBLEM BY ITS CONSIDERATIONS BUT THEN BECOMES MEST.

A problem is to some degree MEST, MEST IS a problem.

What is this MEST? We find that an interested thetan is a thetan, but an interesting thetan has become MEST. What is MEST? Well, it's actually simply a composite of energies and particles and spaces which are agreed upon and which are looked at.

We have the difference between inflow and outflow. A thetan who is being interested is simply outflowing. Interested -- outflowing. Interesting -- inflowing. He wants the attention of others to flow in to him: interesting. That's MEST. Attention of others flows to it. That doesn't tell you that all MEST is is a series of trapped Thetans.

It says that it is a type of life which is being interesting, as opposed to something which is being interested in it.

Now, Number Forty-six: Theta can become a problem by its considerations, but then becomes MEST, is followed by this, that MEST is a problem, and will always be considered a problem, and is nothing else but a problem. MEST is that form of theta which is a problem. That's all. Therefore, it is that form of theta which has a lie introduced into it. And so, of course, it is a problem.

AXIOM FORTY-SEVEN: THETA CAN RESOLVE PROBLEMS.

AXIOM FORTY-EIGHT: LIFE IS A GAME WHEREIN THETA AS THE STATIC SOLVES THE PROBLEMS OF THETA AS MEST.

Now that means that theta is the Static, and theta is the object? Yes, indeed. It can be both ways.

It all depends on which one is being interested and which one is being interesting. And we find that a preclear gets more and more solid the more interesting he becomes, and the more problem he becomes, the more problems he has and the more figuring he does on his problems, the more solid he is going to get.

AXIOM FORTY-NINE: TO SOLVE ANY PROBLEM IT IS ONLY NECESSARY TO BECOME THETA, THE SOLVER, RATHER THAN THETA, THE PROBLEM.

That is a very, very important Axiom. That tells you why SOP 8C Opening Procedure works. It works because the main form of theta which we find desirable, which has mobility, which has freedom which is happy, which is cheerful, which has all those qualities on the top of the Chart of Attitudes is an observer of problems and a solver of problems. So if you get somebody to simply look around the environment, he will cease to be a problem and will become the solver of problems. That's all. Just looking.

Get him to look around and recognize a few problems and he will feel better. Somebody then who is worrying about himself constantly, well, he's all mixed up in a problem and his affinity is at a closure with this problem. He's having an awful time. Well let's take this and turn it around the other way and let's have him observe himself as a problem, and we get that part of the process which is "Problems and Solutions". And naturally, if we asked a thetan to be a solution often enough, he would eventually become a Static. That's all. If we asked him to observe problems long enough he would simply become a Static. In other words he would go out of it both ways.

A Thetan could become a problem, more of a problem, more of a problem, more of a problem, more and more and more and more and more and more -- static. You see he could go "out the bottom".

Or, he could go: less of a problem, less of a problem, less, less -- static. He could go either way. So there's no avoiding it, you're going to survive anyway, and so are your preclears, but we're going to have a better world doing it.

AXIOM FIFTY: THETA AS MEST MUST CONTAIN CONSIDERATIONS WHICH ARE LIES.

In other words, there isn't a single piece of MEST in the world which isn't to some degree lying.

Looking at that, then, we find that the only crime that you could possibly commit in this universe is being there. It doesn't matter where. This is the only crime that you could commit. And this is all your parents objected to, and this is all the preclear objects to when you're auditing him and he growls at you. They add tremendous significances into this, but all they object to is being there. Now if you ran SOP 8C, Opening Procedure, and you ran it very, very definitely with that postulate: to get the fact that the wall is there. Get the fact that the chair is there, that something else is there, etc., you'd be likely to knock your preclear flat at some point. I am not advising you to use this form of Opening Procedure. It's a violent process. If you get almost any preclear and just have him stand in the middle of the room, and say "get the idea", to that empty space out in front of you there, "that it's there", it's there, it's there -- his mother will show up and eight or nine of his wives and all sorts of other things will show up all the way down the line. He'll have all kinds of people standing in front of him. They're all "there". But that's the only crime a thetan can commit. It's a lie, you see. That theta can be THERE is a lie, and that's the only bad thing that anybody has ever done is to be there. Now, that's all, actually, that the body is doing. He's got a body and he's visible. He is being there. And we must have introduced a lie. And the basic lie which is introduced is Time.

It is interesting to note that it is the second postulate which persists, because persist means time, and it's the second postulate which introduces time, and this becomes elementary. Now let's look at this one: let's take this fellow who's awfully sick. He's terribly sick. Boy, is he a problem. He's a problem to himself, a problem to his family, and a problem to his auditor. He is a problem. He's terrific.

You know that he must have had an original postulate that he was well before he could make the second postulate that he was sick. And you know the postulate that he was sick must have denied the postulate that he was well, and so his original sickness was a falsity and he knew it at the time he made it -- he actually knew it well. He knew -- when he said he was sick that day to keep from going to school -- that it was a lie. He knew it was a lie and he got a persistence of the sickness and now here he is eighty-nine years of age and all crippled up and we find out that the basic postulate was the fact that he was well. How could sickness ever get any power except through wellness?

Now we look underneath every lie to find out that it was the truth -- the Static itself -- which gave it power. The lie has no power itself because it is a perversion. Persistence has no power that is not based on the Static itself. So we have the basic lineup at all times and in all places, that the lie is empowered by truth. Truth must have existed and a good condition or quality must have existed prior to a bad condition or quality.

As we study the problem of goodness and badness in the world, we find out that we must be studying the second postulate, because that is all that persists.

Now let's take a situation where something is persisting -- and it's good. We could say that that looks as if it must have been based upon a prior postulate which was bad. But you can't make a prime postulate which is a lie. If you'll just get the idea that there are no postulates, that you've made no postulates of any kind, that there are no postulates which have been made -- now make a postulate. That would be a prime postulate. That postulate can't be a lie. Now make a second postulate denying the one you just made. That's a lie. Now which one of these two is going to persist? Of course the second one. And it is going to get its power from the first postulate.

It would not matter what the prime postulate was. That is not the point, here. We're not going on the basis of badness or goodness. A consideration is a consideration.

Now, do we mean reach back on the track, and find these postulates? -- reach back and run it out with straight-wire? No, because there is no time, and all address to the past -- every address to the past and every address to the future actually is validating a lie. There's only now. There's never been anything else but now. There's a consistent change and a consistent series of postulates going on which give us a continuance of now, but the continuance of now is a lie.

You can move objects around, and that's quite honest, that's not bad. But we're looking at two kinds of lie here, and we discover that when we are trying to make a condition change we simply have to postulate, as though it exists in present time, the opposite condition. So somebody who hates the human race -- he must have loved them desperately by prior postulate. There's no hatred like that which can exist between two brothers or a nation torn asunder in war. Well, that's because they loved each other so well, you see. And so they can hate with violence. But what is their hatred depending on but the fact that they loved each other? So if we have somebody hating madly somebody named Bill -- we would say, "Now, get the idea of loving Bill." Grrrrr, he'd go. "Now, get the idea of loving Bill." Grrrr. "Get the idea of loving Bill." Grr. "Get the idea of loving Bill." "Well, he's not too bad a guy." We wouldn't necessarily restore love, but we'd certainly run out the hatred for Bill.

CHAPTER SEVENTEEN

TWO-WAY COMMUNICATION AND PRESENT TIME PROBLEM

Although you discover in examining existence that consideration is senior to all other things, you have in any preclear who is living in the physical universe, who is still associating with a body, an enforced mechanic. In other words, the mechanics of existence are enforced upon him consistently and continually. Therefore mechanics are much more important to this individual than considerations. He goes on an inversion. He is found not really considering -- he is not making a postulate and having something come true -- he is trying to figure out who's to blame -- that's one of the main things he's trying to do. He's trying to figure out when that ridge in front of his face is going to go away. He's waiting until the auditor does something spectacular.

He's doing a lot of things, but first and foremost he is contactable in the field of mechanics, not in the field of considerations. Considerations are prior to mechanics. This is obvious. But your preclear has gotten to a point where he is inverted on the subject and by his day-to-day living he is closer into contact with mechanics than he is considerations and yet there he is considering.

Well, he's never going to recover from anything considering. He might figure he's way out of the trap. He might think he's way out of it, but as long as we approach the problem as really a purely mechanical problem of a set of convictions rather than considerations we'll be successful with the preclear.

And the first and foremost of his convictions is that it is very aberrative to communicate. This he's certain of. He may have lots of other certainties, but that one he's actually very certain of and we discover that the only thing that is punishable in this universe is communication -- non-communication is not punishable.

We discover that the inanimate object is not guilty. It was the animate object which was guilty. We discover that the driver who was going faster than the other driver was always to blame.

This, by the way, is not even vaguely true. It's just the way people look at things to keep them turned around so that they don't have to take responsibility and make everything disappear.

So we discover, as we look over this problem, that our preclear is certain that if he communicates he will be punished. He has communicated in the past. He has tried to talk to people. And he has met with the greatest contribution of psychiatry, for instance, the pre-frontal lobotomy. It would do just as much good to cut up some calves' brains lying in the butcher's window, as it would to cut up someone's brain and psychiatry knows this. They know it very well. They have never made anybody well with pre-frontal lobotomies or trans-orbital leucotomies.

They go on doing it because a psychotic's condition is desperate, and they compute that they of course have to be desperate in treating it. They have therefore nothing but solid failures behind them. That is not a condemnation. That is just the truth of the matter.

By the way, the only reason they do a pre-frontal lobotomy is -- because people can often survive it. That is what is stated in the original case history on this.

Just as long as I've mentioned that subject, I might give you a little data on it. The first and original case history of this, and the only case history that's quoted in psychiatry, is of an idiot blacksmith's helper who approached the forge, and the forge exploded, and a crowbar flew through the air and drove into his right temple and came out at his left temple. And he

survived this. You look in vain in that case history to discover whether anything happened to his idiocy. We find that no change occurred with regard to his idiocy. But a part of his brain had been removed and he did survive, and this is the sole authority to this day for doing prefrontal lobotomies.

In another case they did a pre-frontal lobotomy on a fellow, and they put him on display, and somebody asked him whether he noticed any change in himself as a result of the pre-frontal lobotomy. And he looked very solemnly and somewhat covertly around and he said, "Yes. I've learned to keep my mouth shut."

So that is the basic lesson anybody learns in this universe. They learn to keep their mouths shut, and it's the wrong lesson. When in doubt, talk. When in doubt communicate. When in doubt shoot. And you'll be very successful all the way along the line if you just remember that.

There's no compromising with this. A thetan is as well off as he can communicate, and he's no better off than that. And when a restraint comes upon his communication, then he starts to wind up and finish up and that is the end of him. So, our preclear sits there, and he is sure that if he communicates he'll be punished. Anything he says will be used against him. They've told him so for many lives. Anything that he cares to bring up -- he knows that the person he brings it up to is going to make fun of it, going to dive on it, going to challenge him with it and so on. He's certain of this, and that if he happens to impart any immediate secret of his existence he knows it will undoubtedly be on the radio by four o'clock that afternoon. So he will approach a session with considerable diffidence. He will not be sure what he should say. As an extremity of human duress which can be used to illustrate this, let's take the case of a psychotic. This person had a terrible obsession. It was just a fantastic obsession. He would not talk because he knew that if he said anything, the person he said it to would carefully store it up and wait for the right time to use it against him. And this was all this person would tell you! This person would utter that sentiment in one way or another -- it was a one hundred percent psychotic dramatization -- but it lay straight across his communication line. This person was utterly insane, could not take care of the body or perform menial tasks or anything else, and yet this person would just go over and over that record -- "Well, if I said anything you would store it up and you'd wait for the right time and you'd use it against me." And then the person would clam up. Try to get him into communication again -- he'd go through this same routine.

Well, let me assure you of something, a person doesn't have to be psychotic to have that basic manifestation in this universe. They're not even vaguely psychotic and they have it. They adjudicated their own sanity by knowing when to talk and when not to talk, and it starts to peel down to a point where they know. They know when not to talk, and when to talk. And then they know WHEN NOT TO TALK, you see, and when to talk. And then -- silence. And that's the way the cycle goes.

So don't for a moment suppose that Step 1 (Get into two-way communication with the preclear) is included as just a handy way to start a session. It's processing.

Your preclear is accessible ordinarily on the Third Dynamic -- groups. This is probably the last dynamic to fold up. They carry a social dynamic all the way through. Processing itself is a Third Dynamic situation, and so is aberration. It's the thetan plus the body that can bring about an aberrative state. It's the thetan plus the Sixth Dynamic, the physical universe, that causes a difficulty, and so on.

All right, we have then Two-Way Communication as Step 1 simply because it is the most difficult step. It is the most arduous step. And it is the step which was missed by everybody from the Aesculapians (Roman medicos) to the most recent psychiatry out of Wundt, Leipzig, 1869.

Around that time in Germany they got started on the first idea that the mind could be approached on a scientific basis. That was the original premise of psychology, and a good one brought up by a fellow by the name of Wundt. There was nothing wrong with this. It was a good hunch. It has never been followed up by that particular field.

Scientific methodology was actually not, there and then, immediately classified, and if he had sat down and classified scientific methodology at that moment he would have been all right. But what they did was unregulated, uncontrolled, wildcat experiments, fuddling around collecting enormous quantities of data, which data was supposed to amount to something one day. But that field was never able to do anything in the field of a two-way communication, never knew the parts of communication, and doesn't to this day. They are more and more "The Only One". They never solved communication so they don't go into communication. They don't have Step 1.

When we come to psychoanalysis we find that in that field they used various methods -- originally Breuer and Freud did -- to produce a two-way communication, and then they went all out, and they decided, Gee, if you could just get somebody talking -- but their first approach to it was the hypnotist's and that is a very poor approach and not only a very poor approach, it's a very inhibitive approach.

If you have ever had anybody as a preclear who had been hypnotized you would appreciate this, for instance, running 8D (8D: Standard Operating Procedure 8D, 1954. Primarily for heavy cases, the goal of this procedure was "to bring the preclear to tolerate any viewpoint." See *The Creation of Human Ability* by L. Ron Hubbard.) Running this on "Where would a ... be safe?" you could put in "hypnotist". You'd get some idea of the aberrative nature of hypnotism.

In psychoanalysis they actually didn't solve two-way communication. They got a system by which somebody simply talked endlessly, and talked, and talked, and talked, and there was no communication from the analyst. You may have seen the cartoon where one analyst is cheerful and he had been so every afternoon at quitting time, and the other analyst said, "My goodness. How can you be so cheerful sitting there all day long listening to those patients?" and the other said, "Who listens?" Psychoanalysis had this idea that if they could just make the person outflow, outflow, outflow, outflow outflow, this would solve it. It doesn't solve it.

It's TWO-WAY communication. What success psychoanalysis did have was just due to the fact that they did specialize in trying to get somebody into communication one way or the other. But they again didn't have any idea of the anatomy of communication.

And we move on forward to various thoughts and philosophic endeavors on this subject and we discover that an individual very rarely is found in a good state of communication when he sits down on the couch and I don't care who this person is, they're just not in a good state of communication. They're either obsessively communicating, or they're inhibited -- they haven't got a good balance on this subject. And you take the most average preclear in the world, he'll give you ordinarily just social responses. You say "How are you?" and he'll say, "I am fine", Forty-five minutes later the oddity is this person says to you, "I feel terrible". You first got a social response, and then the preclear answered the question. The question sometimes, if you'll notice it carefully, will come up as non-sequitur entirely, and, for instance, forty-five minutes after you ask him how he is he tells you. And the gap in between is filled with social responses. It's just trained social response -- a little machine. So that isn't two-way communication with the preclear at all, is it? You're talking to social machinery.

Well, you've done this all too often, much longer than you should have, in plain social activities. You went around to ask somebody about a loan or ask him about something or other, and you went on talking, and this person went on talking, and actually you were not talking to anybody and then you wake up with a great shock to discover that you have just been

arguing with somebody, or been trying to make somebody be better, be nicer to you, be kinder to their neighbors or something of the sort, and after a long dissertation on the subject, and you think you've had a two-way communication with this person, he comes up with some completely disrelated remark, although he seems to have been agreeing with you. He seemed to have said "Yes, that's fine, I'll be a better boy," or something of the sort. You just never reached an agreement, because the actual truth of the matter is if you'd reached an agreement with him he would have been a better person. You weren't talking to anybody. You were talking to some social machinery. Well, that's just in the social world.

How about an auditor? Should he be able to spot this? Well he should, but he would never spot it if he didn't recognize that there was something very definitely there to spot, and that is: who's talking? Are we talking to the preclear? Or are we talking to an education from Harvard? Are we talking to the preclear, or are we talking to Mama? It's a nice thing to have a very, very high on the Tone Scale attitude toward preclears, but there's one point there where the column (Chart of Attitudes) reverses, and that's where it's Trust at the top and Distrust at the bottom. When you're working preclears, you keep with all the top buttons of the Chart of Attitudes except that one -- you just reverse that column. It goes right straight across -- Distrust is the top for an auditor as far as a preclear's concerned, and it's a remarkable thing how many times you can actually crack a case if you'll just simply say, "How are you doing that?" or "What are you doing?" "Who is talking?" "Did you do that?" "Who touched the wall?" "How did you do that?" Once in a while you'll find there's a File Clerk (File Clerk: Dianetic auditor's slang for the mechanism of the mind which acts as a data monitor. Auditors could get instant or "flash" answers direct from the "file clerk" to aid in contacting incidents) or something of the sort and he's taking every response he gives you as a flash answer from the File Clerk. If he's been trained in Dianetics he will sometimes do this to the exclusion of any answer himself. Well, these are social responses, and that is not a two-way communication. That's two-way communication between you and a circuit maybe, or between you and a machine, but it's not a two-way communication between you and the preclear, and it says specifically in Step 1 that we begin a two-way communication with the preclear. Well, how many ways could there be to start a two-way communication with the preclear?

One of the ways to do it is to talk about his problems. He's fairly interested in these, and you get away from the social responses.

And he's there because he's being a problem, so we get step 2 as an assist to Step 1. Step 2: PRESENT TIME PROBLEM. But of course Step 2 is more important than that. You sometimes miss on a preclear by processing him when he's dog tired or he's emotionally upset or something very bad has just occurred, and he wants to be processed so that he can run away from it, and if you don't ask whether or not he has any Present Time Problems, you'll miss sometimes, and have a whole session, or two or three sessions, wasted. I remember processing somebody who seemed to be rather frantic, and he finally came up with an astonishing fact. The case was not making progress, you see, and I got very interested in this and the person would not, just would not give me any clue. And I just kept pounding it and pounding it and talking about it any upset the person had in his current life -- you know, yesterday or today, or something that's going to happen tomorrow -- I just kept talking about it, you see, and saying, "Is there anything that is occurring that I should know about," and so on, because the behavior of the case just simply said that this case is so restive and so upset that he just doesn't seem to listen to my auditing orders and he seems to be distracted all the time by something, and certainly this person is either completely off his base, or he's really a psycho, or he has some very bedeviling Present Time Problem. And finally the guy got the communication and gave me an answer. That processing session series was being very badly interrupted because he was being sued for divorce. He was being sued for divorce over the period I'd been processing him. And he would leave there and go down and talk to his lawyers and he wanted to keep this very secret, and he thought there was something very horrible about this, and so he wouldn't even tell his auditor about it. Now, you see, he's punished for communicating, and thus we get right back to that. He doesn't impart the data about what's going on because he'd be punished for communicating.

Occasionally you will run into someone for whom medicine could do something. The person has an acute illness of one sort or another and is so afraid of any possible treatment that would be offered to him medically, because medical treatment may not be particularly kind, that he has not told anybody about it.

This again will be giving him a sufficient Present Time Problem that he would not gain well in auditing, and is the most important reason why you do not audit a person who should be getting a condition handled medically which can so be handled. But it is the fact that in this universe he is punished for communicating that makes this something to watch for and to see to it that a medical situation is handled medically before you do any auditing.

In order for any gain or release to take place by reason of communication alone on any kind of subject there has to be a two-way communication, not one-way communication. Therefore, the neatest trick in the whole book of tricks of auditing is knowing how to start and continue a two-way communication. It is dependent in its skill on the auditor's ability to grant beingness and actually talk on both sides of the conversation.

Communication is opened first and foremost by any sensory perception. Any sensory perception. Get the preclear to touch something -- you have opened communication with the preclear. If you could take his hand and he could register the pressure of your hand on his hand, and this in the case of a semi-conscious person is very workable, you would be communicating with the preclear. A two-way communication doesn't have anything to do with -- and quite incidentally when it does -- with words. It's a communication. You're there. He's there. His trouble is inhibited communication, and the trouble you're going to run into is getting a two-way communication started. Any perception can be used in a two-way communication. Just sight is enough. If he simply registers the fact that you are there in the room with him -- if he'll just look at you -- that is a communication. If we define communication by: awareness across a distance, no matter how minute that distance is between the preclear and the auditor, we discover that starting a two-way communication is actually much easier.

Continuing with examples -- "the worst it gets" type of situations -- not that these are what you'll be auditing -- if you want to start a fairly perfect communication, of course, you would simply physically duplicate what the preclear's doing. He's lying still -- you just lie down and lie still. You'd be surprised how odd this will seem to him after a little while. He'll get real curious about you. He'll go into communication with you. He picks up the stool and he heaves it at the door with a terrific crash. You pick up the stool and heave it at the door with a terrific crash. That's a bottom-scale level of entrance into communication -- mimicry -- because of course duplication enters into the formula.

But if your preclear is sitting there in complete silence, do you think that if you pour out a great flow of words you're going into communication with this preclear? No, because he's putting out a communication already -- silence. If you suddenly admit that as a communication, it will disturb him a little bit, and it's likely to stir him up into a communication. If you will sit there silent while he sits there silent, sooner or later you're going to go into communication. You can make a preclear enter into communication with you simply by doing whatever the preclear is doing.

Now it's necessary for you to turn around and have the preclear register a communication back. It's just as important for the auditor to go into communication with the preclear as it is for the preclear to go into communication with the auditor, and the auditor can do it by mimicry because he knows how. It's harder for the preclear to do it. Time spent at the beginning of a session just getting a two-way communication going until you really know you're talking to the preclear and he's talking to you is some of the best time you ever spent.

Opening Procedure 8-C is a considerable assist to this.

Improvement of communication is the key-note of all auditing.

CHAPTER EIGHTEEN

OPENING PROCEDURE OF 8-C

It is utterly fascinating what you can do with a process which is apparently as permissive as the Opening Procedure of SOP 8-C. The exact details of the process are given in Issue 24G of the Journal of Scientology.

The number of case factors which are handled in 8-C is fascinating, because here you are processing straight toward simplicity.

We know that what is wrong with a person is his subjective universe. That has gotten into trouble. Now, in view of the fact that he could mock up a tremendous amount of space if he had to, he could mock up lots of energy, he could mock up objects, and he could do this any number of times, then why he's lugging around something called "his universe" is a little bit difficult for a reasonable man to understand, and yet that is what people are doing. You get a sort of idea of somebody walking around with a great many clanking chains, old tin cans, old cigar butts, and so forth and calling these possessions. "His universe" looks like a kid's toy box. If you've ever looked into a three year old's choicest possessions, that's about the order of havingness the thetan pulls along with him.

He gives these things up with the greatest of reluctance, yet his total health, you might say, is dependent upon his ability to make, to have, new fresh things, and to do almost anything he wants to with them.

But, remember, it was always very, very difficult for him to get an object into such a circumstance that it was actually somebody else's object. To procure an object which was somebody else's is what he has to do in order to have that object. If we look at the four conditions of existence, the "Ises", we discover just exactly why these things are so very valuable to him. They are so valuable because they mean to him a period when he was actually in communication with thetans as such, and he could blame them, and if he could blame them then he could have something. And if he couldn't blame them then he couldn't have anything -- unless he duplicated himself, and so had another thetan to blame. This way he would get a persistence, he would get survival in terms of motion. Otherwise it would all seem completely motionless to him.

Now again all of these things are simply considerations, and in view of the fact that they are all considerations, we can get enormously baffled as to how considerations could be so important.

Remember they are only important because of the considerations which one held in common with others.

It would be one thing simply to change one's own considerations all over the place, and it would be quite another thing to do this when one has a series of considerations which have been thoroughly agreed upon with others.

So the thetan, with his old cigar butts, torn playing cards, and clanking chairs -- you see he's been in communication one time or another and the system of communication was all established and therefore he could have an other-determinism so true and so convincing that even he, would not be able to question its convincingness. Nobody could possibly question the validity of these objects he was carrying around.

It's simply, then: he will have some way of blaming somebody else for having put that mass of energy there, and then that energy mass will persist. If he can't blame anybody else why it can too easily be As-ised and so disappear. Other-determinism becomes vital.

Now, when we look over this problem we discover that an individual can go just so far down this line, and then he becomes himself disabled. He begins to count on other-determinism more and more and more heavily to produce his own survival. We can see this in terms of attention -- an individual in this society without any attention from anybody else would not have much chance of surviving. An individual, just on the basis of food alone, would have great difficulty, but he's gotten down to where those objects really have to be solid, and so we get this physical universe, and the particles of this physical universe are so beautifully lost, so completely confused, so misplaced away from point of origin that they can be subjected to a law in physics known as the conservation of energy: that energy cannot be destroyed, can only be converted. Anything that's lost, misplaced, confused, can only be converted, unless you discover the point where it was actually manufactured.

This universe thus becomes valuable. It becomes valuable because we've gone to so much trouble to lose enough things that we then have a continuance of objects.

A thetan who has become upset about the various agreements in existence believes that he no longer can communicate with something. He is a nothingness, therefore he has to communicate with a nothingness, he thinks. The communication formula places him at fault.

Here we have an individual who is living by the communication formula and yet cannot recover his own ability easily to follow the basic of communication, which is all things are on the same point. When you consider a consideration you find out it doesn't have any dimension whatsoever. And a thetan has no dimension. So he's gone to a lot of work, to make a universe that's as heavy as this one. And he's blamed it all on God, and he's blamed it all in various directions, and he has made what amounts to a considerable investment. He has a big investment. And now he has gone so far that having made this investment he can no longer look at it, because he has to follow the communication formula. He cannot occupy the same space as an object. Two objects cannot occupy the same space. Therefore he is not a thetan-plus-body. He is a body.

And once in a while we run into some materialist, in processing, and just the barest thought that he is something other than a body is completely, completely contradictory to him. It's utterly assaulting. You'd think that you'd held a gun on the man and asked him for his money. He'll become very excited. "I am a body. I know I am a body. That is all I am. I am one," exclamation point, exclamation point. He gets real worried about it.

This person at the same time is likely to be the one who is most concerned with God. This is curious isn't it? Well, he has to have an other-determinism. He has to avoid responsibility. His field of awareness will be relatively black, by the way.

That's not a criticism of the individual. That is just the state he is in. Why is he in it? He knows two things can't occupy the same space. Obviously if he is there, and the body is there, then he must be the body. That's the most elementary thing we could possibly put together. This individual has himself mocked up as something, and is being something so thoroughly that he cannot disassociate himself from it. So you tell him to be three feet back of his head -- and he can't be three feet back of his head.

Now, we're processing something which has four parts: (1) the thetan, (2) his machinery, (3) the body, and (4) the reactive bank. The reactive bank is a stimulus-response machine of some magnitude.

The body actually is something capable of collecting an enormous number of molecules and electrons and converting energy and doing all sorts of interesting things.

An auditor occasionally makes a gross error in that he processes any one of these things other than the thetan.

So there are that many engrams? -- well, does this so assault our sensibilities, that these things exist, that we must vanquish and make every one of them, one by one, disappear? Actually what we want to do is improve the thetan's ability to handle reactive banks.

Or an auditor comes along and he starts processing "the body". The body, the body, the body. What kind of auditor would this be?

It would be an auditor who had to have something. This auditor can't possibly have nothing, yet if he's auditing he's actually auditing a nothing. He's trying to free a nothingness. And if he can't conceive of a nothingness and has to go in the direction of a somethingness he will not actually audit the preclear.

Every once in a while some preclear has such an observable surplus of thetan machinery that an auditor just can't stand leaving that machinery alone. He just can't stand it. He's got to get in there and get all these mechanisms out of the road, get 'em all mopped up and wiped out, and the next thing you know the thetan is very, very sad indeed. Look at all the years he's spent blaming this machinery on somebody else. But when you've gotten through processing all this machinery, what've you done anyway? You've just processed some machinery. And it wasn't sick!

So we have these four major parts, but we are processing the thetan. He doesn't have any mass, he can make space, he can make energy, and he can locate objects in space. He has very definite capabilities. Very positive, definite capabilities. And by the improvement of these capabilities we improve his ability to communicate, and so, improving his ability to communicate, we make him able to handle not just the reactive bank he's mixed up with at the moment, not just the body he happens to be inhabiting or hanging around at the moment, and certainly not his bank of machinery. We make it possible for him to handle large quantities of things -- other people's machinery and anything. It's very interesting what he can do. But he cannot possibly be hung up on the basis of "two things can't occupy the same space". He couldn't be hung up on that one. Another thing he couldn't be hung up on, if you're going to separate him easily, is that it's all other-determined. You see, if it's all other-determined, then he would depend on other things to place him in space, and if he's depending on other things to place him in space, he will sit there and "wait for the auditor to exteriorize him". So our point of approach here is the thetan. Now, the easiest way to approach this is simply to make and break communication with the immediate environment.

Environment is the physical universe, security, it's right there, it's solid. This is the space of the room, the floor, the ceiling, the walls, the objects there, and if we happen to be looking through these things, then it's the walls in the next room, and up through the roof, the air about the house and down through, it's the earth underneath the house. And environment means how far can this individual perceive with great certainty in the physical universe. And that's what we're interested in when we say environment. We don't have the preclear in Chicago, for instance, and then because he is an inhabitant of Iowa, process him in the environment of Iowa. Now this sounds, this sounds too utterly stupid, that anybody could do this, but believe me, it has happened. And what would they be processing? They'd be processing a set of facsimiles.

There is a immense ratio between the amount of facsimiles or energy masses a person has, and his ability to communicate. The more energy masses and more facsimiles which a person has, whether white, or green, or purple, or whether they're black curtains or actual apparent solid objects -- we don't care what these are -- the more energy mass the individual has, the less he is capable of communication. A fellow runs a concept -- and gets a flow past his face. He feels something moving past his face. Ah, we've got a case of energy masses. How did they get there? They got there by the thetan directing his attention in various directions, manufacturing energy the while -- and you're going to process this case as a preclear, this thetan in such a way that he sprays out new energy masses around his body? That would be a curious thing wouldn't it? And you know there are processes that you could run -- not any listed in Intensive Procedure -- which would lead an individual to immediately mock up

more, and more, and more and more energy masses in the vicinity of his body. You could actually artificialize his condition.

He's as well off as he doesn't have to have energy masses.

A preclear has to have energy masses to the degree that he believes he cannot create space and energy. That's a direct index. So we find somebody who has large floating ridges and that sort of thing and this individual is having just that much difficulty. No question about it and no exceptions. It doesn't matter what manifestation he's exhibiting at this particular moment, a person is as bad off as he has these energy masses which are not placed but are floating. You could say they are "floating" energy masses because -- everywhere he walks he's got them. Now he's as well off as he can simply take or leave the walls and other items of the physical universe wherever he finds himself. He can take them or leave them, see them or not see them at will. He's well off when he can do that.

What process would you tailor up in order to accomplish this? Well, you could simply have a preclear sitting in a chair and looking around the room spotting spots in one location after another. It's a fantastic technique. It'll do quite a bit for a preclear, just to have him do this. And actually you are applying this further when you have him get up and walk around and PICK OUT the spots, and TOUCH them, and then at will, BREAK COMMUNICATION with them. And SOP 8-C is actually a gradient scale, and 8-C's Opening Procedure is a gradient scale of getting this done.

There is an additional process that could go along with this. You could have him close his eyes and start checking off spots in the environment.

The case that has had his perception turn on very fully, and then promptly turn off and it has never been on since, has simply practically scared himself out of his wits. His perception turned on and that was too much Is-ness. It was too steep a gradient, he could see everything too clearly, and this made him nervous, it upset him, it has disturbed his thetan digestion, and made him very unhappy -- and what is this? This is just simply a case of too much, and instantly he said "It isn't". He said "Not-is". He took a look at all this environment and said, "Dull down. Get real dull. It better be unreal around here, it's just too bright, it's too loud," and so on.

Well, what happens if we have this person sitting there in the chair with his eyes shut and we just have him look around and spot spots in the room, and a facsimile shows up? We just have him go on spotting spots in whatever he can see. We don't suddenly stop and say, "Oh, you've got a lot of blackness. Let's spot some spots in the blackness". No, you just keep hounding him for some sort of perception of the room. That's what you want. And he keeps spotting spots in the room and spotting them and spotting them and spotting them and spotting them. Just that and no more. Spotting them behind him, above him, below him. If you don't watch him a little bit he'll spot them all in front of him. You've got to direct his attention behind. A thetan has a 360 Deg periphery of vision. There is no "behind", or get thee behind me thetan.

Now, here we have in a thetan, then, a possibility that the moment he really saw the room he'd turn it off again. He'd flinch. And then you keep right on processing in the direction of the room. You see what this would be. They'd flinch, their perception would go off, and you just take it from there and have him spot spots in the room. So he says his perception's all turned off -- well, you just have him find something he can perceive. He says, "I think it's a facsimile. I don't know what it is, really. It doesn't seem to me to be terribly real..." You just say, "Close your eyes. Now spot some spots in the room." The preclear says, "I... what d'you mean close my eyes and spot..."

"Well, can you see anything when you've got your eyes shut there?"

"No... of course not."

“Well, why don’t you look around. Get an impression of anything?”

“Mmmm. Well, what do you know. It’s all black.” He never noticed this before.

You say, “Well, all right. How about this now -- you say it’s all black -- well, is there any place where the black is thinner?” Behind you for instance, or above you or below you? Do you make out anything at all about this room?”

“No.”

“Well, as you’re sitting there with your eyes closed, do you know the location of anything in this room?”

“Yea, well, I know where my body is.”

In course a case like this will probably assert to you violently, if he wasn’t prepared otherwise, that he was a body, had always been a body, would always be a body, had never been anything else but a body, and that you live but once. And he would also tell you that during his study of Korzybski’s Science and Sanity he agreed with him entirely that two things could not occupy the same space. He’ll tell you all these things. It would be a very informative conversation if you let him proceed. You only let him proceed on such a conversation, by the way, long enough to keep two-way communication going, then you get him doing something.

“All right,” you’d say, “Well, do you know of the location of any object in this room?” And the fellow says, “Well, there’s a table right over there, I know that.”

“All right. Look at that table.”

Probably his eyes will pop open and he will stare at it -- but you have him keep his eyes closed. You’d get an exchange something like this: He knows there’s a table over there, and you say “Spot some spots in it.”

He says, “I can’t possibly spot any spots in the table if I can’t see it.”

“Do you know it’s there?”

“Yes, I know it’s there. I saw it when I came in.”

“Well, all right. Spot some spots on it.”

“But I’ll have to open my eyes.”

“Go ahead and spot some spots on that table.”

He finally does. And the blackness starts to get a tattle-tale grey around him, and then it flickers on and flickers off, and perception comes on and all of a sudden he’s aware of the fact that it’s all real, and then he convulsively shuts off all of his perception, and then he lets it turn on again, and then he shuts it off again, and then he flinches this way and flinches that way. Why? He knows it’s dangerous to look at things. He knows that. He knows, again, that it is dangerous to communicate. And he shuts it off before something else shuts it off. He’s there ahead of ‘em. But after it goes on and off and on and off a few times, it’s likely to be more and more upsetting to him for the time, because it’s likely to be getting more and more real. The room is likely to be getting more and more real, more and more solid.

Now you don’t let him completely fly out through the doors and the walls on this process, and let him spot at unreal distances -- spotting at a thousand yards, when a thousand millimeters would be much too great and three millimeters is about what he can tolerate. So we

keep him in the immediate environment, and we mean the physical universe when we say environment, and we mean objects that he's fairly sure are there, and we just work him on that basis, and then, the first thing you know, the walls will start to disappear on him and then they'll flicker on again and then they'll flicker off, and it gets more and more real, and he gets upset about it and then he becomes calm about it and he goes through a lot of variations -- and doing what? Just sitting right where he's sitting and you don't care where that is, spotting spots in the room whether the room is black, green, purple, or whether he's got facsimiles that he's really spotting or not. We don't care what this preclear's doing as long as he continues to spot spots. If he's got a facsimile sitting there, and he shifts his attention on the facsimile he'll go of it. He gets rid of some of this mass.

If he's really just spotting into blackness, really changing his perception direction, you see, then Booom, he'll start looking through the blackness. If you have him look at the blackness and spot spots in the blackness you are validating these masses of energy which a thetan is as bad off as he has. What he's witnessing with all these possessions and masses of energy is his own inability to really mock up something and have it belong to somebody else. That's what he's witnessing.

So there is that process. And out of this basic you get Opening Procedure of 8-C. But you can also do Opening Procedure of 8-C with the thetan, without moving the body. You could have the thetan touch things in the room. But actually you don't have him touch things and let go, you have him look at and look away. And you can carry through all the steps by more or less drilling the thetan in the room -- preclear sitting there with eyes closed, and this becomes a tremendously workable procedure.

Actually its most simple form is to just tell him to close his eyes, and if he knows of any object in the room at all while he has his eyes closed, spot spots in it.

Now the classic Group Processing example of this is a very simple one and that is "Three spots in the body, three spots in the room". Have them spot three spots in the body, three spots in the room three spots in the body, three spots in the room, back and forth and at the end of this time, at the end of an hour's group processing on perfectly green people, you'll have four or five out of the twenty of them exteriorized -- the usual run of people you run into.

8-C done with the body, however, and with no further tricks, its most elementary auditing commands as given in Intensive Procedure, is the only process -- please mark this one down, please remember this -- it's the only process to use on the very, very low or difficult case. Let's put that down, and recognize that when a very low level preclear comes in he has already determined exactly the processing he's going to get. It's down below Two on the Tone Scale, and what it takes to handle this case is Opening Procedure of 8-C, because in essence it is a purity of communication and is a very simple process to use, but that doesn't mean that you don't have to be an artist to use it.

CHAPTER NINETEEN

OPENING PROCEDURE BY DUPLICATION

This will take any case that has hung up and is having difficulty and will move him up through successive tone levels swiftly. One should not suppose that a case will not move on the scale. Auditors have been known to have had the goal, in an auditing session, of a good, quiet, orderly preclear. I never have had that goal particularly, but on the other hand I have scrupulously avoided techniques which merely produced an effect and did not produce a result.

Well, here we have a technique which produces an effect and produces a result, because when you get through with this, somebody's communication level has been raised. When you've done Opening Procedure by Duplication for any length of time above a half an hour you will see a change of tone in the case. Now this can be the change of tone of the G.E. (Genetic Entity: A composite of all the cellular experience recorded along the genetic line of the organism to the present body. It has the manifestation of a single identity. It is not the theta being or "T".)

The G.E. can change tone, the thetan can change tone. But where we have a G.E. changing tone we can then be prepared to have a little bit of a skid in tone when we've been doing Opening Procedure by Duplication.

Let's say we did it for one hour with considerable pyrotechnics. We laid off at that time and did not do it further. We did something else. The fellow seemed to be in fairly good shape. We can expect a few days later to have some semblance of all of this in view again, because the G.E. is in revolt, at which time we would simply do it again. This does not mean that a preclear slumps because he's run on this. He never returns to the same state he was in, but the condition deteriorates slightly which you attained if you did nothing else in the session but Opening Procedure by Duplication. So we shouldn't consider Opening Procedure by Duplication a finished and final thing with a case until we've done it several times.

It goes this way. We get into communication with the preclear. Naturally if your preclear is extremely low scale, getting into communication will require mimicry and other such activities on your part -- anything that would be communication. We get into a two-way communication with this preclear, and we talk to him enough to keep up the communication and to get some idea of some sort of a present time problem -- we see whether he has any. That is mostly in the interest of: you're interested in him and you are in communication now about something which is real to him.

Having proceeded that far, we would then tackle this problem bluntly and head-on. We would tackle any possibility that this individual was unable to duplicate a command many times. And we would go into Opening Procedure and we would do Opening Procedure just as such very lightly for a very short time. We would have him go over and put his hand on the desk, and locate something that's real in the room and go over and take hold of it, and withdraw from it, and we'd march him around the room for a very short time. I do mean a short space of time, because what we're getting down to is the reason he won't be able to perform Opening Procedure very easily.

THE PROCESS

We're going to find two locations in the room, and we'll have an object in that location. We will have a book on the table, and on another side table or windowsill or something of the sort we will have another object, preferably a dissimilar object. We might have a hat, or an ashtray -- any kind of object. One object on the table, one object in some other location in the room -- dissimilar. Don't use two books, for instance.

Now we ask the preclear to go to the first object, and we ask him to pick it up, and we ask him to describe it. We ask him its color, its temperature, its weight. Then we have him put it down. Of course a repetition of "put it down" looks possibly not good, being a sort of repeater technique in itself (Repeater Technique: This refers to the Dianetic technique using repetition by the preclear of a word or phrase in order to produce movement on the time track into an engram containing that word or phrase), but the fact is that that command will work out in this process as the case proceeds.

So we have him put it down, and then have him go over to the window and pick up object two, and have him look at it, describe it -- we have him describe it to keep him in two-way communication. We have him describe it verbally and have him feel the weight of it, and have him get its temperature, and then we have him put it down right where he picked it up. And then we have him go to object one, and we have him pick it up and describe it and feel its weight and feel its temperature and have him really ascertain this. We want to make certain that he did ascertain this, and that's the one thing we hound him about through this process is make sure that he really feels the weight of it you see, that he really gets what temperature it is, that he really tells you what the colors are and the appearance of the object is. And put it down, and go over to position two and pick up that second object and get what its weight, its color, and its temperature is, and we have him put it down in the same place he picked it up from -- be very insistent on that -- and then have him go back to position one.

How long do we do this? We do this until he can do it happy as a jaybird for about ten minutes without a single upset, until he can do this time after time and be just that cheerful about it.

How long is it going to take you to do this? Fifteen hours? Well, of course you realize that an individual knows he would die if he were asked to do this for fifteen hours, and that the auditor would shoot himself long before that time! You realize this to be the case, and then go right ahead and do it for fifteen hours if necessary. The shortest time in which I have been able to do it effectively has been one hour.

I got the preclear all the way from apathy, tears -- real tears (real apathy too by the way), a horrible stomach ache, feet fell off at one point -- preclear was absolutely sure of this -- through rage, antagonism, contempt, boredom, apathy again, fear, anger, antagonism, contempt, apathy, grief, fear, antagonism, enthusiasm, apathy, and so on up again to the first time the guy had ever been on the first level of the Know to Sex Scale, to sexual excitement, to symbols, to anger, to laughter, to apathy, to sex again, and eatingness showed up there just as plain as could be. "Well I suppose I could eat the book. I suppose that's what you want me to do now. Eat it. Well I won't eat it, so there." And another time -- the other object, "I suppose I'm supposed to use this for sexual purposes now. That's what you want. Isn't it!" These various manifestations -- until finally the case simply booted right up on the tone scale and stayed up there. He went through sex, and he went into effort, and then he said "Well, I don't know, it's exercise walking back and forth," and went up to emotion. He began to very interested in the fact that he had had emotions regarding this process, that this process would make him emotional was now curious to him. He became rather curious about the process, the first time we'd gotten into curiosity even vaguely, and went on up to -- all of a sudden -- tremendously brilliant visio (Visio: the ability to see in facsimile form something one has seen earlier so that one sees it again in the same color, dimension scale, brightness and detail as it was originally viewed) turns on, and then went on further until his sonic (Sonic: the ability to recall a sound so that one can hear it again as he originally heard it -- in full tone and volume) picked up, and became intolerable, and then shut down again to a tolerable level.

And the longest I myself have done this on a case is five and one half hours. That's a long time. Actually, I didn't ever while I was running this have any real tendency to get awfully bored. It's enormously interesting how many kinds of reaction this simple process produces.

One of the things they ascertain immediately is that you are trying to get them under complete control. They're sure of this. They become sure of various things -- all of them bad -- concerning you as an auditor, if they're having a bad time of it. A case that is under good control may do this for half an hour well-controlled, emotionally stable, doing it just fine, and then go to pieces, just can't stand it any more, that's all. And so you can expect, I suppose, that the entrance to many cases would be that you've got a very well behaved preclear for a little while, he was being social, and then boy did he go anti-social.

Now this procedure, of course, utilizes duplication to an arduous, wicked extent. Duplication is an essential part of any communication, and if you want to get in communication with your preclear, you'd better get him so he can duplicate. This process does two things. It produces an effect, you can be sure of that, but it also produces a result, which is the only reason we're using it, and produces that result faster than any other process I know of.

Now we've all known that Opening Procedure was pretty good, but what part of Opening Procedure was really hot, since you could run anything in 8-C, any step of SOP 8-C could be run by Opening Procedure. You could make a fellow move around and do whatever that step was. It would take a little figuring on the part of the auditor to get this done, but that's a fact. Well, duplication is tremendously important. It just can't be over-emphasized in a case. And when Opening Procedure ran into Duplication we got an enormous effectiveness and where it was not used to level out duplication, but was used to produce random activity, it was not as effective, anywhere near. So we have this procedure built up this far now. We have: Two-Way Communication, find out if there's a Present Time Problem, then we could do just a little bit of common ordinary Opening Procedure of 8-C, you know, just to get them used to the idea of moving around and not being embarrassed because they're doing something kind of silly -- they often think that -- moves around the room, puts his hand on the table -- and so on into Duplication by Opening Procedure with two objects, picking them up, feeling them, describing them, putting them down in the same place, picking up the second object, describing it, putting it down in the same place, and so on.

What happens to a body when you run too much Opening Procedure on it?

You're bringing the body up scale as an entity. How long will it come upscale as an entity? Until it's very restless. Well, there's our point. There's where your Opening Procedure collapses a little bit, or drops back, therefore it isn't an end-all process, is it? You could probably run Opening Procedure long enough on a body to finally exteriorize the G.E. from the body -- if you see that kind of a complexity. But, however you run it, everything the body's been revolting against is likely to come to the surface immediately and intimately and abruptly. It's likely to be quite violent. What's the body doing? The body has been threatening these revolts for a long time. The thetan quite ordinarily has the body in indifferent control, and the body, of course, runs up through these things blasts through some of his ridges and the thetan discovers that he can handle the body regardless of what it is doing. That is what the thetan discovers and that's why your Opening Procedure by Duplication is effective. It is more effective with the thetan exteriorized than interiorized -- much more effective. But if we ran it long enough on the body itself, and if we addressed the body itself to run it, we would probably get some weird manifestation, some new phenomena showing up -- something weird happening. We wouldn't quite be prepared to say exactly what would happen. In the first place it's not a possibility to audit this straight on the body. The body itself is an animal. On a stimulus-response level it has some intelligence, but if you started to drill that intelligence in any way it would have to come up through too many strata.

But the point is: (1) Opening Procedure by Duplication is violent. (2) The condition attained after an hour and a half or so of Opening Procedure by Duplication can be expected in the next day or so to deteriorate, but not to the level where the preclear's body tone was originally, and would have to be done again to that degree in order to pick up and stabilize the tone. I have done it three sessions running, each one about five days apart, and on the last session there was a stability attained simply by this processing.

But this is not an end-all process. This process gets the case into shape so that he will do a good job of following your instructions and will do a good job of communicating, and it picks up the communication tone of the individual. Therefore the length of time you care to run this as an auditor is markedly shortened.

If it were an end-all process, which itself went for broke, this would be the way you would run it. You would run it an hour and a half or something like that, or two hours, you would wait a day, two days, three days, something like that, you would run it for another hour or two, and you would go three or four days, and you would run it again on the preclear for fifteen minutes or a half an hour. And then you would have attained a stable state and you would have improved his condition. Run in that fashion it is an end-all process, but not run really in the fashion in which you would run it as an Opening Procedure.

But let's look now at how it is combined in a procedure to get the preclear out of his incipient explosion, so that it won't get in your way as an auditor. And just consider Opening Procedure by Duplication, although it in itself is very beneficial, as something by which you, the auditor, are going to monitor the preclear so that he really will be able to do what you say.

If a case were to find it consistently difficult to communicate with you, if a case were consistently seeing everything black, if a case were consistently occluded and consistently twisted your orders and so forth, you would simply have to, you would have no other choice but to, sit down and grind with Opening Procedure by Duplication on this case until he was actually out of the woods on it. Now how about the necessity for lapsed time between sessions? Well, actually it isn't absolutely necessary. I'm talking now about professional auditing.

This is how you would schedule these things optimumply. You would make just a little less progress by doing it a couple of hours a day for two or three days. You would invest perhaps thirty percent more auditing time because the case hadn't had a chance to settle out, but you would get there. Two or three days, a couple or three hours a day. Letting the fellow settle out gets him matched back against his environment and saves you time in the long run. He goes back into his environment, he gets restimulated, then he comes back for an auditing session and he blows that. He goes into the environment again, and you actually, day by day, are getting another type of environment which you're running out of the preclear. It would be an end-all process if you did it this way. It would be an answer in itself, just Opening Procedure by Duplication. That's all you'd do with the preclear.

Well, it's a fantastic process in the way it will blow a case. If a case explodes or blows under this -- there is no other process known which will break loose a covert communication line which is twisting a process. If a case blows that means the case had a tendency to twist a process, because he can't duplicate entirely, and so he was sliding out of your hands, and as long as he can slide out of your hands as an auditor, he then will alter a process every time that process gets him into going which is too rough for him and he's got to go through that rough going.

And you won't be able to drive him through with a concept. So you have Opening Procedure by Duplication standing there as the only thing known at this time which will push a case all the way through into a good communication and an ability to duplicate your auditing commands. If you just did this for a little while with a case, you would still get an improved communication line. If you did it for many, many hours with a case on consecutive days or consecutive weeks, you would get a total improvement in communication on the part of the case. This is a certainty. But where your case blows, gets upset or excited, you can look at this fact, that you must have invested -- if you audited this case by other processes earlier -- you must have invested a great deal of time trying to get the case "to break through the sound barrier". The case didn't. Now why does this require a little violence? One of the things that happens is that the individual knows that he mustn't display any violence, and this technique brings him up to the point where he displays it, and he finds out nothing happened to him. This in itself gives him a tremendous confidence. Did you ever see somebody who got mad

and then found out that nobody objected, and then was cocky evermore? Well, Opening Procedure by Duplication gets you there and saves you an enormous amount of time. The amount of time saved in this is probably in terms of scores of hours, if not hundreds. If you have a case that is hanging up, it might very well go right on hanging up unless you get as violent as Opening Procedure by Duplication. And if the case is hanging up to any degree, why you remedy of course his Opening Procedure by Duplication. It has its own role. It is in itself its own remedy, but what you're trying to do as an auditor is blast through places where he would hang up and which it might take you years to get him through entirely.

So it isn't just a passing thought, this process. It seems to contain in it all those elements which go to make a case stable, and therefore is quite important to the auditor. But if an auditor works this without expecting violence, if he works this without expecting he's going to have an awful time every few preclears, why he's even more of an optimist than I am, which is impossible.

CHAPTER TWENTY

THE IMPORTANCE OF TWO-WAY COMMUNICATION DURING OPENING PROCEDURE BY DUPLICATION

When we say thetan we're talking about an emanation point. We're talking about a person. He writes letters, he greets you in a silly fashion, he does this, he does that. Let's examine, for a change, the Cause end of this line. All too often one examines only the Effect end of the line, because that's where interest gets centered. When we examine the Cause end of the line we discover something of tremendous interest about it: Cause, if it desires to get anything like an ARC effect at the Effect point, must take into consideration the fact that the Effect point is often quite incapable of mocking itself up as Cause.

Here is CAUSE -- DISTANCE -- EFFECT. Now, to get perfect duplication it is necessary that Effect mock itself up in some fashion or other in order to get in the duplication of this Cause -- in order to receive the communication at all.

To give you an example of that: you're an American in France. Now a Frenchman comes up and he says, "Blotheree zomberfiel, ello blfthblorerup." And you say, "Huh." You weren't an effect at all, really, not the kind of effect he intended. He wanted you to put your baggage on the van or something. And you sure get a kind of an only-one feeling when you wander around doing this a lot, and people come up to you who don't speak English, don't speak deaf and dumb, don't speak Boy Scout Semaphore. But they throw a lot of verbalization in your face which is supposed to mean something, and you don't comprehend it. Furthermore, you are acutely aware of the fact that their customs are probably unfathomably strange. For instance, in France, if you're an American, your idea of plumbing and the French idea of plumbing are two entirely different things. Two entirely different things. The whole problem of trying to walk into any civilization is actually the problem of being able to mock yourself up. You don't willingly mock yourself up as a Frenchman. You don't willingly mock yourself up as part and parcel of all these strange and outrageous customs. You could understand this quite easily on the Effect point, but how about the Cause point? The Cause point has, much more so than the Effect point, to mock itself up, because the Effect point mockup is being assisted by Cause, but the Cause point mockup is not being assisted, and it's this fact -- that it's not being assisted -- which causes people to think they need help.

They get used to being on the Effect side, and when they get over on the Cause side they say, "Where's all the help?" So they invent an analyzer and a computer and a Reactive Bank and all kinds of things in order to be over here at Cause point, because the Cause point has to mock itself up just like the Effect point or subordinate Effect points which are not really capable of any great change, which are not capable of mocking themselves up, and will never be communicated to, unless Cause mocks itself up.

So in order to deliver an effect, Cause has to be able to mock himself up on a much higher self determinism than Effect because Effect is assisted in the mockup by Cause.

The ability to be at Cause point is necessary for good communication. You have to be able to be. In other words you have to be able to mock yourself up. If you, instantly, addressed by this Frenchman, were to mock yourself up as a French official, were you able to do this, you see, you would find suddenly that it was "all on the house". Actually something would come out of an interchange of this character -- you say suddenly, "What are you doing without your identification papers?" or something of the sort, and he would say, "Oui, Oui, merci, thank you very much, no checkee ... uh... adios..." or whatever. You have to mock yourself up as something he recognizes as Cause, but what kind of a second sight would this take? What does this Effect recognize as Cause? You mock yourself up as what this Effect point normally recognizes as Cause, and that puts you on the Cause end of the line. It is therefore the Cause end of the line which you should examine, because that's where, as an auditor, you're trying to put the preclear. You're not really trying to put the preclear at the

Effect end of the line. Now if you understand that thoroughly -- you're getting what is meant by the increase of self determinism. We mean we're increasing this preclear's ability to be at the Cause end of the line.

If the preclear came into the auditing room, and all he said was "Hehehehehe", why, you would recognize that he is not quite at the Cause end of the line. In fact, he's probably not at the Effect end either, he's probably half way between the two points, being a communication particle.

An individual can drift away from Cause point, get on the line itself, and become a particle on the line. If you walked up to him on the street and wrote an address on his chest and put a stamp on his forehead and put him into a mail box he'd be perfectly happy about it. Such cases have become communication particles. They are a message. They don't even have a message, they are one. The exhausted messenger throwing himself off his horse and dying at the king's feet as he announces the defeat is being his message. There isn't any reason why anybody should kill horses or messengers just to tell some king that he lost a couple of chunks of real estate, but they used to do it all the time. In other words these people could very easily be communication particles. Not cause or effect at all.

The decline is simply from able Cause to fixed Cause -- and then they start riding out on the line. From an Effect which can receive, to an Effect which has to receive, to an Effect which won't receive. Desire, enforce, inhibit. Eventually somebody would be found avoiding all causes, avoiding being Cause, avoiding anything else which was Cause. Whatever they'd do they'd finally get on the line as a particle or symbol. They go from Cause into the state of Symbol, they go from Effect into the state of No Symbol, but they get on the line, they slide around, and they get mass, meaning, mobility. Now there's nothing totally bad about this. But let's restore this preclear's ability.

When you encounter a person who is incapable of addressing you physically or verbally in any acceptable way that makes an easy communication it is because he cannot change. He is fixed. If you, or the warden of a prison, or the soda jerk down at the corner drugstore, or the President of the United States walked in, he would be found in the same fixed state of address.

Well, if he can't change he is expecting continually that he's going to be the Effect. So we have a preclear sitting there and it's: "Well, you go on and audit. I'll be effect." They sit there in "can't change", unwilling to be Cause. So it's up to you to get the preclear to the point where he is at least conscious that he is moving something, that he is not being moved. That's why you get him to go around touching walls and objects.

But the essence of this is contained in duplication. This person cannot duplicate blithererup, therefore he can't talk with you, but that's true of him and all life. He recognizes his inability to duplicate life and he recognizes that he can't get on a two-way communication basis with it in such a way that it then is assisted in its receipt. Life will receive your messages, if it recognizes that you are a communication source. How does it do that? Well you have to be like it. You have to assist its duplication.

This does not mean that an auditor has to get down on the floor and grovel and duplicate all possible weird and bizarre things that a case could do, because actually all you're duplicating there is the circuit (Circuit: a part of an individual's bank that behaves as though it were someone or something separate from him and either dictates or takes over his actions. Circuits are the result of engramic commands.) but certainly an auditor could be called upon to duplicate any average motion. The person folds his hands, the auditor folds his hands. He sees then a physical gesture being duplicated.

The common denominator of this inability is the duplication factor. In all this communication difficulty, there is basically this inability to duplicate -- so much so that reality could be called and rephrased and redefined as: the degree of duplication. Affinity is actually

the distance and the particle size. Communication of course is Cause-Distance-Effect. And the degree of duplication is what makes reality. You are as real to those around you as they can receive you.

Did you ever get some kind of an inkling around your family that they weren't receiving what you were talking about? Well, that's because they fixed in their minds a long time ago the fact that they were duplicating you little. You were different in size. This all by itself would be sufficient to make the family incapable of receiving information from you. Grandpop's a fairly successful manufacturer, and he's seen this grandson who's been running around while grandpop was in his middle years, and the kid goes off and studies sales promotion, with all the verve of youth and a good background and a good inheritance on this whole line and boy he could give Grandpop cards and spades on the subject of promotion. He moves into Grandpop's sphere of activity and he's on the job. He puts a suggestion memo on Grandpop's desk. Do you think it ever gets read? Ha ha, that's just from Jimmy. And Jimmy goes out and starts to work for another company, and it starts selling the whole field and wipes out Grandpop. "He didn't know what he was talking about." Grandpop has already conceived the idea, you see, that the smallness of Jimmy is not a duplication. And that being his primary idea connected with this individual, he then knows that all he can receive really from this individual is "Ga-ga-ga-ga", "Gimme a lolly pop" and "Gimme a nickel". Something on this order would be within his basic communication line with this child, so afterwards he could not then take the child's communication line seriously. But the child changes, grows up.

The main impatience that you ever had with parents or anybody like that around you is their fixed idea that you are small. Then you come around later and your parents are getting on in years and they're ailing and you say, "Why don't you" -- and give them some sensible suggestion -- you're going to help them. And you find out that almost anything you suggest is unacceptable, because they know they can't duplicate someone your size. They know, if they know anything, that you're about a foot tall, or two feet tall -- wherever they're stuck on the track as far as you're concerned. Mama very often gets stuck on the track at birth with the child, the first view of the child, and after that the child just doesn't ever have a sensible solution to anything. But the child is actually better adapted to the modern environment than Mama is.

Thus an odd thing could happen, if an auditor were not fully aware of this duplication factor in the beingness of the preclear. He could be under the delusion that the preclear is improving -- when the preclear is actually simply getting more like the auditor. Well, that is what the entire field of psycho-analysis is built upon: if we could just get the patient to be just like the analyst, why then we'd be all set. They apparently go through some magic rites, as I was taught -- in order to accomplish what? -- the patient's shifting into the valence of the analyst. Well, the assumption by the preclear of a beingness other than his own -- a valence -- is not the goal of an auditor. The goal of an auditor is to return to the preclear more and more self-determinism. It is to make him capable of being at Cause point and at Effect point by his own self-determined choice.

How many dozen ways could you run Duplication? You could run it the basic way. Highly stylized, very pure technique and simply run it like that. That is the most effective of all processes we know on duplication.

If an auditor failed with this process it would be because he didn't maintain two-way communication. He lets the preclear go on to an automatic endurance run without actually finding out what the preclear really feels, really experiences, what it's all about, what the sensations are. This doesn't mean that the auditor even vaguely varies his auditing commands. The auditing commands are always the same. They're given in the exact order in which they're given in R2-17: Opening Procedure by Duplication. But let the preclear talk to you! That is the difference. If you don't get him at the Cause point of the communication line, you've failed. So we make the preclear talk.

How do we do this? We give the exact command. This is one thing an auditor must learn -- to keep continually in two-way communication while you're running any process without actually varying the process or coming an inch off the process, while you throw in on the communication line what is known as "dunnage", the stuff you put around the cargo to keep it straight in a ship.

The preclear goes over woozily and picks up the book. You say, "Look at it." You ask him to describe it.

He says, "Book?" Something's wrong with this bloke's communication! No, there's nothing wrong at all. You see you've got to get those commands in there just exactly in the order in which they are given. You've got to get him to the book, to the bottle, to the book, to the bottle, to the book, to the bottle. Just exactly. And then if you failed to demand to be answered, by failing to insist that the action be knowingly accomplished, and by failing to listen when the preclear says something -- you would lose. He's picked up the book for the 565th time and all of a sudden the whole room goes purple, and he says, "My God!"

And you say "What is its weight?" Well, cut your throat -- you've just cut the preclear's! Then, when he says "Ooohhhh," and you say "What happened?" it's not going to do any good. You've missed it.

When you see something happen to him, find out what it is. If you see that he's really going through it like an automaton, for heaven's sake pick him out of it. He's told you for the 55th time, "It's cool." I'm not above putting some two-way communication in there, getting him to say something. For fifty-five times, automatically, he was saying "Cool", "Cool", "Cool". He wasn't feeling it any more. He was still running the command you gave fifty-five times ago. Now if you don't make him communicate, if you don't make him describe, and if you don't listen to him, it all goes on an automaticity. It just goes on, and on, and on... and I swear if he ran it on a total automaticity, you could run it for 250 hours with no change in the preclear except that he'd get tired legs.

Now the key to this thing is that each moment must be a new moment. Each action must be a new action. And gradually he peels apart these actions so they are different actions so that each moment is new, and that is the primary manifestation of Opening Procedure by Duplication. The newness of each moment.

So when he just gets repetitive, repetitive, you get suspicious. You say "What color is that book?" I've even gone so far as to say to a preclear who has been describing the object as "a book", "a book", etc., -- "Will you please describe it as an object." New frame of reference. "Well... it's a... it's... it's a... rectangular... it's a rectangular object... made out of paper... cloth... cloth on the outside. How about that! You know, books, they're cloth on the outside." He's back into an interest in the process. I've seen this process run, by the way, with two typewriters!

That's incorrect. They have to be two dissimilar objects. The preclear did get a lot stronger.

You could even get that on automatic. But the second these responses become monotonous you'll know that your preclear has simply settled down to being an Effect. You're trying to get your preclear to be Cause. So let's make him originate communications to you concerning the object. That doesn't mean that each new communication has got to be new and original, but it does have to tell you that he is experiencing that instant and not some other instant.

Opening Procedure by Duplication pulls apart all the moments of a time track. It pulls them apart because of the duplication. Unless each moment is a new moment you don't have that occurring. Book, bottle, book, bottle, book bottle, boooo -- it's a book! It's not a word! Very difficult realizations come through to a preclear.

You've got to know that your preclear can talk, and he must talk, and he must describe what is happening to him. When something happens he's expected to call it to your attention, you're expected then to pay some attention to it.

That doesn't mean you go off the process. But let him tell you about it.

A preclear will exteriorize on Opening Procedure by Duplication. And when he's just about ready to exteriorize and wants to tell the auditor about the fact that he's just about to do this -- that is not the time to give the next auditing command or not be interested. The moment the auditor's not interested there is no auditing going on. I've seen preclears who've just gone "dead in their heads" through not being permitted to communicate.

The auditor is not there to suppress communication on the part of the preclear.

Remember that an obsessive overflow is not a communication. You have to know that. But actual communication on the part of the preclear must not be suppressed by the auditor. So there's the trick, and it shows up in Opening Procedure by Duplication because you do have to keep to the exact process commands. He does have to go repetitively through these exact motions. But you have to make sure that he's experiencing these things. You do that by communicating and you'll find Opening Procedure by Duplication working for you much more speedily than it ever has before. You are not looking out the window when a preclear has an enormous piece of news to impart. You don't sit there looking out of the window, auditing on a sort of prank basis -- "Go over to the book, now touch that wall," or something of this sort, and without letting the preclear communicate, because the preclear gets a very sudden tone drop as a result of this. It'll actually stick him in his head. It has turned off perception. It will do all kinds of things.

Letting the preclear talk, demanding the thing really be described, keeping it out of the automatic machine category, making each moment new and fresh in Opening Procedure by Duplication, and never varying its auditing commands -- that's how you win on this process. You can say other things than the auditing commands, but that doesn't give you any license to vary the process.

You just make sure that a communication is going on.

CHAPTER TWENTY-ONE

VIEWPOINT STRAIGHTWIRE

This is a process which is very simple, very easy to use, and makes continuous advances. This process is not mixed with other processes, it is not part of any Standard Operating Procedure. It is not part of anything you would do ordinarily. It doesn't particularly apply to one case level or another case level. It is an independent process which in itself is very simple to administer.

The formula of this process is: All the definitions and Axioms, arrangements and scales of Scientology should be used in such a way as to bring about a greater tolerance of such viewpoints on the part of the preclear. That means that any scale there is, any arrangement of fundamentals in thinkingness, beingness, could be so given in a straightwire process that it would bring about a higher state of tolerance on the part of the preclear.

To make this more intelligible you should understand what a great many preclears are doing, and why an auditor occasionally has trouble with one preclear more than another. A great many preclears are being processed solely and entirely because they are unable to bring themselves to tolerate an enormous number of viewpoints, and being unable to tolerate these viewpoints they desire processing so that they can fall away from them and not have to observe them, and the auditor is auditing somebody who is in full retreat, and Scientology is being asked to aid and abet the retreat by, for instance, taking the charge off an engram. The auditor at the same time, if he does this, gives the preclear something in the way of a change of viewpoint in that he erases something so that the preclear doesn't have to view it any more.

Well, as you can see, this is a weak direction. What the auditor then is doing is to some degree holding in question the ability of the preclear to tolerate viewpoints. Time itself may very well be caused by an intolerance of past viewpoints -- a person doesn't want viewpoints in the past, and so at a uniform rate he abandons past viewpoints, and when he no longer is following this uniform rate but is abandoning them faster than the uniform rate, he starts to jam up in terms of time, and becomes obsessed about time, becomes very hectic, begins to rush time, push hard against the events of the day, feels that he doesn't have enough time to accomplish everything he is supposed to accomplish, and this falls off on a very rapid curve to a point where an individual will simply sit around idle, fully cognizant of the fact that he doesn't have enough time to do anything. And so doesn't do anything, but knows he should be doing something but can't do anything because he doesn't have enough time. This is idiocy itself, but is the state in which you find a very great many people.

Time is the single arbitrary entered into life and is well worth investigating on the part of an auditor. An unwillingness to tolerate viewpoints will cause a jam in time. The fewer viewpoints which an individual will tolerate, the greater his occlusion and the worse his general state of beingness is. As I said, an auditor can remedy this in various ways. He can erase locks, secondaries and engrams (Lock, Secondary, Engram: A lock is a mental image picture of a non-painful but disturbing experience the person has experienced and which depends for its force on an earlier secondary and engram which the experience has restimulated. A secondary is a mental image picture containing misemotion [encysted grief, anger, apathy, etc.] and a real or imagined loss. These contain no physical pain -- they are moments of shock and stress and depending for their force on earlier engrams which have been restimulated by the circumstances of the secondary. An engram is a mental picture of an experience containing pain, unconsciousness, and a real or fancied threat to survival; it is a recording in the reactive mind of something which actually happened to an individual in the past and which contained pain and unconsciousness, both of which are recorded in the mental image picture called an engram). And by erasing these, he can make it possible for the individual to "tolerate the view", as he finds it in his own bank. Or, an individual can be so processed, as in exteriorization, that he can be caused to go around and look at various things and find out that they are not so bad.

Now, let's just take the mean between these two, and realize that a person who doesn't exteriorize is a person who does not want an exteriorized viewpoint. He does not feel he can tolerate an exteriorized viewpoint. He may have many reasons for this and one of the main reasons he will give is the consideration that someone may steal his body. In other words here you have a tremendously valuable viewpoint which he's likely to lose if he exteriorizes. Viewpoints then must be scarce, viewpoints are all obviously too valuable to be used. And this comes about by viewpoints becoming intolerable.

Let's take somebody standing and watching his family being butchered by soldiers or something of this sort, Indians or other wild people. He would go along afterwards so intolerant of this viewpoint that he would fixate on it. It's the fact that he refuses to tolerate the viewpoint which makes him fixate on it. Now the reason for this lies in the various Agree-Disagree scales in the Philadelphia Doctorate Course lectures -- the fact that if you want anything, in this universe, you can't have it, and that if you don't want it, you're going to get it. This is an inversion, and when this inversion comes about, an individual finds himself overwhelmed each time on whatever his own determinism is. If he starts to desire something he will find out immediately that he can't have it. Actually, he himself will take steps to make sure that he can't have it.

When he wants something to flow in, it flows out, when he wants something to flow out, it flows in. There is nothing more pathetic, for instance, than watching a psychotic try to give up any material object -- trying to make them hand over or give up, or throw away one possession, such as an old Kleenex, almost anything -- just try to make them give it up. No, no, they just won't do it. They clutch it to them and I swear that if you handed them an adder, wide-mouthed and fully fanged, they would clutch it to their bosom. Anything that comes in they immediately seize and that's that.

Now you as an auditor, every time you are trying to get someone to give up something, are asking them to give up a compulsive viewpoint. You will see that every time you ask someone to give up something he is likely to hold it closer.

Now there are many processes. There are a great many processes, there are all the Standard Operating Procedures, and in good hands they all work. There's Universe Processing, there's Advanced Course Procedure, there's Creative Processing, on and on and on and on, a tremendous number of techniques, which can be applied with good sense to preclears. There are an enormous number of Straightwire processes, there's old-time Straightwire. The earliest Straightwire we had, which, by the way, was a marked advance on Freudian analysis, went like this: say we noticed that the preclear is afraid of cats. We would say: "Recall a time when you were afraid of cats", then: "Recall somebody who was afraid of cats", and then: "Find a time when somebody said you were like this person". That was approximately its formula -- just Straightwire, and you sprung apart these valences very gently. However, it required a great deal of good sense on the part of the auditor.

An auditor now and then would become a Straightwire expert, and by just asking searching questions and causing the individual to recall certain things he would bring about a great deal of relief on the case. Why did the relief take place? The individual has been going along in the full belief that he could not tolerate a certain viewpoint and the auditor has come along and demonstrated to him that that viewpoint was in the past and therefore is tolerable. There, in essence, are the fundamentals of such Straightwire. You get key-outs (Key-out: Release or separation from one's reactive mind or some portion of it) on this -- the individual comes up to present time so that he isn't looking in the past -- assuming a past viewpoint. That is a goal of a great many processes, and is quite different from "wipe out the past so he won't have to look at it or experience it".

We have in Viewpoint Straightwire a very, very, new type of thinking. This is not to be confused with what we have been doing for all these many years. It hasn't any connection with it. It has an entirely different goal from that of any process you've ever done on a preclear. It takes the benefit of exteriorization, and reduces it to Straightwire. We get an

individual to race around the universe to look at things observe things, experience things. That's a Grand Tour (Grand Tour: The process R1-9, in *The Creation of Human Ability* by L. Ron Hubbard.) -- that sort of drill -- and here we reduce it right down to a Straightwire which is done interiorized or exteriorized.

One simply goes on the basis that the preclear is in the state he's in because he's not tolerating many viewpoints, and the entire goal of the process is to bring him to a point where he will tolerate viewpoints. That's all there is to the process.

The key wording of the process is "you wouldn't mind". Why do I announce this as something important, something new, something that is very useful to you? There are many varieties of viewpoint. If we were to take Full Knowingness, and squash it, we would find we were first getting into space, which would be perception. We have to perceive to know. This is the level of Lookingness. Now if we condense that we find out that we have to get Emote to know. A person has to emote. We squash perception, and we go into Emotion to know. Now, if we squash down and condense even further, we get Effortingness, and if we condense Effort even further, we get Thinkingness, and if we condense and package Thinkingness, we get Symbols. As an example of this, what is a Word but a package of thought, and if we were to condense Symbols, we would get actually the wider definition of the symbol -- we would get animals. You are probably thinking of it in terms of a viewpoint of a body, if you don't see that clearly, but the definition of a symbol is a mass with meaning, which is mobile. That is a symbol and of course that is an animal, too. An animal has certain form which gives him certain meaning and he is mobile, and if you see that the Thinkingness condenses, then, into form, you will understand art. Just in so many words, a very simple thing.

We have Thinkingness condensing into Symbolizingness, ideas condensing into actually solid objects, and when these are mobile, we have symbols, and when these symbols are observed, they are found to wind themselves up with other symbols and take an associate, they associate with one and another, and take things from one and another, and you get Eatingness. That's a big, big band we're covering in there, that's the whole business of: "I have an idea about a form in this space and matter, and I'm going to get it all together, and I'm going to make this all mass together." Well, the second we've done that, something has been created. Now don't expect that thing which has been created to create anything. This is a thing which isn't creating, and therefore must subsist on an interchange of energy, and we get eating. Now we take eating and condense it down, that is to say, let's make food scarce, and let's make it very hard to get, and we get a condensation which completely escapes time itself, and you get outside of time and you get Sexingness.

That is to say that outside of present time, you get future time, which is sex.

An individual is right straight off the time track between Eating and Sex, and there's nothing will float on a time track like a sexual engram. They just float all over the time track. They don't nail down at all. They are very mobile. The individual, in Eatingness, starts to slide out of present time by this token alone, and people are terribly worried about how are they going to eat tomorrow, and when they have reduced this down to the reductio ad gastronomy you get to a point where "I can't solve this problem of eating tomorrow, therefore I'd better just leave it all up to somebody else," and slide in on the genetic protoplasm line and go up the line a little bit, and get another form, and be that.

That's the best way to solve eating -- just to live tomorrow and maybe tomorrow there will be more food.

A very readily available test will demonstrate this. Notice those countries of the world which breed faster and harder than other countries of the world. We find India and China doing this. And we find that these are two countries which have extreme, chronic food scarcity. Now we can say, well look, they have the greatest food scarcity because they keep breeding people, and that eats up all their food. No, it's the other way around. They eat up all their food, and so they breed like mad. This can be tested also with animals. If you starve an

animal, an animal will procreate faster. If you were, for instance, to give any family of homo sapiens a carbohydrate diet with a very, very low protein content -- by the way this would be, you'd say, terribly uncondusive to the production of estrogen, androgen. It's proven to be very unproductive of it -- but if you give them a high carbohydrate, very low protein diet, the next thing you know they'll start to get very anxious about breeding. That's because you're telling them in essence right where they can understand it in their stomachs that they are unable to obtain enough food today, and so must eat tomorrow. Therefore you get countries of the Western hemisphere, which are very heavily starch dieted, and you find out that these countries are the most anxious about breeding and about tomorrow. There is no reason to stand around and prove this for hours. It's just the Know-to-Sex scale. Condensed knowingness.

"I don't know how I'm going to get along today therefore I'd better breed like mad and appear tomorrow and maybe I'll know then," is about the last ditch. Well, if you notice this, death must come, in this band, above sex. A person presupposes his own death to indulge in the protoplasm line. And so we get people like Schopenhauer and The Will and the Idea closely associating sex and death, and we get certain animals and insects, which so closely associate sex and death that they have accomplished death when they have accomplished sex. Fear Merchants (Fear Merchants: The aberrative personality. This was an early description of what is known as a Suppressive Person, or the Anti-Social Personality) like to tell you about the black widow spider. I don't know why the black widow spider is such an attractive beast to some people, but it is apparently so. I noticed that it exists mainly in California -- Southern California. Lots of black widow spiders down there, and most California girls, if you get into any kind of discussion on the second dynamic at all, will sooner or later inform you that the female black widow spider eats its mate after consummation of the sexual act. Anyway, the main thing here is that actually when you go down this scale, although it doesn't belong on the scale, you'll find death just before sex. Know, Look, Emote, Effort, Think, Symbol, Eat, Death, Sex. Death doesn't belong there, but this shows you where this mechanism comes in.

Now, beingness might also be on this scale somewhere. Beingness might be on this scale, and if it were, you would have a tendency to look for it up toward the top, but the truth of the matter is, it's all up and down the scale, and there is no beingness like that beingness at Symbols. You find the human race having been made into a form -- a mass, meaning, mobility. A mass with meaning which is mobile -- that's a body, that's a word in a dictionary, that's a flag above a building, it can be moved around and it has meaning. You'll find that human beings indulge very, very heavily in being symbols. Well, you'll find people around being sexual objects too. So that this scale sort of interlocks on beingness. A fellow could be some effort -- and actually we don't find beingness at the top of the scale at all, we find it down there pretty low on the scale, so when an individual has gotten to a point where he has to be something, he's practically at bottom. A further examination would have to put beingness at least at Symbols. A person becomes things at that level, and you will frequently find a preclear mainly being his name.

Looking further, we find that there are different kinds of viewpoints. There is something you might call a know-point. That would be senior to a viewpoint. An individual would not have dependency on space or mass or anything else. He'd simply know where he was. There would be a viewpoint, which is a perception point, which would consist of look, and smell, and talk, and hear, and all sorts of things could be thrown in under this category, viewpoint. Ordinarily we simply mean at that level of the scale, looking, but you can throw all the rest of the perceptions in at that level of the scale.

Going down a little bit from there we get something we could call an emotion-point. It would be that point from which a person emotes, and at which he emoted, and then there would be something else called an effort-point, and the effort-point would be that area from which a person exerted effort, and that area into which that person received effort. And as we went down a little bit from that, we'd find we had a thinking-point, and there of course we get the "figure-figure-figure". The person is thinking there, not looking. And if we go down a little bit further than this from a thinking-point, we get a symbol-point, and there, really

properly, we get words. And below that we get an eating-point, and below that we get a sex-point.

If you considered each one of these points below known as an effort to make space, a great deal of human behavior would make sense. Let's take an individual who is simply trying to make space with words. Words don't make good space. So an individual who tries to make space with words sooner or later gets into bad condition. Much lower than that would be a person who is trying to make space with eating. Of course that's inverted, isn't it? And then there's the person who is trying to make space with sex, and that is really inverted. That goes both ways from the middle. The lowest part of the eating scale is excreta and urine. People will try and make space with that. Dogs, for instance, are always trying to make space that way.

There are people who are trying to make space with effort. This is the use of force, this is Ghengis Khan riding out and slaughtering villages. He's trying to make space. You notice that the space had to exist before he could ride out any place.

And we go up a little higher, and maybe you've known somebody who's tried to make space with emotion. And we go up a little higher and we get to the way you do make space which is by looking. And actually you get to make space by knowing. If you just knew there was some space, there would be some space, and that would be all there was to that. Just that simple. That's an effective way to go about it, and looking is another effective way to go about it, and when we get down to emotion, that is getting ineffective. People who try to make space with emotion don't get very far. That's literally, actually, figuratively, or any other way you want to look at it. It's too condensed, and it kicks back. Yet that is above the individual who makes space by working hard or by pushing hard or by exerting force.

In other words we see that there is quite a little bit of band there, at effort, and you'll see that they get less far than people who try to make space with emotion. And now we get into the thinking band, and people who try to make space with thinking, which is about the most unworkable activity that anybody could engage in.

When we get down to making space with symbols, here is a nation trying to fly its flag over all the world, which doesn't make much space, and then we go into eating, and an individual trying to make space by offering things to be eaten. A cattleman, for instance, is doing this. He's making space with cattle. And a fat man is trying to make space with food, and so on. Now when we get down into sex, of course, if an individual could breed fast enough and far enough he would wind up with all sorts of space, he thinks. Of course, he winds up with no space. This is the most condensed activity you can get into: sex. You can see somebody's bank all short-circuited -- jammed on sex. But remember, we are looking at a gradient scale that runs from Sexingness right on up through the levels to Knowingness.

And if anybody comes along and tells you that sex is the only aberration, please laugh. You could answer, Yes, that was how we entered the problem, we found out that people were loopy on the subject of sex. So then we examined the problem further, and having examined the problem for many years, it was discovered that sex was part of a gradient scale of human experience which is basically an activity of trying to make space, and people try to make space in various ways. And when they get down too low on the scale they are abandoning present-time life and at that point they have sunk to the level of Sexingness. They are trying in this way to get some future up there on the track and it is a chaos. It is an attempt to derive experience from external sources, and to pull experience in.

Operation at the level of Sexingness is really a cave-in.

When you examine this band and its inversions up and down the scale you see that it gives us an enormous number of Straightwire questions.

The basic question would reduce this first from the stand-point of viewpoint of the whole scale, and that is where you catch your preclear most ably. You just take viewpoint of the scale, viewpoint of sex, viewpoint of effort, and so forth.

The systematic questions that go into this line would be as follows: you ask the preclear to give:

“Something you wouldn’t mind knowing.”

“Something you wouldn’t mind looking at.”

“An emotion you wouldn’t mind observing.”

“Some effort you wouldn’t mind observing.”

“Some thinking which you wouldn’t mind observing.”

“Some symbols which you wouldn’t mind seeing.”

“Some eating which you wouldn’t mind inspecting.”

“Some sex which you wouldn’t mind looking at.”

Just as mildly and quietly as that. And that’s Viewpoint Straightwire.

CHAPTER TWENTY-TWO

REMEDY OF HAVINGNESS AND SPOTTING SPOTS IN SPACE

Spotting Spots in Space and the Remedy of Havingness is itself a total process. It has many ramifications. It is, you might say, a family of processes. There are many such families of processes, but actually it belongs to the family that we would call Opening Procedure of 8-C or the Opening Procedure family. This is actually a low order of Change of Space so it belongs also to another family, it belongs to a Duplication family, since Change of Space is actually a dramatization of the formula of communication. In Change of Space you dramatize the communication formula with the preclear exteriorized. (You have him be at one point then be at another point, then be at the first point and be at the second point, etc.)

That first point is the source point of something, usually, and so he -- by being the cause and then being the effect and finding out there is a vast distance between them -- becomes rather relaxed about the whole thing. But Spotting Spots and Remedying Havingness could then be said to be cousins to two families -- to Change of Space and to Opening Procedure.

The reason why we relate it to Opening Procedure is that that is the way you are going to produce the most effect with it. As though it were Opening Procedure.

The first contest is to get the preclear to find the spot in space. That is the first contest. The preclear will go around and he will find large spots, two or three feet in diameter. He'll go around and find only spots which come out so far from the walls. He can't find a spot independent of the room itself. His spots have energy in them, they have masses, they have color, they have size. In other words he runs into a lot of trouble. If he does locate a spot it's likely to be "suspended four or five feet above the floor on something that looks like a microphone stand".

The various manifestations which occur are quite fascinating, but all of them are completely useless. You want to get the preclear over these as fast as possible.

You get him over them simply by having him spot some more spots in space. That's all. Space where? In the space of the room. And you have him locate these spots in such a wise that he can go over and put his finger on them. Now, when you have him capable of spotting two or three spots, you've usually shot his havingness to ribbons. So you have to remedy havingness right away. If he starts to get queasy, sick, upset in any way remedy his havingness.

There's nothing more destructive to havingness than spotting some spots in space.

This is a precision action -- you want him to spot a spot in space and then be able to spot it again. That spot is only a location. It doesn't have mass, and you want him to be able to put his finger on it and take his finger off of it, and put the finger of his other hand on it, and take it off, and move his body into it and move his body out of it and so forth. This is a location, and the more certain he becomes of these locations the better he is, and the next thing you know -- why, he's able to tolerate space. And you accomplish this by remedying havingness all the way along.

Now let's suppose you had an individual who had an enormous struggle in spotting some spots in space, and the first spots he spotted were fairly large, and you just kept on nagging him until he finally got actually a location in space -- and he started to get sort of upset. Remedy of Havingness had not been done yet, and he feels rather queasy about the whole thing. Then you say, "All right, mock up something that's acceptable to you and pull it in," and he says, "What mockup?" And you say, "Well, just put something out there -- a dead body." "What dead body?" "What are you looking at?" "Nothing." "What are you actually looking at?"

An interesting contest will come in at this point -- getting him to tell you what he is looking at. What he's looking at in this case is usually blackness, and he won't tell you he's looking at blackness. This is "nothing" as far as he is concerned, but he's looking at blackness, and to get him to finally tell you what he actually is looking at is part of your first contest. "What are you looking at?" Well, it doesn't do you very much good with an individual who can't get any facsimiles, mockups, anything of the sort whatsoever, to mock something up and pull it in, because he's going to have too hard a time.

But supposing he can get a vague or indistinct image out there. Is that good enough? Yessir, that's good enough. Have him mock up several of those and pull them in on the body, and then go on spotting spots in space.

But supposing he couldn't get any. None.

Then enters upon the scene this interesting single straightwire question. The agreement between the MEST Universe and the preclear gets down to a point where the preclear has agreed entirely that two things cannot occupy the same space, and after that he is not able to pull anything in, which is the biggest trap you have, because the way a preclear makes something disappear, makes it vanish utterly is to pull it all the way in, and if he can't pull anything all the way in it continues to persist. How would someone fix up a being so that he's packed in energy masses? By getting him to agree that two things could not occupy the same space, and after that he couldn't destroy any energy mass that was around him. Quite Machiavellian. Well, Count Alfred Korzybski devoted a book to this called, "Science and Sanity", and there are others who have written on this subject, but they go back to Korzybski, and: "It is utterly impossible for two things to occupy the same space." And if that book has any message, it says, Differentiate amongst your words and statements and thoughts, and, two things can't occupy the same space. You nearly summate General Semantics when you say those two things. Now, there is a lot to this, you understand. He examined the mechanics of this, but he examined them in complete agreement with the physical universe. With somebody who has studied General Semantics, you've got a picnic on your hands in doing a Remedy of Havingness. You wouldn't have realized it or recognized it but you have. He can't pull anything in. He can't remedy havingness and therefore can't destroy energy. Why can't he? Well, two things can't occupy the same space, so if he wanted to mockup a car out there to pull it in and remedy his own mass, he of course couldn't do it because he is already occupying the spot where the car would come into, therefore he couldn't remedy his havingness. The mockup disappears just before it gets to him, and the underlying agreement back of that is two things can not occupy the same space. This is of course an utter falsity.

It happens to be a condition which when imposed resulted in this physical universe. That law is what keeps the parts and parcels and spaces and planets of this universe apart. It is an enforced differentiation in this universe which makes space for this universe. That is the law which keeps the space stretched in this universe. So of course Korzybski would get all involved with differentiation. Differentiation on the basis of the MEST universe holding itself apart. Well, that isn't differentiation. So as a result you'll have trouble at this point with anybody who has been in General Semantics. Here is this mockup disappearing just before it gets to him -- in other words he isn't remedying havingness. Now, how do you know he isn't remedying havingness? Because he stays upset, of course. That's all.

He's spotted some spots in space, and "these aren't anything you can feel". It just made him feel kind of frantic, and made him feel kind of upset, and made him feel sick at his stomach -- these are common manifestations -- and then you said, "Mock up an acceptable ...", and he says, All right. And you say, "Well, have you got a dead body there, or what have you got mocked up there?" and he says, "Well, I don't know -- I've got a wrecked car," and you say, "Well, okay. Pull that wrecked car into your body. Now pull another one into your body, and pull another one into your body, and pull another one into your body". And you say, "How do you feel?" "I feel... just as frantic as I did," and so on. He isn't pulling anything into his body. It's disappearing before it gets to him, it's dissipating and other things are occurring there, so that his havingness isn't being remedied.

By the way there's a total process on this. You just simply have the fellow mock up things and pull them into his body, and the more massive the better, until you get planets and stars and black suns and all kinds of things being pulled into his body, and you'll start something called an avalanche after a while, and the planets start coming in with a roar, and it's quite an interesting phenomenon. I've seen one run for three or four days. They blow up every facsimile that gets in their road, they'll blow up the entire energy behavior pattern of the preclear if you keep on remedying havingness.

But if remedying havingness doesn't straighten him out it's because he has agreed to this single agreement which doesn't happen to be true, that two things cannot occupy the same space. He's agreed to that so thoroughly that he can't remedy his havingness.

The reason I'm stressing this is so that you will remember why you ask the preclear this question (and that this is the question, and that there isn't any other question) and that question is simply this -- "What wouldn't you mind having occupy the same space as you're occupying?"

Well, he's got to change his mind immediately, and two things can occupy the same space, in order to fulfill this condition, and without your explaining to him how, he had to change his mind.

Sometimes it takes them five minutes, sometimes it takes them five hours, but the roughest case I know of at this time had to be given this for two hours before he could finally accept something in his own space. That is to say, until he could find something that he wasn't unwilling to have occupy the same space as himself. And this question was asked this case over and over and over and over. This case had never been able to remedy havingness, never been able to get mockups, never been able to do this, never been able to do that. Well, he remedied his havingness, and he got into fine fettle and doing very well indeed. This changed his case. If you're doing a lot of Change of Space you remedy havingness on the thetan. Have him put up eight anchor points and have him pull them in on himself, and eight more and pull them in on himself, eight more and pull them in on himself. When his body gets upset and restive, we simply do this. If he really pulls them all the way in they will disappear. That is how you make things disappear. All space is an illusion, therefore if you pull in all anchor points of course there's no space, so what happened to the anchor points? Well, they didn't exist in the first place, so if you make them occupy the same space as you they'll vanish, and actually recognition simply depends on occupying the same space with. That's why Beingness Processing works.

On this factor of recognition and knowingness in terms of beingness and facsimiles, etc., we simply get this: is he willing to occupy the same space as it? And if he is, it will blow, and if he isn't it won't. So if we get a case who can't remedy his havingness being therefore unable to destroy a concept, a lock, a secondary, and an engram. If he can't remedy havingness, he can't occupy the same space with. If he can't occupy the same space with, he naturally conceives that it's making space, so therefore it has validity. And it won't pull all the way in.

This process is very elementary but it could be hashed up most gloriously by over-running the preclear on spotting spots in space until he was good and groggy, upset and quite ill, and then expecting him to work in some fashion or another. Well, you would have driven him down tone scale to the point where he can hardly hold onto anything long enough to do anything about it. So, you're now going to remedy his havingness and do the rest of this? No, you do this early. Remedy his havingness long before he needs to have it remedied. You don't wait for signs. You could make them appear if you wanted to, but you just do this as a routine process. Whenever you spot a spot in space you remedy havingness, that's all.

The process we're interested in is this one: Spotting Spots in Space. We're not really interested in remedying havingness because this is only dramatizing his dependency on it, so

we're just giving priority to the important thing here, and the priority is the spot in space, that's what's important. The remedy of havingness is incidental.

Why does his havingness chew up? There must be something awfully wrong with the way this fellow's handling energy for his havingness to chew up simply by trying to remedy it. All right, what do we do here specifically? We ask him what could occupy the same space as he's occupying. If we had any doubt about this, and here's where we get the answer to your question about that, if we had any doubt about this we would take up this problem before we fooled around with any spots in space. We would look at this fellow and there he is gaunt and emaciated or bloated, or anything strange with his physiology -- and we would say "Oh, this guy has a little bit of trouble with havingness." You know, he's a banker or something. We could tell professionally. He's a commissar, a banker or a general? There's something wrong with this guy's havingness, otherwise he wouldn't be where he is, that's obvious, if he has to have in some other fashion than simply having.

Using a system like "becoming a general". That's a method of having, you see. You go to West Point, and don't talk back, and graduate, and don't talk back, and get into a War Department post, and don't talk back, and coast along, and don't talk back, and then you have to, of course, get more and more suppressed about how famous you've got to be and the next thing you know, why, you will start to accumulate troops to remedy your havingness... and you've got a U.S. General. You don't do anything with the troops, just accumulate them. That's not just being snide about generals. You can look at somebody and tell whether or not he's having a lot of trouble with havingness. If he's having trouble with havingness, then it might be very wise for you to just sail in on that basis. Let's fix it up quick before we render him liable to anything. That would be a good idea.

But what's important about this process is Spotting Spots in Space. What do we do with all these spots in space? We just spot them, that's what. Well, I know, but what do you do with them after you spot them? Well, you spot them. Well, after you've spotted them then what do you do with all these spots in space? Well, you spot some more of 'em. That's what you do.

Don't look for any deeper significance in the technique than that except this: the preclear is sitting on three kingpin significances, (1) that he's there but he's gotta leave, (2) that he's there and fixed there forever -- being fixed against his will, and (3) that "it was there in that spot but now it is gone". Three considerations there that are very aberrative on the track. Well, you could run these with this process. You spot a spot in the room and have him move the spot into his body. Have him stand there. You tell him: "Now get the idea that you can't remain there. All right. Find another spot. Okay. Now move out of the spot you're in and move this next spot into your body. You got that? All right. Now get the idea that you can't stay there."

You just do this in sequence. He's in the spot, "Now get the idea that..." and you are making him dramatize the basic formula of self-determinism, the location of objects in space. And if you make him locate objects in space one after the other he'll make considerable gains. Put this consideration onto it, that he can't stay there, and have him move to the next spot. You just spot the spot and have him move to it, and you can run the consideration that he can't stay there.

And we have him move onto a spot and then get the idea that he's fixed there and can't move, then we have him change his mind, not just break or disobey his postulate, we have him change his mind, and pick out a new spot, and move into it, and get the idea he's got to stay there forever, and then have him change his mind about staying there forever and get a new spot and move it into his body and get the idea he's going to stay there forever. You'd be surprised at the agony and weariness and tiredness that this one runs.

The next level is to have him spot the spot and get the idea that something very precious has just left there that he will never see again. You have him do this: just walk around and spot

these spots and get the idea each one has just been vacated. There is the manifestation of the fellow trying to fill in the spots with energy -- the mechanism that he's undergoing, and it has a tendency to blow this.

So there are three conditions -- there are probably others, but those are certainly important conditions. Why? Well, what is the manifestation of facsimile? The manifestation of facsimile is not being able to remain in a spot, having to get out, and cussedly taking along a picture of it so that one can say he's still there. That's the rationale behind the facsimile. The facsimile is the solution to the problem.

So then, what is this thing called unreality? Unreality is that activity the preclear has engaged upon whenever he was forced to stay in a place where he did not want to be. His answer to this was to make it all unreal, so that he wouldn't really know he was there. He's trying to be self-determined anyhow, and the way he's being self-determined is to make it all unreal. He could say, "Although I am forced to stay here in prison, stone walls do not a birdcage make." That's why they put psychotics in cells. (Well, that didn't quite add up to a solution. That's just a reason as reasonable as anything else in that field, which has to do with nuttiness, so don't expect it to be reasonable.)

All right, he'll make things unreal then, if forced to stay in the same place. He'll dim down his perceptions on things. That merely says that he's unwilling to be there.

Now what's this thing called occlusion? Occlusion comes about as the consequences of loss. Something precious has disappeared from the person, and if he could still see, he'd notice it was gone, and this would be more than he could bear, so the best thing to do would be to cover it all up with blackness and that'd be that. That would be a good solution, wouldn't it? Let's just hide the whole thing. Let's just hide the problem and then let's just abandon the whole idea, and then, you see, we could still pretend that it's still there.

This is the basis of "it's too good to use", also. People will get to the point where if you give them something extremely valuable they will not wear it or use it. They promptly hide it. Well, that's because they know, if they know anything, that they lose things like that. I remember giving a very dear lady, my grandmother, a present one day because she was going around wearing a watch that was a shame -- very disreputable -- and I gave her a new watch, and she kept right on wearing this old disreputable watch. And later on I was going around looking for something and opened up a drawer, and there hidden in the bottom of the drawer was this brand new, very nice, rather indestructible, by the way, good watch. And I asked her why she wasn't wearing it and she said, "Oh, that's much too nice to use." And so I began to wonder about this a little and went back and just glanced through some of her things there, and do you know she had more things that were too nice to use! It was a tremendous abundance. She couldn't use it, though, it was all too nice.

Well, people do this in another way. When they've lost something they turn everything black. They just hide it and they hide the fact that they've lost it. Also this is "no responsibility" and other factors. And occlusion adds up to too many considerations. Actually the basic occlusion is mystery. Unpredictability. "It's gone and I didn't predict it would go, and so... it's all black." Well, here you're making the preclear predict that something is going to disappear.

So there are these methods of handling spots in space, and these are the main considerations. Now, don't for a moment believe that there are eighty-five other considerations that can be added into that type of processing. The basic Pre-logic on which this is based is a very precise thing. It says: Theta locates things in time and space and creates time and space and things to locate in them. Self-determinism is one's ability to locate things in time and space, and this is directly processing self-determinism, so it doesn't go out in all directions. It's right there and it's on those three considerations: the consideration of loss, the consideration of "I got to stay here so I'll make it all unreal," and the consideration of "Well, I can't have that place any more so I'll carry a picture of it." Most of your preclears whether they

know it or not are walking around with a childhood home over their heads. They can't have that spot any more -- the orientation place -- so they think, to see at all they'd better carry it around with them.

Now Spotting Spots and Remedy of Havingness -- between the two of them the more important is Spotting Spots -- and the consequence of Spotting Spots is having to Remedy Havingness. But why does he have to remedy havingness? Because he can't create energy.

There are obviously lots of methods one way or another which would get somebody out of creating energy. For example, after something had been discovered which the preclear was perfectly willing to have occupy the same space, the next thought was, "Well, let's see now. If there's that... that's energy... I think I'll... I'll mock up a machine of some kind or another to remedy my havingness," and mocked up a generator and then it went on to a power station and then on to suns. In other words the preclear went right on and remedied all of his considerations that he was dependent on anything else of any kind whatsoever for energy, and he started producing it himself. So that is the product of remedy of havingness. In other words, he would be saying that that is a very procedure if you just change the considerations on it all the way on up. This is obviously a finite procedure. You don't go on remedying havingness forever.

So -- why don't you remedy the condition that makes you remedy havingness? There is, then, an indicated process. This will turn on mockups and perception and everything else: "What wouldn't you mind occupying the same space as you?"

And so we have the Remedy of Havingness and Spotting Spots in Space.

CHAPTER TWENTY-THREE

DESCRIPTION PROCESSING

This happens to be the most important subject that you will cover in auditing. It may not be the most important subject in the universe, but it is the most important subject in auditing. This is a Step One, Two-Way Communication procedure. And this is the relatively advanced procedure of conducting a two-way communication, and someone who would have no concept of the four conditions of existence would not be remotely capable of running this process, therefore this would not come at the very early part of one's study, although Step One itself comes early in training.

This requires two-way communication -- every iron you can throw into the fire.

It requires all of your knowledge of Scientology and its theory and practice, to conduct an adequate two-way communication with the preclear, because if you do that you can, just by that and with no further process, resolve his case in a relatively short time. So this must be an extremely important process we are talking about here. It requires all of the knowingness you have of Scientology in order to do it. It is done by a clever auditor. It is not a process which is done by a fellow who, as his furthest effort of cognition toward the preclear, reads off a series of commands. It requires a continuous communication with the preclear -- a two-way communication with the preclear. It requires that you establish it and that you maintain it and that you conduct it in such a fashion that the elements which compose the preclear's difficulty are vanished. Just by carrying on a two-way communication with the preclear, you can cause any difficulty he is having, such as non-exteriorization, such as a failure to take responsibility in other Dynamics, and so on, whatever his difficulties, you can conduct a two-way communication in such a way as to make those difficulties vanish. You will have just as much good fortune with this process as you are willing to be a clever auditor and to follow the exact rules of this.

The primary difficulty with this process Two-Way Communication is that it apparently is entirely permissive, it apparently can wander into any field, topic, subject, address anything -- thereby an individual who is not cognizant of its very, very precise fundamentals would go immediately astray. He would go as far astray as men have gone far astray. It's a process which you can easily get entangled about. It's a process which you can be argued with about.

A two-way communication could be a very broad field, but it has a particular precision area where you as an auditor can concentrate. If you know the exact mechanics of what you are doing, used cleverly, this becomes the best process you ever had. When you don't know its mechanics, and you don't use it cleverly, it becomes the gummiest, most misunderstood, non-advancing sort of a process you ever ran into. So again here is a process that requires judgement yet is very easy to do.

The part of Two-Way Communication we are taking up here could be given a name all of its own, and we would call it DESCRIPTION PROCESSING. It could be given this name, but it's likely to get entirely lost if we always refer to it by this name. In the first place Description Processing would not be its entire description name. It would have to be DESCRIPTION RIGHT NOW Processing. But we had better call it a process known as Two-Way Communication, which is just exactly what it is labelled under Step One of Intensive Procedure, (Intensive Procedure: The Standard Operating Procedure, 1954, given in The Creation of Human Ability by L. Ron Hubbard.) and this comes at this distance into this material because it uses every single thing that you know about Scientology. And the main thing that it uses is this factor: If you establish the As-is-ness of your preclear's condition to his satisfaction it will vanish. And you don't establish its As-is-ness by tracing its consequences, by tracing its basics, by tracing its significances, by discovering what lies under the thing that lies under the thing that lies under the back of beyond the other side of, or "Let's change it all, change it all, change it all," because what will happen? The process will persist

won't it? This is a tricky one, then. It is a process which actually and overtly processes and achieves Alter-is-ness, by using nothing but As-is-ness. You can get a change of case with the preclear very simply, solely by taking his case as it is right now. We want right now, no place else, we want to know how it is right now.

The key question of this process can be codified. The process is not sloppy, it's not all over the place, it is highly precise, and the key question is:

How does it seem to you now?

You could just go on asking this question. That is all you want the preclear to give you. How does it actually seem to him right now. If he tells you about the room, or a manifestation of some sort, or something he likes, or something he dislikes, or something he knows or doesn't know -- whatever it is -- what you want, and all that you want from the preclear about it in this process is how actually does it seem to him right now.

And by doing exactly that, you get change, change, change in the preclear, at a very fast rate -- by doing what? -- by asking for nothing but an As-is-ness. What is the condition as it is right this instant.

If you were a very, very clever auditor, all you would have to do is to take this basic question, How does it seem to you now, and couch it in a thousand different guises, always, always pointing straight at this one, that we want this individual to discuss exactly how it is. We want to know about it. And we don't want any romance, we don't want any embroidery, we don't want any alteration so as to get our sympathy. We don't want any super-pressure on us so that we will do something. All we want to know is how it is. That takes clever auditing.

It's quite a fascinating thing to watch a preclear come into cognition -- not recognition, because he probably never knew it before (re-cognition would be "I knew it but I forgot it"). Conditions exist through him, around him, above him, below him -- considerations exist of which he has no cognition. These have come into beingness without any understanding whatsoever on his part. He's never seen them before and yet they're right there, so what we're interested in is cognition -- looking at it -- and we want the As-is-ness of any and every condition which this fellow has.

The preclear begins to change very rapidly. The first thing you know he is saying, "Well, there's nothing wrong with my throat!"... "The back of my head's perfectly alive." If he doesn't know the formula of what you're doing, and he doesn't track with it at all, and he doesn't know Scientology, you have ceased at that moment to be entirely human as far as he's concerned.

Now I have run this process on preclears who were intensely resistive to auditing, who knew nothing could happen, who generally finished up sessions saying nothing happened, and I received the most amazing sort of result. The person knew something had happened. Cognition had occurred. And it had occurred with considerable action. The person knew this extremely well, that something had happened. You can't run this on anybody without changing his condition. It's impossible to do so. Even if you ran it poorly you'd change his condition.

Running this process you could do this occasionally. You could throw in where and when. Not often or repetitively. Once in a while. (Let's not stick him back on the time track.) And recognize well that if he spots this thing even vaguely in the time and place where it began, you are likely to get a whole chain of things blowing, but we are not primarily interested in that, because where, and what, is present time. Time is not just beginningless and endless. It would seem so, but time is a continuing postulate. It is a postulate which continues to be postulated. All time is now. What we call the future, which is entirely hypothetical, is what will be, and that is not an As-is-ness. You could have an As-is-ness about the future, such as "I am worried about the future," but you don't actually have a future in that preclear. And as

far as the past is concerned, it has no more actual validity than the future. All that exists of the past is what is in the present. And if it's not in the present, so what? You could say, well, it might come into the present. No, it won't. Not if you've got the present straightened out. If you have a preclear in a continuous state of beingness, in this present, which is rising and getting better, and his cognition is better and better and better -- you're turning on his knowingness. And if you turn on his knowingness in the present, his knowingness about the past will increase markedly.

I've had a preclear start out with a statement like, "I am a body, I know I am a body and nothing but a body", and tell me he has "heard things about Scientology and exteriorization" and so forth, and he recites all kinds of things he has picked up from the materialistic practitioners. Well, I read in a psychiatric text once upon a time (this is their knowingness level on this) that people occasionally had the delusion that they were not in their bodies, and that psychiatry used electric shock to move them back into their bodies. This would be more or less the level of practice of monkeys hanging from their tails -- they really shouldn't be fooling around with such things as the spirit. These practitioners sat in their chairs for fifty years and for, I'd say, several million if not several billion hours, and they didn't notice this? Well they were starting out on the basic premise that man is mud is mud is mud, he's a body, and there's nothing you can do about it anyway -- and going at it from this angle they were not likely to find out much of anything but the fact that there does happen to be some mud around.

The As-is-ness of the preclear was what was in the road of all the materialistic approaches to the field of healing. This is not to imply that a medical doctor is out of order in practicing on broken bones, obstetrics and such things -- in other words mechanical structure -- but when it comes over to his doing something about the mind, he has to deal with the spirit, because there isn't any mind. That was the thing they never learned about. They didn't find out that what they were studying didn't exist. They were studying a lump of computing machine made out of neurons and cyclotrons or something of the sort. Well, they could have studied it forever and never found out anything about it, because it has no As-is-ness. They could go on describing it forever, and of course it would continue to persist because it is itself an Alter-is-ness.

Well, don't you make the same mistake with a preclear. Don't go chasing after all the endless significances and symptoms -- in other words, Alter-is-ness, Alter-is-ness, Alter-is-ness -- don't make the mistake of addressing this, because all you will do is perpetuate the condition. Just don't make that mistake. What you want to do is quite something else.

You want to find out how it seems right now. You don't want any action on the part of this preclear who wants to go chasing after significances. He is so fixed on the idea of being an observer that let's let him observe. So there's a white area. He says, "Uh... I don't know... the back of the leg's kind of white and the front of the leg's kind of dark. And there seems to be something shooting up through the leg." "Well, how does it seem to you now?" Keep him looking at it, keep him looking at it now. You just want him to describe it and describe it and describe it. And then communicate and communicate and communicate and communicate, and we don't care if we seem to waste some time with it. So he goes off into some wild excursion, something like, "Well, it seems to me like ... I don't know, I can't quite look at the room when that pain is on. I try to look at the room. I wonder why that is. I wonder why that is. I've had a lot of speculation as to why this is." You can let him talk for a while. It's burning time, but remember you're preserving a two-way communication, and throughout this process you're preserving a two-way communication, and that is its keynote and that is why it continues to work so easily. Your preclear does not seem to be under duress at any time. Believe me, is he interested in his conditions! And in Description Processing you simply use that overtly to get him to describe them as they are.

But this requires a certain sensitivity on the part of an auditor. He's got to know when the preclear starts weaving the fancy tales.

How is he going to know this? The condition does not alter. That's an interesting one, isn't it? He's describing how horrible it is. He goes on and describes this, and describes it and describes it and describes it for three or four minutes, and there's no change at all. He describes it for a few more minutes and there's no change at all.

Don't shoot him.

You could ask him how his feet seem to him. Get him off that subject, because you hit a lying machine, and if you'll just get his attention off of it, why, maybe you'll get some straight answers.

This is where you learn about people. But in what framework are you learning about people? You're going entirely on the very, very basic material of the four conditions of existence. You will see a person run this cycle over and over and over as he does Description Processing. People become so fantastically patterned, they are so predictable when they start this sort of thing -- and they become very easy to process. This is not restimulative, because you're not trying to change the preclear. You're trying to find out how he is. You can do this for hours. Cognitions will occur, such as, that he's actually had a migraine headache for years and he didn't even know it, except that all of a sudden it stopped. All of a sudden, he said, "Wait a minute. What's happened to this pain? I didn't ever know I had a pain here." That sort of things happens in this type of processing.

"Description Right Now" Processing -- Two-way Communication: Step One. This is how you get them into communication, how you keep them in communication and why you keep them in communication along this particular line. You could perform this in 8-C Opening Procedure, but you're simply maintaining a two-way communication. "How does this (part of the room) seem to you now?" You're trying to get the exact condition at that moment which he is observing. You will get continuous change. You are undoing all the change he has put into the condition. But it undoes with great rapidity, so there is some hope after all.

CHAPTER TWENTY-FOUR

GROUP PROCESSING

There is a subject of considerable interest to us, which is quite a remarkable subject, and that is group auditing. There are a number of things to be known about this.

A group auditor is one who stands in front of, sits in front of, or relays by loudspeaker system to a group (and a group consists of two or more people), auditing, so as to improve their condition of beingness as thetans. That is a full, complete definition of a group auditor.

If he's there to improve their condition, he will of course do his group auditing well. If he is simply standing there giving rote commands, he might do something too, because the mechanics of auditing will carry forward a great distance. But if he really wants to make people more cheerful, better, put them up into an operative band, change their condition, make the able more able, then he recognizes as he audits a group that he is auditing a number of preclears and he is auditing them collectively and individually all at one time, and a good group auditor recognizes that this is not unlike driving a twenty-mule team -- it's a trick. So, some people are good group auditors. They recognize what it takes to do it, they don't flinch, and they can do it. And there are some who stand up at the front of a room and give auditing commands, but whom you'd hardly call group auditors. Now what are the conditions under which group auditing is best done:

First, the atmosphere should be quiet. And the methods of ingress into the group auditing room, such as doors, windows, chimneys, and skylights, should be to some degree policed so that we don't get people walking into the session. And this would include, under a sub-heading, the fact that people don't come late to a group auditing session. A group auditor who knows his business simply follows that as a rule. He doesn't let people come late. They just don't come. When they get there they will find the next group auditing session is next Thursday, which fact might be announced on the door. He impresses this upon his people and upon his group, that people mustn't come stumbling in fifteen or twenty minutes after the group auditing starts, fall over a couple of chairs, fall over a couple of preclears, drop a couple of ashtrays, step on a couple of ashtrays, and then drop their pocketbook, upset the chair nudge the fellow in front of them so they can say "excuse me", and, in other words, interrupt the session. That is because of the things that can happen by reason of that. You might have somebody sitting there in the back of the room where these people came in and sat down, who was just at that moment getting into something that was pretty darned hard to handle, and was having to wrestle it with himself. You were there helping him as a group auditor, true, and your next command would have a tendency to straighten this up, but this individual has started to flounder, and all of a sudden somebody comes in and helps him out by falling all over him. This introduces a randomness of unpredicted motion into the environment which is not conducive to that person's case improvement.

So the Group Auditor has a Code all of his own which happens to be the Auditor's Code, but the Group Auditor's Code has some more things to it. And amongst those things is: People don't ever come late to a Group Auditing Session.

Just to give a few other little items on this Code -- he doesn't audit with processes which establish long comm lags. He avoids processes which do this on individual preclears. If he knows that a certain process produces a long communication lag on individual preclears here and there, he certainly avoids it in auditing a group. He audits primarily with techniques which will discover every person in the group alert at the end of an hour's processing. And that certainly doesn't include anything that will give somebody a twenty-two hours' comm lag.

Another part of his Code is: He must be willing to grant beingness to the Group. He isn't a lion tamer sitting up there with a bunch of lions about to pounce on him. He is somebody who is standing up in front of a group willing to grant beingness to that group. And

as he grants beingness to the group, so the group recovers. If he is willing to grant beingness to a group, a great many things immediately fall into line. And these things follow: He gives his commands in a clear, distinct voice, and if he notices that people in one part of the room or another look at him suddenly after he has given the command, or look at him questioningly, he simply repeats the command for the whole group. In other words his mission is to get that command through and registered.

He recognizes and must recognize, that the people to whom he is talking in this group are not an audience. They are a number of people who are in a greater or lesser degree involved in recognizing looking at or resolving problems relating to their beingness, and as such, of course, are slightly out of communication with him. He must recognize this just as in an individual session he has to give his commands clearly, distinctly and get them answered. In a group auditing session he doesn't have the answer. He doesn't get that answer that says, "Yes, I've got that." Yes, I've finished that, and so forth. Therefore he must do all of his auditing on such a basis that it obviates those answers. You see, he gives a command, and he's not going to get a reply from his preclear, and so he must therefore take enormous precautions, actually very exaggerated precautions, to make sure that every word he says is clearly registered to the most anaten (Anaten: an abbreviation of "analytical attenuation", meaning a diminution or weakening of the analytical awareness of an individual for a brief or extensive period of time) person in the entire group. His words must register. He must also be careful to give his commands in such a way as not to give a number of failures to one or more individuals in the group. For instance he says, "Now get a place, get a place where you are not... Just contact that place." And he shouldn't give another, contradictory command until he's sure that everybody in the group has found at least one location. Let's take an example of that. He says, "Get a place where you are not." And he waits for a moment, and several people in the group already have spotted this place with accuracy, and so he says "Get one place certainly, and then some more." Now, what he has done is to take those five, six, eight people in the group who did not find that one place right now right away, and he let it be all right for them to go on and comm lag on it. And he still made it all right for the remainder of the group to go on and get other places.

One does not need to have a stylized patter in order to do this, but that does happen to be a very stylized patter. "Get one place, one place for sure ... and when you've got that one place, get some more, and get some more places."

Now, if the auditor is willing to grant beingness to the group, he'll be heard all the way through the group, and if he's not willing to grant beingness to the group, he won't be heard all the way through the group.

Furthermore, if he's not willing to grant beingness to the group, he'll find himself, willy-nilly, shifting processes half way through. He suddenly decides he'd better run something else. He'd better run something tricky. He'd better run something that's very stunky. We were doing all right, we were spotting the walls of the room, we were doing Group Opening Procedure which, given in the Group Auditor's Handbook (Group Auditor's Handbook: This was a 1954 compilation of group auditing sessions resulting from the Advanced Clinical Courses of that year), is a very precise process. The auditor got that going fairly well, had just gotten that well started -- and he decides -- Well, let's shift off to some... Ah! Duplication by Attention! All right. Look at the right wall, look at the left wall, look at the right wall, look at the left wall, look at the right wall, look at the left wall... uh... I don't know, that doesn't seem to be getting very far. Let's see -- what really should we do. And he switches to another process and another.

The group by this time is getting sort of restless. What's basically the trouble here? Is it the fact that the man doesn't know what he's doing? Well, it could be to some slight degree. But why doesn't he know what he's doing? Every single one of those commands and theory behind it can be found in the publications of Scientology. What's he doing not knowing what he's doing? Well I'll tell you what he's doing. He's trying not to grant beingness to that group. And there will be people in that group who are worried about granting beingness to the

group and all these people getting bright and improving and becoming thetans and flying around and demoniacally attacking people and “You shouldn’t make everybody free like that, you know.”

And these people will step on ashtrays, upset chairs, come late, get up in the middle of a group session and open and close windows, open and close doors, and then we discover, of course, that they don’t want to have beingness granted to them. But particularly, they are worried about the group session going on with this individual granting all that beingness to all these people and improving all these people, and if all these people improved, why, goodness knows what would happen -- something horrible would happen, competition would get too high or something of the sort, or something dreadful would occur. That’s the computation that it’s running on when bad auditing commands are used, and don’t ever think otherwise. No, don’t say, Well, he just doesn’t know. Every one of those homo sapiens, individualized the way he is to an Only-One computation, has some facet of his beingness which is refusing to grant beingness. Every man alive has it to some degree, otherwise he’d never have a game or a contact. There’s always “the other side”. He isn’t going to grant any beingness to the Princeton football team -- that sort of thing. And when you exaggerate this consistently and continually you’ll get somebody who doesn’t want to have any beingness granted to anybody anywhere, and so before he does some group auditing he won’t bother to read over the way you do it. And if he does he’ll do something else. And he won’t study up on his subject, he won’t look over his people, and he won’t audit in such a way as to make them improve or win, and you will find, by the way, that his group session will not be well attended. A group auditor’s group session cannot be anything but well attended. They will be continually well attended, and they will increase in their attendance, to the degree that the individual is willing to grant beingness to people, in other words, do a good job.

That’s the long and short of it, and that’s a very uncompromising statement, and one could say that there are a lot of things which mitigate this statement, but I’ll argue you out of them. The truth of the matter is that it comes down just to the granting of beingness. He will or he won’t.

Now, can that be remedied with him? Yes, when he has a little more freedom. Just a standard auditing session as given in the Group Auditor’s Handbook will bring him up to a point where he will grant more beingness to people. It will do this.

You could run this as a straight process, as a group session -- just “grant some beingness to the front walls”, “some beingness to the back walls”. You could do this if you wanted to. But again this is putting too much significance into the process.

The reason anyone is not granting beingness is that he himself is enchained and enslaved and he feels himself attacked to some degree by the environment, and you’ve got to get him up to the point where he has a little more operating margin in his own survival, and if he has a little survival margin he’s willing to let somebody else survive. He begins to treat survival as a commodity. There are only five quarts of it in the world, and he’s darned if anybody’s going to get any part of those five quarts, because he knows he needs it all himself. Right on this point you can tell immediately a good auditor and a bad one. So there is a case computation at the bottom of group auditing ability.

An individual who is afraid of effort is an accurate measure of this. People recognize instinctively, that a fear of effort, an unwillingness to put out effort, goes right along with “bad off”, “won’t grant beingness”, “got to slow other people down too”. So, do we have a group auditor who sits back and puts his feet on the desk and audits a group? Oh no, we don’t. The group won’t get better, won’t recover, won’t do anything. Why? They’ll sit there and run the commands because they’ve heard that Scientology is a good thing, but they will say, This guy doesn’t care. He isn’t interested.

There is no necromancy involved here. We don't have a beam of energy coming out from the group auditor settling like a little star over the head of every person. That is not the case in point. But there's another case in point:

There's the simple matter of duplication of the communication. Why do people recognize this rather instinctively, that a person doesn't care, if he hasn't energy or effort. Well, here's this individual. He seems to have some vitality. The communication line has as its Source Point VITALITY. And whatever there is at Effect point at the beginning, it will at least wind up at the end with vitality. If you've ever talked to somebody for a while in a rather bored tone of voice, you found them after a while getting bored. This is just "Q and A" (Q and A: From "Question and Answer". This term originally referred to the fact that the answer to the question is the question. Q and A has been used as the term for "changing when the preclear changes". It here refers to the preclear duplicating the beingness of the auditor). Have you ever listened to somebody who was very electrifying -- a William Jennings Bryan sort of a speaker -- pound and hawl and so forth -- and when you look at an audience that's been talked to this way -- they're aroused, they definitely are aroused. The man didn't say anything logical at all at any time during the whole time he was talking, and yet just simply the fact that they are duplicating a speaker who seems to have some vitality comes on through to the audience and seems to give them some vitality. But does it give them some vitality -- no, they are simply duplicating it.

Now a group auditor could sit down, and talk to the group. As a matter of fact (this is a very dangerous thing to tell a group auditor) this actually brings about a little bit better duplication, because the group is sitting down. But if he is sitting down, think of how much now his voice has to do. He can't depend on anything else to do anything for him. Everything he does must be contained in his voice. Everything he THINKS must be contained in his voice. Oh, you say, this then requires an actor. Yep. If you're not willing to be various things, and if you can't be various things at will, you actually haven't even got any business auditing. Why? Because in that case you're trying to keep things from being. And the first person you're trying to keep from being is you. And if you're trying to keep you from being, to any marked degree, you will, on a duplication basis, restimulate this fact on the other end of the line. You'll keep others from being. So a group auditor could sit down. I don't mean he should or must.

As a matter of fact the best results I have ever gotten in group auditing sessions was actually walking up and down in front of a group and picking them out every now and then singly -- "Did you get that all right?" etc. And the group tone just starts going up, and then the fact that they are doing drills which are just dynamite of course in themselves will just practically lift them right straight out of their heads. In one of the last broad group auditing sessions I did I came away from the mike and I was simply talking to the crowd and I was really trying to do something for their cases and so forth, and I was quite interested because it was getting on down toward the end of the series of group sessions. And I got the report afterwards: that there were more people exteriorized during that particular session than in any other single session I had given. Well, here I was feeling more alive, interested, urgent about what was going on and that in itself was communicating, and it was communicating very strongly.

A group auditor who has no wish to have anything happen, however, will be disappointed if he sits there and reads the commands in a flat dull dead voice out of the Group Auditor's Handbook, to a crowd of people. He will still get some results. This has been tested out. We took the worst group auditor you ever saw or ever heard of and gave him some commands that were not too well written and we sent him out to audit. His style was, "Well, I've got some commands here now... I've got some commands... let's see now ... uh... let's see... hum... uh... look at the front of the room... it says here... lookattherightwall ..." And this guy still got some results!

So what we're doing with just the processes themselves is fabulous.

Something important to know about group auditing is this: If you're afraid of a crowd, you won't want to grant beingness to them, because that's why you're afraid of them. You're sure that they're about to interrupt you. You're sure that they're about to jump over the seats and attack you. If you're in that frame of mind toward a group, you will not be heard clearly through the group, you'll have a tendency to change techniques, and your attention hunger will probably cause you to drop ashtrays, lose your place, and other wild things.

Now let's look at this thing called "stage fright", and how a person could resolve it. One way he could resolve it is simply by some kind of creative processing. Just do mockups on being scared to death -- body reacting, jumping, and so forth -- but that's a very crude way to handle stage fright.

The best way to cure stage fright is to walk up on a stage before a vast number of people and do your best, and after you've done that a few times you recognize that this is an As-is-ness, this condition and generally everything connected with it, the strain and so forth, will blow. You just recognize clearly that you're under strain when you talk to this audience. You're just under strain and so what. "So I'm under strain when I talk to the audience" -- and you won't be. All it is is fear of what you will do, that you might do something unpredicted, or something strange might occur, and after you've done this a few times you discover that no strange things occur, that you get away with it every time. You survive, and you become quite accomplished.

There's something else that you could do to improve your capabilities as a group auditor. And that is beingnesses. If you could just practice beingness. You could be actors and be therapists and be swamis and be this kind of thing and be that kind of thing, and just work on it on kind of a gradient scale until you got the idea you could be anything. You could have this run on you, you see, in processing, and this would handle stage fright too, because a person with stage fright is being somebody who has stage fright. That's all there is to it. The answer to the problem is the exact problem.

The whole subject of Group Auditing, then, involves itself today not so much with a knowledge of technique, but involves itself with a stage presence on the part of the group auditor and his command over the group itself. If he's willing for the group to make gains, they'll make gains. If he's interested in giving them wins, they'll have wins. If he's interested in having a group, he'll have one. It's a very odd thing, but the best auditors have no difficulty in collecting groups.

Now, you can't have a feeling of embarrassment toward your fellow man actually and be able to walk up to him on the street and tell him anything or get him to do anything. As long as you have an embarrassment toward people you'll have difficulty collecting a group or running a group or anything of this sort. Well, what is this quantity called embarrassment? It's a matter of exhibition.

Here we have appearance and disappearance as a dichotomy. And a group auditor is somebody who has to be willing to appear, and if one has been compulsively made to appear many, many times against his will -- one of his mother's favorite phrases might have been, "Look at you. Here you are dirty from head to foot and I just cleaned you up. Look at you! You're appearing, you little swine!" -- some gentle upbringing of this character will tend to promote embarrassment. But you shouldn't go looking, for the answer to embarrassment, into deep-seated significances. The embarrassment is that the fellow is there, kind of apologizing for his presence, and trying to disappear, at the same time. That's the As-is-ness of embarrassment. And that's just an As-is-ness. We don't care where it came from. He's apologizing. So one of the first things you could do is simply not apologize for your presence. You might expect people to apologize for theirs but don't you apologize for yours. You're here, and their hard luck they're there too or their good luck that they're there.

But if a fellow's in really good shape, why this is the sort of an atmosphere that goes around a group session -- this atmosphere says: "I'm here and you're right there and I'm real

glad to see ya and you're sitting there and that's awful unlucky for you if you're sick because you're going to get well anyway and you could come in and sit down and not run any of the commands at all and you'd still improve, naturally. That's a matter of course. And I'm sorry you've got some things to be ashamed of, but you know, I haven't got a single one" -- that sort of an atmosphere. A fairly calm atmosphere rather than an excited, ecstatic atmosphere. But even an excited, ecstatic atmosphere or a swami atmosphere or an Amie Semple McPherson atmosphere is better than somebody standing there and saying, "You know I'm sorry I'm up here visible."

So the best way to get into the groove of group auditing is to get your case in good shape just exactly as you would get your case into good shape, just with standard processing -- nothing peculiar, nothing slanted, nothing odd or unusual run on it, just get in good shape. You're a little freer, and as you become freer then you are more competent to let yourself appear.

And the other thing that goes right along with that and is not at all dependent on you getting your case in good shape, is the fact that you just go on making public appearances and group auditing people with this postulate: Everybody's glad to see me, they're very happy to hear me talk, and I'm here and I know at the same time I'm scared to death and that's the As-is-ness of it, so what, but I'm putting on a good show anyhow -- and the next thing you know, why, all of that is gone, all that feeling of strain and tension is gone, and you'll go on and give the group a session.

But you give sessions to people to make them better, not to be somebody standing on a stage running off a set of words. You have reason, purpose and meaning in what you are doing and consider it a personal affront if somebody in this group did not immediately get totally improved after a couple of hours' processing. That's a personal affront, and you treat it as such when they tell you about it. "You mean you've come to one of my sessions and not gotten big gains? Humph!" and, "Well I'll let you come to another session but don't pull this again."

CHAPTER TWENTY-FIVE

SCIENTOLOGY AND LIVING

The application of Scientology to one's everyday life is a vast subject, and the best method of doing this is simply using the A-R-C triangle, with its consequent Chart of Human Evaluation, in everyday living. This takes into account most of the manifestations one sees and which one can evaluate quickly.

This, of course, includes the Communication Formula, and an understanding of that Communication Formula would be an understanding of Cause, Distance, Effect, and the fact that people who are at the Cause point or Source point are very often very reluctant to be Cause, and people who are at the Effect point are very often very reluctant to be an Effect, in both cases of anything.

So they will do various things in communication, such as to move out onto the distance between Cause point and Effect point, and so become a message. People get stuck very easily with this. You can carry all the wisdom you want, anywhere, to anybody, without yourself being a message. Have the message in your hand, put the message on the line, but don't yourself be the message. People as they go between these two points get closer and closer to arrival, and there is the fellow who doesn't dare arrive -- he doesn't dare get to that Effect point -- and there's the fellow who doesn't dare leave, or go any further from that Cause point, and he'll get further and further then from being Cause and he will be more and more an Effect. And you could get these two points pulled together more and more tightly until, although they were not quite the same point, nevertheless you get this series of manifestations.

An understanding of the Communication Formula is very useful in every day life, very useful in understanding life. You'll see somebody who -- everything he's the cause of he becomes the effect of. This goes back a long way down the track. "The Second Law of Magic", it could have been said to be, which is: Don't be the effect of your own cause. Well, of course it's impossible not to be the effect of your own cause, so that in itself is a booby trap. A fellow's a fool if he thinks he can cause something without becoming one way or the other the effect of it. He can cause anything he pleases as long as he is willing to be the effect of what he causes. You are a static, you are a personality, you don't have mass, meaning or mobility as yourself (you're using a body rather than being a body) and you naturally are capable of causing almost anything -- but supposing you were standing there protecting a body, being a body, hiding in a body, and you cause something which you wouldn't like to have happen to the body. Supposing you pick up a book and throw it at somebody and give them a big bruise in the face or something of the sort -- you don't like the effect, so you begin to resist being an effect, and you resist being an effect more and more and more. Actually you're making one body resist being an effect, and after a while, because of the make-up of this universe, where eventually (Anything you resist you get, Anything you resist you become -- the favorite motto of this universe), you become it. In the absence of processing and understanding -- let's modify that to that degree -- if you understand this and if there is processing, that ceases to occur. But here we have people becoming very, very unwilling to be the cause of anything. You'll find they won't give anyone orders because they themselves do not want to be the effect of receiving orders. They'll do all sorts of very remarkable things to avoid upsetting people in their vicinity. Why? Because they're afraid themselves of being upset. They've learned by experience the overt act-motivator sequence (Overt act-motivator sequence: the sequence wherein someone who has committed a harmful or contra-survival act has to claim the existence of "motivators", which are then likely to be used to justify committing further overt acts). If you want to know why people get nervous, it's just because when they make the faintest overt act, they get this tremendously exaggerated package of facsimiles saying, No, no, no, no. "Oh, no, you'd better not talk to those people hard like that or it'll really cave in on you." Well, that is fairly normal in a society. It's one thing to be polite because you can be polite, and it's quite another thing to let yourself be walked all over, and it's still quite another thing to be reactively in apathy.

There is another manifestation which is even more curious, which you will see once in a while, and that is: anything that happens in the vicinity at all, the person knows he is the cause of it. Now it starts with anything that happened to him he knew he basically caused it, which of course happens to be a salient truth. It is true that anything that happened to him he was basically the cause of, but that's way up scale on the chart, and now he just feels this reactively -- that he has become an effect, therefore he caused it. Just automatically. You've got Cause and Effect here so close together that they short circuit. If there is an effect, he caused it, and that spreads out to the broad environment, until you will find an insane person, worrying like mad -- for having caused all of World War II. He must have done something, because there was World War II. It must have been him. He's playing the Only One very hard at this point. Even children will react on this one occasionally. On the death of an ally (Ally: a person who sympathized with or appeared to aid the survival of an individual when he was ill, injured or unconscious and whom the individual now reactively regards as necessary to his continued existence and well being) we see a child walking around worrying, and wondering what on earth he did that killed his grandmother or his sister or whoever. He must have done something. He was the effect of it, wasn't he? He must have done something.

And we get that as the entering wedge into superstition. "Let's see, I'm a victim, therefore I must be guilty of something" -- and they dream up something on the order of "original sin". It's all bad, therefore you must be the effect of it, and that becomes "repent, repent". Well, actually, an individual only needs to accept the responsibility for his own acts, this will take care of things very nicely, and if he recognizes clearly the effects which he does cause, and if he's perfectly willing to cause effects which he dares be the effect of himself, he can walk through this bramble and brush with great ease even as a body. There is a mode of conduct which is available.

Well, I want to call your attention to the Chart of Human Evaluation, which was organized very early in 1951, which has various columns, and which gives behavior characteristics. It is plotted out mathematically on the basis of ARC. When you raise the affinity of a person you will raise his reality and raise his communication. When you raise his communication you will raise his affinity and raise his reality. When you raise his reality of something you will raise his affinity and raise his communication. That is a very good chart to use in order to predict people. It is particularly important for an auditor to use this chart, but it is a chart that can be used in everyday living.

An auditor at one time had studied this chart as just theory on a course. He found it quite interesting And having studied all this, why, it never occurred to him that it was true or real or anything like that. He was perfectly in agreement with it as a mathematical study.

Then one day the thought struck him, that this might be applicable to life at large. What if this chart were true! Of course, people really wouldn't act like that. But he went into a bank and looked around, just watching people go by in the bank lobby, and watching the people behind the desks, and he talked to a couple of people and so on, and he started placing them on the Tone Scale. Well, he did this all one morning, and he came back to class pretty horrified. This Chart was absolutely accurate! It applied to every one of those people out there right across the columns. But what horrified him wasn't the Chart but the fact that people consistently obeyed these levels all the time, didn't know they were doing it or what they were doing and had no slightest inkling of what was going on. One fellow was "1.5-ing" (1.5: numerical equivalent on the Chart of Human Evaluation for the person who is in Overt Hostility. Anger is his standard state. He is capable of taking destructive action and is characteristically trying to stop things). He was acting exactly as a 1.5 should act, reacting across the boards. This auditor went so far, toward the end of morning, as to ask the fellow who was 1.5-ing just casually how his arthritis was, and the fellow said, "Oh! It's terrible!" Arthritis would be a way of stopping something, wouldn't it? An auditor spots these things just in everyday fashion as casually as he'd pick up a blotter.

But this auditor had all of a sudden walked into a completely predictable world./ That is good, but you want to beware of this trap: Let's just avoid "the reason why". The reason why

they're doing what they are doing is ARC, and the reasons they give are the reasons which justify them against the social pattern in which they live. That is the totality of "the reason why." For instance, the cop acts the way he acts because he is a cop. The bank president has to act the way he acts because he is a bank president. His first excuse is his beingness or position and his next few excuses down the line might have been causative things in his life -- it's true that a person put in a position that requires for instance, a 2.0 (antagonism) is likely to at least dramatize being a 2.0 right across the Chart, but this is the curious thing: that he doesn't have to believe it, too. You see, he could be a 2.0 straight across the Tone Scale but he doesn't have to believe it. It's only when he becomes all this seriously that he gets onto this scale. Remember that it's ARC, then, not reasons why. If you fall into reasons why, you can just figure-figure with the rest of them forever.

Just look at this ratio: how much space does the person have on that Communication Formula? How much space has he got? What's his general affinity toward life at large? What's his reality? What is he basically in agreement with? And we look at that, and actually we see these three corners of the triangle forming a plane, and as his space gets greater he goes right on up the scale and right on out the top of the scale, and as his space gets less, why the Source Point and Receipt Point of the Communication Formula come almost together, but it's like walking half way to Chicago. Every time you walked half way to Chicago you of course never got to Chicago. The Source Point and Receipt Point do not ever coincide. They will and can coincide perfectly at the top of the scale, at which moment you've achieved a condition which might be rather poetically stated as a brotherhood with the entire universe, but that's a total affinity, and it is not an enforced or impelled affinity. Affinity which is compelled and enforced does not persist, it simply goes down scale. A free affinity for all of life is quite a different thing.

Now every once in a while an individual may start worrying about his sympathy for life. He realizes that he has some inkling of what ants think about and do. And he knows that a cactus has a certain emotion about it too, and he's likely to start worrying about this and try to pull back. He's afraid he will become these things fixedly, if he goes into sympathy with them all.

But his passport to freedom is his sympathy for all life and its forms. Not compulsive, just his free sympathy. If he were being forced to feel sympathetic towards young boys, we would be certain he would eventually, if he were a thetan, become a young boy.

We recognize in this chart that we have a successful method of prediction, and in ARC in general we have a good scale of prediction, and an individual cognizant of these things can predict the activity of those about him.

In view of the fact that these three items, A, R and C, combined together, are symptomatic of understanding, the degree of understanding which a person has of existence is the degree that he has distance possible in his Communication Formula, therefore we find understanding of existence increasing and increasing and increasing as he goes upscale and decreasing, decreasing, decreasing as he goes downscale. Of course we could add every factor of Scientology into this, but let's add beingness into this, and we find out that an individual is at first, on middle scale, completely free to be anything, and then as he goes downscale, he's more and more compulsively being made to be something and he finds himself something, and this makes him unhappy because he feels that it is not by his own choice. We actually know by As-is-ness and the necessity of altering As-is-ness that he had to appoint an other-determinism to keep something, and this makes him unhappy because he feels that it is not by his own choice. We actually know by As-is-ness and the necessity of altering As-is-ness that he had to appoint another determinism to keep something to go on persisting, and he's more and more avoiding motionlessness, because motionlessness is dangerous to him. Therefore a consistent, continual beingness as something is something he begins to fear, and when an individual is to a point where he has the horrible feeling that if he stood still for a long time in one place, he'd sort of grow roots, or he'd do something peculiar like this, something bad would happen to him. Or if pain turns on because he has to stand still for a while, you would

have a condition there where you have compulsive beingness jibing with this one, which is the same thing -- fear of motionlessness -- and that fear of motionlessness is making him more and more motionlessness. The more frantically this individual goes into motion, the more he becomes a symbol. And, of course, the more he becomes a symbol, the more mass he accumulates, and the more meaning he accumulates. And when you get him down around about .5 (apathy) on that tone scale his "reasons why" -- would be utterly nonsequitur, but boy would they be significant! Mass, meaning and mobility, then, fits in there. Beingness fits in there. To understand life and human beings at large one should recognize this -- that every human being there is, is a thetan being a human being.

An individual would never have become selectively and enforcibly a human being if he had no overt acts against human bodies. He has enormous numbers of overt acts against human bodies -- and as a result he is very, very pressed on the subject of protecting bodies. He mustn't let a body be an effect of anything. He now must protect the body from such things as himself. As he goes down tone scale, whereas he may worship some powerful spirit that throws lightning bolts at him, as far as individual thetans are concerned, to let anyone be three feet back of his head or something like that, is intolerable to him and means that a body is likely to be attacked. You see? "Thetans attack bodies." He knows. They're bad. On the subject of exteriorization this person will pull a trick like this: "Be three feet back of your head." "Are you three feet back of your head?" "Well, you're sure you are, now?" et cetera. And he'll say right at that moment: "Well, put your attention on your nose. Make your nose move down a little bit"... and the person is sitting there saying "Whaaat?" A sudden change of pace. And it'll just hang the preclear in that particular moment in time. We get that kind of a manifestation.

Then there is the subject of something-or-nothing-ness. A thetan is perfectly at liberty to have all the somethingnesses he wants to and any of the nothingnesses he wants to. He can communicate with somethingnesses with great ease. A thetan is something which is above something-and-nothing. A thetan isn't just nothing, you see. He is something which can monitor somethingnesses and nothingnesses. Well, if this is the case then we find that people would be doing one of two things when they get extremely down scale. They would either be trying to concentrate on all somethings, or they would start concentrating on all nothings. As a matter of fact as they go down scale they do this alternately. They fall out of all something, something, something, and they go into a strata where it must be nothing, nothing, nothing, must be something, something, something, and then MUST be nothing, and then MUST be something, and going on down through these strata you'll find human beings around who are utterly compelled to make nothing out of bodies, to make nothing out of cars, manuscripts, any remark which you make, any action. They've got to make nothing out of it. It would just kill them if they couldn't ridicule it. Ridicule is the very lightest method of slapping you to pieces. You'll come up with a favorite joke of yours and it's always been funny to other people around, and all of a sudden this person takes it apart with a snide remark. And you have just won the track meet and boy you're sure happy. You've got a ribbon about a yard long and you're proud of it, and everything's fine. This person says to you, "Do you know your shoes are muddy, and you have some dirt on your face, too." NOTHING. Make nothing there if we possibly can. Well, this is the biggest allowable nothing they can make, and they're being prevented from making nothing of things. They don't know any mechanisms to use to unmock things. Really it's by effort -- energy. They've got to make nothing out of things with energy. The harder they try that the further down they go. Now, when they've got to make something, because they have to have something, they'll get into the same kind of situation. A thetan who is in very good shape could mock up a solid steel pyramid, and if he was in wonderful shape, you could probably see it too. But downscale, he just compulsively has to mock up something, then all of his automaticity is gone into making something and he's objecting to it. He's objecting to every part of it as he goes down. To understand people, then, we would have to understand what kind of cycle this person is on. Is he on a somethingness cycle or a nothingness cycle? Neither one is any worse than the other, but the truth of the matter is that sane people -- and we categorize that just overtly as above 2.0 on the tone scale -- sane people make somethings and nothings at will. They don't have to. They do it to get some action, life, and so forth. And they can change their minds. They're not compulsively making somethings

and compulsively making nothings, continually. Their conduct has a little randomness and difference to it.

There is not really such a condition as “insanity”. There really is no such condition as neurosis. These are simply two arbitrary words that were thrown into the society and they were never defined, and the society so variously understands them, that kids just as sane as anybody stand there calling each other crazy. It’s just a slang. There is an emotion, however, called the “Glee of Insanity” (“Glee of Insanity”: Also called the “glee of irresponsibility”. Manifestation which takes the form of an actual wave emanation resulting basically from an individual dramatizing the condition of “Must Reach -- Can’t Reach, Must Withdraw -- Can’t Withdraw”), which is an intolerable thing for a person.

We could say a person in such a state in relationship to energy that he could not take care of himself, couldn’t feed himself properly or take care of his body, we could call that person insane. But again this is just an arbitrary thing. It really has no definition in this society.

But to understand and predict people at large it is only necessary for you to know whether they make something or nothing out of things, and then remember if you please that their conduct is consistent. They might have a lot of reasons why. They might be doing something unpredictable. But they have a motive which underlies their conduct just to this degree: something, or nothing. They are doing one or the other.

Now there are two other categories of human beings, and one is the category up scale where things can be bad, good at will. The categories from Know to Sex on the upper scale can be good, but when they’re low on the scale, everything from Know to Sex -- and low scale this is all Mystery -- is BAD. And when you get someone where everything on the Know to Mystery Scale is bad, you have a case which is very inverted. It’s well below 2. It’s all bad. That’s why “we’ve got to make nothing.” This is your 1.5. He is actually operating there one hundred percent. He can only operate on emergencies. “We are about to have this tremendous disaster and therefore we are going to have to have this emergency legislation,” and therefore, “We can make this huge army,” so as to make nothing.

They have lost the concept of doing something because it’s fun, and there’s your last keynote. Individuals who can do things, no matter whether good, bad or indifferent or outrageous, simply because they’re fun. An individual who can freely and with a clear heart do things because they’re fun is a very sane person. He’s in good shape.

You can notice the amount of laughter which a person laughs. Laughter has a number of harmonics down the line, but we’re not talking about the harmonics. This is rather upper scale laughter. He doesn’t laugh because he’s embarrassed. He laughs because he thinks something is funny, and if a person laughs fairly often and is very easy in that laughter you’ve got a sane man. Down scale they laugh less and less and less, or laugh more embarrassedly, or compulsively or obsessively, more and more and more, as we get way down to the bottom, and the person there just doesn’t laugh. He doesn’t live, either. He just lies there -- mass, meaning and no mobility. He’s not even a symbol any more.

There in essence if you care to study it, is the Chart of Human Evaluation, and if you care to apply this information to life as a whole you’ll find out that you can know human beings.

But remember you shouldn’t expect them to know you. If their distance in that communication formula is very close together, they won’t understand you, but that doesn’t prevent you from understanding them.

GLOSSARY

ACCEPTANCE LEVEL: The degree of a person's actual willingness to accept people or things, monitored and determined by his consideration of the state or condition that those people or things must be in for him to be able to do so.

ANATEN: An abbreviation of "analytical attenuation", meaning a diminution or weakening of the analytical awareness of an individual for a brief or extensive period of time. If sufficiently great, it can result in unconsciousness. It stems from the restimulation of an engram, which contains pain and unconsciousness.

A-R-C, PRINCIPLE OF: The "A-R-C triangle" is Affinity, Reality and Communication. The basic principle here is that as one raises or lowers any of the three corners of this triangle, the others are raised or lowered, and that the key entrance point to these is Communication. Understanding is composed of A-R-C.

AUDITING: The application of Scientology processes and procedures to someone by a trained auditor. The exact definition of auditing is: The action of asking a preclear a question (which he can understand and answer), getting an answer to that question and acknowledging him for that answer.

AUDITOR: Trained Scientologist. Means "one who listens" and is a person who applies Scientology auditing technology to individuals for their betterment.

THE AUDITOR'S HANDBOOK: This was the manual current at the time of the Phoenix Lectures which contained the Axioms and the Route One and Route Two processes of Intensive Procedure. It forms the basis of and is wholly included in *The Creation of Human Ability* by L. Ron Hubbard, with a great deal of additional material. *The Creation of Human Ability* is a major text and is available from all Hubbard Scientology Organization bookstores. See book list and organization address list in back of this book.

BANK: A colloquial name for the Reactive Mind.

BETWEEN-LIVES AREA: The experiences of a thetan during the period of time between the loss of a body and assumption of another. Given in *A History of Man* by L. Ron Hubbard (see book list).

"BLACK V": A heavily occluded case characterized by mental pictures consisting of masses of blackness. This is a "Step V" in early procedures such as Standard Operating Procedure 8.

CHART OF ATTITUDES: A chart on which in 1951 L. Ron Hubbard plotted with the numerical values of the Emotional Tone Scale the gradient of attitudes that fall between the highest and lowest states of consideration about life. Example: top -- CAUSE: bottom -- FULL EFFECT. **CIRCUIT:** A part of an individual's bank that behaves as though it were someone or something separate from him and either dictates or takes over his actions. Circuits are the result of engramic commands.

COMMUNICATION FORMULA: Communication is the interchange of ideas or objects between two people or terminals. The Formula of Communication and its precise definition is: Cause, Distance, Effect with Intention and Attention and a duplication at Effect of what emanates from Cause. (The ability to communicate is the key to success in life; therefore, this definition should be studied thoroughly and understood. Read *Dianetics 55!* by L. Ron Hubbard for a full practical treatise of communication. See Scientology Book List following.)

COMM LAG, AND "COMM LAG IS FLAT": Comm Lag is Communication Lag: The time it takes for a preclear to give an answer to the exact auditing question or to carry out the exact

auditing command. "Flat Comm Lag" is the point at which the auditing question or command is no longer producing change of communication lag.

CYCLE OF ACTION: The creation, growth, conservation, decay and death or destruction of energy and matter in a space. Cycles of Action produce time.

DIANETICS: Means through thought, or mind. Dianetics is Man's most advanced school of the mind, and is that branch of Scientology which treats of mental anatomy.

DIANETIC RELEASE: One who in Dianetic auditing has attained good case gains and stability, and can enjoy life. Such a person is "keyed-out" or in other words released from the stimulus-response mechanisms of the reactive mind.

DRAMATIZATION: Thinking or acting in a manner that is dictated by masses or significances contained in the Reactive Mind. When dramatizing, the individual is like an actor playing his dictated part and going through a whole series of irrational actions.

DYNAMIC: The urge, thrust and purpose of life -- SURVIVE! -- in its eight manifestations.

THE FIRST DYNAMIC is the urge toward survival of self.

THE SECOND DYNAMIC is the urge toward survival through sex, or children. This dynamic actually has two divisions. Second Dynamic (a) is the sexual act itself and Second Dynamic (b) is the family unit, including the rearing of children.

THE THIRD DYNAMIC is the urge toward survival through a group of individuals or as a group. Any group or part of an entire class could be considered to be a part of the Third Dynamic. The school, the club, the team, the town, the nation are examples of groups.

THE FOURTH DYNAMIC is the urge toward survival through all mankind as all mankind.

THE FIFTH DYNAMIC is the urge toward survival through life forms such as animals, birds, insects, fish and vegetation, and is the urge to survive as these.

THE SIXTH DYNAMIC is the urge toward survival as the physical universe and has as its components Matter, Energy, Space and Time, from which we derive the word MEST.

THE SEVENTH DYNAMIC is the urge toward survival through spirits or as a spirit. Anything spiritual, with or without identity, would come under the Seventh Dynamic. A sub-heading of this Dynamic is ideas and concepts such as beauty, and the desire to survive through these.

THE EIGHTH DYNAMIC is the urge toward survival through a Supreme Being, or more exactly, Infinity. This is called the Eighth Dynamic because the symbol of Infinity stood upright makes the numeral "8".

8D: Standard Operating Procedure 8D (1954). Primarily for heavy cases, the goal of this procedure was "to bring the preclear to tolerate any viewpoint". See *The Creation of Human Ability* by L. Ron Hubbard.

EMOTIONAL TONE SCALE: See **TONE SCALE**.

ENGRAM: A mental image picture of an experience containing pain, unconsciousness, and a real or fancied threat to survival; it is a recording in the reactive mind of something which actually happened to an individual in the past and which contained pain and unconsciousness, both of which are recorded in the mental image picture called an engram.

ENGRAM BANK: A colloquial name for the reactive mind. That portion of a person's mind which works on a stimulus-response basis.

EXTERIORIZATION: The state of the thetan being outside his body. When this is done, the person achieves a certainty that he is himself and not his body.

FACSIMILE: A mental image picture.

FACSIMILE BANK: Mental image pictures; the contents of reactive mind; colloquially, "bank".

FEAR MERCHANTS: The aberrative personality. This was an early description of what is known as a Suppressive Person, or the Anti-Social Personality.

FILE CLERK: Dianetic auditor's slang for the mechanism of the mind which acts as a data monitor. Auditors could get instant or "flash" answers direct from the "file clerk" to aid in contacting incidents.

G.E. (GENETIC ENTITY): A composite of all the cellular experience recorded along the genetic line of the organism to the present body. It has the manifestation of a single identity. It is not the theta being or "T".

"GLEE OF INSANITY": Also called the "glee of irresponsibility". Manifestation which takes the form of an actual wave emanation resulting basically from an individual dramatizing the condition of "Must Reach -- Can't Reach, Must Withdraw -- Can't Withdraw".

GRAND TOUR: The process R1-9 in *The Creation of Human Ability* by L. Ron Hubbard.

GROUP AUDITOR'S HANDBOOK: This was a 1954 compilation of group auditing sessions resulting from the Advanced Clinical Courses of that year.

INTENSIVE PROCEDURE: The Standard Operating Procedure, 1954, given in *THE CREATION OF HUMAN ABILITY* by L. Ron Hubbard.

KEY IN (verb): An earlier moment of upset or painful experience is activated, restimulated, by the similarity of a later situation, action or environment to the earlier one.

KEY-OUT: Release or separation from one's reactive mind or some portion of it.

KNOW-TO-MYSTERY SCALE: The scale of Affinity from KNOWINGNESS down through LOOKINGNESS, EMOTINGNESS, EFFORTINGNESS, THINKINGNESS, SYMBOLIZINGNESS, EATINGNESS, SEXINGNESS, and so through to not-Knowingness -- MYSTERY. The KNOW-TO-SEX SCALE was the earlier version of this scale.

LOCK, SECONDARY, ENGRAM: A lock is a mental image picture of a non-painful but disturbing experience the person has experienced and which depends for its force on an earlier secondary and engram which the experience has restimulated. A secondary is a mental image picture containing misemotion -- encysted grief, anger, apathy, etc., and a real or imagined loss. These contain no physical pain -- they are moments of shock and stress depending for their force on earlier engrams which have been restimulated by the circumstances of the secondary. An engram is a mental image picture of an experience containing pain, unconsciousness, and a real or fancied threat to survival.

MEST UNIVERSE: The physical universe, from the initial letters of matter, energy, space, time.

MOCK-UP: A mental model, construction or picture created by a thetan. A mock-up is distinct from a facsimile in that it is created volitionally, does not necessarily copy any previous experience, and is under the control of the thetan. "1.5": Numerical equivalent on the CHART OF HUMAN EVALUATION for the person who is in Overt Hostility. Anger is his standard state. He is capable of taking destructive action and is characteristically trying to stop things.

OVERT ACT: A harmful or contra-survival action against one or more dynamics.

OVERT ACT-MOTIVATOR SEQUENCE: Overt-motivator sequence: The sequence wherein someone who has committed an overt has to claim the existence of "motivators". The motivators are then likely to be used to justify committing further overt acts.

PRECLEAR: A person who through Scientology processing is finding out more about himself and life.

PROCEDURE 30: The special auditing procedure of which Opening Procedure by Duplication (R2-17 Creation of Human Ability is the first step.

PROCESS: A set of questions asked by an auditor to help a person find out things about himself or life. More fully, a process is a patterned action, done by the auditor and preclear under the auditor's direction, which is invariable and unchanging, composed of certain steps or actions calculated to release or free a thetan. There are many processes and these are aligned with the levels taught to students and with grades as applied to preclears, all of which lead the student or the preclear gradiently to higher understanding and awareness. Any single process is run only so long as it produces change and no longer.

PROCESSING: That action or actions of an auditor, governed by the technical disciplines and codes of Scientology, of administering a process to a preclear in order to release or free him.

"PROCESS IS FLAT": A process is continued as long as it produces change and no longer, at which time the process is "flat".

Q AND A: From "Question and Answer". This term originally referred to the fact that the answer to the question is the question. Q and A has been used as the term for "changing when the preclear changes", and refers in Chapter Twenty-four to the preclear duplicating the beingness of the auditor.

REACTIVE MIND: That portion of a person's mind which works on a stimulus-response basis, is not under his volitional control and exerts force and the power of command over his awareness, purposes, thoughts, body and actions.

REPEATER TECHNIQUE: This refers to the Dianetic technique using repetition by the preclear of a word or phrase in order to produce movement on the time track into an engram containing that word or phrase.

RIDGES: Solid accumulations of old, inactive mental energy suspended in space and time.

R2-40: Route Two, Process Number 40, Conceive A Static. See THE CREATION OF HUMAN ABILITY by L. Ron Hubbard.

SOMATICS: Perceptions, stemming from the Reactive Bank, of past physical pain or discomfort, restimulated in present time.

SONIC: The ability to recall a sound so that one can hear it again as he originally heard it -- in full tone and volume.

SOP: Standard Operating Procedure.

STRAIGHT WIRE: Direct memory processes, or a class of processes found in both Dianetic and Scientology auditing procedures.

THETA CLEAR: An individual who, as a being, is certain of his identity apart from that of the body, and who habitually operates the body from outside, or exteriorized.

THETAN: From Theta, the Static. Word taken from Greek letter (-), theta, traditional symbol for thought or spirit. The thetan is the individual himself -- not body, mind or anything else; that which is aware of being aware; the identity that IS the individual.

TONE SCALE: A scale measuring and relating the various factors of behavior, emotion and thought to levels on the scale. (The book, Science of Survival, by L. Ron Hubbard contains a full description of the tone scale and its applications in life.)

VALENCE: The assumption by an individual of a beingness other than his own.

VISIO: The ability to see in facsimile form something one has seen earlier so that one sees it again in the same color, dimension scale, brightness and detail as it was originally viewed.

Is It Possible to Be Happy?

L. Ron Hubbard

It would appear that our main problem in life is happiness; yet there appears to be a confusion about the ingredients that go to make up this evidently desirable condition. To many the main ingredients seem to be money and leisure. How can one be happy without a new coat, a better pair of shoes, a new car, a better house and the leisure in which to enjoy them? How is it possible to be happy when it is manifestly impossible to have the things one wants and desires? And yet, an individual can have a million dollars and buy everything that he desires and still not achieve happiness. Another, who has worked hard all his life and raised a large family, has looked forward to retiring when he would have the time to do all the things he had always wanted to do. But, after he has retired, is he happy? No, he is sitting there thinking about the good old days when he was working hard.

So this question of happiness needs to be examined. What is it? How does one attain it?

The truth of the matter is (and philosophers have said this many times) that the only happiness you will ever find lies within you.

Actually a little child derives all of his pleasure in life from the grace he puts upon life. He goes out in the morning and looks at the day. And it is a very, very beautiful day. He looks at the flowers and they are very beautiful. He waves a magic hand and brings all manner of interesting things into being in the environment. Do you see the magic of the morning and the beauty of the flowers? Too often when we have become adult the flowers are wilted, if we even see them, and the beauty of the morning is obscured by a cloud.

Our attitude toward life makes every possible difference to our living. It is not necessary to study a thousand ancient books to discover this fact; but sometimes it needs to be pointed out again. Life does not change so much as our attitude towards it.

It is easy enough to lose sight of this when our problems are overwhelming us and we no longer seem able to handle them. When the marriage which we dreamed would be so happy turns out to be a dog fight, the project from which we had hoped so much suddenly falls flat, or the friend whom we had trusted betrays our trust.

Is there anything that we can do for conditions like these? There are many things we can do—the least of them is to take a look at the environment. Just look around and ask yourself, “Where am I?” “What am I doing here?” Once you have found out where you are, then find out what you can do to make it more habitable. The day you stop building your own environment, when you stop creating your own surroundings, when you stop waving a magic hand and gracing everything around you with magic and beauty, things cease to be magical and beautiful. People seek happiness in various ways, hectically, seriously, desperately; but the odd part of it is that they find only what they themselves put there. People become unhappy about life because they have ceased to make life. This is the single difference between human beings. On the one hand there is the human being who is unhappy, miserable, sick, who is not getting along in life and who does not see its brightness. Life is handling him, running, changing, making him. On the other hand, we find somebody who is happy, cheerful, strong and who finds everything in life worth doing. What is the secret about this person? It is very simple. He is busy making life. This is the single difference. The first person has stopped making life because he, himself, has decided that life cannot be made. Some small failure, maybe not

graduating with the same class, not marrying the first man or woman who came along and seemed desirable, losing a car, or just some other minor thing in life started this attitude, and the person looks around one day and says, "Well, I've lost." After that life makes him; he does not make life any more.

This has been the main problem which man has faced and failed to solve and it would be a very dreadful situation if nothing could be done about it. The fact of the matter is that this is the easiest problem of all the problems man faces. Simply stated, it is changing his own and the attitudes of those around him. Everyone seems totally dependent upon the attitude of other people; the attitude of somebody else towards you may make or break your life. There are two problems: changing one's own attitude towards someone else and theirs towards oneself. For many centuries man has desired to know how to change the mind and condition of himself and his fellows but, up to a relatively few years ago, had not accumulated enough information to do so. Man now understands a great many things which he never understood before, and among these can now be placed an understanding of the human mind. Man can conquer himself, and as a result interesting miracles are taking place across this country and the other continents of earth. These miracles consist of people becoming well when they were incurably ill, of people who were unhappy becoming happy, of abolishing the danger inherent in many illnesses and many of the conditions of man. Yet the answer has been with man all the time.

The science of Scientology came about because of the increase of man's knowledge of the physical universe and of energy. Never before in all of his history has man possessed so much information about energy, and, in accepting this, he has entered into his inheritance of knowledge and understanding of his own mind. Scientology has made it possible for man to reach the goal towards which he has been striving for thousands of years: to know himself and, in knowing himself, to know and understand other people and the rest of the physical universe.

THE CODE OF A SCIENTOLOGIST

A Basic Course in Scientology—Part 7

All Scientologists who have been granted the right to train by the Board of Directors of the HASI have pledged themselves to adherence to the Code of a Scientologist. It is also the official code of the CECS* and a similar code has been adopted by the Dianetic Foundation for Dianeticists.

In that Man, until he has gotten above 20.0, lives to fight, it is an extremely simple thing for an individual, finding opponents very scarce, to choose out his own organization as an opponent. This is the basic and actually the only reason why there has been enturbulence in the organizations and groups of this science: some individual lacking sufficient sight to see that the organization was facing a potent and powerful abundance of opponents, himself able only to fight with thought itself, to turn upon his fellow auditors, upon a group, upon an organization, and fight it, to fight the subject matter of his science, to fight the correspondences of his organization, to fight the commas and semicolons of Bulletins, and in short to conduct himself as a one-man thinking machine at war with all of thought. Actually this is not very exciting. Such a person is attacking people very like himself who do not fight back, for others than this person can conceive that the actual opponent and enemy being attacked by this science lies totally outside the perimeter of this science. Find someone attacking his job rather than using his job to help attack existence, find someone using his degrees and awards to attack his own organization, find someone using his rank as an officer to attack his own army and one finds immediately a sick man. If he were not a sick man he would have sufficient power and influence to bring about the changes he conceives desirable without recourse to combat.

In that there has to be a fight for there to be a game, it is not strange to find people who have lost elsewhere attacking their own organizations. When such a person gets extremely decayed, he can only attack himself, and so splits himself up into various entities, or identities, or valences, and quarrels with these. The trick of this universe is to reduce down the eight dynamics by making a person fight each one in turn. The willingness of the thetan to fight aids and abets this. Thus this dwindling spiral consists entirely of what one is willing to fight. There is no peace for anyone below twenty, and that is fairly high on the tone scale. But it is a good game to advance science, civilization, knowledge and understanding into a semi-barbaric world made affluent by its machines. It is a good fight simply to make the world effective enough TO fight, but he who loses in a wider fight will engage in a more intimate quarrel until at last he is only fighting himself. About the saddest thing you would ever care to encounter is a thetan obsessively and continually putting out beams which go an inch or two from him and then come back and hit him. He is not even possessed of a body, he is simply an isolated identity at war with himself, for he feels and has been led to feel, that there are no other opponents.

The Code of a Scientologist is a stopgap to serve in the interim time when all Scientologists are not yet up to a level where they are content to receive for their opponents the logical targets

of the science itself, and for their randomness must pick out the organization and other Scientologists in order to engage in a game.

With all Scientologists subscribing to this code, Scientology will, itself, become a potent forward motion in our world and this universe.

A student is expected to know, in its entirety, and to know it well enough to practice it, this Code.

THE CODE OF A SCIENTOLOGIST

The Code of a Scientologist was evolved to safeguard Scientologists in general, and is subscribed to by leading Scientologists. The Committee of Examinations, Certifications and Services of the HASI has accepted it as an enforceable code.

As a Scientologist, I pledge myself to the Code of Scientology for the good of all.

1. To hear or speak no word of disparagement to the press, public, or preclears concerning any of my fellow Scientologists, our professional organization or those whose names are closely connected to this science.
2. To use the best I know of Scientology to the best of my ability to better my preclears, groups and the world.
3. To refuse to accept for processing and to refuse to accept money from any preclear or group I feel I cannot honestly help.
4. To deter to the fullest extent of my power anyone misusing or degrading Scientology to harmful ends.
5. To prevent the use of Scientology in advertisements of other products.
6. To discourage the abuse of Scientology in the press.
7. To employ Scientology to the greatest good of the greatest number of dynamics.
8. To render good processing, sound training and good discipline to those students or peoples entrusted to my care.
9. To refuse to impart the personal secrets of my preclears.
10. To engage in no unseemly disputes with the uninformed on the subject of my profession.

SIX BASIC PROCESSES

There are six basic processes today in Dianetics and Scientology. Before we consider these processes, let us first consider the essential difference between Dianetics and Scientology. What we are doing could be called, more succinctly, "an understanding of life." Under this heading, we could call anything a science or an art and we could bring in many subdivisions.

Other subdivisions which enter into this represent the difference between a study of life in general and a study of man in particular. Scientology could be called a study of life; Dianetics could be called a study of man. The first four dynamics are devoted to Dianetics. If you read again *Dianetics: The Modern Science of Mental Health*, you will discover that it treats of the first four dynamics. If you examine the first shadows of what we now call Scientology, it treats all of the eight dynamics. In view of the fact that both Dianetics and Scientology operate in the field of man, it should be readily seen that the basic processes of Dianetics or Scientology as they apply to man would be the same. Just because we have used two different words is no reason man has changed. Thus we have our six basic processes and thus we discover that Dianetics and Scientology, up to the point of stable exteriorization, operate in exactly the same field with exactly the same tools. It is only after man is sufficiently exteriorized to become a spirit that we depart from the field of Dianetics; for here, considering man as a spirit, we must enter the field of religion. Thus we have our additional subdivision. Dianetics is a science which applies to man, a living organism; and Scientology is a religion.

The six basic processes are as follows:

- 1. Two-way Communication**
- 2. Elementary Straightwire**
- 3. Opening Procedure of 8-C**
- 4. Opening Procedure by Duplication**
- 5. Remedying Havingness**
- 6. Spotting Spots in Space.**

An additional breakdown of these sections demonstrates that these processes subdivide into some highly important techniques. An additional process is as follows:

1. **Two-way Communication** includes communication lag, scarcity of problems, the Code of a Scientologist, the Axioms of Dianetics.

2. **Elementary Straightwire** includes the Auditor's Code, *Self Analysis*, Memory and Mass and their relationship, under which we get past life loss of memory and what we generally call "next-to-the-last list of *Self Analysis*."
3. **Opening Procedure of 8-C includes** pan-determinism, orders, defenses and the theory and material pertinent to present time.
4. **Opening Procedure by Duplication** includes the communication formula, general theory of ARC and "it must-mustn't happen again."
5. The **Remedy of Havingness** includes the scale of substitutes, the hide-to-curiosity scale, Expanded Gita, mock-ups and engrams, overt acts and motivators, flows and terminals, the fact that two things can't occupy the same space if one is to have a universe, significances and problems and, in particular, the scarcity of problems.
6. **Spotting Spots** includes "space, the theory of," disinterest, importance, as-isness and the conditions of existence and separateness.

Appended to these subjects is one of equal importance in that it is the prediction of human beings. This is included, and could be called part seven of these basics. *Science of Survival*, with its dissertations on the Theta-MEST theory, ARC, and the Chart of Human Evaluation, is, indeed, a study of the prediction of homo sapiens.

It has been discovered in the field of training that an auditor has to be thoroughly versed in these seven items. He must be able to be expert in processing people using the six processes, and his understanding must be increased to the seventh item as included in the book *Science of Survival*.

How thoroughly does one have to cover any one of these subjects in order to render an auditor conversant with it? It has been found in the Phoenix Certification Course that even auditors who have studied this material before coming to the course had to be rehearsed on it a minimum of *eight times* and had to be carefully supervised through each one of these at least eight times, had to audit at least ten or fifteen hours on each process under supervision, and had to have each one of these processes run on him expertly for many hours before he finally was able to practice them with such skill that he produced uniform results. This is in spite of the fact that these particular processes are simple. Indeed, they are so simple that an auditor has a tendency to look at them and use them as though they were also pliable. Their simplicity is residual in the fact that they are the exact processes necessary to produce the exact results of Dianetics and Scientology.

It has been found that the simplicity of these processes was the stumbling block in their use. One instance in one HCA unit: a class went through for five weeks without entirely grasping the theory and practice of communication lag. Amongst this class was an auditor-student who was so expert at giving indirect, yet seemingly direct, answers that he had actually evaded the understanding of his fellow students. This person had yet to give a precisely direct reply to a question asked him. An instructor sat down with this student and for forty-five minutes asked him the same simple question. At the end of that time the student gave at last a direct reply, and this reply was the first time in the course when he had answered a question straight. A precision definition of communication lag is "the length of time, whether verbal or silent, intervening between the auditor's asking of a specific question and the specific and precise answer of that question by the preclear." It would not matter then whether the preclear continued to talk about something else than the question, or simply remained silent, this would still be communication lag. The class had not entirely grasped this fact in that they assumed that an indirect or an almost answer was sufficient. Rapidly in the next two auditing periods the case of the student broke, simply because his auditor now understood exactly what this person was doing with auditing questions and now demanded precise answers to questions, at the same time retaining ARC with his preclear.

The processes of Dianetics, as one can see, stress bringing a preclear into present time. In the old days we did this by running engrams, running locks and unsticking the preclear in general from various incidents in the past. Now we approach the problem far more directly. The Opening Procedure of 8-C is putting the preclear into contact with what is present time. The Remedy of Havingness will actually give the preclear enough energy masses to permit his starved condition to let go of the energy masses he is holding to him. The energy masses he is holding to him are commonly engrams with significance and content which make him very unhappy, but not as unhappy as he thinks he would be if he no longer had this energy. The motto of an individual seems to be "Any energy, even with content as vicious as an engram, is better than little or no energy."

Here, with this list of processes, we have before us the basic training for the Dianeticist and Scientologist. These processes have now remained stable for some eight months. In spite of all the attention and tests they have received, little or no improvement has occurred in the actual form of the processes, and the processes and the commands have remained steady and stable.

In view of the fact that the thetan exterior is described fully in the second chapter of *Dianetics: The Modern Science of Mental Health*, and in view of the fact that we have now with the command "**Be three feet back of your head**" the "one-shot clear," and in view of the fact that the instructor in London with his Advanced Clinical Course [1st London ACC] only three weeks deep had exteriorized successfully all of his students, we see we do not have any real problems in terms of processing or processes today. We can do it. An auditor *who is well trained* can achieve results with these basic processes which in any other age would be called miracles.

There are people around who desperately need it as a process who believe and who would have you believe that the Opening Procedure by Duplication techniques are the most vicious things ever invented. Compare this with the fact that these people also feel bounden to go out and crusade amongst their fellow men to teach them how bad Dianetics and Scientology are. These two facts combined should tell you something concerning duplication. The very thought of duplication is so hideous to some people that they are utterly unwilling to face the slightest chance that they might be brought in to a willingness to duplicate. These people have had things happen to them which are bad enough to make these people postulate that certain things mustn't happen again. Duplication means that things must happen again and the process of duplication itself balances out and makes a person easy about his past.

In the process of running Opening Procedure by Duplication hypnotism very often comes off of the bank. Here we have an example of unhypnotizing. The process of hypnotism is a monotony and a central fixation on some one object. Opening Procedure by Duplication, using two objects and using an alert and aware procedure, contacting and examining these two objects alternately, tends to unfix a person from points in the past. Naturally, this begins to run out hypnotism. A person run for only 15 or 20 minutes on Opening Procedure by Duplication might very well feel himself getting more and more hypnotized; by the time he has been run 45 minutes or an hour, this sensation has worn away and the person is far more alert than he was at the beginning of the session. It is quite common to run Opening Procedure by Duplication for several hours, and Intensive Procedure as given at headquarters of the HASI is run precisely as given and taught upon preclears for a minimum of five hours before the HASI is content to release a preclear as in good condition. If the preclear cannot duplicate, his arrival at a state of good condition will simply be a signal for him to have a "no duplicate" fixation on feeling good. Thus the auditor would have brought him up to a level of feeling well and immediately afterwards the individual, being able to have things happen only once, would then have to feel bad. Here again is the problem of exteriorization which results soon afterwards in re-interiorization: the person has exteriorized, he has the fixation that something must happen only once, and thus he will go back into the body and will not come out again. This is all under the heading of duplication. Opening Procedure by Duplication wakes up the preclear, puts his body back into balance and gives him a brighter outlook in general and makes him fear the past much less than before it has been run on him. He is far better able to control his body and his

environment than previously and remarks that incidents have far less effect upon him than before. This does not look very much like hypnotism, now, does it?

With these processes a trained auditor—and we emphasize *trained*—is able to get the results which are called for and described in all the earlier books on Dianetics and Scientology. The reason one did not see these results more often was that the auditor himself could not duplicate the auditing commands, and thus anything and everything was being run but a minimum of result was taking place. I was running one preclear one day who was a very old-timer and who had been run many, many hours on the techniques contained in *Dianetics: The Modern Science of Mental Health*. I was running him on processes which ran out all of his earlier auditing. He broke down under this processing and began to curse, saying, “If only once—if only just once—I had been permitted to run a second time through an engram by my auditor; if only just once I had been able to run the secondary once more! But no! I was never given the chance to go through the engram a second time.” Now those of you who know the techniques of Book One know definitely they call for a continuous running through, over and over, of the same incident so as to de-intensify it. This is the sort of complicated duplication which the preclear was asked to do which resolved at once his ability to duplicate and the fact that it mustn’t happen again. Thus when auditors failed to return people through engrams and secondaries, for a second, fourth, fifth, or even tenth time if necessary, it then became impossible for these early techniques to work.

In training it is very difficult to relay the theory and processes to people who are not very alert and who cannot duplicate. One can say straight to a class that such-and-so is observably true, and the class will immediately agree that something is observably true, but immediately after leaving the classroom, will believe in themselves that an entirely different statement had been made than the one they agreed with. They will then agree with this different statement and all sorts of oddities in the form of theory and techniques become circulated.

In the next *Professional Auditor’s Bulletin* I am going to give you a rather thorough rundown on two-way communication and on the bulletins subsequent to that I am going to give you, for the first time, in written form, a considerable dissertation on these processes and the exact auditing commands and the results to be looked for.

But there is one thing I am probably not going to cover again, and this is an odd fact which has shown up in our training experience here and in my handling of a great many auditors. This has to do with the case of the auditor in particular. I could write an entire series of PABs on this subject, but I am sure this statement will be enough. The case of an auditor, one who is skilled in the processes of Dianetics and Scientology, and the case of a preclear, one who has just walked in off the street without further knowledge, are entirely different cases, as both Dianeticists and Scientologists know. At one time the cases of Scientologists and Dianeticists were considered so much with horror on the part of other Scientologists and Dianeticists that one audited a fellow practitioner with considerable reluctance. Dianeticists and Scientologists were renowned to be tough cases.

I have found now what made them tough cases. The preclear has an entirely different goal from the auditor. The preclear is there to get well: the auditor is there to make the preclear well.

When we consider this further, we see that the ability of the auditor to control minds and mental reactions is dependent upon his getting results in preclears. The preclear’s results simply stem from the preclear’s gained ability to control his own mind and its reactions. Thus, of course, we have entirely different values.

An auditor who does not consistently get good results is going to have his own case cave in on him. The only way an auditor can keep his case up is to get continuous and predictably excellent results upon preclears. Thus an auditor, to have his case in good order, would have to be in good order as an auditor; he would have to be able to get results upon those he processed. In view of the fact that he could get results upon other human beings, he could then, of course,

know continuously that he could control human reactions and mental reactions; and so, with this confidence and this control, be completely unworried about his own case and be able to do actually anything he wished with his own mental machinery.

The case of the auditor actually depends upon his successes in auditing. Thus in the Certification Course in Phoenix we stress today only the skill of an individual to audit, and we discover consequently that, as the auditor gets results upon his fellow student and as he gets results on outside preclears, his own belief in his ability to handle the human mind soars to such an extent that as a case he ceases to be in the concern category. He of course is audited and without being audited he would not know the results which would happen in a preclear, but his actual case gains depend on his gains on preclears.

Now with today's techniques we can guarantee those results on preclears. We can demonstrate to any auditor that he can make anybody well, if the person is even vaguely breathing, simply by using with skill and understanding, as trained, the above six processes and the seventh, which is actually an understanding. Here is the problem of the auditor's case resolved. The way to have one's case in excellent condition is to have continuing confidence in one's ability to get results on preclears. In the Certification Courses in Phoenix and London we work solely in the direction of giving an auditor confidence in his ability to handle the aberrations of others and we discover that with this gained confidence the fear of his own behavior vanishes; and thus an auditor becomes a very, very capable clear.

FOREWORD

SECRET! Secrets, secrets SECRETS! Ah, the endless quest, the far, far search, the codes, the vias, the symbols, the complications, the compilations, the mathematicity and abstractacity of secrets, secrets, secrets.

And truth. TRUTH! From Keats to Johnny Jones, we all have traffic with the truth, truth, TRUTH! The professors have a truth, the religionists have a truth, the stars and almost anything but government have a truth, truth, TRUTH.

Knowledge! Endeared as a precious torch, abhorred as a neurotic's nightmare, it is all knowledge, knowledge, Knowledge! You get diplomas for it and buy books full of it, you perish for the lack of it or triumph in the absence of it, but whatever it might be, knowledge is precious, dangerous, valueless and horrible and craved.

And what is knowledge? And what is the SECRET? and what is TRUTH?

Pontius Pilate asked the question when he washed his hands. Alexander executed messengers when the Truth was unpalatable. The Chaldean priest corralled a bit of truth and ruled Chaldea into yesterday and Babylon into dust motes. And rulers and men, scholars and generals have condemned with it, dedicated their lives to it, fought for it and denied it and -- have never defined it.

What is TRUTH? What is KNOWLEDGE? What is the SECRET? Are they inventions from a shaman's dream? Are they connected with science? Do they belong to philosophy? What are they, whence do they come? Do they exist? Are they owned? Have they ever been written or spoken or guessed? And would one go mad if he knew them?

Dianetics moved into the world on May 9, 1950, with the publication of a book, DIANETICS: THE MODERN SCIENCE OF MENTAL HEALTH. It moved with violence although its message was peace. A half a million Americans read it, many, many of these acted upon it and are still acting upon it, and every year it sells still more copies -- more copies than the average "best seller."

Dianetics was an adventure into the dark realms of the secret to accumulate knowledge and to establish the truth. Until Dianetics these commodities have been owned by philosophy of either the esoteric or the monotony schools or had been used by the charlatan -- with or without surplice -- to lure and ensnare.

Dianetics moved into a Dark Age of Reason where only a physical universe fact was given credence. When Dianetics was born every free thinker Man had known had long since been burned or poisoned or dust-binned into the curriculums of "universities." It was an age where renown awaited only the manufacturer -- not the inventor -- of the new can opener, where sanity was adjusted with electrodes and philosophy was made with Univacs. Knowledge and the SECRET being the total assets of vested interest, Dianetics was hit with violence from many quarters. Medicine, entirely cognizant that it could not cure nor even alleviate the majority of Man's ills, yet like a prima donna who can but croak yet resists the incoming next act, bluntly and viciously condemned in leading weekly magazines, any further glance towards knowledge and truth. The government, fighting a war at the time, entirely cognizant that its pilot supply was old and slow, yet could not communicate on any subject which might remedy the matter. The Better Business Bureaus of the U.S., an organization solidly behind anything good and solid, upheld the objection of capital to this new idea; the Communist Party, being solidly against any alteration of the mind since that would undoubtedly alter devotion, went to considerable lengths to assist the stand of capital. To anyone who wanted a monopoly on knowledge and truth Dianetics was an enemy. To them it was a degraded, wicked, fraudulent hoax -- or so they said. However, there happens to be a

principle that anything which is thoroughly understood ceases. Their opinion of Dianetics could not have been correct because Dianetics is still here.

During the ensuing four years of commotion, much happened. The only orderly and progressive thing which happened was that Dianetics went on encroaching into the territory of the SECRET along the roadway of KNOWLEDGE to discover nearer TRUTH.

The primary assault of Dianetics was upon reverence and forms. The first book was written as a javelin directed into the doubtlessly sacrosanct vitals of philosophical departments and literature. It was carefully careless with its commas in the belief that commas, contrary to the prevailing mode, have little power to disturb an ultimate truth. The first book was written to be read and understood, and it was written to upset and override and warn off those who would give it the fate of being reverable. And the first book was written to be used by anyone who could understand it -- and the way it was written, this of course could not include the extant mental charlatan nor the professional dabbler in abilities. As one had learned these could not be trained and if they could have been, wouldn't have been interested in the proposed goals, it was necessary that a new breed of feline come into being -- the auditor -- and the auditor did.

Now this adventure along the road of knowledge towards truth was very shiny new in 1950. It was not quite so new but much shinier in 1954. Certain promises were made in 1950. And these promises have now been kept.

Man can be cleared. He can be cleared -- brought to the condition described in Chapter Two of the first book -- by a well-studied and competent auditor in a relatively short length of time.

This book contains processes which were the forerunners of the clearing processes in use today. This means that auditors do have to be trained -- we have found definitely that they do. It also means that an auditor who has been trained and processed can now take these newer processes and run them as directed and can achieve the result of Clear.

Thus, in DIANETICS 55! we have, actually, the SECOND BOOK of Dianetics. Everyone has assigned the title First Book to DIANETICS: THE MODERN SCIENCE OF MENTAL HEALTH. But nobody has ever referred to SCIENCE OF SURVIVAL, published in 1951, as the Second Book. They haven't because it obviously wasn't. SCIENCE OF SURVIVAL was a first book in its own right.

It was the first book of and under Plan C on of the real First Book. SCIENCE OF SURVIVAL adventured into causation, not into the resolution of problems outlined in the First Book.

Thus there has never been a Second Book of Dianetics. Such a book would have to take the exact problems of the First Book and in the terms and reference of the First Book resolve these problems.

Well, as one looks over fiction novels and technical volumes in general he finds that a four year -- almost five -- lag between an author's first and second volume would discover his public to have waned. But when we take up a subject of the status of Dianetics and when we realize that it is condensing into a few years some thousands of years of doing, we see that a lag of four or five years between volumes isn't so very bad.

What happened in those four or five years? Many things. Somehow, for one thing, research and development was financed and the basic organization, after many limpings, survived. A lot of petty things happened which in another decade will be bone dust -- for none of these things, none of the tales of terror, the attacks, the financing, the business advances, were permitted to interrupt the only thing that CAN mean any difference -- the product of years of steady gain on the road of knowledge towards the goal of ultimate truth.

Knowledge, Truth, Secrets -- they are the guts and anatomy of life. They must not then be owned. They must not then be hidden or bent. They must be permitted to stand out in the bold sunlight for all to see for only when they are to be seen are they safe things to have, to hold, to know.

This is the Second Book of Dianetics. It could mean a new Earth, it could mean a new freedom. But whatever it means it cannot mean nothing in the sense Man uses that word -- for you cannot unveil the SECRET and have it ever be quite so secret ever again. Note: Much of what in this book was termed Dianetics is, in today's technical lineup, Scientology technology. The two fields are as follows:

DIANETICS: from the Greek dia (through) and noos (soul), thus "through the soul"; a system for the analysis, control and development of human thought which also provides techniques for increased ability, rationality, and freedom from the discovered single source of aberrations and psychosomatic ills. Introduced May, 1950, with publication of Dianetics: The Modern Science of Mental Health by L. Ron Hubbard.

SCIENTOLOGY: is an applied religious philosophy and technology resolving problems of the spirit, Life and thought; discovered, developed and organized by L. Ron Hubbard as a result of his earlier Dianetic discoveries. Coming from the Latin, scio (knowing) and the Greek logos (study), Scientology means "knowing how to know" or "the study of wisdom."

CHAPTER I

DIANETICS

Why should anyone want to know anything about the human mind? And, for that matter, why should anyone believe that knowledge of the human mind is either unobtainable or undesirable? Why should men ostensibly seeking answers to the mind stray so far from it as to examine rats and entirely avoid looking at human beings? And why should anyone pretending to treat the mind stray so far afield as electric shock?

The answers are relatively simple. Anyone who knows the structure, function, and dynamics of the human mind is very difficult to control. The only way a mind can be controlled is by enforcing upon it ignorance of itself. As far as study and treatment is concerned, a mind which has been made ignorant of itself would have to have restored to it awareness of its fundamentals before it could be considered to be recovered. And when one restores full awareness to a mind one is no longer able to victimize it. And a profession or a society would have to move out of slave orientation into action by freedom and consent, were it to be effective.

Just as you do not want people to control you, so you should want knowledge of yourself and others. Just as you fight away from knowingness concerning self, so you will be controlled.

A simple and conclusive science of mind is a vital necessity in any society which desires to become free and remain free. The only elements in a society which would combat, or contest, or dispute an effort to attain such a science would be those interests which desired, by ignorance, to maintain their control of a slavery. Each and every impulse of freedom is an impulse towards sanity, towards health, towards happiness. Every impulse towards slavery is an impulse in the direction of misery, disease and death. One can say alike of the arthritic and the neurotic that the basic cause of disturbance, physical or mental, germinated in efforts to reduce the freedom of the individual, the group, or Mankind.

Dianetics is an effort towards the attainment by Man of a level of freedom where decency and happiness can prevail, and where knowledge of the mind itself would prevent the unscrupulous use of the mechanisms of slavery. Dianetics can be contested, it can be vilified, its founder and practitioners can be publicly pilloried, but Dianetics cannot be ignored. It could neither be drowned in praise, nor burned in some purge to its total eradication, for it is a wonderfully observable fact that the one impulse in Man which cannot be erased is his impulse towards freedom, his impulse towards sanity, towards higher levels of attainment in all of his endeavors. This is Man's one saving grace, and because Dianetics is such an impulse, and because its basic purpose, from the moment of its conception, have been dedicated unswervably to the attainment of even greater freedom it cannot perish -- a fact which will become doubtlessly more annoying to the slave-masters as the years roll on.

There is much argument upon which we could adventure concerning whether Dianetics is an art or a science, whether it is a humanity or a hoax, but all this would avail us very little for we would only be quibbling with words. Dianetics is what it is, and the totality of it can best be summed by the description, 'an understanding of Man.' We do not care whether or not it is a science. We do not care whether or not it is more properly catalogued under Adventure or Mystery. We do care whether or not it is promulgated and known, for everywhere it walks slavery ceases. That mind which understands itself is the mind of a free man. It is no longer prone to obsessive behavior, unthinking compliances, covert innuendoes. It is at home in an environment, not a stranger. It is the solver of problems and the maker of games. A mind that is enslaved is weak. A mind that is free is powerful, and all the power there is, is defined by and contained in freedom.

Why should you know something about your mind? A question of a similar magnitude would be: "Why should you live?" A science fiction writer once conceived a world composed entirely of machines, composed to a point where the machines were repaired by other machines, which, in turn, were repaired by yet other machines, and so the circle went 'round and the machines survived. He wrote this story from the fondest belief of nuclear physicists that there is only a machine, that man derives from some spontaneous combustion of mud, that the soul does not exist, that freedom is impossible, that all behavior is stimulus-response, that causative thought cannot exist. What a world this would be! And yet this world, this pattern, is the goal of the slave makers. If every man could be depressed from his freedom to a point where he believed himself but a cog in an enormous machine, then all things would be enslaved. But who would there be to enjoy them? Who would there be to profit? Not the slave-maker, for he is the first to succumb. He succumbs to his own mechanisms. He receives the full jolt of his own endeavors to entrap. What would be the purpose of this world of machines? There could be no purpose worth contemplating which does not include happiness and experience. When a man is no longer able to envision happiness as a part of his future, that man is dead. He has become nothing but an animated robot, without understanding, without humanity, perfectly willing then to compose missiles of such desolating quality that an entire civilization can perish, and that the happiness of all can be destroyed in the experience of radiation -- an experience which might be considered digestible by an atomic pile, but not by a human being. Thus as we depart from the concepts of freedom, we depart into a darkness where the will, the fear, or the brutality, of one or a few, no matter how well educated, may yet obliterate everything for which we have worked, everything for which we have hoped. This is what happens when the machine runs wild, and when Man, becomes a machine, runs wild. Man can only become a machine when he is no longer capable of understanding his own beingness and has lost his contact with it. Thus it is of enormous importance that we understand something about the mind, that we understand we are minds, that we are not machines, and it is of enormous importance that Man attain at once to some higher level of freedom where the machine reaction of destruction may be controlled, and where Man himself can enjoy some of the happiness to which he is entitled.

"Dianetics: The Modern Science of Mental Health" was written into a world where atomic fission was yet in its early stages. But "Dianetics 55!" is being written in a world where bombs exist of such fury that a continent could be laid waste. The recent declaration of the Secretary of War of the United States of America that such weapons exist, and are capable of being used, and his assumption that men exist with such insufficiency of humanity that they would use such weapons, tells us that it is time someone, somewhere, took a hand in this game. The intimacy of his promises cannot be escaped. You would think anyone a madman who essayed to destroy every book in every library in the United States and Russia. You would think a man quite insane if he insisted upon the destruction of all your personal possessions. You would know he was mad when he insisted that the only course for the future was the destruction of your body and any future race to remember it. Only a raving, drooling madman could contemplate the ending of all goals everywhere on earth. And only an apathetic fool would stand by motionless before the inevitable destruction of his most intimate dreams, his fondest hopes, his possessions -- even on down to his identification cards and the money in his wallet. Such destruction permits no inheritance. It means an end of everything for which we have all hoped, for which we and our ancestors have striven, and it is my belief that an individual who can contemplate this with equanimity and without an impulse to act is so lost to the race and lost to himself, to his family, and to his friends, that he must personally believe there is no hope for anything, anywhere, at any time. Such depravity is difficult to envision. We know, definitely, that the wrong thing to do is nothing. Whenever any situation may develop, we always have that answer. It is wrong to do nothing. The only time anyone has ever gotten into serious trouble was when he decided he could do nothing about something.

This was the entering threshold towards death. When one knew, at last, that he was powerless in the face of all fates, or of any one particular fate, he was, to that degree, a slave of those fates. Thus, the wrong thing to do in this world, at this time, is nothing. No matter what fantastic or incredible plan we adventure upon, no matter how we put it forward, it would still be better than the abandonment of all plans and all action. It may be that we have better plans

than fantastic plans. It may be that we, possessed of a knowledge of the mind and of Man, can yet restrain this dreadful crime of oblivion from occurring.

Dianetics, then, is a weapon. It is a timely weapon. It is the only weapon of defense in existence which can confront with equanimity nuclear fission. Dianetics can fail only if it is not used, only if those who know about it do not use it to its fullest extent. Were you to take the technologies of Dianetics this day, and seeking out anyone even remotely connected with the responsibility for waging atomic war, apply these techniques to them, you would soon have the man into a sufficiently high stratum of humanity that he would recognize some of his responsibility to the human race. Your task would be made hard, for all those who are connected with the waging of war with atomic fission are restricted by law from receiving any psychotherapy. If this seems incredible to you, you should realize that anyone in a top-secret or confidential classification in government is not supposed to impart any information of his calling. And it is the fear of governments that some of this information might be imparted to someone practising in the field of mental healing. And thus, if anyone connected with nuclear fission is discovered to be undergoing processing of any kind, he would be immediately relieved of his post and his top-secret classification would be cancelled. But this is not a hopeless picture. Supposing one processed them all and had all their top-secret classifications cancelled, who would be left? Or supposing one pointed out this idiocy with sufficient conviction to those in charge of (but who are not responsible for) the destinies of Man, and made it mandatory that the sanity of anyone connected with the creation or use of atomic fission be required to have a sanity passport. Only the insane will destroy. Remember that! Only the insane would bring about the end of earth. One of these men, fumbling forward, uncomprehending, a mere machine, given processing begins to realize that he is not without responsibility for the safety of humanity. Only when he is a slave could he be forced to use such weapons against mankind. There is no argument on earth of sufficient emergency or violence to require war, much less war by atomic fission with the consequence of the destruction of at least one continent, and within a few years, the destruction of the planet earth.

Who would believe that anyone could wipe a continent clean of life without at once so polluting the atmosphere of earth as to endanger or eradicate all further life-forms on this planet? What argument could there be amongst men which could occasion such a fate for earth? There is no such argument amongst men. Such an argument could arise amongst machines which, conscientiously, might push buttons, reach conclusions for which they had no responsibility.

There are many ways in which a higher state of security could be attained for earth. None of these ways include violence or revolution, and all of them include a greater freedom for Mankind. Dianetics is the key technology necessary for the control of atomic fission. Remember that, and remember also that Dianetics is a precision science, that it works only when it is used as a precision science. That if you are to accomplish anything with it, whether the rescue of a relative from the pain of continued psychosomatic illness, of a group, a nation, or a world, it works exactly along the lines it is designed. It does not work with innovations. It is a precision science. It has a precision mission. It contains more answers than Man has ever had before, and it contains enough answers to make Man free -- if it is used!

CHAPTER II

THE FUNDAMENTALS OF LIFE

Much more broadly covered in Scientology, the fundamentals of life yet differ in no way for Man.

The basic subdivision in life is between ability and mechanics. This could also be described as a subdivision of quality and quantity, but less accurately.

Where mechanics have ability, the ability is only apparent and has been endowed into the mechanics by life. It is all right to suppose that an electronic brain is capable of thought as long as one realizes that life itself must necessarily be present in order to give cause, and quality, or direction, to such a brain. An electronic brain will sit all day and do nothing unless life starts the machine running. It will give millions of answers, but none of these, no matter how sharp, have any meaning until they are viewed by life. The machine is never anything more than a servo-mechanism to life. Indeed, a machine cannot even exist in the absence of life.

By mechanics we mean any and all of the objects, motions, or spaces which exist. Foremost of these, and foremost in any mechanical scheme, is space. Next is energy. Next is condensed or solidified energy, called matter. And finally, always present in any mechanical arrangement or mechanic, that relative change of position of particles or objects known as time. Thus we have space, energy, matter, and time. Whether we are considering a body running on any energy, an automobile or a mountain, we are still dealing with what we call here mechanics. Mechanics are always quantitative. There is always just so much distance, or so much mass, or so many hours. The quality of space, energy, matter, and time has value only when viewed, used, or monitored by life, and, indeed, cannot exist in the absence of life. Correct or not, this is workable and is our primary assumption. We have a word for mechanics compounded from matter, energy, space, and time which is MEST. By MEST we mean any or all arrangements of energy of whatever kind, whether in fluid or object form, in space or spaces. We do not conceive life to have an energy, and therefore, any energy, even if directly produced by life, can be found to be embraced under the quantitative term "MEST."

Life itself has quality and ability. The products of quality and ability are mechanics. Ability is demonstrated by the handling of matter, energy, space and time. Quality means simply "valued," or "having a value." No values, that is to say opinions, exist in the absence of life. In the matter of such a thing as an automatic switch we might consider that the switch is capable of making a decision whether to be off or on. However, we must remember that the original decision that a switch was to be made, and that "off" and "on" could be accomplished, and indeed, the design of a switch itself depended entirely upon life -- quality.

In the field of mechanics we do not discover creativeness. We discover varying conditions, varying arrangements, deterioration and destruction of one or another form, but we do not discover any alteration in quantity. Indeed, the entire science of physics is predicated upon the assumption of "conservation of energy," which is to say that energy, itself, cannot be created or destroyed but can only alter its form. To this we might add "conservation of space," "conservation of matter," and "conservation of time." None of these things are capable, in themselves, of altering. They are not capable of more than change of position or alteration of form. The physicist is very fond of demonstrating that the breaking of a vase does no more than the altering of the relative positions of the particles of the form, and that the burning of a piece of coal does not change the basic particles of matter, since if you were to collect all the smoke, and the ash, and the particles which radiated from the burning and weigh them you would have the same weight as before the coal was burned. In other words, the quantity of matter does not change, and, as above, it does not create to itself or add to itself in any way.

Life, it has been adequately established, can, however, create. It can create particles and it can add to mass. The demonstration of this on a man is an easily accomplished thing and is quite conclusive. A process known as “the remedy of havingness” is capable of altering the weight of a man upwards of twenty to thirty-five pounds even though there is no change whatsoever in the diet or the living habits of that person. In other words, the life which is in the body of the man, and which is actually the man, can, by a certain process, increase the amount of mass of this man. Another process known as “perfect duplication” can reverse this, and, again without change of diet or the living habits of the man, decrease the amount of mass of a man without the complications of heat or waste-products being present. Thus, forthrightly and directly, in the same frame of reference as that used by the physicist, it is easily demonstrated that life does create mass and can cause mass to disappear.

As long ago as fifty years, as represented by an article in the Encyclopedia Britannica, it was fairly well understood that the study of physics should have begun with an examination of the mind. This article, under the heading of time and space, states that as space and time are mental phenomena their proper delineation and study begins in the field of the mind. Nineteenth century “mental sciences” were insufficiently schooled in science to comprehend this, and the physicist, unaware in general of such facts, did not consider that his proper province was the mind. Thus a misunderstanding existed in the Humanities and in the Sciences where one was depending upon the other, and the result came about that neither knew his proper field of endeavor. By undertaking a study of the mind from the orientation of physics, and with the application of all the principles known in chemistry, physics, and mathematics (items with which the nineteenth century psychologist was entirely unfamiliar, and which the twentieth century psychologist utterly disdains), it was only then possible to produce some comprehension of this thing we call life in this place we call the physical universe.

Thus, that thing which considers, that thing which has opinions, that thing which creates, that thing which monitors, that thing which has goals, desires, and which can experience, is Life. What we call space, time, energy, matter, forms of any kind, are the by-products of, and are monitored by, Life. Energy, whether in the form of a mental image, a body, a tree, or a rock, are alike the by-products of life. There is no faintest difference, save only density and wavelength, between the space you behold around you with your physical eyes and the spaces and forms you see when you close them and behold a mental image. These things, alike, are energies, and obey the various laws of energy.

Here, then, we have a unit or a quality capable of bringing into being quantities such as spaces, energies, masses, and time, capable of changing and controlling these masses and energies, capable of adding to them or subtracting from them.

There is considerable dissertation in “Dianetics: The Modern Science of Mental Health” concerning the “awareness of awareness unit.” When this subject was first under investigation it was established that all was not a machine. Somewhere, in tracing back the various lines, it was necessary to strike a cause point, either simply to assume that there was a cause point or to discover one. Two words were used in connection with this causative agent. One of them was “analytical mind,” and the other, much more properly, the “awareness of awareness unit.” The awareness of awareness unit, as its name implies, is aware of being aware, or aware of being alive. When one was looking at or discussing the analytical mind, one was aware of something else: that the awareness of awareness unit became connected in some fashion with computers, or analyzers, in order to handle and control the remainder of the physical being. The term “analytical mind” then meant the awareness of awareness unit plus some evaluative circuit or circuits, or machinery, to make the handling of the body possible.

The other item discussed broadly in “Dianetics: the Modern Science of Mental Health,” was the “reactive mind.” This mind was a stimulus-response mind which depended for exterior direction upon its action and reaction. The reactive mind was conceived to be a collection of records, in picture form, so arranged as to make a complete pattern of experience, capable by its pattern alone of evaluating the conduct or behavior of the individual. The pictures contained in the reactive minds are now called “facsimiles,” for they are no more and no less than

pictures, like photographs, taken of the universe around the individual and retained by him. A specialized kind of facsimile was the "engram." This differed from other mental pictures because it contained, as part of its content, unconsciousness and physical pain. The definition of an engram is: a picture of "a moment of pain and unconsciousness." The reactive mind was conceived to have more of these engrams than the analyzer. But the analyzer was seen to have some of these, too, except they were a lighter form and were a lock on the engram in the reactive memory bank. Indeed, when one considered the reactive mind he was actually considering what is, in the electronic brain, a memory bank. Instead of cards or a card-file system the reactive mind contained pictures. These pictures were filed and were drawn out of the files by the environment, which contained restimulators. The presence of these pictures could alter form and could alter behavior. The eradication of one of these engrams by one of the earlier erasure techniques of Dianetics was found to alter the stimulus-response behavior of the individual.

Here we were confronting three kinds of mind. One was the causative agent, the awareness of awareness unit, which did not appear to have any by-products but which was impinged upon another mind called the analytical mind, which on a machine basis analyzed situations rationally, when sane and rational, and a third kind of mind even further remote from the awareness of awareness unit, which acted without the consent of the causative agent and did not in any way consult it. Now on a very careful review of this we see that the analytical mind and the reactive mind, alike, are by-product mechanical minds. Alike, they depend upon energy, spaces, storage, and other quantitative things. The awareness of awareness unit, however, is itself decision, is itself knowingness. It delivers into the analytical mind and its system various knowingnesses to be handled on a mechanical basis, and unwittingly delivers into the hands of the reactive mind -- which is totally a mechanical thing -- the right to alter and correct the analytical mind. Apparently, then, we have here a causative agent and two machines. We might as well, then, take the obvious conclusion that there is the awareness of awareness unit, and that this in some fashion handles machinery, and that the analytical mind, the reactive mind, and even the body and the environment are mechanical. One item here is qualitative and decisional -- the awareness of awareness unit. All other items are subordinate to it and depend for their conclusions either upon it or upon the environment. Here again we have quality versus quantity.

A further demonstration of this awareness of awareness unit in action is quite convincing. A machine, a meter, which is built in every tradition of physics and electronics, and which is composed of nothing more or less than the usual meters and gauges and electrodes, can detect the production of energy by the analytical mind. This machine demonstrates conclusively that the awareness of awareness unit can predict and cause an energy reaction to occur at will. It goes further and demonstrates that the awareness of awareness unit can bring about, without further contact, an energy flow in a body at a distance. This is a very startling demonstration, and is one of the more significant electrical discoveries of recent times. The conditions of the experiment are sufficiently rigorous to dispel any doubt in the mind of a physicist concerning the authenticity of occurrence.

If there were no energy being created by the awareness of awareness unit, then one would be at a loss to account for mental energy pictures, for these things, being made at a tremendously rapid rate, have considerable mass in them -- mass which is measurable on a thing which is as common and everyday as a pair of bathroom scales.

As soon as it was discovered how facsimiles (these mental energy pictures) came into being it was also discovered that they were actual energy and not "an idea of energy" as they had been supposed to be in the past. The facsimile and the engram come into action by resistance. The awareness of awareness unit resists a scene in the physical universe, either resisting its approach or departure, and thus by this resistance makes a print. This print is made in a moving fashion, like a motion picture, and is complete in every detail. Later on the individual can call back this print and take a look at it, and will find it to have in it the exact forces which were in the original version in the physical universe. The awareness of awareness unit does this so easily that it has been completely unaware of what it was doing. Now, when

the awareness of awareness unit makes a print, trying to restrain something from going away, or trying to restrain it from approaching, and considers that the survival of its body is being violated or threatened, it files this print in such a way that it will not have to look at it again. But this does not mean that an approximation of the print by the physical environment cannot reactivate the print independently. In other words, when the awareness of awareness unit puts away and does not want to look again at such a facsimile, the facsimile itself begins to have a power over the awareness of awareness unit. The collected files of these non-survival experiences come together and are the reactive mind. The awareness of awareness unit could be conscious of these, but chooses not to be. Thus the environment can restimulate this reactive mind and can cause changes of behavior and bodily form such as over-weight, psychosomatic ills, or even fixed expressions or gestures.

The essence of time is change. Where there is no change there is no time. Thus, something which is unchanging is enduring. If a thing has no change in it, it will then “float” in all time, since it does not assign itself to any changingness, being a thing of no-change. Thus we discover that silences and no-motions “float” in time and we discover that every place on the time track where the awareness of awareness unit has taken a picture of silence, has resented or restrained silence, it then has an energy mass which will “float” or stay with it, whatever time it assigns to itself, and we get the composition of the physical universe. The physical universe is composed of “floating” or forever energy. If this did not work out in processing and if it were not a usable principle it would not be included in this text.

In view of the fact that these facsimiles, particularly those of silence, can “stay with” the individual, then we get the entire mechanism we call “restimulation” where the environment reactivates a facsimile, which then acts back against the body or awareness of awareness unit of the person. This is a very simple system of stimulus-response. We discover then that engrams, or facsimiles in general, have a tendency to hang up on all of their silent or motionless spots. Thus a facsimile may contain considerable action and yet be stuck at one point of no-motion. Here we have a no-motion on either side of which there is motion. The no-motion point hangs up and is not contacted by the awareness of awareness unit, since the awareness of awareness unit is looking, in general, for motion. Thus we get a phenomenon known as “stuck on the time track” where an individual can believe himself to be at some distant point in the past. The facsimile or engram in which he is “caught” has almost as much reality to him as a condition of existence as his present-time environment. When he becomes entirely psychotic the facsimile or engram has far more reality to him than his present-time environment. Thus we have aberration and psychosomatic illness.

In early Dianetics, the way this condition was alleviated was by addressing the pictures themselves and persuading the awareness of awareness unit to erase them by recounting them and re-experiencing them. Because this took a long time, and because auditors had a tendency to abandon half-erased incidents, the technology -- while workable -- was not conclusive. Thus, more research and investigation had to be entered upon in order to establish the best way to handle this situation.

CHAPTER III

THE AWARENESS OF AWARENESS UNIT

In examining the individuality and identity of the individual one discovers that the individual is himself, and not his by-products. The individual is not his analytical mind, he is not his reactive mind, he is not his body any more than he is his house or car. He might consider himself to be associated with his analytical mind, his reactive mind, his house, his body, his car, but he is not these things. He is himself. The individual, the personality, is the awareness of awareness unit, and the awareness of awareness unit is the person. As this awareness of awareness unit confuses itself further and further with the pictures it has made of its surroundings it conceives itself more and more to be an object, until at last when it has gone entirely down the tone scale* it has arrived at the point where its fondest belief is that it is an object.

Just as you would not say that John Jones was his car, so must you also say -- when you perceive this clearly -- that John Jones is not his analytical mind or his reactive mind, his body, or his clothes. John Jones is an awareness of awareness unit, and all there is of him that is capable of knowing and of being aware is John Jones, an awareness of awareness unit.

When we have arrived at a state where John Jones himself knows that he is an awareness of awareness unit and not his analytical mind, his reactive mind, his body, his clothes, his house, his car, his wife or his grandparents, we have what is called in Dianetics, a "Clear." A Clear is simply an awareness of awareness unit which knows it is an awareness of awareness unit, can create energy at will, and can handle and control, erase or re-create an analytical mind or reactive mind.

The difference of approach is this: instead of erasing all the things with which the awareness of awareness unit is in conflict, we make the awareness of awareness unit capable of besting and controlling all those things with which he thought he had to be in conflict. In other words, we raise the determinism of an individual up to a point where he is capable of controlling his mental pictures and the various by-products of life. When he is capable, so far as his ability is concerned, of controlling and determining the action of these things, he is no longer aberrated. He can recall anything he wants to recall without the aid and assistance of energy masses. He can be what he wants to be. He has had restored to himself a considerable freedom.

About the only difficulty we have in accomplishing this state of Clear, with all the power and ability appended thereto, is the fact that individuals come to believe that they have to have certain things in order to go on surviving. Actually, an awareness of awareness unit cannot do anything else but survive. He is unkillable, yet his by-products are destroyable, and confusing himself with his by-products he begins to believe that he has to have or do certain things in order to survive. His anxiety becomes so great on this that he will even believe that he has to have problems in order to survive. An awareness of awareness unit is very unhappy unless it has some mass or space of some kind and if it does not have various problems to solve.

For a very long time in Dianetics we looked far for the "One-Shot Clear." Such a thing has come into existence and is workable on over fifty percent of the current populace of mankind. The One-Shot Clear depends, of course, upon getting the awareness of awareness unit at a distance from and in control of its various by-products so that it no longer confuses itself with its by-products. The astonishing speed with which fifty per cent of the human race can be cleared is believable only when you put it into action. The magic words are: "Be three feet back of your head." This is the One-Shot Clear. If the existence of a One-Shot Clear, or a process is indigestible to people it is because they have so long contemplated objects and have their attention so thoroughly fixed upon objects that they can no longer view space. And the idea of viewing space, the idea of being without objects is so antipathetic to them that they feel

they must condemn any effort which might take from them the proximity of some of their fondest possessions.

It is so strongly antipathetic to Man to look at space that one of the basic processes of Dianetics -- causing him to look at spots in space -- will cause a rather low-toned individual to become quite violently ill at his stomach. The nausea resulting simply from contemplating empty space is discoverable only in those who have a great deal of trouble with possessions and who are unable to have things. From having to have things they have gotten to a point where they do not believe they can have anything any more. Thus, being asked to contemplate an emptiness of any kind is enough to cause a violent physical reaction. Hence, this whole subject of "Clear" and exteriorization, as it is technically termed, is very antipathetic to the remaining fifty percent of the human race who cannot be hit instantly with this one-shot button.

Fifty percent of the people you walk up to, if you do not pre-select your preclears -- a person on the road to being Clear -- will immediately exteriorize, be a distance from their body, and behold themselves as capable of handling a great many things they before considered impossible to control the moment you say "Be three feet back of your head." The remaining fifty percent will look at you with varying puzzlement. These know they are a body. These know they are an object, and these know (most of them) that they would get sick at their stomachs if they contemplated being all by themselves in space. They would believe it would be impossible to control a body while being three feet behind it. Thus one gets into an immediate argument with such people, and they wish to go into the various deeper significances. If these people were lost to us with current Dianetic processes, we would still have gained many percentile over any past effort to do something for the race or about the mind.

In the past, even when we looked as short a time ago as 1949, we discovered that Man in general did not possess the ability to get a recovery percentage in patients higher than twenty-two percent. Oddly enough, whether it was a witch doctor at work, a psychoanalyst, psychologist, a medical doctor, or any other practitioner, simple assurance and a pat on the back yet brought about twenty-two percent cured. This fact, not looked at very carefully by practitioners, caused people to believe that the only thing that was wrong with the mind was that people thought something was wrong with the mind and all people needed was a cheering word and it would be all right. Twenty-two percent of a population will recover if anything is done for them. The remaining 78 percent are not quite so lucky. When we can raise the percentages even to 30 percent we are doing more than has ever been done before. When any practice gets less than 22 percent recovery, then that practice is actually definitely harming people, for if all the practitioner did was be at home in his office and give cheery reassurance to his patients he would get this 22 percent. He would have to be very active and depressive in order to decrease this amount of recoveries. Now, when we suddenly vault to the figure of 50 percent we know that we are closing with the answer. Thus, we could relax at this very point, confident that we have done more in this field than has ever before been done.

However, it is not good enough within our framework. In the first place, if we wish to help people involved with the government, people involved with ruling, people involved with the material sciences -- such as physicists and chemists -- we are dealing with almost entirely the remaining "resistive" 50 percent. This does not mean that a person, simply by exteriorizing, is weaker. It means that a person with continuous contact with the physical universe and continuous harassment and concern over the state of objects or energy is apt to get what we call "interiorized."

A recent series of cases undertaken to demonstrate how far we had to go and what we had to do in order to bring results in this remaining 50 percent has now concluded successfully. With modern techniques, very, very closely followed, auditors trained by the central organization have been successfully clearing cases which were resistive and did not improve on all earlier processes as of 1951, '52, '53 and the bulk of '54. The certainty of clearing the first 50 percent simply with the magic words has been followed now with a certainty of handling the remaining 50 percent. This presents a rather different scene and attitude than in 1950 when an

auditor had to be “intuitive” and had to work endlessly, it seemed, to produce gains on cases, much less clearing. My own percentages in clearing people do not count, and I learned early (with some puzzlement) that what I did with a preclear and the results I obtained with a preclear were not the results which would be obtained by another auditor. It was this fact alone which caused research and investigation to be continued at such lengths, and processes to be codified so closely. For first we had to know processes, and then we had to know how to train auditors, and finally we are obtaining these clearing results.

Any Clear earlier obtained was known to be Clear simply by the fact that he could recall at will by pictures, or could perform certain other feats. Actually, a person was only able to stay Clear when he was not immediately involved with either his analytical or his reactive mind. And those Clears which remained stable had been put unwittingly into a much more advanced stage than had been supposed, even by the auditor. It was an investigation of these Clears which led forward into the techniques we have now. It was found that many of them were simply wide-open cases which had become rather able to read their own facsimiles. Several had simply increased their ability to a point so senior to other people’s ability that everyone agreed they should be called “Clear.” And then there was the actual Clear. The actual Clear, on close questioning, even though he himself had not always noticed it, conceived himself now to be some distance from the body. Those Clears which remained stable and continued to perform and function despite the convulsions of life were these who had been stably exteriorized. This may be a datum which is very hard for some Dianeticists to assimilate, but again the difficulty would stem only from the fact that these would be unwilling to look at space or would be afraid of being disenfranchised. Such people are very frightened of losing their bodies. But this is a fact with which we cannot argue, that so far as psychosomatic illness is concerned it is best resolved by exteriorization. One has the individual step back from his body, look at it, and patch it up, and that is about all there is to psychosomatic illness. There is, of course, an electronic structure of the body which one can direct a person’s attention to, but I have seen the shape of a face change in a moment, I have seen psychosomatic illnesses disappear in seconds, and as long as there was any physical structure left to work with at all I have seen the problem of psychosomatic illness pushed so far into the background, as a problem, that we no longer think in these terms, and we do not consider Dianetics well used when it is only addressed to psychosomatic illness and aberrations.

Our emphasis today is upon ability. We have found that the more we increase the ability of a person the better the by-products around him become. Simply by increasing an individual’s ability to walk or to talk we can change his physical beingness and his mental outlook.

By this theory it would be enough to have somebody learn how to make pottery, or drive a car, or speak in public, to increase his mental and physical health. And indeed, on investigation we discover that these things are therapeutic, but we discover that they are limited in their therapy because the talents which an individual learns in this fashion are talents involved entirely with the handling and orientation of the body, and he is not being entirely influenced merely by his body. He is being influenced as well by the computing machinery which he calls his analytical mind and by the more insidious and less obvious machinery called his reactive mind. Furthermore, by these increases in ability he is not brought up to a point where he can control or handle his entire environment. Such an ability can be developed only by and in the awareness of awareness unit itself. When it is learning to do something via the body it is not learning to do something directly, it is learning to do something with help -- the help of arms and legs, face, voice, and thus hobby therapy is limited even though it is quite positive.

Looking a little further along this line one discovers that the awareness of awareness unit has peculiar abilities. First and foremost of its abilities is to be where it likes to be, and look. It does not need eyes. It does not need a vehicle in which to travel. All it needs to do is to postulate its existence in a certain location and then look from that point of existence. In order to do this it has to be willing to be cause. It has to be willing to be an effect. But if it can do this

it can go much further -- it can create and change space. Furthermore, it can erase at a glance facsimiles and engrams.

Now when we get into such capabilities people are liable to believe that we have entered the field of mysticism and spiritualism. But an inspection of these fields demonstrates the people in them not to be very able. Mysticism and other such practices are reverse practices. Rather than controlling the reactive bank, the analytical mind, the body, the environment, they seek very markedly to withdraw from the necessity to control. This is downward ability, and while I might be accused of maligning these fields, I can only look at the people I have known in these fields and add the fact that I, myself have studied in these fields in the East and know their limitations. People are apt to confuse exteriorization with astral walking. As you sit there reading this book you are definitely and positively aware of sitting there, and of this book. There is no question about whether or not you are looking at a book. You don't believe yourself to be projected, and you don't have to guess where you are, and you don't think you have to create some sort of an image in order to look at anything. You are simply sitting there reading a book. This is exteriorization. If you were cleared, and, with your body at home you were in a library, you could read in the library just as well, with the limitation that you might not have as good a grasp on pages. You would certainly know you were in the library. There would be no question about this. There would be no question about the text on the periodicals on the table. There would be no question about the quality and personality of the librarian and other people sitting there. Being Clear does not enter into guesswork. You would not be concerned with telepathy, with the reading of people's minds, and other such bric-a-brac. You would simply know what you wanted to know. Further, you wouldn't have to use a system for finding out what you know. You would simply know it.

If Man cannot face what he is, then Man cannot be free. For an awareness of awareness unit surrounded entirely by energy masses, and believing that it itself is completely these masses, is in a difficult and desperate state. It believes, for instance, that in order to go from one address to another it has to take the energy mass along with it. This is not true. One might carry a body around in order to speed up one's conversation, in order to have a problem, in order to get some attention and interest from people, but one would not carry a body around because one had to have a body.

The general attitude of a person who is cleared is the most interesting thing to observe. Only a cleared person has a very definite tolerance for the behavior of others. People before they are cleared are in varying degrees of distrust of other people. They are hiding, or protecting, or owning things to such a degree that they do not dare separate themselves from them.

There is a certain fear of an exteriorized person. There is a belief that he might do them wrong. Actually one is done wrong by the weaklings of this world, not the strong men. One does not have to enslave and control by force those whose conduct he does not fear. When you find an individual who is bent entirely upon a course of the arduously controlled emotions of others you are looking at an individual who is afraid. By their fear you shall know them.

Another slight difficulty in the state of exteriorization is that one has a tendency to let things be more or less as they are. Up to a certain point one is content to let the game run and take part in it and have fun with it. The point, of course, is the destruction of the playing field. Life, to a Clear, is no more and no less than a game, and the only thing which he would consider somewhat unpardonable in behavior would be the wiping out of the playing field. But if he were even higher in such a state he should, theoretically, make his own playing field. However, if he did this he would find difficulty getting into communication with other live beings, unless, of course, he made them, which is rather an unsatisfactory state of affairs since one never quite forgets that, he did so.

Moral conduct is conduct by a code of arbitrary laws. Ethical conduct is conduct out of one's own sense of justice and honesty. When you enforce a moral code upon people you depart considerably from anything like ethics. People obey a moral code because they are

afraid. People are ethical only when they are strong. One could say that the criminals of earth are those upon whom moral codes have been too forcefully enforced. (As an example of this take the cliché object, the minister's son.) Ethical conduct does not mean promiscuous abandon or lawless conduct. It means conduct undertaken and followed because one has a sense of ethics, a sense of justice, and a sense of power. This is self-determined morality. A Clear has this to a very marked degree. By actual check of many such cases their moral behavior is intensely superior to that of people who pride themselves on "being good." The point arises because law and order depends for its existence upon its necessity in the field of morals, and it looks with a sort of horror on somebody who would be good without recourse to or threat from the forces of law and order. Such a person would be rather hard to have around. He would cut down the number on the police force quite markedly.

The state of Clear, then, is attainable and is desirable, and now that we can accomplish it with greater positiveness than in 1950 is found to be superior to that described in the second chapter of "Dianetics: The Modern Science of Mental Health."

The way one goes about being Clear, or creating a Clear, is simple, but requires a certain code of conduct called The Auditor's Code, and requires, we have discovered, a considerable amount of training. Clearing another person is a highly specialized ability. This ability must be raised in individuals before they can easily and successfully undertake such a project. Witnessing this is the fact that while many of the processes involved in clearing have been available for a very, very long time, very few people have successfully used them. The discovery of why this was was quite as important as the state of Clear itself. The remedy of this disability lies in training and processing. The activity of creating a Clear is known as "processing" and is undertaken by one individual on behalf of another individual. "Self-clearing" has not been found possible where the individual was badly mired in his own case.

Enormously subordinate to the goal of Clear, but enormously senior to Man's various healing activities in the mind, spirit, and body, the very processes which lead up to Clear resolve, whether one wants them to or not, a great many of the physical and mental aberrations of the individual. One can take one of these processes and run it all by itself, and accomplish more with Dianetics than Man has previously accomplished in any of the fields that deal with human aberration. When one has the answer, of course applying these answers to minor psychosomatic difficulties, or aberrations, or spiritual unrest is elementary. But again we have discovered that there is no real substitute for training either at the hands of an already trained and skilled auditor, or best, from a central organization.

The awareness of awareness unit was not readily discoverable in the field of physics because physics is entirely concerned with mechanics. Physics starts with the assumption of the conservation of energy and the existence of space and goes on into further complexities from there. The awareness of awareness unit is one step earlier than all this, and its existence was unsuspected by a misdefinition in the field of physics. That was the definition of a static. A static, in physics, is called something which is "an equilibrium of forces." This object at rest in an equilibrium of forces is an interesting semantic puzzle. If we put a glass upon a table and then say that it is a static, we are telling a very bad lie. It is not in an equilibrium of forces. That glass happens to be traveling at 1,000 miles an hour just by reason of the fact that the earth is turning. It has seven other directions and speeds by reason of being part of the planet earth, the solar system, and this galaxy. It cannot, then, be considered at rest. Thus no object can be considered at rest unless one considers something relatively at rest. The glass is at rest in relationship to the table, but this is not the physical definition.

The definition of a static discloses something else of interest. There was a missing definition in the field of mathematics, and that was the definition of zero. The mathematician for ages has been using in all his formulas a wild variable without suspecting it was there. He did not really encounter it until he got into the higher fields of nuclear physics. At this time he encountered it so forcefully and knew it so little that he had to alter most of his mathematical conceptions in order to work with nuclear physics at all.

This wild variable was no less than zero. Zero, put down as a goose egg in many mathematical formulas, would introduce many interesting variables. In the first place an absolute zero has never been obtained in this universe. It has only been approached. That is in terms of chemistry. That is in terms of non-existence. We can say there is zero of apples, but that is still a qualified zero. We can say there were no apples, but that is further qualified as being in the past. It is a past zero. We can say there will be no apples, and again we will have the zero qualified as being in the future. Zero was an absence of a thing, and this immediately violated the definition of zero being no thing. The absoluteness of no thing had to be examined while we were examining the field of the mind and actually led to some very astonishing discoveries with regard to Life itself and immediately pin-pointed the existence of the awareness of awareness unit.

The proper and correct definition of zero would be: "Something which had no mass, which had no wave length, which had no location in space, which had no position or relationship in time." This would be a zero. One could state it more shortly, if a little less correctly as: "something without mass, meaning, or mobility."

It would be almost impossible to detach a dyed-in-the-wool physicist from the concept that everything was a "somethingness" and that there was actually a "nothingness." However, there is a nothingness which has quality. It has potentials, it has ability. It has the ability to perceive, it has the ability to create, the ability to understand, and the ability to appear and disappear to its own satisfaction in various positions in space. Furthermore, this thing could, we have demonstrated conclusively, manufacture or cause to vanish space, energy and masses, and could, quite additionally, reposition time.

These new concepts are actually advances in the field of physics and mathematics, and from the viewpoint of the physicist and the mathematician would only incidentally apply to the mind.

From this data we get the basic definition of a static, which is: "An actuality of no mass, no wave-length, no position in space or relation in time, but with the quality of creating or destroying mass or energy, locating itself or creating space, and of re-relating time." And thus we have the definition of an awareness of awareness unit. It is the definition of a static. It does not have quantity, it has quality. It does not have mechanics, it can produce mechanics, and it does have ability.

The foremost ability of the awareness of awareness unit is to have an idea, and to continue that idea, and to perceive the idea in its continuance in the form of mass, energy, objects and time. In the field of Scientology the fact that this awareness of awareness unit can also control and even make physical bodies is almost incidental. That is only a specialized branch of the game. In Dianetics this is a very important function, for one in Dianetics is working with Man.

A static could also be called an orientation point. It would be from that point that it made and directed space, energy and objects. It would be from that point that it assigned meanings, and that we have an essential difference between the awareness of awareness unit and its by-products. These by-products we categorize as symbols. When we say "mechanics" we actually mean to some degree "symbols." A symbol is something that has mass, meaning, and mobility -- three M's. That is the technical definition of a symbol. An orientation point is something that controls symbols. The difference in ability of an awareness of awareness unit is how much it is an orientation point in relationship to how much it believes itself to be a symbol, or to have mass, meaning and mobility. Reduction from the state of awareness is into the condition of the symbol -- mass, meaning and mobility. To get a clear idea of this, you see the word "a" on this page. That has mass, even if very slight mass. It has meaning, since it conveys an idea when glanced at, and it certainly has mobility, since you can move the book around. Now you, looking at this book, have the role of an orientation point to the degree that you do not conceive yourself to have a fixed identity, a fixed position, a fixed mass. If you, looking at the book, have no real mass, if your name is not a tremendously fixed idea with you, and if you know

you can move your body around without having to move with it, then you would very clearly and decisively be an orientation point. But if you think you have mass and are mass, and if you think you are your name, and if you think you have to move around only by moving the body around, then of course somebody else, something else, can be your orientation point. It may be your mother. It may be your home town, or, if you are a mystic, it might even be some spirit. You would think of yourself as a symbol. Similarly, a symbol does not remember anything more than it symbolizes, and thus your memory to a large degree might be the memory of past allies -- people who took care of you and to whom you were attached affectionately -- and if you were in a lecture you would probably take notes rather than remember what is being said. An orientation point has the power of memory without record. A symbol has the power of memory only to the degree that it is a record.

Thus we see that it is desirable that an individual does not identify himself with masses, but that he retain his ability to handle masses and objects and energies, to remember at will, without the need of records such as those in the reactive bank, or facsimile machines such as those in the analytical mind's bank.

In any good, thorough investigation, one investigates to see what he will discover and to find better ways to do things. In any reliable investigation report one tells what he discovered and reports its character and nature. In this science we are doing just that. When we talk of the awareness of awareness unit we are not talking to be pleasing, to win friends or influence professors, we are simply telling you what has been discovered after twenty-five years of research and investigation in the field of the mind that has taken off from the platform of physics and mathematics rather than philosophy. The awareness of awareness unit is a fact. It is a demonstrable fact, and the best way to demonstrate it is to use the processes which accomplish this, and then discover that the individual is more well, has a better memory, is better oriented, more capable, is more ethical, happier, has better command of time, can communicate better, is more willing to have friends, is less anti-social than the average person, and has a greater zest for living and getting things done. All these things can be accomplished by test.

In 1950 we often had occasion to demonstrate the existence of the engram. It seemed to be highly in question amongst those people who were extremely specialized -- it said on their diplomas -- in the field of the mind. To be accomplished in the field of the mind and yet not know anything about engrams or facsimiles would be an idiotic state indeed, because the mind is composed of facsimiles and engrams, if one wishes to examine it -- or energy products. Well, then (as now) we were only interested in results. What can we do with this technology? If we can demonstrate with this technology that we can better the lives, tolerances, abilities of those around us, then certainly we will have done something. We have no place for philosophical argument concerning this material. It is simply workable material. You do not argue with the directions on how to open a vacuum packed can. If you don't follow them you don't get the can open. Or, not following them, and still being insistent upon it, you smash the can and ruin the contents. One would not go into a philosophic dissertation about the directions of opening a can. Obviously they are written by somebody who knows how to open cans, and any hours spent on getting this person to demonstrate that he really could open cans would be wasted time. The thing to do is simply read the directions, follow them very closely, and see whether or not the can is opened. Although this seems to be a very common sort of example to apply to that noble creature, Man, it is nevertheless, the bluntest statement that could be made about the status of Dianetics and Scientology and their uses and purposes.

Dianetics has as its goal the repairing and patching up of this thing called by the uninitiated, this civilization, taking its destiny out of the hands of madmen who think that the entire organism is simply a machine, and putting it in the hands of the same people, only this time with the ingredient of sanity added. There isn't even any point in trying to categorize Dianetics or say that it compares to psychology or mathematics or engineering, or any other activity, because it is obviously senior to all these activities and doesn't have to take any of these activities into account to work. All Dianetics needs to work is a trained auditor, a preclear, and a little time in which to accomplish its processes. If these ingredients -- the auditor, the

preclear, and a little time -- were not available, then there would be no purpose in having any Dianetics at all, since there wouldn't be any human race.

The spirit in which these conclusions are advanced is intensely practical, and now that some nitwits who probably don't get along with their wives and hate dogs, but who have worked themselves into the position of being able to, can knock a couple of atoms together, either by orders or by actual skill, and so tear up a very nice playing field, the presence of Dianetics in this world is not simply a practicality, but an urgency.

CHAPTER IV

ACCENT ON ABILITY

Almost anyone realizes that he can be better than he is, that he can do things better than he has been doing them. It is an entirely different thing to ask someone to realize that he is ill, aberrated, or stupid. Why is it that a man can understand that he can be more capable and very often cannot understand that he is incapable? It would seem to follow that if a man realized that he could be more capable, then he would realize at once that he was, to some degree, less capable than he could be. For various reasons, however, this does not follow. One is confronted many times too often by his insistence upon brilliance of a very stupid man. It could be said with some truth that the person who asserts he needs to know no more to be fully as bright as his fellows, would, upon examination, be discovered to be quite deficient in capability and understanding.

Earth has had many examples of this. The Fascist is probably best described as a very stupid man who insists upon a status quo which is intolerable for all others, yet who believes himself to be brighter than all others. But even a Fascist of the most modern sort -- the Fission Fascist -- would be the first to admit that both he and others could do a better job of being fascistic.

The basic reason for this is a simple one, almost idiotically simple. One can understand understanding, and can see that understanding can increase. Stupidity, ignorance, illness, aberration, incapability are only a fall away from understanding and are, themselves, less understanding and so are less understandable. One does not understand that he might get worse, and so does not have any great communication with people who tell him that he will get worse. The dying man believes right up to the moment of his last breath, no matter what he is saying to his doctor and family, that he is going to get better. He has no understanding of that state of non-understandingness called death. One can understand the understandable. One cannot understand the incomprehensible because the definition of incomprehensibility is non-understandability. As I said, this is an almost idiotically simple situation.

Life in its highest state is understanding. Life in its lower states is in a lower level of understanding, and where life has ceased to function and has arrived at what one might call total incapability, there is no understanding at all.

In Dianetics and Scientology we have a great deal to do with this subject called understanding. Understanding has very specific component parts. These component parts are: Affinity, Reality, and Communication.

Affinity, Reality, and Communication form an interdependent triangle. It is easily discovered on some inspection that one cannot communicate in the absence of Reality and Affinity. Further, one cannot have a reality on something with which he cannot communicate and for which he feels no affinity. And similarly, one has no affinity for something on which he has no reality and with which he cannot communicate. Even more narrowly, one does not have affinity for those things on which he has no reality and on which he cannot communicate, and one has no reality on things which he has no affinity for and cannot communicate upon, and one cannot communicate upon things which have no reality to him and for which he has no affinity.

A graphic example of this would be anger. One becomes angry and what one says does not then communicate to the person at whom one might be angry. Even more crudely, the fastest way to go out of communication with a machine would be to cease to feel any affinity for it, and to refuse to have any reality upon it.

We call this triangle the ARC triangle. The precision definitions of these three items are as follows:

1. COMMUNICATION is the interchange of ideas or particles between two points. More precisely, the definition of Communication is: Cause, Distance, Effect with Intention and Attention and a duplication at Effect of what emanates from Cause.

2. REALITY is the degree of agreement reached by two ends of a communication line. In essence, it is the degree of duplication achieved between Cause and Effect. That which is real is real simply because it is agreed upon, and for no other reason.

3. AFFINITY is the relative distance and similarity of the two ends of a communication line. Affinity has in it a mass connotation. The word itself implies that the greatest affinity there could be would be the occupation of the same space, and this, by experiment, has become demonstrated. Where things do not occupy the same space their affinity is delineated by the relative distance and the degree of duplication.

These three items, Affinity, Reality and Communication, can be demonstrated to equate into Understanding. Above Understanding is Knowingness without formula or design, and this might be considered to be a unit activity. Dropping down from a complete Knowingness we would arrive into the realm of Understanding, for this is a Third Dynamic manifestation peculiar to two or more individuals. Were you to be a clever mathematician, you could discover by Symbolic Logic how all mathematical formulas could be derived from this principle that Understanding is composed of Affinity, Reality, and Communication. No mathematics falling outside this triangle is valid mathematics to man. There is no additional factor in Understanding except Significance, but this, of course, is the idea or consideration mentioned in the Communication Formula (1., above).

It is a truism that if we could understand all Life we would then tolerate all Life. Further, and more germane to ability, if one could occupy the position of any part of Life, one would feel a sufficient affinity for Life to be able to merge with it or separate from it at will.

When we say "Life" all of us know more or less what we are talking about, but when we use this word "Life" practically, we must examine the purposes and behavior, and in particular the formulas evolved by life in order to have the game called "Life."

When we say "Life" we mean Understanding, and when we say "Understanding" we mean Affinity, Reality, and Communication. To understand all would be to live at the highest level of potential action and ability. The quality of Life exists in the presence of Understanding -- in the presence, then, of Affinity, Reality, and Communication. Life would exist to a far less active degree in the levels of misunderstanding, incomprehensibility, psychosomatic illness, and physical and mental incapacibilities. Because Life is Understanding it attempts to understand. When it turns and faces the incomprehensible it feels balked and baffled. It feels there is a secret, and feels that the secret is a threat to existence.

A secret is antipathetic to Life, and therefore Life, in searching for those things which would seem to reduce it, will hit upon various secrets it must discover. The basic secret is that a secret is an absence of Life, and a total secret would be a total unlivingness.

Now let us look at this formula of Communication and discover that we must have a duplication at Effect of what emanates from Cause. The classic example here is a telegram sent from New York City to San Francisco which says "I love you." When it arrives in San Francisco the machinery of communication has delivered it so that it says "I loathe you." This failure of duplication is looked upon as an error, and would cause considerable problems and trouble. It could not be considered to be a very good communication. There was nothing wrong with the basic intention. There was nothing wrong with the Attention which would be given the wire in San Francisco. The only thing that was wrong was a failure to duplicate at Effect what emanated from Cause.

Now if Life is Understanding it would find it very hard to communicate with something which was not Understanding. In other words, Life, faced with a non-understanding thing, would feel itself balked, for Life, being Understanding, could not then become non-understanding without assuming the role of being incomprehensible. Thus it is that the seeker after secrets is trapped into being a secret himself.

Where one has an effect point which is an incomprehensible thing, and where one is occupying a cause point, in order to get any communication through to the effect point at all, it would be necessary for the one at cause point to somehow or another reduce his understandingness down towards incomprehensibility. The salesman knows this trick very well. He looks at his customer, recognizes his customer is interested in golf, and pretends to be interested in golf himself in order to have his customer listen to his sales-talk. The salesman establishes points of agreement and potential duplication, and then proceeds into a communication. Thus searchers after truth have often walked only into labyrinths of untruth -- secrets -- and have themselves become incomprehensible, with conclusions of incomprehensibility. Thus we have the state of beingness of the philosophical textbooks of Earth. A wonderful example of this is Immanuel Kant, the Great Chinaman of Koenigsburg, whose German participial phrases and adverbial clauses, and whose entire reversal of opinion between his first and second books balks all our understanding as it has the understanding of philosophic students since the late Eighteenth Century. But the very fact that it is incomprehensible has made it endure, for Life feels challenged by this thing which, pretending to be understanding, is yet an incomprehensibility. This is the grave into which so many philosophers walk. This is the coffin into which the mathematician, seeking by mathematics the secrets of the universe, eventually nails himself. But there is no reason why everyone should suffer simply because he looks at a few secrets. The test here is whether or not an individual possesses the power to Be at his own determinism. If one can determine himself to be incomprehensible at will, he can of course, then, determine himself to be comprehensible again. But if he is obsessively, and without understanding, being determined into incomprehensibility, then of course he is lost. Thus we discover that the only trap into which Life could fall is to do things without knowing it is doing them. Thus we get to a further delineation of the secret and we discover that the secret, or any secret, could exist only when Life determined to face it without knowing and without understanding that it had so determined this action. The very best grade secret, then, would be something which made Life also tend to forget that it was looking at a secret.

One can always understand that his ability can increase, because in the direction of an increase in ability is further understanding. Ability is dependent entirely upon a greater and better understanding of that field or area in which one cares to be more able. When one attempts to understand inability he is of course looking at less comprehensibility, less understanding, and so does not then understand lessening ability anywhere near as well as he understands increasing ability. In the absence of understanding of ability we get a fear of loss of ability, which is simply the fear of an unknown, or a thought-to-be-unknowable thing, for there is less knowness and less understanding in less ability.

Because Life does not want to face things which are less Life-like, it has a tendency to resist and restrain itself from confronting the less comprehensible. It is the resistance alone which brings about the dwindling spiral, the descent into less ability. Life does not will this descent into less ability unless Life is cognizant of the principles involved. Life exists itself into this less-ability. There is a primary rule working here: that which one fears, one becomes. When one refuses to duplicate something, and yet remains in its environment, his very resistance to the thing he refuses to duplicate will cause him eventually to become possessed of so many energy pictures of that thing which he refuses to duplicate that he will, to have any mass at all, find himself in possession of those energy pictures, and without actually noticing when it happened, is very likely to accept, at their level, those things which he refused to duplicate earlier. Thus we get the riddle of the engram, the facsimile, if we understand, at the same time, that Life does not necessarily find it bad to have masses of energy around, and is, indeed, unhappy unless it does have some energy. For if there is no energy, then there is no game. Life has a motto: that any game is better than no game. And it has another motto: any

havingness is better than no havingness. Thus we find individuals clutching to them the most complex and destructive of facsimiles imaginable. They do not necessarily want these complexities, and yet they want the energy or the game which these complexities would seem to offer them.

If you would make anyone well, you must then concentrate upon an increase of ability, an increase of understanding. The only reason bad things come to Life is because understanding has impressed further life into them. When an individual faces some secret, the fact that he is facing it and injecting life into it alone causes the secret to activate and have force in action. The only way a bad situation in existence can continue to have life is by taking life from nearby sources of communication. The bad things of life, then, have life only to that degree that understanding is invested in them. We have an example in poliomyelitis, which was at one time an extremely minor and unheard-of illness. By various publications, by a great deal of advertising, by many invitations to combat this illness, it is made to take prominence and manifest itself in this society. The only life, actually, which poliomyelitis has is the amount of life which can be invested in poliomyelitis. Yet, poliomyelitis, one thinks, would exist and continue its way if it were ignored. If one were to go on ignoring poliomyelitis, now that one knows about poliomyelitis, yes, this would be the case. It indeed would continue to exist even though everyone was studiously ignoring it. As a matter of fact it would get worse. If, however, it were to be completely understood, and if an ability on the part of individuals existed by which they could face it without having to resist it, then the matter would be solved.

One wonders why all the nurses and doctors in contagious wards do not immediately pick up the illness, and here we have another factor which is the same factor as understanding, but couched in a different way. People do not acquire obsessively those things which they do not fear. An individual has to resist something, has to be afraid of something, has to be afraid of the consequences of something before it could have any adverse obsessive effect upon him. At any time he could have a self-determined duplication of it, but this, not being obsessive, not being against his will, would not produce any ill symptom beyond the length of time he determined it.

Part of understanding and ability is control. Of course, it is not necessary to control everything everywhere if one totally understands them. However, in a lesser understanding of things, and of course in the spirit of having a game, control becomes a necessary factor. The anatomy of control is Start, Stop and Change, and this is fully as important to know as Understanding itself, and as the triangle which composes Understanding, Affinity, Reality, and Communication.

The doctors and nurses in a contagious ward have some degree of control over the illnesses which they see before them. It is only when they begin to recognize their inability to handle these ills or these patients that they, themselves, succumb to this. In view of the fact that of recent centuries we have been very successful in handling contagious diseases, doctors and nurses, then, can walk with impunity through contagious wards.

The fighters of disease, having some measure of control over the disease, are then no longer afraid of the disease, and so it cannot affect them. Of course, there would be a level of body understanding on this which might yet still mirror fear, but we would have the same statement obtaining. People who are able to control something do not need to be afraid of it, and do not suffer ill effects from it. People who cannot control things can receive bad effects from these things.

Here we have an example of what might happen in the realm of disease. How about human aberration? We discover that the sanitariums of the world are all too often inhabited, in addition to patients, by these persons who were formerly at work in these institutions. It is a rather shocking thing to discover in Ward Nine the nurse who was once supervisor of a mental hospital. Now here we have a condition where there was no control or understanding. People do not understand mental illness, aberration, insanity, neurosis. The first actual effort along this line which cut down the tally was Freudian Analysis, and yet this, requiring much too

long, was not an effective weapon. These doctors and nurses in institutions who, then, are themselves patients in the same institutions knew definitely that they did not have any real control over insanity. Thus, having no control over it, they became subject to it. They could not start, stop and change insanity. The franticness of this state is represented by the medieval torture which has been utilized in such institutions as "cures." By "cured" the people in such institutions merely meant "quieter." The natural course of existence would lead them to think in terms of euthanasia, and so they have -- that it would be best to kill the patient rather than to have his insanity continue. And they have even accomplished this at the rate of two thousand mental patients a year dead under electric shock machines. And they have accomplished it by a very high percentage dead under brain operations. The only effectiveness of electric shock and brain operations would be to render the patient less alive and more dead, and the end-product we see so many times of death, which would be the only way to stop the insanity. These people, of course, could not envision the fact of immortality and that the insanity would crop up as a problem in future generations. They had to conceive that if they killed the patient, or if they simply made him much quieter, they had then triumphed to some degree. In view of the fact that Man, sane or insane, is not to be destroyed according to law waives against this "solution."

With Dianetics, to use the study in a relatively narrow field of application, we have assumed some control over insanity, neurosis, aberrations, and can actually start, stop and change aberration. In the first book, "Dianetics: The Modern Science of Mental Health," techniques were present which would place in view, and then vanquish them, almost any mental manifestation known in the field of insanity and aberration. Where an auditor was unable to do anything for the insane or the neurotic, the fault (if fault there was) generally lay in the fact that the auditor was actually afraid. His fear was borne entirely out of his insecurity in starting, stopping and changing the condition.

In modern instruction at Academies of Scientology, there is little or no emphasis placed upon the case of the student, and yet when the student graduates he is discovered to be in a very high tone. The entire concentration is upon giving the student the ability to handle any and all types of case, and he becomes sufficiently secure in his ability -- if he is graduated -- to walk without any fear and considerable calm through any and all areas of human aberration. He has been given the technologies by which these misbehaviors of Life can be controlled. In view of the fact that he can start, stop and change them he need no longer fear them, and could with impunity work around the insane if this were his mission.

The handling of psychosis, neurosis, and psychosomatic illness do not happen to be the mission of the auditor. Indeed, these things get well only if they are more or less ignored. As long as the accent is upon ability any malfunction will eventually vanish. The mission of the auditor is in the direction of ability. If he increases the general ability of the preclear in any and all fields then, of course, any misability such as those represented by psychosis, neurosis, and psychosomatic illness will vanish. The auditor, however, is not even covertly interested in these manifestations. Around him he sees a world which could be far more able. It is his business to make it so. While business, in general, does not recognize that there is anything wrong with its abilities, it can recognize that its abilities can be better. One well-trained auditor working with group processing in the United States Air Force could treble the number of pilots successfully graduated from a school, and could reduce the crash toll of high-speed planes by fully three-quarters. This is not a wild statement. It is simply an application of the research data already to hand. The mission is greater ability, not an eradication of inability.

Just to give more understanding to those around him could be said to be a sufficient mission for a well-trained auditor, for by doing so he would certainly increase their ability. By increasing that ability he would be able to increase their Life.

The common denominator of all neurosis, psychosis, aberration and psychosomatic illness is "can't work." Any nation which has a high incidence of these is reduced in production, and is reduced in longevity.

And what does he do about “how bad it is”? Well, if one depends for a long time upon others to do something about it, or depends upon force, he will fail. From his viewpoint the only one who can put more Life, more Understanding, more Tolerance and more Capability into the environment is himself, just by existing in a state of higher Understanding. Without even being active in the field of auditing, just by being more capable, an individual could resolve for those around him many of their problems and difficulties.

The accent is on ability. Amongst the unable is the criminal, who is unable to think of the other fellow, unable to follow orders, unable to make things grow, is unable to determine the difference between good and evil is unable to think at all on the future -- Anybody has some of these. The criminal has all of them -- LRH

CHAPTER V

THE AUDITOR'S CODE

There are several codes in Scientology and Dianetics. The only one that has to be obeyed if we wish to obtain results upon a preclear is The Auditor's Code, 1954. In the first book, "Dianetics: The Modern Science of Mental Health," we had an Auditor's Code which was derived more or less from an ideal rather than from practical experience. In the ensuing years a great deal of auditing has been done and a great many errors have been made by auditors. And when we have taken the common denominator of what has caused preclears to make small or negative progress, we discover that these can be codified so as to inform the auditor who wishes to get results what to avoid in his processing.

When a psychoanalyst or psychologist uses Dianetics he is very prone to be operating in his own frame of conduct. It is the conduct of the practitioner almost as much as the processes which makes Dianetics work. In psychoanalysis, for instance, we discover that the basic failure of Freud's work in practice and as used by analysts failed chiefly because of two things done by the analyst in a consultation room. Whatever the value of Freud's libido theory, the effectiveness was reduced by the analyst's evaluation for the patient. The patient is not allowed to work out his own problem, or to come to his own conclusions. He is given ready-made interpretations. In psychology there is no operating code, for clinical psychology is not much practiced and is, indeed, outlawed in many states. While psychiatry might have a *modus operandi*, none of those conversant with this handling of the insane -- the function of psychiatry -- would call it a code intended to induce a better state of beingness in a patient.

In education, which is in itself a therapy, we discover an almost total absence of codified conduct beyond that laid down by school boards to regulate the social attitude of, and restrain possible cruelty in educators. Although education is very widespread, and indeed is the practice best accepted by this society for the betterment of individuals, it yet lacks any tightly agreed-upon method or conduct-codification for the relaying of data to the student. Custom has dictated a certain politeness on the part of the professor, or teacher. It is generally believed to be necessary to examine with rigor and thoroughness. Students are not supposed to whisper or chew gum, but education in general has no code designed to oil the flow of data from the rostrum to the student bench. On the contrary, a great many students would declare that any existing code was designed to stop any flow whatever.

Dianetics is in an interesting position in that it is itself, and although people may try to classify it with mental therapy, it is closer to the level of education so far as the society itself is concerned. Its goal is the improvement of the mind on a self-determined basis, and its intended use is upon individuals and groups. Because it is an accumulation of data which is apparently the agreed-upon factors from which existence is constructed, and although the simple perusal of this data very often frees an individual, it is also disseminated on an individual and group basis directly to individuals and groups, and is a form of self-recognition.

If you were to make the best progress along any highway you would do well to follow the signs. In this Auditor's Code of 1954 we have a number of sign-posts, and if their directions are pursued a maximum of result will result. If they are not pursued, one is liable to find the preclear over in the ditch in need of a tow-truck in the form of a better auditor. Quite in addition to the command of the processes themselves, the difference between the Book Auditor and the professional Auditor lies in the observance of this code. A very great deal of time is invested in the auditor at Academies of Scientology in demonstrating to him the effects of disobedience of this code and obedience of it, and in leading him to practice it closely. This supervision in the Academies is relatively simple. One takes a look at the class and finds somebody who is not in good shape. One discovers who audited him, and one then knows what auditor is not following the Auditor's Code. The offending student is then taken aside and briefed once more. A graduating auditor has to know this code by heart, and more importantly has to be able to practice it with the same unconscious ease as a pilot flies a plane.

THE AUDITOR'S CODE, 1954

1. Do not evaluate for the preclear.
2. Do not invalidate or correct the preclear's data.
3. Use the processes which improve the preclear's case.
4. Keep all appointments once made.
5. Do not process a preclear after 10.00 p.m.
6. Do not process a preclear who is improperly fed.
7. Do not permit a frequent change of auditors.
8. Do not sympathize with the preclear.
9. Never permit the preclear to end the session on his own independent decision.
10. Never walk off from a preclear during a session.
11. Never get angry with a preclear.
12. Always reduce every communication lag encountered by continued use of the same question or process.
13. Always continue a process as long as it produces change, and no longer.
14. Be willing to grant beingness to the preclear.
15. Never mix the process of Dianetics with these of various other practices.
16. Maintain two-way communication with the preclear.

This is actually The Auditor's Code, 1954, Amended, since it has one additional clause from the original release of this code -- number 16: "Maintain two-way communication with the preclear."

If one were to sort out these provisos he would discover that all of them were important, but that three of them were more vitally concerned with processing than the others, and that these three, if overlooked, would inevitably and always result in case failure. These three are the differences between a good auditor and a bad auditor. They are numbers 12, 13 and 16.

In 12 we discover that the auditor should reduce every communication lag encountered by continued use of the same question or process. Almost every case failure contains some of this. The difference between a professional Auditor and a Book Auditor is most visible in this and the other two provisos mentioned. A good auditor would understand what a This code (replaced in 1968) was extended to include:

17. Never use Scientology to obtain personal and unusual favors or unusual compliance from the preclear for the auditors own personal profit.

18. Estimate the current case of your preclear with reality and do not process another imagined case.

19. Do not explain, justify or make excuses for any auditor mistakes whether real or imagined. communication lag is -- the length of time intervening between the asking of a question and the receiving of a direct answer to that question, regardless of what takes place in the interval -- and he would be very careful to use only those processes on a preclear which the preclear could reasonably answer up to, and he would be quite certain not to walk off from a communication lag into which the session had entered. A bad auditor would believe, when he had struck a communication lag, that he had simply found a blind alley, and would hastily change to some other question.

In number 13: "Always continue a process as long as it produces change, and no longer," we find the greatest frailty on the part of auditors. An auditor who is not in good condition or who is not well trained will "Q and A" with the preclear. When the preclear starts to change, the auditor will change the process. (By "Q and A" we mean that the answer to the question is the question, and we indicate a duplication.) Here we find an auditor possibly so much under the command of the preclear, rather than the reverse, that the auditor simply duplicates obsessively what the preclear is doing. The preclear starts to change, therefore the auditor changes. A process should be run as long as it produces change. If the preclear is changing that is what the auditor wants. If the auditor were to stop and change off to some other process just because the preclear has shown some change, we have discovered some very sick preclears. Additionally, an auditor is liable to continue a process long after it has stopped producing change. He and the preclear get into a sort of a marathon, a machine-motivated grind, on Opening Procedure by Duplication, which probably after ten hours produced no further alteration in the preclear. Yet this pair might go to 50 hours with the process and would be quite disheartened to discover that for 40 hours nothing had happened. This, however, is much less harmful as an action than just changing a process simply because it is producing change.

The maintenance of two-way communication is the most touchy activity of auditing. An auditor being the auditor and concentrating upon control of the preclear, all too often forgets to listen when the preclear speaks. Many an auditor is so intent upon the process that when it produces a change which the preclear thinks he should advise upon, the auditor ignores him. Ignoring the preclear at a time when he wishes to impart some vital information generally sends the preclear directly into apathy. At the same time, an auditor should not permit the preclear to keep on talking forever, as in the case of a lady recently reported who talked to the auditor for three days and three nights. The therapeutic value of this was zero, for the auditor was listening to a machine, not to a preclear. One should understand rather thoroughly the difference between an obsessive, or compulsive communication line and an actual communication. Listening to circuits of course validates circuits. The auditor should pay attention to the rational, the usual, the agreed-upon, and should leave very much alone the bizarre, the freaky, the compulsive and the obsessive manifestations of the preclear. The maintenance of two-way communication is actually a process in itself, and is the first and most basic process of Dianetics, and continues on through all the remaining processes.

Simply because we have pin-pointed three of these there is no reason to ignore the others. Every time there has been a "psychotic break" by reason of or during auditing, it has occurred when the preclear was improperly fed, when the preclear had had a frequent change of auditors, and when the two-way communication had not been maintained. The effort on the part of the preclear to impart a vital change to the auditor was ignored. All these "psychotic breaks" were repaired, but because these factors were present the patching up was rather difficult. Audit them early, audit them bright, listen to what they have to say about what's happening, make sure they are eating regularly, and change auditors on a preclear as seldom as possible, and no "psychotic breaks" will occur.

If you are simply investigating Dianetics to discover whether or not it is workable, you should be aware of the fact that the Auditor's Code, following of, is an essential function of Dianetics. Dianetics functions very poorly in the absence of the Auditor's Code. It is part of the process, not simply a polite way to go about handling people. Thus, if Dianetics is tested in the absence of The Auditor's Code, do not pretend that it has been tested at all.

Another phrase might have been added to this code, but it would be more germane to living than to auditing, and that phrase would be: "Maintain silence around unconscious or semi-conscious people." The reason for this is contained in "Dianetics: The Modern Science of Mental Health" and in preventive Dianetics. Such statements become "enramic." The addition of this to the Auditor's Code, however, is not practical, as an auditor often finds himself talking to a "groggy" preclear. Because the auditor is reducing every communication lag he encounters by a repetition of the question, the asking of a question or giving of a command to a semi-conscious preclear is thus rendered relatively unaberrative, for sooner or later the question imbedded in the unconsciousness will work loose and the communication lag will not flatten until this occurs. Thus, simply the reduction of the communication lag in itself eradicates such phrases. Thus, this is not part of the Auditor's Code. However, when we encounter unconsciousness or semi-consciousness, as in moments immediately after the injury of a child, a street accident, an operation, we maintain silence when we are not auditing a person. Mothers and fathers would spare themselves a great deal of later mental unrest on a child's part if they knew and would follow this injunction, and in many other ways it is a very important one. A man can be killed by too much conversation around him while he is injured. No matter how deeply unconscious he may appear to be, something is always registering. The questioning by the police at the scene of an accident, where the person being questioned is in a state of shock, or where other accident victims are present, is probably the most aberrative conduct in this society. The questioning by police is quite restimulative in any event, and many severe complications after accidents have been traced immediately to this activity on the part of the police. It might be very important for some ledger somewhere to know exactly who caused this. It is more important that the people involved in it live and be happy afterward. It is not that we do not like police. This is not the case. We simply believe that the police should be civilized, too.

Simply memorizing this code is not enough. Memorizing it in order to practice it is indicated, but it is the practice of this code which is important. Observance of it is the hallmark of a good auditor, and it signalizes the recovery of the case.

If an auditor is going to raise the ability of the preclear, his ability in the field of auditing must be considerable. That ability begins with the understanding and observance of the Auditor's Code, 1954, Amended.

CHAPTER VI

TRAPPED

In Greece, Rome, England, Colonial America, France and Washington, a great deal of conversation is made on the subject of Freedom. Freedom, apparently, is something that is very desirable. Indeed, Freedom is seen to be the goal of a nation or a people. Similarly, if we are restoring ability to the preclear we must restore Freedom. If we do not restore Freedom we cannot restore ability. The muscle-bound wrestler, the tense driver, the rocket jockey with a frozen reaction time alike are not able. Their ability lies in an increase of Freedom, a release of tension, and a better communication to their environment.

The main trouble with Freedom is that it does not have an anatomy. Something that is free is free. It is not free with wires, vias, by-passes, or dams, it is simply free. There is something else about Freedom which is intensely interesting, it cannot be erased. In "Dianetics: The Modern Science of Mental Health" we learned that pleasure moments were not erasable. The only thing that was erasable was pain, discomfort, distortion, tenseness, agony, unconsciousness. In more modern Scientological parlance, Freedom cannot be "as-ised," it is something which is imperishable. You may be able to concentrate somebody's attention on something that is not free and thus bring him into a state of belief that Freedom does not exist, but this does not mean that you have erased the individual's freedom. You have not. All the freedom he ever had is still there. Furthermore Freedom has no quantity, and by definition it has no location in space or time. Thus we see the awareness of awareness unit as potentially the freest thing there could be. Thus man concentrates on Freedom.

But if Freedom has no anatomy, then please explain how one is going to attain to something which cannot be fully explained. If anyone talks about a "road to Freedom" he is talking about a linear line. This, then, must have boundaries. If there are boundaries there is no freedom. This brings the interesting proposition to mind that the very best process, by theory, would be to have an individual assume himself to be free, and then he would simply be asked to assume himself to be free again. Indeed, upon many cases of a high toned variety this is a quite workable process. An individual is "sick," he is usually in very good tone, the auditor simply asks him to assume that he is free, and he will cease to be "sick." The magic, however, is limited to those people who have some concept of what "free" means. Talk to a person who works from eight o'clock until five with no goals, and no future, and no belief in the organization and its goals, who is being required by time-payments, rent, and other barriers of an economic variety to invest all of his salary as soon as it is paid, and we have an individual who has lost the notion of Freedom. His concentration is so thoroughly fixed upon barriers that Freedom has to be in terms of less barriers. Thus, in processing we have to audit in the direction of less and less barriers in order to attain Freedom.

If Freedom is so very compelling and is so useful, and is in itself something like a synonym for ability -- even if not entirely -- then it is our task to understand a little more about Freedom as itself in order to accomplish its attainment, for unfortunately it is not enough for the bulk of the human race simply to say "be free" and have an individual recover.

Life is prone to a stupidity in many cases in which it is not cognizant of a disaster until the disaster has occurred. The middle-western farmer had a phrase for it: "Lock the door after the horse is stolen." It takes a disaster in order to educate people into the existence of such a disaster. This is education by pain, by impact, by punishment. Therefore, a population which is faced with a one-shot disaster which will obliterate the sphere would not have a chance to learn very much about the sphere before it was obliterated. Thus, if they insisted upon learning by experience in order to prevent such a disaster, they would never have the opportunity. If no atomic bomb of any kind had been dropped in World War II it is probable there would be no slightest concern about atomic fission, although atomic fission might have developed right on up to the planet-buster without ever being used against Man, and then the planet-buster being used on Earth and so destroying it.

If a person did not know what a tiger was, and we desired to demonstrate to him that no tigers were present, we would have a difficult time of it. Here we have a freedom from tigers without knowing anything about tigers. Before he could understand an absence of tigers he would have to understand the presence of tigers. This is the process of learning we know as "by experience."

In order to know anything, if we are going to use educational methods, it is necessary then to know, as well, its opposite. The opposite of tigers probably exists in Malayan jungles where tigers are so frequent that the absence of tigers would be a novelty, indeed. A country which was totally burdened by tigers might not understand at all the idea that there were no tigers. In some parts of the world a great deal of argument would have been entered into with the populace of a tiger-burdened area to get them to get any inkling of what an absence of tigers would be. Many cases in processing have suddenly lost a somatic, to discover themselves in a new and novel state. This somatic was so routine and so constant and so pervasive that they could not intellectually conceive of what life would be like without that particular somatic.

The understanding of Freedom, then, is slightly complex if, then, individuals who do not have it are not likely to understand it, and thus we have an individual who knows nothing about exteriorization and knows everything about being in constant contact with the sensations of a body failing to grasp the idea of the freedom resulting from exteriorization. These people do not even believe that exteriorization can exist, and so combat it. They are so little experienced on the subject of Freedom that this type of Freedom is "known to be non-existent" to them.

The way to demonstrate the existence of Freedom is to invite the individual to experience Freedom, but if he does not know what Freedom is, then he will not exteriorize. We have to hit some sort of gradient scale on the matter, or make him turn around and look squarely at the opposite of Freedom.

But the opposite of Freedom is slavery and everybody knows this -- or is it? I do not think these two things are a dichotomy. Freedom is not the plus of a condition where slavery is the minus unless we are dealing entirely with the political organism. Where we are dealing with the individual better terminology is necessary and more understanding of the anatomy of minus-Freedom is required.

Minus-Freedom is entrapment. Freedom is the absence of barriers. Less Freedom is the presence of barriers. Entirely minus-Freedom would be the omnipresence of barriers. A barrier is matter or energy or time or space. The more matter, energy, time or space assumes command over the individual the less Freedom that individual has. This is best understood as entrapment since slavery connotes an intention, and entrapment might be considered almost without intention. A person who falls in a bear-pit might not have intended to fall into it at all, and a bear-pit might not have intended a person to fall upon its stake. Nevertheless, an entrapment has occurred. The person is in the bear-pit.

If one wants to understand existence and his unhappiness with it, he must understand entrapment and its mechanisms.

In what can a person become entrapped? Basically and foremost, he can become entrapped in ideas. In view of the fact that freedom and ability can be seen to be somewhat synonymous, then ideas of disability are first and foremost an entrapment. I dare say that amongst men the incident has occurred that a person has been sitting upon a bare plain in the total belief that he is entirely entrapped by a fence. There is that incident mentioned in "Self-Analysis" of fishing in Lake Tanganyika where the sun's rays, being equatorial, pierce burningly to the lake's bottom. The natives there fish by tying a number of slats of wood on a long piece of line. They take either end of this line and put it in canoes, and then paddle the two canoes to shore, the slatted line stretching between. The sun shining downward presses the shadows of these bars down to the bottom of the lake and thus a cage of shadows moves

inward towards the shallows. The fish, seeing this cage contract upon them, which is composed of nothing but the absence of light, flounder frantically into the shallows where they cannot swim and are thus caught, picked up in baskets and cooked. There is nothing to be afraid of but shadows.

When we move out of mechanics man finds himself on unsure ground. The idea that ideas could be so strong and pervasive is foreign to most men. For instance, a government attacked by the Communists does not perceive that it is being attacked only by ideas. It believes itself to be attacked by guns, bombs, armies and yet it sees no guns, bombs, armies. It sees only men standing together exchanging ideas. Whether or not these ideas are sound or not is beside the point, they are at least penetrative. No 16-inch armor plate could possibly stop an idea. Thus a country can be entrapped, taken and turned towards Communism simply by the spread of the Communistic idea. A country that fails to understand this arms itself, keeps its guns cocked, its armies alert, and then succumbs at last to the idea now entered into the heads of the armed forces, which it so hopefully employed. The collapse of Germany in World War I was an instance of this. Its armies, its grand fleet were all flying the red flag. Although Allied pressure and the conditions of starvation in Germany had much to do with its defeat, nevertheless, it was keyed into being by the Communist idea infiltrated into the minds of the men who originally were armed and trained to protect Germany. And Communism, just as an idea, traps the minds of men. They find themselves organized into cells, they find their customs abandoned and are regimented by a militant biological, soulless tyranny, their master. Here is an idea becoming a sort of trap.

So, first and foremost, we have the idea. Then, themselves the product of ideas, we have the more obvious mechanics of entrapment in matter, energy, space and time.

The most common barrier which man recognizes as such would be a wall. This is so obviously a barrier that individuals quite commonly suppose all barriers to be composed of solid walls. However, almost any object can be made into a barrier. A less common use of an object as a barrier would be one which inhibited, by some sort of suction or drag, a departure from it. A solid lump of considerable magnetic properties will hold to it a piece of steel. Gravity is, then, a barrier of a kind. It holds the people or life units of Earth to Earth.

Another barrier would be energy. A sheet of energy or something carrying energy, such as an electrical fence, can prove to be a formidable barrier. A cloud of radioactive particles obstructing passage into another space could also be a barrier. Tractor-type beams, as in the case of gravity, could be seen to be a barrier of sorts, but in the form of energy.

Yet another barrier, easily understood, is that of space. Too much space will always make a barrier. Space debars an individual from progressing into another part of the galaxy. One of the finest prisons one could imagine would be one located on a small piece of matter surrounded by such a quantity of space that no-one could cross it. Space is such an efficient barrier that people in the Southwest of the United States, committing crimes, discover their way everywhere blocked by the giganticness of space. In New York City it would be very easy for them, after the commission of a crime, to vanish, but in attempting to cross a space of such size as the Southwest they become exposed everywhere to view, there being nothing else upon which the police can fix their attention.

Quite another barrier, less well understood, but extremely thorough as a barrier, is time. Time debars your passage into the year 1776 and prevents your repossession of things which you had in your youth. It also prevents you from having things in the future. Time is an exceedingly effective barrier. The absence of time can also be a barrier, for here an individual is unable to execute his desires and is so constricted by the pressure of time itself.

Matter, energy, space and time can all, then, be barriers. An awareness of awareness unit, however, which is the personality and beingness unit of the person, and which is composed of quality, not quantity, can be anywhere it wishes to be. There is no wall thick enough, nor any space wide enough, to debar the reappearance at some other point of an

awareness of awareness unit. In that this is the individual, and not some ghost of the individual, and as the individual is himself an awareness of awareness unit and not his machinery and his body, we see that as soon as one understands completely that he is an awareness of awareness unit, he no longer is restricted by barriers. And thus those who would seek entrapment for individuals are entirely antipathetic towards the idea of exteriorization, and the person who knows nothing but barriers is apt to believe that a condition of no-barriers could not exist. Yet a condition of no-barriers can exist, and this is itself Freedom.

Examining Freedom, then, we have to examine why people do not attain it easily or understand it. They do not attain Freedom because their attention is fixed upon barriers. They look at the wall, not the space on either side of the wall. They have entities and demon-circuits which demand their attention, and, indeed, the body itself could be considered to be an attention-demanding organism. One might believe that its total function was to command interest and attention. It is so interesting that people do not conceive that behind them lies all the Freedom anybody ever desired. They even go so far as to believe that freedom is not desirable and that if they could attain it they would not want it. One is reminded of prisoners who occasionally go so sufficiently "stir-crazy" as to demand after their release from prison confining walls and restricted spaces. Manuel Komroff once wrote a very appealing story on this subject, the story of an old man who had served twenty-five years in prison, or some such time, and who on his release asked for nothing more than the smallest room in his son's house and was happiest when he could see someone on an opposite roof who had the appearance of a guard, and who actively put bars back on his window. One could consider that a person who has been for a long time in the body could have such a fixation upon the barriers imposed by the body, that once an auditor tries to remove them the preclear puts them back quickly. You might say that such a person is "stir-crazy," yet the condition is remediable.

The anatomy of entrapment is an interesting one, and the reason why people get entrapped, and, indeed, the total mechanics of entrapment are now understood. In Scientology a great deal of experimentation was undertaken to determine the factors which resulted in entrapment, and it was discovered that the answer to the entire problem was two-way communication.

Roughly, the laws back of this are: Fixation occurs only in the presence of one-way communication. Entrapment occurs only when one has not given or received answers to the things entrapping him. Thus we see the ARC Triangle itself, and most importantly the Communication factor of that triangle, looming up to give us Freedom.

It could be said that all the entrapment there is is the waiting one does for an answer.

Here we find Man. Basically he is an awareness of awareness unit which is capable of, and active in, the production of matter, energy, space and time as well as ideas. We discover that he is more or less fixated upon ideas, matter, energy, space and time and the processes and functions involving these. And we discover that these, being the products of the awareness of awareness unit, do not supply answers to the awareness of awareness unit, and thus the awareness of awareness unit supplies itself those answers.

Entrapment is the opposite of Freedom. A person who is not free is trapped. He may be trapped by an idea, he may be trapped by matter, he may be trapped by energy, he may be trapped by space, he may be trapped by time, he may be trapped by all of them. The more thoroughly a preclear is trapped the less free he is. He cannot change, he cannot move, he cannot communicate, he cannot feel affinity and reality. Death itself could be said to be Man's ultimate in entrapment, for when a man is totally entrapped he is dead.

It is our task in investigation and auditing to discover for the individual and the group a greater freedom, which is the roadway to a greater ability.

The processes the auditor uses today are designed entirely to secure greater freedom for the individual, for the group, for Mankind. Any process which leads to a greater freedom for

all Dynamics is a good process. It should be remembered, however, that an individual functions on all Dynamics, and that suppression by an individual of the Third or Fourth Dynamic leads to less Freedom for the individual, himself. Thus, the criminal, in becoming immorally free, harms the group and harms Mankind, and thus becomes less free himself. Thus there is no Freedom in the absence of Affinity, Agreement, and Communication. Where an individual falls away from these his freedom is sharply curtailed and he finds himself confronted with barriers of magnitude.

The component parts of Freedom, as we first gaze upon it, are then: Affinity, Reality, and Communication, which summate into Understanding. Once Understanding is attained, Freedom is obtained. For the individual who is thoroughly snarled in the mechanics of entrapment, it is necessary to restore to him sufficient communication to permit his ascendance into a higher state of understanding. Once this has been accomplished his entrapment is ended.

None of this is actually a very difficult problem. In the auditing done today this is very simple, but where the auditing is being done by a person who does not basically desire the freedom of the individual a further entrapment is more likely to ensue than further freedom. The obsessively entrapped are then enemies of the preclear, for they will trap others.

A greater freedom can be attained by the individual. The individual does desire a greater freedom, once he has some inkling of it. And auditing according to the precision rules and codes of Dianetics and Scientology steers the individual out of the first areas of entrapment to a point where he can gain higher levels of Freedom, either by further auditing or by himself. The only reason we need a regimen with which to begin is to start an individual out of a mirror-maze of such complexity that he himself, in attempting to wend his way, only gets lost.

This is Dianetics 55!

CHAPTER VII

COMMUNICATION

Communication is so thoroughly important today in Dianetics and Scientology, as it always has been on the whole track, that it could be said that if you would get a preclear into communication you would get him well. This factor is not new in psychotherapy, but concentration upon it is new, and interpretation of ability as communication is entirely new.

If you were to be in thorough and complete communication with a car on a road, you would certainly have no difficulty driving that car. But if you were in only partial communication with the car and in no communication with the road, it is fairly certain that an accident would occur. Most accidents do occur when the driver is distracted by an argument he has had, or by an arrest, or by a cross alongside of the road that says where some motorists got killed, or by his own fears of accidents.

When we say that somebody should be in present time we mean he should be in communication with his environment. We mean, further, that he should be in communication with his environment as it exists, not as it existed. And when we speak of prediction we mean that he should be in communication with his environment as it will exist, as well as as it exists.

If communication is so important, what is communication? It is best expressed as its formula, which has been isolated, and by use of which a great many interesting results can be brought about in ability changes.

There are two kinds of communication, both depending upon the viewpoint assumed. There is outflowing communication and inflowing communication. A person who is talking to somebody else is communicating to that person (we trust), and the person being talked to is receiving communication from that person. Now, as the conversation changes, we find that the person who has been talked to is now doing the talking, and is talking to the first person, who is now receiving communication from him.

A conversation is the process of alternating outflowing and inflowing communication, and right here exists the oddity which makes aberration and entrapment. There is a basic rule here: He who would outflow must inflow -- he who would inflow must outflow. When we find this rule overbalanced in either direction we discover difficulty. A person who is only outflowing communication is actually not communicating at all in the fullest sense of the word, for in order to communicate entirely he would have to inflow as well as outflow. A person who is inflowing communication entirely is again out of order, for if he would inflow he must then outflow. Any and all objections anyone has to social and human relationships is to be found basically in this rule of communication, where it is disobeyed. Anyone who is talking, if he is not in a compulsive or obsessive state of beingness, is dismayed when he does not get answers. Similarly, anyone who is being talked to is dismayed when he is not given an opportunity to give his reply.

Even hypnotism can be understood by this rule of communication. Hypnotism is a continuing inflow without an opportunity on the part of the subject to outflow. This is carried on to such a degree in hypnotism that the individual is actually trapped in the spot where he is being hypnotized, and will remain trapped in that spot to some degree from there on. Thus, one might go so far as to say that a bullet's arrival is a heavy sort of hypnotism. The individual receiving a bullet does not outflow a bullet, and thus he is injured. If he could outflow a bullet immediately after receiving a bullet, we could introduce the interesting question, "Would he be wounded?" According to our rules he would not be. Indeed, if he were in perfect communication with his environment he could not even receive a bullet injuriously, but let us look at this from a highly practical viewpoint.

As we look at two life units in communication we can label one of them “a” and the other one of them “b.” In a good state of communication “a” would outflow and “b” would receive, then “b” would outflow and “a” would receive. Then “a” would outflow and “b” would receive. In each case both “a” and “b” would know that the communication was being received and would know what and where was the source of the communication.

All right, we have “a” and “b” facing each other in a communication. “A” outflows. His message goes across a distance to “b” who inflows. In this phase of the communication “a” is Cause, “b” is Effect, and the intervening space we term the Distance. It is noteworthy that “a” and “b” are both life units. A true communication is between two life units, it is not between two objects, or from one object to one life unit: “a,” a life unit, is Cause, the intervening space is Distance, “b,” a life unit, is Effect. Now a completion of this communication changes the roles. Replied to, “a” is now the Effect, and “b” is the Cause. Thus we have a cycle which completes a true communication. The cycle is Cause, Distance, Effect, with Effect then becoming Cause and communicating across a Distance to the original source, which is now Effect, and this we call a two-way communication.

As we examine this further we find out that there are other factors involved. There is “a’s” intention. This, at “b” becomes attention, and for a true communication to take place, a duplication at “b” must take place of what emanated from “a.” “A” of course, to emanate a communication, must have given attention to “b,” and “b” must have given to this communication some intention, at least to listen or receive, so we have both Cause and Effect having intention and attention.

Now there is another factor which is very important. This is the factor of duplication. We could express this as Reality, or we could express it as Agreement. The degree of Agreement reached between “a” and “b” in this communication cycle becomes their Reality, and this is accomplished mechanically by Duplication. In other words, the degree of Reality reached in this communication cycle depends upon the amount of duplication. “B,” as Effect, must to some degree duplicate what emanated from “a,” now as Effect, in order for the first part of the cycle to take effect, and then “a,” now as Effect, must duplicate what emanated from “b” for the communication to be concluded. If this is done there is no aberrative consequence. If this duplication does not take place at “b” and then at “a” we get what amounts to an unfinished cycle of action. If, for instance, “b” did not vaguely duplicate what emanated from “a” the first part of the cycle of communication was not achieved, and a great deal of randomness, argument, explanation, might result. Then if “a” did not duplicate what emanated from “b” when “b” was cause on the second cycle, again an uncompleted cycle of communication occurred with consequent unreality. Now naturally, if we cut down Reality, we will cut down Affinity, so where duplication is absent Affinity is seen to drop. A complete cycle of communication will result in high Affinity and will, in effect, erase itself. If we disarrange any of these factors we get an incomplete cycle on communication and we have either “a” or “b” or both waiting for the end of cycle. In such a wise the communication becomes aberrative.

The word “aberrate” means to make something diverge from a straight line. The word comes basically from optics. Aberration is simply something which does not contain straight lines. A confusion is a bundle of crooked lines. A mass is no more and no less than a confusion of mis-managed communication. The energy masses and deposits, the facsimiles and engrams surrounding the preclear are no more and no less than unfinished cycles of communication which yet wait for their proper answer at “a” and “b.”

An unfinished cycle of communication generates what might be called “answer hunger.” An individual who is waiting for a signal that his communication has been received is prone to accept any inflow. When an individual has, for a very long period of time, consistently waited for answers which did not arrive, any sort of answer from anywhere will be pulled in to him, by him, as an effort to remedy his scarcity of answers. Thus he will throw engramic phrases in the bank into action and operation against himself.

Uncompleted cycles of communication bring about a scarcity of answers. It does not much matter what the answers were or would be as long as they vaguely approximate the subject at hand. It does matter when some entirely unlooked for answer is given, as in compulsive or obsessive communication, or when no answer is given at all.

Communication itself is aberrative only when the emanating communication at Cause was sudden and nonsequitur to the environment. Here we have violation of attention and intention.

The factor of interest also enters here but is far less important, at least from the standpoint of the auditor. Nevertheless it explains a great deal about human behavior, and explains considerable about circuits. "A" has the intention of interesting "b." "B," to be talked to, becomes interesting. Similarly "b," when he emanates a communication, is interested and "a" is interesting. Here we have, as part of the communication formula (but as I said, a less important part) a continuous shift from being interested to being interesting on the part of either of the terminals, "a" or "b." Cause is interested, Effect is interesting.

Of some greater importance is the fact that the intention to be received, on the part of "a" places upon "a" the necessity of being duplicatable. If "a" cannot be duplicatable in any degree, then, of course, his communication will not be received at "b," for "b," unable to duplicate "a," cannot receive the communication. As an example of this, "a," let us say, speaks in Chinese, where "b" can understand only French. It is necessary for "a" to make himself duplicatable by speaking French to "b" who only understands French. In a case where "a" speaks one language, and "b" another, and they have no language in common, we have the factor of mimicry possible and a communication can yet take place. "A," supposing he has a hand, could raise his hand. "B," supposing he had one, could raise his hand. Then "b" could raise his other hand, and "a" could raise his other hand, and we would have completed a cycle of communication by mimicry. Communication by mimicry could also be called communication in terms of mass.

We see that Reality is the degree of duplication between Cause and Effect. Affinity is monitored by intention and the particle sizes involved, as well as the distance. The greatest Affinity there is for anything is to occupy its same space. As the distance widens Affinity drops. Further, as the amount of mass or energy particles increases, so again does Affinity drop. Further, as the velocity departs from what "a" and "b" have considered optimum velocity -- either greater or lesser velocity than what they consider to be the proper velocity -- Affinity drops.

There is another fine point about communication, and that is expectancy.

Basically, all things are considerations. We consider that things are, and so they are. The idea is always senior to the mechanics of energy, space, time, mass. It would be possible to have entirely different ideas about communication than these. However, these happen to be the ideas of communication which are in common in this universe, and which are utilized by the life units of this universe. Here we have the basic agreement upon the subject of communication in the communication formula as given here. Because ideas are senior to this, a thetan can get, in addition to the communication formula, a peculiar idea concerning just exactly how communication should be conducted, and if this is not generally agreed upon, can find himself definitely out of communication. Let us take the example of a modernistic writer who insists that the first three letters of every word should be dropped, or that no sentence should be finished, or that the description of characters should be held to a cubist rendition. He will not attain agreement amongst his readers and so will become to some degree an "only one." There is a continuous action of natural selection, one might say, which weeds out strange or peculiar communication ideas. People, to be in communication, adhere to the basic rules as given here, and when anyone tries to depart too widely from these rules, they simply do not duplicate him and so, in effect, he goes out of communication.

We have seen an entire race of philosophers go out of existence since 1790. We have seen philosophy become a very unimportant subject, where once it was a very common coin amongst the people. The philosophers themselves put themselves out of communication with the people by insisting upon using words of special definitions which could not be assimilated with readiness by persons in general. The currency of philosophy could not be duplicated readily by those with relatively limited vocabularies. Take such jaw-cracking words as "telekinesis." While it probably means something very interesting and very vital, if you will think back carefully no taxi-driver mentioned this word to you while you were paying your fare, or even during the more verbose moments of the ride. Probably the basic trouble with philosophy was that it became Germanic in its grammar, an example set by Immanuel Kant. And if you will recall that wonderful story by Saki, a man was once trampled to death while trying to teach an elephant German irregular verbs. Philosophy shed some of its responsibility for a cycle of communication by rendering itself unduplicatable by its readers. It is the responsibility of anyone who would communicate that he speak with such vocabulary as can be understood. Thus philosophy could not even begin for some hundred and fifty years a sound cycle of communication, and thus is dead.

Now let us take up the individual who has become very "experienced" in life. This individual has a time-track in particular. This time-track is his own time-track, it isn't anyone else's time-track. The basic individualities amongst men are based upon the fact that they have different things happen to them and that they view these different things from different points of view. Thus we have individualization and we have individual opinion, consideration and experience. Two men walking down the street witness an accident. Each one of them sees the accident from at least a slightly different point of view. Consulting twelve different witnesses to the same accident, we are likely to find twelve different accidents. Completely aside from the fact that witnesses like to tell you what they think they saw instead of what they saw, there were actually twelve different points from which the accident was viewed, and so twelve different aspects of the occurrences. If these twelve were brought together, and if they were to communicate amongst themselves about this accident, they would then reach a point of agreement on what actually happened. This might not have been the accident, but it certainly is the agreed-upon accident, which then becomes the real accident. This is the way juries conduct themselves. They might or might not be passing upon the real crime, but they are certainly passing upon the agreed-upon crime.

In any war it takes two or three days for enough agreement to occur to know what took place in a battle. Whereas there might have been a real battle, a real sequence of incidents and occurrences, the fact that every man in the battle saw the battle from his own particular point of view, by which we mean severely "point from which he was looking," rather than his opinions -- no one saw the battle in its entirety. Thus, time must intervene for enough communication on the subject of the battle to take place so that all have some semblance of agreement on what occurred. Of course, when the historians get to this battle and start writing different accounts of it, out of the memoirs of generals who were trying to explain away their defeats, we get a highly distorted account indeed. And yet this becomes the agreed-upon battle, as far as history is concerned. Reading the historians one realizes that one will never really know what took place at Waterloo, at Bennington, at Marathon. In that we can consider as a communication one soldier shooting at another soldier, we see that we are studying communications about communication. This scholarly activity is all very nice, but does not carry us very far towards the resolution of human problems.

We have seen these two words "Cause" and "Effect" playing a prominent role in the communication formula. We have seen that First Cause became at the end of the cycle Last Effect. Furthermore, at the intermediate point, First Effect immediately changed to Cause in order to have a good communication cycle. What, then, do we mean by "Cause"? Cause is simply the point of emanation of the communication. What is "Effect"? Effect is the receipt point of the communication. In that we are only interested in life units, we see that we can readily ascertain cause at any time. We are not interested in secondary or tertiary Cause. We are not interested in assisting causes in any way. We are not interested in secondary or tertiary effects. We are not interested in assisting effects in any way. We consider any time that we

look at a source point of a communication that we are looking at Cause. In that the entire track is composed of this pattern of Cause and Effect, an individual is very prone, whenever he sees a possible cause point, to look for an earlier cause point, and then an earlier one, and an earlier one, and an earlier one, and after a while takes to reading the Bible, which is very hard on the eyesight.

In view of the fact that all Cause is simply elected cause, and all Effect is simply elected effect, and that the primary echelon is the idea level of communication, that is Cause which we elect to be Cause, that is Effect which elects to be Effect, and there is no more that can be said about it. Cause in our dictionary here means only "source point." Effect means only "receipt point."

We notice that the receipt point, midway in the cycle of communication, shifts and becomes source point. We could classify this shift in the center of the cycle of communication in some other fashion, but it is not necessary to do so. We would be getting too complicated for our purposes.

Now we come to the problem of what a life unit must be willing to experience in order to communicate. In the first place the primary cause point must be willing to be duplicatable. It must be able to give at least some attention to the receipt point. The primary receipt point must be willing to duplicate, must be willing to receive, and must be willing to change into a source point in order to send the communication, or an answer to it, back. And the primary source point in its turn must be willing to be a receipt point. As we are dealing basically with ideas and not mechanics, we see then that a state of mind must exist between a cause and effect point whereby each one is willing to be Cause or Effect at will, and is willing to duplicate at will, is willing to be duplicatable at will, is willing to change at will, is willing to experience the distance between, and, in short, willing to communicate. Where we get these conditions in an individual or a group we have sane people. Where an unwillingness to send or receive communications occurs, where people obsessively or compulsively send communications without direction and without trying to be duplicatable, where individuals in receipt of communications stand silent and do not acknowledge or reply, we have aberrative factors. And it is very interesting to note from the standpoint of processing, that we have all the aberrative factors there are. We do not need to know anything further about aberration than that it is a disarrangement of the cycle of communication. But to know that, of course, we have to know the component parts of communication and the expected behavior.

Some of the conditions which can occur in an aberrated line are a failure to be duplicatable before one emanates a communication, an intention contrary to being received, an unwillingness to receive or duplicate a communication, an unwillingness to experience distance, an unwillingness to change, an unwillingness to give attention, an unwillingness to express intention, an unwillingness to acknowledge, and, in general, an unwillingness to duplicate. We might go so far as to say that the reason communication takes place instead of occupying the same space and knowing -- the communication introduces the idea of distance -- is that one is unwilling to BE to the degree necessary to be anything. One would rather communicate than be. Thus we find that the inability to communicate is a gradient scale -- it goes down along with the inability to be. We get individuals winding up as only willing to be themselves, whatever that is, and thus becoming "the only one." To the degree that a person becomes "the only one" he is unwilling to communicate on the remaining dynamics. An individual who has become only himself is in the sad and sorry plight of being off the Second, Third, and Fourth Dynamics, at least.

It might be seen by someone that the solution to communication is not communicating. One might say that if he hadn't communicated in the first place he wouldn't be in trouble now. Perhaps there is some truth in this, but there is more truth in the fact that processing in the direction of making communication unnecessary, or reducing communication, is not processing at all, but murder. A man is as dead as he can't communicate. He is as alive as he can communicate. With countless tests in the Hubbard Association of Scientologists International department of writing and investigation, I have discovered to a degree which could be called

conclusive, that the only remedy for livingness is further communicatingness. One must add to his ability to communicate.

Probably the only major error which exists in Eastern Philosophy, and probably the one at which I balked when I was young, was this idea that one should withdraw from life. It seemed to me that every good friend I had amongst the priests and holy men was seeking to pull back and cut off his communications with existence. Whatever the textbooks of Eastern philosophy may say, this was the practice of the people who were best conversant with Eastern mental and spiritual know-how. Thus I saw individuals taking fourteen or eighteen years in order to get up to a high level of spiritualistic serenity. I saw a great many men studying and very few arriving. To my impatient and possibly practical Western viewpoint this was intolerable. For a very great many years I asked this question, "To communicate, or not to communicate?" If one got himself into such thorough trouble by communicating, then, of course, one should stop communicating. But this is not the case. If one gets himself into trouble by communicating, he should further communicate. More communication, not less, is the answer, and I consider this riddle solved after a quarter-century of investigation and pondering.

CHAPTER VIII

THE APPLICATION OF COMMUNICATION

If you think we are talking about anything very esoteric, or highly mathematical, kindly read the communication formula again. Just because we are speaking of the basic fundamentals of sanity, aberration, freedom, ability, truth, knowledge, and secrets is no reason why we have to be complicated. We expect the fundamentals of behavior to be complicated simply because so many highly complicated people have discussed the subject. If Immanuel Kant couldn't, and if Adler added communication, there is no reason why we should.

As we speak of the applications of communication we are looking at complexities of these fundamentals, and having isolated the fundamentals, we do not then see any complexity in the product of the basics. Let us say that we thoroughly understand that two plus two equals four. Now we write this on a piece of paper and put it on a table. It is still understandable. Now we write on another piece of paper that two plus two equals four and put it on the same table. Now on a third piece of paper we write two plus two equals four and add it to those on the table. We take four tablets full of paper and on each sheet we write two plus two equals four, and tearing each sheet out, add these. Now we get some blocks of wood, and we write two plus two equals four on these blocks of wood. We get some leather and charcoal and write two plus two equals four, and add that to the table. Then we get some blackboards, and on each one white two plus two equals four and put them on the table. And we get some colored chalk and write two plus two equals four in various colors on another blackboard and put it on the table. Then we have two plus two equals four bound in vellum and add that to the pile on the table. Then we get some building bricks and we scratch on them two plus two equals four and put them on the table. Now we get four gallons of ink and pour it over two plus two equals four, and smear everything we've put on the table. Now we take a bulldozer and push the table out through the wall. We take a steam roller and run over the debris. We take some concrete and pour it over the whole and let it dry, and we still have not altered the fact that two plus two equals four.

In other words, no matter what mechanics we add to the communication formula, no matter what form we use to communicate, no matter how many types of words and meanings we place into the communication formula to become messages, no matter how we scramble meanings, messages, cause points and effect points, we still have a communication formula.

Here we have an individual. He has been living for a many-vented lifetime. He began life, let us say, with a perfect grasp of the communication formula. His experience has been a consistent departure from the communication formula only to the degree that he failed to emanate or failed to receive, twisted, perverted, or failed to return communications, and at the end of that lifetime all we have to do to put him into excellent condition would be to restore in its complete clarity his ability to execute the communication formula. The only thing which has happened to him has been violation of the communication formula. He emanated something that was not received when it was received it was not acknowledged when it replied he did not receive it and thus he begins to look further and further afield for communication and becomes more and more complicated in his view of communication and becomes less and less duplicatable, is less and less able to duplicate, his intentions swerve further and further, his attention becomes more and more altered, what should have been straight lines wind up in a ball, and we have our preclear after a lifetime of living with homo sapiens. All we have to do to get him into the most desirable clarity would be to restore his ability to perform the various parts of the communication formula and his ability to apply that formula to any thing in this or any universe. He would have to be willing to duplicate anything. He would have to be willing to make himself duplicatable. He would have to be able to tolerate distance and velocities and masses. He would have to be able to form his own intentions. He would have to be able to give and receive attention. He would have to be able to take or leave at will the intentions of others, and more important, he would have to be able to be at any point and make it cause or receipt

point at will. If he were able to do this he could not possibly be trapped, for here we are intimately walking into the deepest secret of the trap.

What is a secret? It is the answer which was never given, and this is all a secret is. Thus knowledge and use of the communication formula within the framework of Dianetics and Scientology resolves any and all secrets and even the belief in secrets.

The only thing that could be said to aberrate communication would be restriction, or fear of restriction. A person who is not communicating is one who is restricting communication. A person who is communicating compulsively is afraid of being restricted in his communication. A person who is talking on another subject than that to which Cause was giving his attention has been so restricted on the subject of communication elsewhere, or has experienced such a scarcity of communication elsewhere, that he is still involved with communication elsewhere. This is what we mean by "not in present time."

When we look at problems without which humanity cannot seem to live we discover that a problem is no more and no less than a confusion of communication lines, missing cause or effect points, undeterminable distances, misread intentions, missing attention, and failures in the ability to duplicate and be duplicatable. Move off the communication formula in any direction and a problem will result. A problem, by definition, is something without an answer, not because the two words are similar, but because all of humanity has confused them. We find that answer to a communication and answer to a problem can, for our purposes, be synonymous.

When one has failed to get answers consistently to his communications, he begins to run into a scarcity of answers, and he will get problems in order to have solutions, but he will not solve any of the problems because he already has a scarcity of answers. An auditor walks in on a preclear who has a scarcity of answers, finds the preclear has a circuit of problems, tries to resolve some of the problems of the preclear, discovers that the preclear creates new problems faster than old ones can be resolved. One thing the preclear knows is that there aren't any answers -- not for his particular kind of problems. He knows this is to such a degree that he is unable to conceive of answers, which means to him that he is unable to conceive of solutions. He is like the old man in Manuel Komroff's story who, after his release from prison, yet created a cell of his own. He cannot look at freedom. He does not believe freedom exists. He cannot envision a world without tigers. The remedy for this, of course, is to have him remedy his lack of answers by having him mock up answers.

That confused look you see on a mathematician's face is the task he has set himself to procure symbolic answers to hypothetical abstracts, none of which, of course, are human answers. The longer he symbolizes, the more formulas he creates, the further he drifts from the human race. Answers are answers only when they come from living units. All else is a glut on the market. No mathematical formula ever gave anybody any answer to anything unless it was to the problem of communication itself, but this I'll invite to your attention, was not involved with, and was not derived from, mathematics as we know them. The communication formula was derived from an observation of and working with life. It could be derived only because one had entirely abandoned the idea that energy could tell anyone anything. Life is not energy. Energy is the by-product of Life.

Your recluse is one who has become so thoroughly convinced that there are no obtainable answers from anyone that he does no longer believe that Life itself exists. He is the only living thing alive, in his opinion. Why? Because he is the only thing which communicates. I dare say every recluse, every "only one," every obsessively or compulsively communicating individual has so thoroughly associated with "life units" which were so dead that it became "very plain" that no one else was alive. The attitude of a child towards the adult contains the opinion that adults have very little Life in them. A child, with his enthusiasms, is in his family everywhere surrounded by communication blocks of greater or lesser magnitude. His questions do not get answers. The communications which are addressed to him are not posed in a way which can be duplicated. In other words, the adult does not make himself duplicatable. Freud

and his confreres were entirely in error in believing that the child is totally self-centered. It is not the child who is totally self-centered. He believes that he is in communication with the total world. Investigation of children demonstrates that they are very heavy on the First, Second, Third and Fourth Dynamics. The child is so convinced of his ability to communicate that he will touch a hot stove. Life has no terrors for him. He has not yet learned by experience that he cannot communicate. It's the adult who is drawn back into the "only one" and one believes that the inspiration of this continuous belief on the part of a psychologist and psychoanalyst that the child is entirely self-centered and living in his own world must be the expression of an opinion held by the psychoanalyst and psychologist out of his own bank. As one grows one goes less and less into communication with the environment until he is at last entirely out of it. Only he is out of it in the wrong direction -- dead.

Where you see aberration, where you would wish to detect aberration, you must look for violations in the communication formula. People who consistently and continually violate portions of the communication formula can be suspected of being just that dead. The further one departs from the communication formula the more death exists for them. The more concentrated they become on secrets, the more they question intentions, the less they are likely to assume the point of view called Cause or the point of view called Effect.

One should not go so far as to say that Life is communication. It is, however, a native condition of Life to be able to communicate. Life, the awareness of awareness unit, the ability to have unlimited quality with no quantity, or do produce quantity, is capable of communication. And here again we are consulting ability. Ability, first and foremost, could be conceived to be the ability to BE, and also the ability to vary being, and this means the ability to communicate. One has to be able to be in order to communicate. One has to be able to vary one's beingness in order to return communication.

There is the manifestation, then, known as the "stuck flow." This is one-way communication. The flow can be stuck incoming or it can be stuck outgoing. The part of a communication cycle that goes from primary Cause to Effect may be the flow that is stuck, or it might be the other from "b" back to "a" that is stuck. Here we have several possible methods of achieving a stuck flow, and several conditions of flow, four to be exact. The flow can be stuck from primary Cause to Effect, from the viewpoint of primary Cause. The flow can be stuck from primary Cause to primary Effect from the viewpoint of primary Effect. The flow can be stuck from Effect-turned-Cause to final Effect, from the viewpoint of Effect-turned-Cause. The flow can be stuck from Effect-turned-Cause to primary Cause, from the viewpoint of primary Cause. These four stuck flows can become - - any of them or a combination of them -- the anatomy of a communication lag of a case. A person can hear but cannot answer. A person can cause a communication to begin, but cannot receive an acknowledgement. A primary Cause can be totally engrossed in keeping the flow from arriving at primary Effect, etc.

A failure to complete a cycle of communication will leave some part of that communication in suspense. It will leave it, in other words, silent, and this will stick on the track. It will float in time. It will restimulate. It will attract and hold attention long after it occurred.

Unconsciousness itself results from the receipt of too much, too heavy, communication. It can similarly, but less often, result from the emanation of too much, too heavy, communication as in the case of blowing up a large balloon, where one becomes dizzy after the expulsion of too much breath. Theoretically, one sending a large mass towards another might fall unconscious as a result of sending too much mass away from himself too suddenly, and we find that this can be the case. This is degradation because of loss. One gives away too much, or loses too much, and the departure of the mass, or even the idea, can bring about a drop in consciousness. In view of the fact that a thetan can create at will this is not a very dangerous situation. One can receive too much communication too suddenly, such as a cannon ball. Unconsciousness will result from this. Most engrams are composed of too much incoming mass and too much outgoing mass, so as to make a confusion into which any answer, any phrase interjected can then be effective since there is a scarcity of phrases and a

plus in masses. One could even go so far as to say that the only reason a mass interchange is ever effective in the line of unconsciousness is that it does not have enough reasons with it. I suppose that if one explained carefully enough to a soldier why he had to be shot, the arrival of a bullet would not make him unconscious or hurt him. But again this is theoretical, as very little reason goes on in war, thus it has never been subjected to a clinical experiment.

The resolution of any stuck flow is remedying the scarcity of that which stuck the flow. This might be answers, it might be original communication, it might be chances to reply.

The communication formula at work is best understood through the “communication lag.”

CHAPTER IX

TWO-WAY COMMUNICATION

A cycle of communication and two-way communication are actually two different things. If we examine closely the anatomy of communication we will discover that a cycle of communication is not a two-way communication in its entirety.

If you will inspect Graph "A" below, you will see a cycle of communication:

Here we have Joe as the originator of a communication. It is his primary impulse. This impulse is addressed to Bill. We find Bill receiving it, and then Bill originating an answer or acknowledgment as Bill', which acknowledgement is sent back to Joe'. Joe has said, for instance, "How are you?" Bill has received this, and then Bill (becoming secondary Cause) has replied to it as Bill', with "I'm O.K.," which goes back to Joe', and thus ends the cycle.

Now what we call a two-way cycle of communication may ensue, as in Graph "B."

Here we have Bill originating a communication. Bill says, "How's tricks?" Joe receives this, and then as Joe' or secondary Cause, answers "O.K., I guess," which answer is then acknowledged in its receipt by Bill'.

In both of these graphs we discover that in Graph "A" the acknowledgement of the secondary Cause was expressed by Joe' as a nod or a look of satisfaction. And again, in Graph "B," Joe's "O.K., I guess" is actually acknowledged by Bill' with a nod or some expression signifying receipt of the communication.

If both Joe and Bill are "strong, silent men" -- highly aberrated -- they would omit some portion of these cycles. The most flagrant omission and the one most often understood as "communication lag" by the auditor would be for Joe in Graph "A" to say "How are you?" and for Bill to stand there without speaking. Here we have Joe causing a communication, and Bill failing to continue the cycle. We do not know or require, and we are not interested in, whether or not Bill, as the receipt point, ever did hear it. We can assume that he was at least present, and that Joe spoke loudly enough to be heard, and that Bill's attention was somewhere in Joe's vicinity. Now instead of getting on with the cycle of communication, Joe is left there with an incompleting cycle and never gets an opportunity to become Joe'.

There are several ways in which a cycle of communication could not be completed, and these could be categorized as (1) Joe failing to emanate communication, (2) Bill failing to hear communication, (3) Bill' failing to reply to the communication received by him, and (4) Joe' failing to acknowledge by some sign or word that he has heard Bill'.

We could assign various reasons to all this, but our purpose here is not to assign reasons why we do not complete a communication cycle. Our entire purpose is involved with the non-completion of this communication cycle.

Now, as in Graph "A," let us say we have in Joe a person who is compulsively and continually originating communication whether he has anybody's attention or not, and whether or not these communications are germane to any existing situation. We discover that Joe is apt to be met, in his communicating, with an inattentive Bill who does not hear him, and thus an absent Bill' who does not answer, and thus an absent Joe' who never acknowledges.

Let us examine this same situation in Graph "B." Here we have, in Bill, an origination of a communication. We have the same Joe with a compulsive outflow. Bill says, "How are you?" and the cycle is not completed because Joe, so intent upon his own compulsive line, does not become Joe' and never gives Bill a chance to become Bill' and acknowledge.

Now let's take another situation. We find Joe originating communications, and Bill a person who never originates communications. Joe is not necessarily compulsive or obsessive in originating communications, but Bill is aberratedly inhibited in originating communications. We find that Joe and Bill, working together, then get into this kind of an activity: Joe originates a communication, Bill hears it, becomes Bill', replies to it, and permits Joe a chance to become Joe'. This goes on quite well, but will sooner or later hit a jam on a two-way cycle, which is violated because Bill never originates communications.

A two-way cycle of communication would work as follows: Joe, having originated a communication, and having completed it, may then wait for Bill to originate a communication to Joe, thus completing the remainder of the two-way cycle of communication. Bill does originate a communication, this is heard by Joe, answered by Joe', and acknowledged by Bill'.

Thus we get the normal cycle of a communication between two terminals, for in this case Joe is a terminal and Bill is a terminal and communication can be seen to flow between two terminals. The cycles depend on Joe originating communication, Bill hearing the communication, Bill becoming Bill' and answering the communication, Joe' acknowledging the communication, then Bill originating a communication, Joe hearing the communication, Joe' answering the communication, and Bill' acknowledging the communication. If they did this, regardless of what they were talking about, they would never become in an argument and would eventually reach an agreement, even if they were hostile to one another. Their difficulties and problems would be cleared up and they would be, in relationship to each other, in good shape.

A two-way communication cycle breaks down when either terminal fails, in its turn, to originate communication. We discover that the entire society has vast difficulties along this line. They are so used to canned entertainment and so inhibited in originating communication by parents who couldn't communicate, and by education and other causes, that people get very low on communication origin. Communication origin is necessary to have communication in the first place. Thus we find people talking mainly about things which are forced upon them by exterior causes. They see an accident, they discuss it. They see a movie, they discuss it. They wait for an exterior source to give them the occasion for a conversation. But in view of the fact that both are low on the origin of communication -- which could also be stated as low on imagination -- we discover that such people, dependent upon exterior primal impulses, are more or less compulsive or inhibitive in communication, and thus the conversation veers rapidly and markedly and may wind up with some remarkable animosities or mis-conclusions. Let us suppose that lack of prime cause impulse on Joe's part has brought him into obsessive or compulsive communication, and we find that he is so busy outflowing that he never has a chance to hear anyone who speaks to him, and if he did hear them would not answer them. Bill on the other hand, might be so very, very, very low on primal cause (which is to say, low on communication origination) that he never even moves into Bill', or if he does, would never put forth his own opinion, thus unbalancing Joe further and further into further and further compulsive communication.

As you can see by these graphs, some novel situations could originate. There would be the matter of obsessive answering as well as inhibitive answering. An individual could spend all of his time answering, justifying or explaining -- all the same thing -- no primal communication having been originated at him. Another individual, as Joe' in Graph "A" or Bill' in Graph "B," might spend all of his time acknowledging, even though nothing came his way to acknowledge. The common and most noticed manifestations, however, are obsessive and compulsive origin, and non-answering acceptance, and non-acknowledgement of answer. And at these places we can discover stuck flows.

As the only crime in the universe seems to be to communicate, and as the only saving grace of a thetan is to communicate, we can readily understand that an entanglement of communication is certain to result, but we can understand -- and much more happily -- that it can now be resolved.

That which we are discussing here is minimally theory and maximally derived from observation. The main test of this is whether or not it resolved cases. and be assured that it does.

Flows become stuck on this twin cycle of communication where a scarcity occurs in (1) origination of communication, (2) receipt of communication, (3) answering of communication given, (4) acknowledging answers. Thus it can be seen that there are only four parts which can become aberrated in both Graph "A" and Graph "B," no matter the number of peculiar manifestations which can occur as a result thereof.

These observations of communications are so vital that a considerable difference amongst case results comes about between an auditor who does acknowledge whatever his preclear answers and an auditor who does not. Let us take "Auditor G" and we discover that he is running Opening Procedure of 8-C on a preclear, but that at the end of two hours of Opening Procedure of 8-C the preclear has benefited very little. Then let us take "Auditor K." The auditor does 15 minutes of Opening Procedure of 8-C and gets very good results on the preclear. The difference between Auditor G and Auditor K is only that Auditor G never acknowledges any answer or statement, or communication origin on the part of the preclear. He simply continues doggedly with the process. Auditor K, on the other hand, is willing to let the preclear originate a communication and always acknowledges whenever the preclear concludes the action called for in a command, or when the preclear volunteers a verbal answer. In other words, G did not answer or acknowledge -- but ran the process with mechanical perfection, and K both answered and acknowledged as well as originated orders. The fact that the scarcest thing there is is the origin of orders or communications, and the fact that G was at least doing this, was enough to cause G to get some improvement in the preclear, but he would not get anything like the improvement obtained by Auditor K.

Silence is nowhere desirable except in permitting another to communicate or waiting for another to acknowledge. The auditing of silence will wind the preclear in a perfect fish-net of aberration. The total process which remedies this is remedying the scarcity, by whatever means, of the four parts of a two-way communication.

CHAPTER X

COMMUNICATION LAG

Yesterday we used an instrument called an E-Meter to register whether or not the process was still getting results so that the auditor would know how long to continue it. While the E-Meter is an interesting investigation instrument and has played its part in research, it is not today used by the auditor except perhaps in testing the basal metabolism of the preclear. The E-Meter is no longer used to determine “what is wrong with the preclear.” As we long ago suspected, the intervention of a mechanical gadget between the auditor and the preclear had a tendency to de-personalize the session and also gave the auditor a dependence upon the physical universe and its meters which did not have to be there. I knew when we first began to use E-Meters that sooner or later something would have to be evolved, or that something would turn up which would dispense with them. I worked along that line rather consistently and about half a year before this writing developed “communication lag” as the only diagnostic instrument needed by the auditor.

The exact definition of a communication lag is: “the length of time intervening between the posing of a question, or origination of a statement, and the exact moment that question or original statement is answered.” The Mark V E-Meter, though not a diagnostic instrument, was developed by L. Ron Hubbard since this writing for precision auditing. See book list in back of this book for titles on this subject.

If you will look very closely at this definition you will discover that nothing is said, whatever, about what goes on between the asking of the question or the origination of a communication and its being answered. What goes on in between is lag. It does not matter if the preclear stood on his head, went to the North Pole, gave a dissertation on Botany, stood silent, answered some other question, thought it over, attacked the auditor, or began to string beads. Any other action but answering, and the time taken up by that action, is communication lag. An auditor has to understand this very thoroughly. Usually he interprets a communication lag as the length of time it takes the preclear to answer the question and loosely applies this as the length of time between the asking of the question and the first moment the preclear starts to speak. This is not communication lag, for the preclear may start to speak on some other subject, may desire information, may almost answer the question, and still not actually answer the question.

If you will look around at people you will find them possessed of a great many communication lag mechanisms. In their effort not to be an effect, or in their effort not to be cause, in their aberrations about compulsive communication, and inhibitive communication, and in indulging in impulsive, compulsive and inhibitive communication. They manage to assemble quite a number of interesting mechanisms, but all these mechanisms are communication lag.

Here is an example of communication lag. Joe: “How are you, Bill?” Bill: “You look fine, Joe.” Here the question was never answered at all and would go on as a communication lag from there until the end of the universe.

Here is another example: Joe: “How are you, Bill?” Bill (after twenty seconds of study): “Oh, I guess I’m all right today.” As this is the commonest form of communication lag it is the most readily observed.

Less well known is the following communication lag. Joe: “How are you, Bill?” Bill: “What do you want to know for?” Again, this question goes on unanswered until the end of the universe.

The most maddening kind of communication lag is, Joe: “How are you Bill?” Bill: _____ silence from there on out. This is dramatized when people anxiously inquire of an

unconscious person how he is and they become entirely frantic. They are simply looking at a communication lag which they believe will become total, and their anxiety is simply their multiple suffering on the subject of communication lag.

Here is another type of communication lag. Joe: "How are you, Bill? I was saying to Ezra the other day that I have seen a lot of sick men in my time, but you certainly look pretty bad. Bill, now how are you? I've been down to see the doctor and he was telling me there's a lot of these colds and things going around..." In other words, Joe never gives Bill an opportunity to reply, and this is the other side of communication lag.

An auditor's understanding of the subject of communication lag is brief if he believes it is the lag between the originator of the communication and the person to whom it is addressed. On our Graph "A" on an earlier page this would be from Joe to Bill'. There is a return lag, and that is from Bill' to Joe', and, as above, there is a lag between Joe and Joe' where Joe simply keeps on talking without ascertaining if there is any Bill' there. You could also call this return lag an "acknowledgement lag." Joe to Joe is not a communication at all. Actually, Joe to Bill' without the completion of the cycle is the same thing. Joe never acknowledges a communication and so the return lag is actually Joe to Joe. The proper sequence of such a communication is Bill' to Joe'. In other words Joe, to make a complete cycle of communication, must acknowledge in some manner, verbal or gesture, that Bill' has said something.

Joe to Joe, as a communication lag (which is to say, no acknowledgement) has as its initial root an absence, for Joe, of Bill to Bill' in Graph "B." In other words, Joe has been called upon to originate communication so consistently that he now does so compulsively and obsessively since there has been an entire scarcity of other people originating communication.

Now let us look at a highly specialized type of communication lag. Here we have Joe to Bill to Bill' to Joe', as in Graph "A." Then we have Joe waiting for Bill, in Graph "B," to originate a communication. If Bill does not, and only silence ensues, Joe then originates another communication. In other words, we have no two-way communication.

The two-way cycle of communication is not quite as important in auditing as it would be in Life, for in auditing the auditor perforce is originating communication in order to get the preclear up to the point where he can originate communication. One does not remedy Life by approximating it exactly in the auditing room. The process is so designed that it will accomplish a rehabilitation in Life without, to a marked degree, having to live it. As an example of this, the auditor does not expect the preclear to turn around and originate some process to make the auditor well. But the auditor does expect to get audited by somebody sooner or later, or expects to be at a level where he can rise above this need of a communication interchange in order to live.

The place auditors have the most trouble with the communication lag is the return lag. Auditors seldom acknowledge the execution of commands on the part of the preclear. As in Opening Procedure of 8-C, a process which is one of the six basic processes, the auditor sends the preclear over to touch the wall. When the preclear has touched the wall, the auditor is quite prone to give another command without acknowledging the fact that the preclear has touched the wall. It is an amazing thing what the lack of acknowledgement will do to slow down a case recovery. Many times when an auditor is doing this acknowledging, he is doing it in such a perfunctory fashion that the preclear does not recognize it as an acknowledgement, but as a prelude to a new command. A good auditor makes very, very sure that the preclear knows the acknowledgement has occurred, As an example, the auditor says: "Go over to the wall and touch it." The preclear does so. The auditor says: "Very good," and with a definite pause after this acknowledgement says: "Now go over to that wall and touch it." In other words, the auditor who is a good auditor makes sure that the preclear knows that a complete cycle of communication has occurred on this particular auditing command.

Another failure on the part of auditors is to fail to let the preclear originate a communication. The auditor tells the preclear: "Go over to that wall and touch it." The preclear does so but stops midway in the gesture and gasps, then completes the gesture. The bad auditor will fail to note and inquire after this gasp. This is actually the origin of a communication on the part of the preclear. He does not verbalize it. He does not express it any further than some physical gesture or a look of dismay, and even these might be slight, but this is usually as far as he can go in originating a communication. The auditor who fails to pick this up fails to inform the preclear thus that the preclear is permitted to originate a communication. This gasp, this gesture, should at once be noted by the auditor with a "What's happening?" or, "What's the matter?" or, "Something happen?" This gives the preclear the opportunity to originate a second cycle of communication. Remember that the gesture or the gasp was actually a communication. The preclear probably will not acknowledge the auditors statement beyond starting out on the origin of a new communication, but the fact that he does originate a statement on the subject of what is the matter is, in itself, an acknowledgement of the fact that he has heard the auditor. This is so vital that many cases have stumbled, tripped, and bogged, simply because the auditor did not encourage the preclear to make a statement as to something which had occurred. Actually, the more often an auditor can do this the better auditor he is, and the more good will be done by auditing.

Now, of course, there is an opposite side of this where the auditor can give credence to an obsessive or compulsive outflow on the part of the preclear to such an extent that the auditing is entirely interrupted. An example of this occurred recently where a preclear outflowed at an auditor three days and three nights without the auditor recognizing entirely that this, was simply obsessive communication in action. But this is not communication. This is not pertinent to the situation, and the definition of compulsive or obsessive communication is "an outflow which is not pertinent to the surrounding terminals and situation." In other words, compulsive or obsessive communication is an outflow which is not in reality with the existing reality.

We see, then, that an auditing session really does include two-way cycle of communication, but it does not include it, ever, unless the auditor invites the preclear to comment upon what is going on as he does processing.

Just as a side comment here, the way to handle an obsessive or a compulsive communication is to wait for a slight break in the flow and interject an auditing command. Remember that an obsessive outflow is actually not a communication. A communication is on the subject and is in agreement with the environment. It is also in agreement with what is occurring.

Now it doesn't happen to matter what process is being done, the basic of that process is two-way communication. In auditing, as in living, communication is existence. In the absence of communication we have silence, and where we have silence we have no time. Time is manifested in communication lag to the extent that the preclear has been subjected to silences, or such a thing as an obsessive or compulsive outflow which had nothing to do with communicating on the subject at hand. This is again a sort of silence. Somebody talking obsessively and continually about things which might or might not exist, and to no one in particular without expecting any cycle of communication to take place.

A communication lag is handled by an auditor by repetition of a question or command which elicited a communication lag. Here is an example. Bill: "How are you, Joe?" Joe: silence silence silence -- finally a grunt. Bill: "How are you, Joe?" Silence, silence -- "O.K., I guess." Bill: "How are you, Joe?" "I'm all right, I tell you!" Bill: "How are you, Joe?" Joe: silence _____ "I'm O.K." Bill: "How are you Joe?" Joe: "All right, I guess." Bill "How are you, Joe?" Joe: "All right." Bill: "How are you Joe?" Joe: "Oh, I'm all right."

This is an example of flattering a communication lag. At first we have silence and no very intelligible reply, then we have silence and a reply, and then other manifestations, each

one of which demonstrates a changing interval of time until the last couple of commands -- three, in actual auditing practice -- where the same interval of time was present.

Flattening a communication lag requires only that the preclear answer after a uniform interval of time at least three times. This uniform interval of time could, for practical purposes, be as long as 10 seconds. Thus we get lengths of time required to answer an auditing question as follows: answer requires 35 seconds answer requires 20 seconds answer requires 10 seconds answer requires 10 seconds answer requires 10 seconds. To all intents and purposes, with these three last 10 second intervals the auditor could consider that he has to some degree flattened this particular auditing command because he is getting a consistent response. However, with such a long lag as 10 seconds, the auditor will discover that if he asked the question two or three more times he would recover a changing interval once more.

This is the mechanical formula of flattening communication lag. Give the order, as in Opening Procedure of 8-C, or ask the question, as in Straightwire, and then continue to give that same order or ask that same question until the preclear executes it after a short interval three times the same.

There is an entirely different manifestation for a completely flattened communication lag. We get extroversion. The preclear ceases to put his attention on his mind, but puts his attention on the environment. We see this happen often in the Opening Procedure of 8-C where the preclear has the room suddenly become bright to him. He has extroverted his attention. He has come free from one of these communication tangles out of the past and has suddenly looked at the environment. This is all that has happened. On a thinkingness level this happens quite often. The preclear is doing the process very well, and then begins to remember odds and ends of appointments he has, or some such thing. Just because he does this is no reason the auditing session should be ended. It simply demonstrates an extroversion. You have, in one way or another, pulled the preclear out of a communication tangle and put him into present time, when he extroverts

Communication lag as a subject could be a very large one. We have all manner of communication lags in evidence around us. Probably the most interesting one is the shock reaction after an accident, which one occasionally sees. At times it takes the body 36 hours to find out and reply to the fact that it has received an impact. It is quite common for a body to suddenly manifest the impact half an hour after it. This is communication lag. There are many humorous angles to communication lag. Sometimes you ask somebody "How are you?" and you get a reply from his social machinery. He says, "I'm fine." Then, two or three hours later, he is liable to say to you, "I feel terrible." This was the preclear, himself, answering. This was the awareness of awareness unit awakening to this communication lag.

This universe could be called a consistent and continuous communication lag. One is trapped in it to the degree that he is lagging. If there were no remedy for communication lag I would never bring up the subject. However, there is, and it is a remedy which is easily undertaken in auditing today.

Entrapment is actually communication lag. One has waited for communication which never arrived, expected something to answer so long and so often that he becomes fixated upon something, or in somethings, and so does not believe he can escape from it. The first and foremost factor in communication lag, of course, is time, and the next factor is waiting. This is also dependent upon time.

As has been commented earlier, the only things which float on the time track are the moments of silence when no communication occurred. These are "no time" moments, and so have no time in which they can live, and so they float forward on the time-track. It is an oddity that an engram behaves in such a way as to put all its silent moments in present time with the preclear and leave its talking or action moments back on the track. When we took a person back to birth and ran out birth, we took out the action moments. If we did not take out, as well, the silent moments in birth, we did not take out the very things which pin themselves to the

preclear in present time. In other words, the birth engram did not move at all, but the silent moments in birth might have a tendency to come up into present time. These silent moments in engrams and facsimiles do, themselves, compose the matter extant in the preclear. This matter is not so much composed of action moments as silent moments. Thus we see that an individual, the longer he lives in this universe, the more communication lag he runs into, the more upset he is about existence, the greater his communication lag, the more he is silent. Of course, obsessive or compulsive communication is just one grade above silence. It is the last frantic effort to keep things from going entirely quiet. It is not communication and is actually silence of a sort, particularly since very few people listen to it.

Now we are studying about communication, and we are communicating about communication, and you have every opportunity here to get yourself beautifully snarled, so I would ask you to look around your environment and check a number of manifestations of communication lag. You are not controlled by the subject. You can easily control it. The dangerous thing is not to know the answers and simply go on in these consistent and continual communication lags imposed upon us by the lack of communication in this universe.

It is of great interest to note that imagination as a function of existence becomes drowned in an absence of communication origin. An individual can become so dependent upon others for entertainment and originating communications that he himself does not. Indeed, it is very unpopular in this society at this time to originate communications. One should always say that somebody else thought of it first, or that it goes back to the ancient Ugluks, or that it's happened many times before, or that one has just dug up the information after it has been buried, or one is really taking directions from the Archangel Smearel, rather than stand up and plead guilty to originating a communication. Unless one can originate communications one's imagination is in bad shape. The reverse does not happen to be true. The imagination is not that thing which is first imperiled and then results in failure to originate communication. Failure of communication origin then results in failure of imagination, so the rehabilitation of communication origin rehabilitates as well the imagination.

This is very good news, indeed, for anyone in the creative arts, particularly, but who is not in the creative arts?

Examining the whole subject of communication one discovers that there are very few people around him in this day and age who are actively communicating, and there are a lot of people who think they are communicating who are not.

CHAPTER XI

PAN-DETERMINISM

An entirely new concept in Dianetics and Scientology is that of Pan-Determinism.

In Book One we talked about Self-Determinism. Self-Determinism meant, in essence, control by the awareness of awareness unit of that which it conceived to be its identity. Some effort was made in Book One to move Self-Determinism out into the remaining Dynamics.

Pan-Determinism is a word which describes determinism all along the Dynamics. Actually, Self-Determinism attempted to do this, and our earlier idea of Self-Determinism was a sort of Pan-Determinism.

We have to remember here that the Dynamics involved in Dianetics are the first four. The Dynamics involved in Scientology are the last four of the total set of eight. The Eight Dynamics are as follows:

DYNAMIC ONE is the urge towards survival of self.

DYNAMIC TWO is the urge towards survival through sex, or children, and embraces both the sexual act and the care and raising of children.

DYNAMIC THREE is the urge towards survival through the group and as the group.

DYNAMIC FOUR is the urge towards survival through all mankind and as all mankind.

DYNAMIC FIVE is the urge towards survival through life forms such as animals, birds, insects, fish and vegetation, and is the urge to survive as these.

DYNAMIC SIX is the urge towards survival as the physical universe and has as its components Matter, Energy, Space and Time, from which we derive the word MEST.

DYNAMIC SEVEN is the urge towards survival through Spirit and would include the manifestations or the totality of awareness of awareness units, thetans, demons, ghosts, spirits, goblins, and so forth.

DYNAMIC EIGHT is the urge towards survival through a Supreme Being, or more exactly, Infinity. It is called Dynamic Eight because it is Infinity turned up on its side.

The urge towards survival through self, sex, children, groups and mankind is the proper province of Dianetics.

Now let us examine the concept of Pan-Determinism. Pan-Determinism would

be the willingness to determine or control self and dynamics, other than self, up to the eight listed above. Like Self-Determinism, Pan-Determinism is self-elected or self-determined, in that one does it knowingly and directly, not from obsession, compulsion or inhibition. An undetermined individual, of course, does not exist, but an other-determined individual definitely can exist. Where we have Self-Determinism, and we interpret Self-Determinism as determinism on the First Dynamic, we have only willingness to control self and no willingness to control anything beyond self. If this is the case, in Self-Determinism we have as other-determinism sex, children, groups, mankind, and going on into Scientology, animal life, vegetation, the physical universe, spirits, and God -- or whatever else might compose Infinity. In view of the fact that Self-Determinism was interpreted in this fashion it left an individual in the state of mind of being willing to be determined on all other Dynamics and by all other

Dynamics except his own personal dynamic. In view of the fact that all auditing is the Third Dynamic, and in view of the fact that a personal dynamic cannot exist, and that an individual as we see him, a man, is actually a composite and is not a First Dynamic but a Third Dynamic, we see we are in difficulty with this definition of Self-Determinism and continued use of Self-Determinism. It is necessary, then, to investigate further and to assign more precision to this concept of willingness to control.

When we say control we do not mean the "control case" where control is obsessive or other-determined, or where the individual is controlling things out of compulsion or fear. We simply mean willingness to start, stop and change. The anatomy of control is just that -- starting, stopping and changing things. Now it is not necessary for a person to start, stop and change things just to demonstrate that he can control them. He must, however, to be healthy and capable, be able to start, stop and change things.

Here we come immediately to what we mean by ability. It would be the ability to start, change and stop things, and if we have an ability to start, stop and change things, we of course must have a willingness to start, stop and change things. Those people who are unwillingly behaving in some direction so as to start, stop and change things are very sick people, and in this last category we discover the bulk of the human race at this writing.

The basic difference between aberration and sanity, between inability and ability, between illness and health, is the knowingness of causation by self opposed to unknown causation by others or other things. An individual who knows he is doing it far more capable than one who is doing it but supposes something else is doing it. Psychosis is itself simply an inversion of determinism. A psychotic is entirely other-determined, a sane man is in good measure Self-Determined. Pan-Determinism would mean a willingness to start, change and stop on any and all dynamics. That is its primary definition. A further definition, also a precision definition, is: the willingness to start, change and stop two or more forces, whether or not opposed, and this could be interpreted as two or more individuals, two or more groups, two or more planets, two or more life-species, two or more universes, two or more spirits, whether or not opposed. This means that one would not necessarily fight, he would not necessarily choose sides.

This is in total controversy to some of the most cherished beliefs of Man, but may I point out to you quickly that Man is not an entirely sane person, and thus some of his beliefs must be somewhat aberrated. There is such a thing as courage, but there is not such a thing as sanity totally opposed.

People who are afraid of control are liable to be afraid of Pan-Determinism but if they will see this as a willingness to start, change and stop any Dynamic they will see that a person must be assuming the responsibility for any of the Dynamics. A conqueror, in his onslaught against society, is fighting other-determinism. He is starting, changing and stopping things because of an unwillingness to associate with or support other races or customs than his own. Therefore, what he is doing can be interpreted as "bad."

In support of this we get all of the earlier religious teachings, but these have been grossly misinterpreted. These have been interpreted to mean that a person should not fight in any way, or defend anything, or have anything, or own anything. This is not true. A person who is willing to be other identities besides himself, other individualities besides himself, does not necessarily harm these other individualities. Indeed, we cannot make the complete distinction of other than himself, since we are saying in this that he clings to something he calls self and supports and defends it without being willing to identify himself with others.

One of the most maddening debaters is one who moves at will between the viewpoints of himself and those who have elected him as an enemy.

There is an important scale down from Pan-Determinism. It does not lead along a dwindling Dynamic path, but it could, of course. One could simply see as Pan-Determinism

dwindling the falling off of one Dynamic after another until one is down to First Dynamic, but that is not a particularly workable picture and an auditor does not use it.

The Scale down from Pan-Determinism is: Pan-Determinism, Fighting, Must and Must Not Happen Again, Repair and Association. These are actually processes. At the bottom we find an unwillingness to associate with anything. Just above this is an unwillingness to repair anything, but a willingness to associate somewhat. Above this is a willingness to associate and to repair somewhat, but no willingness to let certain things happen again. Above this is a willingness to fight things, and above this is Pan-Determinism. These are arranged in this fashion because this is the ladder a preclear climbs if he is run on a certain type of process. This is something like the old Emotional Scale, which went: Apathy, Grief, Fear, Anger, Antagonism, Boredom, Conservatism, and Enthusiasm, only in this case it is a scale of behavior manifestations. Where an individual who is unwilling to associate with various things is certainly a long way from being Pan-Determined and definitely is not even Self-Determined, he has to come up a ways before he is willing to repair anything, but in this frame of mind he can repair quite generally but is unwilling or unable to create or destroy. An oddity here is that a person who is unwilling to associate is only able to destroy, and a person has to be very far up the scale before he can create. In fact, he has to be up around Pan-Determinism to adequately create. Above this level of repair we find an individual frozen in many incidents which he is preventing from occurring once more and is holding the facsimiles or engrams of these incidents so that he will have a model and so know what mustn't occur and above this level we discover an individual fighting and being willing to fight almost anything and above this level we discover an individual willing or able to be almost anything and so may be at peace with things and does not have to fight things. An individual at the Pan-Determinism level can create. An individual at Association, as I have said, can only destroy. An individual at Repair or Must and Must Not Happen Again is making a very, very heavy effort -- and I do mean Effort -- to survive.

Let us take for our example of Pan-Determinism the Second Dynamic. Here we find such a thorough effort to have other-determinism that Freud picked this out as the only aberrative factor. It is not the only aberrative factor, but in view of the fact that it is a desired inflow it can be considered with many other things to have some aberrative value. Let us look at it in terms of Self-Determinism and Pan-Determinism. Here we have an individual believing himself to be a man, who believes that his only sexual pleasure can be derived from remaining very solidly a man and having sexual relationships with a woman, and being very sure that he is not the woman. On the other hand, we find a woman determined to be herself and experience as herself, and to experience a sexual inflow from a man. In the case of the man, as in the case of the woman, we have an unwillingness to be the other sex. This is considered natural but do you know that when this is entirely true, when we have complete determinism to be self and not to be to any slightest degree the other person, there is no sexual pleasure interchange of any kind whatsoever? We get the condition known as Satyrism and Nymphomania. We get a tremendous anxiety to have a sexual flow.

Probably the only reason you can see the universe at all is because you are still willing to be some part of it. Probably the only reason you can talk to people is because you can be the other person you are talking to. Probably the only reason you can really let people talk to you is because you are willing to let the other person be you, somewhat, and he is willing to let you be him to some degree. In view of the fact that space itself is a mock-up, is a state of mind, it can be seen that individuality depends to some degree upon the law that no two things must occupy the same space. When we get this law in action we have a universe. Until this law goes into action there is no universe, and one would be hard put to differentiate entirely. Two things can occupy the same space to the degree that you are willing to believe they can. It is a very easy thing to talk to an audience if you are perfectly willing to be an audience. It is a very difficult thing to talk to an audience if you are unwilling to be an audience. Similarly, it is very difficult to be an audience if you are unwilling to be on the stage. One could conceive that a person who had a considerable amount of stage-fright would be incapable of enjoying a performance of actors. And so it is. We discover the person who is in the audience and has, himself, considerable stage-fright, writhing and feeling embarrassed for every actor who makes

the slightest slip on the stage. In other words, we find this person compulsively being on the stage although he is in the audience.

Things of this nature have led more than one philosopher to assume that we were all from the same mould, or that we were all the same thing. This is a very moot question. Processing demonstrates rather adequately that we are all really individuals and that we are not the same individual, and indeed, people who believe we are all the same individual have a very rough time of it. But evidently we could all be the same individual, at least if we were entirely sane.

The physical universe is a sort of hypnotic trance where the individual believes himself to be capable of viewing from various points. The illusion is rendered very excellent by the fact that other individuals believe that they are viewing the same things from the same points as they occupy. We are all, as awareness of awareness units, basically different. We are not the same "pool of Life," and we are all evidently differently endowed, no matter what the Communist Party would like to believe.

One of the most significant differences from man to man is the degree to which he is willing to be Pan-Determined. The man who has to forcefully control everything in his vicinity, including his family, is not being Self-Determined, usually, much less Pan-Determined. He is not being his family. If he were being his family, he would understand why they are doing what they are doing and he would not feel that there was any danger or menace in their going on executing the motions or emanating the emotions which they do. But, anchored down as one person, rather obsessed with the damage that can be done to him or those around him, an individual is apt to launch himself upon a course of heavy, solid, super-control of others. Now let's take the person who is Self-Determined and Pan-Determined in the same situation, and we discover that he would have enough understanding in the vicinity of his family and others' families, and with this understanding would be willing to be and experience as the remainder of the family, and he would find out that he actually could control the family with considerable ease. The oddity of it is that force can control down into entheta -- to enturbulation -- but that a Pan-Determinism controls upward into greater happiness and understanding since there is more ARC present. You have seen individuals around whom a great deal of peace and quiet obtained. Such individuals quite commonly hold into sanity and cheerfulness many others in their environment who are not basically stable or Self-Determined at all. The individual who is doing this is not doing it out of obsession, he is doing it simply by knowing and being. He understands what people are talking about because he is perfectly willing to be these people. When he falls away from understanding what they are talking about he has also fallen away from being willing to be them. The willingness to understand, the willingness to be are, for our purposes, synonymous.

Now how does this Pan-Determinism tie into communication?

We have seen that difficulties arise on the cycle of communication and on the two-way cycle of communication where origins of communication, answers and acknowledgements were scarce. It must be, then, that the individual becoming aberrated through communication, must have conceived the necessity of another determinism. In other words, one has to fall away from Pan-Determinism to get into any of the traps of communication at all.

It is a very fortunate thing for us that Pan-Determinism exists, otherwise there would be absolutely no way whatsoever out of this maze of mis-communication that a person gets into. The only way out of it would be to have other people come around and do enough talking and go to enough movies, and seek out another Self-Determinism which could communicate and make it communicate until one were sane. However, it doesn't have to be worked out in an unlimited sense in this way. The oddity is that it works out in "mock-up." Further, it works out best in mock-up, for in mock-up we introduce the idea of Pan- Determinism.

When we ask somebody to get the idea that somebody else is present, who is not, and then have him make this person give him answers, we discover after a while that some major

aberrations have blown out of our preclear. In the first part the preclear is actually remedying the scarcity of answers -- or, if these were being processed, originals or acknowledgements -- and is so disentangling communication lines. The sense of what he would mock the person up as saying would have nothing to do with it. The communication could be almost pure gibberish as long as it was an answer. This would straighten out the bank to a very marked degree. The other factor which enters into this is Pan-Determinism. We are making the individual actually mock up somebody else and make somebody else say something. In other words, we are making our preclear take over the control, the start, change and stop of another communication medium. And with further test and experiment we discover that we can do this for all the Dynamics, and when we have done this for all the Dynamics we have brought our preclear up to a point where he is willing to monitor communications on all the Dynamics. And when he is willing to do this, and get origins, answers, and acknowledgements along all the Dynamics, we find that we have a very serene person who can do the most remarkable things. Anything you have read concerning the potential abilities of the Clear, and a lot more, comes true when we follow this course. So it is a very fortunate thing for us that Pan-Determinism exists. Otherwise there would be no processing anybody.

Remember, when you are explaining this to people, that it is willingness to control on any and all Dynamics, and that it is not an obsessive or compulsive control to own, protect, or hide on any Dynamic. All the ills of Earth come from an obsession to own, control, protect and hide on other Dynamics than Self. The true enlightenment of this world has come from Willingness to be along any of the Dynamics.

One of the things which gives truth to Pan-Determinism is the savageness with which the aberrated attempt to drive an individual away from anything resembling Pan-Determinism. This is simply an obsessive action on the part of people to climb up to Pan-Determinism by force. Pan-Determinism cannot be climbed by force. The ladder to that height is not made of pikes and spears, spankings and police forces. It is made of Understanding, Affinity, Reality and Communication.

CHAPTER XII

THE SIX BASIC PROCESSES

Today's auditor must be conversant with six Basic Processes and must be able to get results with these processes before he can expect to get results with higher levels of auditing.

These six processes form a roadway for more than the auditor. We discover that they compose a tone-scale. This tone-scale is as follows: at its lowest and highest reaches, whether by mimicry, words, or mock-up, we have two-way communication. Next above this, occupying a position from about 1.1 to 1.8 on the Chart of Human Evaluation as given in "Science of Survival," we have Elementary Straightwire. Above this we have, from 1.8 to 2.5, Opening Procedure. Above this, from 2.6 to 3.0, we have Opening Procedure by Duplication. Above this we have Remedy of Havingness, from 3.1 to 3.5, and above this, from 3.6 to 4.0, Spotting Spots in Space.

An auditor, in auditing these six basic processes, becomes sufficiently capable in observing and communicating that he can handle (or, can bring the preclear up to the point where he can handle) the "subjective process" which remedies communication, or the other one which is the "One-Shot Clear."

The problem of psychosis never rightly belonged in Dianetics but it has been solved there. Opening Procedure of 8-C and the Mimicry techniques as given in the PABs resolve psychosis. They resolve it rapidly and care for it adequately, and we have no real worry on that score. The only reason we would enter the field of psychosis at all would be to find out how far South our techniques worked.

CHART OF PROCESSES

WHERE THEY ARE ON THE ARC TONE SCALE

Exteriorized	
Spotting Spots in Space	4.0
	3.6
Remedy of Havingness	3.5
	3.1
Op. Pro. by Duplication	3.0
	2.6
Opening Procedure 8-C	2.5
	1.8
Elementary Straightwire	1.8
	1.1
Two-Way Communication	1.0
	-8.0

As covered much more fully in “The Creation of Human Ability,” available from the Hubbard Scientology Organization, these Six Basic Processes form the background to all processes. Through them we find two-way communication everywhere. It can be said with honesty that there is no auditing without two-way communication.

The process, Two-way Communication itself, could be subdivided into verbal and non-verbal processes. The verbal processes would include questions about the present time environment and the preclear’s life, interests, and so forth, and would get a direct answer to every question, no matter how long the communication lag was. In other words, a two-way communication would be entered upon so as to actually bring the preclear to talk to the auditor. In the case of people who have great difficulties in this line, we have non-verbal techniques such as Mimicry, wherein the auditor mimics the preclear and persuades the preclear to mimic the auditor. Various processes are used, such as passing a ball back and forth between them, nodding, shaking hands, sitting down, standing up, walking across the room and back and sitting down, all of which are effective.

Much of this book, “Dianetics 55!” is on the subject of two-way communication, and the totality of auditing is bringing a preclear into excellent two-way communication, and it is conceived a little difficult by instructors to relay the “process” called Two-way Communication. However, it is actually simplicity itself, for all that is necessary is to get the preclear to actually volunteer communication and answer the communications volunteered to him. There is always something the preclear will talk about.

Mimicry, particularly when used on psychotics, is a precision subject. Mimicry is not a new process, it is almost as old as psycho-therapy, but it is spotty when used without an intimate knowledge of validation. It can be said that that which one validates comes true. The only force or strength Life has is that which derives directly from the upper echelon of Understanding. When Life gets down to a point where it is incomprehensible it cannot relay any understanding. Understanding this is essential for an auditor. He must realize that he gives power to everything he validates. We made some thing important out of the engram, and by validating engrams, we actually, where they were audited poorly, gave force and power to engrams. Thus it is with the psychotic. To mimic the strange, peculiar, bizarre and unusual things he does is to give force and strength to those things. It cannot be said with sufficient emphasis that the auditor must never mimic the strange, bizarre and unusual manifestations of the psychotic. The only way that the auditor can make mimicry work consistently and continually and rapidly, is by validating what the environment considers the agreed-upon, the usual, the routine, the ordinary. Perhaps the psychotic is twisting his hands madly, and occasionally nodding slightly. The auditor, to mimic him, would not twist his hands, but would nod slightly, since a nod is the agreed-upon manifestation in the environment, not the twisting of hands. If the auditor does this, the preclear will begin to nod more and twist his hands less. If the auditor were to begin to mimic the psychotic by twisting hands, he would discover that the psychotic would probably stop twisting his hands, but would do something else more bizarre. And if the auditor mimics this much more bizarre thing, the psychotic will simply go on to something even wilder or might become entirely motionless, for the one fear the psychotic has is becoming predictable. The psychotic is under the control of entities, demon-circuits. He does have a grain of sanity present, otherwise he would not be able to function at all. Therefore, those things which he does which are sane must be mimicked and so reinforced. If an auditor knows this thoroughly and practices it smartly he will discover that psychotics can be brought into two-way communication and moved immediately into Opening Procedure of 8-C, the proper process for psychotics. 8-C, while not a psychotic process, does work on psychotics. However, in working Opening Procedure of 8-C on the psychotic, the auditor must be very careful not to go beyond part “a” for a long, long time.

From the process known as “Two-way Communication” we move on to the process known as “Elementary Straightwire.” Elementary Straightwire has two basic commands. One of these commands is used continually, over, and over, and over, and over, until the communication lag is entirely flat on it and then the other command is used over, and over, and over until the communication lag is entirely flat, at which time it will be discovered that the first

command will now give communication lag. And so it is used over, and over, and over, and then the second one is used over, and over, and over. In other words, what we do here is to use this process of Elementary Straightwire with just two commands, continually, one command at a time, flattening each communication lag encountered. While one is doing this, of course, one maintains two-way communication. He acknowledges the fact that the preclear has recalled something and is in general alert to receive from the preclear an originated communication, answer it, and give further orders. The two commands of Elementary Straightwire are: "Give me something you wouldn't mind remembering," "Give me something you wouldn't mind forgetting." This can be varied with: "Tell me something you wouldn't mind remembering," "Tell me something you wouldn't mind forgetting." This Elementary Straightwire is a standard form. If it is varied it should be varied towards simplicity. A simple form of straightwire is "Remember something," over and over, again, and again, and again, and again, and again. Do not use, however, "Forget something," since this is far too rough for the preclear. Another even simpler form is to apply "Remember something" to the Dynamics, such as "Remember a man," "Remember a group." The only error that can be made in Elementary Straightwire is to get too fancy, for one does not believe that an auditor who has advanced this far in auditing would make an error in communication. There is an entire gamut which we call "The next to the last list in Self-Analysis" published in the original edition of "Self-Analysis" which has many times been known to break a person from a neurotic to a sane state. This is: "Can you recall a time that is really real to you?" "Can you recall a time when you were communicating well to someone?" "Can you recall a time when someone was communicating well to you?" "Can you recall a time when you felt Affinity for someone?" "Can you recall a time when someone felt Affinity for you?" By keeping this in the Understanding or Affinity line a case advances more rapidly than if mis-emotion and other factors are addressed.

Opening Procedure of 8-C is one of the most effective and powerful processes ever developed and should be recognized and used as such. The main error which is made in the Opening Procedure of 8-C is not to do it long enough. It takes about 15 hours of Opening Procedure of 8-C in order to bring a person into a completely relaxed and Self-Determined state of mind regarding orders. Opening Procedure of 8-C is a precision process. Step "a" of Opening Procedure of 8-C is "Do you see that object?" the auditor pointing. When the preclear signifies that he does, the auditor says, "Walk over to it." When the preclear has walked over to it, the auditor says, "Touch it." When the preclear does, the auditor says, "Let go," and designates another object -- a wall, a lamp -- calls it by name or not, and goes through the same procedure once more. It is important that the auditor specifically acknowledge each time the preclear has executed the command given. When the preclear has seen the object, when he has walked over to it, when he has touched it, when he has let go -- each time the auditor signifies that he has perceived and does acknowledge this action on the part of the preclear. This Step "a" is used until the preclear does it easily, smoothly, without the slightest variation or introduction of any physical communication lag, and has demonstrated completely that he has no upset feeling about the auditor or objects in the room.

When "a" has been run for a length of time necessary to bring the case up tone, Part "b" is run. Part "b" introduces the idea of decision. It is notable that the "One-Shot Clear" must be very strong on this power of decision. It is also notable that a person in extremely bad condition has no power of decision. The commands of Part "b" are: "Pick a spot in this room," and when the preclear has: "Walk over to it," and when the preclear does: "Put your finger on it," and when the preclear has: "Let go." Each time, the auditor acknowledges the completion of the command by the preclear, signifying "All right," "O.K.," or "Fine," making it very plain that he has noticed and approves of and is acknowledging the preclear in following each specific command. He approves of these one at a time in this fashion. The preclear is run on this until he demonstrates no physical communication lag of any kind in making up his mind what to touch, how to touch it, and so forth.

Part "c" of Opening Procedure of 8-C introduces further decision. It goes as follows: the auditor says, "Pick a spot in this room," and when the preclear has, the auditor says "Walk over to it." When the preclear does, the auditor says, "Make up your mind when you are going

to place your finger on it, and do so.” When the preclear has, the auditor says, “Make up your mind when you are going to let go, and let go.” The auditor each time acknowledges the completion of one of these orders to the preclear.

In doing Opening Procedure of 8-C the preclear must not be permitted to execute a command before it is given, and a two-way communication must be maintained. As I have said, Opening Procedure of 8-C is a very powerful process. If all auditors knew how to do this Opening Procedure of 8-C and could do this very well, we would right there have psychotherapy licked. But we are not trying to lick psychotherapy. It has never been a major problem to us. We are trying to bring people a long way further North than psychotherapy ever dreamed of, and Dianetics and Scientology are not psychotherapies, they are processes which increase the abilities of people.

Opening Procedure by Duplication has as its goal the separating of time, moment from moment. This is done by getting a preclear to duplicate the same action over and over again with two dissimilar objects. In England this process is called “Book and Bottle,” probably because these two familiar objects are the most used in doing Opening Procedure by Duplication.

The first step in Opening Procedure by Duplication is to familiarize the preclear with both objects, as to their reality and his ability to own them. One makes himself handle them, and feel them, and acquaint himself with them, makes him describe them as objects he is experiencing in present time, not as something related into the past. A little time spent on this can be quite beneficial.

The auditor then begins what will become to the preclear before he is through with this some of the most hated phrases anyone could conceive, but which, by the time the preclear is finished with this, become just like any other phrases. Many people believe that opening Procedure by Duplication induces hypnosis. This is because in running it hypnotism runs off: the preclear, while the hypnotism is running off, may feel quite hypnotized. It is the exact reverse of hypnotism. Hypnotism is an effort to persuade the individual to do nothing, to sit still, and to accept fully the inflow. Opening Procedure by Duplication contains two-way communication, and indeed does not work unless two-way communication is done with it. The main liability in doing two-way communication on Opening Procedure by Duplication is that the auditor, in introducing two-way communication to it, may stray considerably from the pattern laid down. He must not do this. Although he is maintaining two-way communication he must adhere very sharply to the process. He can make the preclear tell more about them, he can make the preclear describe various things which are manifesting themselves to the preclear he can be insistent the preclear really knows he has just picked this up, but he must stay with this sequence of auditing commands, and may not vary from them even vaguely. He can interject other conversation, but not other auditing commands, into Opening Procedure by Duplication.

The auditing commands are: “Do you see that book?” says the auditor, pointing. When the preclear signifies that he has, the auditor says, “Walk over to it.” When the preclear does, the auditor says, “Pick it up.” When the preclear does, the auditor says, “Look at it.” When the preclear does (usually he was looking at it but now looks at it more closely) the auditor says, “Give me its color.” When the preclear does, the auditor says, “Give me its weight.” When the preclear does, the auditor says, “Give me its temperature.” When the preclear has, the auditor says, “Put it back exactly as you found it.” This action sequence having been completed, the auditor points to the bottle. “Do you see that bottle?” When the preclear does, the auditor says, “Walk over to it.” When the preclear does, the auditor says, “Pick it up.” When the preclear has, the auditor says, “Look at it.” When the preclear does, the auditor says, “Give me its color.” When the preclear has, the auditor says, “Give me its weight.” When the preclear has, the auditor says, “Give me its temperature.” When the preclear has, the auditor says, “Put it back exactly as you found it.” Then the auditor says, pointing out the book, “Do you see that book?” and so on, back and forth, using this exact sequence of commands. The auditor can interject “Describe it more fully.” The auditor can sometimes, but not oftener than once every 15 minutes, point to the book, have the preclear go through the full sequence with the book,

and then point to the book again, and have the preclear once more go through the full sequence with the book. This will break down the automatic machinery a preclear is bound to set up to compensate for this process. We want to keep the preclear doing it, not his machines. By asking the preclear to describe the object, or describe its temperature more fully in its proper sequence in these commands, machines are also broken down and the alertness and the awareness of the preclear is increased.

The auditor must not omit letting the preclear give him the preclear's reaction. The preclear will pause, seem to be confused. It is up to the auditor at that moment to say, "What happened?" and to find out what happened, and then to continue with the process, having acknowledged the communication of the preclear. An auditor must never be afraid to let a preclear emanate a communication, and an auditor must never fail to acknowledge the completion of an auditing action, no matter how minute.

The Remedy of Havingness is an extremely effective process for it remedies the ability of the preclear to have or not have at will. Sometimes auditors interpret this process as inflow, only. That is because the physical universe is an inflow universe, and it is all too easy for an auditor to assign to auditing and all other actions inflow characteristics only.

The modus operandi of the Remedy of Havingness is to have the preclear mock up something, pull it in, or mock up something and throw it away. It does not matter what you have him mock up. The item can have significance or not as the case may be. Preclears who are low in tone, if this is run on them, have a tendency to make everything they mock very significant. It is not the significance, it is the mass that counts. However, to keep the preclear interested, or to assist his mocking up, an auditor may designate specific things, and does so.

It will be found that the acceptance level and expectance level of the preclear very definitely monitor what he mocks up, and what he can pull in and what he can throw away. As covered in the Professional Auditor's Bulletins, acceptance level processes can be combined with the Remedy of Havingness.

The commands of Remedy of Havingness are as follows: "Mock up a (planet, man, brick)." "Make a copy of it." "Make a copy of it." "Make a copy of it." And when the preclear has from five to 15 copies, "Push them all together." "Now pull them in on you." When the preclear has done this for some time, the last command is varied by saying, "Throw them away and have them disappear in the distance." In other words, we have the preclear mock up something, and when he has we have him make a copy of it, make another copy, and another copy, and another copy, one at a time, push them together and pull them in or throw them away.

We keep up this process for some time until we are very certain that he can actually throw things away or pull them in on himself at will. This is the Remedy of Havingness. Remedy of Havingness does not mean stuffing the preclear with energy. It means remedying his ability to have or not have energy. Run with particular significances such as money, women, et cetera, one could remedy specific scarcities on the part of the preclear. But remember that at first they may be so scarce that at first he may have to waste a large quantity of them before he can have one.

On an awareness of awareness unit exteriorized we run Remedy of Havingness, but a little differently. We say, "Put up eight anchor points." We describe to him how we want these put up. We want them put up in such a way as to form the corners of a cube. In other words, these eight anchor points are not put in a group in front of or behind the preclear, they are to be distributed around him. When the preclear has done this we say, "Pull them into you." We keep this up for a long time. We also have the preclear exteriorized mock up eight anchor points and send them away from him. A preclear exteriorized can be very unhappy about his lack of havingness and this last process is used to remedy this upset.

Remedy of Havingness is an exteriorization technique. If it is run on an individual long enough, say eight or ten hours, he will probably exteriorize at the end of that time. If you kept on running it as an exteriorized process, given in the second part above, he would then have his visio clear up, and he would finally get into very excellent condition. This is quite a process. However, remember this process depends upon the preclear following the auditor's orders. Unless the auditor has guaranteed this by Opening Procedure of 8-C and Opening Procedure by Duplication, the chances of the preclear's actually following his orders (although pretending to do so) are very slim. We discovered in old-time Dianetics that the breakdown was in the preclear failing to follow the auditor's orders. Preclears would pretend to follow an auditor's orders but actually would not.

The process known as Spotting Spots in Space is not to be attempted on somebody who is having a difficult time, and when it is attempted it should be accompanied with Remedy of Havingness. One makes a person spot spots in space for a short time, then remedies Havingness, makes them spot spots in space, then remedies Havingness, then spot spots in space. These two processes, Remedying Havingness and Spot Spots in Space actually belong together, however the preclear eventually emerges up in a higher band where he can spot spots in space without remedying Havingness.

The auditing commands are: "Spot a spot in the space of this room." When the preclear has, the auditor says, "Spot another spot," etc. When the preclear gets well into the process in this fashion we say, "Spot a spot in the space of this room." "Walk over to it," and when he has, "Put your finger on it." When he does, "Let go."

The auditor should ask the preclear when he starts this process if the spot has any mass, color, temperature, or any other characteristics, or "How big is it?" The auditor asks this to make sure that the preclear is actually spotting a spot, a simple location, not a spot that has a mass, temperature, or characteristics. A location is simply a location, it does not have mass, it does not have color, it does not have any temperature. When we ask the preclear to spot a spot at first his spots are liable to have mass and temperature. We do not object to this, we simply ask him frequently, once we have discovered that his spots do have this, how his spots are getting along, and we remember, on such a preclear, that we must remedy havingness. Eventually he will move out to a point where he is simply spotting locations.

These are the Six Basic Processes that an auditor must know. They are all of them very powerful processes, and each and any one of them can accomplish the goals which were envisioned in "Dianetics: The Modern Science of Mental Health." The essence of these processes is to do them as given, to do them "purely," all the while maintaining a two-way communication with the preclear. Auditors get into minor variations on this set of processes, but these processes were evolved first in theory by myself, were developed in practice by myself, and were then given to many auditors to do, and many auditors were trained in them, and then these processes were refined and inspected until they represent a very broad agreement, and we have found that these commands, as you have them here, are the best commands which can be used in processing a preclear. The failure of an auditor to duplicate, his unwillingness to duplicate, his upset about duplication in general will quite often lead him up the blind alley of varying a process compulsively or obsessively. When he does he can expect to lessen the results. Auditing today, by the experience of a very large number of auditors, is a very severe discipline on the individual. It is not an art, and it never will be an art. It is a precision science. In the old days, all this talk about art and intuition and instinctiveness cost a lot of preclears the benefit of auditing. Auditing in the long ago was tremendously complicated but it was none the less precise. Now that it is very simple it is still very precise.

Amongst these processes an understanding of communication lag and Opening Procedure of 8-C were chose as the two processes to be taught to a very large area which contained a large number of auditors. This area had been noteworthy, heretofore, for the strange results "obtained" by auditors and the strange techniques which were used in it. A couple of auditors were sent into this area to teach everybody communication lag and Opening Procedure of 8-C. Actually these two auditors were originally from this area. They did so, and

several lives have been reported saved to date, and a great many cases have been salvaged, and the entire science is looking up in that particular area simply because the area was taught nothing but communication lag and the Opening Procedure of 8-C and did nothing thereafter but this. Out in the outskirts of this area a couple of auditors varied Opening Procedure by Duplication and were reported to be having very good luck with the variation, but these two auditors were not part of the crew who were taught Opening Procedure of 8-C and communication lag, and the results they are obtaining are very junior to the results obtained by their own fellows very close by.

It could be said that the only real danger in auditing was failure. Auditing is the start, change and stop of aberration, or the creation of ability. Today creation of ability takes prominence to a point where aberration drops out of sight and is forgotten. But the auditor who does not obtain results is demonstrating to himself that he cannot control human aberration and human ability, and a demonstration of his failure to himself is sufficient to make him slightly incapable in handling his own difficulties. Thus it is a tremendously important thing that we have processes which, when used exactly as given, and used with skill, produce uniformly good results on preclears. An auditor using these on preclears gets better, and better, and better, and better even when he doesn't have any auditing himself -- a thing which was not the story in 1950. When you can control aberration in others, when you can increase the ability of others, you certainly do not worry about your own. An auditor who has consistent failures will eventually drop back to self-auditing, but these processes will cure even that. Self-auditing, of course, is the manifestation of going around running concepts or processes on one's self. One is doing this because he has been made afraid, through his failure on others, of his ability to control his own engrams, facsimiles, thoughts and concepts, and he seeks to control them through auditing. It is not necessary for an individual to audit himself in order to control his own machinery.

Before anyone should adventure in the direction of testing the "One-Shot-Clear" or doing anything about exteriorizing the awareness of awareness unit and so making a Clear, he should be entirely conversant with these processes. Actually, any of these processes run long enough would probably result in an exteriorization. There are faster ways to achieve an exteriorization than these processes, but these processes are preliminary to them. The preclear who cannot follow the auditor's orders will not sit there and do a subjective -- which is to say, an out-of-sight, in his own mind -- process without varying it. The trouble with the preclear is that he cannot duplicate, he cannot follow the orders of the auditor, and when the auditor tells him to run a concept or a thought, the preclear probably pays token nod to this and runs entirely something else. A very close E-Meter review of a number of preclears who were not advancing under "subjective processes" disclosed that each and every one of them had never run what the auditor told them to run. They were afraid of obeying the auditor, they were afraid of what the auditor was doing, they were afraid of his skill. Opening Procedure of 8-C remedies this fear and brings the inability and unwillingness of the preclear out into the open where it belongs.

In Opening Procedure by Duplication we very often get a preclear "blowing the session" where the auditor has run an insufficient quantity of Opening Procedure of 8-C. When a preclear "blows the session" on Opening Procedure by Duplication, the auditor has missed. He has not run enough Opening Procedure of 8-C. How much is enough Opening Procedure of 8-C? Until the person is in very good condition as homo sapiens.

Remember that whether the command is physical or mental, the auditor must observe communication lag. In Opening Procedure of 8-C he simply repeats the process command all the way through, and then again, and again and again and in such a way flattens any lag that shows up. He does not repeat the command on which the preclear got the lag. It is easier to do this way, it is a more orderly process when it is done this way. By very close theory, the actual command on which the preclear lagged should be repeated again, but this is not done.

These are the six basic processes which we must know before we can constitute ourselves auditors. These are the processes which are getting results. These are the processes which are making able men and able women.

These processes can be varied into specific uses where ability is concerned. One of the uses of these, for instance, would be to raise the ability of a pilot to fly a plane, or a person to drive a car, simply by having him approach, touch, and let go of various parts of the object to be controlled. The exact procedure as given above of Opening Procedure is run, except that the object to be controlled is used. Typists have learned to type better, people have learned to drive cars better, and many other abilities have been recovered simply by running 8-C. One could envision a pianist who was getting tired, run-down, or upset by his music, coming into full awareness of it once more simply by running 8-C on his instrument or instruments.

If we wanted to increase the ability of a salesman, it would only be necessary to run any of the above processes in their proper position on the tone scale to increase his ability. Abilities increase, in general, when these are run.

When does one run what process? One should have a copy of the Chart of Human Evaluation from "Science of Survival" and know that chart well in order to understand exactly where one starts. In general practice, however, an auditor simply starts with two-way communication, and when he is getting answers to his questions and is taking rather freely with his preclear he goes into Elementary Straightwire, and from Elementary Straightwire he goes into Opening Procedure of 8-C.

There is a variation on two-way communication. If you have a difficulty in getting a preclear started in two-way communication it is a very easy thing to get him talking on problems, and from problems to run this one, "What problem could you be to yourself?" "What problem could you be to others?" running one and then the other each time until the preclear understood he could be an infinity of problems. Many people are so thoroughly scarce on problems that they will not let any go until they know that they can create problems for themselves. When a case is stalling, he is generally finding it very hard to give up a pet problem because he knows he can't have any more. Of course, all this is basically situated on answers. He can't have any answers so he has to have problems, then from problems he finally gets to a point where he can't even have these.

Anyone desiring to be a good auditor should follow this chapter very closely, should provide himself with a copy of "The Creation of Human Ability," and should also procure "Science of Survival" and study them. The best way to become an auditor is to be trained as an auditor. We have found this so much the case that while we offered an examination to anyone who wished to take it to the grade of Hubbard Certified Auditor, or Hubbard Dianetic Auditor, we never expected them to pass it -- for they never had, even though it was on the most simple elements as you see before you. There is no substitute for good training.

CHAPTER XIII

THE PROCESSING OF COMMUNICATION

If you will examine the Six Basic Processes you will discover that they are communication processes. The efficacy of 8-C derives from the fact that it places into the realm of knowingness communication with the physical universe. The physical universe does not give us back answers, but the Opening Procedure of 8-C remedies to a marked degree the liability of this no-answer situation by making the individual aware of the fact that walls are simply walls, that chairs are chairs, and floors floors, and ceilings ceilings. Opening Procedure by Duplication is processing another facet of communication: Terminals, the object (terminal) at Cause interchanging flow with the object (terminal) at Effect. Elementary Straightwire is simply a communication with the past, and securing of answers from the past, in other words, using the past as a terminal. Havingness, in itself, describes the mass at a terminal, or masses, and Spotting Spots in Space improves the tolerance of an absence of a communication terminal.

These Six Basic Processes, as designed, bring an individual up a gradient scale of tolerance for more and more communication. Once a preclear has been pressed through these he is ready for the direct processing of communication. He is not ready for the direct processing of communication until he has been put through these Six Basic Processes.

The ability of an individual depends upon his ability to communicate. The first and foremost of mechanical abilities is this communication ability. An individual who cannot communicate with something will become the victim of that something. That which a person withdraws from in this universe becomes, to a marked degree, his master. That which one fears becomes one's master. If an individual were willing to communicate with anything and everything in the entire universe he would then be free in the entire universe. Additionally, he would have an unlimited supply of distances and terminals. A barrier, perforce, is something which an individual cannot communicate beyond. When we see space as a barrier, its total operation as a barrier is the inability of the individual to be at the other extreme end of that space or outside that space. When we see energy as a barrier, we simply see it as something which will not permit the egress or ingress of an individual. When we see mass, walls or time as a barrier, we mean "imagined impossibility of communication." If you do not imagine that you cannot communicate, then there cannot be a barrier.

At the same time we are placed up against this conundrum: in the absence of communication, in the absence of interchanges of communication, in the absence of other terminals, flows, and terminals to which others can communicate, an awareness of awareness unit is not, by its own consideration, living. Livingness is communication. Communication is livingness. We add to this the variant degrees of Affinity. We add to it Agreements and attain Reality, but still these are only significances entered into communication. Any and all types of significances can be entered into communication in order to "give a reason for" communication. These "reasons for" are simply reasons for a game, reasons to have communication.

In the light of the concept of Pan-Determinism we see that an individual has to assume that he cannot know what another is talking about if he wishes to communicate with and depend upon the communications of that other. In other words, he has to pretend he cannot communicate. An individual who has some sort of barrier around him must pretend that he cannot communicate beyond that barrier. Actually this is nothing more nor less than a pretence. These barriers are the shadows through which the fish would not move. They could have swum through these shadows except for the fact that they did not believe they could penetrate beyond the shadows. It could be said that belief alone is the reason for any entrapment.

However, there are the mechanics of entrapment and we discover that an entrapment must be a communication barrier. An individual becomes entrapped in something because he does not believe he can communicate outside of it, or he becomes fixated on a terminal as a terminal himself.

To be very precise, the reason why an individual is entrapped has to do with scarcity of communication. An individual is still waiting, is still looking towards something, expecting it to communicate to him. It has not, and he has eventually turned his attention slightly off of this onto something else which he expects to communicate to him. And when this does not, he expects communication and so finds it elsewhere, but each time he sets up one of these expectancy lines he is to that tiny degree trapped against the terminal from which he was expecting but did not get communication. Thus, we have the entire bundle known as the reactive mind, the entire anatomy of ridges, and any other enturbulative mechanism, and even problems themselves, being a seemingly endless chain of communication scarcities.

What are the specific scarcities in a communication line? There is no scarcity of silence. Anyone has far too much silence. Silence might be conceived to be the native state of a thetan -- an awareness of awareness unit -- but it is not, for obviously a thetan is alive only to the degree that he is communicating, is action -- concentrated only to the degree that he is living. We discover that the tiny cells of the body consider themselves to be the very mirrors of truth when they are the most silent. There is an interesting and peculiar test here where the auditor has the preclear mock up in any area which contains a somatic a great many answers or originated communications from these "dead cells" and we discover this somatic-ridden area coming to life, waking up, becoming active once more. This in itself is a specific for all types of somatics. All one has to do is to have the preclear mock up answers in these dead cell areas. An ultimate truth, which is studied to a far greater extent in "The Creation of Human Ability", is a Nothingness, but this ultimate truth is not Life. Life is composed of this pretence that one cannot communicate, that one must communicate. It is composed of this intricate tangle of communications and self-erected barriers which give us games. When we get too deeply immersed in this game, when answers get entirely too scarce, we forget that we were the one who interposed the idea that no answers were to be given.

Silences do not process. There is entirely too much silence on the track. Remember that: it does not process. You can fill silence, but silence itself is death. When you process silence you process the preclear down towards death, not upward towards life. The way to process him upward towards life is by supplying abundance of communication. We find the preclears who are in the worst condition are the preclears who are the most silent, the most out of communication. These are the closest to death, closest to aberration. The way to get them alive again is to remedy some of the scarcity of communication. For a preclear who is in very bad shape, or in common practice, any preclear you would encounter, you would use first the Six Basic Steps in order to bring the individual up to something approaching a livable communication strata. And then you would go immediately into the remedy of scarcity of communication by having him mock up himself, even if just as ideas, the various parts of a two-way cycle of communication.

The parts of a communication cycle that have to be remedied are: (1) originated communications, (2) people to communicate to, or other awareness of awareness units to communicate to, (3) answers, (4) acknowledgements, and additionally, but not as important, (5) arrivals, (6) departures.

It is not necessary that the preclear have the ability to mock up or put out and hear back sound. In other words, sonic and visio are not necessary to this process. The entirety necessary is the idea of communication. You might say you have him mock up a "verbalizing idea."

A preclear will sort through, himself, pads (2), (3), (4), (5) and (6) if the preclear is simply told to "mock up some people speaking." He will, in rotation, get people answering, people acknowledging, people greeting him, and people saying goodbye to him. Because the preclear is usually far down the Tone-Scale on origin and ideas, and because "necessity level," other determined forces, have been necessary to get him into communication, it is likely that he will not, himself, spot the origination of communication, and the auditor will have to call his attention to this.

Remember this is not done on a preclear who has not first been put through his paces on the Six Basic Processes, for an auditor sitting there asking the preclear to mock up answers, or acknowledgements, or originated communications could not otherwise be sure that the preclear is doing this at all. Further, the preclear's attention is very likely to stray into various portions of his own bank, for his bank starts to come to pieces under the impact of all these communications.

The preclear must be kept at his job. His mocking up of communications must be kept at a simplicity and out of deep significances, and if his attention seems to fixate upon flows and he begins to "wrestle with mass," the auditor should get him back into mocking up communication as fast as possible.

What degree of originality is required of a preclear in mocking up any of these originative communications, answers, or acknowledgements? The answer to this is "none." No variety is necessary whatsoever. Simply the idea of communication, with some sort of a specific idea being communicated, is all that is necessary. Having the preclear, silent himself, mock up before him something saying "Hello," and saying "Hello" again, and saying "Hello" again, and having him mock this up behind him saying "Hello," and saying "Hello," and saying "Hello," would be quite adequate for an originated communication. Having the preclear mock up any banality such as "All right," or "O.K.," serves very well for both answers and acknowledgements. We are not at all concerned with the significance of the communication. We do not want long and involved communications. The preclear will try to get off into them. He will also try to get into his prenatal bank, his early childhood, and eight lives ago. We do not want him to do this, we want him to go on mocking up originated communications, answers, acknowledgements. We are validating ability, we are not trying to get rid of inabilities in his past. We are trying to increase his ability to communicate in the present, and originate communications, and take a Pan-Determinism out of all communicating terminals. We are not trying to get him to run out anything in the past. I know that an old Dianeticist is going to have a very hard time restraining himself from running out the prenatal which immediately appears after the preclear has made something say "Hello" to him 15 or 20 times. It is the auditor's job to make the preclear go on having the preclear or something say "Hello" or "Okay," or "I did it," and to ignore that engram. The number of engrams which will blow into view and beg to be run are countless. The auditor is not interested in these. Of course, if the preclear wants to ten the auditor about these, the auditor must permit the preclear to originate communication and must answer it simply to get the preclear to originate communication. He should not let the preclear go on, and on, and on discussing what has occurred, once the preclear has told him the essentials of it. The auditor wants to get the preclear back onto mocking up originating communications, answers and acknowledgements. The auditor is also making the preclear mock up something to talk to while he is doing this, a point which is cared for automatically and which is not addressed actually and actively in auditing. Naturally, if there is a spot in the air out there saying "Hello," or "Okay," or "I did it," the preclear is assuming that there is something alive there that can say "Hello" to him.

All manner of thinkingness machines, large black masses, white and green fire, purple spheres, falling stars, shotted rockets, may appear in the preclear's bank while he is undergoing this process. The auditor is not interested in this phenomenon, he is merely interested in getting the preclear to mock up further communication.

It does not matter if the preclear says these communications himself aloud or simply does them quietly to himself. The necessity here is not sound. Sound is a by-product of communication. It is the carrier wave of communication and is not itself communication.

Some interesting variations can be worked on this, but they are not advised, and indeed they violate the terms of this process, but they demonstrate how much power this process has. One has the preclear say aloud, "Okay, Mamma," a few hundred times. He will be amazed at the amount of variation which will occur, the communication lags, the impatience, the anger, the amount of data which will jump up about Mamma. But this data that is jumping up is simply the bank which is triggered to agree with what the preclear is doing at this moment. In

other words, that is stimulus response. Restimulation is stimulus-response and is covered in great detail in "Dianetics: The Modern Science of Mental Health." We could clear away an ally, we could do almost anything we wanted to do in Book One with this process of remedying the scarcity of communications.

Another point immediately arises, as to whether or not Havingness has to be remedied on the preclear. It has not been found necessary to remedy havingness on the preclear if one is actually remedying the scarcity of communication. This is a great oddity, for the preclear's bank, being composed of tangled and unfinished communication lines, starts to come apart the moment you begin to remedy the scarcity of originated communications, answers, and acknowledgements. Some of these black masses which the preclear has fondly held before his face blow into forever, and yet the preclear does not need his mass remedied. The reason why he had to have mass was to compensate for the lack of communication. Where you have had a lack of communication you are liable to have a mass. As an example of this, an individual loses an ally and then keeps close by him a ring which belonged to that ally. The ring is a substitute communication terminal for the ally. After a while one begins to believe that he really has to have mass he doesn't have to have mass at all. The remedy of the scarcity of communications cures a person of having to have mass, having to eat obsessively, or do anything else obsessively.

Along with the remedy of originated communications, the preclear's imagination rises quite markedly, and thus he is able to imagine new games and new ways of communication with sufficient rapidity to compensate for the old games which you are taking away from him. Actually the preclear, being a preclear, is a game, perhaps even the last last-ditch game in which the individual could engage.

When the auditor has the preclear run acknowledgements, the wording is: "I did it." This will remedy responsibility difficulties. All automaticity comes about through lack of acknowledgements (absent players, secret players).

In view of the fact that Pan-Determinism is control on all Dynamics, and in view of the fact that control is start, change and stop, one can have the preclear stop making things communicate for a moment, and then change the communication, and then start anew. This gives the preclear practice in starting, changing and stopping.

The auditing command which would go with this is simply, "Mock up some answers," "Mock up some original communications." "Mock up some acknowledgements," with enough guiding talk to give the preclear the idea that you do not want new, startling, difficult action but only the simple placing of communication ideas such as "Hello" in the vicinity of the preclear over, and over, and over, and over.

The exact auditing commands to process communications are: Originated Communications: Auditor: "Have somebody out there," (indicating a spot in the air) "start saying 'Hello' to you." The preclear does so, is himself silent. When the process is long run: Auditor: "Start saying 'Hello' to a live spot out there." The preclear aloud, or as himself, does so.

Answers: Auditor: "Have a spot out there start saying 'Okay' to you." The preclear does this many times. Auditor: "Start saying 'Okay' to a spot out there."

Acknowledgements: Auditor: "Have a spot out there start saying 'I did it'." When the preclear has, many, many times: Auditor: "Start saying 'I did it' to a spot out there."

The command that turns on a somatic, repeated often enough, will turn it off.

When in doubt, remedy havingness.

This is the processing of communication directly. Remember that it is done after one has already done the Six Basic Processes. Remember that a two-way communication is maintained with the preclear while it is being done, and remember that the preclear must be audited in full understanding and practice of the Auditor's Code, 1954.

CHAPTER XIV

THE ONE-SHOT CLEAR

The goal of the “One-Shot Clear” has been with us since the earliest days of Dianetics. By “One-shot Clear” we meant one phrase or one action given once, or repeated, which would bring into being the Clear as described in “Dianetics: The Modern Science of Mental Health,” Chapter II.

It should be understood by this time that the Clear described in “Dianetics: The Modern Science of Mental Health,” Chapter II, is actually the thetan exterior of Scientology. The way to clear somebody is to get him out of the influence of his reactive bank and his analytical machinery. When a person is so cleared, his level of knowingness is sufficient to overcome the need of machinery, and the need of stimulus-response mechanisms as contained in his reactive mind.

Long since we have had a “One-Shot Clear” for 50 per cent of the human race. All we say to the individual is, “Be three feet back of your head.” If he is, he orients himself, he knows that he is not his body, he knows he does not have to be up against his reactive mind, he has been gotten out of the trap. Of course, there are many other things which you could do to further increase his ability and orient him in this position, but this is not immediately in our province in Dianetics. When an individual is so exteriorized he also can look over the body and patch up pinched nerves, black areas, rearrange the anchor points which create and hold the space of the body, and so repair a body quite excellently. However, it is not the purpose of exteriorization simply to get a person to square away the machine known as the body.

“Be three feet back of your head” is a strange and interesting combination of words. Evidently this simple combination has not been known before by Man. It is notable that one does not say, “Move three feet back of your head,” since an awareness of awareness unit does not move, it appears and disappears from locations.

If one uses this “One-Shot Clear” technique, he should be advised that he must not ask or expect of the newly exteriorized person a number of strange or impossible things. He must not ask him to go chasing around finding things. He must not ask him to prove that he is exteriorized. The individual says so -- that’s the end of it. In Scientology, of course, on Route 1, as contained in “The Creation of Human Ability,” we go on to improve the ability of this exteriorized awareness of awareness unit up to a point we call “Operating Thetan.” We do this by running many drills and exercises which improve his perception. However, the process of Answers, or even the Six Basic Processes could be run on the individual after he is exteriorized and his exteriorization will markedly increase, and he will get into even better condition as an exteriorized person. If you were to say “Be three feet back of your head” to somebody, and he was, the next thing to do would be to go into Elementary Straightwire and then into Opening Procedure of 8-C, then Opening Procedure by Duplication, then Remedy of Havingness, then Spotting Spots in Space, and then Answers, or, as the last chapter gives forth, “Remedy of Communication.” If you did these things just as given in this book you would have something like a stable Clear. You would pay no attention to the fact that he was Clear. As a matter of fact, if you were to run any of these Six Basic processes long enough, and certainly if you were to run answers for any length of time after you have run these Six Basic Processes, you would have somebody exteriorized. It is a peculiar thing that there is no argument about exteriorization. Any argument which has been in existence was born out of the psychiatrist’s observation of “compulsive exteriorization” by an individual who so detested his body that he stayed outside of it. Psychiatrists have been known to give people electric shocks and other “treatments” to get them to get back inside their bodies. This level of punishment, trying to get a person to accept something under duress, does not work. But then, nothing in psychiatry ever worked, except bank accounts. This “compulsive exteriorization” is a manifestation which we call in Scientology “doing a bunk,” in other words, “running away.” You will occasionally

encounter this, but you will not encounter it if you run the six Basic Processes before you go in for exteriorization.

There is, astonishingly enough, a “One-Command Clear” for the remaining 50 per cent, even if it has to be repeated many times. I have been developing and testing this for some time, and have kept it back on the shelf against a time when we had enough competent auditors to use the process intelligently.

This is a “One-Shot Clear” technique in that one uses one command and so achieves clearing, and after clearing to the stage of exteriorization has been accomplished, one simply goes on using the same type of command. It is a highly effective process, a very violent process. Theoretically it should work on any level of case. In actual practice psychotic, neurotic cases, or people badly out of communication receive it with considerable difficulty and it is not recommended for them, but it would work on them if it could be communicated to them. (On such people use Opening Procedure of 8-C, only.)

The basis for this process is the observation that the MEST universe is a game. One can have a game and know it. He can be in a game and not know it. The difference is his determinism.

Games require space and havingness. A game requires other players. Games also require skill and knowingness that they are games.

Havingness is the need to have terminals and things to play for and on.

When a game is done the player keeps around tokens. These are hopes the game will start again. When that hope is dead the token, the terminal, is hidden. And it becomes an automaticity -- a game going on below the level of knowingness. Truthfully, one never stops playing any game once started. He plays old games in secret -- even from himself -- while playing or not playing new ones. The only real game one can have is in present time. All others are in the past. Anxiety for a game takes one into the past.

The command is, “Invent a game” and when the preclear has, again, “Invent a game.” Then: “Mock up somebody else inventing a game.”

Having established the fact that an auditing session is in progress, and established some slight communication with the preclear, the auditor says, “Invent a game.” When the communication lag on this is flat the auditor then uses the command, “Mock up somebody else inventing a game.” This is the only phrase he utters, but he of course engages in two-way communication with the preclear when the preclear has something to say to him. An auditor has to be a good auditor in order to use this process. Just because it is a simple “one-command” process is no reason why it will work for an auditor who is not cognizant of the Auditor’s Code, cognizant of a two-way communication and has some experience in more basic levels of processing.

We use this process as a remedy for the scarcity of games and we use it in full awareness of the processes involved in two-way communication.

It is a murderous process and requires five or ten hours in rough cases to bring about an understanding of existence.

This is not necessarily a recommended process. It is a workable process, it does function, it is fast, but remember that it has the frailty of the ability of the auditor himself. It has the frailty of failing when a two-way communication is not maintained with the preclear, it will fail if the preclear in volunteering information finds no attention from the auditor, it will fail if the auditor does not acknowledge the fact that the preclear has done this. But, if these things are considered, it will work.

This process can be abused by the preclear. He can wander from it. He can sit there in the auditing chair doing other things, but we depend upon the skill of the auditor to see that the preclear is not doing other things, and that he is actually doing the process.

The preclear will “pick his bank clean” rather than invent, he will have doubts that he is inventing. But we persevere -- and we win.

CHAPTER XV

ARC PROCESSING

If we examine communication we will discover that all communication lag is the introduction of Matter, Energy, Space and Time into communication. The more time has been introduced into communication, the less communication there is.

As an example of this let us say that a star in some other galaxy explodes, and then let us trace the length of time necessary for a small amount of that explosion's particles to reach earth across great space. Almost countless light-years elapse before this communication line has been completed. This is a very, very long communication. Not necessarily a communication lag since the progress of the particles is not interrupted. There are no VIAs. Actually, MEST itself does not have a communication lag, it is totally a communication lag.

The more of this sort of thing enters into communication, the worse off is the preclear. Thus we can see that the subject of MEST itself is the aberrative factor.

As we examine barriers, we find that they are Matter, Energy, Space and Time. We discover that we can overcome the barriers of Matter, we can climb walls or go through them. We can somehow or other brave or get on the other side of energy barriers. We discover that even space has its limitations even when it appears as limitless as the space of this universe (and the space of this universe appears as big as a person supposes it is big, whereas actually it is, to a thetan who can get outside of it, about the size of a matchbox to a child). The one barrier which we discover difficult to get around is Time.

The basic definition and understanding of Matter, Energy, Space and Time are not particularly germane in this place. They are taken up on a much higher theoretical level in Scientology, but the essence of time is that it is measured or marked by the motion of particles in space. Space and energy particles are necessary to have mechanical time, but what is time, basically? Time is actually a consideration. There is time because one considers there is time.

You must examine the physical universe very closely to discover that the reason it is always here is because it is, each particle of it, each cubic inch of space of it, in forever. The physical universe is not moving through time, it is stuck in time. Each and every part of it is fixed in a now which lasts forever. The only real changes which take place in the physical universe are those introduced into it by Life. We can argue about this if we want to but we are interested there in a concept which leads towards a workable process.

We discover that time exists for the individual to the degree that the individual makes time. Time is an other-determined thing to nearly everyone alive. He depends on clocks, he depends on the rising and setting of the sun, he depends on all manner of mechanisms to tell him what is the time. Actually the more a person is told what the time is, the more he gets into a dependency upon some other consideration, and so he drops into forever. When he stops considering that he is making time, when he stops making time by considerations, he is dropping himself into a foreverness. He has less and less motion, he has less and less determinism. Time is a very insidious barrier because its apparency would tell an individual that time is created by the movement of things. Actually it is not, it is created by a consideration that things are moving.

The remedy of the barrier of time produces an astonishing effect upon a preclear. When the auditor is auditing one of these two "One-Shot Clear" commands (the one given in the last chapter and the one given in this chapter) he will stumble across quite a bit of complication on the subject of time. An individual told to have some complications by decisions will eventually move out into the fact that the most complicated thing he can get into is time, and so this is a very satisfactory game. We can process this factor directly.

This process is the essence of simplicity. It has one command. The command is "Make some time." This is all the command there is. One does not advise or teach the preclear how to make some time. One accepts whatever the preclear decides makes time as the answer. One maintains the two-way communication with the preclear, and answers comments which the preclear has on it. One carefully does not evaluate for the preclear and tell him how to make some time. One does not set an example in making time. One simply has the preclear make some time.

This process on some cases has to be run many hours before the preclear comes into partial control of the barrier of time. When he does this he of course comes into some control of his engram bank and his considerations.

The making of time naturally puts into motion all those silent or motionless masses which are hanging to the preclear and which actually pin together his reactive bank.

This is an enormous joke upon the preclear by himself and the universe that he makes all the time he will ever perceive. He cannot possibly get out of phase with "forever" if he is in contact with the foreverness of the space and energy mass of which this universe is composed. When he starts to protest against the universe at large he starts to protest against the foreverness which includes all time, and so he withdraws into earlier times when he was making time in order to have some time himself.

"Make some time," is a process of astonishing ramifications.

But remember, time is a barrier. One could also say, "Make some space," "Make some energy," "Make some objects," "Make some terminals," and have gains in a preclear. But these are barriers. Although a game requires barriers, the preclear already has too many in the past, too few in the present.

Barriers are not life.

We must use three cardinal rules in processing: (1) Process towards truth (2) Process towards ability (3) Process towards life.

Auditing commands must emphasize truth, ability, life.

Don't process towards entheta, chronic somatics, difficulties. Ignore them.

The only thing wrong with the preclear is that his attention is fixed on barriers -- MEST. His freedom depends upon putting his attention on freedom or present time. Here are two auditing commands. Which is correct? (1) "Find some things you can't do." (2) "Find some things you can do."

The second is correct. The first will almost spin a preclear. Why? Because it concentrates on a lie. A preclear can do anything!

A preclear has a bad leg. Which is the right process? (1) "Touch the back of your chair." (2) "Recall a time when somebody hurt his leg."

The first is correct. It is faster. Why? Because it processes towards ability.

We have a preclear who is apathetic. Which process is the right one? (1) "Who used to have headaches?" or (2) "Feel the floor beneath your feet." The second is correct because it processes towards life, not illness.

That which the auditor concentrates upon in auditing comes true. Hence, the processing of MEST gives us new barriers. The processing of life gives new life.

Processing barriers gives us limited processes. Processing life gives us unlimited processes. Life is composed of Affinity, Reality, Communication. These make understanding. Modern ARC processing processes communication as given earlier in this volume. ARC processing includes the following powerful processes: (1) "Tell me something you might communicate with." "Tell me something that would communicate with you." (2) "What might you agree with?" "What might agree with you?" (3) "Tell me something you could like." "Tell me something that might like you." These are present time, not past or future processes. They produce very strong reactions. They solve very rough cases. They are summed up in a simple process which does not dispense with them: "Tell me something (someone) you could understand." "Tell me something (someone) who could understand you."

CHAPTER XVI

EXTERIORIZATION

The auditor will be confronted with a great many problems in exteriorization once he has exteriorized his preclear. The things not to do and to do are as follows:

- (1) Do not require the awareness of awareness unit to again put its attention on the body.
- (2) Do not make the person prove that he is exteriorized.
- (3) Do not make the newly exteriorized person discover, find things, read the future, or do other nonsensical tricks.
- (4) Maintain the Auditor's Code more severely than before.
- (5) Continue the process on which the preclear exteriorized.

If the auditor knows these things he will not get the preclear and himself into trouble. The auditing command "Be three feet back of your head" sometimes gets the auditor into more trouble than he is equipped to handle. The preclear may do a compulsive exteriorization, "do a bunk," and drop his body limp in the chair and give from that body no sign that he is hearing any of the auditing commands given by the auditor. One such case was pleaded with for half an hour by an auditor along the lines that the preclear should remember her husband, should think of her children, should come back and live for the sake of her friends, and found no response from the preclear. Finally the auditor said, "Think of your poor auditor," at which moment the preclear promptly returned.

A limited "compulsive exteriorization" is the preclear going out of the body and getting plastered against the ceiling, or falling in terror upward into the sky (an inverting of gravity). This manifestation is equally upsetting.

If a preclear has been given the command "Be three feet back of your head" and if he "does a bunk," or if he "falls out of his body upward," all the auditor has to do is to get into a two-way communication with the preclear. Actually, he should have, as an auditor, an excellent command of the Chart of Human Evaluation and "Science of Survival." He would not then tell a preclear below 2.0 on the Tone Scale to "Be three feet back of your head," for when they do, at these lower levels of the Tone Scale, it is on a compulsive or obsessive level, and all the preclear can think of is to try and get away.

Another remedy, if this untoward and strange occurrence happens, is to ask the preclear to "Reach from your position to your body," "Withdraw from the body," "Reach for the body," "Withdraw from the body" or "Decide to run away and run away," several times. Remember, such things as this occur only when the auditor has not placed his preclear on the Tone Scale before he began to audit him.

The way to get away from these entirely is to audit the Six Basic Processes on the preclear, and then audit either or both of the "One-Shot Clear" processes of Remedying Communication and Time Processing until the preclear exteriorizes and then simply go right on auditing the process which exteriorized the preclear. Remember that a preclear exteriorized is simply an awareness of awareness unit which has been taken out of a trap, and the awareness of awareness unit had not changed any from the basic individual, but now recognizes itself to be out of the trap and is quite happy about it.

A very funny manifestation occurs on some very low-toned preclears when they talk about exteriorization. They say, "I'm over there." This, of course, is impossible. An individual is always here. It is here where you are. Lord knows what this individual who says "I'm over there" has exteriorized -- a circuit, a mock-up, some such thing. He himself definitely is not. Another manifestation we have is "battered all over the universe." A preclear who is battered all over the universe is one who does not know where he is and if we ask him many, many times, over and over and over, each time making him get a spot with certainty, "Can you find a spot where you are not?" we will gradually narrow down his area. What has actually happened in such a case is that the preclear has used remote viewpoints, and has left remote viewpoints located all over everywhere to such a degree that the preclear thinks he is any place rather than where he is.

The main thing one has to know about exteriorization is that it takes place. If one uses the Six Basic Processes, remembers the Auditor's Code, and the two "One-Shot Clear" processes, he is then quite safe on exteriorization, for it will occur when it occurs, and the thing to do after it occurs is to do the same process one was doing when it did occur. Of course, one should acknowledge the fact of the preclear's mentioning it and one should certainly permit the preclear to discuss it, but one should continue with the process which exteriorized him, unless, of course, one is very well trained in exteriorization exercises.

As exteriorization drilling, as an activity, is most germane to the realm of Scientology, further knowledge of it and about it is written up in "The Creation of Human Ability." Here are given the Route 1 steps which should be run after an exteriorization takes place.

The creation of a Clear undertaken in 1950 actually was this manifestation of exteriorization happening at some random moment and not being adequately cared for after it occurred. Nobody remarked upon the fact that he was a distance from the body because most of the people who were thus exteriorized had very good visio on their own banks but very poor visio on the immediate environment. A little more exteriorization work and any one of these clears would have suddenly found himself out in the room looking at the room directly without the aid of his eyes.

We wanted Clears in 1950. We all want Clears. We now have the way to make them, the way to make them stable, and the way to make anybody you process far more able.

The by-word on this is not to address specific errors or difficulties, but to validate abilities and process immediately towards the acquisition of further and higher abilities. We are not in there to pay attention to all of the bad things in the world, since these are composed only of the imaginings of the individual. Let us increase the ability of the individual to create, to be, to perceive, and increase his ability to associate all along the dynamics. If we could do this it would be a far, far better world.

THE MAGIC OF THE COMMUNICATION CYCLE

*From the LRH Tape 6 February 1964,
"Comm Cycle in Auditing"*

If you look over communication you will find that the magic of communication is about the only thing that makes auditing work.

The Thetan in this universe has begun to consider himself mest and has begun to consider himself mass and the being that considers himself mass of course responds to the laws of electronics *and the laws of Newton*. *He is actually incapable of generating very much or as-ising very much.*

An individual considers himself *mesty or massy* and therefore he has to have a second terminal. A second terminal is required to discharge the energy.

Here we have two poles. We have an auditor and a pc and as long as the auditor audits and the pc replies we get an exchange of energy from the pc's point of view.

Many auditors think they are being a second terminal to the degree that they pick up the somatics and illnesses of the pc. Actually there is no backflow of any kind that hits the auditor but if he is so convinced that he is mest he will turn on somatics in echo of the pc. Actually nothing hits the auditor, it has to be mocked up or envisioned by him.

You have set up in essence a two pole system and that will bring about an as-ising of mass.

It isn't burning the mass, it is as-ising the mass and that's why there is nothing hitting the auditor.

Now that is the essence of the situation. The magic involved in auditing is contained in the communication cycle of auditing. You see now you are handling *the SMOOTH INTERCHANGE BETWEEN THESE TWO POLES*.

When you look over the difficulties of auditing realize that you are handling simply the difficulties of the communication cycle and when you yourself as the auditor do *not* permit A SMOOTH FLOW BETWEEN YOU AS A TERMINAL AND THE PC AS A TERMINAL, AND THE PC AS A TERMINAL BACK TO YOU, you get a no as-ising of mass. So you don't get TA action.

Part of the trick of course is what has to be as-ised and how do you go about it, but that we call technique—(what button has to be pressed). *We find, oddly enough, if the auditor is*

actually capable of making the pc willing to talk to him, he wouldn't have to hit a button to get tone arm action. (He cannot make the pc get tone arm action basically because a communication cycle doesn't exist)

The person who is insisting continuously upon a new technique is neglecting the *basic* tool of his auditing which is the *communication cycle of auditing*.

When the communication cycle does not exist in an auditing session we get this horrible compounding of a felony of trying to get a technique to work but the technique cannot be administered because there is no communication cycle to administer it.

Basic auditing is called *basic auditing* because it goes **PRIOR** to the technique.

A communication cycle *must exist* before the technique can exist.

The fundamental entrance to the case is not on a level of the technique but is on a level of the communication cycle.

Communication is simply a familiarization process based on reach and withdraw.

When you speak to a pc you are reaching. When you cease to speak you are withdrawing. When he hears you, he's at that moment a bit withdrawn but then he reaches toward you with the answer.

You'll see him go into a withdraw while he thinks it all over. Then he reaches the reason. Now he will reach the auditor with the reason and he will say that was it.

You have made an exchange from the pc to the auditor and will see it reflect on the meter because that exchange now is giving an as-ising of energy.

IN THE ABSENCE OF *THAT* COMMUNICATION YOU DO NOT GET METER ACTION.

So **THE FUNDAMENTAL OF AUDITING IS THE COMMUNICATION CYCLE.** *That's* the fundamental of auditing and that is really the *great* discovery of Dianetics and Scientology.

It's such a simple discovery but you realize that nobody knew anything about it.

Basic Auditing Series 2R

THE TWO PARTS OF AUDITING

*From the LRH Tape 2 July 1964,
"O/W Modernised and Reviewed"*

In order to do something for somebody you have to have a communication line to that person.

Communication lines depend upon reality and communication and affinity and where an individual is too demanding the affinity tends to break down slightly.

Processing goes in two stages.

1. To get into communication with that which you are trying to process.
2. Do something for him.

There is many a pc who will go around raving about his auditor, whose auditor has not done anything *for* the pc. All that has happened is that a tremendous communication line has been established with the pc and this is so novel and so strange to the pc that he then considers that something miraculous has occurred.

Something miraculous *has* occurred but in this particular instance the auditor has totally neglected *why* he formed that communication line in the first place. He formed it in the first place to *do* something for the pc.

He very often mistakes the fact that he has formed a communication line, and the reaction on the pc for his having formed one, with having *done* something for the pc.

There are two stages.

1. Form a communication line.
2. Do something for the pc.

Those are the two distinct stages. It is something like (1) Walking up to the bus, and (2) Driving off. If you don't drive off you *never* go anyplace.

It is a very tricky and no small thing to be able to communicate to a human being who has never been communicated to before. This is quite remarkable, and is such a remarkable feat that it appears to be an end-all of Scientology to some.

But you see that's just walking up to the bus. Now you have got to go someplace.

Any upset that the individual has is so poised, it is so delicately balanced, that it is difficult to maintain. *It is not difficult to get well.* It is very hard to remain batty. A fellow has to work at it.

If your communication line is *very good and very smooth* and if your auditing discipline is *perfect so you don't upset this communication line* and if you just made a foray of no more importance than saying something like—What are you doing that's sensible and why is it sensible?—and kept your communication line up all the while and kept your affinity up with the pc all the while, did it with perfect discipline, you would see more aberration fall to pieces per square inch than you ever thought could exist.

Now that's what I mean when I say *do something for the pc.*

You must audit well, get *perfect* discipline and get your communication cycle *in*. Don't ARC Break the pc, let your cycles of action *complete*.

All of that is simply an entrance. You see, the discipline of Scientology makes it possible to do this, and one of the reasons *why* other fields of the mind never *got anyplace and could never get near anybody* was because they couldn't communicate to anybody.

So that discipline is *important*.

That is the ladder that goes up to the door and if you can't get to the door you can't do anything.

The perfect discipline of which we speak, *the perfect communication cycle*, the perfect auditor presence, perfect meter reading—all of *these* things are just to get you in a state where you *can do* something for somebody.

So when you're real slow picking up the discipline, real slow picking up keeping in the communication cycle, when you're pokey on the subject you are still 9 miles from the *ball*. You're not even attending yet.

What you want to be able to do is audit *perfectly*. By that we mean keep in a communication cycle, be able to approach the pc, be able to talk to the pc, and be able to *maintain* the ARC. Get the pc to give you *answers* to your questions. Be able to read a meter and get the *reactions*.

All of those things have to be *awfully good* because it's very difficult to get a communication line in to somebody anyway. They all have to be present and they all have to be *perfect*. If they are all present and they are all perfect, *then* we can *start* to process somebody. *THEN* we can start to process somebody.

I'm giving you an entrance point here of, if all your cycles were perfect, if you were able to sit there and confront the pc and meter that pc and keep your auditing report and do all these multiple various things, and keep a pleasant smile on your face and *not chop his communication*, well then there is something you *do* with *these* things. *It takes a process now.*

We used to have it all backwards. We used to try and teach people what they could do for somebody. But they could never get in communication with him to do it, so therefore you had failures in processing.

The most elementary procedure would be—''What do you think is sensible?''—or anything of that sort. The pc says, ''Well, I think horses sleep in beds. That's sensible. '' The auditor says, ''Alright. Now why is that sensible?'' The pc says, ''Well ... ah Hey! . . . That's not sensible. That's nuts!'' You actually wouldn't have to do anything more than that He's cognited. You've flattened it. It's so easy to do, but you keep looking for some magic.

Well, your magic is in getting into communication with the person. The rest is very easy to do, all you have to do is remain in communication with the person while you are doing this, and realize that these huge aberrations he's got are poised with the most fantastically delicate balance on little pinheads. All you have to do is to phooph and these things crash.

Now if you're *not* in communication with this person he doesn't cognite. He takes it as an accusative action. He tries to justify thinking that way. He tries to make himself look good to you and tries to put on a public front of some kind or another. He tries to hold up his status.

Anytime I see a bunch of pcs around who want to jump happily to something else because sane people run on that and crazy people run on something else, and they never have to be run on the crazy one, I right away know their auditors are *not* in communication with them and that auditing discipline itself has broken down because the pc is trying to justify himself and trying to uphold his *own* status. So he must be defending himself against the auditor.

The auditor couldn't possibly be in communication with him.

So we are right back *to* the fundamental of why didn't the auditor get into comm with the pc in the first place.

You get into communication with the pc in the first place by doing proper Scientology discipline. *That is not any trick. It goes off 1, 2, 3, 4.*

You sit down and you start the session and you start handling the pc and his problems and that sort of thing and you **DO IT BY COMPLETING YOUR COMMUNICATION CYCLES AND NOT CUTTING HIS COMMUNICATION—THE VERY THINGS YOU ARE TAUGHT IN THE TRs**, and you find you are in communication *with* the person. *Now you've got to do something for the person.*

Unless, having gotten into communication, you *do* something for the person, you lose your communication line because the R-Factor of why you're in communication with the pc breaks down. He doesn't think you're so good, and you go out of communication with him. That having happened, the person will be in a sort of status defensive and wonder why he is being processed.

On the other hand, if you *have* done something for the pc and he has *had* his cognition, and you try and go on and get more TA action out of the fact that "all horses sleep in beds"—you don't get there as you've *already* flattened the process.

You can over-audit and you can under-audit.

If you don't notice that *one* answer come your way, that indicates you *have done* something for the pc and if you keep him working on that same thing, your TA *action will disappear*, your pc will get resentful and you'll lose your communication line.

He's already *had* the cognition you see. You *are now restimulating* the pc. You have gotten your key-out destimulation factor—it has occurred right before your eyes. You have *done* something for the pc. One more mention of the subject and you've had it.

There are a lot of things you could do *with* the pc, without doing anything for him. You can turn on some very very handsome somatics on a pc at one time or another without turning them off either. You've got to do something *for* the pc, not *to* him.

Now you can be doing something (A), and the pc is doing (B), and you go on doing (A), while the pc is doing (B) then somewhere on down the line you wind up in a hell of a mess and you wonder what happened.

Well the pc never did what you said so you didn't do anything for the pc. There was in actual fact no barrier to your willingness to do something for the pc *but there must have been a tremendous barrier to your understanding of what was going on.*

That you could ask (A), while the pc answered (B), in itself showed the auditor observation was very poor so therefore the auditor *wasn't* in communication with the pc.

So again the communication factor was out and once more we weren't doing anything for the pc.

It requires of the auditor discipline to *keep* in his communication line. He has got to *stay* in communication with his pc. Those cycles have got to be *perfect*. He can't be distracting the pc's attention onto the TA, e.g. "I'm not getting any TA action now." That's not staying in communication with the pc—has nothing to do with it. You're distracting the pc from his own zones and areas.

Don't put the pc's attention out of session. Keep him going and keep that communication line *in*. And the next requirement is to do something productive for the pc *using* the communication line.

Basic Auditing Series 3

THE THREE IMPORTANT COMMUNICATION LINES

*From the LRH Tape 15 Oct 63,
"Essentials of Auditing"*

When you are sitting in an auditing session what are the 3 important communication lines and what is their *order of importance*?

1. The first is the Pc's line to his bank. The *Itsa Maker* line.
2. The second is the Pc's line to the Auditor. The *Itsa* line.
3. The third is the Auditor's line to the Pc. The *What's-it* line.

Now the definition, "*Willing to talk to the Auditor*", is very easy to interpret as "*Talking to the Auditor*". So the Auditor *cuts the line the Pc has to the bank* in order to get the Pc to talk, because "It's the *Itsa* line that blows the charge," he says.

So the Auditor *cuts the Pc's communication line* with his bank in order to *bring about* an *Itsa* line—and then he wonders why he gets no TA action and why the Pc ARC Breaks.

This cut communication line is not perceivable to the naked eye. It's hidden because it's from the Pc—a Thetan unseen by the Auditor—to the Pc's bank—unseen by the Auditor.

The Auditor is simply there to use the *What's-it* line in order to get the Pc to confront his bank. The charge blows off it to the degree that it's confronted and this is represented by the *Itsa* line.

The *Itsa* line is a report on what has been as-ised, that gives it its flow.

The *sequence* of use of these lines in an auditing cycle is 3, 1, and then 2.

Where the Auditor neglects this hidden line from the Pc to the Pc's bank, where he doesn't understand that hidden line and can't integrate it or do anything with it he is going to fail.

Basic Auditing Series 4R

**COMMUNICATION CYCLES WITHIN THE
AUDITING CYCLE**

*(Taken from the LRH Tape, "Comm Cycles
in Auditing", 25 July 1963)*

The difficulty that an Auditor gets into is normally found in his own *auditing cycle*.

There are basically two communication cycles between the Auditor and the Pc that make up the *auditing cycle*.

They are cause, distance, effect with the Auditor at cause and the Pc at effect, and cause, distance, effect with the Pc at cause and the Auditor at effect.

These are completely distinct one from the other. The only thing that connects them and makes an auditing cycle, is the fact that the Auditor, on his communication cycle, has calculatingly restimulated something in the Pc which is then discharged by the Pc's communication cycle.

What the Auditor has said has caused a restimulation and then the Pc needs to answer the question to get rid of the restimulation.

If the Pc does not answer the question he doesn't get rid of the restimulation. *That is the game that is being played in an auditing cycle and that is the entirety of the game.* (Some auditing breaks down because the Auditor is unwilling to restimulate the Pc.)

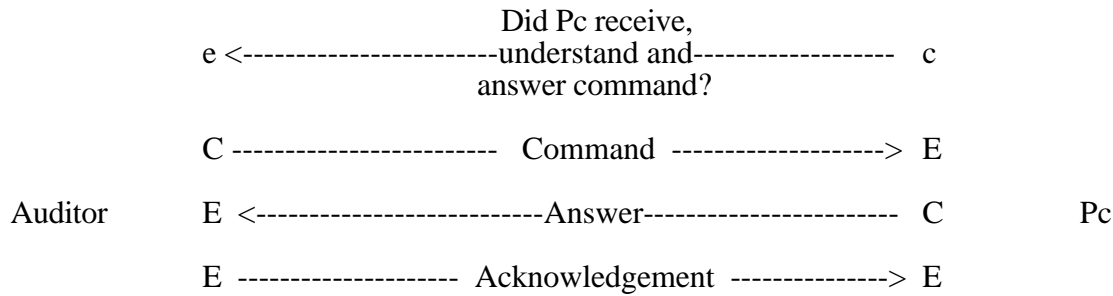

There is a little extra communication cycle on here. The Auditor says, "Thank you" and you have this as the acknowledgement cycle.

Now there are some little inner cycles that can throw you off and make you think that there are some other things to the auditing cycle. There is another little shadow cycle: it is the

observation of “Has the Pc received the auditing command?” This is such a tiny “cause” that nearly all Auditors who are having any trouble finding out what’s going on with the Pc are missing this one. “Does he receive it?” *Actually there is another cause in here and you’re missing that one when you’re not perceiving the Pc.*

You can tell by looking at the Pc that he didn’t hear or understand what you’d said or that he was doing something peculiar with the command he was receiving. *Whatever that message is in response, it rides on this line.*

An Auditor who isn’t watching a Pc at all never notices a Pc who isn’t receiving or understanding the auditing command. Then all of a sudden somewhere along the line there is an ARC Break and then we do assessments and we patch up the session and all kinds of things go wrong.

Well, they actually needn’t ever have gone wrong in the first place if this line had been in. *What is the Pc doing completely aside from answering? Well, what he is doing is this other little sub-cause, distance, effect line.*

Another of these tiny lines is the cause, distance, effect line of—”Is the Pc ready to receive an auditing command?”

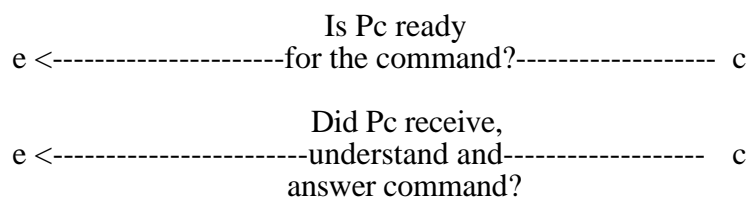

This is the Pc causing and it rides up the line across distance, *is received at the Auditor* and the Auditor perceives that the Pc is doing something else.

It is an important one and you find that Auditors goof that one very often; the Pc’s attention is still on a prior action.

Now here’s another one—”Has the Pc received the acknowledgement?” Sometimes you violate this one. You have been acknowledging but you’ve never seen that he didn’t receive the acknowledgement. *That perception has another little tiny one in it that actually comes on this line; it is—’Has the Pc answered everything?’*

The Auditor is watching the Pc and the Auditor sees that the Pc has not said all that the Pc is going to say. You sometimes get into trouble with Pcs that way. Everything at “cause” hasn’t moved on down the line to effect and you haven’t perceived all of the “effect” and you go into the acknowledgement one before this line has completed itself.

That’s chopping the Pc’s communication. You didn’t let the communication cycle flow to its complete end. The acknowledgement takes place and of course it can’t go through as it’s an inflowing line and it jams right there on the Pc’s incomplete outflowing answer line.

So if you want to break it all down, there are six communication cycles which make up one auditing cycle. Six, not more than six unless you start running into trouble. If you violate one of these six communication lines you of course are going to get into trouble which causes a mish-mash of one kind or another.

There is *another* communication cycle inside the auditing cycle and that is at the point of the Pc. It's a little additional one and it's between the Pc and himself. *This is him talking to him. You're listening to the inside of his skull when you're examining it. /t actually can be multiple as it depends upon the complications of the mind.*

This happens to be the least important of all the actions except when it isn't being done. And of course it's the hardest to detect when it isn't being done. Pc says: "Yes. " Now what has the Pc said yes to? And sometimes you are insufficiently curious. And that in essence is this internal perception of line. It includes this cause, distance, effect backlash here—"Is the Pc answering the command I gave him?"

So with this, there are seven communication cycles involved in an auditing cycle. It is a multiple cycle.

A communication cycle consists of just cause, distance, effect with intention, attention, duplication *and understanding*. How many of these are there in *one* auditing cycle? You'd have to answer that with how many *principal* ones there are *because some auditing cycles contain a few more*. If a Pc indicates that he didn't get the command (*cause, distance, effect*), the Auditor would give a repeat of it (*cause, distance, effect*) and that would add 2 more communication cycles to the auditing cycle, *so you've got 9*—because there was a flub. So anything unusual that happens in a session adds to the number of communication cycles in the auditing cycle, but they are still *all* part of the auditing cycle.

Repetitive commands as an auditing cycle, is doing the same cycle over and over again.

Now there is a completely *different* cycle *inside the same pattern*. The Pc is going to originate and it's got *nothing to do* with the auditing cycle. The only thing they have in common is that they both use communication cycles. *But this is brand new*. The Pc says something that is not germane to what the Auditor is saying or doing and you actually have to be alert for this happening at any time and the way to prepare for it is just to realize that it can happen at any time and just go into the drill that handles it. Don't get *it* confused with the drill that you have as an auditing cycle. Consider it its own drill. You *shift gears into this drill when the pc does something unexpected*.

And, by the way, this handles such a thing as the Pc originates by throwing down the cans. That's still an origin. It has nothing to do with the auditing cycle. Maybe the auditing cycle went to pieces and this origination cycle came in. Well, the auditing cycle can't complete because this origin cycle is now here. That doesn't mean that this origin has precedence or dominance but it can start and take place and have to be *finished off* before the auditing cycle can resume.

So this is an interruptive cycle and it is cause, distance, effect. *The Pc causes something. The Auditor now has to originate as the Auditor has to understand what the Pc is talking about—and then acknowledge. And to the degree that it is hard to understand, you have the cause, distance, effect of the Auditor trying to clarify this thing; and every time he asks a question, he's got a new communication cycle.*

*You can't put a machine action at that point because the thing has to be **understood**. And this must be done in such a way that the Pc isn't merely repeating his same origination or the Pc will go frantic. He'll go frantic because he can't get off that line—he's stuck in time and it really upsets him. So the Auditor has to be able to understand what the devil the Pc is talking about. And there's really no substitute for simply trying to understand it.*

There is a little line where the Pc indicates he is going to say something. *This is a line (cause, distance, effect) that comes before the origination takes place so you don't run into a jam and you don't give the auditing command.* The effect at the Auditor's point is to shut up and let him. There can be another little line *(cause, distance, effect)* where the Auditor indicates he is listening. Then there is the origination, the Auditor's acknowledgement of it and then there is the perception of the fact that the Pc received the acknowledgement.

That's your origination cycle.

An Auditor should draw all these *communication* cycles out on a scrap of paper. *Just take a look at all these things; mock up a session* and all of a sudden it will become very straight how these things are and you won't have a couple of them jammed up. What's mainly wrong with your *auditing cycle* is that you have confused a couple of *communication cycles* to such a degree that you don't differentiate that they exist. That's why you sometimes chop a Pc who is trying to answer the question.

You know whether the Pc has answered *the* question or not. How *did you* know? Even if it's telepathy it's *cause, distance, effect*. It doesn't matter how that communication took place, you know whether he's answered the command by a communication cycle. I don't care how you sense this.

If you are nery on the subject of handling the basic tool of auditing and if that's giving you trouble (and *if you* get into trouble *by suddenly breaking it down and analyzing it*) then it should be broken down and analyzed *at a time when you're auditing something nice and simple*.

I've given you a general pattern for an auditing cycle; maybe in working it over you can find a couple of extra communication cycles in the thing. But they are all there and if you made someone go through each one painstakingly, you would find out where his auditing cycle is jammed up. It isn't necessarily jammed up on his ability to say "Thank you". It may *very* well be jammed up in another quarter.

Basic Auditing Series 9

COMM CYCLE ADDITIVES

There are *no* additives permitted on the Auditing Comm Cycle.

Example: Getting the pc to state the problem after the pc has said what the problem is.

Example: Asking a pc if that is the answer.

Example: Telling pc "it didn't react" on the meter.

Example: Querying the answer.

This is the WORST kind of auditing.

Processes run best MUZZLED. By muzzled is meant using ONLY TR 0, 1, 2, 3 and 4 by the text. A pc's results will go to HELL on an additive comm cycle.

There are a hundred thousand tricks that could be added to the Auditing Comm Cycle. EVERY ONE of them is a GOOF. The ONLY time you ever ask for a repeat is when you couldn't hear it.

Since 1950, I've known that all auditors talk too much in a session. The maximum talk is the standard model session and the TR 0 to 4 Auditing Comm Cycle ONLY.

It is a serious matter to get a pc to "clarify his answer". It is in fact an Ethics matter and if done habitually is a Suppressive Act, for it will wipe out all gains.

There are mannerism additives also.

Example: Waiting for the pc to look at you before you give the next command. (Pcs who won't look at you are ARC Broken. You don't then twist this to mean the pc has to look at you before you give the next command.)

Example: A lifted eyebrow at an answer.

Example: A questioning sort of ack.

The Whole Message is

GOOD AUDITING OCCURS WHEN THE COMM CYCLE ALONE IS USED AND IS MUZZLED.

Additives on the Auditing Comm Cycle are ANY ACTION, STATEMENT, QUESTION OR EXPRESSION GIVEN IN ADDITION TO TRs 0-4.

They are Gross Auditing Errors.

And should be regarded as such.

Auditors who add to the Auditing Comm Cycle never make Releases.

So, that's Suppressive.

Don't do it!

THE AUDITOR'S CODE

In celebration of the 100% gains attainable by Standard Tech.

I hereby promise as an Auditor to follow the Auditor's Code.

1. I promise not to evaluate for the preclear or tell him what he should think about his case in session.
2. I promise not to invalidate the preclear's case or gains in or out of session.
3. I promise to administer only Standard Tech to a preclear in the standard way.
4. I promise to keep all auditing appointments once made.
5. I promise not to process a preclear who has not had sufficient rest and who is physically tired.
6. I promise not to process a preclear who is improperly fed or hungry.
7. I promise not to permit a frequent change of Auditors.
8. I promise not to sympathize with a preclear but to be effective.
9. I promise not to let the preclear end session on his own determinism but to finish off those cycles I have begun.
10. I promise never to walk off from a preclear in session.
11. I promise never to get angry with a preclear in session.
12. I promise to run every major case action to a floating needle.
13. I promise never to run any one action beyond its floating needle.
14. I promise to grant beingness to the preclear in session.
15. I promise not to mix the processes of Scientology with other practices except when the preclear is physically ill and only medical means will serve.
16. I promise to maintain Communication with the preclear and not to cut his comm or permit him to overrun in session.
17. I promise not to enter comments, expressions or enturbulence into a session that distract a preclear from his case.

18. I promise to continue to give the preclear the process or auditing command when needed in the session.
19. I promise not to let a preclear run a wrongly understood command.
20. I promise not to explain, justify or make excuses in session for any Auditor mistakes whether real or imagined.
21. I promise to estimate the current case state of a preclear only by Standard Case Supervision data and not to diverge because of some imagined difference in the case.
22. I promise never to use the secrets of a preclear divulged in session for punishment or personal gain.
23. I promise to see that any fee received for processing is refunded following the policies of the Claims Verification Board, if the preclear is dissatisfied and demands it within three months after the processing, the only condition being that he may not again be processed or trained.
24. I promise not to advocate Scientology only to cure illness or only to treat the insane, knowing well it was intended for spiritual gain.
25. I promise to cooperate fully with the legal organizations of Dianetics and Scientology as developed by L. Ron Hubbard in safeguarding the ethical use and practice of the subject according to the basics of Standard Tech.
26. I promise to refuse to permit any being to be physically injured, violently damaged, operated on or killed in the name of "mental treatment".
27. I promise not to permit sexual liberties or violation of the mentally unsound.
28. I promise to refuse to admit to the ranks of practitioners any being who is insane.

TWINNING

(CANCELS: BTB 16 Mar 71
STUDENT AND COURSE MORALE,
TOUGH CHECKOUTS & COACHING)

Cancellation of Issues Canceling Twinning

The following BPLs and HCO PLs which canceled issues on twinning, or canceled or suspended twinning itself, are now CANCELED:

1. HCO PL 29 Jul 72 II FAST FLOW IN TRAINING written by Training and Services Aide. Though the issues it canceled remain canceled, this HCO PL itself was canceled by BPL 10 Oct 75 X CANCELLATION OF POLICY LETTERS 1972 and remains so.
2. HCO PL 31 Aug 74 FAST FLOW TRAINING REINSTATED which suspended twin training or checkouts, was previously canceled and remains so.
3. BPL 18 Oct 76RD, Rev. 10.9.78 URGENT, IMPORTANT, SUCCESSFUL TRAINING LINEUP, which canceled requirements of twin training or checkouts for Academy, has been canceled and replaced by HCO PL 25 Sep 79 I URGENT, IMPORTANT, SUCCESSFUL TRAINING LINEUP.

THERE ARE NO VALID BPLs OR HCO PLs NOW EXISTING WHICH CANCEL TWINNING.

“Twinning” is the pairing up of two students training on the same subject to work together on their materials.

It is a Scientology innovation in training. For years it was used highly successfully when done correctly and as a standard action on Scientology courses.

Recently I discovered a big WHY behind course failures. That is that twinning as a subject and practice has become confused and fallen into misuse or fallen out completely and one of the reasons behind that is that a number of HCOBs on twinning were canceled and no one issue exists that covers the subject in its entirety.

THIS HCOB REINSTATES TWINNING FIRMLY AND WITH EMPHASIS.

It is NOT subject to cancellation.

It fully lays out the purpose of twinning, the basics and rules and correct use of twinning, when and how it is done, the responsibility of twins and the responsibility of the Supervisor and the handling of twinning bugs.

It re-establishes mandatory twinning on all practical courses, such as the TRs

Course, or on the practical sections of a course, such as E-Meter Drills. It also covers twinning in some areas of theory study where it is obviously called for, such as Method 9 Word Clearing when done between students.

BACKGROUND

In 1954 we found that when you teamed up students of comparable case level and ability they then made progress. When we find something that is that workable we put it to use. Twinning was installed as a fundamental part of the Scientology system of training and it immediately and effectively brought up the participation and action levels of entire course rooms of students. Students grasped the application of the materials faster. It gave us results.

Originally twinning was used almost exclusively on practical drills. Later, in the early '60s, it was carried over into twin checkouts on theory. Still later, with the advent of Word Clearing, applied study tech and fast flow, twinning as a broad mandatory action for all students on theory was canceled.

Even so, some orgs continued twinning students unnecessarily on admin courses and some theory courses and were not enforcing twinning on courses where it is mandatory, such as a TRs Course.

Twinning on practical courses and practical actions has never been canceled by me and was never intended to be canceled. However, a line in a BPL (BPL 18 Oct 76RD Rev. 10.9.78 URGENT, IMPORTANT, SUCCESSFUL TRAINING LINEUP) which stated: "Requirements of twin training or checkouts for Academy are canceled" caused twinning to be dropped out even on practical drills in some areas and threw a confusion into the scene in other areas. The above BPL has now been canceled with a vengeance and is replaced by HCO PL 25 Sept 79 I URGENT, IMPORTANT, SUCCESSFUL TRAINING LINEUP.

And this bulletin restores twinning to its rightful place in training as the vital tool that it is.

WHY TWINNING?

One reason twinning is so vital is that it brings those people who have sunk back into their First Dynamic up out of their First Dynamic and onto the Third. It gives the student a terminal to work with. It puts students into communication, into doingness and participation. One doesn't learn by being a spectator. Twinning not only gets students extroverted but also gets them to take some responsibility for their fellow man. These are factors that are sadly lacking in modern permissive education.

TWINNING VERSUS MODERN PERMISSIVENESS

With twinning we are cutting right across modern "permissive" teaching.

The modern tendency is to just let everybody do as they please and put their attention on whatever they please. This is the "think" of the day, and it is in in most basic school systems and has spread as well into many different fields.

Probably someone somewhere thought it would be much quicker and easier and require much less confront to just let a student sit there permissively, with his attention wandering

around in the total significance of it all and then claim he had passed the subject when he had never gone near it.

It is a symptom of people who can't confront not to make anyone else confront.

We don't buy this. It is totally batty. The creeping disease of permissiveness, non confront and spectatorism is simply a part of "the beautiful world of irresponsible slop." It has no place in Scientology training.

Real twinning, enforced, effectively pulls the student right up out of the vague permissiveness of modern think and lands him with some responsibility right from the start. With that he can be honestly trained.

CAUSE AND EFFECT

A person being trained is mainly working on an inflow basis. Day after day it is inflow, inflow, inflow. This tends to put him at effect.

In twinning, the person can balance his inflow with outflow. This keeps him from going totally into effect. It puts some cause into the scene.

A person, when he is expected to apply knowledge or skills, must, of course, be at cause. When he is trained totally at effect, he can get into what is called a "stuck flow" phenomenon whereby he can't outflow the subject. Yet, if he is ever going to apply it, he is going to have to outflow it.

Twinning has the virtue of balancing inflow and outflow. It will be found that when the person comes to apply the tech, he is already able to outflow if he was trained using twinning.

WHEN TO TWIN

It is not necessary to twin students on admin courses, nor, as a general rule, on tech theory courses. You ensure the student is applying study tech and is not going past misunderstood words and you let him get on with it.

Practical and practical courses are another matter.

Mandatory Twinning

Twinning is mandatory on those courses where the essence of the course is to train the student in the practical application of the data. This would include the TRs Course, any Upper Indoc and Objectives Course, a specialized E-Meter Drills Course and courses of a similar nature.

Even though such courses also include theory, the final objective of such a course is a person trained and drilled in the doingness involved and twinning is absolutely essential for this purpose.

Thus, on such a course, twins are assigned at the beginning of the course and they remain assigned through to the completion of that course. We call it "assigning twins in concrete." One does not musical chair twins, once assigned, nor allow them to drift from one twin to another.

The whole essence of twinning is to get two students to work together, to assist each other and take responsibility for getting each other successfully through the course.

Twinning On Practical Sections Of Courses

On certain courses containing both theory and practical, such as Academy Levels, you would not necessarily twin students on the theory section of the course. You would, however, definitely and mandatorily twin them on the practical sections.

For example, twinning is a must on E-Meter Drills, or such actions as assessment drilling, drilling of special rundown procedures where this is called for, Learning Drills, Obnosis Drills and other practical applications.

Twinning On Word Clearing

One always twins students where Method 9 Word Clearing is to be done between the students themselves and not by a Word Clearer.

Similarly, Method 8 Word Clearing is twinned, on exactly the same turn-about basis as described in Method 9. (Ref: HCOB 30 Jan 73RB Rev. 1.6.79 Word Clearing Series 46RB METHOD 9 WORD CLEARING THE RIGHT WAY)

An example of turn-about on Method 8 would be: First twin clears word "a." Second twin then clears word "a" AND word "b." First twin then clears word "b" AND word "c," etc. You do two actions consecutively every time.

Twins may also be assigned to get each other through other methods of Word Clearing in this way.

Henceforth, on courses such as the Primary Rundown, where Word Clearing is the essence of the course, twinning is mandatory.

Wherever twins are assigned, whether for an entire course or for practical sections of a course, the rules of twinning apply.

ASSIGNING TWINS

The Supervisor is responsible for assigning twins.

He should take care to team up students of comparable case level and training and abilities inasmuch as possible. In this way both twins make the best progress. Twinning a very fast student with a slow student should be avoided, if possible, as it can be frustrating and upsetting to both students. This must never be used as an excuse NOT to twin students. However, ideally, one matches them up according to their capabilities and twinning goes smoothly and produces best results when this is done.

In some rare instances it may be necessary to reassign twins who have been incorrectly paired. But it should not be necessary if care was taken in teaming them up correctly to begin with.

Otherwise, once assigned, twins work together through to successful completion of the course or activity.

TURN-ABOUT

THE RULE OF TWINNING IS THAT IT IS DONE ON A "TURN-ABOUT" BASIS.

"Turn-about" is done as follows:

One student coaches his twin through a drill or a section of a drill. They then turn-about and the second twin does the same drill or section of that drill PLUS the next drill or next

section of the drill. They then turn-about again, with the first student doing the drill his twin has just done PLUS the one following.

The same system applies in Method 9 or Method 8 Word Clearing. One twin clears a word or M9s a paragraph or section of the text. They turn-about and the second twin clears the word or M9s the paragraph or section PLUS the following one. They turn-about again, with the first twin now clearing or M9ing the word or section his twin just cleared PLUS the one following.

Turn-about is applied as well to starrate checkouts where these are called for. It may be done by checking out an entire bulletin on one's twin before the turn-about is done. Or, where a very long text is to be starrated, the turn-about can be done after each section.

With the turn-about system one person is not constantly leading and misunderstands are kept picked up between twins. The twins keep apace with each other, we don't get unbalanced flows and both are kept progressing.

THE TWIN'S RESPONSIBILITY

A TWIN IS RESPONSIBLE FOR SEEING THAT THE STUDENT WITH WHOM HE IS TWINNED KNOWS AND CAN APPLY THE MATERIAL HE HAS STUDIED .

Twins must be made aware of this responsibility at the onset of the course.

The twin word clears his fellow student. He listens to his sentences and sees that they are correct and fit the definition of the word being cleared. He makes sure his twin understands the materials. If the student doesn't know them cold, the twin helps the student find his misunderstood words and gets him through any difficulties.

Twins do practical drills together. They coach each other to wins and certainty in applying the materials 100% correctly.

If a student flunks a Supervisor checkout on materials he's been passed on by his twin, both students get a flunk. The twin must have a misunderstood himself if he missed the other student's goof.

Morale and Production

MORALE depends on production.

PRODUCTION, in training, is the evidence of the demonstration of competence.

MORALE IS UP WHEN COMPETENCE IS DEMONSTRATED.

MORALE IS UP WHEN PRODUCTION IS UP.

Morale isn't necessarily built by being "nice." Twinning actions *are* carried out with good ARC, but being "nice" is not enough.

A student getting a good stiff coaching session from his twin and passing—or getting a good, stiff checkout and passing, feels great. He has really accomplished something. He *knows* that he knows the data or drill.

A student who gets poor or nonstandard coaching or checkouts feels and knows that he has been cheated. If his twin is just being "nice" he doesn't win and doesn't appreciate the checkout. His morale will be down.

One keeps his twin's morale and production high. One gives him tough standard coaching sessions so he *becomes* competent. One gives him tough standard checkouts so he KNOWS HE HAS DEMONSTRATED HIS COMPETENCE IN THE MATERIALS. It is always done with good ARC.

It must be real to student and Supervisor alike that twinning is not a namby-pamby, brush-off activity.

One is responsible for getting his twin *through* the course. If one twin goes to Review, the other goes to Review. If one twin goes to Ethics, the other goes to Ethics. If one twin should blow, the other twin must go and get him. One is responsible for getting his twin *through* the course.

There have been cases in the past where one twin worked like mad to get the other twin through an extensive section right at the end of the course. The other twin then simply went off and would not do the same so the first student could also finish the course.

IT IS NOW FIRM POLICY THAT WHERE SUCH AN INSTANCE OCCURS, THE STUDENT WHO ABANDONED HIS TWIN JUST BECAUSE HE HIMSELF WAS FINISHED MAY *NOT* BE CERTIFIED

AND MAY *NOT* BE GIVEN A COURSE COMPLETION UNTIL HE HAS COMPLETED HIS TWIN.

Twins are responsible for getting each other *through* the course.

THE SUPERVISOR'S RESPONSIBILITY

It is the Supervisor's responsibility to enforce twinning per the points in this bulletin.

He assigns twins, pairing them according to their capabilities.

He ensures twinning is being done by the book, on a turn-about basis, with *both* twins making progress.

He makes sure twins are wearing their hats as twins and taking responsibility for getting each other through, exactly as laid out in course materials.

A "double flunk" is given when a student flunks a Supervisor checkout on materials his twin has passed him on. "Double flunk" means the student and his twin are both flunked in such a case, as, if the twin has missed the student's goof, he must have misunderstands of his own.

The Supervisor maintains high tech standards by adhering firmly to this system and when he must double flunk he makes sure *both* twins get handled on the goof.

A situation can occur where a student and his twin get into a "games condition," one with the other. This gives a no-progress, problem situation. The students who are twinned are not both working toward the same goal but one is in opposition to the other in some way. This gives no progress, no wins, no production, no demonstration of competence being permitted and low morale.

It is the responsibility of the Supervisor as well as the twinned students to not permit such a situation to occur. With any failure of a twin to be a twin and assume that responsibility, the Supervisor gets the student checked out on this bulletin and any other applicable course material and ensures the student is fully handled.

To keep the course morale high, Supervisors must insist on production and on the demonstration of competence on all materials by the student and his twin.

In a case where a student gets sent to Review or Ethics, the Supervisor must uphold the rule that his twin *always* gets sent as well. He ensures that any blown student is recovered by his twin. In all such cases the Supervisor keeps track of his students and ensures they're handled and gotten back on course rapidly.

A Supervisor who understands the WHY of twinning and sees it is carried out standardly is going to produce causative, responsible graduates who can apply what they have learned.

EMPHASIS ON NO VERBAL DATA

All students should be made aware, from the beginning of training, that the answers to their questions are in their course materials or other source references.

The issues on verbal tech, HCOB 9 Feb 79 HOW TO DEFEAT VERBAL TECH and HCOB 15 Feb 79 VERBAL TECH PENALTIES, should be well-known in the course room.

Even so, students, particularly when they are new, sometimes get into an exchange of verbal data or opinion while they are twinning. A Supervisor must be on the alert for this and step in to handle at once when he observes it happening. He uses study tech to straighten the scene out and always refers the students to the above mentioned HCOBs on verbal tech.

Twinned students, of course, bear a responsibility for not spreading verbal tech, neither between themselves nor to anyone else, for that matter. A twin always refers his fellow student to source materials.

HANDLING BUGS ON TWINNING

The main twinning bugs which could arise are those which were encountered earlier on the Saint Hill Special Briefing Course. One twin would get sent to Ethics or Cramming or Review and the other one then had no twin. Thus, twinning could get to be a little bit unpopular and could block somebody from finishing the course unless these factors are handled.

The remedy for this sort of thing is to send *both* twins to Ethics, *both* twins to Cramming, *both* twins to Review and if anybody blows, send his twin after him. In other words, we don't buy the idea that everybody is totally irresponsible for everybody else in this wonderful First Dynamic world. This is not a mere expediency. It takes only a good, straight look at the purpose and WHY of twinning to recognize the value of this system. Those who do recognize its value will enforce and maintain it.

There is another situation which could act as a bug in twinning. What happens when one twin actually does disappear from the scene totally, in spite of checkouts and crammings and ethics? What do you do with the remaining twin? Unhandled, it can stop a course for a student, so handled it must be and with no time wasted. You don't let the odd twin rattle around on his own for very long.

If he's not too far advanced into the course he can be twinned with an oncoming student. (A well-run course room will always have new students enrolling.) Every effort is then made to get the newcomer caught up with his twin as rapidly as possible.

But what of the more advanced student who loses a twin? If there's absolutely no other single terminal to team him up with, there is still a solution far preferable to having him continue on his own. You match him up with a set of twins of comparable ability and advancement to his and you turn that twinship into a trio. Once formed, you run that trio as tightly as you would any twinship. The turn-about system would then need to be adjusted to a

“round robin.” (Example: A coaches B. B coaches C, C coaches A.) And it would then reverse. This is more easily seen if it is diagrammed:

A coaches B on the 1st
action (drill, definition,
etc.)_____ B

B coaches C on the 1st
action_____ C

C coaches A on the 1st
action_____ A

And then it reverses.

B_____ C coaches B on the
2nd action

A _____ B coaches A on the
2nd action

C _____ A coaches C on the
2nd action

And now it reverses back.

A coaches B on the 3rd
action _____ B

B coaches C on the 3rd
action _____ C

C coaches A on the 3rd
action _____ A

And now it would reverse back again (C coaches B. etc.) and so on through the drill, definition or M9 section.

All the rules of twinning then apply to these three. You “assign the trio in concrete” and you ensure they keep advancing. Again, the point here is that we operate on the Third Dynamic where one does take some responsibility for his fellow man.

HANDLING BOGGED STUDENTS AND THEIR TWINS

When a bogged student cannot be handled in the course room with standard Word Clearing and study tech and he is sent to Cramming, Review or, where indicated, to Ethics, his twin is also always sent.

The idea is not only to keep the twins together and taking responsibility for each other but to also correct and repair *both* of them as needed.

In other words, one twin doesn't simply sit there and observe the other twin being handled. The twin of a bogged student will also require handling in Review, Ethics, or Cramming himself. If a student has ended up on Review lines, it must be assumed that the twin has goofed as a twin and has misunderstands on the course materials. This must be sorted out and resolved by the Dir Review when the twins route through Review.

The Dir Review determines, by interview, what the trouble is and how it should be resolved. This is done on an individual basis for each twin.

For example, the bogged student may need Word Clearing or a Word Clearing Correction List and his twin may need to restudy this twinning bulletin or other course materials.

In Ethics, for example, a student may be involved in some sort of out-ethics situation, such as continually being late for course. In any ethics situation one would look for the possibility of mutual rudiments between twins. Whether or not mutual ruds exist, the twin would always be given some handling in regard to his responsibility in the situation.

In the above example, the Ethics Officer might handle the student with an amends project. He would then go over with the twin the matter of *his* responsibility and what steps *he* could take to ensure the student gets to course on time. The twin would then get the student through his amends, get through his own handling, whatever its nature and the two of them would then go back to course.

The twin sees the student through his review, cramming or ethics cycle and, whenever possible, is used to help the student get through it. He also receives appropriate handling himself.

THE RULE IS: WHEN ONE STUDENT BECOMES BOGGED, HIS TWIN IS ALWAYS SENT WITH HIM TO CRAMMING, REVIEW OR ETHICS.

In the rare case where a student is going to require extensive handling in Review or Ethics, such as case handling or suspension from course where such would be truly warranted, the Dir Review or Ethics Officer may send the other twin back to course to be retwinning with another student.

The Supervisor always checks up on any students who have been routed off course temporarily. He must keep himself informed as to their whereabouts and progress on correction lines and see that they are returned to course corrected, as rapidly as possible. He does not allow any student or twin to simply drop off his lines with an incomplete course, unhandled or unaccounted for. Any twin has the responsibility of getting himself and his fellow student back onto the course as well.

Once students get the idea that their own progress on a course depends utterly on the quality of their twinning you will start to see some quite magical results. They're now out of the irresponsibility of it all and operating on the Third Dynamic.

It simply takes standard supervision plus REAL TWINNING.

That is the winning combination.

So enforce twinning.

It will show up in F/Ning students and high and genuine course completions, which any Supervisor, any org. any graduate can be proud of.

And I will be proud of you, too.

COACHING

In order to help you to do the best you possibly can in the course as far as being a coach is concerned, below you will find a few data that will assist you:

1. *Coach with a purpose.*
 - (a) Have for your goal when you are coaching that the student is going to get the training drill correct; be purposeful in working toward obtaining this goal. Whenever you correct the student as a coach just don't do it with no reason, with no purpose. Have the purpose in mind for the student to get a better understanding of the training drill and to do it to the best of his ability.
2. *Coach with reality.*
 - (a) Be realistic in your coaching. When you give an origination to a student really make it an origination, not just something that the sheet said you should say; so that it is as if the student was having to handle it exactly as you say under real conditions and circumstances. This does not mean, however, that you really feel the things that you are giving the student, such as saying to him, "My leg hurts." This does not mean that your leg should hurt, but you should say it in such a manner as to convey to the student that your leg hurts. Another thing about this is do not use any experiences from your past to coach with. Be inventive in present time.
3. *Coach with an intention.*
 - (a) Behind all your coaching should be your intention that by the end of the session your student will be aware that he is doing better at the end of it than he did at the beginning. The student must have a feeling that he has accomplished something in the training step, no matter how small it is. It is your intention and always should be while coaching that the student you are coaching be a more able person and have a greater understanding of that on which he is being coached.
4. *In coaching take up only one thing at a time.*
 - (a) For example: Using TR 4, if the student arrives at the goal set up for TR 4 then check over, one at a time, the earlier TRs. Is he confronting you? Does he originate the question to you each time as his own and did he really intend for you to receive it? Are his acknowledgements ending the cycles of communication, etc. But only coach these things one at a time; never two or more at a time. Make sure that the student does each thing you coach him on correctly before going on to the next training step. The better a student gets at a particular drill or a particular part of a drill you should demand, as a coach, a higher standard of ability. This does not mean that you should be "never satisfied". It does mean that a person can always get better and once you have reached a certain plateau of ability then work toward a new plateau.

As a coach you should always work in the direction of better and more precise coaching. Never allow yourself to do a sloppy job of coaching because you would be doing your student a disservice and we doubt that you would like the same disservice. If you are ever in doubt about the correctness of what he is doing or of what you are doing, then the best thing is to ask the supervisor. He will be very glad to assist you by referring you to the correct materials.

In coaching never give an opinion, as such, but always give your directions as a direct statement, rather than saying "I think" or "Well, maybe it might be this way," etc.

As a coach you are primarily responsible for the session and the results that are obtained on the student. This does not mean, of course, that you are totally responsible but that you do have a responsibility toward the student and the session. Make sure you always run good control on the student and give him good directions.

Once in a while the student will start to rationalise and justify what he is doing if he is doing something wrong. He will give you reasons why and because. Talking about such things at great length does not accomplish very much. The only thing that does accomplish the goals of the TR and resolves any differences is doing the training drill. You will get further by doing it than by talking about it.

In the training drills the coach should coach with the material given under "Training Stress" and "Purpose" on the training sheet.

These training drills occasionally have a tendency to upset the student. There is a possibility that during a drill a student may become angry or extremely upset or experience some misemotion. Should this occur the coach must not "back off". He should continue the training drill until he can do it without stress or duress and he feels "good about it". So, don't "back off" but push the student through whatever difficulty he may be having.

There is a small thing that most people forget to do and that is telling the student when he has gotten the drill right or he has done a good job on a particular step. Besides correcting wrongnesses there is also complimenting rightness.

You very definitely "flunk" the student for anything that amounts to "self-coaching". The reason for this is that the student will tend to introvert and will look too much at how he is doing and what he is doing rather than just doing it.

As a coach keep your attention on the student and how he is doing and don't become so interested in what you yourself are doing that you neglect the student and are unaware of his ability or inability to do the drill correctly. It is easy to become "interesting" to a student; to make him laugh and act up a bit. But your main job as a coach is to see how good he can get in each training drill and that is what you should have your attention on; that, and how well he is doing.

To a large degree the progress of the student is determined by the standard of coaching. Being a good coach produces auditors who will in turn produce good results on their preclears. Good results produce better people.

HCO POLICY LETTER OF 16 MAY 1965

Remimeo
Students

**TECH DIVISION
ACADEMY COURSES;
GENERAL REMARKS
ZERO COURSES
HUBBARD RECOGNIZED SCIENTOLOGIST**

On all new check sheets of Zero Courses, include the following on both the (Theory) Certificate Course and the (Practical) Classification Course:

1. E-Meter Tone Arm.
2. Analysis of Case Condition by Tone Arm.
3. HCO Policy Letter of Apr 2, 1965 and (on Classification Course) drills for same.

TRS WITH METER

All Academy TRs will now be done with an E-Meter before the student and his coach holding the cans, whether the Meter is being used or not.

AUDITOR'S REPORT

All Academy TRs and auditing for supervisor inspection must have an Auditor's Report form close to the student's hand, whether kept or not.

Materials on how to keep an Auditor's Report must be included on both Zero Courses (Certificate and Classification).

If a report is actually written during the drill or session the student must be made to put it carefully in a folder and file it.

This is all part of his training.

FIRM POLICY

A student must be trained only with the tools of his trade to hand.

Therefore in an Academy the Supervisor must not omit what an auditor actually uses in sessions whether it is covered in the levels training or not.

This therefore includes a card table, a ball point, as well as a Meter and a "preclear" and an Auditor's Report.

Do NOT let a student be trained with the tools absent. In upper levels the unfamiliarity of the tools causes them to stumble.

Academies may not supply Meters or give away Auditor's Report pads, work sheets or ball points. If no Meter is available use a similarly coloured and shaped box with a dial painted on it and cards and cans attached and urge the student to get a Meter. The Academy furnishes card tables and chairs. An Academy must not use solid desks or solid tables in training as they are too hard to move about and too expensive.

ZERO VOCABULARY

The 13 word Vocabulary belongs in the Beginning Scientology Course.

A Zero student is expected to learn all common Scientology words in current use up to the number of 200.

ZERO CERTIFICATE COURSE

A student is supposed to study evenings and week-ends during the day-Zero Certificate Course—and any day-Certificate Course. The evening student is supposed to study on week-ends during the Evening Certificate Course and evenings on the Week-End Certificate Course. Those not so studying must be reported to Ethics. Supervisors must assign what is to be studied off course.

This is true of all Certificate Courses.

Classification Course students must frequent the Free Scientology Centre when not in class in those periods assigned to study in the Certificate Course. If not in action at the Free Scientology Centre, the student is expected to be gathering his Auditor's Reports elsewhere for presentation to the Examiner as Examination is to occur at the exact end of the Classification Course completed check sheet, no matter when that occurs.

EXAMINATIONS

Zero Certificate Exams and all other Certificate Exams consist of verifying that the data was actually studied.

ZERO CLASSIFICATION

Exams are by written Exam and by inspection of the submitted auditing reports.

Where there is not yet a Department of Review, the student who fails is returned to Course. It will be found however that this is a very catastrophic procedure and a Review Cramming Section should be instituted as soon as possible. When it is there, an Examiner never returns the student to Course but sends to Review.

TWIN CHECKING

Twin Checking proceeds with the slight change that the twins are not co-auditors, but may assist each other by auditing if they wish but not with regular sessions on Course time.

Twins are for Theory Checking on the Certification Course and for Practical Drills on the Classification Course.

Until all check sheets and materials are to hand the D of T must cope. Additions to a check sheet may be written in on old check sheets but not while the student is on it, and only for the next student to be given it.

ZERO COURSE

The basic point of Zero today is Find the Auditor. "Look at me who am I?" "Who would I have to be to audit you?" is the type of process that best defines the Level—Recognition.

HCO BULLETIN OF 22 FEBRUARY 1972RA

Remimeo
All Supervisors
HPCSC
Mini Crse
Super Crse
Word Clearing
Crse
Est Off Crse
Dept 13
Personnel

(Revised 26 March 1972
and 8 July 1974.
(Changes in this type style.)

Word Clearing Series 32RA

URGENT—IMPORTANT—URGENT

*Vital for all Supervisors,
Est-Os, and Cramming Officers.*

WORD CLEARING METHOD 4

Tech and Admin Cramming Officers, Word Clearers and Course Supervisors use Method 4 Word Clearing when fishing for a misunderstood word. E.g. Cramming Officers use it to fish for misunderstood words concerning what the person is being crammed on. Word Clearers use it on Interns when the Intern needs a retrain or retread or even if the Intern is sent to Cramming. Course Supervisors use it in the classroom CONTINUOUSLY ON NON-F/N STUDENTS or queries.

The whole idea is the person requiring the Method 4 Word Clearing has a Cramming Order or is not an F/Ning student because of confusion as a result of a misunderstood word, as per Word Clearing Series 16R or omitted materials.

Method 4 fishes for the misunderstood word, finds it, clears it *to F/N*, looks for another in the area until there are no more *with an F/N* VGIs, then moves to another area, handles that—eventually *all* the misunderstands that resulted in the Cramming Order or non-F/N student are handled.

It requires no C/S OK for it to be done. Method I is not a prerequisite to Method 4.

E-Meter Drill No. 21 is the E-Meter Drill to be drilled on Method 4. It's the method of fishing for a cognition.

Requires proper application of TRs and metering. All Supervisors, Est-Os, and Dept 13 personnel to check out on, drill, and *apply* this tech AS IT IS VITAL STUDY TECH.

METHOD 4 WORD CLEARING

1. Give person the cans, state, "I am not auditing you."
2. Ask while watching the meter:

"Is there any part of what you're studying you did not fully get?"

Trace the read. Use "fishing for a cog" drill (per HCO B 25 June 70, Issue III) if needed. If no read the question may be varied, e.g.

“Is there any part of the materials you’re studying you disagree with?”

or

“Is there any part of what you’re studying you feel you could not apply?”

or

“In (material being checked) is there anything you didn’t understand?”

Let the student tell you *briefly*. Do NOT tell him the data.

Verify that his study pack is complete as the data might have been omitted.

Also he might never have read the pack at all.

If the data was missing do not go on to Step 3. See that he gets the complete pack and reads it. Then repeat Method 4.

If the person just has not read the materials do not go on to 3 but get him to read the materials. Then repeat Method 4.

3. Get what it is then ask:

“What *word* was misunderstood just before that?”

Meter reads, Word Clearer finds the word, never accepting a confusion but finds *the* word giving the read (SF, F, LF, BD), gets it looked up in a dictionary and used in sentences until it can be seen from the sentences that the student now understands the word *and the word F/Ns*. *All the tools of Study Tech and Word Clearing are at the Word Clearer’s disposal to take the word to F/N. The Word Clearer does not stop at one misunderstood but makes sure all are cleared.*

4. Repeat 2 & 3 until the materials are fully cleared up and any and all misunderstands or confusions handled.
5. If the action bogs when used in the classroom the student must be sent to Qual for handling and Supervisor to Cramming on TRs and metering and drilling on this procedure.

The correct action is a W/C CORRECTION LIST DONE ON THE STUDENT AND HANDLED.

Of course if the above question F/Ns on asking, there would be no misunderstands on the material being checked, but the person is in Cramming, not an F/Ning student or whatever, so there obviously are misunderstood words to be found and handled.

Look at HCO PL 16 Feb 72, “The Purpose of the Dept of Personnel Enhancement”. It says this Dept “reaches and looks for business all over the org and brings it in”. So someone with stats down—student or post stats, confusion about what to do, overloaded, can’t seem to handle it, how do you do this, etc, etc, are *all* indicators of misunderstood words as the person is saying confusion, confusion. Well, underneath the confusion is a misunderstood word just as Word Clearing 1 6R says.

Method 4 Word Clearing is what is used in doing and achieving the purpose of the Dept of Personnel Enhancement, HCO PL 16 Feb 72.

One of the ways the Word Clearers in this Dept do the job is using Method 4 Word Clearing.

METHOD 4 IS USED BY COURSE SUPERVISORS TO HANDLE ALL STUDENT QUERIES ABOUT CONTENTS OF COURSE MATERIALS.

The reason students ask questions about “What is meant” is because of omitted pack materials from their checksheet, failure to read what they have OR BECAUSE OF A MISUNDERSTOOD WORD JUST BEFORE THEY GOT CONFUSED.

The Super has to know only where the materials are and BE SMART ENOUGH TO DO METHOD 4 INSTEAD OF GIVING THE STUDENT ALTER-ISED ANSWERS THAT STOP SCIENTOLOGY WORKING.

Word Clearing, especially Method 4, is how to get in HIGH CRIME HCO PL 7 Feb 1965, Reissued 15 June 70, “KEEPING SCIENTOLOGY WORKING”.

SUCCESSFUL COURSE SUPERVISION AND SUCCESSFUL CRAMMING REQUIRE THIS ACTION BE FULLY KNOWN AND U—S—E—D.

HCO BULLETIN OF 17 AUGUST 1972R
REVISED 8 JULY 1974

Remimeo
(Translate to
European
Languages)

(Revision in this type style)

(Reissued 24 October 1974
as a Tape Course Series)

Word Clearing Series 42R

Tape Course Series 10

METHOD 4 NOTES

Too generalized a question in using Method 4 defeats its use and can restimulate a person badly.

Example: "Is there anything in *college* you didn't understand?" That of course is just plain ridiculous as a question. "Have you ever heard anything you didn't understand?" would be similarly silly.

BREAK DOWN THE MATERIALS

When doing Method 4 you have to break down the materials (put them into small separate units) in order to ask questions.

Example: We have Papers 1 & 2, both on the same subject. The wrong question for Method 4 would be "Is there anything in Papers 1 & 2 you didn't understand?" and not even give him the papers to see! The right way to do it would be to take Paper 1 and break it down into its obvious sections, give the person Paper 1 and let him look at it. Point to its 1st section and say, "Is there anything you didn't understand in this section?" while watching the meter. Then point to next section, do the same. Finish Paper 1. Then go to Paper 2 and do it the same.

A person has to know what he's being asked about and has to be thinking of it when asked the question.

TAPES

Just as it would be ridiculous to ask, "Have you ever misunderstood anything you ever read?", it would be silly to ask, "Did you ever have a misunderstood on Tape?"

The right way is to take *the* tape and put it on a machine and play a bit of it. And ask, "Is there anything in the first section of this tape you didn't understand?" while watching the meter. Then high speed the tape forward to another area and do the same. Thus the tape is covered.

This can also be done from any tape notes, section by section.

BOOKS

Books are done chapter by chapter.

QUICKIE M4

Method 4 is defeated utterly by:

1. Bad metering,
2. Too general a question,
3. Not having the material to hand,
4. Not getting the person's attention on parts of the material,
5. *Not taking each word found to F/N.*

Quickie M4 misses. It sets the person up for a loss in his studying.

And we want him to actually succeed in his study, don't we?

same title.)

**CANCELLATION OF DESTRUCTIVE
BTBs AND BPLs ON TRs**

There are many valid issues on TRs, all of which remain in full force.

The following issues are hereby canceled for the reasons stated in this issue:

BTB 15 Aug 71R Rev. & Reiss. 3.7.74 as BTB	TR COURSE BUGS HANDLING
BTB 16 Aug 71R Rev. & Reiss. 31.7.74 as BTB	BREAKTHROUGH, TR COURSE
BTB 18 Aug 71R Rev. & Reiss. 24.8.74 as BTB	TR COURSE—HOW TO RUN
HCO PL 4 Nov 71 II (not by LRH)	ACADEMY PREREQUISITES
BTB 5 Nov 71R Rev. 24.4.78	TR COURSE DEBUG DRILL
HCO PL 6 Nov 71 III	INTERNSHIPS LINEUP, AUDITOR INTERNSHIPS
HCOB 7 Apr 73RA Rev. 22.2.79	GRADIENTS IN TRs
HCOB 8 Dec 74 BTB 8 Mar 75 IV	TR 0—NOTES ON BLINKING Cramming Series 5RB TRs IN CRAMMING
BTB 20 Sep 72 Reiss. 20.9.74 as BTB	TR TRAINING UNDER LRH
BTB 13 Mar 75R Rev. 30.4.75	TRs TRAINING BREAKTHROUGH
FDD 32 DIV IX INT 7 Jun 71	TRs THE HARD WAY

REASONS FOR CANCELLATION

The only source of technical data is LRH HCOBs, books and tapes.

The issues listed above have introduced false data, verbal data and technical alter-is. See HCOB 23 Oct 75 TECHNICAL QUERIES, HCOB/HCO PL 9 Feb 79 HOW TO DEFEAT VERBAL TECH, HCOB/HCO PL 15 Feb 79 VERBAL TECH PENALTIES.

The specific points of out-tech introduced by these canceled issues are given here, so that all will know what the specific out-tech is that is being canceled.

1. *BTB 15 Aug 71R, Rev. & Reiss. 3. 7. 74 as BTB, TR COURSE BUGS HANDLING.*

This BTB is canceled because it states that if the student reads on “overrun?” that he is passed on the TR. This has given rise to false passes and the idea that the TR student has a case on course.

TRs are not processes, they are drills. The student passes the TR when he can do it competently.

2. *BTB 16 Aug 71R, Rev. & Reiss. 31.7.74 as BTB. BREAKTHROUGH, TR COURSE.*

This BTB is canceled because it introduces the idea of a “Major Stable Win,” stressed that the 2 hour confront had been lifted and not to overrun a person on TRs. It also states “It may take minutes to hours to a hundred hours to achieve the major win.”

Of course wins are gotten on doing TRs. But TRs are drilled until the student does the TR competently and passes. The idea that TRs could take “hundreds of hours” to get in is completely false. A competent Supervisor, using LRH tech and not omitting any of it, should be able to get students through the TR Course in a couple weeks at the most.

3. *BTB 18 Aug 71R, Rev. & Reiss. 24.8.74 as BTB. TR COURSE—HOW TO RUN.*

This BTB gives the idea that wriggling around, moving, fidgeting, watering red eyes and blinking and swallowing are OK.

These manifestations show that a person is not confronting, is nervous, afraid, flinching, or in grief. Of course the coach never insists that the student mustn't blink, nor that he mustn't ever swallow. He coaches the student to do the TRs until he can do them comfortably and competently, at which point those manifestations of nonconfront are no longer present. A good auditor can be there comfortably and would never distract a pc.

4. *HCO PL 4 Nov 71 II. ACADEMY PREREQUISITE.*

This issue omitted mention of the Hard TRs Course as an Academy prerequisite, as a result of which the Hard TRs Course was dropped out of the training for auditors.

A Hard TRs Course is essential to the ability to audit at any level of auditing.

“Pat-a-cake” (meaning child's game) TRs were originally used in Div 6 for raw public to get them on a co-audit in London in the '50s and still might be of some small value for raw public that never intended to be auditors. But they sure won't pass or make a real auditor. In this era of permissive education, forget the permissiveness. The day we dropped out hard TRs, we entered an era of less case gain for pcs.

5. *BTB 5 Nov OR, Rev. 24.4. 78, TR COURSE DEBUG DRILL.*

This issue stresses the same points covered in No. 1 and No. 2 above and gave rise to false passes and quickying.

6. *HCO PL 6 Nov 71 III, INTERNSHIPS LINEUP. AUDITOR INTERNSHIPS.*

This issue states that interns and auditors do daily TRs and gave rise to the false idea that one's TRs could go out overnight and you'd have to get them in again the next morning!

Once an auditor's TRs are in, they are IN. The way to get your TRs in is to do the TRs Course. This doesn't mean that you can't do TRs again; it is usual to check an auditor's TRs in Cramming and handle any outnesses. But once TRs have been done fully and honestly, they are in! And they stay in from there on out.

7. *HCOB 7 Apr BRA, Rev. 22.2. 79. GRADIENTS IN TRs.*

The earlier system, the one I originally used was successful. The trouble was that others added in the idea “it takes a hundred hours,” and actually thought it would take them months to get through a TRs Course and were sticking students in on one TR. Cycling through the TRs

remedies that but one must ask what it is remedying? It's remedying a bunch of knuckle-headedness and invalidation in the first place!

Cycling through the TRs has been given a new definition and action. The student goes up through the TRs until he or she sticks, and then starts back at the beginning of the TRs. It is a technical fact, that when one cannot do a lower level TR, one is not likely to do an upper level TR. Get the student through the TRs the Hard Way, each one to a pass, one at a time. If the student hangs up or fails on a later TR, start him or her from the beginning of the TRs again.

8. *HCOB 8 Dec 74. TR 0—NOTES ON BLINKING.*

This issue has been misinterpreted by some who figured that because the coach doesn't flunk the student for a blink, that it was then OK for the student to blink excessively in a distracting manner. This issue also points out that the person is a thetan and not a body, but that doesn't mean that it is OK for the student to writhe nervously in the chair and call that TR 0.

The coach does not flunk a person because he blinked, nor does he flunk the person because he breathed! But there's a big difference between someone who can't confront who blinks excessively and squirms around nervously and an auditor who can comfortably be there without flinching or being distractive in any way to the preclear—which would be an Auditor Code break. A good auditor is never distractive to a pc. And a person who can confront doesn't have excessive body motion of any kind, he can be there comfortably confronting.

"Blinkless TR 0" needs to be defined. It means that when a person's TR 0 is in he doesn't exhibit any manifestation of inability to confront including blinking nervously, flinching or doing anything else that shows a nonconfront.

Automatic body functions don't have anything to do with TRs and are not taken up by the coach or Supervisor.

Nor do you do "pat-a-cake" TRs and you never pass someone who makes reactive body motions. Get the student able to confront. Any good auditor or Scientologist takes this ability for granted.

Totally blinkless wide open staring-eyed TR 0 and TR 0 Bullbait are not a requirement for pass but any truly competent auditor can do it.

9. *BTB 8 Mar 75 IV. Cramming Series 5RB, TRs IN CRAMMING.*

This issue called for "daily TRs," the same error as is covered above in No. 6.

10. *BTB 20 Sep 72. Reiss. 20. 9. 74 as BTB. TR TRAINING UNDER LRH and BTB 13 Mar 75R. Rev. 30.4. 75 TRs TRAINING BREAKTHROUGH.*

Both these issues introduced the false idea that an auditor should make a question sound like a statement when assessing. This is incorrect as a statement can be accusative or evaluative. This idea was a misinterpretation of the fact that an assessment should have impingement.

The correct way to do assessments is covered in HCOB 22 Jul 78 ASSESSMENT TRs.

11. *FDD 32 DIV IX INT (7 JUNE 71) TRs THE HARD WAY.*

This issue stated "It may take weeks to get through plain TR 0." That false idea gave TR Course students and Supervisors the idea that a TR Course could take a long time and set everybody up for a lose.

Honestly, TRs the Hard Way can be done fully, thoroughly and to a result of excellent TRs in a very short time. I can get somebody through TRs in three days, and often have.

SUMMARY

False data on TRs, and how “difficult” they are to do, were entered into the original tech. The tech then got dropped out of use and “permissive TRs” crept in and then the TRs Course the Hard Way got dropped out of the training of an auditor. There’s no such thing as an *auditor* who can’t do TRs. Excellent TRs are the hallmark of a good auditor. Scientologists are known for their TRs. But an auditor can’t get results without TRs and a good auditor gets case gain on a pc on his TRs and comm cycle alone.

All the tech on TRs and TR training is available. Use it and make real professional auditors who get results on every pc, every time.

FALSE DATA STRIPPING
HCO PL 9 Feb 79 II HOW TO DEFEAT VERBAL TECH

TRs have been under study and pilot for the past year as, just about this time last year it became all too obvious, through review of the video-taped TRs of special corps of auditors as well as those from piloted TRs Courses, that students seemed to have become incapable of mastering the TRs.

This presented a mystery, as I have always been able to teach TRs effectively in about a week's time, give or take a few days. Once the student has his basics in it's done by simply getting the student to DO it, as TRs are not a "think" action nor a subjective action. They're practical drills on the comm cycle. There's nothing subjective about them. TRs are a doingness.

But we suddenly had entire corps of student auditors unable to master these drills.

What had happened to the teaching of TRs?

A good many months were spent in isolating exactly what had gone wrong, and it has now all been boiled down to a very few factors:

1. Hard TRs had been dropped out.
2. Doing the communication formula in clay had been omitted.

Those were the two major points of change and when these two were omitted, that was it. That was the end of anybody being able to do TRs. One can't master TRs without familiarity with the comm cycle. One can't master TRs with permissive, pata-cake drilling. TRs are gotten in by drilling them HARD.

It is one thing to try to teach Hard TRs to raw public and it is quite another to make an auditor. People studying to become auditors have to be made into auditors.

It's all right to teach a mild TRs Course in Division 6 and one should, but when it comes to making auditors, there is no substitute for Hard TRs.

Somewhere along the line doing the communication formula in clay as the beginning part of the TRs Course was dropped out. This left the student with no slightest concept of why he was doing TRs. The communication formula is a Scientology discovery and when you omit teaching it, the student suffers from out-basics. So the omission of doing the communication formula in clay on a TRs Course was fatal.

There were also three additional factors found to be further influencing the scene:

3. Student auditors had no real understanding of the ARC triangle. Thus, their Communication was stuck because their Affinity and Reality and, therefore, their Understanding, were deficient.
4. The lack of a bona fide TRs checksheet had opened the way for all kinds of false data to be entered into the subject.
5. Ignorance of the end phenomena of a TRs Course or why they were doing TRs.

The result of this past year's study and piloting and the isolation of these factors has now culminated in a full and final TRs Course which will be issued very soon in unalterable book form.

Meantime, this bulletin is being issued as a holding action to make these errors and omissions in the teaching and drilling of TRs broadly known so that they can be remedied at once wherever auditor TRs are being taught.

OMITTED CHECKSHEET AND FALSE DATA

Since the cancellation of HCO PL 24 May 71 THE PROFESSIONAL TR COURSE, there has been no real TRs checksheet, complete with the basics of communication and the theory of communication which underlie the TRs. That was a huge out-basic right there. TRs as drills appeared on various checksheets, sometimes with several accompanying bulletins, but omitted was any thorough preliminary insequence study of the theory upon which the TRs are based.

Here we had a course without a checksheet, which made it possible for false data to spring in from various quarters. And so it did. It wasn't that people were willfully entering false data into the subject. It was simply that there was no standard checksheet which took the student through the true data, and *only* the true data, on the simple basics (the ARC triangle and the communication formula) underlying the TRs and then the TRs drills themselves. With that situation you can get all kinds of false data coming into an area. And that is exactly what was found. Almost one for one the students coming onto the special piloted courses conducted this past year were ridden with false data, various types of "think" and figure-figure and alter-is of the tech of the TRs.

A number of BTBs and BPLs on the subject contributed to this scene and actually perpetrated out-tech in the area, and these have now been canceled, by specific title, by HCOB 23 Sep 79, CANCELLATION OF DESTRUCTIVE BTBs AND BPLs ON TRs, which lists and corrects the outnesses these issues introduced.

A further handling is to give the student the true data on communication and TRs, as covered in the chapters on ARC in *Problems of Work* and *Fundamentals of Thought*. the chapters on communication in *Dianetics •55!*, and HCOB 16 Aug 71R, TRs

REMODERNIZED. As he studies this, one then digs up and strips off the false data accumulated on the subject or drill, using HCO PL 7 Aug 79, FALSE DATA STRIPPING.

Where false data on a subject exists it hits immediately and directly up against the true data, and until this conflict is blown by False Data Stripping the person can be untrainable on the subject.

Thus this brand new tech tool, False Data Stripping, is and has been tremendously useful in correcting TR outnesses and ensuring correct training on the TRs.

It might be noted in passing that the most false subject on the planet at this time is psychology because the mission of a psychologist is a government one—to make the population into controllable zombies—the subject is being taught earlier and earlier in schools and a lot of your students and even Supervisors have been subjected to this propaganda and false data about Man and the mind. I recall that the people it took longest to get through TRs Courses were professional psychologists. The basis of this is false data—they are loaded with it. It is not that psychology teaches anything about communication (they never heard of the subject until we came along) but that they simply have so many false data about life that they actually can't study or drill in a life subject such as Scientology. And you may find it necessary to clean this up. This prevents horrible slows on TRs Courses. It's not an action that would be done in the course, of course, but would be done in Review.

THE COMMUNICATION FORMULA IN CLAY

The TRs are drills on the various parts of the communication formula.

This basic datum seems to have become obscured in recent years. It appeared that, to many, TRs were considered to be drills that were done for the sake of doing drills, with only some vague accompanying idea of their actual use or application or how they related to auditing and an auditing session.

The truth of the matter is that TRs are simply the drills that enable a person to polish and perfect his comm cycle.

But if one doesn't know what the cycle of communication is to begin with, if one isn't totally familiar with the various parts of the communication formula, the TRs as drills are not going to make much sense to him. Drilling becomes a struggle because he doesn't even know what it is he's trying to handle.

So one of the first things a TRs student needs is a sound understanding of the communication formula.

The way to learn the communication formula is to do it in clay. That defines it, puts it there in the physical universe for him. By demonstrating the communication formula, all of its parts, in clay, he will actually *see* how it works. It becomes real to him. Now he knows what it is he's drilling.

Unfortunately, with the cancellation of the 24 May 71 TRs Checksheet the basic action of demonstrating the communication formula in clay was dropped out and with that a real understanding of the use of TRs was obscured for many.

Representing the comm formula in clay is now reinstated firmly as a vital preliminary step to drilling TRs.

USE OF THE ARC TRIANGLE

Even below an understanding of the communication formula comes an understanding of the ARC triangle. Now we are getting more basic.

This turned up as a very interesting technical factor in reviewing countless TR video tapes this past year. It was actually a very interesting technical bug. I studied and studied these flunked video TR sessions to find the common denominator of all of them, and I finally nailed it. What I found was that they were specializing in “C,” communication, on the ARC triangle. They were specializing in “C” but what was out was their “A” (affinity) and “R” (reality) and their “C” was being pegged—it would go up just so far—because they weren’t anywhere up the line on their “A” and “R.”

As a result they couldn’t *understand* anything the other guy was saying. Most of the flubs were on this basis. They didn’t have any pc there, they weren’t listening to what the pc said, the ARC was out the bottom.

The person gets stuck without full use of the ARC triangle. You can raise the communication level but then you have to raise the reality and then you have to raise the affinity and then you get some understanding. Only then can you continue to improve each point of the triangle.

On most of those videos they were stuck with the communication being raised just a bit, and that was that, because they weren’t raising the affinity and reality levels along with it. So they did not advance or improve.

A handling is to make sure the student gets a very sound understanding of the ARC triangle and its use before he tackles the TRs.

This can be accomplished by having him represent it in clay, using the chapters on ARC in *Fundamentals of Thought* and *Problems of Work* and Chapter VII of *Dianetics 55!*

When he knows how A and R and C interrelate and how they’re used to bring about Understanding, he’s then prepared to really grasp the communication formula. And when he has a good familiarity with the communication formula he can drill the TRs and polish up his own communication cycle and improve with comparative ease.

TRs THE HARD WAY

When TRs the Hard Way slipped out of use and permissive TRs entered the picture. the results were less competent auditors and less case gain for pcs.

Auditor TRs must be taught rough, tough and hard. This does not mean invalidative drilling or coaching or supervision. It does mean you get the student to DO the TRs. He’s got to drill the TRs, not figure-figure on them or dive into his case to avoid them.

TRs the Hard Way means stringent, spot-on coaching and supervision on the proper gradient. Each button found on the student is flattened before it is left. Flunks are given when the student flunks. And when he flunks he goes right back in again and he drills it until he’s got it.

The TRs are taught and drilled per the 16 Aug 71R bulletin, TRAINING DRILLS REMODERNIZED, and per the advices in HCOB 23 Sep 79, CANCELLATION OF DESTRUCTIVE BTBs AND BPLs ON TRs. The student is coached to wins, not losses. You make sure he understands the drill and after that it’s a matter of his DOING it. It’s a matter of keeping him at it, getting him through it, regardless of what buttons crop up to be flattened, until he’s mastered each TR and can handle any comm cycle with ease.

Permissive, namby-pamby, pat-a-cake TRs have no place in the training of an auditor or on a bona fide TRs Course. A student who hasn't mastered his TRs won't master any of the training that follows them. The way to master TRs is to drill them the hard way.

It is Hard TRs that make an auditor. (A more gradient approach to TRs would be taken on the HAS Course where the new Scientologist is getting his first taste of how to handle communication in his everyday life and livingness.)

Given sound training on the basics, ARCU and the formula of communication with any false data stripped off, and the student then drilled on TRs the Hard Way, to perfection, you'll find he comes through with flying colors to a smooth, flubless comm cycle. And it doesn't take a year or even months to accomplish it.

END PHENOMENON OF TRs

As the students really had no idea of the communication formula as such due to the omission of the requirement that they do it in clay and learn it, they of course didn't know where they were going. A surprising number of students were heard making stupid remarks like, "I would never use the TRs in auditing" which is about the same as saying "I would never use food when I eat."

Practically no students on TRs Courses had any idea why they were doing TRs or what had to be achieved in order to be a finished product on a TRs Course. This unfortunately included the Supervisors and of course the coaches. So one got all sorts of silly, invalidative, evaluative teaching and coaching.

If they didn't know where they were going and what the end phenomenon of a TRs Course was, of course they couldn't train a student toward it and so TRs Courses which would only involve a week or two turned into months and months of floundering around due to mis-coaching and mainly destructive criticism which had no purpose.

Instruction and coaching are not based on opinion. They should be based on producing the end phenomenon.

The PRIMARY VALUABLE FINAL PRODUCT of TRs is:

A professional auditor who with comm handling alone can keep a pc interested in his own case and willing to talk to the auditor.

The SECONDARY VALUABLE FINAL PRODUCT of TRs is:

A person with the session and social presence of a professional auditor and that presence can be summed up as a being who can handle anyone with communication alone and whose communication can stand up faultlessly to any session or social situation no matter how rough.

The END PHENOMENON of TRs is:

A being who knows he can achieve both of the above flawlessly and from here on out.

That's the EP and that's the direction all instruction and coaching must take. Each TR must be in against the standard above.

As we know the communication formula and as the TRs are parts of it, the end phenomenon can be achieved relatively rapidly. It is that we know, for the first time in man's history, the communication formula that makes it possible to drill people on it and produce the above end phenomenon. This was a major point that was being missed—that one was trying to

produce something. If you don't know what you're trying to produce it can take forever, can't it?

PREREQUISITE

There is one factor that would effectively block a smooth run through this training, basics or no basics. You're not going to get a person who has been loaded up with drugs to grasp this data and come out the other end as any kind of product until he's had his drugs handled.

You now have the Purification Rundown to handle that, along with Objectives and the Drug Rundown. With this fantastic new rundown, which is an undercut to all training and processing, we have the means to make even the seemingly untrainable trainable.

SUMMARY

I wanted to let you know what has been happening in regard to TRs study and training over the past year, and what bugs have now been uncovered. Each of the points taken up in this bulletin have now been solved. You will have a very complete professional TRs Course released in book form in the near future.

Meantime, the materials exist and are available on which to train students in TRs and do so very effectively.

Therefore, this issue is your license to include on any current checksheet which calls for auditor TRs the materials and actions covered herein.

The data is being given you for your immediate use.

So I'll expect to see you turning out crops of auditors with flawless TRs!

It *can* be accomplished by getting in the five points covered in this bulletin alone.

Chapter Six

AFFINITY, REALITY AND COMMUNICATION

There are three factors in Scientology which are of the utmost importance in handling life. These three factors answer the questions, How should I talk to people?-How can I sell people things?-How can I give new ideas to people?-How can I find what people are thinking about?-How can I handle my work better?

We call these three factors in Scientology the A-R-C triangle. It is called a triangle because it has three related points. The first of these points is Affinity. The second of these points is Reality. The third of these points and the most important is Communication.

By Affinity we mean emotional response. We mean the feeling of affection or lack of it, of emotion or misemotion connected with life. By Reality we mean the solid objects, the real things of life. By Communication we mean an interchange of ideas between two terminals.

Without affinity there is no reality or communication. Without reality there is no affinity or communication. Without communication there is neither affinity nor reality. Now these are sweeping statements but are nevertheless very valuable and are true.

Have you ever tried to talk to an angry man? An angry man's communication is at a level of misemotion which repels all terminals from him. Therefore his communication factor is very low, even though very loud. He is attempting to destroy something or some other terminal, therefore his reality is very poor. Very likely what he is being angry about apparently is not what has made him mad. An angry man is not truthful. Thus it could be said that his reality, even on the subject he is attempting to voice, is poor.

There must be good affinity (which is to say affection) between two people before they are very real to each other (and reality must here be used as a gradient, with things being more real than other things). There must be good affinity between two people before they can talk together with any truth or confidence. Before two people can be real to each other there must be some communication between them. They must at least see each other, which is in itself a form of communication. Before two people can feel any affinity for each other they must, to some degree, be real.

These three terms are interdependent one upon the other, and when one drops the other two drop also. When one rises the other two rise also. It is only necessary to improve one corner of this very valuable triangle in Scientology in order to improve the remaining two corners. It is only necessary to improve two corners of the triangle to improve the third.

To give you some idea of a practical application of this, there is the case of the young girl who had run away from home and whose parents would no longer talk to her. The girl, as a clerk in an office, was quite despondent and was doing very bad work. A Scientologist whose attention had been directed to her by the office manager, gave her an interview and discovered that her parents were intensely angry with her and would no longer communicate with her at all. They had been so upset at her refusal (actually her inability) to follow a career as a concert pianist for which they had her studying at great expense that they had "washed their hands of her", and the unpleasantness had forced her to run away to a distant point. Since that time they had not communicated with her but had spoken to people she had known in her home neighborhood in very bitter terms concerning her. In such a state of mind, since she was intimately involved with her parents and wished to be on the best possible terms with them, she could not work. Her failure to perform her work was jamming communication lines in her own office. In other words, her affinity was very low and her reality on things was quite low since she might be said to have been elsewhere most of the time, and thus the communication lines which passed through her hands were equally low and successfully jammed other communication lines in the office, at which time this matter became of intense interest to the

office manager. Now ordinarily in the work-a-day world the office manager would have dismissed her and found another girl. But employment was critical at the time and this office manager knew the modern thing to do. He sent for a Scientologist.

The Scientologist knowing well this A-R-C triangle did a very ordinary thing -- to a Scientologist -- which apparently worked magic as far as the girl was concerned. He told the girl that she must write to her parents -regardless of whether they replied or not she must write -- and she did so. Naturally there was no reply. Why was there no reply from the parents? Well, the girl, having disobeyed them and having moved out from underneath their control, was apparently no longer in contact with them. These parents did not consider her as real. She did not actually exist as far as they were concerned. They had actually said this to themselves. They had actually tried to wipe her out of their lives since she was such a disappointment. Therefore they had no emotion about her whatsoever except perhaps a sort of apathy. They had been unable to control her and so they were apathetic about her since they had failed to control her. At this stage the parents were glumly apathetic about the girl and she was not very real to them at all. As a matter of fact, as they had started her on a career she could not complete, the girl could not have been very real to them in the first place since the career was undoubtedly beyond the girl's capabilities. So the Scientologist had her write a letter. This letter was, as we say in Scientology, entirely "good roads and good weather". The girl said that she was working in this other city, that the weather was good, that she was getting along well, and hoped that they were both well and sent them her love. The letter carefully did not take up any of the problems or activities immediately behind her leaving home. The A of the letter, the affinity, was quite high; the C was present. What the Scientologist was trying to do was establish R, reality: the reality of the situation of the girl's being in another city and the actual reality of her existence in the world. He knew that she was sufficiently involved with her parents that if they did not consider her real, she was not even real to herself. Of course the parents did not answer this first letter but the Scientologist had the girl write again.

After four letters, all of which said more or less the same things and entirely ignored the idea that there had been no reply, there was a sudden letter from the mother to the girl which was angry, not with the girl but with one of her old playmates. The girl, coached, was held in line by the Scientologist and was not permitted to explode back through the communication line but was coaxed into writing a surprised, pleasant letter expressing her happiness at having heard from her mother. After this two letters came, one from the father and one from the mother, both of them were very affectionate and hoped the girl was doing well. The girl of course replied to these very joyously but would have been completely propitiative if the Scientologist had permitted her to do so. Instead, a happy letter went back to each of them, and in return two more letters came, both of them very congratulatory to the girl at having found a job and found something that she was interested in doing in life, with requests as to where her clothes should be sent and actually a small draft of money to help her along in the city. The parents had already begun to plan the new career of the girl which was in exact line with what the girl could do in life -- stenographic work.

Of course the Scientologist knew exactly what was going to happen. He knew that their affinity and reality would come up and the girl's reality, affinity and communication in the office itself would rise as soon as this situation was remedied. He remedied with communication, expressing affinity from the girl and this of course, as it always does, produced reaction. The girl's work came up to par, the girl began to progress and now that her feeling of reality was sufficiently high actually became a very valuable office worker.

Probably the reason why the A-R-C triangle went so long undiscovered was the fact that a person in apathy rises through various tones. These tones are quite uniform; one follows the next and people always come up through these tones one after the other. These are the tones of affinity, and the Tone Scale of Dianetics and Scientology is probably the best possible way of predicting what is going to happen next or what a person actually will do.

The Tone Scale starts well below apathy. In other words, a person is feeling no emotion about a subject at all. An example of this was the American attitude concerning the

atomic bomb; something about which they should have been very concerned was so far beyond their ability to control and so likely to end their existence that they were below apathy about it. They actually did not even feel that it was very much of a problem. Americans processed on this particular subject had to be worked with for some little time until they began to feel apathetic about the atomic bomb. This was really an advance over the feeling of no emotion whatsoever on a subject which should have intimately concerned them. In other words, on many subjects and problems people are actually well below apathy. There the Tone Scale starts, on utter, dead null far below death itself. Going up into improved tones one encounters the level of body death, apathy, grief, fear, anger, antagonism, boredom, enthusiasm and serenity, in that order. There are many small stops between these tones, but one knowing anything about human beings should definitely know these particular emotions.

A person who is in apathy, when his tone is improved, feels grief.

A person in grief, when his tone improves, feels fear.

A person in fear, when his tone improves feels anger.

A person in anger, when his tone improves feels antagonism.

A person in antagonism, when his tone improves feels boredom.

When a person in boredom improves his tone, he is enthusiastic.

When an enthusiastic person improves his tone, he feels serenity.

Actually the below apathy level is so low as to constitute a no-affinity, no-emotion, no-problem, no-consequence state of mind on things which are actually tremendously important.

The area below apathy is an area without pain, interest, beingness or anything else that matters to anyone, but it is an area of great danger since one is below the level of being able to respond to anything and may accordingly lose everything without apparently noticing it. A workman who is in very bad condition and who is actually a liability to the organization may not be capable of experiencing pain or any emotion on any subject. He is below apathy. We have seen workmen who would hurt their hand and think nothing of it and go right on working even though their hand was very badly injured. People in dispensaries working in industrial areas are quite amazed sometimes to discover how little attention some workmen pay to their own injuries. It is an ugly fact that people who pay no attention to their own injuries and who are not even feeling pain from those injuries are not and never will be, without some attention from a Scientologist, efficient people. They are liabilities to have around. They do not respond properly. If such a person is working a crane and the crane suddenly goes out of control to dump its load on a group of men, that sub-apathy crane operator will simply let the crane drop its load. In other words, he is a potential murderer. He cannot stop anything, he cannot change anything and he cannot start anything and yet, on some automatic response basis, he manages some of the time to hold down a job, but the moment a real emergency confronts him he is not likely to respond properly and accidents result. Where there are accidents in industry they stem from these people in the sub-apathy tone range. Where bad mistakes are made in offices which cost firms a great deal of money, lost time and cause other personnel difficulties, such mistakes are found rather uniformly to stem from these sub-apathy people.

So do not think that one of these states of being unable to feel anything, of being dumb, of being incapable of pain or joy is any use to anyone. It is not. A person who is in this condition cannot control things and in actuality is not there sufficiently to be controlled by anyone else and does strange and unpredictable things.

Just as a person can be chronically in sub-apathy, so a person can be in apathy. This is dangerous enough but is at least expressed. Only when we get up into apathy itself do we have the A-R-C triangle beginning to manifest itself and become visible. Communication from the

person himself, not from some circuit or training pattern is to be expected. People can be chronically in grief, chronically in fear, chronically in anger, or in antagonism, or boredom, or actually can be “stuck in enthusiasm”. A person who is truly able is normally fairly serene about things. He can, however, express other emotions. It is a mistake to believe that a total serenity is of any real value.

When a situation which demands tears cannot be cried about one is not in serenity as a chronic tone. This sub-apathy can be mistaken rather easily for serenity, but of course only by a very untrained observer. One glance at the physical condition of the person is enough to differentiate. People who are in sub-apathy are normally quite ill.

Just as we have a range of the Tone Scale thus covering the subject of affinity, so do we have one for communication. On the level of each of the emotions we have a communication factor. In sub-apathy an individual is not really communicating at all. Some social response or training pattern or, as we say, “circuit” is communicating. The person himself does not seem to be there and isn’t really talking. Therefore his communications are sometimes strange to say the least. He does the wrong things at the wrong time. He says the wrong things at the wrong time. Naturally when a person is stuck on any of the bands of the Tone Scale, sub-apathy, apathy, grief, fear, anger, antagonism, boredom, enthusiasm, or serenity, he voices communications with that emotional tone. A person who is always angry about something is stuck in anger. Such a person is not as bad off as somebody in sub-apathy, but he is still rather dangerous to have around since he will make trouble, and a person who is angry does not control things well. The communication characteristics of people at these various levels on the Tone Scale are quite fascinating. They say things and handle communication each in a distinct characteristic fashion for each level of the Tone Scale.

Just as in affinity and communication, there is a level of reality for each of the affinity levels. Reality is an intensely interesting subject since it has to do in the main with relative solids. In other words, the solidity of things and the emotional tone of people have a definite connection. People low on the Tone Scale cannot tolerate solids. They cannot tolerate a solid object. The thing is not real to them; it is thin or lacking weight. As they come upscale, the same object becomes more and more solid and they can finally see it in its true level of solidity. In other words, these people have a definite reaction to mass at various points on the scale. Things are bright to them or very, very dull. If you could look through the eyes of the person in sub-apathy you would see a very watery, thin, dreamy, misty, unreal world indeed. If you looked through the eyes of an angry man you would see a world which was menacingly solid, where all the solids posed a brutality toward him, but they still would not be sufficiently solid or sufficiently real or visible for a person in good condition. A person in serenity can see solids as they are, as bright as they are, and can tolerate an enormous heaviness or solidity without reacting to it. In other words, as we go up the Tone Scale from the lowest to the highest, things can get more and more solid and more and more real.

Affinity is most closely related to space. In fact affinity could be defined as the “consideration of distance” since terminals which are far apart or close together have different affinity reactions one to another. Reality, as we have seen, is most intimately connected with solids. Communication consists of the flow of ideas or particles across space between solids.

While these definitions may seem very elementary and would not at all satisfy an M.I.T. professor, they actually outreach and encompass an M.I.T. professor’s whole field of activity. Truths do not have to be complicated.

There are, as described at considerable length and studied with considerable depth in Scientology, many interrelations of spaces and solids, and ideas or particles, since these are the most intimate things to livingness itself and comprise the universe around us. But the most basic thing we should know about A-R-C is simply emotional tone which is affinity, the actuality of things which is reality, and the relative communication ability concerning them.

Men who can do things are very high on affinity, very high in terms of reality and are very capable in terms of communication. If you wish to measure their various capabilities you should study the subject much further. A whole book has been written about this triangle called Science of Survival.

Then how would you talk to a man? You cannot talk adequately to a man if you are in a sub-apathy condition. In fact you would not talk to him at all. You would have to have a little higher affinity than that to discuss things with anyone. Your ability to talk to any given man has to do with your emotional response to any given man.

Anyone has different emotional responses to different people around him. In view of the fact that two terminals, or, that is to say, two people, are always involved in communication, one could see that someone else would have to be somewhat real. If one does not care about other people at all one will have a great deal of difficulty talking to them, that is certain. The way to talk to a man then would be to find something to like about him and to discuss something with which he can agree. This is the downfall of most new ideas. One does not discuss subjects with which the other person has any point of agreement at all and we come to a final factor with regard to reality.

That with which we agree tends to be more real than that with which we do not agree. There is a definite co-ordination between agreement and reality. Those things are real which we agree are real. Those things are not real which we agree are not real. On those things upon which we disagree we have very little reality. An experiment based on this would be an even jocular discussion between two men of a third man who is present. The two men agree on something with which the third man cannot agree. The third man will drop in emotional tone and will actually become less real to the two who are discussing him.

How do you talk to a man then? You establish reality by finding something with which you both agree. Then you attempt to maintain as high an affinity level as possible by knowing there is something you can like about him. And you are then able to talk with him. If you do not have the first two conditions it is fairly certain that the third condition will not be present, which is to say, you will not be able to talk to him easily.

You should realize in using the A-R-C triangle that, once more, the emotional tones are progressed through as one begins to develop communication. In other words, somewhere up the line somebody who has been totally apathetic about us is liable to become angry at us. If one can simply persevere up through this anger, he reaches only antagonism, then boredom and finally enthusiasm and a perfect communication level of understanding.

Marriages fall apart simply because of a failure of communication, because of a failure of reality and affinity. When communication starts failing the affinity starts dropping. People have secrets from each other and the affinity starts out the bottom.

Similarly, in an office or a business it is perfectly easy to establish those people who are doing things which are not to the best interests of the firm, since these people go gradually and sometimes not so gradually out of communication with the firm. Their emotional tone towards their superiors and those around them starts dropping and finally goes out the bottom.

As can be seen the A-R-C triangle is intimately bound up with an ability to control and an ability to leave uncontrolled. When an individual attempts to control something and fails to do so he then experiences an antipathy toward that thing. In other words, he has not been right, he has been wrong. His intention has failed. His intention has, you might say, backfired upon him. Thus as one attempts to control things and then fails to control them he is likely to drop down Tone Scale about those things. Thus an individual who has been betrayed by the tools of his own trade is apt to treat them with a lowering affinity level. He becomes bored with them, he becomes antagonistic toward them, he becomes angry with them (and at this stage the machinery begins to break up) and finally he becomes afraid of them, he becomes sad about them, he becomes apathetic about them and no longer cares about them at all. At this stage he

certainly cannot use them at all. Actually from the level of boredom down the ability to use one's tools of the trade is consistently lowered.

Now, how could one knowing this raise his ability to control the tools of the trade without even going to a Scientologist? Naturally if a Scientologist took over in this situation the entirety of control of tools or an area or of life could be regained, but, lacking this, how could one simply handle the exact articles with which he is right now and immediately associated?

By using A-R-C he could regain in some measure both his control of the tools and his enthusiasm for work. He would do this by communicating and discovering his willingness for these and the people around him to be real or solid. An individual could regain his ability over his immediate tools simply by touching them and letting them go. This might seem rather pointless and he is apt to reach the level of boredom and become bored with the process. Just above this level is the pay of becoming enthusiastic. It sounds very strange that if one simply touched his automobile and let go and touched it and let go and touched it and let go and touched it and let go, possibly for some hours, he would regain not only his enthusiasm for the automobile but a tremendous ability to control the car which he had never suspected in himself at all. Similarly with people, since these often object to being touched, one can communicate. If one really communicates and communicates well to these people, listens to what they have to say and acknowledges what they say and says what he has to say to them gently enough and often enough so that it is actually received by them, he will regain to a very marked degree his ability to associate and co-ordinate the actions of those people with whom he is immediately surrounded. Here we have A-R-C immediately adjusted to work. It sounds strange that if we made a bookkeeper pick up and lay down his pencil or pen for a couple of hours he would regain his ability to handle it and would improve in his ability to make figures; and that if we got him to touch and let go of his ledger for a considerable length of time he would be more capable of handling that ledger and would make far fewer mistakes with it. This sounds like magic. It is magic. It is Scientology.

CHAPTER FIVE

THE A-R-C TRIANGLE

There is a triangle of considerable importance in Scientology, and understanding of it gives a much greater understanding of life and an ability to use it.

The A-R-C triangle is the keystone of living associations. This triangle is the common denominator of all of life's activities. The first corner of the triangle is called Affinity. The basic definition of affinity is the consideration of distance, whether good or bad. The most basic function of complete affinity would be the ability to occupy the same space as something else.

The word "affinity" is here used to mean love, liking or any other emotional attitude. Affinity is conceived in Scientology to be something of many facets. Affinity is a variable quality. Affinity is here used as a word with the context "degree of liking". Under affinity we have the various emotional tones ranged from the highest to the lowest, and these are, in part, serenity (the highest level), enthusiasm (as we proceed downward toward the baser affinities), conservatism, boredom, antagonism, anger, covert hostility, fear, grief, apathy. This, in Scientology, is called the Tone Scale. Below apathy, affinity proceeds into solidities such as matter. Affinity is conceived to be comprised first of thought, then of emotion which contains energy particles, and then as a solid.

The second corner of the triangle is Reality. Reality could be defined as "that which appears to be". Reality is fundamentally agreement. What we agree to be real is real.

The third corner of the triangle is Communication. In human relationships this is more important than the other two corners of the triangle in understanding the composition of human relations in this universe. Communication is the solvent for all things. It dissolves all things.

The inter-relationship of the triangle becomes apparent at once when one asks, "Have you ever tried to talk to an angry man?" Without a high degree of liking and without some basis of agreement there is no communication. Without communication and some basis of emotional response there can be no reality. Without some basis for agreement and communication there can be no affinity. Thus we call these three things a triangle. Unless we have two corners of a triangle, there cannot be a third corner. Desiring any corner of the triangle, one must include the other two.

The triangle is conceived to be very spacious at the level of serenity and completely condensed at the level of matter. Thus to represent a scale for use one would draw a large triangle with a high part of the scale and succeeding small triangles down to a dot at the bottom of the scale.

Affinity, reality and communication are the basis of the Scientology Tone Scale, which gives a prediction of human behavior as contained in *Science of Survival*.

As has already been noted, the triangle is not an equilateral triangle. Affinity and Reality are very much less important than Communication. It might be said that the triangle begins with Communication, which brings into existence Affinity and Reality.

The most primitive Scientology definition of Communication is "Cause-Distance-Effect". The fundamental manual of Communication is the book, *Dianetics 55!*

A-R-C are understanding.

If you would continue a strong and able communication with someone there must be some basis for agreement. There must be some liking for the person and then communication

can exist. We can see then that simple talking and writing randomly without knowledge of this would not necessarily be communication. Communication is essentially something which is sent and which is received. The intention to send and the intention to receive must both be present in some degree before an actual communication can take place. Therefore one could have conditions which appeared to be communications which were not.

Original with Scientology, as are all these concepts, the A-R-C triangle understood is an extremely useful tool or weapon in human relationships. For instance, among the A-R-C triangle laws, a communication to be received must approximate the affinity level of the person to whom it is directed .

As people descend the tone scale they become more and more difficult to communicate with, and things with which they will agree become more and more solid. Thus we have friendly discourse high on the scale and war at the bottom. Where the affinity level is hate, the agreement is solid matter, and the communications . . . bullets.

HUBBARD COMMUNICATIONS OFFICE
Saint Hill Manor, East Grinstead, Sussex

HCO BULLETIN OF 5 APRIL 1973

REISSUED 19 SEPTEMBER 1974
(Only change is signature)

Remimeo
HAS Course

AXIOM 28 AMENDED

AXIOM 28.

COMMUNICATION IS THE CONSIDERATION AND ACTION OF IMPELLING AN IMPULSE OR PARTICLE FROM SOURCE-POINT ACROSS A DISTANCE TO RECEIPT-POINT, WITH THE INTENTION OF BRINGING INTO BEING AT THE RECEIPT-POINT A DUPLICATION AND UNDERSTANDING OF THAT WHICH EMANATED FROM THE SOURCE-POINT.

The formula of Communication is: Cause, Distance, Effect, with Intention, Attention and Duplication WITH UNDERSTANDING.

The component parts of Communication are Consideration, Intention, Attention, Cause, Source-point, Distance, Effect, Receipt-point, Duplication, Understanding, the Velocity of the impulse or particle, Nothingness or Somethingness. A non-communication consists of Barriers. Barriers consist of Space, Interpositions (such as walls and screens of fast-moving particles), and Time. A communication by definition, does not need to be two-way.

When a communication is returned, the formula is repeated, with the receipt-point now becoming a source-point and the former source-point now becoming a receipt-point.

HCOB 18 Apr 80	TR CRITICISM
HCOB 5 Apr 80	Q & A, THE REAL DEFINITION

This HCOB is to replace all other issues of TRs 0-4 in all packs and checksheets, excepting those TRs Booklets specifically designed for Div 6 Courses.

TRS DEFINITION

The term "TRs" is an abbreviation for Training Regimen or Routine. TRs are also often referred to as Training Drills.

While each individual TR drill has its own specific purpose, the overall purpose and definition of TRs is given here fully and finally:

TRS ARE METHODS OF DRILLING THE COMMUNICATION FORUULA AND BECOMING EXPERT IN ITS HANDLING AND USE.

That definition applies to any TR. At times over the years when it has been dropped out or obscured or misunderstood, auditor training quality and results have suffered.

Therefore, this full and final definition is to be posted in LARGE letters in any course room where Professional TRs are taught. It should be emblazoned upon the foreheads and minds of TR Course Supervisors and all students on TRs Courses in training to become auditors. It should be known broadly and understood and emphasized.

In 1971, due to the following factors, I found it necessary to modernize TRs 0 to 4.

1. The auditing skill of any student remains only as good as he can do his TRs.
2. Flubs in TRs are the basis of all confusion in subsequent efforts to audit.
3. If the TRs are not well learned early in Scientology training courses, **THE BALANCE OF THE COURSE WILL FAIL AND SUPERVISORS AT UPPER LEVELS WILL BE TEACHING NOT THEIR SUBJECTS BUT TRs.**
4. Almost all confusions on Meter, Model Sessions and Scientology or Dianetic processes stem directly from inability to do the TRs.
5. A student who has not mastered his TRs will not master anything further.
6. Scientology or Dianetic processes will not function in the presence of bad TRs. The preclear is already being overwhelmed by process velocity and cannot bear up to TR flubs without ARC breaks.

THESE FACTORS HOLD VERY TRUE TODAY AND ALWAYS WILL.

Academies were tough on TRs up to 1958 and have since tended to soften. Professional TRs Courses are not a tea party.

The TRs given here should be put in use at once in all auditor training, in Academy and HGC and in the future should never be relaxed.

A more gradient approach to TRs is taught on specially packaged co-audits for those with no prior technical training, where the same degree of flawlessness and skill demanded of a professional auditor is not demanded of the untrained co-auditor.

And there is still another gradient of TRs found on courses for new public in Division 6, where the person is getting his first experience in handling communication in his life and livingness.

But on a Professional TRs Course for auditors absolutely no standards are lowered. **PROFESSIONAL AUDITORS IN TRAINING ARE GIVEN REAL TRs - ROUGH, TOUGH AND HARD.** To do otherwise is to lose 90% of the results. There is nothing pale and patty-cake about TRs.

THIS HCOB MEANS WHAT IT SAYS. IT DOES NOT MEAN SOMETHING ELSE. IT DOES NOT IMPLY ANOTHER MEANING. IT IS NOT OPEN TO INTERPRETATION FROM ANOTHER SOURCE.

THE A-R-C TRIANGLE

As TRs are methods of drilling the communication cycle, one cannot expect to master TRs without familiarity with that cycle. And basic to the drilling or any real use of the comm cycle is an understanding of Affinity, Reality and Communication, which make up the ARC Triangle.

There is no attempt here to repeat all of the existing data on the ARC Triangle and its use. Any student put on TRs must first have done a sound study of this theory. The data exists in the books:

**THE PROBLEMS OF WORK, Chapter 6: Affinity, Reality and Communication
THE FUNDAMENTALS OF THOUGHT, Chapter 5: The ARC Triangle
DIANETICS 55!**

and in various HCOB Bulletins in the Technical Volumes.

A student ready for TR drills would know and would have demonstrated how Affinity, Reality and Communication interrelate. He would be familiar with how one improves the level of ARC by first raising one side of this important triangle in order to raise the next side and the next, and how ARC brings about Understanding.

When he has that data he's better prepared to handle the comm cycle.

THE FULL CYCLE OF COMMUNICATION

Communication Defined

If one were to put it very simply, it could be said, correctly, that communication is the interchange of ideas across space.

A finer statement of this is given in the following definition from Axiom 28:

COMMUNICATION IS THE CONSIDERATION AND ACTION OF IMPELLING AN IMPULSE OR PARTICLE FROM SOURCE-POINT ACROSS A DISTANCE TO RECEIPT-POINT, WITH THE INTENTION OF BRINGING INTO BEING AT THE RECEIPT-POINT A DUPLICATION AND UNDERSTANDING OF THAT WHICH EMANATED FROM THE SOURCE-POINT.

The simplest statement of the formula of communication is CAUSE-DISTANCE-EFFECT.

When we do a close inspection of this formula and the cycle involved, its many elements come to view.

The Parts Of The Full Communication Cycle

The full cycle of communication is made up of these components:

Observation, Confront, Consideration, Intention, Attention, Cause, Source-point, Particle or Impulse or Message, Distance, Estimation of Distance, Control (Start-Change-Continue-Stop), Direction, Time and Timing, Velocity, Volume, Clarity, Interest, Impingement, Effect, Receipt-point, Duplication, Answer, Acknowledgement, Understanding. It also includes Nothingness or Somethingness.

Each TR drill is designed to train the student in one or more of these various components, until he has become expert in handling each part of the communication cycle and the communication cycle as a whole.

When a student understands and has fully demonstrated the basic theory of communication in clay, including the theory of the ARC Triangle and how it works in practice and the use of the communication cycle and all of its parts, he is well equipped to begin his training in TRs.

DRILLING TRS ON A PROFESSIONAL TRS COURSE

The student first studies the TR, clears any misunderstood words in it and makes sure he understands it. Then he DRILLS it. He must DO TRs.

If during the drilling he has questions about the TR, he restudies it and gets right back onto drilling it.

AT NO TIME MAY A COACH OR SUPERVISOR GIVE A VERBAL INTERPRETATION OF THE HCOB. All queries and questions are handled by referring the

student to the HCOB, getting him to restudy or re-word clear the drill. Then getting him to DO the drill.

In addition to this Bulletin, the supervisor may have the student and his twin study, in HCOB 18 Apr 80 TR CRITICISM, the section on the specific TR drill they are trying to do.

ON PROFESSIONAL TRS, DONE THE HARD WAY, STUDENTS DRILL EACH TR TO A PASS, ONE AT A TIME.

This is the rough, tough way it was done earlier, in the '60s, with results. The earlier action of getting a student through each TR itself, one at a time, and increasing the gradient of toughness as he does that TR, is what has proven successful.

IF A STUDENT HAS TROUBLE AND HANGS UP AND CAN'T PASS AN UPPER TR, HE HASN'T MADE IT ON THE LOWER TRS. THIS HAS BEEN PROVEN CONCLUSIVELY. START HIM BACK AT THE BEGINNING OF THE TRS AGAIN. HE RE-DRILLS EACH TR UNTIL HE DOES IT COMPETENTLY TO A PASS.

If he then hangs up on the lower TRs, you would put him all the way back to restudy ARC and the cycle of communication, as there will be something there he hasn't grasped.

TRs are coached and supervised with attention and with the intention of getting the student to win. By win we mean honestly mastering each TR as he goes.

There's got to be a supervisor THERE to ensure this occurs.

Lax, permissive coaching or lax, permissive supervision have no place on a Professional TRs Course. They are simply an extension of the permissiveness of modern education where nobody winds up educated. This is not how we train. Permissiveness is nothing more than a symptom of the inability to confront.

A Professional TRs Course is TAUGHT and taught HARD, not permissively.

The above points are those which make up the expertise of how it is done. There are not many of these points but they have to be emphasized.

TRAINING DRILLS 0-4

THESE TRS ARE DONE EXACTLY PER THIS HCOB WITHOUT ADDED ACTIONS OR CHANGE.

NUMBER: OT TR 0 1971 REVISED 1980

NAME: Operating Thetan. Being There

THEORY: OT TR 0 is the drill which provides an undercut to the actual use of the communication formula. For any communication to take place, it requires somebody there. On OT TR 0 the student is drilling simply being there as Potential Cause or Source-point or potential Effect or Receipt-point.

COMMANDS: None.

POSITION: Two students sit facing each other with eyes closed, a comfortable distance apart - about three feet.

PURPOSE: To train the student simply to be there comfortably. The idea is to get the student able to BE there comfortably in a position three feet in front of another person, to BE there and not do anything else but BE there.

TRAINING STRESS: Students sit facing each other with eyes closed. There is no conversation. This is a silent drill. There is NO twitching, moving, confronting with a body part, "system" or vias used or anything else added to BE there. One will usually see blackness or an area of the room when one's eyes are closed. BE THERE, COMFORTABLY. This does not mean the student is supposed to be completely unfeeling or unaware. And he does not get into a figure-figure or go into weird additives or considerations. There is NO complexity to this drill. It means exactly what it says -- simply BE THERE, COMFORTABLY.

Students do not coach each other on OT TR 0. The Supervisor does the coaching, covering the whole classroom, spotting any twitches, squirming, etc., and flunking them. If a student goes to sleep or starts boiling off, the supervisor gets him back onto the drill. He simply keeps the students at it.

PATTER: None for students. Supervisor starts the drill with "Start" and uses "That's it" to terminate the drill. When he needs to flunk a student he uses "Flunk" and indicates what the flunk is on.

When a student can BE there comfortably for some time, the drill is passed.

NOTE: OT TR 0 would only be coached on a student by this twin if the student had flunked a later TR and been put back onto OT TR 0. It is then up to his twin to get him through, coaching him as the supervisor would, with the supervisor also keeping an eye on it. This means the student coach (who would have his eyes open for this coaching) sits across from the student who is doing OT TR 0, observing him and flunking twitches, squirming, etc. During this coaching, the coach would use "Start" "Flunk" and "That's it" as given in the Patter section above.

HISTORY: Developed by L. Ron Hubbard in June 71 to give an additional gradient to confronting and eliminate students Confronting with their eyes, blinking, etc. Revised by L. Ron Hubbard in August 1971 after research discoveries on TRs. Further revised by L. Ron Hubbard in 1980 to clarify coaching of OT TR 0 and emphasize the drill as a gradient to actual confronting.

NUMBER: TR 0 CONFRONTING REVISED 1961 RE-REVISED 1980

NAME: Confronting.

THEORY: On TR 0, in addition to potential Cause or Source-point or potential Effect or Receipt-point, the following parts of the Comm Cycle are entered in: Observation, Distance, Consideration, Attention, Confront.

COMMANDS: None

POSITION: Student and coach sit facing each other with eyes open, a comfortable distance apart - about three feet.

PURPOSE: To train student to confront another person with auditing only or with nothing. The whole idea is to get the student able to be there comfortably in a position three feet in front of another person, to BE there comfortably and CONFRONT and not do anything else but BE THERE AND CONFRONT.

TRAINING STRESS: Have student and coach sit facing each other, neither making any conversation or effort to be interesting. Have them sit and look at each other and say and do

nothing for some hours. Student must not speak, fidget, giggle, be embarrassed or anaten, or exhibit any reactive body motion which would be distractive to a preclear.

TR 0 requires some coaching. It can be done uncoached for an initial period to accustom students to confronting and to permit some time for student to get through the initial manifestations he may encounter when first doing the drill. Thereafter, the drill is coached on a student by his twin, and vice versa, on a turnabout basis.

It will be found the student tends to confront WITH a body part, rather than just confront, or tends to use a system of confronting rather than just BE there. This can show up in any number of ways including fidgeting, giggling, twitching, or any distractive motion or manifestation. Flunks are given for these as they are indications of non-confront, and they would be taken up and coached on the drill.

Automatic body functions which are not distractive, such as normal breathing, swallowing, blinking, are not taken up by the coach or the supervisor.

To clarify what has been known in the past as “Blinkless TR 0”, the statement should be made that this does NOT mean the person never blinks. It is defined here finally and in full to mean that when a person’s TR 0 is in he doesn’t exhibit manifestations of inability to confront, including blinking nervously or flinching or doing anything else that would be distractive to a pc and shows a non-confront.

PATTER: When TR 0 is coached, coach uses “Start” to begin the coaching period. He uses “Flunk” when the student shows any manifestation of non-confront, indicates what the non-confront is, and uses “Start” to begin the drill again. “That’s it” is used to terminate the drill.

NOTE: The drill is mis-named if Confronting means to DO something to the person. The whole action is to accustom an auditor to BEING THERE three feet in front of another person without apologising or moving or being startled or embarrassed or defending self. Confronting with a body part can cause somatics in that body part being used to confront. The solution is just to BE there and CONFRONT.

On a Professional TRs Course the student passes when he can just be there and do a straight, uninterrupted 2 hours of good, acceptable confront.

HISTORY: Developed by L. Ron Hubbard in Washington in March 1957 to train students to confront preclears in the absence of social tricks or conversation and to overcome obsessive compulsions to be “interesting”. Revised by L. Ron Hubbard April 1961 on finding that SOP Goals required for its success a much higher level of technical skill than earlier processes. Revised by L. Ron Hubbard in August 1971 after research discoveries on TRs. Further revised in 1980 by L. Ron Hubbard to clarify “Blinkless TR 0” and coaching, and to include theory on the communication cycle.

NUMBER: TR 0 BULLBAIT REVISED 1961 RE-REVISED 1980

NAME: Confronting Preclear Bullbaited.

THEORY: On TR 0 Bullbaited the student drills being there as potential Cause or Source-point and being there as Effect or Receipt-point, with Duplication. He is also drilling Observation, Distance, Consideration, Attention, Confront and particularly confronting a preclear who is being Cause or Source-point. The gradient of confront is increased on this drill, with emphasis on the fact that the student is confronting a preclear no matter what the preclear says or does.

COMMANDS: Coach: “Start” “That’s it” “Flunk”.

POSITION: Student and coach sit facing each other a comfortable distance apart - about three feet.

PURPOSE: To train student to confront a preclear with auditing or with nothing. The whole idea is to get the student able to BE there comfortably and confront a preclear in a position three feet in front of the preclear without being thrown off, distracted or reacting in any way to what the preclear says or does. It is on TR 0 Bullbaited that the student learns to CONFRONT A PRECLEAR.

TRAINING STRESS: After the student has passed TR 0 and he can just BE there comfortably and confront, “bull baiting” can begin. Anything added to BEING THERE AND CONFRONTING THE PRECLEAR is sharply flunked by the coach. Twitches, sighs, fidgets, anything except just being there is promptly flunked, with the reason why.

PATTER: Student coughs. Coach: “Flunk! you coughed. Start.” This is the whole of the coach’s patter as a coach. Coach then repeats whatever he had said or done that caused the student to react. He continues to coach the student on that “button”, flattening it to a win for the student before going on to another button or other bullbaiting.

Button: An item, word, phrase, subject, voice tone, mannerism, anything that causes a person to react, causes him discomfort, embarrassment, upset or to laugh uncontrollably, etc. It is called a “button” because when you push it you get a reaction.

PATTER AS A CONFRONTED SUBJECT: Bullbaiting is done on a gradient, giving the student lighter situations to begin with so student is not plunged into overwhelm at the start. Coach gets the student through the lighter situations and confronting those, then gradually stiffens the gradient, giving the student more and more to confront. The coach may say anything or do anything except leave the chair. The student’s “buttons” should be found (these will be spotted by the coach during drilling) and each button flattened before it is left. A button is never left unflat. Any words that are not coaching words may receive no response from the student. If the student responds, the coach is instantly a coach (see patter above). Student passes when he can BE there comfortably and confront a preclear without being thrown off or distracted or reacting in any way to anything the coach says or does.

HISTORY: Developed by L. Ron Hubbard in Washington in March 1957 to train students to confront preclears in the absence of social tricks or conversation and to overcome obsessive compulsions to be “interesting”. Revised by L. Ron Hubbard April 1961 on finding that SOP Goals required for its success a much higher level of technical skill than earlier processes. Revised by L. Ron Hubbard in August 1971 after research discoveries on TRs. Further revised by L. Ron Hubbard in 1980 to emphasize the purpose of TR 0 Bullbaited and to include data on “buttons” and the comm cycle.

NUMBER: TR 1 REVISED 1961 RE-REVISED 1980

NAME: Dear Alice.

THEORY: On TR 1, the student is using Observation, Consideration and Confront as previously drilled. He is also drilling being Cause or Source-point, awareness of Effect or Receipt-point, and as Cause getting a Message (or Impulse or Particle) across a Distance to Receipt-point with Attention, Interest, Control, correct Direction, correct estimation of Distance, Time and correct Timing, correct Velocity, correct Volume, Clarity and Impingement, and with the Intention that it is received and duplicated at Receipt-point.

PURPOSE: To train the student to deliver a command newly and in a new unit of time to a preclear without flinching or trying to overwhelm or using a via, and to deliver a command with the intention that it is received.

COMMANDS: A phrase (with the “he says” omitted) is picked out of the book “Alice in Wonderland” and read to the coach. It is repeated until the coach is satisfied it arrived where he is. In other words it must be received by the coach.

POSITION: Student and coach are seated facing each other a comfortable distance apart.

TRAINING STRESS: The command goes from the book to the student and, as his own, to the coach. It must not go from book to coach. It must sound natural not artificial. Diction and elocution have no part in it. Loudness may have.

The coach must have received the command (or question) clearly and have understood it before he says "Good". The operative word here is received. The communication must be received at Receipt-point as when that has occurred duplication can take place.

Any datum that every command must sound exactly like the last command is false. Each question or command is delivered in a new unit of time. When that does not occur the same tonality will be noted, command after command, and the student appears robotic. A command delivered naturally is one that is delivered newly in a new unit of time.

Don't buy an unchanging student or a wrongly done TR.

If a student is unchanging (delivers 3 or 4 robotic TR-1s in a row) flunk him, coax him to do it correctly, make sure he knows and understands the drill and do all possible to get him delivering a command naturally that arrives. But if there is still no change, put him back on OT TR 0 as he hasn't made it on his lower TRs.

PATTER: The coach says "Start", says "Good" without a new start if the command is received. He says "Flunk" if the command is not received. "Start" is not used again. "That's it" is used to end the activity or to terminate for a brief discussion. Any discussion is kept to a minimum. If student has a question it is acknowledged, student studies the TR again for any necessary clarification and is put back on the drill. If session is terminated for a discussion, coach must say "Start" again before it resumes.

This drill is passed only when the student can put across a command naturally, without strain or artificiality or elocutionary bobs and gestures, and when the student can do it easily and relaxedly. When the coach thinks the student has done it he asks the student if he has done it. If the coach is satisfied that he is receiving the commands, each newly in a new unit of time, and the student is satisfied that he has done it, he passes on to the next TR.

HISTORY: Developed by L. Ron Hubbard in London, April 1956, to teach the communication formula to new students. Revised by L. Ron Hubbard 1961 to increase auditing ability. Further revised by L. Ron Hubbard in 1980 to emphasize the purpose of the drill and to include theory on the come cycle.

NUMBER: TR2 REVISED 1978 RE-REVISED 1980

NAME: Acknowledgements.

THEORY: On TR 2, the student is using all of those parts of the comm cycle previously drilled. He is also drilling switching from Cause (Source-point) to Effect (Receipt-point) in order to receive, Understand and Duplicate the preclear's Answer, and then back to Cause to give the Acknowledgement.

The real emphasis here is on the drilling of Control (the Start-Change-Stop of a communication), as he uses the Acknowledgment to bring the communication to a full stop. Timing, Velocity, Volume and Impingement also enter into this drill.

PURPOSE: To teach the student that an acknowledgement is a method of controlling preclear communication and that an acknowledgement is a full stop. The student must understand and appropriately acknowledge the comm and in such a way that it does not continue the comm.

COMMANDS: The coach reads lines from “Alice in Wonderland” omitting the “He saids” and the student thoroughly acknowledges them. The student says “Good”, “Fine”, “Okay”, “I heard that”, anything only so long as it is appropriate to the pc’s comm in such a way as actually to convince the person who is sitting there as the preclear that he has heard it. The coach repeats any line he feels was not truly acknowledged.

POSITION: Student and coach are seated facing each other at a comfortable distance apart.

TRAINING STRESS: Teach student to acknowledge exactly what was said so preclear knows it was heard. Ask student from time to time what was said. Curb over and under acknowledgement. Let student do anything at first to get acknowledgement across, then even him out. Teach him that an acknowledgement is a stop, not beginning of a new cycle of communication or an encouragement to the preclear to go on and that an acknowledgement must be appropriate for the pc’s comm. The student must be broken of the habit of robotically using “Good”, “Thank you” as the only acks.

To teach further that one can fail to get an acknowledgement across or can fail to stop a pc with an acknowledgement or can take a pc’s head off with an acknowledgement.

PATTER: The coach says “Start”, reads a line and says “Flunk” every time the coach feels there has been an improper acknowledgement. The coach repeats the same line each time the coach says “Flunk”. “That’s it” may be used to terminate for discussion or terminate the session. “Start” must be used to begin a new coaching after a “That’s it”.

HISTORY: Developed by L. Ron Hubbard in London in April 1956 to teach new students that an acknowledgement ends a communication cycle and a period of time, that a new command begins a new period of time. Revised 1961 and again in 1978 by L. Ron Hubbard. Further revised by L. Ron Hubbard in 1980 to include theory on the comm cycle.

NUMBER: TR 21/2 1978 REVISED 1980

NAME: Half Acks.

THEORY: The same parts of the comm cycle are drilled on TR 2* as on TR 2, with one exception; the emphasis here is on drilling Acknowledgement and Control in such a way as to bring about the “Continue” (or “change”) part of the Control cycle.

PURPOSE: To teach the student that a half acknowledgement is a method of encouraging a pc to communicate.

COMMANDS: The coach reads lines from “Alice in Wonderland” omitting the “He saids” and the student half acks the coach. The coach repeats any line he feels was not half acked.

POSITION: The student and coach are seated facing each other at a comfortable distance apart.

TRAINING STRESS: Teach student that a half acknowledgement is an encouragement to the pc to continue talking. Curb over-acknowledgement that stops a pc from talking. Teach him further that a half ack is a way of keeping a pc talking by giving the pc the feeling that he is being heard.

PATTER: The coach says “Start”, reads a line and says “Flunk” every time the coach feels there has been an improper half ack. The coach repeats the same line each time the coach says “Flunk”. “That’s it” may be used to terminate for discussion or terminate the session. If the session is terminated for discussion, the coach must say “Start” again before it resumes.

HISTORY: Developed by L. Ron Hubbard in July 1978 to train auditors in how to get a pc to continue talking as in R3RA. Revised by L. Ron Hubbard in 1980 to include theory on the comm cycle.

NUMBER: TR 3 REVISED 1961 RE-REVISED 1980

NAME: Duplicative Question.

THEORY: On TR 3 the student is drilling using all the parts of the comm cycle, with emphasis on getting a communication duplicated and completed.

PURPOSE: To teach a student to duplicate without variation an auditing question, each time newly, in its own unit of time, not as a blur with other questions, and to acknowledge it. To teach that one never asks a second question until he has received an answer to the one asked.

COMMANDS: "Do Irish swim?" or "Do birds fly?"

POSITION: Student and coach seated a comfortable distance apart.

TRAINING STRESS: One question and student acknowledgement of its answer in one unit of time which is then finished. To keep student from straying into variations of command. Even though the same question is asked, it is asked as though it had never occurred to anyone before.

Duplicating the auditing question without variation in a new unit of time does NOT mean a robotic duplication of tone of voice, command after command. It means that the original question asked is asked in a new unit of time without variation of the question. Any idea that the student must give every command sounding exactly like the last command is a false datum and only serves to mis-train the student into robotic delivery.

The student must learn to give a command and receive an answer and to acknowledge it in one unit of time.

The student is flunked if he or she fails to get an answer to the question asked, if he or she fails to repeat the exact questions, if he or she "Q and As" with excursions taken by the coach.

Q and A means: Asking a question that is based on the last answer. It never completes any cycle. (Re : HCOB 5 Apr 1980, Q & A, THE REAL DEFINITION.)

The student is also flunked for robotic delivery of the question or command.

PATTER: The coach uses "Start" and "Flunk". "That's it" is used to terminate the session. "Start" must be used to begin a coaching session again after a "That's it".

The coach is not bound after starting to answer the student's question but may comm lag or give a commenting type answer to throw the student off. Often the coach should answer. Somewhat less often the coach attempts to pull the student in to a Q and A or upset the student.
Example:

Student: "Do fish swim?" Coach: "Yes" Student: "Good" Student: "Do fish swim?" Coach: "Aren't you hungry?" Student: "Yes" Coach: "Flunk"

When the question is not answered, the student must say, gently, "I'll repeat the auditing question", and do so until he gets an answer. Anything except commands, acknowledgement and as needed, the repeat statement is flunked. Unnecessary use of the repeat statement is flunked. A poor command is flunked. A poor acknowledgement is flunked. A Q and A is flunked (as in example). Student misemotion or confusion is flunked. Student failure to utter the next command (or with a long comm lag) is flunked. A choppy or premature acknowledgement is flunked. Lack of an acknowledgement (or with a distinct comm lag) is flunked. Any words from the coach except an answer to the question, "Start", "Flunk", "Good" or "That's it" should have no influence on the student except to get him to give a repeat statement and the command again. By repeat statement is meant, "I'll repeat the auditing command."

“Start”, “Flunk”, “Good” and “That’s it” may not be used to fluster or trap the student. Any other statement under the sun may be. The coach may try to leave his chair in this TR. If he succeeds it is a flunk. The coach should not use introverted statements such as “I Just had a cognition.” ‘Coach divertive’ statements should all concern the student, and should be designed to throw the student off and cause the student to lose session control or track of what the student is doing. The student’s job is to keep a session going in spite of anything, using only command, the repeat statement or the acknowledgement. The student may use his or her hands to prevent a ‘Blow’ (leaving) of the coach. If the student does anything else than the above, it is a flunk and the coach must say so.

HISTORY: Developed by L. Ron Hubbard in London in April 1956, to overcome variations and sudden changes in sessions. Revised 1961 by L. Ron Hubbard The old TR has a comm bridge as part of its training but this is now part of and is taught in Model Session and is no longer needed at this level. Auditors have been frail in getting their questions answered. This TR was redesigned to improve that frailty. Further revised by L. Ron Hubbard in 1980 to include the definition of Q and A, flunks for robotic delivery of question, and to include theory on the comm cycle.

NUMBER: TR 4 REVISED 1961 RE-REVISED 1980

NAME: Preclear Originations.

THEORY: On TR 4 the student drills handling another’s origination of a communication cycle as well as handling his own cycle of communication, and ensuring that both Of these cycles are completed. All the parts of the cycle of communication come into play in this drill.

PURPOSE: To teach the student not to be tongue-tied or startled or thrown off session by originations of preclear and to maintain ARC with preclear throughout an origination.

COMMANDS: The student runs “Do fish swim?” or “Do birds fly?” on coach. Coach answers but now and then makes startling comments from a prepared list (see Attachment of this HCOB, taken from the Preclear Origination Sheet at the back of The Book of E-Meter Drills). Student must handle originations to satisfaction of coach.

POSITION: Student and coach sit facing each other at a comfortable distance apart.

TRAINING STRESS: The student is taught to hear origination and do three things. 1. Understand it; 2 Acknowledge it; and 3. Return preclear to session. If the coach feels abruptness or too much time consumed or lack of comprehension, he corrects the student into better handling.

PATTER: All originations concern the coach, his ideas, reactions or difficulties, none concern the auditor. Otherwise the coach’s patter is the same as in TR 3 (“Start”, “Flunk”, “That’s it” and “Start” to resume the coaching session after a “That’s it”).

The student’s patter is governed by: 1. Clarifying and understanding the origin. 2. Acknowledging the origin. 3. Giving the repeat statement “I’ll repeat the auditing command”, and then giving it. Anything else is a flunk.

The auditor must be taught to prevent ARC breaks and differentiate between a vital problem that concerns the pc and a mere effort to blow session. (TR 3.) Flunks are given if the student does more than 1. Understand; 2. Acknowledge; 3. Return pc to session.

Flunks are also given for too abrupt a shift of attention or too slow a shift of attention back to the session, or for failure to return the pc to session at all.

Coach may throw in remarks personal to student as on TR 3. Student’s failure to differentiate between these (by trying to handle them) and coach’s remarks about self as “pc” is a flunk.

Student's failure to persist is always a flunk in any TR but here more so. Coach should not always read from list to originate, and not always look at student when about to comment. By Originate is meant a statement or remark referring to the state of the coach or fancied case. By Comment is meant a statement or remark aimed only at student or room. Originations are handled, Comments are disregarded by the student. The coach uses the Comments & Originations Sheet, attached to this issue, choosing items at random to drill the student in handling.

When the student has mastered 1. Understanding; 2. Acknowledging; 3. Returning pc to session, the gradient is upped and the student is flunked for any part of the comm cycle being out. This would include non-coniront, failure to get a communication across, using a half acknowledgement improperly (and thus inviting the pc to continue endlessly when the pc isn't even answering the question asked) when a full stop acknowledgement is required, failure to encourage the pc to continue when it is necessary, failure to get the question answered or to deliver each command in a new unit of time, as well as any flub in handling preclear originations.

The drill is passed when the student can handle cycles of communication smoothly and naturally.

HISTORY: Developed by L. Ron Hubbard in London in April 1956, to teach auditors to stay in session when preclear dives out. Revised by L. Ron Hubbard in 1961 to teach an auditor more about handling origins and preventing ARC breaks. Further revised by L. Ron Hubbard in 1980 to include theory on the comm cycle.

As TR 5 is also part of the CCHs it can be disregarded in the comm course TRs despite its appearance on earlier lists for students and stair auditors.

ROBOTIC TRS

Stiff, unnatural TRs are robotic TRs. Students and auditors who haven't mastered the TRs will handle communication robotically.

Anatomy Of A Robot

It can be said of robots that:

1. They don't know what a comm cycle is.
2. They have never really passed OT TR 0.
3. They have never really passed TR O .
4. They have never really passed TR O Bullbait.
5. They don't do TR 1 in a new unit of time each time they give it, so they all sound alike and they probably have TR 3 mixed up with TR 1, or they ? rstuck in an unseat 0 Series (OT TR 0, TR O , TR O BB)
6. They don't realize their TRs are addressed to the person in front of them but are probably addressed tr the instructors for a pass.

And so, with a combination of the above, these students ard auditors will look like robots. They would never get the product of a pc interested in his own case and willing to talk to the auditor. And it's possible that they don't know that that is their product.

The point is, however, that it would be almost impossible for any student or auditor to go on looking like a robot if he actually did the TRs.

The remedy for robotic TRs is to put the student back onto restudy of the basics, the ARC Triangle and the cycle of communication, and then to re-drill the TRs from OT TR 0 on up, each one this time to a real pass.

With these standard actions done he will reach the EP and wind up a Valuable Final Product.

VALUABLE FINAL PRODUCT AND END PHENOMENON
OF TRS ON A PROFESSIONAL TRS COURSE

The PRIMARY VALUABLE FINAL PRODUCT of TRs is:

A professional auditor who with comm handling alone can keep a pc interested in his own case and willing to talk to the auditor.

The SECONDARY VALUABLE FINAL PRODUCT of TRs is:

A person with the session and social presence of a professional auditor and that presence can be summed up as a being who can handle anyone with communication alone and whose communication can stand up faultlessly to any session or social situation no matter how rough.

The END PHENOMENON of TRs is:

A being who knows he can achieve both of the above flawlessly and from here on out.

With honest drilling of the cycle of communication on TRs these skills are fully achievable.

And any being mastering these skills is capable in the extreme.

COMMENTS AND ORIGINATIONS FOR USE ON TR 4

Taken from the Book of E-Meter Drills Preclear Origination Sheet

COMMENT: A statement or remark aimed at the student or the room.

ORIGINATION: A statement or remark referring to the state of the coach or his fancied case.

I have a pain in my stomach.
The room seems bigger.
My body feels heavy.
I had a twitch in my leg.
I feel like I'm sinking.
The colors in the room are brighter.
My head feels lopsided.
I feel wonderful.
I have an awful feeling of fear.
You are the first auditor who ever paid attention to my case.
I think I've backed up from my body.
I just realized I've had a headache for years.
This is silly.
I feel all confused.
That was a very good session yesterday.
I've got a sharp pain in my back.
When are we going to do some processing?
I feel lighter somehow.
I can't tell you.
I feel terrible - like I'd lost something, or something.
WOW - I didn't know that before.
The room seems to be getting dark.
Say, this really works.
I feel awfully tense.
You surely are a good auditor.
That wall seems to move toward me.
If you give me that command again, I'll bust you in the mouth.
I feel like something just hit me in the chest.
You surely have a nice office here.
I feel warm all over.
By the way, I won that tennis tournament yesterday.
My head feels like it has a tight band around it.
When are you going to get a haircut? I seem to see the wall behind my body.
This processing is worth the fee.
I feel like I was all hemmed in somehow.
Who is going to win the Cup Final?
It seems like I'm as tall as this building.
This chair is so comfortable I could go to sleep.
I feel like I could just suddenly break something.
I keep thinking about that copper who blew his whistle at me this morning.
I can see facsimiles better.
Things suddenly look a lot brighter.
Aren't we finished with this yet?

I feel like I'm floating.
It looks like the wall is caving in on me.
That wall looks real thin.
WOW!!! W-O-W!!!!!!!
How long do we have to do this processing?
OUCH, OH OUCH.
My face tingles.
I'm getting sleepy.
This is the first time I have ever really been in session.
I'm starving.
Let's go to lunch.
I remember a time when I fell down and hurt my zorch.
Can I have a cigarette?
What does this have to do with religion?
Suddenly I'm so tired.
Everything is getting blurry.
What time do we get through?
I thought we were going to use Dianetics.
Is this room rocking?
How much longer do we have to run this process?
You are by far the worst auditor I've ever had.
Your eyes stink.
I just realized how wrong I've been all my life.
Do these processes work differently on men than on women?
I feel like there's a spider's web on my face.
My left knee hurts.
I feel so light!
Isn't it getting hotter in here?
I just remembered the first time I went swimming.
My back has been aching like this for years.
How much do you weigh?
Are you clear?
Can you make your body rise up in the air?
I kind of ache all over.
That's a somatic, isn't it?
How many engrams have you had run out?
What is this "Assist" I keep hearing about?
What does Scientology say about ghosts?
Have you ever seen an Operating Thetan?
How are you going to prove to me that I have a soul?
I feel like killing myself.
How long will it take me to get clear?
I just realized how terrible my mother actually was.
Are you married?
Hold my hand.
I feel so lonesome.
How many hours have you been processed?
I feel like I can't talk.
My body is starting to shake all over.
My ribs hurt.
I feel just like the time I got run over by that car.
Everything seems to be getting dark.
Could we stop and talk for a little while?
Don't you get tired of listening to someone like me?
Can you make my hair curly?
How long will it take me to lose 20 pounds?
Kiss me.
You are my re-incarnated husband of 20,000 years ago.

Why are you talking so much?
That last process isn't flat.
I'm sick.
You're dead.
I'm dead too.
We are all dead.
I love death.
Kill me.
Beat me.
No, -- No, no, no, NO!!!!!!
Moo Gum Guy Pan.
Sum Gum War Sue Up.
Fizzle Wizzle Bum Crum.
I am going to vomit on you if you don't stop.
I absolutely love the way you handle originations.
You are sweet.

HCO BULLETIN OF 5 APRIL 1980

TR Courses

Q & A, THE REAL DEFINITION

There are several definitions for the term “Q & A”.

In Scientologese it is often used to mean “undecisive”, not making up one’s mind.

Q stands for “Question”. A stands for “Answer”. In “perfect duplication” the answer to a Question would be the Question.

The real definition as it applies to TRs is “The Question proceeding from the last Answer.”

Example:

Question: How are you?

Answer: I’m fine.

Question: How fine?

Answer: My stomach hurts.

Question: When did your stomach begin hurting?

Answer: About four.

Question: Where were you at four?

etc., etc.

The above example is a grievous auditing fault. As each question is based on the last answer, it is called “Q and A”. It could also be called “Q based on last A”.

It never completes any cycle. It tangles pcs up. It violates TR 3. Don’t do it.

I trust the above handles any confusion on this subject.

TR CRITICISM

Ref: HCOB 24 Dec 79	TRs BASICS RESURRECTED
HCOB 5 Apr 80	Q & A, THE REAL DEFINITION
HCOB 10 Apr 80	AUDITOR BEINGNESS
HCOB 16 Aug 71RA	TRs REMODERNIZED

During 1979, Ron made a thorough study of current TR training, examining the materials and checksheets in use, conducting TR course pilots, and critiquing video-recorded TRs done by students. He isolated and handled the difficulties that TR supervisors and students had been having. His reorganization of TR training is represented in HCOB 24 Dec 79 TRs BASICS RESURRECTED. During this period while Ron was sorting out TR training I had the privilege of working with him and being trained by him in criticizing TRs. This paper summarizes what I learned from Ron, and my own experience in teaching TRs and getting them done from a C/S (Case Supervisor) point of view.

**COMMENTS ON FAULTS WITH
STUDENTS ON TRs OT TR-0**

Because this TR is so simple, students tend to make it complicated. It requires that the student do this TR in its simplicity and not add to it. All sorts of hidden standards get interjected into it by students, coaches and supervisors. One handling is to clear misunderstood words in the TR, restudy the TR and get them doing it again.

An important clarification is that OT TR-0 is Just being there - the confront part is left until TR-0.

The coaching on OT TR-0 is mostly done by the supervisor. It is an actual waste of time to have two students coaching each other on it as there is very little to do. A supervisor can note somebody twitching. Even if the supervisor ignores it and just insists that the class go on doing OT TR-0, the guy will come through. The supervisor can cover a whole classroom of OT TR-0. The students don't do any coaching, the supervisor does. Even an isolated student when the rest of the class has gone on - the supervisor would keep his eye on him in spite of whatever else the supervisor was doing. And if he went to sleep or started boiling off or whatever, the supervisor would get him back onto it again. (But if a student flunked on a later TR and was returned to OT TR-0 it would be up to his twin to get him through. The twin does a lot of coaching only after somebody has been returned to it when the rest of the class is doing something else.)

TR-0

All too often students and coaches tend to get into trying to get the student to do something with his body, like trying to hold it still, trying not to blink, trying to hold a poker face, etc. These of course violate TR-0, as then the student is not confronting the coach, but has attention fixated on his body (to such a degree sometimes that he can be oblivious of the

coach). Not that the student should be allowed to writhe and twitch on TR-0, but the emphasis needs to be first and foremost on getting the student to confront the person opposite him (the coach). Then later in the TR, iron out physical manifestations, twitches, blinks, etc. (but if physical manifestations persist, OT TR-0 is unflat and must be flattened).

Although OT TR-0 isn't coached by the coach, TR-0 does require some coaching, in order to get the student to sit there and confront - which is the purpose of TR-0.

TR-0 BULL-BAIT

The purpose of TR-0 is just to get the guy to sit there and confront. But the purpose of TR-0 Bull-bait is to get the student able to confront a preclear. The purpose of these TRs must be stressed. OT TR-0 gets the student able to Just be there. TR-0 gets the student able to be there and confront. TR-0 Bull-bait gets the student able to confront a preclear.

The coach must use some sense and reality in his bull-baiting of the student, in order to present situations which test or could throw the student off his confront. Then the coach must flatten each of the student's buttons as it is encountered.

A gradient scale of toughness is essential. First the coach presents the student with lighter situations to confront, flattens that, then steps it up gradually until finally the student can confront anything that the coach (or a preclear) might say or do. Don't overwhelm the student at the start. Use a gradient. Always flatten each button encountered. Then step it up and make it tougher. Unfortunately coaches sometimes lose sight of the purpose of this TR - to make the student able to confront a preclear - and get off into doing something else such as dramatizing their own banks or trying to entertain or impress the rest of the class, neither of which has anything to do with coaching TR-0 Bull-bait. In fact on TR-0 Bull-bait, the coach must be in PT and be very alert in what he is doing, and in observing the student so that he can spot any break in the student's confront and flatten it. A coach who goes off into his own dramatizations is actually unflat on OT TR-0 and TR-0 himself and should be put back to flatten them; he won't be able to coach TR-0 Bull-bait, much less be able to drill it himself, until his own OT TR-0 and TR-0 are in.

The coach must use a gradient scale of toughness in his bull-baiting, must be alert for and flatten any button c! the student's that he encounters, and must get the student up to being able to confront a preclear. This requires good coaching with reality and with the purpose of this TR in mind. It is very much the supervisor's job to ensure that this gets done.

TR-1

Most troubles on TR-1 go straight back to out earlier TRs (i.e., OT TR-0, TR-0, and TR-0 Bull-bait); for example, the student mumbles to himself as he is unaware of or unable to confront the person he is talking to. Or, does the reverse and talks loudly, harshly, mechanically, which is also a non confront of the person to whom he is talking.

Affinity level of the student-auditor is very important, and all too often the student or auditor whose TR-1 is out lacks affinity. He can't reach or be the other person (coach or pc), so has difficulty communicating.

Sounding like a machine or robot is very not OK on TR-1. The student-auditor must be able to communicate naturally, with affinity, and reach the person he is talking to.

TR-2

This used to be abused by an ultra mechanical “Good”, or “Thank you” to everything the pc or coach said. This was largely handled by the mid-78 revision of TR-2, in which it is stated that the auditor should acknowledge with a statement appropriate to what the pc said.

A recognition of what would be an appropriate acknowledgment depends on the student’s or auditor’s reality. It isn’t just a matter of clearing the words “appropriate” and “acknowledgment” (though this would help); it is also necessary that the student-auditor have a sufficiently high reality level that he can recognize what is, and what is not, appropriate. But this isn’t really too difficult. If someone were to tell you that he had broken his leg, it would not be appropriate to say “Good”! Reality is important in TR-2.

TR-3

Here most trouble comes from lack of understanding of what is meant by the term “Q & A”, coupled with lack of understanding of the term “cycle of action” and why one should complete each cycle of action. Additionally, there is the bank tendency not to complete cycles but to Q & A instead. Part of the trouble here is that the term “Q & A” has various different definitions and descriptions, like: “failure to complete a cycle of action”, “changing when the pc changes”, “accepting orders from the pc”, and “question and answer”. The materials on the subject of Q & A are contained in many different HCOBs and articles and tapes and unless a student takes the time and trouble to look up and study and work out all the various references (which very few people will do), he/she winds up with a misconception of what “Q & A” is. E.g., an auditor fixates on “not accepting orders from the pc about what to run on him” as a definition for “Q & A”. The pc says “the room is too hot”, and the auditor doesn’t handle the room temperature as it would be (he thinks) “accepting an order”; or pc gets upset and suggests “Why don’t you assess a BPC list?”, and the auditor freezes because he feels that if he does so he will have Q & Aed. These may seem offbeat but I’ve seen them happen all too often. And yet these are usually accompanied by the auditor Q & Aing madly with every misdirection from the pc’s bank and never getting a question answered or a cycle completed on the pc.

I think this would be handled by: (a) a compilation of all the various texts on the subject of Q & A and on cycles of action into one comprehensive text; (b) an announcement to the effect that duplication processes (such as Opening Procedure by Duplication) cure the tendency to Q & A by increasing the ability to duplicate and to complete cycles of action.

Ron has now released HCOB 5 Apr 80 Q & A, THE REAL DEFINITION, which clarifies exactly what Q & A is.

TR-4

The errors on this TR are most commonly either too abrupt a shift of attention or too slow a shift of attention back to the process (including no shift back to the process!). Beginning students love to get a pat phrase or set of phrases to use to mechanically/robotically “handle” all originations with. Then later they tend to get into all kinds of Q & A with originations. Basically it depends upon the student-auditor’s ability to understand, which comes straight back to the student auditor’s own ARC Level, as well as whether the student-auditor understands what he/she is supposed to be doing on the TR, and why.

UPPER INDOC TRs

TRs 6 - 9 (Upper Indoc TRs) are also essential to professional auditor training.

TR-6

Here again the coach plays a vital role in that the coach must start off with a light gradient, and must ensure on this TR that the student becomes fully accustomed to, familiar with, and relaxed about controlling another's body. A lot of confusion is likely to blow off! on this TR and the coach must get the student through it and to a point where the student learns that it is perfectly OK to run 8-C on another's body. The coaching here should be in the direction of encouragement and getting the student to do it. The coach should not present opposition as that is the subject of a later TR. This TR should concentrate on getting the student to do it, and showing him the importance of precision, accuracy and positiveness when running 8-C.

TR-7

In this TR the coach starts presenting opposition on a gradient and getting the student more and more capable of continuing to run perfect control without being thrown or sinking to a lower tone level when faced with opposition. Hence the importance of getting the student very expert in TR-6 before embarking on this TR. And if the student has a hard time of it on this TR then drop back to and flatten TR-6, or any earlier out TR.

Here again (as in TR-0 Bull-bait), the coach must be a coach, and not get carried away with his own dramatizations. Dramatization by the coach has nothing to do with coaching. (This doesn't mean that the coach shouldn't present dramatizations to the student, but the coach has to be in PT and not in his own bank.) Supervisors need to ensure that coaches do coach and neither overwhelm the student utterly, nor be so namby-pamby that the student's confront isn't raised. Hence the necessity for good coaching and for the supervisor to be on the ball and ensuring that the students and coaches are working on the TR.

TR-8

An error on this is to fail to ensure that the term "tone 40" is well cleared, also the word "intention" as these terms are often subject to misinterpretation. The coach needs to ensure that the student does do the TR and doesn't become mechanical and just go through the motions. This is necessary because this TR has to do with intentions. It is however easy to observe whether the student is using intention or not, and to coax and persuade the student into doing so. The coach does have to get the student to do it. It is often a good idea to have the student and coach take turns in doing and coaching this TR, to increase reality on it. (The same is true of other TRs too.)

TR-9

As this TR depends for its success on the student having mastered the earlier TRs 0 - 4, 6 - 8, any weaknesses in earlier TRs will show up here. The remedy for failure on this TR is to get the earlier unflat TRs fully in.

The student and coach could err in either too readily quitting on TR-9, and drop back to earlier TRs rather than persist and get the student through and able to do it. Or, they will err in going on and on with the student failing.

It is a point of supervisor judgment as to whether to keep them at it and get them through, or whether to return to and get in earlier TRs. The supervisor decides this on the basis of whether the student is making progress on the TR, whether the coach is coaching correctly, and handles accordingly.

Earlier in TR training students were cycled through the TRs several times over. The idea here was to increase the gradient each time through, with the student getting better at it each time. This was to get the student more familiar with the TRs and to prevent the student from being stuck in a lose by miscoaching. The Professional TR Course is not run this way. The

liability of cycling the student through the TRs is that the TR training then becomes permissive and doesn't result in professional auditors.

Most auditors entering the Professional TR Course have already done lower level TR courses and have had objective processes. And where they haven't, cycling is an answer (but it isn't THE answer).

Permissiveness in professional TR training is the main way that TR training for pro auditors went out. There are various purposes and uses for TRs. There are permissive TRs for new public, public Comm Course TRs, a therapeutic TR course as contained in the Survival Rundown, and there is the Professional TR Course. The uses and purposes of these various TR courses need to be kept separate. On the Professional TR Course we make a real pro auditor.

The way to run the Professional TR Course is by getting the student to do it, one TR at a time, to a full pass on each TR. It is up to the twins to get each other through with professional coaching and high standards. The supervisor's job becomes very crucial. The supervisor is there to get them through to a full pass on each TR and graduated from the course as pro auditors. A supervisor who does his part in this diligently and effectively is worth his weight in gold as he is

making pro auditors whose TRs will stand by them through the years of auditing ahead.

Should the student fail on a TR on the Professional TR Course, he is started over from the beginning of the line-up, this time getting in each TR to a full pass, with his coach ensuring that he does, and the supervisor very actively in there making sure that the student becomes a real pro.

COPYING

It could be said with some humor that students on TR courses tend to obsessively copy. Unfortunately they do. They copy other students, they copy (or try to) what their auditor sounded like, or what they think he sounded like. And not infrequently, I have caught out students getting hold of another student's passing tape and trying to copy it. On TR critiquing there are repeating waves of all the students' TRs suddenly starting to sound alike. This usually traces to either an opinion leader (not someone who can get results as an auditor, but one who pretends to be an authority), or it traces to a bunch of students going out-ethics and trying to copy what they think students who passed sounded like.

Invariably these copy the worst traits or characteristics in others' TRs, and after all that isn't surprising as if they understood the TRs materials in the first place, they wouldn't be compelled to try to copy others. It probably stems from some impulse to beat the system by attempting to steal the beingness of another whom they consider to be a winning valence = no beingness of their own.

DRUGS

I am convinced that most of the trouble with TR training in recent years is due to the increased incidence of heavy druggies arriving on TR courses. Now there is the point that doing TRs is therapeutic to druggies, helping them get over withdrawal symptoms as practiced by Narconon and in HGCs, and as an essential part of an effective Drug RD. But we need to differentiate between the use of TRs to help a druggie get over drugs, and the use of TRs in training a professional auditor. of course TRs do give case gain even to nondruggies.

One of the more obvious case gains visible on a lower level case from TRs is physical changes such as increased whiteness of the whites of the eyes, color changes in the iris, reduction or disappearance of creases and wrinkles from frowning and facial ridges, cessation of obsessive and continual body motion, and on many the awareness of a mind or bank as separate from themselves or their body. In order to avoid students on TR courses being cases

and to preserve these two different uses of TRs, a delineation could be made of these two different uses, both valid in their own right: TRs for case gain, and TRs for pro auditor training.

Heavy druggies have invariably failed in auditor training on TRs courses until their drugs were handled, the minimum being a Purification RD, but I think that many would also need Objectives and a Drug RD in order to succeed on a Professional TRs Course.

OBJECTIVES

Partly covered above under TRs 6 - 9, and under Drugs. A very successful action was done on Flag, on Ron's advice, of putting all tech trainees through a checksheet and course called the "Tech TRs Course and Objectives Co-audit". On that course the students did all TRs 0 - 4, 6 - 9, and coaudited a full battery of objective processes on each other (on a read it, drill it, do it basis). After this, they actually studied and drilled TRs 0 - 4, and did their electronic attest (getting TRs tapes passed on actual auditing sessions during their internship). Those working on getting their TR tape passed had already co-audited a full battery of objective processes on each other. (And the additional advantage of coauditing these processes is that they got it both ways, on themselves as a pc, and they learned the discipline of running Objectives as an auditor, both being important.)

(This whole line-up of TRs 0 - 4, Upper Indocs, co-auditing Objectives and much more, is now available on the Survival Rundown.)

In 1979 while viewing a batch of student TR videos, Ron analyzed the difficulty these students were having with TRs as due to their lack of "R" (Reality) and "A" (Affinity). He pointed out that they were trying to Communicate ("C"), but their own "A" and "R" were so depressed, that their "C" couldn't be brought up (without raising their "A" and "R"). In other words these students hadn't made the case gains available from objective processes and ARC Straightwire. Until a person has been audited on objective processes and ARC Straightwire, he can't see, and he is out "R" and out "A". Ron also stressed that these are essential to the making of a Scientologist, as on these processes a pc will make quite a breakthrough. He/she will realize the communication formula, and that something is really real, affinity goes up, and the pc goes into ARC with the environment and life. This is an important step in becoming a Scientologist. And these gains are a very necessary prerequisite to pro auditor training. (SOED 1367 INT, 14 Jan 80 SPEEDING UP SLOW OR BOGGED STUDENT AUDITORS AND INTERNES implements and gives a supervisor the ways to handle these points above when they are found out on tech trainees and Professional TR Course students.)

AFFINITY, REALITY, COMMUNICATION & UNDERSTANDING

As pointed out above, unless the student-auditor can rise to a high enough level of ARC, then he won't succeed on a pro TRs course (nor in sessions as an auditor). He probably needs to be at least 3.0 or 3.5 on the tone scale to be able to do pro TRs successfully (or to audit successfully). If he is lower on the tone scale, his own ARC level is insufficient to be able to engage in a positive or theta exchange of communication with another being.

There is an essential basic that needs greater stress, and that is that we are seeking in TR training to bring about the ability in a being to be able to communicate (in ARC) with another being, to complete communication cycles, not to get sidetracked into another subject, etc. The fundamental being the ability to get into ARC with another person, and to maintain that ARC.

That ability is partly acquired by case gain and partly by training.

ESSENTIAL MATERIALS FOR STUDY IN TR TRAINING

The following materials (which haven't always been on TR course checksheets) are essential in that the student must study and understand and be able to apply them to succeed on pro TR training:

The ARC Triangle
The Cycle of Action
The Communication Formula
Materials on Q & A
The Axioms 21 - 28 (especially Axiom 28)
Book: THE FUNDAMENTALS OF THOUGHT
Book: DIANETICS '55! (chapters on communication)
Book: THE PROBLEMS OF WORK (on A, R. and C)
Book: THE MECHANICS OF CONTROL AND S-C-S

Material on "Beingness", especially HCOB 10 Apr 80 AUDITOR BEINGNESS

These materials above are in addition to the HCOBs on TRs.

ESSENTIAL STUDY ACTIONS

1. Study of the ARC triangle.
2. Study of the cycle of action and the cycle of communication.
3. Study of the communication formula.
4. Representing the communication formula in clay.
5. Representing Chapter VII of DIANETICS '55! in clay.
6. Study of each TR, including clearing misunderstands and getting off false data.
7. Work out how each TR relates to the communication formula. (Note: This is only useful when the student knows what the comm formula is and understands it.)
8. Study of the end phenomena and valuable final products of TRs (as given in HCOB 24 Dec 79 TRs BASICS RESURRECTED).

OTHER DATUMS

It is up to the supervisor to get the students to do the TRs, and to get them through each TR to a pass. This is the make-break point of any TR course - the supervisor getting the students to do the TRs.

Only supervisors who have done a Professional TRs Course and have themselves gotten a pass on TRs, have succeeded in running a TRs course.

In practice I have had to dig the supervisor out of the video room. By which is meant that the TR supervisor starts spending all his time looking at videos that students have made of their TRs, to see if there is a video good enough to send up for a pass, instead of the supervisor spending most of his time on the floor in the course room getting the students' TRs in, and then when the student has made it on TRs, then and only then, make a video. Otherwise the supervisor gets glued to the TV screen. (This is also a kind of stat push instead of going for quality products.)

TR courses have been subject to corruption in stat pushes in that different items on TR checksheets have different amounts of points and there have been certain items that give higher points than other items and in times of stat push the students are gotten to do or redo the items that yield higher points to get the student points up before Thursday 2:00 p.m., without any regard for training these students to be able to do TRs and thereby producing graduates who can apply what they have learned(i.e., quality products). Such a course can appear “upstat” due to “power” stats - student points - while crippling tech training in academy, internship and messing up the HGC with failed auditors. (A point of some bitterness with me.)

Maybe a genuine desire to make auditors who can audit, on the part of the supervisors and executives in a training org. is amore important factor than I have realized, and possibly more of the difficulties over the past year on TR training are due to its lack.

I think with some derision of a fellow who claimed ineffectiveness due to out tech on his case, but omitted to mention that he was audited and C/Sed by those he was responsible for training. So a possible solution is to permit the executives and supervisors over a tech training area to only be audited and C/Sed by those they have trained in order to give them more incentive to train auditors who will be able to audit successfully.

TR CRITIQUING

I feel there is a wide gap between being able to do TRs successfully oneself and being able to successfully critique another’s TRs. It’s quite another level of skill.

Points in my experience in learning to critique TRs under Ron are:

1. There’s a danger of not being certain enough and seeing an auditor or TR student do something that I wouldn’t have done, but dismissing it on the basis that what I would or wouldn’t do is not a valid criterion. That has always been a mistake as the reason I didn’t like what I saw or heard was because it was a TR outness - otherwise it wouldn’t have Jarred my attention. The handling I found for this was (whenever I saw or heard something I didn’t like on a TR tape/video) to replay it until I could isolate exactly which of the TRs 0 - 4 had been violated and how exactly. Or, how it violated or omitted part of the comm formula or the ARC triangle. In other words, by comparing it to the basic technical data, reviewing the basic tech data, and isolating the exact departure from those basics.
2. Writing up critiques of TR videos before they were critiqued by Ron, and then after he had critiqued them, comparing his and my critiques, and on any that differed replaying the video and watching it again until I clearly saw what I had missed previously. Then again reviewing the basic tech data on that area.
3. Working out the ideal scene for a session (see definition of “in session”), and the auditor’s TRs in relation to this.
4. Working out the purpose of TRs and of each TR. Comparing this to the purpose of auditing, the definition of “in session” and how these relate.
5. Having high ARC for auditors and for pcs generally and an earnest desire to help them succeed.
6. Not letting an auditor go on failing on a TR course but getting the guy debugged, or some act of compassion even if as little as a letter to let him know that someone cared and to get some hope back up, getting O/Ws pulled, word clearing done, inspection of the course for “What Is A Course PL” outnesses, coming down on any dilettante attitude, verbal tech, or out-ethics.

7. A measure of humility borne of awareness of goofs I have made so as not to become authoritarian or out of reach and thus communication, with the students and supervisors.
8. Asking myself the question: "Would I want to be audited by this TR student or auditor?", and if not, establishing why not, and what would have to be done to correct it.
9. Always narrowing down and establishing the tech data or tech basic that was violated in any error and getting the guy onto the HCOB or book that covered this point so as to get him on source and avoid verbal tech or interpretation.
10. Withstanding the make-wrongs or bids-for-sympathy from those not up to a pass, seeking another way through than by achieving competence.
11. Knowing that it is possible to do the TRs and to do them right and an awareness of how valuable correct TRs are in auditing, both from my own experiences as an auditor and as a pc, on both good TRs and flubbed TRs.

EXAMPLES AND REMEDIES

1. Student and coach don't seem to know what they are supposed to be doing on any TR, or are doing something they ought not to be doing, or are omitting part of the TR. Remedy: Get them both word cleared on the TR, and, have them both restudy the TR materials. Then get them back onto and doing the TR.
2. Despite word clearing and restudy of the TR, the student and coach can't apply what they have studied or are misapplying the data, or get confused and can't think with the basic data. Remedy: Get any verbal tech off per HCOB/PL 9 Feb 79 HOW TO DEFEAT VERBAL TECH. Get FALSE DATA STRIPPING done on both student and coach.
3. Despite drilling, the student cannot seem to be brought up to confronting. Or the student sounds and acts "dead". Or the student is nattery, critical or gets into "joking and degrading". Remedy: See HCOB 3 Feb 79 Issue II CONFRONT TECH HAS TO BE PART OF THE TR CHECKSHEET. Get the person's O/Ws pulled, especially tech O/Ws.
4. Student is displaying roller-coaster, or is NCG (no case gain) as a student, or is being out-ethics. Remedy: Route to ethics for handling (per HCO PL 5 Apr 65 THE NO-GAIN-CASE STUDENT).
5. Student is showing a lack of perception, is wooden, out of PT, stuck back on the track or in drug pictures, can't learn despite word clearing, is dull, lacks self-determinism. Remedy: Put the person onto and through the Purification RD.
6. Student has done the Purification RD, but is not fully in PT, lacks perception or coordination. Doesn't perceive PT environment rapidly and with clarity. Or, lacks experience on TRs and objective processes. Remedy: Put him onto the Survival Rundown.
7. Student is lacking in Affinity, Reality, Communication or Understanding. Remedy: Get the student to do the parts of and the whole ARC triangle in clay. (Use the books: THE PROBLEMS OF WORK, THE FUNDAMENTALS OF THOUGHT, and DIANETICS '55! as references.)
8. If after the above the student is still lacking in ARC, or doesn't seem sufficiently high toned to have and maintain ARC. Remedy: Have the student's ARC Straightwire Grade looked into and repaired and completed to its full result. Or get the Expanded ARC Straightwire Grade run if not previously run.

9. The student doesn't understand or can't apply the communication formula, or doesn't see how the TRs relate to the comm formula. Remedy: Get the student word cleared on the comm formula, then restudy it and demonstrate it in clay. (Note: After doing the comm formula in clay, the student can work out how each TR relates to the comm formula, and how the TRs relate to auditing. But this comes after doing the comm formula in clay, as otherwise he may not have sufficient comprehension of the comm formula.
10. The student doesn't understand or can't apply the comm formula and communication cycle, or the mechanics of communication. Remedy: Get the student to demonstrate in clay, Chapter VII, of DIANETICS '55!
11. Students or coaches not working or coaching in the direction of getting the TRs in better, or coaching without reality; unaware of how the TRs relate to auditing. Remedy: Thoroughly word clear and study the primary and secondary valuable final products of TRs and the end phenomenon of TRs (HCOB 24 Dec 79 TRs BASICS RESURRECTED). Work out the ideal scene for a session (see def: "in session"), and how each TR contributes to this when in, and detracts from it when out.
12. Student feels that he has gotten a TR done correctly once or twice or very briefly, and is afraid of "overrunning" it or that he might not get it right the next time or thereafter. Remedy Pro auditor training is not a case action, but drilling to consistent and continual perfection of TR rendition. Once a person's TRs have been gotten in, they don't go out. A real pro can audit from there on out with perfect TRs. Point this out as the standard and get the student to continue the drill until fully and consistently competent.
13. The student gets partway through the TRs and hangs up on a TR and can't make it to a pass on that TR. Or, the student has undue difficulty on a later TR. Remedy: Realize that the reason for the trouble is an outness in an earlier TR (or TRs). Put the student back to the earliest TR that is out, and get these in fully.
14. The student gets through to the end of the TRs but hasn't made it fully, or cannot get a tape pass. Remedy: Realize that this is due to earlier TR outnesses and that he won't succeed until all earlier TRs are fully in. Put the student back to the beginning of the line-up (which is meant he re-word clears, restudies the materials, does the clay demos again and starts at OT TR-0). Take each TR, from OT TR-0 on up, to a full pass.
15. Student failing and other remedies haven't handled. Remedy: Get the "TR Debug Assessment" assessed and handled to an F/N on each line. Do any additional handlings indicated as needed by this assessment.
16. For any lack of progress at an acceptable speed and to an excellent result. Remedy: Get the supervisor out on the floor in the course room actively and energetically getting the students to DO THE TRs!
17. After having done all the above, and the student's TR rendition is mechanically correct, and he has been very thoroughly drilled in all the TRs, including Upper Indoc TRs, there is something lacking in his attitude or presence that leaves him short of being a pro auditor. Remedy: Have him study and apply the data on auditor beingness. (Note: This data may only be studied or attempted after the student has become very proficient in and is thoroughly drilled in all the TRs including Upper Indocs. To attempt this action earlier would be a waste of the tech as it would be premature and out gradient. But when the student has been very thoroughly drilled in the TRs and has fully mastered them, then this action of doing the "Auditor Beingness" step will put the final polish on his TRs and will make him into a real professional auditor whose pcs go "into session" on his TRs alone and stay in session throughout the session. His pcs will rave about his auditing and the case gains they make. And there is the final reward for honestly and thoroughly doing a good job of the TRs, exactly the way Ron has laid them out in the materials, each to a full pass!)

IDEAL TR TRAINING LINE-UP

1. Beginning or public TR training course, Comm Course.
2. The Purification Rundown.
3. The Survival Rundown.
4. A Drug Rundown.
5. Method One Word Clearing (preferably co-audited).
6. Expanded ARC Straightwire Grade (again preferably co-audited).
7. THE PROFESSIONAL TR COURSE. (Done to professional auditor standard, but not only for auditors, as the quality of having TRs of pro auditor standard is of great value to any Scientologist and will last with him as an ability from here on out.)

MOOD DRILLS

Beings can be fixed or stuck in a chronic mood (emotion)—always sad, always angry, always bored, etc. Just in life and livingness this makes them rather hard to live with but in an auditor it is fatal. The mood of an auditor, particularly if fixed and chronic, can color the session and the results he obtains.

TRs are a matter of sound, not how an auditor feels. When an auditor has a stuck or fixated mood, such as monotony, timidity, dullness, showing up in his TR drills or in session, this can slow up a pc's progress or rough up or upset a pc. The auditor's TRs should sound live and interested and natural.

Mood Drills have been developed to handle fixed, uncontrolled or unsuitable tone levels in an auditor. These drills consist of drilling TR I over and over at each tone level of the full Tone Scale (HCOB 25 Sept 71RB, Revised 1 Apr 78 TONE SCALE IN FULL). You start low on the scale and do TRs at each tone level *in that tone*, then up to the next tone, and the next, i.e., TR 1 done over and over at "Dying," then at the tone of "Useless," and so on up the scale. The coach simply has the student do TR I at the particular tone level so that the coach and the student are both satisfied that the student has conveyed that tone and the student has a win.

A technical fact is that moods or emotions are usually "automatic" which means they are not necessarily under control but tend to control the person himself. It is as if he is under other-determinism. Technically, you can "take over" the automaticity and put it under a being's control just by having him consciously do it over and over. You can also change a chronic tone level by shifting a person's attention from it by making him do something else. (Reference: "Ability 36" and "Ability—Straight Wire.")

Body position, voice tone, facial expression and attitude are all part of conveying the mood or tone level. For example, the student doing Mood Drills is on TR 1 working on the tone "Anger." He gives a line from *Alice in Wonderland*, and it sounds a bit weak. Coach's patter: "That's it. It sounds a bit gentle. Let's get some more G-r-r-r-r in it. Start." Student repeats the line, but smiles a bit although he sounds more angry. Coach: "That's it. It *sounded* more angry, but you smiled. Do it again—you *feel* angry. Start." Student gives the line again, this time frowning fiercely and in a *very* snarly tone of voice, leaning forward aggressively. Coach: "Good! Do you feel you did it?" Coach continues until the student is certain he can do it easily. The coach must be able to identify the various emotions and if he is in question about it the dictionary should be resorted to until both student and coach are in agreement on what the tone is or means and that it is being accurately and demonstrably expressed.

A student drilling these must beware of Mis-Us and the coach must make sure that he and the student both understand each mood (tone). Any moods that are too easy to do should be spotted by the coach and repeated until the automaticity is broken.

If a mood is too hard for the student to master, have him do TR 1 in different beingnesses, e.g., a timid student who is trying to sound antagonistic could be asked to do TR 1 as a panther, a lion, a villain, etc. If you had him do it as a timid bird or some such timid thing that would never be antagonistic you would probably have your student where he lived. Again, do such things to a student win and don't use it to harass him. The whole point is to get

him to do TR 1 antagonistically. These shifts of beingness help to shift his attention off a repulsion to an emotion he cannot easily do.

Once begun, Mood Drills should be continued until the whole scale is flat so the auditor doesn't get stuck on the Tone Scale but can do any mood easily and without strain. When an auditor is upset about his voice, you can have him try speaking melodiously, boringly, enthusiastically, until he can change his voice mood about at will.

Mood Drills should be done when the auditor sounds mechanical, or his tone is brush off, not interested or some set emotion. An auditor can be drilled on assessments in the E-Meter Drill Book with Mood Drills, when his assessment is dull or monotonous. Any set emotion like "sweet," "light and airy fairy," or sad, dreary, deadly serious, indifferent can be handled by drilling with Mood Drills.

50 FOOT MOOD DRILLS

50 Foot Mood Drills can be used to cure a fixed mood that doesn't seem to budge with regular Mood Drills. Student and coach go to an area where they can do some shouting without disturbance. The coach and student are at least 50 feet apart and the Mood Drill is done, as described above, at this distance.

Mood Drills are not only fun to do, but also enable an auditor to be at cause over how he sounds in a session, without strain and without his own feelings interfering with the session and thus to get maximum gain for the pc.

TRs AND COGNITIONS

In the presence of rough TRs cognitions do not occur.

Cognitions are the milestones of case gain.

Rough TRs, rough metering, Out Code and a distractive auditor then make no case gain.

When an auditor has smooth, usual TRs, does his metering expertly and without attracting the pc's attention, when he follows the Auditor's Code (particularly regarding Evaluation and Invalidation) and when he is interested, not interesting as an auditor, the pc cognites and makes case gains.

Further, according to the axioms, a bank straightens out by AS-ISING its content. If the pc's attention is distracted to the auditor and meter his attention is not on his bank so AS-ISING cannot occur.

The definition of In Session is INTERESTED IN OWN CASE AND WILLING TO TALK TO THE AUDITOR. When this definition describes the session in progress, then of course the pc will be able to AS-IS and will cognite.

By *The Original Thesis*, the auditor plus the pc is greater than the pc's bank. When the auditor plus the bank are both overwhelming the pc then the bank seems greater than the pc. It is this situation which gives a pc a low Tone Arm.

An auditor who can't be heard, doesn't ack, doesn't give the pc the next command, fails to handle origins, simply has OUT-TRs.

The auditor who is trying to be interesting to the pc, who over-acks, who laughs loudly, is putting the pc's attention onto himself. So the pc's attention, not being on his bank, doesn't as-is or cognite.

The auditor whose metering by-passes F/Ns or calls F/Ns at wrong points, or who tells the pc "That reads" "That blew down" etc, or who any other way uses the meter distractingly (the pc knows when he is being under- or over-run and knows when he is being mismetered), is of course violating the definition of IN SESSION. The pc's attention goes to the meter, not his bank, so he doesn't AS-IS or cognite.

Auditor Invalidation and Evaluation is just plain villainy. It interferes with pc cognitions. Other Code breaks are similarly distractive.

A PERFECT SESSION

If you understand the exact definition of IN SESSION, if you understand the pc's necessity to have his attention on his bank so as to AS-IS it and work out what is really going on in a session that brings about a cognition (as-ising aberration with a realization about life),

you will then be able to spot all the things in TRs, metering and the Code that would prevent case gain.

Once you see that out-TRs, mismetering and Code breaks would PREVENT the IN SESSION definition you will see what would impede a pc from AS-ISing and Cogniting.

When you have this figured out you will then be able to see clearly what are IN-TRs, CORRECT METERING and CORRECT CODE APPLICATION.

There can be an infinity of wrongnesses. There are only a few rightnesses.

Recognition of right TRs, right Metering and right Code use depend only on:

- (a) Understanding the principles in this HCO B, and
- (b) Their practice so as to establish habit.

This mastered, one's pcs will get cognitions and case gain and swear by "their auditor" !

OBNOSIS AND THE TONE SCALE

The following is extracted from the Advanced Clinical Course Preparatory Manual for Advanced Students in Scientology. It was published in 1957.

OBNOSIS AND THE TONE SCALE

Somewhere in your possession, in your desk, or tucked into a bookcase, are two large pieces of paper. They are covered closely with data invaluable to an Auditor. You have pored over them, and quoted from them many, many times. They are, of course, the Chart of Human Evaluation and the Chart of Attitudes. The data in them is a large part of an Auditor's stock in trade, and every Auditor in the world is, in some degree, familiar with them.

But how about getting the data off the charts and applying it to life, to some real person? It's not hard to do casually, for some acute tone. "Joe was on a 1.5 kick last night." Sure, he turned red as a beet, and threw a book at your head. Simple. Mary breaks into sobs, and grabs for the Kleenex. Couple of Auditors on the scene exchange looks, nod sagely. "Hmm. Grief!" But how about chronic tone, with that thin, shiny veneer of social tone slicked over it? How sharp and how certain are you about that? Now, take a pc that you are familiar with. What, exactly, is his chronic tone? If you don't know, you had better read on. If you do, read on, and learn more about it.

The title of this article starts with an odd word: obnosis. It's been put together from the phrase, "observing the obvious". The art of observing the obvious is strenuously neglected in our society at this time. Pity. It's the only way you ever see anything; you observe the obvious. You look at the isness of something, at what is actually there. Fortunately for us, the ability to obnose is not in any sense "inborn" or mystical. But it is being taught that way by people outside of Scientology.

How do you teach somebody to see what is there? Well, you put up something for him to look at, and have him tell you what he sees. That is what is done in an ACC class, the earlier in the course, the better. A student is asked to stand up in the front of the classroom and be looked at by the rest of the students. An instructor stands by, and keeps asking, "What do you see?" The first responses run about like this: "Well, I can see he's had a lot of experience." "Oh, can you? Can you really see his experience? What do you see there?" "Well, I can tell from the wrinkles around his eyes and mouth that he's had lots of experience." "All right, but what do you see?" "Oh, I get you. I see wrinkles around his eyes and mouth." "Good!" The instructor accepts nothing that isn't plainly visible. A student starts to catch on and says, "Well, I can really see he's got ears." "All right, but from where you're sitting can you see both ears right now as you're looking at him?" "Well, no." "Okay. What do you see?" "I see he's got a left ear." "Fine!" No conjectures, no tacit assumptions will do. Nor are the students permitted to wander in the bank. For example, "He's got good posture." "Good posture by comparison with what?" "Well, he's standing straighter than most people I've seen." "Are they here now?" "Well, no, but I've got pictures of them." "Come on. Good posture in relation to what, that you can see

right now.” “Well, he’s standing straighter than you are. You’re a little slouched.” “Right this minute?” “Yes.” “Very good.” You see what the goal of this is? It is to get a student to the point where he can look at another person, or an object, and see exactly what is there. Not a deduction of what might be there from what he does see there. Not something the bank says ought to go in company with what is there. Just what is there, visible and plain to the eye. It’s so simple, it hurts.

Along with this practice in observing the obvious about people, the students receive a lot of information about particular physical and verbal indications of tone level. Things very easy to see and hear, by looking at a person’s body and listening to his words. “Thetan-watching” has no part in obnosis. Look at the terminal, the body, and listen to what’s coming out of it. You don’t want to get mystical about this, and start relying on “intuition”. Just look at what’s there.

As examples: You can get a good tip on chronic tone from what a person does with his eyes. At apathy, he will give the appearance of looking fixedly, for minutes on end, at a particular object. Only thing is, he doesn’t see it. He isn’t aware of the object at all. If you dropped a bag over his head, the focus of his eyes would probably remain the same. Moving up to grief, the person does look “downcast”. A person in chronic grief tends to focus his eyes down in the direction of the floor a good bit. In the lower ranges of grief, his attention will be fairly fixed, as in apathy. As he starts moving up into the fear band, you get the focus shifting around, but still directed downward. At fear itself, the very obvious characteristic is that the person can’t look at you. Terminals are too dangerous to look at. He’s supposedly talking to you, but he’s looking over in left field. Then he glances at your feet briefly, then over your head (you get the impression a plane’s passing over), but now he’s looking back over his shoulder. Flick, flick, flick. In short, he’ll look anywhere but at you. Then, in the lower band of anger, he will look away from you, deliberately. You know, he looks *away* from you; it’s an overt communication break. A little further up the line, and he’ll look directly at you all right, but not very pleasantly. He wants to locate you—as a target. Then, at boredom, you get the eyes wandering around again, but not frantically as in fear. Also, he won’t be avoiding looking at you. He’ll include you among the things he looks at.

Equipped with data of this sort, and having gained some proficiency in looking at the iveness of people, the ACC students are sent out into the public to talk to strangers and to spot them on the tone scale. Usually, but only as a slight crutch in approaching people, they are given a series of questions to ask each person, and a clipboard for jotting down the answers, notes, etc. They are public-opinion poll-takers from the Hubbard Research Foundation. The real purpose of their talking to people at all is to spot them on the tone scale, chronic tone and social tone. They are given questions calculated to produce lags and break through social machinery, so that the chronic tone juts out. Here are some sample questions, actually used: “What’s the most obvious thing about me?” “When was the last time you had your hair cut?” “Do you think people do as much work now as they did fifty years ago?” At first, the students merely spot the tone of the person they are interviewing—and many and various are the adventures they have while doing this! Later, as they gain some assurance about stopping strangers and plying them with questions, these instructions are added: “Interview at least 15 people. With the first five, match their tone, as soon as you’ve spotted it. The next five, you drop below their chronic tone, and see what happens. For the last five, put on a higher tone than theirs.”

What does an ACC student gain from these exercises? A willingness to communicate with anyone, for one thing. To begin with, students are highly selective about the sort of people they stop. Only old ladies. No one who looks angry. Or only people who look clean. Finally, they just stop the next person who comes along, even though he looks leprous and armed to the teeth. Confrontingness has come ‘way up, and he’s just somebody else to talk to. They become willing to pinpoint a person on the scale, without shilly-shallying. They say, “He’s a chronic 1.1. Social tone 3.5, but real phony.” That’s the way it is, and they can see it. They also become quite gifted and flexible at assuming tones at will, and putting them across convincingly. Very useful in many situations, and lots of fun to do. They grow adept at

punching through a comm lag in an informal situation. At sorting out apparencies from realities. The rise in certainty of communication, and in ease and relaxation of manner while handling people, in the students who have been run through this mill, is something which must be seen or experienced to be believed. The one most often repeated request in every ACC Unit is: "Can't we please have some more obnosis this week? We haven't had enough of it yet." (This statement is very funny to the ACC instructors, because these same students said at the beginning, "If you make me go out there, I'll walk out on the course.") Obnosis is quite important, and should be learned as thoroughly as possible by all Scientologists.

SCIENTOLOGY I to IV

GOOD INDICATORS AT LOWER LEVELS

The following list of good indicators was compiled from my lecture tapes by John Galusha. An additional three are added at the end.

Lower Level Good Indicators.

1. Pc cheerful or getting more cheerful.
2. Pc cogniting.
3. Fundamental rightnesses of pcs asserting themselves.
4. Pc giving things to auditor briefly and accurately.
5. Pc finding things rapidly.
6. Meter reading properly.
7. What's being done giving proper meter response.
8. What's being found giving proper meter response.
9. Pc running rapidly and flattening by TA or cognitions.
10. Pc giving auditor information easily.
11. Needle cleanly swinging about.
12. Pc running easily and if pc encounters somatics they are discharging.
13. Tone Arm goes down when pc hits a cognition.
14. Further TA blowdown as pc continues to talk about something.
15. Expected meter behaviour and nothing unexpected in meter behaviour.
16. Pc gets warm and stays warm in auditing or gets hot and unheats while in auditing.
17. Pc has occasional somatics of brief duration.
18. Tone Arm operating in the range 2.25 to 3.5.
19. Good TA action on spotting things.
20. Meter reading well on what pc and auditor think is wrong.
21. Pc not much troubled with PTPs and they are easily handled when they occur.
22. Pc stays certain of the auditing solution.
23. Pc happy and satisfied with auditor regardless of what auditor is doing.
24. Pc not protesting auditor's actions.
25. Pc looking better by reason of auditing.
26. Pc feeling more energetic.
27. Pc without pains, aches or illnesses developing during auditing. Does not mean pc shouldn't have somatics. Means pc shouldn't get sick.

28. Pc wanting more auditing.
29. Pc confident and getting more confident.
30. Pc's Itsa free but only covers subject.
31. Auditor easily seeing how it was or is on pc's case by reason of pc's explanations.
32. Pc's ability to Itsa and confront improving.
33. Pc's bank getting straightened out.
34. Pc comfortable in the auditing environment.
35. Pc appearing for auditing on his own volition.
36. Pc on time for session and willing and ready to be audited but without anxiety about it.
37. Pc's trouble in life progressively lessening.
38. Pc's attention becoming freer and more under pc's control.
39. Pc getting more interested in data and technology of Scientology.
40. Pc's havingness in life and livingness improving.
41. Pc's environment becoming more easily handled.

BOARD TECHNICAL BULLETIN

26 APRIL 1969
REISSUED 7 JULY 1974 AS BTB

CANCELS
HCO BULLETIN OF 26 APRIL 1969
SAME TITLE

BAD INDICATORS

1. PC not wanting to be audited.
2. PC protesting auditing.
3. PC looking worse after auditing.
4. PC not able to locate incidents easily.
5. PC "not having time for auditing".
6. PC less certain.
7. PC not doing well in life.
8. Somatics not blowing or erasing.
9. PC in Ethics trouble after auditing.
10. PC protesting Auditor actions.
11. PC wandering all over track.
12. PC misemotional at session end.
13. PC demanding unusual solutions.
14. Skin tone dull.
15. Eyes dull.
16. PC trying to self audit in or out of session.
17. PC continuing to complain of old somatics after they have been run.
18. PC dependence on medical treatment not lessening.
19. PC using, or continuing to use, other treatments.
20. PC lethargic.
21. PC not becoming more cheerful.
22. PC wanting special auditing.
23. No TA action on running incidents.
24. PC not cogniting.
25. PC dispersed.
26. PC trying to explain condition to Auditor or others.
27. PC bored with auditing.
28. PC not available for sessions.
29. PC tired.
30. PC attention on Auditor.
31. PC not wanting to run the process or incident

32. PC overwhelmed.
33. PC taking drugs or excessive alcohol.
34. PC not sure that auditing works for him.
35. PC continuing former practices.
36. PC not handling environment more easily.
37. PC sick between sessions.
38. PC not going on to next grade or level.

E-Meter Checksheets

(Corrections in this type style)

**E-METER ESSENTIALS
ERRATA SHEET**

The following corrections are to be made in *E-METER ESSENTIALS*:

RE: THE TONE ARM:

Page 9 Section 10:

Delete: “no matter what the preclear says.”

Add: “until the EP of that process is reached.”

The whole section now reads: “If the Tone Arm shows motion, continue the process, until the EP of that process is reached.”

Page 10. Section 12:

Delete: “is a breach of the Auditor’s Code Clause 13. Also to continue a process that is producing no Tone Arm motion is a breach of the same Clause . “

Add: “will leave the pc with By-Passed Charge. The process should be continued to the EP of that process.”

The whole section now reads: “To change a process while the Tone Arm shows good motion will leave the pc with By-Passed Charge. The process should be continued to the EP of that process.”

RE: THE SENSITIVITY KNOB:

Page 13, Section 5:

Delete: “Have the preclear hold the electrodes comfortably in his hands. Have him tighten his hands and then relax them, still holding the cans. The needle should drop exactly one-third of a dial. Adjust the sensitivity knob by asking the preclear to squeeze the cans again and observing the needle fall.”

The whole section is substituted with the following: “The exact setting of the sensitivity knob is done as follows: Have the preclear hold the electrodes (cans) in his hands with the cans in contact with the cups of his palms and all his fingers and both thumbs in a comfortable grip. Set the sensitivity at 5 and adjust the position of the needle to set. Have the preclear squeeze the cans with an even gradual pressure, not a sudden hard squeeze. Watch the distance the needle drops. If the distance the needle fell is less than one-third of a dial drop, raise the sensitivity some and get another can squeeze, continuing this procedure till you’ve got the sensitivity setting that gives you one third dial drop on the can squeeze. If the can squeeze gave you

more than one-third dial drop at Sens. 5, lower the sensitivity setting a bit, test another can squeeze, continuing this procedure till you get one-third of a dial drop.

In other words, keep adjusting your sensitivity lower or higher according to whether the drop is more or less than one-third of a dial drop, until you get the correct sensitivity setting.”

Page 13. Section 7:

Delete: “Adjust the knob to a still needle that will yet move on needed responses . “

Add: “Adjust the sensitivity knob to get a third of a dial drop on the can squeeze, or as close to that as you can.”

The whole section now reads: “In short, adjust the sensitivity knob to get a third of a dial drop on the can squeeze, or as close to that as you can.”

RE: THE NEEDLE:

Page 14. Section 4:

Delete: “A fall always happens with rapidity, within a second or two.”

Add: “A fall always happens at the exact end of the question asked.”

The whole section now reads: “A falling needle (3) makes a dip to the right as you face the meter. A fall may consist of half a division (about one-eighth of an inch) or may consist of fifteen dials (the whole meter face dropped fifteen times). It is still a fall. A fall always happens at the exact end of the question asked. It is also called a drop, a dip and a register. It denotes that a disagreement with life on which the preclear has greater or lesser reality has met the question asked.”

Page 15. Section 9:

Delete: “upon the question being asked. A fall can be in two stages or more providing they take place within a second or two after the question.”

Add: “at the end of the last word of the question asked.”

The whole section now reads: “A fall follows at once at the end of the last word of the question asked.”

RE: CHANGE OF CHARACTERISTIC:

Page 15. Section 17:

Delete: “we must assume that that is it and we use it.”

Add: “it can be further explored with the suppress and invalidate buttons to see if it develops into a sF, F. or BD, which then can be used.”

The whole section now reads: “Change of characteristic occurs when we hit on something in the preclear’s bank. It occurs only when and each time that we ask that exact question. *As* the question or item alone changes the needle pattern, it can be further explored with the suppress and invalidate buttons to see if it develops into a sF, F. or BD, which then can be used.”

Page 15. Section 18:

Delete: “usually” .

Add: “may”.

The whole section now reads: “A question that stops a rising needle is a change of characteristic question and like a fall means we have struck something. Further exploration may develop it into a fall.”

Page 16, Section 21:

Delete: “within one tenth to one half of a second after you have asked a question of the preclear.”

Add: “An instant read is defined as that reaction of the needle which occurs at the precise end of any major thought voiced by the auditor.”

The whole section now reads: “It is not much used but must be known as it may have to be used sooner or later when we can’t get falls.

“The only needle reactions in which you should be interested are those which occur INSTANTLY. An instant read is defined as that reaction of the needle which occurs at the precise end of any major thought voiced by the auditor.”

RE: ROCK SLAMS:

Page 17, Section 35, ROCK SLAM (7):

Delete: “This originally meant (and still does) that you are on the rock chain.”

Add: “A Rock Slam means a hidden Evil Intention on the subject or question under discussion or auditing.”

The whole section now reads: “In assessing or running you occasionally get a Rock Slam. A Rock Slam means a hidden Evil Intention on the subject or question under discussion or auditing.”

Page 17, Section 36:

Delete: “A Rock Slam is a crazy, irregular, unequal, jerky motion of the needle, narrow as one inch or as wide as three inches happening several times a second. The needle ‘goes crazy’, slamming back and forth, narrowly, widely, over on the left, over on the right, in a mad war dance or as if it were frantically trying to escape. It means hot terminal or hot anything in an assessment and takes precedence over a fall.”

The entire section is replaced with: “A Rock Slam is a crazy, irregular, leftright slashing motion of the needle. It repeats left and right slashes unevenly and savagely, faster than the eye easily follows. The needle is frantic. The width of a Rock Slam (R/S) depends largely on sensitivity setting. It goes from one-fourth inch to whole dial. But it slams back and forth. It means hot item in an assessment and takes precedence over a fall or it means that you have left rings on the pc’s hands or have a loose connection in the leads or meter. If the latter two items verify as not present you are looking at a Rock Slam in the pc.”

RE: FREE NEEDLES:

Page 17, Section 41:

Delete: “It means an idle, uninfluenced motion, no matter what you say about the goal or terminal. It isn’t just null, it’s uninfluenced by anything (except body reactions).”

The entire section is replaced by: “It means the same as a Floating Needle, which is a rhythmic sweep of the dial at a slow, even pace of the needle, back and forth, back and forth, without change in the width of the swing except perhaps to widen as the pc gets off the last small bits of charge. Note that it can get so wide that you have to shift the Tone Arm back and forth, back and forth, to keep the needle on the dial in which case you have a floating tone arm.”

Page 18 Section 44:

Delete: “It doesn’t happen until a person is well above release, so don’t worry about it until you see it.”

The whole section is replaced with: “It can occur after a cognition, blowdown of the Tone Arm, at a release point, or on the erasure of a Dianetic chain.”

Page 18. Section 46:

Delete: “A Free Needle means, when it’s used as a term, ‘The preclear is getting awful close to clear.’“

The whole section is replaced with: “A Free Needle or Floating Needle is one of the parts of the End Phenomena for any process or action.”

RE: SECURITY CHECKING:

Page 21. Section 3:

Delete: “(b) it’s in a past life and he doesn’t consciously know about it (since the meter precedes preclear consciousness).”

The entire line is replaced with: “(b) there’s an earlier similar overt or withhold . “

Page 22. Section 5:

Delete: “In the case of a past life possibility you add, ‘In this lifetime’ to your security question. As you repeat that, if the misdeed was in a past life, the fall will vanish.”

The whole section is replaced with: “In the case of (b) when there’s an earlier similar overt or withhold, you must ask for it and get it.”

Page 22. Section 7:

Delete: “always (as in all Rudiments) ask the question again as this might not be all of it.”

Add: “you get all the data and handle it earlier similar withhold as necessary to an F/N.”

The whole section now reads: “If the preclear tells you a withhold, you get all the data and handle it earlier similar withhold as necessary to an F/N.”

Page 22. Section 9:

Delete: “On a security check sheet, follow up every change of characteristic before you go on.”

Add: “On a security check, follow up every change of characteristic, if it is instant, before you go on.”

The whole section now reads: “On a security check, follow up every change of characteristic, if it is instant, before you go on. Change of characteristic, if it amounts to anything, will develop into a fall.”

Page 22, Section 10:

Delete. “(or it’s a past life)”.

Add: “or there’s an earlier similar overt or withhold”

The whole section now reads: “If the preclear hasn’t told all or there’s an earlier similar overt or withhold, the meter won’t clear.”

Page 22, Section 14:

No deletions.

Add: “except when it’s a false read which can be checked for.”

The whole section now reads: “Grim experience of a decade has taught me that it’s (a) or (b) and never ‘I moved the needle myself’ or ‘I feel nervous just generally’. The E-Meter is right even when it seems to make the preclear wrong, except when it’s a false read which can be checked for.”

RE: METER FRAILTIES:

Page 25, Section 7:

Delete: “if that doesn’t stop it, squirt some lighter fluid into the Tone Arm ‘bearing’ from the meter face side.”

Add: “including the Mark V until February 1979”.

The entire section now reads: “One exception: The British and American Hubbard Electrometer early models including the Mark V until February 1979 had a ‘carbon pot’ which is to say the Tone Arm was in ‘pure carbon bearings’, if you could call it that. A speck of dust can get in the ‘pot’ and cause the needle to rock slam whether connected to the preclear or not. Pull the lead wire jack (disconnecting cans) and if the slam continues, it’s the ‘pot’ that’s wrong. Work the Tone Arm vigorously for a short while. If that doesn’t stop it, turn it in to be repaired. Later models of the British and American Hubbard Electrometer have ‘wire wound pots’ and this doesn’t happen . “

L. RON HUBBARD
Founder

The Book

Of

E - Meter Drills

E-METER DRILL-1

Number: EM- 1.

Name: TOUCH AND LET GO OF THE E-METER.

Purpose: To familiarize the student auditor with the E-Meter.

Position: The coach and student auditor sit facing each other with an E-Meter in front of the student auditor, either on a table or chair.

Commands: "Touch the meter and Let go of the meter" alternately. The acknowledgement, after each execution of the commands, is "Thank you".

Training Stress:

The coach sees that the student auditor executes the commands. The coach asks from time to time, "How are you doing?" The coach handles any physical manifestations of the student auditor by asking, "What is happening?"

History: Developed by L. Ron Hubbard in September. 1962. at Saint Hill.

E-METER DRILL-2

Number: EM - 2.

Name: E-METER FAMILIARISATION.

Purpose: To familiarize the student auditor with the E-Meter.

Position: The coach and the student auditor sit beside each other with an E-Meter in the student auditor's lap or on a table in front of the student auditor.

Commands:

- Touch the sensitivity knob.
- Move the tone arm to 5.5.
- Touch the trim knob.
- Plug in the electrodes.
- Turn the meter on.
- Set the sensitivity knob at 3.
- Turn the meter on test.
- Unplug the cans.
- Turn the meter on set.
- Adjust the needle to set.
- Turn the sensitivity booster to 64.
- Turn the meter to transit.
- Switch the meter off.
- Set the tone arm at 2.75.
- Point to the needle.
- Turn the sensitivity booster to 32.
- Switch the meter on.
- Turn the meter to set.
- Demonstrate a tone arm blowdown.
- Set the tone arm at 2.5.
- Point to 7 on the tone arm dial.
- Turn the sensitivity knob to 8.
- Set the tone arm at 6.
- Demonstrate a tone arm blowdown.
- Switch the meter off.
- Plug in the electrodes.
- Set the tone arm at 1.5.
- Turn the meter to transit.
- Point to the electrode plug.
- Turn the sensitivity booster to 128 (or 64).
- Unplug the electrodes.
- Switch the meter on.
- Move the tone arm to 3.5
- Touch the tone arm.
- Touch the sensitivity knob.
- Switch the meter on.
- Adjust the needle to set.
- Demonstrate an unmoving tone arm.
- Move the tone arm to 5.
- Switch the meter off.
- Touch the sensitivity booster.

Training Stress:

The coach should read these off to the student auditor, getting him to do each action. As the student auditor improves, the coach can read the list more rapidly until the student auditor can perform each action called for without hesitation and without errors. Flunks are given for

failure to execute the action called for, and for any hesitation after the student auditor has been through the drill several times.

The drill is passed when the student auditor can do the drill rapidly and precisely without any flunks.

HISTORY: Developed by L. Ron Hubbard in May, 1961, at Saint Hill.

E-METER DRILL-3

Number: EM-3.

Name: READING AND SETTING UP A TONE ARM COUNTER. (Only for those student auditors with a tone arm counter on their E-Meter)

Purpose: To teach the student auditor how to read the tone arm counter. To train the student auditor to set up a tone arm counter before each session as part of setting up the E-Meter.

Position: The coach and the student auditor sit beside each other in front of a table with an E-Meter on it.

Commands: No set commands.

Training Stress:

Step 1. Have the student auditor do the following by list:

Set the figure "0" in the middle of the upper window of the tone arm counter. Move the tone arm clockwise until the tone arm is sitting at 2, 3, 4, 5, or 6 on the tone arm dial. Now have the student auditor do the following:

- a. Move the tone arm down one division from 6 to 5 or 4 to 3 or so on. Have the student auditor observe that the figure "1" now reads in the middle of the upper window.
- b. Move the tone arm up one division to the original position. Have the student auditor observe that the figure "1" remains constant in the middle of the upper window.
- c. Move the tone arm down a half division from 6 to 5.5 or 4 to 3.5 or so on. Have the student auditor observe that the figure "1.5" now reads in the middle of the upper window.
- d. Move the tone arm down another half division. Have the student auditor observe that the figure "2" now reads in the middle of the upper window.
- e. Move the tone arm up a division. Again have the student auditor observe that the figure in the upper window is still "2" and that no change occurred by reason of an upward movement of the tone arm. The student auditor should now realize that only the downward movement of the tone arm is registered and counted on the tone arm counter.
- f. Move the tone arm slowly down one division and count the number of small divisions registering in the upper window as the tone arm moves. Have the student auditor observe that the divisions are marked off in tenths of a division.
- g. Move the tone arm randomly up and down. Have the student auditor read off the registration in the middle of the upper window of the tone arm counter.
- h. Move the tone arm up and down and observe that the upper tone arm counter registers up to 7 divisions of downward tone arm motion and that the lower tone arm counter adds up these 7 divisions of tone arm action.

Step 2. Have the student auditor do the following actions again and again so as to train him in setting up a tone arm counter.

- a. Move the tone arm up and down in the area below 2.0 on the tone arm dial until the figure "0" appears in the middle of the window of the upper counter.

b. Without further touching of the tone arm, rotate the pinions of the gear wheel on the lower counter with the thumb nail, or otherwise, until the figure "98" appears in the window of the lower tone arm counter.

c. Move the tone arm clockwise up to 3.5 on the tone arm dial. The student auditor should observe that the counter clicks twice and that the figure "0" is now reading in the window of the lower tone arm counter.

This is step ten of the next drill on setting up an E-Meter, so the student auditor should become proficient at doing this before going to the next drill.

The student auditor should know that in a proper session, after the can squeeze in session preliminaries, and before the R factor, he should write down on the Auditor's Report Form the figure now reading in the upper window of the tone arm counter. This figure will have to be subtracted from the total of the upper and lower counter windows at the end of the session in order to calculate the total downward arm motion obtained in the session.

Step 3. The following is to teach the student auditor to take care in reading his tone arm counter when the tone arm is being operated above 3.0 on the tone arm dial.

a. The coach moves the counter to any position by moving the tone arm so that a figure lower than 6 registers in the upper window of the tone arm counter.

b. The student auditor notes down the amount of tone arm motion registering on both counter windows by adding the figure is to be taken as the total tone arm motion obtained the far in the session.

c. The coach has the student auditor move the tone arm and down, keeping the tone arm above 3.0 on the tone arm dial, until the first click of the counter is heard or until the figure in the lower window changes one position.

d. The student auditor is to write down the figure reading in the middle of the upper window of the tone arm counter and observe that the reading in the lower window is incorrect.

e. The coach has the student auditor move the tone arm clock wise a little further until the second click of the counter occur or until the figure in the lower window changes to a second position.

f. The student auditor should write down the figure appearing in the lower window of the tone arm counter and observe that the reading in the lower window plus that in the upper window would give an incorrect tone arm figure.

g. The coach now has the student auditor subtract the figure noted down in step "d" from 7.0. This amount is now subtracted from the figure noted down in step "f". This gives the proper total of the tone arm action obtained thus far in the session.

h. The above steps "a" through "e" are done again with the student auditor moving the tone arm in the range below 3 0. After the second click of the counter occurs or when the figure in the lower window changes to a second position, the student auditor should write down the figure appearing in the lower window of the tone arm counter and observe that the reading in the lower window plus that in the upper window will now give a correct tone arm figure.

Flunks are given for misreading the figures in the tone arm counter windows, for slowness and errors in setting up the tone arm counter, and for getting a wrong total of tone arm motion.

This drill is passed when the student auditor can demonstrate his ability to read and set a tone arm counter to the satisfaction of the supervisor. A pink sheet is given for an earlier drill the student auditor demonstrates a lack of ability.

History: Developed by L. Ron Hubbard at Saint Hill Manor in 1964 upon the advent of the tone arm counter as an aid in the use of an E-Meter.

E-METER DRILL-4

Number: EM-4.

Name: SETTING UP AN E-METER.

Purpose: To train the student auditor to set up an E-Meter properly before each session and to learn never to check the batteries in the presence of a preclear.

Position: The coach and student auditor sit beside each other in front of a table with an E-Meter and the cans on the table.

Commands: Have the student auditor do the following actions by number and command over and over again:

1. Take the lid off the E-Meter.
2. Put the lid on to the far edge of the E-Meter and secure into position with catches.
3. Turn the sensitivity knob full on (16 or 32 depending upon the model).
4. Turn the set-transit-test knob to test for battery check.
5. Turn the set-transit-test knob to set.
6. Position the tone arm at 2.0 on the tone arm dial.
7. Adjust the trim knob until the needle registers at the set line on the needle dial.
8. Place the electrodes, not touching each other, in a position on the table for the preclear to pick up.
9. String the electrode lead between the E-Meter and the lid, from the left of the meter to the right, and plug the jack in completely.
10. Set the tone arm counter as given in previous drill. (Omit this step if student auditor has no tone arm counter on his E-Meter.)
11. Await the preclear.

Training Stress:

When the student auditor is proficient at doing the above by command and by number only, then the coach will have the student auditor do the full operation. Flunks are given for any action done out of sequence and for taking an excessive amount of time to perform any action.

This drill is passed when the student auditor can perform each action rapidly, smoothly, and without communication lag. A pink sheet is given any student auditor who cannot properly perform some action which he should have learned in an earlier drill. This drill will then have to be re-passed by the student auditor.

History: Developed by L. Ron Hubbard in December, 1963, at Saint Hill, in order to train the student auditor to set up an E-Meter properly and to eliminate the distractions of sound and noise from the preclears session.

E-METER DRILL-5

Number: EM-5.

Name: CAN SQUEEZE.

Purpose: To train a student auditor how to get an accurate can squeeze which correctly indicates the preclear's current state of Havingness and state of case.

Position: The coach and the student auditor sit facing each other across a table with an E-Meter facing the student auditor. The E-Meter is already set up.

Commands: "put your hands in your lap." "Thank you." "Squeeze the cans, please." "Thank you."

Training Stress:

To give the student auditor a proper idea as to what a can squeeze is, the following drill should be done first:

1. The coach has the student auditor shake his hands until the fingers are loose and floppy.
2. Then the coach has the student auditor put his hands on the table, palms up, exerting no control on his fingers. The student auditor's fingers will curl in toward the palm.
3. Now the coach simply places the cans in the student auditor's hands at an angle across the palms. The natural curl of the fingers is sufficient to hold the cans in place, and the placement of the cans at an angle ensures that the maximum skin area is touching the cans.
4. Now the coach has the student auditor casually increase his grip on the cans and relax. This is a can squeeze.
Having done the above, the coach now has the student auditor do the following:
 1. Have the coach pick up the cans.
 2. Check the coach's grip on the cans.
 3. Adjust the sensitivity booster knob to the lowest position (16 or 32, depending upon the model).
 4. Set the sensitivity knob at 1 on the sensitivity dial.
 5. Adjust the needle to the set line on the needle dial.
 6. Give the proper commands for getting a can squeeze.
 7. Note the distance the needle fell when the coach squeeze the cans.

Flunks are given for not having the coach remove all rings or finger jewellery. as they can cause the needle to give unusual reads; for not checking that there is maximum skin contact on the cans; for failing to see that the thumbs go around the can and not up the sides; for failing to set the meter and needle up properly; for failing to notice and handle a desperate or convulsive grabbing or sudden letting go of the cans; for failing to note accurately the distance

the needle fell on the can squeeze; and for giving the wrong commands. Lack of skill in earlier drills is corrected by pink sheet.

Please note that step number 2 is not always done. In actual auditing, the preclear soon learns how to do a proper can squeeze. If the preclear's Havingness is in good shape, the needle should go over, hit the right-hand pin, and bounce off the pin twice.

History: Developed as a training drill by L. Ron Hubbard at Saint Hill in 1963.

E-METER DRILL-6

Number: EM-6.

Name: HANDLING THE TONE ARM AND SENSITIVITY KNOB.

Purpose: To train a student auditor to move the tone arm and sensitivity knob without distracting the preclear or drawing the preclear's attention to the E-Meter. To train the student auditor out of over or under compensation in bringing the needle to set so as to obtain an accurate count of tone arm action on the tone arm counter.

Position: The coach and the student auditor sit beside each other at a table with an E-Meter in front of them.

Commands: Tone arm and sensitivity positions as called by the coach in Step 1.

Training Stress:

Step 1. The coach has the student auditor place the four fingers of the left hand behind the E-Meter, leaving the thumb free to move the tone arm and the sensitivity knob. Then the coach calls out to the student auditor various tone arm and sensitivity positions.

The student auditor must move the tone arm or the sensitivity knob to the correct position smoothly and fast.

Step 2. The coach holds the electrodes in his hands and makes gross hand motions to produce tone arm motion. The student auditor must continuously adjust the tone arm so as to place the needle in the set position area on the needle dial.

Flunks are given for any obvious movement which could distract a preclear; for any noisy actions, such as accidentally turning the meter off while moving the sensitivity knob; for slowness in adjusting the tone arm and the sensitivity knob to the positions called; for moving his head while watching the needle; for an inability to return the needle to the set position area on the needle dial; and for adjusting the needle so poorly as to cause the needle to hit the pin on either side of the needle dial; such being an action caused by the auditor and not the coach. Give a pink sheet for any earlier drills to be re-done. if necessary.

History: Developed by L. Ron Hubbard at Saint Hill upon the development of the more sensitive E-Meter.

E-METER DRILL-7

Number: EM-7.

Name: TONE ARM READING.

Purpose: To teach the student auditor how to read the tone positions on the tone arm dial accurately and speedily.

Position: The coach and student auditor sit beside each other at table with the E-Meter in front of them.

Commands: No set commands, except the following by list for Step 2 of the drill:

Move the tone arm to:

1.9	6.5	0.7	6.1	4.9	3.5	4.2
5.75	3.0	5.0	3.4	1.75	2.4	3.3
1.3	4.1	5.9	4.0	3.25	2.7	3.9
3.1	2.3	2.2	6.0	1.5	5.25	2.75
5.3	4.7	6.2	0.5	0.9	5.8	2.0
4.5	3.5	2.1	2.6	5.6	1.8	2.8
4.4	1.25	6.25	2.25	3.2	5.1	4.8
3.6	1.1	2.5	4.25	4.75	3.75	4.6
6.3	5.4	5.7	1.6	2.9	1.0	5.5
1.7	0.8	1.2	4.3	6.4	0.6	1.4
5.2	3.8	0.75	1.7	0.8	1.2	4.3
0.6	1.4	5.2	3.8	0.75	3.0	5.0
3.4	1.75	3.3	1.3	4.1	5.9	3.25
3.1	2.3	2.2	6.0	1.5	5.25	2.75

Training Stress:

Step 1. The coach moves the tone arm, calling each position from 3.0 to 4.0, the positions being 3.0, 3.1, 3.2, 3.25, 3.3, 3.5, 3.6, 3.7, 3.75, 3.8, 3.9, 4.0 and then has the student auditor do the same. Then the coach selects another division to work through, as from 1.0 to 2.0, doing the same thing. Do not for to cover the half divisions from 0.5 to 1.0 and from 6.0 to 6.5.

The student auditor should feel confident and familiar with reading the tone arm in this fashion before going to the next step.

Step 2. The coach calls off the tone arm positions as listed above. The student auditor rapidly moves the tone arm to positions called. For further practice, if need be, the coach can call off the tone arm positions listed in a different sequence.

The student auditor should be able to move the tone arm to the required positions with precision and speed before going on to the next step. Should the student auditor get confused or continue to do this step slowly, the coach should return the student auditor to the first step for further practice.

Step 3. The coach flicks the tone arm to any and all positions of the tone arm dial. After this has been done, the student auditor should read and call the exact position of the tone arm. The tone arm positions are only read in tenths except for the marked positions of 0.25 and 0.75 for each division. The coach should continue to do this section of the drill until the student auditor can read and call the positions accurately without hesitation. If the student auditor has difficulty with this step of the drill, the coach should return him to the first step of the drill for further work and then re-do the second step again.

This drill is passed when the student auditor, upon examination by the supervisor, can rapidly and accurately read and call any tone arm position as in the third step of this drill. Earlier drills in error are corrected by giving the student auditor a pink sheet to re-do them.

History: Developed by L. Ron Hubbard in 1961, in order to establish a common ground of tone arm position reading amongst the students of the Saint Hill Special Briefing Course and to train students to read the tone arm positions more rapidly.

E-METER DRILL-8

Number: EM-8.

Name: TONE: ARM MOTION AND NO MOTION RECOGNITION.

Purpose: To enable the student auditor to recognize tone arm motion when it occurs and when it does not occur.

Position: The student auditor sits in any posture with the E-Meter held in any way he wants to hold it. Another student sits silently reading a bulletin, while holding the electrodes.

Commands: None. This is a totally silent drill.

Training Stress:

The student auditor should note when the tone arm moves and when the tone arm is not moving. These are noted by saying to himself, "The tone arm is moving; do nothing" or "The tone arm is not moving; do something".

Don't get involved with significances or phenomena.

All this drill is supposed to teach is that, when the tone arm moves, nothing should be done by an auditor and that, when the tone arm does not move, something should be done by an auditor.

This is a simple drill. Please Keep it Simple.

The supervisor should check now and then to make sure the student auditor is doing it correctly. This drill is passed when the student auditor can recognize when the tone arm is moving or not moving without error. Give a pink sheet for any earlier drill which the student auditor mishandles.

History: Developed by L. Ron Hubbard at Saint Hill in September 1962, and revised in December, 1963.

E-METER DRILL-9

Number: EM-9.

Name: TONE ARM MOTION AND BODY MOTION.

Purpose: To teach the student auditor to differentiate between the reaction of thought and of body motion on the E-Meter and to train a student auditor not to touch the tone arm while the preclear is moving.

Position: The student auditor and the coach are seated facing each other across a table with the E-Meter set up and the sensitivity set at 16. The coach holds the electrodes and has a bulletin available to study. The student auditor has pen and paper.

Commands: No set commands are used. The coach, in making body motions, should do the following: sigh, yawn, breathe deeply, cough, laugh, move hands around, stretch, squirm, twist about in the chair, relax or firmly grip the electrodes, shift feet about, or any other motion of the body.

Training Stress:

The student auditor needs to know that the tone arm moves on thought and on body motion and that it is only the tone arm motion of the mind that is of interest to the auditor, plus the following:

Tone Arm Motion: The amount of divisions, down, measured for a 2-hour session.

Naturally, in order to get downward motion of the tone arm, the tone arm does have to move upward. By downward motion is meant the tone arm moving, say, from 3.2 to 2.5 on the tone arm dial. By upward motion is meant the tone arm moving, say, from 2.7 to 3.4. The tone arm has to move up and down to get tone arm motion in a session, but it is the downward motion that tells whether the preclear is making gains or not. That is why tone arm motion is measured and recorded by downward motion for a session.

Body Motion: Any motion of the body which causes the tone arm to move falsely up or down. Body motion is never recorded in a session. In order not to falsely record body motion in a session, the auditor should never adjust the tone arm during a body motion of a preclear and should wait until the preclear settles down before adjusting the tone arm. Some preclears will move about so as to get more tone arm motion or will do some thing to show the auditor that they can control the tone arm by causing it to blow down. This is all easily done by body motion or by going out of session. The student auditor should know that this can occur, should be unimpressed by it, and should know not to record it as tone arm motion for the session. It may be necessary for an auditor to tell a preclear that no body motion will be recorded, in order to get his co-operation in sitting relaxedly and quietly in the session.

The coach will alternately study a bulletin for a while and perform various body motions. Then the coach is both to study a bulletin and perform various body motions while studying. The student auditor records the downward motion of the tone arm.

After doing this for a while, the coach gets the student auditor to add up the tone arm motion and checks to see that the total is correct and that the total reflects only the downward motion of the tone arm.

Flunks are given for an incorrect total of tone arm motion, for adjusting the tone arm during body motion, and for recording any body motion. This is more difficult when the coach both studies bulletins and performs body motions at the same time so the coach should keep a close watch on what the student auditor is doing.

This drill is passed when the student auditor can demonstrate that he can differentiate tone arm motion from body motion, can properly record tone arm motion (if student auditor cannot perform earlier drills on the E-meter, then the supervisor should give him a pink sheet in order to re-do these), and can handle the tone arm properly.

History: Developed by L. Ron Hubbard in 1962 at Saint Hill with the discovery of the various levels of processes.

E-METER DRILL-10

Number: EM-10.

Name: TONE ARM BLOWDOWNS.

Purpose: To train the student auditor to observe and note down tone arm blowdowns.

Position: The student auditor and another student are seated facing each other across a table with the E-Meter set up and the sensitivity set at 16. The student holds the electrodes and studies a bulletin.

Commands: None. This is a totally silent drill.

Training Stress:

The student auditor, after getting the other student to hold the electrodes and to study a bulletin, carefully notes down tone arm motion and carefully watches for any tone arm blowdown.

A tone arm blowdown is a sudden downwards motion (at least 0.2 divisions or more) of the tone arm.

When a blowdown occurs, the student auditor marks it down and writes "Blowdown" to the right-hand side of the written line of the tone arm action.

Example: 2.4
 2.1
 2.0
 2.5)
 2.2) Blowdown

Further, the student auditor should say to himself every time a blowdown occurs, "That which blows down the tone arm will produce tone arm motion."

This drill is passed when the supervisor has examined the student auditor doing the drill, observed that the student auditor can observe and correctly note down tone arm blowdowns, and does understand that any tone arm blowdown if taken up by an auditor will, with processing, produce tone arm motion. The student auditor is given a pink sheet for failing to handle properly any of the earlier E- Meter drills.

History: Developed by L. Ron Hubbard in 1962. and revised in 1963. The value of the blowdown was first apparent in the assessment of items and was later discovered to be of value at all levels of auditing.

E-METER DRILL-11

Number: EM-11.

Name: SUPERLATIVE TONE ARM HANDLING.

Purpose: To train a student auditor to handle the tone arm while asking a metered question. To teach a student auditor that, when asking a metered question, the preclear must be still, the needle in sight on the needle dial, and his thumb off the tone arm before the end of a question.

Position: The student auditor and the coach sit beside each other at a table with an E-Meter set up and the coach holding the electrodes.

Commands: The preclear origination sheet. (See Appendix.)

Training Stress:

Step 1. The student auditor takes a line from the preclear origination sheet and reads it out. At the end of the line, the needle must be in sight on the needle dial and the student auditor must have his thumb off the tone arm.

Lower sensitivities are worked at to begin with, and the coach increases the sensitivity of the meter as the student auditor's ability increases, until the student auditor can do the drill with the sensitivity set at 32 and the sensitivity booster set at 128.

Step 2. The coach now complicates the drill by moving about, thereby causing the student auditor to repeat the line.

Flunks are given for failure to have the needle on the dial and the thumb off the tone arm before the end of the spoken line and for failure to repeat a line, when it was interrupted with a body motion so as to render the read unreadable or invalidated. Earlier drills in error are corrected by issuance of a pink sheet.

This drill is passed when the student auditor can handle the tone arm, as indicated, to the satisfaction of the supervisor.

History: Developed by L. Ron Hubbard at Saint Hill when the most sensitive E-Meter that has ever been used in Scientology was produced—the Mark V.

E-METER DRILL-12

Number: EM-12.

Name: NEEDLE ACTIONS.

Purpose: To teach the student auditor to recognize the various needle actions.

Position: The student auditor and the coach sit beside each other at a table with the E-Meter turned on and the electrodes unplugged. or they work at a constructed, enlarged model of the E-Meter.

Commands: No commands are used.

The student auditor must demonstrate on the E-Meter and he able to- define the following needle actions:

- | | | |
|--------------------------------|--------------------|------------------|
| 1. Stuck | 7. Rock slam | 13. Tick |
| 2. Null | 8. Free needle | 14. Speeded rise |
| 3. Fall | 9. Stage four | 15. Speeded fall |
| 4. Change of
characteristic | 10. Rocket read | 16. Slowed rise |
| 5. Rise | 11. A clean needle | 17. Slowed fall |
| 6. Theta bop | 12. A dirty needle | 18. Stop |

Training Stress:

Step 1. The student auditor is asked to produce, as well as he can, all of the above needle actions and define each one.

Step 2. The coach then does the various needle actions above and has the student auditor call what each one is.

Step 3. The coach now calls off at random the above needle actions and the student auditor has to produce each one as called.

Flunks are given for mis-defining a needle action, for mis- calling a needle action, and for failing to produce the proper needle action called for.

This drill is passed when the student auditor can perform the three steps of this drill accurately.

History: Developed in 1961 at Saint Hill by L. Ron Hubbard to supplement other similar meter drills.

E-METER DRILL-13

Number: EM-13.

Name: BODY REACTIONS.

Purpose: To familiarize the student auditor with the E-Meter and to train the student auditor to distinguish between mental reads and body reactions on the E-Meter.

Position: In the first part of the drill, the student auditor and coach are seated facing each other a comfortable distance apart. The student auditor holds the E-Meter in his hands with the sensitivity set at 16, and the coach holds the cans.

In the second part of the drill, the coach sits behind the student auditor, the coach holding the cans and the student auditor holding the E-Meter with the sensitivity set at 16.

Commands: In the first part of the drill the coach announces and then physically does each of the following actions: Sigh. Yawn. Breathe deeply. Cough. Laugh. Touch cans together. Lift a finger off the cans. Tap a finger on the cans. Rotate cans in hand. Compulsively grip the cans. Loosen grip on the cans. Scratch a leg. Rub a can against garment. Rub fingers together. Stretch.

In the second part of the drill, the coach does not announce what action he is doing.

Training Stress:

In the first part of the drill, the coach is to get the student auditor thoroughly familiar with all of the listed body reactions.

In the second part of the drill, the coach says, "Start", and then randomly does one of the above body actions. The coach then asks the student auditor what the body reaction was. If the student auditor gives the wrong answer, the coach says, "Flunk" and tells the student auditor what the body reaction was and does the same motion again. Then the coach does another body action.

This training drill is passed when the student auditor can correctly call each of the above body actions correctly by mere observation of the reaction produced by them on the E-Meter.

History: Developed by L. Ron Hubbard at Saint Hill in May 1961.

E-METER DRILL-14

Number: EM-14.

Name: NEEDLE MOTION AND NO MOTION RECOGNITION.

Purpose: To enable the student auditor to recognize reads and no reads of the meter needle.

Position: The student auditor sits in any posture with the E-meter held in any way he wants to hold it. Another student, while holding the electrodes, sits silently reading a bulletin.

Commands: None. This is a totally silent drill.

Training Stress:

When the meter reads, the student auditor says to himself, "Read". When the meter does not read, the student auditor says to himself, "Clean". (He doesn't say it to the student reading the bulletin, or to an instructor, and NOT to a coach.) The student auditor calls silently a dozen reads and then calls a dozen times when the needle is clean, no reaction or change of needle characteristic occurring at the time he calls it. Then he calls more reads and more cleans.

Don't get involved with significances or phenomena.

All this drill is supposed to teach is that, when the meter reads. it reads and that, when it's clean, it's clean.

The supervisor should check now and then to make sure the student auditor is doing the drill correctly. This drill is passed when the student auditor can call a read or a clean without missing. Errors in earlier E-Meter drills are corrected by issuing a pink sheet for any drills the student auditor needs to re-do.

History: Developed by L. Ron Hubbard at Saint Hill in September, 1962, and revised in December, 1963.

E-METER DRILL-15

Number: EM-15.

Name: FAMILIARISATION WITH READING AN E-METER.

Purpose: To train the student auditor to recognize accurately speedily, and with certainty when the preclear has reacted something said or asked.

Position: The coach and student auditor sit facing each other across a table with an E-Meter set up and the coach holding the electrodes.

Commands: The preclear origination sheet.

Training Stress:

The student auditor takes a line from the preclear origination sheet and, while looking at the meter, says the line to the coach.

When the student auditor has done this, the coach asks the following question: “What did the needle do while reading the line?”

If the student auditor hesitates or is uncertain of what the needle did, then the coach asks the student auditor for the ten main needle actions, getting him to define each briefly; and the the coach has the student auditor repeat the line from the preclear origination sheet and asks the above question again.

As the student auditor becomes proficient at observing and calling what the needle did, the coach now adds to the above question, “Where did the needle—?” for each action of the needle reported by the student auditor, until the student audit not only can report accurately all that the needle did, but also exactly when, in the line read to the coach, the needle did it.

Flunks are given for any previous training drill in error a for comm lags in answering the questions.

This training drill is passed when the student auditor can demonstrate to the satisfaction of the supervisor that he observed and read accurately all actions which occur on the needle and can report precisely when all such actions occurred. A pink sheet is issued for earlier drills in error.

History: Developed by L. Ron Hubbard at Saint Hill in 1961 order to improve the meter reading ability of students on Saint Hill Briefing Course.

E-METER DRILL-16

Number: EM-16.

Name: PRODUCTION OF NEEDLE REACTIONS.

Purpose: To train the student auditor to produce the various needle actions, to recognize the various needle actions, to use the E-Meter to locate specific incidents and phenomena, and to show the student auditor that he can handle a preclear's bank.

Position: The coach and the student auditor sit facing each other across a table with an E-Meter set up and the coach holding the electrodes.

Commands: No set commands. Verbal questions, designed to produce needle actions, are asked.

Training Stress:

This training drill is not coached by the coach. It is coached by the instructor. The student auditor is to produce basic needle actions on as many coaches as he has time, keeping a written record of each coach checked out. When he is confident that he can produce those needle actions at will on any preclear, he is to be checked out by the instructor on this training drill.

The needle actions can be produced by questioning along the following lines, but it must be kept in mind that other things can produce these actions also:

1. A fall: Losses, lies, present time problems, locks, and disagreements with a reality.
2. A rise: Non-confront, an ARC break restimulation, unreality, out-of-sessionness, fear, irresponsibility, identification. elsewhere, dispersal, and confusion.
3. A stuck needle: Betrayal, anger, stopped or stopping, hate, fixed attention, failed help, refused help, terror, and failure.
4. A theta bop: Exteriorizations, operations, desires to leave anything, violent injuries, and shocks.
5. A rock slam: The consideration of committing overts. This is best done with "Consider committing overts against _____" while checking over items on the R2-12 List One. (See Appendix.)
6. No reaction: Anything which has been destimulated or discharged or which is inert.
7. A Change Of Characteristic: Any of the above.
8. A free needle: Demonstrated by elimination. If the student auditor has been able to produce any of the above needle actions then the needle was not a free needle.

This training drill is passed when the student auditor can prove to the satisfaction of the supervisor that he can produce the above needle actions.

History: Developed for the 20th ACC in 1958 and revised by L. Ron Hubbard in December, 1963.

E-METER DRILL-17

Number: EM-17.

Name: WHAT MAKES THE E-METER READ AND CLEANING A READ.

Purpose: To teach the student auditor that the E-Meter reacts on thought and disagreement. To teach the student auditor how to clean a particular read.

Position: The student auditor sits in any posture with the E-Meter held in any way he wants to hold it. Another student sits silently reading a bulletin, while holding the electrodes and answering questions when asked by the student auditor.

Commands: None, except two- way communication.

Training Stress:

While the student sits silently reading a bulletin, the student auditor watches the meter, looking for a tick or read. The student auditor carefully observes the exact characteristic of the read observed. It could be a quarter inch tick, or it could be a double tick, or it could be a speeded rise.

Having observed the read and noting its characteristic, the student auditor asks of the student reading the bulletin, "What did you just read?" and has the student read it in the bulletin again, only out loud now.

It is now the task of the student auditor to find again, on the meter, that exact same read which he observed. To do this the student auditor uses two- way communication concerning what was read to locate the thought the student had in disagreement, with what was read in the bulletin. When the exact thought of disagreement with what was read in the bulletin is found, the exact same read will occur. The student auditor can now have the student read that part of the bulletin again. If the student auditor has found the exact read noted, then that read will not occur again as the student reads; however, the student auditor may now note that there is a different read on that same section of the bulletin. He notes the characteristics of that read and now works to recover that read by finding out what new thought of disagreement the student has. The student auditor will cognite that the student reading the bulletin doesn't really understand it and can become quite missionary about it. This is not an auditing session, but it is quite all right for the student auditor to help the other student.

This drill is passed when the student auditor can observe a read, find that same exact read by locating the thought of disagreement, and thus clean that read off the meter. If a student auditor can do this, he or she will have reality that, when the preclear thinks something, the E-Meter reads and that the E-Meter reads on disagreements. Pink sheets are given for earlier drills needing improvement.

History: Developed by L. Ron Hubbard in September, 1962, at Saint Hill Manor when it was discovered that a majority of auditors believed the E-Meter to read on their own voices or on the preclear's body or for some other nebulous reason.

E-METER DRILL-18

Number: EM-18.

Name: INSTANT RUDIMENT READS. (See Appendix.)

Purpose: To train the student auditor to recognize and call instant rudiment reads.

Position: The coach and the student auditor sit facing each other across a table with an E-Meter set up and the coach holding the electrodes.

Commands: The rudiments check sheet.

Training Stress:

The student auditor is to check the rudiments of as many coaches as he has time, keeping a written record of each coach checked out.

The student auditor puts in the R Factor that he is going to do a rudiments check on the last auditing session of the coach or, if the coach has not been audited that week, the rudiments on today with each question prefixed by "Today", and that no answer from the coach is expected. The student auditor then proceeds to ask the rudiments check questions, marking a rudiment in or out. He just asks the questions and acknowledges without getting any answers from the coach. A rudiment is out if it reads and in if it does not read.

This training drill is passed when the student auditor can do a perfect rudiments check with no errors as to which rudiments are in or out and can define accurately an instant rudiment read.

An Instant Rudiment Read. On rudiments, repetitive or fast, the instant read can occur anywhere within the last word of the question or when the thought major has been anticipated by the preclear, and must be taken up by the auditor. This is not a prior read. Preclears poorly in session. being handled by auditors with indifferent TR-1, anticipate the instant read reactively as they are under their own control. Such a read occurs in the body of the last meaningful word in the question. It never occurs latent. The supervisor, in checking out the student auditor on this training drill, should note any student auditor weakness on training drills and promptly issue the student auditor a pink sheet on those needing correction.

E-METER DRILL-19

Number: EM-19.

Name: INSTANT READS.

Purpose: To train the student auditor to recognize and call instant reads.

Position: The coach and the student auditor sit facing each other across a table with an E-Meter set up and the coach holding the electrodes.

Commands: The preclear origination sheet.

Training Stress:

The student auditor takes a line from the preclear origination sheet and, while looking at the meter, says the line to the coach.

When the student auditor has done this, the coach asks him "Did you get an instant read? What was it?"

If the student auditor has any doubts about whether it read did not read, the coach has the student auditor define an instant read and a major thought.

An Instant Read. An instant read is defined as that reaction of the needle which occurs at the precise end of any major thought voiced by the auditor. HCO B May 25, 1962.

Major Thought. By major thought is meant the complete thought being expressed in words by the auditor. Reads which occur prior to the completion of the major thought are "prior reads". Reads which occur later than its completion are "latent reads". HCO B May 25, 1962.

If the student auditor cannot give the precise definition the coach reads the definition back to the student auditor, until the definition can be duplicated and proceeds with the drill.

Flunks are given for any previous training drill in error, hesitation in calling the reads, and for imprecise definitions.

This training drill is passed when the student auditor can demonstrate the accurate reading of instant reads to the satisfaction of the supervisor.

History: Developed by L. Ron Hubbard in 1962 for students on the Saint Hill Briefing Course.

E-METER DRILL-20

Number: EM-20.

Name: HOW TO DIRTY AND CLEAN A NEEDLE.

Purpose: To teach a student auditor what causes a dirty needle and to train a student auditor how to clean a dirty needle.

Position: The student auditor and a student sit facing each other across a table with an E-Meter set up and the student holding the electrodes. The sensitivity is set at 16.

Commands: The following questions are the only ones which the student auditor is allowed to ask of the student:

What is your name?
What is your height?
What is your weight?
What color is your hair?
What color are your eyes?
What is your nationality?
Are you married or single?
Where do you live?
Where are you from?
What is your occupation?
What types of work have you done?
Do you like walking?
Do you drive?
Do you like sports?
Do you read a lot?
Do you like fiction?
Do you like non-fiction?
Do you watch television?
What did you eat for breakfast?
What color are your shoes?
Do you have a passport?
How did you come to this course?
What kind of house do you live in?
When did you last go shopping?
What time is it?
Did you sleep well last night?
Do you like the weather?
Where are you now?
Is the sun shining?
What groups do you belong to?
What pets have you had?
Do you own a radio?
Do you like music?
What kind of music do you like?
Do you like cats?
Have you ever voted?
How many hours do you sleep at night?

Training Stress:

The most important thing about auditing by cleaning a question on the E-Meter is to know that the E-Meter reacts first on the session and secondly on the preclear's bank; therefore.

it is very important to maintain a good auditing cycle and a good repetitive cycle on the preclear. If this is not done, then the E-Meter begins to react on the session and not the preclear's bank. This reaction on the session is manifested by a dirty needle.

Thus, it becomes very important to know what causes a dirty needle and how a dirty needle is cleaned, when it occurs.

The student auditor in this drill should first of all dirty the student's needle and then clean the needle. The student auditor should dirty and then clean the needle in each one of the following fashions:

1. Ask the questions before the student is ready to receive the question, until you have a dirty needle, and then clean the needle.
2. Ask the questions in such a way that the student will not receive the questions, until you have a dirty needle, and then clean the needle.
3. Ask the questions in such a way that the student doesn't have a chance to answer any fully, until you have a dirty needle. Now clean the needle.
4. Ask the questions, let the student answer, and then pretend to misunderstand his answer by saying you don't understand. When the needle becomes dirty, clean it.
5. Ask the questions of the student and then query all of his answers by checking them on the E-Meter or by asking invalidative or evaluative questions. After you have dirtied the needle clean it.
6. Ask the questions, but cut all the student's answers with acknowledgement, until the needle is dirty. Now clean the needle.
7. Ask the questions of the student, but never acknowledge an answer. When the needle becomes dirty, clean it.
8. Ask the questions of the student, but answer them all for him. Clean the needle after you have made it dirty in this fashion.
9. Ask the questions on the E-Meter. Carefully cleaning cleans at every opportunity until you have a dirty needle, and then clean the needle.
10. Ask the questions on the E-Meter. This time miss any and all reads. When the needle is dirty, clean it.

These are some of the major ways to mess up the auditing cycle and to cause a dirty needle. There are others which the student auditor should discover by studying the auditing cycle.

The needle is cleaned by getting the student's considerations or with regard to what has been happening in the drill, by maintaining a good auditing cycle while doing so, and by completing the repetitive cycle of getting off his considerations until the needle is clean.

This drill is passed when the student auditor can demonstrate to the supervisor that he can clean a needle, that he does understand what causes a dirty needle, and that he can maintain a good auditing and repetitive cycle while cleaning the needle. Errors in earlier drills should be noted by the instructor and pink sheets issued for the drills to be re-done by the student auditor.
History: Developed by L. Ron Hubbard in 1963 at Saint Hill.

E-METER DRILL-21

Number: EM-21.

Name: E-METER STEERING.

Purpose: To train a student auditor to assist the preclear in finding an answer to a question, when difficulty arises, with a “That” each time a latent read duplicates the instant read of a question. To teach the student auditor that this is one method of cleaning a dirty needle.

Position: The student auditor and a student sit facing each other across a table with an E-Meter set up and the student holding the electrodes. The sensitivity can be set at 16 or 32 depending upon the model of the E-Meter, and the sensitivity booster knob can be at any position necessary to ensure reads will be obtained.

Commands: “Consider the events of today.”

Training Stress:

Step 1. The student auditor has to give the above command and carefully observe the characteristic of some read which occurred while the student is executing the auditing command. The student auditor must indicate the read he has observed by asking the student, “What was that?” When this is asked of him. The student should not answer, but should think of various other things. Having done this, the student now thinks the origin thought which produced the read the student auditor questions where upon that same read will re-occur on the E-Meter. When the read re-occurs, the student auditor must indicate that he has observed it by saying, “That was the same thought.”

If the student auditor has called the exact, same read, what the student is now thinking of will be what he originally thought when the student auditor first queried him. If this is not the case, then the second read that the student auditor called was not really a duplicate of the one he originally observed. This is naturally a flunk, and the student auditor will have to try again being more careful to observe the exact characteristic of a read and to pick that same read up when it re-occurs.

Step 2. The student auditor should observe the needle behaviour of the student on the E-Meter. If the needle is clean (a clean needle is a needle that acts when the auditor speaks and does nothing the rest of the time), the student auditor should get another student.

If the needle is not clean, the student auditor should tell the student that he is now going to clean the needle and will want to know what the student is thinking of when the student auditor says, “That”.

The student auditor observes a certain needle characteristic in the dirty needle phenomena (i.e., a particular double tick of a certain size or a stop in a jitter of activity) and proceeds to clean this read off the needle by steering (saying “That” whenever that particular, exact read occurs) and getting the student to say what he was thinking of. When that particular read is cleaned off the needle, then another particular read is noted and handled in the same fashion until the needle is clean.

NOTE: that in regular auditing one would only use steering, as given in Step 1 above, when the preclear was having difficulty answering a rudiment question, a prep-check question, or a question given in auditing- by- list. Steering is used only when cleaning a needle or cleaning a question on the needle. Further, a preclear can answer a question whenever he has an answer. The student is asked not to answer the question in Step 1, so as to give the student auditor practice in steering.

This drill is passed when the student auditor can demonstrate the ability to steer correctly and to clean a needle to the satisfaction of the supervisor. A pink sheet is given for any earlier drill or E-Meter drill in error.

: Developed by L. Ron Hubbard at Saint Hill in 1961 to enable students of the Saint Hill Briefing Course to assist their preclears in answering questions which are cleaned by the needle and to enable students to clean a needle more readily and easily.

E-METER DRILL-22

Number: EM-22.

Name: E-METER HIDDEN DATE, THIS LIFE.

Purpose: To train the student auditor to locate a date on the track with the E-Meter, to increase the student auditor's reality on the factualness of an E-Meter and the factualness of the time track, and to give the student auditor a great familiarity with the E-Meter and its use.

Position: The student auditor and coach sit facing each other across a table. The student auditor handles the meter, while the coach holds the electrodes.

Commands: No set commands. "Over and under" method of questioning is used to isolate the correct date.

Training Stress:

The coach is to select a date, preferably his birthday or any known anniversary. Later as the student auditor gets better, the coach is to select any date (month, day, and year) at random from the early years of his present lifetime. He does not tell the student what the date is. The student auditor, by the use of the meter, is to find the date the coach has selected, without the coach replying or saying anything at all except for coaching instructions.

A date is found by the process of elimination. The student auditors questions are of this sort: "Is the date before 1940 A.D. . . . After 1940 A.D.?" If the needle reacts, the answer is yes. If the needle doesn't react, the answer is no. If the needle reacts on the first question, then the second question is not asked. If the needle does not react on either question, then the student auditor does not have a year even close to the right one or he has been asking the questions with poor TR- 1.

After the year is found, then the student auditor locates the month of the year, "Is it before June, 1945 A.D. . . . After June 1945 A.D.?" Then the day is found, "Is it before March 15,1945 A.D. . . . After March 15,1945 AD.?"

As the student auditor improves, the coach should increase the difficulty of the date to be found by selecting month, day, year and also minutes and seconds.

The student auditor may use "before" and "after", but not "more than. . . . less than" for this lifetime.

The coach should flunk the student auditor for TR's 0 to 2, if poor; for ambiguous, indirect Q and A type of questions; for improper interpretation of the E-Meter reads; or for taking an excessive amount of time.

The student auditor passes this drill when he can easily, correctly, and accurately date on the E-Meter.

History: Developed as "E-Meter Hidden Body Part" by L. Ron Hubbard in November, 1958 in London, and revised in December, 1963.

METER DRILL-23

Number: EM-23.

Name: ASSESSMENT BY TONE ARM.

Purpose: To train the student auditor to assess a list accurately by selecting that item which, upon brief discussion, produces the most movement of the tone arm.

Position: The coach and the student auditor sit facing each other across a table with an E-Meter set up and the coach holding the electrodes.

Commands: Prepared assessment lists of items only. (See Appendix.) No listing must be allowed.

Training Stress:

The student auditor is to assess as many lists on as many coaches as possible, keeping a written record of each coach checked out. The student auditor is to assess prepared lists, keeping an accurate record of tone arm motion on each item.

To do this drill the student auditor gets the coach to discuss briefly each item on the list while the student auditor listens, to mark accurately the tone arm motion gotten on each item, and to acknowledge the coach.

When the list is completed, the student auditor immediately hands the coach the assessment list and informs the coach which item produced the most tone arm motion. The coach then checks the tone arm motion of each item to ascertain if the student auditor has selected the correct item. If the student auditor has selected the wrong item, the same list is done again. The student auditor should learn to spot accurately tone arm motion on a given subject without the comm lag of looking over the list and adding up the tone arm action.

Please note that all assessment drills are done with prepared lists. The coach should never be asked actually to list.

Flunks are given for any previous training drill, when in error for taking an excessive amount of time in doing the assessment for putting his attention on the list in an effort to add up the tone arm; and for selecting the wrong items.

This training drill is passed when the student auditor can accurately and smoothly assess a list by tone arm.

History: Developed by L. Ron Hubbard at Saint Hill in 1963.

E-METER DRILL-24

Number: EM-24.

Name: ASSESSMENT BY INSTANT READ

Purpose: To train the student auditor to assess a list accurately and rapidly by instant read.

Position: The coach and the student auditor sit facing each other across a table with an E-Meter set up and the coach holding the electrodes.

Commands: Prepared assessment lists only. Permit no listing by the coach.

Training Stress:

The student auditor is to assess as many lists on as many coaches as possible, keeping a written record of each coach checked out. He should learn to call off rapidly a list and mark in accurately all items reading with an instant read. This should be practised until the student auditor can do this rapidly and accurately. Should the needle of the coach become dirty while doing this, the student auditor can clean it by getting the coach to tell what communication has been cut, but remember that the student auditor is not there to audit the coach or do anything for the coach's case; the student auditor is doing the drill for the total purpose of learning how to assess a list by instant read.

After the student auditor can accurately assess a list by instant read and mark all items in or out correctly, the student auditor can proceed to null completely a list by elimination until either one is in or all are out.

This drill is passed when the student auditor can rapidly, without hesitation and without having to read an item several times, mark the items in or out with complete accuracy, and can complete the list properly to either one item in or all out.

Flunks are given for any previous training drill in error.

The supervisor in examining this drill should carefully note any training drill weakness of the student auditor, like TR-1 and any of the earlier E-Meter drills, and take prompt action to have the student auditor do further work on them by issuing a pink sheet.

History: Developed in 1961 by L. Ron Hubbard at Saint Hill for use in the assessment of lists.

E-METER DRILL-25

Number: EM-25.

Name: TRACK DATING.

Purpose: To train the student auditor to locate dates on the track accurately and rapidly, to help establish a reality of the track, and to demonstrate that the E-Meter can be used to detect something in the absence of verbal answers from the preclear.

Position: The coach and the student auditor sit facing each other across the table with the E-Meter set up and the coach holding the electrodes.

Commands: No set commands.

Training Stress:

Step 1. The student auditor is first of all trained to establish the correct order of magnitude of a track date. The coach write down on a slip of paper the order of magnitude of an imagined date. For instance, the order of magnitude the coach write down is tens of years. The student auditor then has to establish what the order of magnitude is by use of the E-Meter.

The phraseology is: "Is this the order of magnitude of seconds, minutes, days, years, tens of years, hundreds of years thousands of years, tens of thousands of years. hundreds of thousands of years?" and so on until he gets a definite read. Then the student auditor informs the coach of the order of magnitude; the coach then flunks the student auditor if the order of magnitude is incorrect, and the student auditor has to work again to locate it until the correct order of magnitude has been established. When the correct order of magnitude has been established, the coach shows the slip of paper on which the order of magnitude is written. The coach should work to get the student auditor proficient at this step of the drill so that the student auditor can readily deal with large sections of time.

Step 2. Next the coach writes down on a slip of paper a definite amount of years, keeping to round figures like "75 trillion trillion years ago", "150 billion trillion years ago", "89 billion years ago", or some such. The student auditor finds the date by first of all getting the order of magnitude. Let's say that the order of magnitude is tens of thousands of trillions of years ago. Then, using "greater than" or "lesser than"- the student auditor gets it down specifically. "Is this date greater than 50 thousand trillion years ago, lesser than 50 thousand trillion years ago?" The student auditor will get a read on either question and take what reads. If neither question reads, the TR- 1 was poor or the date is nowhere near correct. In the example, the read was on "lesser than 50 thousand trillion years ago". The patter would continue like so:

"Is this date greater than 25 thousand trillion years ago? That reads."

"Is this date greater than 35 thousand trillion years ago, lesser than 35 thousand trillion years ago? It reads lesser than."

"Is this date greater than 30 thousand trillion years ago? That reads."

"Is this date 30 thousand trillion years ago, 31, 32. That reads. 32 thousand trillion years ago. Is this a correct date? Is this an incorrect date? It reads as correct."

Note that if the first question on "greater than" reads, the second question is not added.

If the student auditor has done a good job of meter reading. used good TR- 1, and not, himself, gotten confused, the date will be correct and will compare to the date noted down on the slip by the coach. It's a flunk to get a wrong date. When the student auditor gets the correct date, the coach shows him that the date found is the exact one he wrote down.

Step 3. In the last step of this drill the coach writes down a full date like: 56,276,345,829,100 years ago, 315 days, 42 hours, 15 minutes, and 10 seconds.

Using the same procedure as in the second step, the student auditor locates the date in full. The coach should not set a date down which is greater than hundreds of trillions of years ago. The student auditor flunks if he doesn't get the correct date and passes if he does.

For purposes of clarification, the following is what is meant by various terms:

1-9, years.
10-99, tens of years.
100-999, hundreds of years.
1,000-9,999, thousands of years.
10,000-99,999, tens of thousands of years.
100,000-999,999, hundreds of thousands of years.
1,000,000-9,999,999, millions of years.
10,000,000-99,999,999, tens of millions of years.
100,000,000-999,999,999, hundreds of millions of years.
1,000,000,000-9,999,999,999, billions of years.
10,000,000,000-99,999,999,999, tens of billions of years.
100,000,000,000-999,999,999,999, hundreds of billions of years. 1,000,000,000,000-9,999,999,999,999, trillions of years. 10,000,000,000,000-99,999,999,999,999, tens of trillions of years. 100,000,000,000,000-999,999,999,999,999, hundreds of trillions of years. 1,000,000,000,000,000-9,999,999,999,999,999, thousands of trillions of years. 100,000,000,000,000,000-999,999,999,999,999,999, hundreds of thousands of trillions of years.

And so on, going as follows:

millions of trillions of years.
tens of millions of trillions of years.
hundreds of millions of trillions of years.
billions of trillions of years.
tens of billions of trillions of years.
hundreds of billions of trillions of years.
trillions of trillions, or trillions-two years tens of trillions-two years. hundreds of trillions-two years.
thousands of trillions-two years.
tens of thousands of trillions-two years.
hundreds of thousands of trillions-two years.
millions of trillions-two years.
tens of millions of trillions-two years.
hundreds of millions of trillions-two years.
billions of trillions-two years.
tens of billions of trillions-two years.
hundreds of billions of trillions-two years trillions-three years.

This drill is passed when the student auditor can accurately and rapidly date on the track. Any errors in previous drills note by the supervisor should be re-done by the student through the issuance of a pink sheet.

History: Track dating was first done by L. Ron Hubbard in 1951 when it was obvious that preclears were recalling to view incidents further back in time than their present lifetime span.

Dating has been a subject taught in courses of Scientology since that time. The drill was revised in 1963.

E-METER DRILL-26

Number: EM-26.

Name: DIFFERENTIATION BETWEEN SIZES OF NEEDLE READS.

Purpose: To teach a student auditor to differentiate the sizes of needle reads.

Position: The coach and the student auditor sit facing each other across a table with the E-Meter set up and the coach holding the electrodes. The sensitivity is set as high as necessary to ensure that reads are obtained.

Commands: Prepared assessment lists only. Permit no listing.

Training Stress:

The student auditor is to assess the list, reading each item. When he comes to the end of the list, he must be able to determine which item read the largest, the second largest, and the third largest.

This is a very important drill in that, at Level V and Level VI auditing, it becomes necessary that an auditor gets big reads on goals, items, case analysis, and checking out things. Whereas at lower levels it is only important that something reads, at Level VI it is important how big it reads. If it reads big, then that is it. At Level VI a two inch read is about the smallest to be accepted with the sensitivity set at 4.

For the purpose of this drill, the student auditor is to become familiar with looking for bigger reads, not just any reads; and to do this he has to be able to differentiate between sizes of reads.

This drill is passed when the supervisor is assured that the student auditor can do the above. Any mistakes in earlier drills are corrected by the issuance of a pink sheet.

History: Developed by L. Ron Hubbard at Saint Hill in 1964, when it was learned that most wrong goals run, were run because the auditor accepted small reads.

E-METER DRILL-27

Number: EM-27.

Name: NEEDLE OBSERVATION.

Purpose: To train the student auditor to observe any reaction of the needle outside the direct line of vision so as not to miss any reads of the needle.

Position: The coach and the student auditor are seated beside one another at a table with the E-Meter set up, a bulletin on the table, and the coach holding the electrodes with the sensitivity neither too high nor too low for the production of a one to two inch needle read when the cans are squeezed.

Commands: No set commands.

Training Stress:

Step 1. The E-Meter in this step is set up in the exact position which is usual in actual auditing. The bulletin is beside the E-Meter in the position where the Auditing Report Form is usually kept.

The coach is to cause the E-Meter to read by squeezing the electrodes. The student auditor is to call every read of the needle by saying "Then", while at the same time directing his vision in the following manner:

- a. The student auditor is to confront whatever is directly front of his eye-level line of vision.
- b. The student auditor is to read the bulletin.
- c. The student auditor is to look at his left hand on the side of the meter.
- d. The student auditor is to look at his lap.
- e. The student auditor is to look to his right.
- f. The student auditor is to look to his left.

Step 2. The coach has the student auditor do all the above once again, only this time the coach has the student auditor describe to him all that he can see or tell him what he is reading in the bulletin. While the student auditor is doing so, the coach again causes the needle to read by squeezing the electrodes; and student auditor has to call every read as it occurs with a "Then"

Step 3. In this step the coach has the student auditor confronts whatever is directly in front of his line of vision, while the student auditor holds the E-Meter in different positions. The coach again causes the needle to read by squeezing the electrodes at different times.

The student auditor is to hold the E-Meter in the following positions:

- a. To the right with the E-Meter face parallel to his own line of vision.
- b. To the right with the E-Meter face at a 90° angle to his line of vision.
- c. To the left with the E-Meter face parallel to his line of vision.
- d. To the left with the E-Meter face at a 90° angle to his line of vision.

- e. To the right of his forehead with the E-Meter facing him and with the E-Meter held about 10 inches from his forehead.
- f. To any other position the coach may select.

In doing this drill the coach should be careful to sit in such a position that the coach can see the meter and to place his hands in such a fashion that the student auditor cannot see the electrodes being squeezed.

This drill is passed when the student auditor can call the reads exactly on each of the three steps of this drill. ANY mishandling of earlier E-Meter drills should be corrected by the supervisor in the issuance of a pink sheet, so that the drill in error can be re-passed by the student auditor.

History: Developed by L. Ron Hubbard on June 4, 1964, at Saint Hill Manor, where it was noted that students in the higher levels of auditing were missing reads vital to the running of Level VI.

APPENDIX

(Preclear Origination Sheet, R2-12 List One, Rudiments Check, Prepared Assessment Lists 1-12)

PRECLEAR ORIGINATION SHEET

For Use in E-Meter—15 and 19

I have a pain in my stomach.
The room seems bigger.
My body feels heavy.
I had a twitch in my leg.
I feel like I'm sinking.
The colors in the room are brighter.
My head feels lopsided.
I feel wonderful.
I have an awful feeling of fear.
You are the first auditor who ever paid attention to my case.
I think I've backed up from my body.
I just realized I've had a headache for years.
This is silly.
I feel all confused.
That was a very good session yesterday.
I've got a sharp pain in my back.
When are we going to do some processing?
I feel lighter somehow.
I can't tell you.
I feel terrible—like I'd lost something, or something.
WOW—I didn't know that before.
The room seems to be getting dark.
Say, this really works.
I feel awfully tense.
You surely are a good auditor.
That wall seems to move toward me.
If you give me that command again, I'll bust you in the mouth.
I feel like something just hit me in the chest.
You surely have a nice office here.
I feel warm all over.
By the way, I won that tennis tournament yesterday.
My head feels like it has a tight band round it.
When are you going to get a haircut?
I seem to see the wall behind my body.
This processing is worth the fee.
I feel like I was all hemmed in somehow.
Who is going to win the Cup Final?
It seems like I'm as tall as this building.
This chair is so comfortable I could go to sleep.
I feel like I could just suddenly break something.
I keep thinking about that copper who blew his whistle at me this morning.
I can see facsimiles better.
Things suddenly look a lot brighter.
Aren't we finished with this yet?
I feel like I'm floating.
It looks like the wall is caving in on me.
That wall looks real thin.

WOW !!! W-O-W !!!!!!!

How long do we have to do this processing?

OUCH, OH OUCH.

My face tingles.

I'm getting sleepy.

This is the first time I have ever really been in session.

I'm starving. Let's go to lunch.

I remember a time when I fell down and hurt my zorch.

Can I have a cigarette?

What does this have to do with religion?

Suddenly, I'm so tired.

Everything is getting blurry.

What time do we get through?

I thought we were going to use Dianetics.

Is this room rocking?

How much longer do we have to run this process?

You are by far the worst auditor I've ever had.

Your eyes stink.

I just realized how wrong I've been all my life.

Do these processes work differently on men than on women?

I feel like there is a spider's web on my face.

My left knee hurts.

I feel so light !

Isn't it getting hotter in here?

I just remembered the first time I went swimming.

My back has been aching like this for years.

How much do you weigh?

Are you clear?

Can you make your body rise up in the air?

I kind of ache all over. That's a somatic, isn't it?

How many engrams have you had run out?

What is this "Assist" I keep hearing about?

What does Scientology say about ghosts?

Have you ever seen an Operating Thetan?

How are you going to prove to me that I have a soul?

I feel like killing myself.

How long will it take me to get clear?

I just realized how terrible my mother actually was.

Are you married?

Hold my hand.

I feel so lonesome.

How many hours have you been processed?

I feel like I can't talk.

My body is starting to shake all over.

My ribs hurt.

I feel just like the time I got run over by that car.

Everything seems to be getting dark.

Could we stop and talk for a little while?

Don't you get tired of listening to someone like me?

Can you make my hair curly?

How long will it take me to lose 20 pounds?

Kiss me.

You are my re-incarnated husband of 20,000 years ago.

Why are you talking so much?

That last process isn't flat. I'm sick.

You're dead.

I'm dead too.

We are all dead.

I love death.
Kill me.
Beat me.
No,—No, no, no, NO ! ! ! !
Moo Gum Guy Pan.
Sum Gum War Sue Up.
Fizzle Wizzle Bum Crum.
I am going to vomit on you if you don't stop.
I absolutely love the way you handle originations.
You are sweet.

R2-12 List One

For Use in E-Meter—16

Scientology	the dynamics
Scientologists	the reactive mind
an auditor	aberration
auditors	somatics
auditing	pain
students	engrams
an E-Meter	circuits
meters	valences
a session	past lives
clearing	a center
a clear	certificates
a release	HCA's
a preclear	tests
a patient	examiners
insane people	tapes
The mind	lectures
Department of health	field auditors
Dianetics	franchise
Book One	10%'s
Dianetic books	Scientology groups
Scientology books	group auditing
a Scientology magazine	memberships
a Scientology congress	reports
a bulletin	dissemination
a policy letter	infractions
a hat	world clearing
hats	Ron
Staff members	L. Ron Hubbard
a registrar	the Executive Director
HPA's	the Governing Director
D.Sc'n's	the Founder
ministers	Mary Sue
HGC pc s	Mary Sue Hubbard
ACC's	the Association Secretary
mental science	the Organization Secretary
a science of mind	the HCO Secretary
mental doctors	security
Saint Hill	your case
courses	people's cases
statements	techniques
units	procedures
Scientology letters	a squirrel
instructors	psychologists
Staff auditors	psychiatrists
the D. of P.	rock slammers
the D. of T.	thetans
HCO	PAB's
HASI	assessments
a Scientology organization	mid ruds

Rudiments Check

(Repeat the leading line before each numbered item)

For Use in E-Meter—18

By the end of your last session, had your auditor failed to find and clear:

1. A suppression?
2. Something you have been careful of?
3. Something you did not reveal?
4. Something you have not-ised?
5. A suggestion?
6. A mistake?
7. Something you have been anxious about?
8. A protest?
9. A decision?
10. Something you did or left unsaid?
11. A problem?
12. An objection you had to the room?

Prepared Assessment List 1

For Use in E-Meter—23, 24 and 26

ASSESSMENT QUESTION: What is your favorite dog?

a bull terrier	an old English sheepdog
a whippet	a Siberian husky
a foxhound	an Irish wolfhound
a dachshund	a Saint Bernard
an Irish terrier	a Chihuahua
a Pekingese	a Scottish terrier
a German shepherd	a Sealyham terrier
a Pomeranian	a Doberman pinscher
a corgi	an English setter
a bulldog	a Gordon setter
an Airedale	a Welsh terrier
a bloodhound	a Shetland sheepdog
a chow	a Welsh collie
a Dalmatian	an Alsatian
an Eskimo dog	an English spaniel
a collie	a hound dog
a Boston terrier	an English bulldog
a cocker spaniel	an Irish water spaniel
a fox terrier	a bull mastiff
a greyhound	a West Highland terrier
a mastiff	a Welsh corgi
a pointer	a Border terrier
a beagle	a malamute
a wirehaired terrier	a mongrel
a poodle	a Russian wolfhound
a pug	a Skye terrier
a spitz dog	a Great Dane
a schnauzer	a golden retriever
an Irish setter	a red setter
a Yorkshire terrier	a King Charles spaniel
an Afghan hound	a Bedlington terrier
a boxer	a Cairn terrier
a Labrador retriever	a Basset hound

Prepared Assessment List 2

ASSESSMENT QUESTION: Which tree do you like the best?

an oak	a juniper
an ash	a palm
a magnolia	a chinaberry
a horse-chestnut	a London plane
a dogwood	a snowdrop tree
a catalpa	a flowering crab-apple
a beech	a redbud
a maple	a locust
an elm	a cucumber tree
a hickory	a Pagoda tree
a sweet gum	a golden chain
a pine	a hornbeam
a sassafras	a teak
a willow	a mohogany
a poplar	a Kauri pine
a birch	a chestnut
a sycamore	a eucalyptus
a walnut	a turpentine
a linden	a tallow-wood
a copper beech	a jarrah
a tulip tree	a mangrove
a hawthorn	a bombax
a weeping willow	a baobab
a red oak	an ironwood
a gingko	an ebony
a cedar	a stinkwood
a yew	a sneezewood
a fir	a bluegum
a cypress	a hemlock
a spruce	a larch
a lime-tree	a jacarandah

Prepared Assessment List 3

ASSESSMENT QUESTION: Which fruit tastes the best?

apples	lemons
pears	dates
peaches	damsons
plums	walnuts
cherries	cranberries
oranges	tomatoes
grapefruit	persimmons
grapes	loquats
nectarines	tangerines
raspberries	cantaloupes
blackberries	litchi nuts
strawberries	papayas
currants	kumquats
gooseberries	pomelos
blueberries	star-fruit
dewberries	lotus seeds
quinces	crab apples
watermelons	jujubes
pineapples	peanuts
bananas	sugarcanes
plantains	water chestnuts
breadfruit	pecans
guavas	prunes
pomegranates	zapotes
coconuts	limes
figs	hazel nuts
chestnuts	cashew nuts
mangoes	apricots
almonds	grededellas

Prepared Assessment List 4

ASSESSMENT QUESTION: What vegetable do you like the least?

spinach	kidney beans
carrots	navy beans
green beans	endive
turnips	corn
leeks	kohl-rabi
potatoes	mint
celery	mushrooms
cabbage	sweet potatoes
turnip greens	seakale
green peas	shallots
black-eyed peas	lentils
asparagus	red beans
rice	okra
onions	green peppers
parsnips	pumpkins
brocoli	collard greens
Brussels sprouts	spring greens
cauliflower	squash
eggplant	artichokes
parsley	radishes
kale	lettuce
beetroot	marrows
rhubarb	chicory
lima beans	broad beans

Prepared Assessment List 5

ASSESSMENT QUESTION: Which musical instrument would you like to play?

a flute	a tuba
a clarinet	a lyre
a contrabass	a trumpet
a guitar	an ocarina
an oboe	a bass tuba
a bassoon	a helicon
a banjo	a harpsichord
a harmonica	a Hawaiian guitar
a lute	a fife
an organ	a bagpipe
a saxophone	a harp
a trombone	bongo drums
a ukulele	a snare drum
a violin	an alto clarinet
a piano	a bass clarinet
a xylophone	a bass trumpet
a mandolin	a tenor saxophone
a marimba	a triangle
a cello	castanets
a viola	a double bassoon
a clavichord	a piccolo
cymbals	chimes
an English horn	a glockenspiel
a French horn	a bass drum
a concertina	a Pan pipe
an accordion	a samisen
a double bass	a dulcimer
a cornet	Burmese gongs
an alt horn	gourd rattles
a zither	an African flute
a bamboo rattle	kettledrums

Prepared Assessment List 6

ASSESSMENT QUESTION: What flowers would you like to grow?

sweet peas	phloxes
daisies	pinks
tulips	regal lilies
nasturtiums	shaster daisies
dahlia	irises
marigolds	zinnias
poppies	sweet williams
gladioli	verbenas
forget-me-nots	anemones
clarkias	larkspurs
snapdragons	alyssums
petunias	balloon-flowers
lobelias	lady's-slippers
chrysanthemums	bugle-weeds
primroses	Iupines
delphiniums	cannas
lilies	globe-flowers
crocuses	hyacinths
sunflowers	veronicas
columbines	violets
candytufts	wallflowers
bellflowers	jonquils
carnations	orchids
monkshoods	morning glories
daffodils	pansies
nicotianas	peonies
asters	hollyhocks

Prepared Assessment List 7

ASSESSMENT QUESTION: Which North American animal would you like to see?

a squirrel	a porpoise
a bear	a weasel
a moose	a lemming
an ocelot	a sea lion
a hare	a lynx
a vole	a wild dog
a porcupine	a dolphin
a wolf	a chipmunk
an elk	a coati
a ringtail	a peccary
a sable	a pika
a rabbit	a shrew
a fox	a cougar
a deer	a coyote
an armadillo	an otter
a walrus	a wolverine
a badger	a sloth
a whale	a mountain goat
a woodchuck	a gopher
a caribou	a ground hog
a bat	a marmot
a mouse	a skunk
a beaver	a racoon
bighorn sheep	an opossum
a bison	a jaguar
a ferret	a jaguarundi
a fisher	a manatee
a rat	a marten
a prairie dog	a mink
a seal	a mole
a bobcat	a margay
a sea otter	a wildcat

Prepared Assessment List 8

ASSESSMENT QUESTION: Which color do you like the most

green
red
pinky blue
bluey green
duck egg blue
white
mauve
cream
khaki
amethyst
turquoise
sage green
aquamarine
cobalt
blue
cardinal
charcoal
rust
scarlet
shale gray
rose red
orange
primrose
prussian blue
emerald green
crimson
chartreuse
peacock blue
venetian red
coffee
strawberry
straw colour
nutbrown
pale brown
royal blue
golden brown
pale pink
tea rose yellow
buff
maroon
olive green
vermillion

pink
ebony
cherry red
sea green
yellow
nattier blue
magenta
purple
saffron
puce
rose
heliotrope
violet
bottle green
black
pistachio
ivory
pearl white
navy blue
ruby
topaz
burnt sienna
flamingo
bronze
grass green
indigo
chocolate
cinnamon
lavender
apricot
salmon pink
peach
brown
ochre
cadmium
flame-red
lilac
verdigris
beetle green
gold
silver
orchid

Prepared Assessment List 9

ASSESSMENT QUESTION: What country would you like to live in?

United Kingdom	Iceland
Ireland	Norway
Sweden	Finland
Denmark	Netherlands
Belgium	France
Spain	Portugal
Germany	Austria
Switzerland	Italy
Czechoslovakia	Poland
Hungary	Rumania
Yugoslavia	Albania
Greece	Bulgaria
Union of Soviet	Luxembourg
Socialist Republics	Syria
Turkey	Israel
Saudi Arabia	Jordan
Lebanon	Aden Protectorate
Yemen	Muscat and Oman
Trucial Oman	Persia
Qatar	Kuwait
Afghanistan	Iraq
Pakistan	Kashmir
India	Nepal
Ceylon	Mongolia
China	Burma
Siam	Laos
Cambodia	Vietnam
Malaya	Philippines
Indonesia	Sarawak
North Borneo	North Korea
South Korea	Japan
Kenya	Greenland
Uganda Protectorate	Canada
Congo	United States
Tanganyika	Mexico
Republic of South Africa	Jamaica
South West Africa	Haiti
Angola	Dominican Republic
Congo	Puerto Rico
Gabon	Colombia
Bolivia	Chile
Uruguay	Australia
Argentina	New Guinea
New Zealand	Liechtenstein

Prepared Assessment List 10

ASSESSMENT QUESTION: What is your favorite mode of transportation?

oxcart	brougham
horseback	motorcycle
roller skates	ox
street car	caribou
airplane	snow cruiser
carriage	wheelbarrow
bicycle	lorry
automobile	snowshoes
steam ship	water buffalo cart
bus	caravan
sloop	rickshaw
mule-back	four-wheel cart
camel	dugout
balloon	llama
jet	brig
covered wagon	motorboat
canoe	dogsled
helicopter	barque
chariot	tricycle
elephant	wagon
train	schooner
palanquin	skis
rowboat	kayak
prairie schooner	raft
litter	yak
flatboat	brigantine
sleigh	barouche
galley	barkentine
overhead railway	on foot
stage coach	travois
buckboard	cabriolet
coupe	dirigible
hansom	junk
sampan	surrey
victoria	covered cart
underground	gondola

E-METER SENSITIVITY SETTING

*(Ref: HCOB 4 Dec 77 CHECKLIST FOR SETTING UP SESSIONS AND AN
E-METER
HCOB 24 Jan 77 TECH CORRECTION ROUND-UP
HCOB 7 Feb 79R E-METER DRILL 5RA—CAN SQUEEZE)*

When preparing for a session, an auditor sets up his E-Meter as per E-Meter Drill 4.

The sensitivity is set for 1/3 of a dial drop on a correct can squeeze per HCOB 7 Feb 79R E-METER DRILL 5RA CAN SQUEEZE. This is done for each individual pc and at the beginning of each session before starting the session, and with the pc on the cans, per HCOB 4 Dec 77 CHECKLIST FOR SETTING UP SESSIONS AND AN E-METER.

There is no set sensitivity setting for a pc at any grade level. It is determined by the pays can squeeze at each session.

E-METERS

SENSITIVITY ERRORS

*(Ref: HCOB 4 Dec 77 CHECKLIST FOR SETTING UP
SESSIONS AND AN E-METER
HCOB 14 Jan 77 URGENT AND IMPORTANT
TECH CORRECTION ROUND-UP
HCOB 7 Feb 79R E-METER DRILL 5RA CAN
SQUEEZE)*

An auditor must set the sensitivity of an E-Meter exactly right for *each pc and each session.*

The setting is different for almost every pc *and can change, session to session, even for one pc.*

TOO LOW

Too low a sensitivity on some pcs (like Sens 1) will obscure reads and make them look like ticks. It will obscure an F/N. Whereas a Sens 16-128 will show reads and F/Ns.

A pc can be hindered by the auditor not setting the sensitivity high enough to show reads and F/Ns. Items are missed as well as F/Ns.

On almost any pc, a convulsive or incorrect can squeeze can shoot the needle across the dial and cause the auditor to reduce his sensitivity down and down and down until he finally sets it at a point where long falls become ticks and F/Ns don't exist. E-Meter Drill 5RA tells one how to do a proper can squeeze.

TOO HIGH

When auditing a flying pc or a Clear or OT the auditor who sets the sensitivity too high gets weird impressions of the case.

“Latent reads” on such a case are common. They aren't latent at all. What happens is that the F/N is more than a dial wide at high sensitivity and a started F/N looks like a read as its sweep is stopped by the pin on the right of the dial.

Also, the pc can delicately press the cans improperly with his thumbs and forefingers when doing a can squeeze and cause the auditor to push the sensitivity up and up and up. And then with the sensitivity set too high, be unable to keep the needle on the dial and so miss or imagine reads. E-Meter Drill 5RA now teaches how to do this properly.

In this way uncharged items are taken up, the case is slowed, overrun and general upsets requiring repairs occur.

On a one-hand electrode an OT VII sometimes has a 1/3 dial wide F/N at Sens 2!

This would mean a 3/4 dial *wide* F/N . . . with two cans.

A Clear sometimes has a floating TA at Sens 5 or 10 instead of an F/N. He *might* have to be run at Sens 1 on two cans to keep him on a dial or detect F/Ns.

This is a very important matter as the auditor will miss F/Ns, think beginning F/Ns are reads and as the pre-OT is off the dial, miss reads.

Thus uncharged areas are run and charged ones are missed.

The result is very chaotic to repair.

Many lower level pcs also have a need for lower sensitivity settings.

SUMMARY

Sometimes an easy pc looks very difficult just because of wrong sensitivity settings *brought about by wrong can squeeze procedure.*

Set the sensitivity for the pc for 1/3 of a dial drop on a correct can squeeze per *E-Meter Drill 5RA (Reference: HCOB 7 Feb 79R, E-METER DRILL 5RA CAN SQUEEZE)*. And do the drills. You will be amazed.

Don't get repairs.

Get wins.

**E-METER DRILL 5RA
CAN SQUEEZE**

The following E-Meter Drill immediately revises and replaces E-Meter Drill 5, as it appears in *The Book of E-Meter Drills* and modifies any data to the contrary in *E-Meter Essentials*.

NUMBER: EM-5RA

NAME: CAN SQUEEZE

PURPOSE:

- I. To demonstrate to the student how an incorrect can squeeze gives an inaccurate, unreliable needle reaction.
- II. To train a student auditor how to get a pc to do an accurate can squeeze.
- III. To train a student auditor how to determine the sensitivity setting to get 1/3 of a dial drop of the needle on the can squeeze, for use in setting the correct sensitivity for each preclear in an auditing session.
- IV. To convince a student auditor that he has to use a correct sensitivity setting for 1/3 of a dial drop of the can squeeze to have a workable and readable E-Meter.

POSITION: The coach and the student auditor sit facing each other across a table with an E-Meter facing the student auditor. The E-Meter is already set up.

TRAINING STRESS:

SECTION 1: To give the student auditor a reality on how a can squeeze can be done *incorrectly*. so he will know all the points he may have to correct to ensure he gets an accurate can squeeze.

1. Coach picks up the cans and holds his hands on the table so the student can clearly see them.
2. Coach has student set sensitivity booster knob to lowest position and the sensitivity at I on the sensitivity knob.
3. Coach has student adjust the needle to the set line on the needle dial.

The coach will have the student readjust the needle to set as necessary at the beginning of each demonstration of the can squeeze.

4. The coach gives the cans a squeeze with an even pressure. If there is no read or a very small one, less than an inch, at sensitivity 1, the student auditor moves the sensitivity knob to 5, and gets another can squeeze. If still no read or it's smaller than an inch, student moves sensitivity to 16 and gets another squeeze. For purposes of the following demonstration, you want to set the sensitivity so that you can obviously see a movement of the needle on the can squeeze of about an inch. So the sensitivity could be set lower than 5 or higher than 5, so long as you get a fall of about an inch on the squeeze.
5. With the sensitivity setting determined in 4 above, the coach will then squeeze the cans incorrectly, each time in a different way. The coach shows the student what particular thing he's doing with his hands, and then has the student observe what happens on the meter and the distance the needle falls on the dial when he does each version of an *incorrect* can squeeze as follows:
 - A. Coach holds the cans with cups of palms and all fingers and both thumbs in complete contact with the cans. As he squeezes the cans, he lifts one finger off and then puts the finger back on after relaxing the squeeze. This is an incorrect can squeeze.
 - B. Coach holds the cans as in A. This time he gives the cans a *very* fast light squeeze. This is an incorrect can squeeze.
 - C. Coach holds the cans as in A, squeezes them with a gradual pressure and then when he releases the squeeze he relaxes his grip on the cans so it is much looser than before the can squeeze. This is an incorrect can squeeze.
 - D. Coach holds the cans as in A, and this time gives a hard fast squeeze. This is an incorrect can squeeze.
 - E. Coach holds the cans as in A, squeezes them firmly and only *partially* releases the squeeze. This is an incorrect can squeeze.
 - F. Coach holds the cans as in A, but gives a squeeze in 2 stages. first a little squeeze, then suddenly a harder one. This is an incorrect can squeeze.
 - G. Coach holds the cans as in A, gives a hard fast squeeze, and *holds the grip*. The student should notice that the needle swings way over to the right due to the *sudden* motion, and that it returns only part of the way with the coach still maintaining the squeeze, thus giving an incorrect measurement of the can squeeze. Student should see that the distance between the first needle position at set and the final needle position with the coach still maintaining the squeeze is the *actual* measurement of the can squeeze fall. It is not the distance between the first needle position of set and the needle position at the far swing to the right. A hard, fast can squeeze is an incorrect can squeeze.
 - H. Coach holds the cans so they are not in contact with the cups of his palms and squeezes them. This is an incorrect can squeeze.
 - I. Coach holds the cans with the thumbs going up the sides and sticking out over the top edge of the cans and squeezes them. This is an incorrect can squeeze.
 - J. Coach holds the cans in a fairly tight grip and squeezes the cans. This is an incorrect can squeeze.
 - K. Coach holds the cans with the forefingers lifted slightly off and puts the forefingers on the cans during the squeeze. This is an incorrect can squeeze.

The drill is continued until the student auditor gets the idea that an incorrect can squeeze gives inaccurate, unreliable needle reactions.

SECTION II: To give the student auditor a proper idea as to what a correct can squeeze is, and to train him how to get a correct can squeeze.

1. The following drill should be done first by the coach to demonstrate to the student auditor what a correct can squeeze is:
 - A. The coach has the student auditor shake his hands until the fingers are loose and floppy.
 - B. Then the coach has the student auditor put his hands on the table, palms up, exerting no control on his fingers. The student auditor's fingers will curl in toward the palm.
 - C. Now the coach simply places the cans in the student auditor's hands at an angle across the palms. The natural curl of the fingers is sufficient to hold the cans in place, and the placement of the cans at an angle ensures that the maximum skin area is touching the cans. The cups of the student auditor's palms and all the fingers and both thumbs must be touching the cans. Ensure the thumbs go around the cans and not up the sides.
 - D. Now the coach has the student auditor gradually increase the pressure of his grip on the cans until a light squeeze is achieved, and then relax it. This is a correct can squeeze.
 - E. *NOTE:* Ensure when the student auditor relaxes his grip that he does not take a finger or thumb or his palms off the cans. He should have about the same contact he had at the start as in C above.

2. Having done the above, the coach now has the student auditor do the drill as follows:
 - A. Have the coach pick up the cans *and keep his hands on the table so the student can see them throughout the can squeeze.*
 - B. Check the coach's grip on the cans to ensure it is correct as in B and C above. *The student may have to try out different sizes of cans, small, medium or large, depending on the size of the coach's hands, to obtain the correct size can which he can hold comfortably without strain and that fits into the cup of his palm, with maximum skin contact.*
 - C. Adjust the sensitivity booster knob to the lowest position.
 - D. (a) Set the sensitivity knob at 1 on the sensitivity dial.
(b) Adjust the needle to the set line on the needle dial.
(c) Give the proper commands for getting a can squeeze as follows:
. . . .
"Squeeze the cans, please."
"Thank you."
The student must ensure the coach gradually increases the pressure of his grip on the cans and relaxes it.
(d) Note the distance the needle fell when the coach squeezed the cans.
 - E. Now increase the sensitivity setting to 2 and repeat steps D (b), (c) and (d) above, again noting the distance the needle fell when the coach squeezed the cans.

F. Repeat steps D (b), © and (d) for sensitivity setting at 3, then sensitivity setting 4, then 5, then 6, and on up until you have the needle hitting the pin on the can squeeze. With the needle hitting the pin on the can squeeze, you wouldn't be able to note the length of the needle fall.

Flunks are given for not having the coach remove all rings or finger jewelry, as they can cause the needle to give unusual reads; for not checking that there is maximum skin contact on the cans; for failing to see that the thumbs go around the can and not up the sides; for failing to set the meter and needle up properly; for failing to notice and handle a sudden or hard or jerky or convulsive can squeeze instead of an even increase of pressure on the cans or sudden letting go of the cans; for not making sure the coach doesn't take a finger or thumb or palm off the cans when he releases the contact; for failing to note accurately the distance the needle fell on the can squeeze; and for giving the wrong commands. Lack of skill in earlier drills is corrected by pink sheet.

SECTION III: To give the student auditor a reality on setting the sensitivity for a 1/3 of a dial drop of the needle on the can squeeze.

The student auditor should know that setting the sensitivity for 1/3 of a dial drop on the can squeeze is an integral part of setting up each and every session he does. It is the sensitivity he will be using during the session. It is vitally important he gets the correct sensitivity setting for each preclear at each session, so that he will not miss reads or F/Ns. A sensitivity setting which is too low or too high for that particular preclear in the particular session will obscure reads and F/Ns, thus upsetting the preclear's case. Therefore, the student auditor must be proficient on this drill.

1. A. Have the coach pick up the cans *and keep his hands on the table so the student can see them throughout the can squeeze.*
- B. Check the coach's grip to ensure it is correct, *also ensuring you have the correct can size.*
- C. Adjust the sensitivity booster knob to the lowest position.
- D. (a) Set the sensitivity knob at 5 on the sensitivity dial.
(b) Adjust the needle to set line on the dial.
(c) Get the coach to squeeze the cans ensuring he does it properly.
(d) Note the distance the needle fell when the coach squeezed the cans.
- E. *On Step D (d) the needle will have fallen a distance of either*
(a) LESS than 1/3 of a dial drop,

or

(b) MORE than 1/3 of a dial drop.

If it's (a) raise the sensitivity a bit and repeat steps D (b), © and (d) and continue to do this until you have 1/3 dial drop. If it's (b) lower the sensitivity a bit and repeat steps D (b), (c) and (d) and continue to do this until you have 1/3 dial drop.

In other words, keep adjusting your sensitivity lower or higher according to whether the drop is more or less than 1/3 of a dial drop, until you get the correct sensitivity setting.

Each time a new can squeeze is asked for, the student auditor is to make sure the coach is holding the cans properly and is giving a correct can squeeze.

F. The student then notes the exact sensitivity setting at which he got the 1/3 dial drop. Flunks are given for errors as in Section II above and for failing to recognize when a 1/3 dial drop of the needle on the can squeeze has been obtained; for failing to recognize if the coach is giving a considerably harder or lighter can squeeze than he was giving at sensitivity 5, and for failing to establish the correct sensitivity setting for 1/3 of a dial drop on the coach.

2. Now the coach has the student auditor do the drill on a number of other students, with the coach watching, until he is satisfied that the student can easily and accurately establish the correct sensitivity setting for a 1/3 dial drop can squeeze.

SECTION IV: To give the student auditor a reality on how a correct sensitivity setting for 1/3 of a dial drop on the can squeeze gives a readable and workable meter and how an incorrect sensitivity setting gives an unreadable and unworkable meter, so the student will understand why he has to use a sensitivity setting that gives 1/3 of a dial drop.

1. Coach has the student auditor set the sensitivity accurately on a correct can squeeze for 1/3 dial drop as in Section III.
2. The student auditor does a "pinch test" as follows: student pinches the coach's arm, hard enough to hurt a little bit.
3. Now, while watching the meter, the student says to the coach:
"Recall that pinch I just gave you."
"Thank you."
4. Student notes the reaction of the needle to his command and the distance the needle fell.
5. Coach has the student do steps 2, 3, and 4 several times, each time noting what the needle does in response to "Recall that pinch."
6. Coach now has the student set the sensitivity at 1. Student has coach squeeze the cans and notes whether there's a read, or not. If there is a read, note size of read and leave the sensitivity at 1. If there's no read on the squeeze, the student still leaves the sensitivity at 1.
7. The student auditor does a new "pinch test" as in 2, 3, 4 and 5 above, noting the difference in needle response to the command "Recall that pinch" as compared to what it was in Step 5 at the correct sensitivity setting. There may be no read at all and the student should notice that.
8. Coach now has student set the sensitivity at 32, and coach squeezes the cans.
9. Student does the pinch test again and notes the reaction of the needle to his command "Recall that pinch."
10. Coach has the student then set the sensitivity correctly for 1/3 of a dial drop on a correct can squeeze and does the pinch test again.
11. The student should observe from these pinch tests that an accurate sensitivity setting determined from a correct can squeeze gives a readable and workable meter and that an

incorrect sensitivity setting gives an unreadable and unworkable meter. If he does not see this clearly, then the coach would have the student redo steps 7 through 10 until the student sees why the sensitivity must be set for 1/3 of a dial drop determined by a correct can squeeze.

Flunks are given for failing to note what the needle did and size of read in response to student telling coach to recall the pinch and for errors in setting sensitivity accurately and getting a correct can squeeze when called for in the drill.

HISTORY: Developed as a training drill by L. Ron Hubbard at Saint Hill in December, 1963 and revised by L. Ron Hubbard in February, 1979.

FALSE TA CHECKLIST

Ref:	HCOB 24 Oct 71R	FALSE TA
	HCOB 12 Nov 71RA	FALSE TA ADDITION
	HCOB 15 Feb 72R	FALSE TA ADDITION 2
	HCOB 18 Feb 72R	FALSE TA ADDITION 3
	<i>BTB</i> 24 Jan 73R II	<i>EXAMINER & FALSE TA</i>
	HCOB 24 Nov 73RC	C/S 53RK
	HCOB 23 Nov 73RA	DRY AND WET HANDS MAKE FALSE TA
	HCOB 13 Jan 77RA	HANDLING A FALSE TA

“This Bulletin cancels HCOB 29 February 1972RA Revised 23 April 1975 as it is misleading and has caused some auditors to assess the pc on the meter to find the cause of false TA instead of checking directly with the pc.”

This Bulletin reinstates the False TA Checklist with specific handlings that are directly from the issues that I wrote on false TA.

“The following are the items to be checked by an auditor on any pc. It need only be done once unless the check itself is suspected false, or if conditions of the pc’s hands, etc. change.

“The checklist is kept in the pc folder and is entered on the Folder Summary as an action done.

“The value of operating with correct can size should not be underestimated, the reference HCOBs state why.”

The auditor signs and answers the following points on the checklist. The auditor must obtain information by checking the pc’s hands himself or herself to see if the hands are dry or wet. The cause of false TA is in the physical universe and that is where the check is done. It is not done by asking the pc or checking the questions on the pc for meter reads. So the auditor would feel the hands of the pc to establish if they are dry or wet, would feel the pc’s hands with cream on them to see if the cream has dried up, would see if the pc’s hands cup so as to form an area that does not touch the cans and so forth. False TA is not think or mental mass. It is in the physical universe and that is where it has to be handled for it to be remedied. The handling sheet follows the items mentioned below.

“R-Factor to pc: ‘I am going to check the cans, your hands and various other things to adjust everything for best accuracy.’”

(See numbered list at back for handlings. Each number in the checklist is exactly represented in the handling by the same number to make it easy to switch to the handling section when doing this checklist.)

1. Is the meter charged fully? _____

2. Is the meter trimmed correctly? _____
3. Are the leads connected to the meter and cans? _____
4. Are the cans rusty? _____
5. Are pc's hands excessively dry requiring hand cream? _____
6. Are the pc's hands excessively wet requiring powder? _____

7. The pc is *NOT* being told continually to wipe his hands? _____
8. The pc's grip on the cans is *NOT* being continually checked by the auditor in a way that interrupts the pc? _____
9. TA position on large cans? Size approx *4 1/2 inches by 3 inches* or *11 cm by 8 cm* _____
10. TA position on medium cans? Size approx *4 7/8 inches by 2 5/8 inches* or *12 1/2 cm by 7 cm* _____
11. TA position on small cans? Size approx *3 3/4 inches by 2 1/8 inches* or *9 cm by 5 cm* _____
- 11A. Can size for a child is incorrect? Size can go down to photographic aluminum 35 mm film cans for a child. *Size approx 2 inches by 1 3/16 inches* or *5 cm by 3 cm* Note down TA position. _____
- 11B. If the above mentioned can sizes aren't correct for the pc's hands other sizes can be tried. 1 1/4" tubing 1 3/4" tubing as well as other can size checked to see which fits the pc's hand. Note down TA position. _____
12. Are the cans too large for the pc? _____
13. Are the cans too small for the pc? _____
14. Are the cans just right in size? _____
15. Are the cans cold? _____
16. Are the pc's hands dry or calloused? _____
17. Does the pc have arthritic hands? _____
18. Does the pc loosen his grip on the cans? _____
19. Check the pc's grip, does he hold the cans correctly? (See E-Meter Drill 5.) _____
20. Is the pc hot? _____
21. Has the pc slept well? _____
22. Is the pc cold? _____
23. Is the pc hungry? _____
24. Is it too late at night? _____
25. Is the auditing being done not in the pc's normal *regular* awake hours? _____
26. Are there rings on the pc's hands? (Remove any rings.) _____
27. Is the pc wearing tight shoes? _____
28. Is the pc wearing tight clothes? _____
29. Is the pc using the wrong hand cream? _____

30. Is the application of the hand cream correct and does it cover the entire hand? _____
31. Is the chair the pc is sitting in comfortable? _____
32. Is it actually chronic high or low TA case condition? _____
33. Has the pc gone into despair over his TA? _____

The handling of these points is stated in the reference HCOBs.

The handling of high or low TA after checking these points is by C/S 53RK, Short Hi-Lo TA Assessment C/S.

The way to be sure of a C/S 53RK or Hi-Lo TA list is by continued assessment and handling of these lists until an F/N on assessment is gotten.

So standard tech handles the high and low TA. The C/S Series gives more data on the subject.

FALSE TA CHECKLIST HANDLING SHEET

1. IS THE METER FULLY CHARGED?

Handling: "Keep a meter charged at least one hour for every 10 of auditing for 240 AC volt charging current, or 2 hrs for every 10 of auditing on a 110 AC volt charging current.

"Before each session snap the knob over to TEST. The needle should hit hard on the right side of the face. It can even bounce. If the needle doesn't snap to the right hard or if it doesn't quite get there on TEST, then that meter will go flat in mid-session and give false TA and no reads or TA on hot subjects." LRH (HCOB 24 Oct 1971R False TA.)

2. IS THE METER TRIMMED CORRECTLY?

Handling: "A meter can be improperly trimmed (not set at 2.0 with the trim knob) and can give a false TA position. When a meter is not left on a minute or two before trimming, it can drift in the session and give a slightly false TA.

"The trim can quietly be checked in mid-session by snapping out the jack where the cord goes into the box and putting the TA on 2, seeing if the needle is now on SET. If not, the trim knob can be moved to adjust it. The jack is quietly slipped back in. All without distracting the pc." LRH (HCOB 24 Oct 1971R False TA.)

3. ARE THE LEADS CONNECTED TO THE METER AND CANS?

Handling: "A properly set up meter with cans (electrodes) fitted to a pc who is holding them properly IS ALWAYS CORRECT." LRH (HCOB 24 Oct 1971R.) Reference for setting up a meter is covered in E-Meter Drills book EM 4.

4. ARE THE CANS RUSTY?

Handling: "Corroded cans can falsify TA. Get new ones now and then." LRH (HCOB 24 Oct 71R.)

5. ARE PC'S HANDS EXCESSIVELY DRY REQUIRING HAND CREAM?

Handling: "A quick test is have the pc put the cans under his armpits and you'll see if it's his calloused or chemically dried out hands. The excessively dry hand is seen as shiny or polished looking. It feels very dry. The correct treatment is to use a hand cream such as Vaseline Intensive Care Lotion (obtainable from any cosmetics store) not a greasy hand cream or vanishing cream. A good hand cream rubs all the way into the hand and leaves no excess grease. Hand cream is usually smeared on, rubbed in and can then be thoroughly wiped off. The hands will usually produce, then, a normal TA and meter response." LRH (HCOB 23 Nov 73RA Revised 23 April 75 Revised 26 Jan 77 Dry and Wet Hands Make False TA.)

6. ARE THE PC'S HANDS EXCESSIVELY WET REQUIRING POWDER?

Handling: "If the TA is low, check if the pc's hands are wet. If so have him wipe them and get a new read. It is usually found that the 1.6 was really 2.0 . . . Have the pc wipe hands. LRH (HCOB 24 Oct 71R.)

"Anti-perspirants can be applied to too wet hands. There are many brands of these, often a powder or spray. It can be wiped off after application & should work for two to three hours." LRH (HCOB 23 Apr 73RA.)

7. THE PC IS NOT BEING TOLD CONTINUALLY TO WIPE HIS HANDS?

Handling: Above per wet hands.

8. THE PC'S GRIP ON THE CANS IS NOT BEING CONTINUALLY CHECKED BY THE AUDITOR IN A WAY THAT INTERRUPTS THE PC?

Handling: "Keep the pc's hands in sight. Check the pc's grip. Get smaller cans." LRH (HCOB 24 Oct 71R.)

9. TA POSITION FOR LARGE CANS?

Handling: "For a normal or large handed pc the can size is about 4 7/8ths inches by 2 5/8ths inches or 12 1/2 cm by 7 cm. This can be altered as big as 4 1/2 inches by 3 inches diameter or 11 cm by 8 cm. This is standard." LRH (HCOB 24 Oct 71R.)

10. TA POSITION ON MEDIUM CANS?

Handling: Covered above.

11. TA POSITION ON SMALL CANS?

Handling: "This can should be 3 3/4 inches by 2 1/8th inches or 9 cm by 5 cm diameter or thereabouts. A small child would be lost even with that can. So a small 35 mm film can could be used. This is 2 inches long by 1 3/16ths diameter or 5 cm by 3 cm. This works but watch it as these cans are aluminum. They do work but test for true read with a slightly larger can and then trim to adjust for the aluminum if any different. "Cans of course should be steel with a thin tin plating. Regular soup cans. Can size to match the pc avoids slack can grip or tiring the hands into going slack, giving the auditor 3.2 F/Ns and trouble." LRH (HCOB 24 Oct 71R.)

11A. CAN SIZE FOR A CHILD IS INCORRECT?

Handling: Size can go down to photographic aluminum 35 mm film cans for a child. Note down TA position.

11B. IF THE ABOVE MENTIONED CAN SIZES AREN'T CORRECT FOR THE PC'S HANDS OTHER SIZES CAN BE TRIED.

Handling: 1 1/4" tubing or 1 3/4" tubing as well as other can size checked to see which fits the pc's hand. Note TA position.

12. ARE THE CANS TOO LARGE FOR THE PC?

Handling: "Can size to match the pc avoids slack can grip or tiring the hands into going slack." LRH (HCOB 24 Oct 71R.)

Check the pc's grip and see if the hand is touching all of the can and if the size is comfortable. (Ref: HCOB 13 Jan 77RA Handling a False TA.)

13. ARE THE CANS TOO SMALL FOR THE PC?

Handling: Per above. Check how the pc is holding the cans and if the entire hand is on the cans and if they are comfortable and adjust accordingly per above.

14. ARE THE CANS JUST RIGHT FOR THE PC?

Handling: Check the grip and see if the can size is correct for the pc. Do the cans comfortably fit the pc's hands with the hand touching the cans so it gets an accurate reading on the meter? If the can size is correct then you must ensure that the grip is also correct on the cans.

15. ARE THE CANS COLD?

Handling: "Regardless of can size, cold E-Meter electrodes tend to give a much higher tone arm reading particularly on some pcs.

"Until the cans warm up, the reading is generally false and is false in the direction of high. Some pcs are 'cool blooded' and the shock of ice cold cans can drive the TA up and it takes awhile to drift down.

"A practice which gets around this is for the auditor or Examiner to hold the cans briefly until they are warm and then give them to the pc. A variation is for the auditor or Examiner to put the cans under his armpits while setting up. This warms them. There are probably many other ways to warm up cans to body temperature." LRH (HCOB 12 Nov 71RA Revised 26 Jan 77.)

16. ARE THE PC'S HANDS DRY OR CALLOUSED?

Handling: Covered above under pc's hands excessively dry requiring hand cream.

There are ways to apply the hand cream so that it is correct for that individual pc and does handle the false TA. You can spread it on extensively then wipe it off and then rub a bit more in ensuring the thumbs are included is one way. (Ref: HCOB 13 Jan 77RA.)

The point is to feel the hands with the cream on them to see if it has handled the excessively dry hand that is seen as shiny or polished looking.

And it now should no longer feel dry. (HCOB 23 Nov 73RA Revised 23 Apr 75, Revised 26 Jan 77.) The correct treatment is to use a hand cream such as Vaseline Intensive Care Lotion (obtainable from any cosmetics store) not greasy hand cream or vanishing cream.

A good hand cream rubs all the way into the skin and leaves no excess grease. This restores normal electrical contact. Such a hand cream would only have to be applied once per session—at session start—as it lasts for a long while.

If a cream leaves smears on a can, it is too heavily applied or too little absorbed. (HCOB 23 Apr 75R, Revised 26 Jan 77.)

17. DOES THE PC HAVE ARTHRITIC HANDS?

Handling: "A rare pc is so crippled with arthritis that he doesn't make contact fully with the cans. This gives high TA. Use wide wrist straps and you'll get a right read." LRH (HCOB 24 Oct 71R.)

18. DOES THE PC LOOSEN HIS GRIP ON THE CANS?

Handling: Check the grip. Does the angle of the cans go across the palms of the pc? Is the natural curl of the fingers sufficient to hold the cans in place, and is the placement of the cans at an angle ensuring that the maximum skin area is touching the cans? (Ref: *Book of E-Meter Drills.*) See if the palm is touching the can and not elevated off. (Ref: HCOB 13 Jan 77RA.)

19. CHECK THE PC'S GRIP, DOES HE HOLD THE CANS CORRECTLY?

Handling: Covered in above section. Also check to see if the pc is holding the cans so tight that it is causing the hands to sweat and read falsely low. (Ref: HCOB 13 Jan 77RA.)

20. IS THE PC HOT?

Handling: Get a fan in the room or handle the room so that it is cooler and the pc comfortable.

21. HAS THE PC SLEPT WELL?

Handling: Don't audit a pc who has not had sufficient rest or is physically tired. (Ref: HCO PL 14 Oct 68R The Auditor's Code.)

22. IS THE PC COLD?

Handling: "A pc who is too cold sometimes has a falsely high TA. Wrap him in a blanket or get a warmer auditing room. The auditing environment is the responsibility of the auditor." LRH (HCOB 24 Oct 71R.)

23. IS THE PC HUNGRY?

Handling: Get the pc something to eat and don't audit a pc who has not had enough to eat or is hungry. (Ref: HCO PL 14 Oct 68R The Auditor's Code.)

24. IS IT TOO LATE AT NIGHT?

Handling: "Between 2 and 3 AM or late at night a pc's TA may be very high. The time depends on when he sleeps usually. This TA will be found normal in regular hours." LRH (HCOB 24 Oct 71R.)

25. IS THE AUDITING BEING DONE NOT IN THE PC'S NORMAL REGULAR AWAKE HOURS?

Handling: Covered above.

26. ARE THERE RINGS ON THE PC'S HANDS?

Handling: "Rings on the pc's hands must always be removed. They don't influence TA but they give a false rock slam." LRH (HCOB 24 Oct 71R.)

If the ring can't come off use a small strip of paper around them to shield the ring touching the can.

27. IS THE PC WEARING TIGHT SHOES?

Handling: Remove them. (Ref: HCOB 24 Oct 71R, HCOB 13 Jan 77RA.)

28. IS THE PC WEARING TIGHT CLOTHES?

Handling: If it turns out that tight clothing is affecting the TA ensure that the pc doesn't wear tight clothes in future sessions. If possible have the pc remove the tight clothing and see what the effect was that it had on the TA and make sure no more tight clothes are worn in future sessions.

29. IS THE PC USING THE WRONG HAND CREAM?

Handling: Using the reference materials find the right hand cream and test it on the pc. Note TA position.

30. IS THE APPLICATION OF THE HAND CREAM CORRECT AND DOES IT COVER THE ENTIRE HAND?

Handling: Watch how the pc puts on hand cream and see if it covers the entire hand, thumb included. If not then have the pc put on hand cream covering the entire hand and pick up the cans and note TA position. Some pcs may have to put cream on and wipe it off and then re-apply it. (Ref: HCOB 13 Jan 77RA.)

31. IS THE CHAIR THE PC IS SITTING IN COMFORTABLE?

Handling: Get a new chair that is comfortable for the pc.

32. IS IT ACTUALLY A CHRONIC HIGH OR LOW TA CASE CONDITION?

Handling: C/S Series 53RK or Hi-Lo TA Assessment. Done to F/Ning assessment.

33. HAS THE PC GONE INTO DESPAIR OVER HIS TA?

Handling: Handle the false TA with using this list as a guideline so that the cause of false TA is found and fully handled with the pc by the various handlings covered above. When false TA is handled check TA worries, TA hassles and LIC best read.

This handling sheet is used in conjunction with the items that are checked. This gives you the way to handle them.

Refer to reference material in reference section above for further data on handling a false TA.

METER POSITION

**YOU MUST NEVER NEVER NEVER HAVE YOUR METER IN A POSITION
WHERE THE PRECLEAR CAN READ THE TA.**

To do so can cause the pc worry about his TA position and take his attention off his case.

It violates Clause 17 of the Auditor's Code.

THE NEEDLE

1. A needle is monitored by the sensitivity knob, the Tone Arm and the momentary or changing reactions of the preclear.

2. There are ten main needle actions:

- (1) Stuck
- (2) No reaction (nul)
- (3) Fall
- (4) Change of characteristic
- (5) Rise
- (6) Theta bop
- (7) Rock slam
- (8) Free needle
- (9) Body reactions
- (10) Stage Four

3. In a totally stuck needle (1) the preclear would not even register being pinched. It looks stiff. In a nul needle (2) the question does not change the needle behavior.

In the presence of an ARC break with the auditor, the needle is liable not to register any reaction at all, and to look like a nul needle; therefore, before writing off any assessment item, prepcheck, or security check question as nul, be sure to check for -- and repair -- any ARC break.

4. A falling needle (3) makes a dip to the right as you face the meter. A fall may consist of half a division (about one-eighth of an inch) or may consist of fifteen dials (the whole meter face dropped fifteen times). It is still a fall. A fall always happens with rapidity, within a second or two. It is also called a drop, a dip and a register. It denotes that a disagreement with life on which the preclear has greater or lesser reality has met the question asked.

5. A fall is the most used and observed needle action. It means to the auditor, 'I've found it', or 'I've gotten a response in the bank'. (It is the click of the light switch illuminating where we are going.

6. Falls are measured relative to falls. That's why we leave the sensitivity alone when we are looking for something question by question.

7. Given two falls, the longer fall is the right one. For instance, a question about 'Joe' gets three-eighths of an inch of fall. A question about 'Mabel' right after gets five-eighths of an inch of fall. The right answer is Mabel.

8. Any fall denotes there is something there. Any fall at any sensitivity level on rudiments questions denotes the presence of a bad reaction to the room, an ARC break, a withhold, or a present time problem and must be cleared no matter what the preclear says.

9. A fall follows at once upon the question being asked. A fall can be in two stages or more providing they take place within a second or two after the question.

10. A fall is the diagnostic meter action. Set for falls from a still needle as given under Sensitivity above.

11. In starting out the first thing you want to know is, 'Is the preclear reading on this meter?' You get the preclear to squeeze the cans. You get a fall as he does. Oh. He or she is reading on the meter. The meter is not broken or turned off or disconnected. It is the fall that tells us.

12. The next thing we want to know is rudiments. It is the fall that tells us what we must handle.

13. The next thing is the assessment. It is degree of fall that tells us what is right, for we always take the greatest fall we can obtain, the sensitivity being kept constant.

14. The next thing is the running. We ignore the fall now and watch the Tone Arm instead. The needle, of course, has to move if the Tone Arm is going to move, but, until we want more rudiments type answers or until we want a new assessment, we ignore the needle and watch only the Tone Arm.

15. Change of characteristic (4). Sometimes, as in old Dynamic Assessment, we cannot get clean falls on what we are looking for. Another guide is "change of characteristic" of the needle.

16. The needle is doing a pattern of small rises and falls. We ask a question, it stops moving. We ask another question, it resumes idly rising and falling as before. That stop is a change of characteristic. Or the needle is stopped while we ask a long series of questions but suddenly does a small dance. That is a change of characteristic.

17. Change of characteristic occurs when we hit on something in the preclear's bank. It occurs only when and each time that we ask that exact question. As the question or item alone changes the needle pattern, we must assume that that is it and we use it.

18. A question that stops a rising needle is a change of characteristic question and like a fall means we have struck something. Further exploration usually develops it into a fall.

19. By using 'change of characteristic' we can sometimes get our foot in the door and get into a channel that brings about falls.

20. A whole assessment can be done by change of characteristic as well as by falls but it is not usual and, in fact, will develop falls anyway; if you are on to something hot.

21. It is not much used but must be known as it may have to be used sooner or later when we can't get falls.

The only needle reactions in which you should be interested are those which occur INSTANTLY, i.e., within one-tenth to one-half of a second after you have asked a question of the preclear.

22. Rises (5). A rising needle means 'no confront'.

23. Of course a needle must rise at times or the Tone Arm would never move. But it still means that the preclear has struck an area or something he isn't confronting. One never calls his attention to this. But one knows what it is.

24. The only use a rising needle has at this time is to stop going up the Pre-Havingness ladder with a terminal assessment when the needle begins a marked rise. You have exceeded the preclear's reality and he isn't confronting, so you'd better turn around and go down the ladder again before you get things too unreal for him by asking if the terminal can do things the preclear cannot imagine it could do.

25. The right circuit, valence, machinery, called off, will stop a rising needle. This was once used but is not necessarily employed at this time.

26. The rising needle is, therefore, not much employed, but one should recognize one. It is a steady, constant movement of the needle, rather slow, from right to left.

27. A needle returning to position after a fall is not a rising needle.

28. A Theta Bop (6) is a small or wide steady dance of the needle. Over a spread of one-eighth of an inch, say (depending on sensitivity setting -- it can be half an inch), the needle goes up and down perhaps five or ten times a second. It goes up, sticks, falls, sticks, goes up, sticks, etc., always the same distance and a constant speed.

29. A theta bop means 'death', 'leaving', 'don't want to be here'. It is caused by a yo-yo of the preclear as a thetan vibrating out and into the body or a position in the body. It's as if the needle is jumping between two peaks across a narrow valley.

30. Mention death to anyone (or make them think about it) while they're on a meter and you'll see a theta bop.

31. Its use is to detect whether a preclear is being left stuck in death, or to locate death or departures.

32. If a preclear wants badly to get out of session he or she may start theta bopping without being stuck in a death. But few theta bops mean the preclear wants to leave session. It's most often turned on for 'desire to leave session' during a security check.

33. If you get a 'bop' turned on during an assessment (or a security check) it takes it quite a while, sometimes, to turn off. The next several questions after a 'bop' turns on are therefore seldom validly readable. Just keep on with an assessment but be careful to go over the ground again and again if you're getting a 'bop'. Theta bops turn on fast and turn off slowly.

34. They are not very important in diagnosis. They're more interesting than vital.

35. Rock slam (7). In assessing or running you occasionally get a Rockslam. This originally meant (and still does) that you are on the rock chain.

36. A Rock slam is a crazy, irregular, unequal, jerky motion of the needle, narrow as one inch or as wide as three inches happening several times a second. The needle 'goes crazy', slamming back and forth, narrowly, widely, over on the left, over on the right, in a mad war dance or as if it were frantically trying to escape. It means hot terminal or hot anything in an assessment and takes precedence over a fall.

37. It differs from a theta bop, which has no precedence over a fall, in that a theta bop is even and gentlemanly and a Rock slam is as crazy as a Commie agitator.

38. If found in an assessment, use it, but make sure of what turned it on before you buy. It means the item is hot.

39. If found in running a process, just carry on. It means the going is hot, so for Heaven's sakes don't stop the session.

40. Free needle (8). This is probably the least understood term and needle action in all of E-Metering.

41. It means an idle, uninfluenced motion, no matter what you say about the goal or terminal. It isn't just nul, it's uninfluenced by anything (except body reactions).

42. Man, it's really free.

43. You'll know one when you see one. They're really pretty startling. The needle just idles around and yawns at your questions on the subject.

44. It doesn't happen until a person is well above release, so don't worry about it until you see it.

45. Use NUL as a word, not Free, if you're in doubt about it. A NUL just doesn't fall on a question. It might fall on a similar question. A Free Needle wouldn't fall if the psychiatrists surrendered in a body or the Empire State Building fell down.

46. A Free Needle means, when it is used as a term, 'The preclear is getting awful close to clear'.

47. Tight needles (stuck) are far from free. A stuck needle can be made to fall by advancing the sensitivity 'way up. Thus even a 'stuck needle' can be 'nul'. But a Free Needle is not stuck or nul. It just floats around.

48. Body reactions (9). The deep breathing of a preclear, a sigh, a yawn, a sneeze, a stomach growl can any one of them make a needle react.

49. Get a person on the cans. Turn the sensitivity high. Make him do the following one at a time: sigh, yawn, breathe deeply, cough, laugh, knock the cans together, lift a finger off the electrode (can), convulsively grip the cans, scratch his head while holding the cans, scratch his leg, rub a can against his or her shirt or skirt, rub his fingers together without letting the cans touch, and stretch. Note the needle reactions. Now have the person do all these things again as you read them off. Now turn down the sensitivity knob so that the needle drops one-third of a dial (about one and a half inches). Now with that setting, read off the list to him and watch the needle.

50. Do you see now why you don't run with high sensitivity?

51. These are body reactions.

52. The meter will also read Basal Metabolism, interesting because it tells you if the preclear really is eating, or has eaten breakfast. Have the preclear on the cans take a very deep breath. If a moment later the needle falls half a dial (two inches or more) the preclear has a good high Basal Metabolism. If he hasn't eaten breakfast, it won't fall like that. On the second or third deep breath let out, the Basal Metabolism stops registering, so the first time is the test, not subsequent tries.

53. You can also make a high sensitivity set needle jump by 'imagining' the preclear's hands being better connected to the cans and 'seeing' a whitish glow between cans and finger tips. That is, if you're in good shape. You can also do it by 'seeing' this glow in the area of a preclear's old injury. That is the extent of your influencing the preclear and the meter reading outside of auditing.

54. You can also (after you've been talking to, not processing, a preclear) set the meter on yourself, then give the cans to the preclear and he or she will read the same adjustments for a few moments.

55. These are all more or less Body Reactions. They get in your road as to movement and sneezes and they don't affect your processing as to 'crosscurrents' between auditor and preclear.

So bear up under them and skip them. They're not important once you know what they are.

56. Stage Four (10). This is the sole survivor of an old system (20thACC) that used four stages of meter reaction as a test of state of case.

57. A Stage Four Needle is still important to identify when met as it means this preclear is from No place as a case.

58. A Stage Four is below a merely stuck needle. The preclear's thoughts and few of your questions have any bearing on the preclear's case. This is most promising as CCH stuff. But not only a Stage Four takes CCH. (See Director of Processing Check Type One for case reactions that take CCH.)

59. Possibly the change process or attention process may bite here.

60. A Stage Four needle goes up about an inch or two (always the same distance) and sticks and then falls, goes up, sticks, falls, about once a second or so. It is very regular, always the same distance, always the same pattern, over and over, on and on, and nothing you say or the preclear says changes it (except Body Reactions).

61. Break through this meter action by pulling withholds or unkind thoughts or the Jo'burg Security Check or the CCHs or processes, and you have busted the lowest level of the case.

62. But it's a disheartening phenomenon. The E-Meter just doesn't react to anything except a kick in the head. Up, stick, fall, up, stick, fall. On and on like a metronome set for the Dead March of Saul. Know it when you see it. Until you break it, there's no case change.

AUDITING GOOFS
BLOWDOWN INTERRUPTION

It is a serious goof for the auditor to speak or move during a blowdown of the Tone Arm.

When a Tone Arm has to be moved rapidly down, the needle *appears* to float to some but it is just falling.

To see if a needle is floating the TA must have stopped moving down.

A Blowdown is a period of relief and cognition to a pc while it is occurring and for a moment after it stops.

Therefore it is a serious goof for an auditor to speak or move during the blowdown or for a moment afterwards.

This was noted years ago and is given in early materials on goals.

AN AUDITOR MUST NOT SPEAK OR MOVE DURING A BLOWDOWN.

When the auditor has to move the TA from right to left to keep the needle on the dial and the movement is .1 divisions or more then a blowdown is occurring. The needle of course is falling to the right.

That is a period of charge blowing off the bank. It is accompanied by realizations for the pc. Sometimes the pc does not voice them aloud. They nevertheless happen.

If the auditor speaks or moves beyond adjusting the TA quietly with his thumb the pc may suppress the cognitions and stop the blowdown.

To see if a needle floats the TA must be halted for the moment between 2 and 3 on a calibrated meter. A floating needle cannot be observed during a blowdown.

For an auditor to sit up suddenly and look surprised or pleased, or for an auditor to say the next command or "That's It" during a blowdown, can jolly well wreck a pc's case. So it's a real goof to do so.

To get auditing results one must audit with a good comm cycle, accept the pc's answers, handle the pc's originations, be unobtrusive with his auditing actions, not hold the pc up while he writes, not develop tricks like waiting for the pc to look at him before giving the next command, not prematurely ack and so start compulsive Itsa, and be very quiet during and just after a blowdown.

WHAT IS A FLOATING NEEDLE?

A floating needle is a rhythmic sweep of the dial at a slow, even pace of the needle.

That's what an F/N is. No other definition is correct.

ARC BREAK NEEDLE

The needle of a preclear with an ARC Break may be dirty, stuck or sticky, but may *also* give the appearance of FLOATING. This is *not* a Release point however, as the pc will be upset and out of comm at the same time. The auditor must observe the preclear and determine which it is.

DEFINITION OF A ROCK SLAM*

R/Ses, WHAT THEY MEAN

*(HANDLING OF CONFESSIONALS CHECKSHEETS)
(PTS PROCESSING CHECKSHEETS)
(EXPANDED DIANETICS CHECKSHEETS)
(METER OPERATION CHECKSHEETS)
(VARIOUS RUNDOWN CHECKSHEETS)*

The crazy, irregular, left-right slashing motion of the needle in the E-Meter dial is called "A rock slam" or "R/S." It repeats left and right slashes unevenly and savagely, faster than the eye easily follows. The needle is frantic. The width of an R/S depends largely on sensitivity setting. It goes from one-fourth inch to whole dial. But it slams back and forth.

The term was taken from a process in the 50s which sought to locate "A rock" on the pc's early time track; the "slam" is a description of the needle violence, meaning it "slams" back and forth. For a time all left-right motions of the needle were considered and called "rock slams" until it was found that a *smooth* left-right flow was a symptom of release or key-out and this became the "floating needle." There is yet another left-right motion of the needle called the "theta bop." This occurs when the person has or is trying to exteriorize. "Theta" is the symbol for the person as a spirit or goodness; "bop" is an electronic term for a slight hitch in the sweep of a needle. A "theta bop" hitches evenly at each end of the sweep left and right and is very even in the middle of the sweep.

Neither the "floating needle" nor the "theta bop" can be confused with a "rock slam." The difference of the rock slam is uneven, *frantic slashing left and right*; even the distances traveled left and right are likely to be different in each swing from the last.

A "rock slam" can be caused sometimes by leaving rings on the pc's fingers or by a short circuit in the meter or by the cans (electrodes) touching something like a dress. These are the mechanical considerations and must be ruled out before the pc can be considered to have "rock slammed." If the pc is not wearing rings and if the meter needle is calm with the lead unplugged, if the lead is okay, and if the pc is not jiggling the ends of the cans against his clothes, then the pc's rock slam is caused by the pc's bank .

One has to be very careful about the correctness of the pc actually having rock slammed while on the meter, that it was actually observed, that it was not mechanically caused as above. One puts the R/S down on the worksheet and also gives exactly what was asked. And also that the mechanical points were checked without distracting the pc.

ONE MUST ALWAYS REPORT A ROCK SLAM IN THE AUDITING REPORT, NOTE IT WITH SESSION DATE AND PAGE INSIDE THE LEFT COVER OF THE PC'S FOLDER AND REPORT IT TO ETHICS INCLUDING THE QUESTION OR SUBJECT WHICH ROCK SLAMMED, PHRASED EXACTLY.

Why? Because the rock slam is the most important needle manifestation! It gives the clue to the pc's case.

In 1970 I began a full-scale research project into the subject of insanity and its relationship to cases and case gains and suppression. It was only then that the full significance of the rock slam was unearthed. This research developed into what is now called EXPANDED DIANETICS, a series of special processes and actions with their drills and training which permits the auditor to handle a specific case type. This was, by the way, Man's first system of positive detection and handling of psychosis and the first full understanding of what psychosis is.

While this bulletin is not in any way a two-minute course in or a substitute for full training in Expanded Dianetics, any auditor who audits, Sec Checks, or handles people on a meter has to know what a rock slam is and how it behaves and what he should do about it.

The first thing is to be able to recognize one and to quickly with the scan of the eye and unplug of the meter cord (without any distraction of or notice by the pc) make the checks for a mechanical rock slam as given above.

You can make a meter "rock slam" with no pc or cord connected to it by (a) turning it on; (b) put the sensitivity at perhaps 2; © put the needle at "set"; (d) rapidly, very rapidly, move the TA back and forth maybe a quarter of an inch and do it unevenly. *That*, if you did it very fast and unevenly, would be something that resembled a rock slam. But no matter how fast you made your fingers move, a real R/S is a trifle faster. If you do that you will see what an R/S looks like. The needle in this experiment is not made to hit the sides of the meter.

Now if you take the same set-up and smoothly slowly move the tone arm back and forth about 2 times a second without any roughness and the same distance right and left, you will have a floating needle. Note it very well as this comes at a time of release and is the thing a good auditor hopes to see and gives him the end-off signal for a process. It has to be well known as you NEVER bypass one in a session and to do so makes an uncomfortable pc. (The pc will often cognite—get a realization about himself or life at this point and one does not stop him from doing this.) This is the thing you indicate to the pc. You don't ever indicate rock slams or theta bops. When you see it, and without stopping or interrupting the pc's cognition, you always say, "Your needle is floating."

Now the theta bop can also be shown to yourself by you. Set up the meter as above. Only this time, you smoothly swing it to the right and give it a tiny twitch in the same direction. Then you smoothly, at once, swing it to the left and give it a tiny twitch in the same direction. Then do it to the right. And so on. This is a theta bop. It is different than a floating needle only in that it hitches at each end of the swing. So learn to recognize it.

There is a vicious smooth right direction slash that occurs when a pc hits a certain area of the bank that is called a "rocket read" and there is of course the small fall, long fall (which both go to the right and indicate a charged question or reaction) and there is the gradual rise to the left. But these do not repeat back and forth which is the characteristic of the rock slam, floating needle and theta bop.

All right, so we know exactly what it looks like when we talk about a ROCK SLAM as a read of the meter. We know how it can be mechanically caused. And we know what we have to record and report when it is seen.

But exactly *what* does a rock slam mean with regards to the pc?

If you don't know this you can miss on the pc, on the case, on the org and humanity.

A ROCK SLAM MEANS A HIDDEN EVIL INTENTION ON THE SUBJECT OR QUESTION UNDER DISCUSSION OR AUDITING.

Two things underlie insanity, or to be more specific, there are two causes and conditions both of which have been lumped together by man and called insanity. He could not of course define it as he didn't know what caused it.

The first of these two things does not concern us overly much here and is the subject of a separate checksheet and training and is called PTS or Potential Trouble Source handling. A "PTS" is a person who has been or is connected with somebody who has evil intentions. A PTS can feel uncomfortable in life or be neurotic or go insane because of the actions upon him of a person with evil intentions. Most of the people in institutions are probable PTSes.

The second of these two things is insanity caused to the individual himself (let alone others) by hidden evil intentions.

The extent of these intentions and what the person will do (and hide) in order to carry them out is quite shocking. These people are covert or overt criminals and many of them are insane—meaning beyond all rationality in their acts. Because their evil intentions are hidden and because they are often very plausible such individuals are what make "behavior so mysterious" and "Man look so evil when you see what Mankind does" and all sorts of fallacies.

It is this last type, the chronic, heavy rock slammer, which Expanded Dianetics handles.

One rock slam doesn't make a psychotic. Or a total menace to everyone. But it does mean there could be more and it might in rare cases mean you have, seeing enough of these R/Ses, a very dangerous person on your hands and in your vicinity. And that person must be handled by Expanded Dianetics.

You won't see a great many rock slams in auditing people so you could be totally thrown off by surprise when you see one. And mess it all up because you are surprised. So know what it is and don't get all quivery and make mistakes and blow your confront. Just carry on.

If you don't note the EXACT question that was asked and the EXACTLY worded statement the pc made when the R/S was seen, you can muck it up for the Expanded Dianetics guys. They won't be able to get it turned back on again easily and will lose a lot of time. So you have to be sure your auditing report is accurate, that the R/S is written BIG on the column and circled and, no matter what else you do in the session, you have to get it recorded in the left front cover of the folder giving the date and page of the session and you have to report it to Ethics. And also you don't third party the pc and give him a bad time in the session because of it.

Now R/Ses most easily turn on during Sec Checks or Integrity Processing or when pulling withholds or trying to investigate something. So the people who see these most often are those engaged in that activity and not routine auditing (when they can also but more rarely turn on). Further the most likely person to collide with "needing to be Sec Checked" is an R/Ser, which again increases the numbers of R/Ses seen in these activities compared to routine auditing. But a very heavy R/Ser will also turn them on in routine auditing.

It is the exact *point* of the R/S in the session, the exact question that was asked and the exact subject or phrase where the R/S turned on that are important. And these are very important as then the person can be fully handled with a full Expanded Dianetics Rundown by a qualified Expanded Dianetics Specialist. When, of course, the person gets to that point on his Grade Chart. The Grade Chart points are after Dianetics (like Drug RDs, etc.) but before grades, after grades but before Power, after Power but before Solo, and after OT III or after any single grade above OT III. These are the only points where Expanded Dianetics can be delivered and the R/S fully and completely handled.

Now here is how you can turn off an R/S and mistakenly think it is handled:

1. The overt-motivator sequence has two sides. One is what the person has done (overt) and what is done to the person (motivator). You can ask, when the person R/Ses on something, if anyone has ever INVALIDATED him on that subject or action. He will find some and the R/S will turn off AND WON'T EVEN BE FAINTLY HANDLED BUT ONLY SUBMERGED. One can believe he has "handled" the R/S. Not true. He has just turned it off and maybe made it harder to find next time. One can ask what the person has done TO the subject mentioned and while this may unburden the case and make the person a bit better, the R/S is NOT handled, only turned off or submerged. It's almost as if there are so many overts and motivators on this subject or in this area that the push-pull of it makes the needle go wild (R/S). And indeed, this may be the energy cause, in the bank, of the needle reaction. But neither overt nor motivator handles an R/S finally because the CAUSE of the R/S is an INTENTION to harm and it isn't all that likely the basic intention will be reached.
2. Another apparent way the R/S can get "handled" and isn't is to take the R/Ser earlier similar on the subject of the R/S. The R/S will probably cease, go "clean." But in actual fact it is still there, hidden.
3. The third way an R/S can be falsely "handled" is to direct the person's attention to something else. If, when this is done, the exact subject of the R/S is not noted by the auditor, it will be difficult to find it again when the person goes into Expanded Dianetic auditing.
4. Yet another, and probably the last way to falsely "handle" an R/S is to abuse the person about his conduct or behavior or the R/S, or to "educate" him to do better, or to "modify" his behavior with shocks or surgery or other tortures like the psychiatrists do. In other words one can seek to suppress the R/S in numerous ways. Maybe the R/S won't occur (being too overburdened now) but it is still there, buried very deep and possibly beyond reach now.

So if you understand the above four points you will see that although you can ease off the R/S, you have not handled it. It has merely gone out of sight.

All right, what then DOES HANDLE an R/S?

I warned you that this isn't a two-minute course on Expanded Dianetics and it isn't. An R/S is HANDLED by a fully qualified Expanded Dianetics auditor delivering full Expanded Dianetics to the person at that point on the Grade Chart where Expanded Dianetics is supposed to be delivered. If anyone thinks it can be done effectively any other way or if he C/Ses it to be done and the auditor is stupid enough to try to do that C/S, then it's Committees of Evidence and suspended certificates all around.

With that warning, and only with that warning, I can briefly state what has to be done with the case. This is not what YOU do if you are not delivering full Expanded Dianetics at the right point on the Grade Chart. It is a brief statement so that you can understand what lies under that R/S.

The pc with an R/S on any given subject and who R/Ses while discussing that or related subjects HAS AN EVIL INTENTION TOWARD THE SUBJECT DISCUSSED OR SOME CLOSELY RELATED SUBJECT. The pc intends that subject or area of life nothing but calculating, covert, underhanded HARM which will be at all times carefully hidden from that subject.

Thus, the Expanded Dianetics Specialist, in handling that case (at the proper point on the Grade Chart) has to be able to locate each and every subject and question and R/S in that person's folder as noted by Sec Checkers and previous auditors or Cramming Officers or Why

Finders. He has to have the complete list of R/S subjects. If they are noted as to session date and page and if all Sec Checking papers and cramming papers are in that person's folder, then the Expanded Dianetics Specialist can do a full and complete job. Otherwise he has to do a lot of other time wasting actions to get the R/Ses found and turned on again.

What the Expanded Dianetics Specialist actually does is locate EXACTLY the actual evil intention for every R/S on the case and handle each one to total conclusion. When he is finished, if he has done his job well, the person's behavior will be magically improved and as to his social presence, menace and conduct, well that will be toward survival.

When you see an R/S, if you are not an Expanded Dianetic Specialist doing Expanded Dianetics at the correct point on the Grade Chart, you don't say "Hey, you've got an evil intention!" and you don't ask "Say, what's that evil intention?" or do corny things like that because you'll get the pc self-listing, you may get a wrong item, you won't know what to do with it and you're just likely to get the auditing room wrapped around your neck right there.

No, you quietly note it, make sure it isn't a mechanical fault, write it big on the worksheet, write down everything the pc is saying swiftly, note what question you were asking and let the pc talk and ack him and go on with what you are doing with the pc at the time. And after session you note it in the left-hand cover of the folder and send a report to Ethics.

And some day, when he's done his Drug Rundown or gotten to one of the points on the Grade Chart where a full XDn can be done, why then it will be handled. And a good C/S will program or tip the case for that to be done.

So that's the know-how you have to know about R/Ses to really help the guy and the society and your group.

We're not in the business of curing psychos. The governments at this writing pay the psychiatrists billions a year to torture and kill because of R/Ses they don't know anything about. The crime in the society out there is caused by people who R/S. Stalin, Hitler, Napoleon and Caesar were probably the most loaded R/Sers of all time unless it was Jack the Ripper or your local friendly psychiatrist.

So know what you are seeing when you see it and know what to do about it. And don't kid yourself. Or vilify or mow down people who R/S; we're not in that business.

And the Expanded Dianetic Specialist *and* the pc someday will love you dearly for knowing your job and doing it right.

FOLLOWING UP ON DIRTY NEEDLES

(Ref: HCOB 3 Sep 78	DEFINITION OF A ROCK SLAM
HCOB 28 Jun 62	DIRTY NEEDLES
HCOB 17 May 69	TRs AND DIRTY NEEDLES
E-Meter Drills	
17, 20, 21:	<i>THE BOOK OF E-METER DRILLS</i>
TAPE: 6205C23	
SH TVD-7	FISH & FUMBLE, CHECKING DIRTY NEEDLES.)

The only valid definition of a dirty needle is given in HCOB 3 September 78, DEFINITION OF A ROCK SLAM, as:

“DIRTY NEEDLE: AN ERRATIC AGITATION OF THE NEEDLE WHICH IS RAGGED, JERKY, TICKING, NOT SWEEPING, AND TENDS TO BE PERSISTENT. IT IS NOT LIMITED IN SIZE.”

It is caused by one of three things: 1) the auditor’s TRs are bad or 2) the auditor is breaking the Auditor’s Code or 3) the pc has withholds he does not wish known.

The definitions are pointed up in the above HCOB because it is *vital* not to confuse a dirty needle with an R/S. They are distinctly different reads. The difference is in *the character of the read*: it has nothing to do with size.

Auditors, supervisors and C/Ses must understand the difference between these two reads and must be able to recognize each instantly when they occur.

Because of the underlying causes of these two different types of reads they are both most apt to appear when Confessionals are being done or when areas of O/Ws are being addressed. But they are different and the auditor must know the difference cold.

A dirty needle must not be ignored especially when doing any type of Confessional action.

If the auditor’s TRs are in and he is maintaining the Auditor’s Code, a dirty needle, taken up, will either clean or turn into an R/S. It is not to be overlooked.

The dirty needle is your hottest string to pull in finding and turning on an R/S. *Whatever is behind it, ignoring it will cut the comm line between auditor and pc and wreck the auditing comm cycle.*

The area that is producing a dirty needle, when questioned to get full data, will either clean or go into an R/S.

The area is considered clean when you can go over the area that gave the dirty needle and it no longer produces a dirty needle.

If it still produces a dirty needle then there is more to the withhold itself or something the pc isn't voicing about the withhold or how he feels about the withhold, or the auditor's TRs are terrible, but—pursued and taken up with auditor's TRs in— this dirty needle will either turn into an R/S or it will fully clean. Until it does, however, it is still a dirty needle.

The procedure for fishing a read is covered in AUDITING DEMO TAPE 6205C23 SH TVD-7, "FISH AND FUMBLE, CHECKING DIRTY NEEDLES." Cleaning a dirty needle is covered in E-Meter Drills 17, 20 and 21 as well, and Class II auditors and above should be very adept at this.

The rule is: DON'T IGNORE DIRTY NEEDLES. ALWAYS FOLLOW THEM UP.

DIRTY NEEDLES
How to Smooth Out Needles

Quite often a pc is found whose needle is jerky, random, gives many prior and latent reads and goes into small scratchy patterns or wild, continuing rock slams.

Such a needle is hard to read—and such a pc is a long way out of session a lot of the time.

An auditor, seeing such a needle, and faced with the task of reading the instant read through all these prior and latents and scratchy patterns, tends to think in terms of heroic measures. It is “obvious” that this pc has W/Hs, Missed W/Hs, overts and secrets to end all reactive banks and that the thing one ought to do is pick each one of these random needle reactions up as soon as possible. BUT when you try to do this you find the needle gets even *more* confused. It reads something all the time!

An extreme case of a dirty, random needle is not solved by any “fish and fumble” or heroic measures.

The pc’s needle reacts that way because of *no-confidence*, which induces a sort of auto-control in session which induces a dirty needle. *Ability to predict equals confidence*.

The thing to do is give this pc about 3 sessions of rudiments and havingness just Model Session severely with no Q and A or added chit-chat. The sessions should be each one about one hour long.

All one does is do Model Session, getting the rudiments in carefully exactly by the textbook. Use Model Session, HCO Bulletin 23 June 1962. Use instant reads only as per HCO Bulletin 25th May 1962. And avoid *any* Q and A as per HCO Bulletin 24 May 1962, “Double Questioning”.

Use Middle Rudiments somewhere during the havingness session.

By doing this perfect, predictable textbook auditing session three times on the pc, most of these prior and latent reads will drop out and the needle will look much cleaner. Why? Because the pc is off auto or in session.

You can *make* a pc’s needle get dirty and react to many odd thoughts by the pc by doing the following:

1. Try to clean off prior reads and avoid instant reads in getting ruds in (going against HCO Bulletin 25 May 1962).
2. Use a scruffy and ragged session pattern (going against HCO Bulletin 23 June 1962).
3. Double question any rudiments question (as per HCO Bulletin 24 May 1962).

The pc's needle, even if very clean at the start and loose, will tighten up, develop patterns and dirt if an auditor fails to use a textbook session. This includes raw meat that never heard of a textbook session. Raw meat particularly requires a severely textbook session. Don't think because they're new they won't know. And too much coffee shop type auditing can rough a needle.

A pc who has become unwilling to be audited is best cured by three textbook flawless sessions of havingness as above. Don't plunge for what is *wrong*. Just establish a standard of excellence the pc can predict. And up will come the pc's confidence.

After the three sessions you can prepcheck or fish and fumble and get things really clean. And providing you *continue* to use a textbook session, the pc will get better and better.

If a pc still has a dirty needle with many prior reads after an auditor has audited that pc three sessions, then we can conclude that that auditor

1. Is not using HCO Bulletin 25 May 1962 in reading a meter.
2. Is not handling questions as per HCO Bulletin 24 May 1962, and
3. Is not using Model Session HCO Bulletin 23 June 1962.

There *are* no difficult pcs now. There are only auditors who do not give textbook sessions.

TRS AND DIRTY NEEDLES

When a student's pc develops a dirty needle (dn) it is caused by one of three things.

1. The student's TRs are bad.
2. The student is breaking the Auditor's Code.
3. The pc has withholds (w/hs) he does not wish known.

The remedy for TRs is to have the student do them in clay, showing the lines and actions of each TR. And to do more TRs with a fellow student.

The remedy for Code Breaks is to have the student define and do Invalidation and Evaluation in clay. And to list examples of possible upsets caused by each line of the Code.

The remedy for the pc with withholds is to send to a Scientology Review Auditor as Scientology can handle outnesses which occur in Dianetic sessions.

It is a safe rule in any event when a "dirty needle" occurs to send the preclear to a Scientology Review Auditor.

It is also a safe rule to assume that the student whose pcs get dirty needles is deficient on TRs and the Auditor's Code.

and Routine 2-10 Modern Assessment.")
(Cancels HCOB 13 Aug AD12)
(Cancels HCOB 1 Aug AD12)

URGENT—URGENT—URGENT

DEFINITION OF A ROCK SLAM

The following is the only valid definition of an R/S:

ROCK SLAM: THE CRAZY, IRREGULAR, *LEFT-RIGHT* SLASHING MOTION OF THE NEEDLE ON THE E-METER DIAL. R/SES REPEAT LEFT AND RIGHT SLASHES UNEVENLY AND SAVAGELY, FASTER THAN THE EYE EASILY FOLLOWS. THE NEEDLE IS FRANTIC. THE WIDTH OF AN R/S DEPENDS LARGELY ON SENSITIVITY SETTING. IT GOES FROM ONE-FOURTH INCH TO WHOLE DIAL. BUT IT SLAMS *BACK AND FORTH*.

A ROCK SLAM (R/S) MEANS A HIDDEN EVIL INTENTION ON THE SUBJECT OR QUESTION UNDER AUDITING OR DISCUSSION.

VALID R/SES ARE NOT ALWAYS INSTANT READS. AN R/S CAN READ PRIOR OR LATENTLY.

HCOB 5 December AD12, "2-12, 3GAXX, 3-21 and Routine 2-10 Modern Assessment" is an HCOB composited by others incorrectly and is *CANCELLED* as it misdefines an R/S as a single slash left or right. It contains the statements: "One or two slashes make an R/S.... If it slashed up or down once call it an R/S." The data is utterly false. By this *wrong* definition a rocket read could be mistaken for an R/S, or any sudden rise could be mistaken for an R/S. ONE SLASH DOESN'T *BEGIN* TO BE AN R/S. NOR TWO OR THREE FOR THAT MATTER. THE CORRECT DEFINITION OF AN R/S INCLUDES THAT IT SLASHES SAVAGELY *LEFT AND RIGHT*.

DEFINITION OF A DIRTY NEEDLE

The following is the only valid definition of a dirty needle:

DIRTY NEEDLE: AN ERRATIC AGITATION OF THE NEEDLE WHICH IS RAGGED, JERKY, TICKING, NOT SWEEPING, AND TENDS TO BE PERSISTENT. IT IS NOT LIMITED IN SIZE.

A DIRTY NEEDLE IS CAUSED BY ONE OF THREE THINGS:

1. THE AUDITOR'S TRs ARE BAD.
2. THE AUDITOR IS BREAKING THE AUDITOR'S CODE.
3. THE PC HAS WITHHOLDS HE DOES NOT WISH KNOWN.

The definitions of a dirty needle as “a small rock slam” and “a smaller edition of the rock slam” in HCOB 13 August AD12, “Rock Slams and Dirty Needles,” are CANCELLED. The definition of a dirty needle as “a minute rock slam” in HCOB 1 August AD12, “Routine 3GA, Goals, Nulling by Mid Ruds,” is CANCELLED.

All definitions which limit the size of a dirty needle to “one quarter of an inch” or “less than one quarter of an inch” are CANCELLED.

A dirty needle is NOT TO BE CONFUSED with an R/S. They are distinctly different reads. You never mistake an R/S if you have ever seen one. A dirty needle is far less frantic.

THE DIFFERENCE BETWEEN A ROCK SLAM AND A DIRTY NEEDLE IS IN THE *CHARACTER OF THE READ*. NOT THE SIZE.

Persistent use of “fish and fumble” can sometimes turn a dirty needle into a rock slam. However until it does it is simply a dirty needle.

AUDITORS, C/SES, SUPERVISORS MUST MUST MUST KNOW THE DIFFERENCE BETWEEN THESE TWO TYPES OF READS COLD.

ASSESSMENT TRs

The right way to do an assessment is to ask the pc the question in a *questioning* tone of voice.

In assessing, some auditors have made assessment questions into statements of fact, which of course is a cousin to evaluation.

A downcurve at the end of an assessment question contributes to making it a statement. Questions should go up at the end.

A remedy for this is to record ordinary conversation. Ask some normal questions and make some normal statements and you will find that the voice tone rises on a question and goes down on a statement.

Assessing with a statement's tone of voice instead of a questioning tone of voice results in evaluation for the pc. The pc feels accused or evaluated for rather than assessed and an auditor can get a lot of false and protest reads.

It's all tone of voice. Auditors have to be drilled in asking questions. Assessment questions have an upcurve at the end.

Get it?

Then drill it.

6306C26 SHTVD-22 Listing Assessment for Engram Running (Part I)

Notice the simplicity of this procedure. [See HCOB 1Jul63 "Routine 3R: Bulletin 4 -- Preliminary Step for a description of the procedure.] The difficulties with it are minimal. The skills of R2-12 are used, the rules of listing apply, etc. The key note of any fairly high-level case, and what makes an incident an incident, is protest. By protesting, a person shoves his face towards something. He attacks it, while he resists it. This opposition produces a heavy charge. But some people aren't up to protest, so we will assess an 18-button prepcheck list to determine the thing to assess for engrams.

[LRH proceeds to assess an 18-button prepcheck (with "created" left out because it is a goal), with the prefix, "In this lifetime, have you mainly _____?" He gets a huge list of items, after nulling the 18 buttons down to "decided". Lists "In this Lifetime, what have you decided?" to a clean needle. Does goals and gains, havingness, and ends off.]

You just keep listing until the needle is clean without doing anything to disturb the PC and put ruds out. You are not looking for R/S's RR's or any "peculiar needle phenomena". The next step would be to null the list, "In this lifetime what have you decided?" to one item. If this item turns out to be a goal, it would be run with R3N. Otherwise, you locate an engram (chain) that could cause such a decision in life. Model Session was very simple and skeletal. If the PC had not made goals or gains, LRH would have said, "I'm sorry you didn't make your goals/gains." If he had made some of them, the acknowledgment would have been both "Thank you," and "Sorry."

HCO BULLETIN OF 8 JUNE 1961R
REVISED 22 FEBRUARY 1979

(Revisions in this type style)

E-METER WATCHING

ARE YOU WAITING FOR THE METER TO PLAY DIXIE?

I have been a bit surprised by the length of time it is taking people to do assessments on the Prehav, on Security Checks and goals.

A query into this, which may reveal more, has discovered that students wait patiently for the meter to react, which Mary Sue has noticed.

It dawns on me that auditors believe they are doing an *analytical* assessment on the Prehav, etc. *This is wrong.*

The Prehav Scale is not a picture of analytical thought. It is in the order it is in because it is a picture of reactive thought. It is how the reactive mind is stacked up. (See *Dianetics: The Modern Science of Mental Health* for the chapter on the reactive mind.)

Now an E-Meter reacts only on the reactive mind. A Clear doesn't react because he is able to be conscious. An aberree reacts because he can't think without thought exciting the reactivity of the reactive mind. This, being composed of mass, energy, space, time and thought, responds to tiny electrical impulses.

If your auditing was not aimed at reactivity it would not register on a meter. Thus, you run what reacts because it reacts and is therefore part of the reactive mind.

The reactive mind responds instantly on data a billion years ago. How is this? Time in the reactive mind is out of order. So is space. So is matter, so is energy. Pin a sign on the reactive mind: "Out of Order." It connects wrong connections. Hence, the E-Meter.

What is wrong with the pc is not known to the pc. Therefore if a pc knows all about it, it isn't wrong with him.

That's why you never run what the pc says. You run *only* what the meter says. Example: pc *is sure* his current general Prehav Level that should be run now is "Order or Command." "Order" rapidly vanishes. "Command" follows suit. CONQUER stays in. This is an actual example. I just assessed it a few minutes ago on a pc who is in pretty good shape. He didn't like CONQUER. He said Order and Command were long track. Somebody running a Q and A on his assessment would have said, perhaps, the pc knows best, so we'll run Order. Even if it doesn't fall. But when I said it was CONQUER that we were going to run as only *it* now fell, the pc sighed and gave in. Finding the Conquer level questions produced a very responsive meter needle. It was wrong with the pc because he didn't know about it. It was part of his reactive mind. Order and Command were analytical responses prompted by an entirely different thing CONQUER. If Order or Command had been run the pc would have had a lot of auditing time wasted on him.

Now, why are assessments wrong sometimes? Because the auditor is persuaded by the pc, not the meter. If the pc and the meter agree, so what. You can still run it. But only if the meter says so, for only then is it reactive.

Now, what about *slow* assessments? Well, the auditor thinks the pc must consider things before he answers, waits for the pc to answer and waits for the question to sink in so the meter will react.

This is entirely wrong. Based on a misunderstanding of assessment, the meter and the reactive mind.

1. The pc does not have to be given a chance to think before the needle responds.
2. The pc does not have to answer or say one word to make the needle respond.
3. All needle response is reactive.
4. There is no time in the reactive mind.
5. If the pc knew what was wrong with him it wouldn't be wrong.
6. Only the meter knows.
7. The auditor has more control over the pc's reactive mind than the pc since the pc is influenced by the reactive mind responses and the auditor is not so influenced.

The meter responds instantly. The reaction you will get on the needle starts to occur on the needle *instantly* after you utter it.

There is no need to sit there afterwards waiting for the needle to respond again, for it won't until you push that button again.

The only wait is caused by letting the needle come back at the end of a fall. This may take one second.

Therefore: TO WAIT MORE THAN *ONE* SECOND BEFORE UTTERING THE NEXT WORD ON THE LIST IS A COMPLETE WASTE OF AUDITING TIME.

All the response you want will begin to occur instantly after you utter a goal, terminal, level or security question. Thus the maximum time between questions on the Prehav Level is at most a three-second interval of silence while you digest the data.

Further, on an assessment for a Prehav run on the General Scale (as in Routine 2, HCOB 5 June 1961), you do not now say, "Do you . . ." or any other dunnage. You just say the level itself, note response, put a pencil point down on the level if it responds, say the next word, etc., etc. Takes about 5 minutes to run the Primary Scale up and down to find its level. You start at the bottom. You just say the word. If it responds you dot the sheet (using different symbols to tell them apart like dots, X's, lines). Then go back down the scale touching only those you marked going up. Add another dot if they still fall or react. Then play off those left one against the other, saying a level only once each time. The remaining level is now the only one that reacts. So you assemble your 5-way bracket and carry on with auditing.

The pc doesn't have to say a word throughout the whole assessment. You can even ask him politely not to, as breath going in and out in speech can vibrate the needle.

When you assess over into the Secondary Scale of the level you found, you do exactly the same as above. You read them all off once, then only those that reacted, eliminate them and you've got it. (And, by the way, if you go over the Secondary Scale, you then don't only run levels on that Secondary forever; in each new assessment you use the Primary Scale again to find a new Secondary Level to assess.)

This is also true of a Joburg. If you're going to get a reaction on the needle, it will come fast. No waiting. If you get a reaction you clear that reaction, not the pc's whole life. The moment the needle is null, you go on to the next question. Of course, in a Joburg, the pc talks. He better!

All auditing actions except the CCHs are now done in Model Session.

And all auditing actions and questions are done effectively, neither frantically rushed nor slowly.

So it boils down to this. Weeks can be added to Joburgs and assessments if you think you have to wait for a needle response.

What are you waiting for? The whole action only requires a second.

Don't wait for the E-Meter to play Dixie. It was made in the Nawth.

ASSESSMENT AND HOW TO GET THE ITEM

INSTANT READS

The correct definition of INSTANT READ is THAT REACTION OF THE NEEDLE WHICH OCCURS AT THE PRECISE END OF ANY MAJOR THOUGHT VOICED BY THE AUDITOR.

All definitions which state it is fractions of seconds after the question is asked, are cancelled.

Thus an instant read which occurs when the auditor assesses an item or calls a question is valid and would be taken up and latent reads, which occur fractions of seconds after the major thought, are ignored.

Additionally, when looking for reads while clearing commands or when the preclear is originating items, the auditor must note only those reads which occur at the exact moment the pc ends his statement of the item or command.

E-METER
INSTANT READS

An instant read is defined as that reaction of the needle which occurs at the precise end of any major thought voiced by the auditor.

The reaction of the needle may be any reaction except "nul". An instant read may be any change of characteristic providing it occurs instantly. The absence of a read at the end of the major thought shows it to be nul.

All *prior* reads and *latent* reads are ignored. These are the result of minor thoughts which may or may not be restimulated by the question.

Only the instant read is used by the auditor. Only the instant read is cleared on rudiments, What questions, etc.

The instant read may consist of any needle reaction, rise, fall, speeded rise, speeded fall, double tick (dirty needle), theta bop or any other action so long as it occurs at the exact end of the major thought being expressed by the auditor. If no reaction occurs at exactly that place (the end of the major thought) the question is nul.

By "*major thought*" is meant the complete thought being expressed in words by the auditor. Reads which occur prior to the completion of the major thought are "prior reads". Reads which occur later than its completion are "latent reads".

By "*minor thought*" is meant subsidiary thoughts expressed by words within the major thought. They are caused by the reactivity of individual words within the full words. They are ignored.

Example: "Have you ever injured dirty pigs?"

To the pc the words "you", "injured" and "dirty" are all reactive. Therefore, the minor thoughts expressed by these words also read on the meter.

The major thought here is the whole sentence. Within this thought are the minor thoughts "you", "injured" and "dirty".

Therefore the E-Meter needle may respond this way: "Have you (fall) ever injured (speeded fall) dirty (fall) pigs (fall)?"

Only the major thought gives the instant read and only the last *fall* (bold-italic type in the sentence above) indicates anything. If that last reaction was absent, the whole sentence is nul despite the prior falls.

You can release the reactions (but ordinarily would not) on each of these minor thoughts. Exploring these prior reads is called "compartmenting the question".

Paying attention to minor thought reads gives us laughable situations as in the case, written in 1960, of "getting P.D.H.ed by the cat". By accepting these prior reads one can prove anything. Why? Because *Pain* and *Drug* and *Hypnosis* are minor thoughts within the major

thought: “Have you ever been P.D.H.ed by a cat?” The inexpert auditor would believe such a silly thing had happened. But notice that if each minor thought is cleaned out of the major thought it no longer reacts as a whole fact. If the person on the meter *had* been P.D.H.ed by a cat, then only the discovery of the origin of the whole thought would clean up the whole thought.

Pcs also think about other things while being asked questions and these random personal restimulations also read before and after an instant read and are ignored. Very rarely, a pc’s thinks react exactly at the end of a major thought and so confuse the issue, but this is rare.

We want the read that occurs instantly after the last syllable of the major thought without lag. That is the only read we regard in finding a rudiment in or out, to find if a goal reacts, etc. That is what is called an “instant read”.

There is a package rudiment question in the half truth, etc. We are doing four rudiments in one and therefore have four major thoughts in one sentence. This packaging is the only apparent exception but is actually no exception. It’s just a fast way of doing four rudiments in one sentence.

A clumsy question which puts “in this session” at the end of the major thought can serve the auditor badly. Such modifiers should come before the sentence, “In this session have you?”

You are giving the major thought directly to the reactive mind. Therefore any analytical thought will not react instantly.

The reactive mind is composed of:

1. Timelessness.
2. Unknownness.
3. Survival.

The meter reacts on the reactive mind, never on the analytical mind. The meter reacts instantly on any thought restimulated in the reactive mind.

If the meter reacts on anything, that datum is partly or wholly unknown to the preclear.

An auditor’s questions restimulate the reactive mind. This reacts on the meter.

Only reactive thoughts react instantly.

You can “groove in” a major thought by saying it twice. On the second time (or third time if it is longer) you will see only the instant read at the exact end. If you do this the prior reads drop out leaving only the whole thought.

If you go stumbling around in rudiments or goals trying to clean up the minor thoughts you will get lost. In sec checking you can uncover material by “compartmenting the question” but this is rarely done today. In rudiments, What questions, et al, you want the instant read only. It occurs exactly at the end of the whole thought. This is your whole interest in cleaning a rudiment or a What question. You ignore all prior and latent reactions of the needle.

The exceptions to this rule are:

1. “Compartmenting the question”, in which you use the prior reads occurring at the exact end of the minor thoughts (as above in the pigs sentence) to dig up different data not related to the whole thought.

2. “Steering the pc” is the only use of latent or random reads. You see a read the same as the instant read occurring again when you are not speaking but after you have found a whole thought reacting. You say “there” or “that” and the pc, seeing what he or she is looking at as you say it, recovers the knowledge from the reactive bank and gives the data and the whole thought clears or has to be further worked and cleared.

You can easily figure-figure yourself half to death trying to grapple with meter reads unless you get a good reality on the instant read which occurs at the end of the whole expressed thought and neglect all prior and latent reads except for steering the pc while he gropes for the answer to the question you asked.

That’s the whole of reading an E-Meter needle.

(Two Saint Hill lectures of 24 May 1962 cover this in full.)

E-METER DRILL COACHING

The following was submitted by Malcolm Cheminais Supervisor on the Saint Hill Special Briefing Course.

Here are some observations I have made on the coaching of E-Meter drills, which I feel could be of use:

1. The coach's needle is dirty. The student's out comm cycle has cut his comm in some way, but PRIOR to that the coach failed to flunk the part of the comm cycle that went out. Correct flunking by coaches equals students with no dirty needles.
2. If a coach's TA starts climbing on a drill and the needle gets sticky, it means that the student's comm cycle has dispersed him and pushed him out of PT. The coach is either (1) not flunking at all (2) flunking the incorrect thing.
3. The correct flunking by the coach of an out comm cycle, which has dispersed him and pushed his TA up, will always result in a TA blow down. If there is no blow down, the coach has flunked the wrong thing.
4. Needle not responding well and sensitively on assessment drills, although the needle clean. Coach has failed to flunk TR 1 (or TR 0) for lack of impingement and reach.
5. Coach reaching forward and leaning on the table, means TR 1 is out with the student.
6. Students shouting or talking very loudly on assessment drills to try and get the Meter to read by overwhelm. The reason for this is invariably—"but I'm assessing the bank!" They haven't realized that *banks* don't read, only thetans impinged upon by the bank—therefore the TR 1 must be addressed to the thetan. The meter responds proportionately to the amount of ARC in the Session. (See HCO B 29 Jan 70 for lists that don't read.)

METER READING

A survey of auditing has brought up the datum that the gross auditing error in failure to obtain results from Security Checking and Problems Intensives lies wholly in the inability to read an E-Meter.

You may some day get a huge reality on the fact that, in supervising auditing, all failures are gross auditing errors, not fluke case differences.

Auditors one is supervising often demand “an extraordinary solution” because such and such a case isn’t moving. The unwise supervisor will actually furnish “extraordinary solution” after “extraordinary solution” “to handle this different case”. It may be John Jones who “cannot think of any changes in his life” or it may be Mary Smith who “just doesn’t respond to Security Checking”. And the supervisor burns the midnight oil and gives the auditor some new involved solution. Then as often as not, the auditor comes back the day after and says, “That didn’t work either.” And the supervisor goes a quarter around the bend and again burns the midnight oil If this seems familiar to you as a supervisor, know you *should* have asked, “*What* didn’t work?” Usually the auditor can’t even recall the solution—it was never used. Or it was applied in some strange fashion.

For *today*, the reasons for failure all lie under the heading “Gross Auditing Error”.

Such an error would be, the auditor never arrived for the session, the E-Meter was broken throughout, the pc hadn’t eaten or slept for three days, the din from construction next door made it impossible to give commands or hear answers. The auditor didn’t run any known process. That is the order of magnitude of a “GROSS AUDITING ERROR”. It is never, the pc was unhappy, the pc has difficulty remembering, etc. In supervising auditing, *always* look for the gross auditing error and *never* give out with an extra-ordinary solution.

Well, taking my own advice, when I saw some tricky elements in new clearing processes taking far too much time, I didn’t look for “different” pcs, I looked for the gross auditing error. And found it.

The auditors who were having trouble couldn’t read an E-Meter.

Impossible as that may seem, it proved to be true. I put Mary Sue on this at once and Herbie Parkhouse carried through. The errors found in E-Meter reading where there had been trouble, were so huge as to have been missed on any casual inspection.

The errors went like this:

1. The auditor believed the E-Meter could not be read while the needle was swinging around. The auditor was waiting until it stopped every time before asking a question.
2. The auditor believed the needle had to be exactly at “set” on the dial before it could be read.

3. The auditor did not know a rising needle could be read by stopping the rise with a question or making the needle twitch.
4. The auditor had not done the body reaction drills in *E-Meter Essentials* and was reading only body reactions and ignoring all others.
5. The auditor thought an E-Meter could not be read if it showed breathing or heart beat.
6. The auditor always looked at the pc for a few seconds after asking the question, then looked at the meter, and so missed all but latent (non-significant) reads.
7. The auditor sat staring at the meter for twenty seconds after the reading had registered.
8. The auditor thought E-Meters could be fooled so easily, it was more reliable to make up his own mind about what the pc's item or guilt was.
9. An auditor thought that if the needle rose on a rudiment question, the rudiment was out.

These and many, many more panned out to be:

IF A SECURITY CHECK OR PROBLEMS INTENSIVE WAS PRODUCING NO RESULTS, IT WAS BECAUSE THE AUDITOR COULD NOT READ AN E-METER.

That's the gross auditing error.

In this bulletin, I am not trying to give you any methods to remedy this. I am just calling it widely to everyone's attention.

The fact is big enough to merit study by itself.

And to get cases started by no other mechanism than learning to really read an E-Meter or by teaching people to read it.

This one point remedied could change the entire future of Scientology, an organization or an auditor.

Issue I

Remimeo

REVISED 25 NOVEMBER 1976
RE-REVISED 28 MARCH 1977
(*Re-Revised to correct typographical error on p. 147 in
“High TA & ARC Brks” section. No other changes.
(Revision in this type style)*)

C/S Series 4IRA

C/S TIPS

LISTS

Always C/S to correct lists first when lists are out or suspected to be out.

Don't do ARC Brks first in a case of out lists as an out list can make an ARC break that can't be handled by ARC Brk but only an L4BR.

On a GF when lists show up or overlists you should handle that (first action in handling the GF) but also you must order an "L4BR Method 5 and handle." Method 5 is the once through for assessment.

NO READ AUDITORS

When auditors can get no reads on things you get their:

- (a) TRs checked to see if they can even be heard.
- (b) Their metering checked for meter position on auditing table, can they see meter, pc and write without shifting eyes?

And can they see pc's hands on the cans?

And was the meter turned on and charged and can an auditor work the tone arm smoothly with his thumb?

- (c) Does the auditor discount reads gotten on clearing commands? (They are the reads.)
- (d) Can the auditor read out a list and see the meter reads as a coordinated action?

CRAMMING

Send auditors to Cramming on all flubs, insist they GO to Cramming, insist Cramming calls them in and crams them and insist on a carbon copy of the fact that cramming has been done.

All the hard work of C/Sing comes in when auditors are flubby.

It takes weeks to make an auditor after he has had a course and it's only done by cram—cram—cram.

R-FACTORS

Never order an R-Factor that takes pc into future or past as he then won't be in session. Example: C/Ses "R-Factor we are setting you up for Dianetics." Promptly the pc is up ahead not in *this* session.

MIXING STARTS

There are many ways to start a session. Don't mix them.

It's "2WC what do you have your attention on?"

"Fly a rud if no F/N."

"Fly all ruds."

"2WC the TA down."

"Fly a rud or GF + 40 Method 5 and handle."

It's not a mixture of frantic efforts to get a TA down.

If the auditor can't on what the C/S says THE AUDITOR ENDS OFF.

Interiorization is undone or out, there may be list errors, there may be overruns, but for sure it's a case for FOLDER STUDY, not for an auditor C/Sing in the chair.

HIGH TA & ARC BRKS

Train your auditors NEVER TRY TO GET A TA DOWN FROM ABOVE 3.0 ON ARC BREAKS.

LOW TA QUILTS

Some auditors see a TA sink below 2.0 and then won't continue the 2WC or process to get the TA back up.

"The TA sank so I quit" is a common auditor note.

Compare this: "The TA rose above 3.0 so I quit."

See? Doesn't make sense.

If a TA sinks below 2.0—and the auditor's TRs are good—the same action will usually bring it up to 2.0 and F/N.

Come down hard on auditors who do this.

Get their TRs checked, make them continue.

EXAM F/Ns AFTER FLUBS

Pcs whose TAs are high in session or low in session get F/N at the exams put the finger on the auditor. They are protesting or being overwhelmed.

Always C/S "Examiner! Ask pc what auditor did in session."

Then you know it's the auditor or the case. The pc will say the auditor was okay. So it's case. But usually *when cases are puzzles* there's weird things going on with TRs.

Also the auditor may be noisy or laugh hard or is boisterous and being "interesting."

C/S VIA

The C/S is handling cases on the via of an auditor.

If the auditor is *perfect* the C/S can handle the work out of the case. If the auditor is not perfect in TRs, metering, Code, reports and doing the C/S then the C/S is solving a factor unknown to him, not the pc's case.

So, be a perfect C/S. Demand perfect auditing. Cases fly.

HIGHER LEVELS

A C/S who assesses a pc to higher levels to solve lower ones is really asking for a wreck.

It's always the earlier actions that are out.

Trying to cheat a case up to Grade II when he won't run on Grade I is like trying to run the whole Grade Chart to cure a cold.

A pc can always be solved in or below where he is.

"Oh, we'll put him up a grade and cure his high TA" is like "He can't pass kindergarten so we'll enroll him in college."

C/S EXPERTISE

A C/S has to know his auditing materials, HCOBs and texts MUCH better than an auditor.

If a C/S is not being successful, get a retread on VI and VIII materials.

A C/S also must be confident HE could crack the case as an auditor.

When a C/S is shaky on his materials then the world of auditing looks very unstable.

The tech is very exact, very effective. If any errors existed in it they've been corrected.

So the variables are the knowledge of the C/S, his discipline and demands of auditors and the actions of the auditor.

If THESE are stable then the cases that come along are easy as can be.

The successful C/S knows his materials. If he wants to be even more successful he keeps his study up.

Then he is steady and calm for he is totally certain.

C/S Series 72

USE OF CORRECTION LISTS

A current survey shows that the weakest point in C/Sing done in orgs is failure to use Prepared Lists for Case Correction.

There are some other points. For some reason C/Ses are being inventive instead of following the C/S Series and doing standard repairs and grades.

Probably the failure to use Prepared Correction Lists derails the use of standard actions.

There are very few actions which do not have their own Correction Lists.

THERE IS NOTHING IN DIANETICS AND SCIENTOLOGY AS MIRACULOUSLY WORKABLE AS CORRECTION LISTS.

The only things which prevent the list from working are

- (a) AUDITOR'S METERING
- (b) AUDITOR'S TRs.

METERING

When the auditor's meter is habitually placed where he cannot see (1) The meter needle, (2) The worksheet and (3) The pc WITH ONE DIRECTED LOOK, then he misses reads.

All three have to be seen at once.

The faults are

- i) Eyesight poor
- ii) Glasses rims obscure one while looking at another
- iii) Position of the meter.

It is a Standard Cramming action to look into these points **WHENEVER A CORRECTION LIST IS SAID TO BE BLANK.**

For example a GF is done by Auditor A on Monday. It is done again by Auditor B on Tuesday. Reads are found by B. This means Auditor A is missing reads.

THIS IS FAR MORE COMMON THAN BELIEVED.

TRs

When an auditor can't be heard or is overwhelming the pc the list won't be valid.

An auditor's TRs show up more quickly on a Correction List than anything else.

A pc ARC Broken by TRs 0 to IV will not read properly on a Correction List.

NUMBERS OF LISTS

The number of Correction Lists is large.

It is unthinkable to do Word Clearing without ever using a WC Corr List. Yet we find folders with bogged Word Clearing sessions where the list was never used.

There is the Green Form for general case upset, the Green Green Form for Solo, L 1 C for ARC Brks over a period, L3B for Dianetic bogs, L4B for listing and nulling goofs, Int RD Corr List for Int-Ext corrections, a Power Corr List for Power, GF 40R for resistive cases, C/S 53 and Hi Low TA for TA misbehavior, L7 for Clearing Course, and others.

C/Ses trying to “solve cases” without using Correction Lists is like trying to repair flat tires without puncture patches—it just CAN’T BE DONE.

THE PRIMARY TOOL OF A C/S IS PREPARED CORRECTION LISTS.

It is not inventive ways of “solving cases”.

METHOD OF USE

Where you have inexpert auditors you always order Method 5, which is just a full rapid assessment. Then the C/S sorts out the reads and C/Ses what to do as very well covered on the lists themselves and the C/S Series.

Then the auditor does the C/S.

A Green Form is *always* done this way. It will bog on any other method like 3.

There are different methods of handling lists. L1C is always done Method 3, carrying each read as it is found Earlier Similar to F/N.

A GF 40R is done Method 3 and then the engrams are run for each read where engrams are indicated.

It’s up to a C/S to use Correction Lists, to coach his auditors into proper list use and to get corrected any misuse.

A C/S who can’t or doesn’t use Prepared Correction Lists isn’t a C/S at all but a “person puzzled about cases”.

Correction Lists, standard programs and the Grade Chart and Grade Commands and materials.

These are the tools of the C/S.

There are NO others.

A C/S is one who uses these things. He is Supervising that they are used when they are supposed to be.

HCO BULLETIN OF 15 OCTOBER 1973RB
RE-REVISED 4 DECEMBER 1978

Remimeo

(Revisions in this type style)

C/S Series 87RB

NULLING AND F/Ning PREPARED LISTS

(Ref: HCOB 4 December 1978, HOW TO READ THROUGH AN F/N)

A prepared list is one which is issued in an HCOB and is used to correct cases. There are many of these. Notable amongst them is C/S 53 and its corrections.

It is customary for the auditor to be required to F/N such a list. This means on calling it that the whole list item by item is to F/N.

To F/N a list, you do it Method 3. Somebody's got the wrong idea that it is done Method 5—going over and over and over something.

A recent C/S of *mine* on the subject stated: "The reason you're having trouble F/Ning a list is because you don't do M3, handle each read to the end and then reassess M3 and handle each read to the end. It is obvious from your list markings that you were doing M5 over and over, which of course gets into protest. Usually M3 at some point will begin to F/N and that is the reason you do M3. Also, when you miss on a prepared list the F/N stops. So there were a few minor misses on these lists but mostly because you were doing it M5. Also, it takes an R-Factor that you're going to clean up everything on the list."

You handle a list Method 3 by calling the line and handling the line. A prepared list should be used to get optimum results on a pc. If a prepared list reveals that more needs to be handled, i.e. engram in restimulation, then it would be handled. *(Note: In this case the handling would be to assess the L3RF and handle the reads. WARNING: You would NOT run Dianetics on a Clear, Dianetic Clear or OT. For C/ears and OTs you would assess the L3RF and then simply INDICATE the read.)*

If a more major action was found to be needed it would be programmed for handling, per list instructions. If something hot leaps into view on a prepared list then handle it.

It is the wrong think that one has to quickie a prepared list and get it to F/N in a hurry rather than to use it to get optimum results on a pc.

All the list must be called a final time.

"NONREADING, NON-F/Ning" LISTS

Now and then you get the extreme oddity of a list selected to exactly remedy the case not reading but not F/Ning.

Of course this might happen if the list did not apply to the case (such as an OT prepared list being used on a Grade IV, heaven forbid). In the case of lists to correct listing and in particular the C/S 53 Series, it is nearly impossible for this situation to occur.

A C/S will very often see that the auditor has assessed the list on the pc, has gotten no reads, and the list did not F/N.

A “reasonable” C/S (heaven forbid) lets this go by.

Yet he has before him first class evidence that the auditor

1. Has out-TRs in general,
2. Has no impingement whatever with TR 1,
3. Is placing his meter in the wrong position in the auditing session so that he cannot see it, the pc and his worksheet,
4. That the auditor’s eyesight is bad.

One or more of these conditions certainly exist.

To do nothing about it is to ask for catastrophe after catastrophe with pcs and to have one’s confidence in one’s own C/Sing deteriorate badly.

An amazing number of auditors cannot make a prepared list read for one of the above reasons.

Putting in Suppress, Invalidation or Misunderstood Words on the list will either get a read or the list will F/N. If a list does not F/N then the subject of the list is still charged or there is something wrong with the list.

The moral of this is that prepared lists that do not read F/N. When prepared lists that do not read do not F/N or when the auditor cannot get a prepared list to F/N, serious auditing errors are present which will defeat a C/S.

In the interest of obtaining results and being merciful on pcs, the wise C/S never lets this situation go by without finding what it is all about.

READING THROUGH AN F/N

There is a skill that any auditor who is handling lists should master and that is reading through an F/N.

WHEN TAKING A LIST TO F/Ning ASSESSMENT AN AUDITOR MUST KNOW HOW TO READ THROUGH AN F/N.

When going down a list that is F/Ning you’ll sometimes see the F/N “check” briefly and then continue. The swinging weight of the F/Ning needle has momentum and it will tend to obscure a read. But a sharp auditor will see this “check” or slow in an F/N, know he has a hot item and take it up and handle it. An auditor who can’t read through an F/N will miss it and go right on by, and the F/N then kills within the next couple of items. Now he’s got a suppressed read and he’s going to have trouble F/Ning the list.

When this happens, even if you can’t read through an F/N, you should go back up the list an item or two and find it. BUT one should be able to read through an F/N. It is the secret of

being able to take a list accurately to an honestly F/Ning assessment, with no wasted time or effort. (Ref: HCOB 4 December 78, HOW TO READ THROUGH AN F/N.)

THE "RABBIT BUTTONS"

To "rabbit" means to run away from the bank. (The term derives from the fact that a rabbit is timid and runs away from just about everything.)

Some auditors have been known to "rabbit" from auditing sessions or from certain session actions. This is wholly due to out-TRs or shaky metering and the auditor not knowing how to use his tools. Rabbiting shows up in various ways—not getting the pc through the engram and not taking a Dianetic chain to full EP, or calling an F/N when it's an ARC break needle, or simply ending off when the going gets rough, etc. It's running away from the action rather than completing it.

One of the ways some auditors rabbit from F/Ning a list is by using what have come to be known as the "rabbit buttons." Given a C/S 53 (or other list) to take to F/Ning assessment, the auditor begins assessing and handling the list items but on the slightest provocation (such as a minor protest from the pc), introduces such questions as: "Is the C/S 53 being overrun?", "Is this list unnecessary?", "Do you feel over-repaired?" or something similar.

These questions are valid enough when they occur, as they do, at the end of some prepared lists. But used out of sequence they serve to get the auditor out of taking the C/S 53 or other assigned list to F/Ning assessment. Auditor throws in the "rabbit buttons," pc immediately agrees it's "overrun" or "unnecessary," and the auditor ends off, with the majority of the list items unchecked for charge.

This is by no means true of all auditors but it has happened frequently enough for these questions, used out of sequence, to be dubbed the "rabbit buttons."

And each time an auditor has rabbited in this way from F/Ning a list, something has been found later that should have been handled.

Thus: WHEN THE C/S CALLS FOR F/Ning A LIST IT MUST BE TAKEN TO COMPLETION AND NOT QUIT BEFORE THE ENTIRE LIST IS F/Ning, ITEM BY ITEM, ON ASSESSMENT.

Any pc protest or upset or apprehension over extensive repair actions or a list having to be F/Ned stems mainly from auditor out-TRs and mismetering (missing reads and calling false reads) when doing repair lists.

Any auditor back-off or protest on F/Ning a list stems from these same points plus having to handle pc upset or protest.

The solution is for the auditor to polish his TRs and sharpen up his metering. AND learn to read through an F/N.

Given good TRs and standard metering, the auditor who can then also read through an F/N will have no difficulty taking a list to F/Ning assessment.

C/S Series 90

THE PRIMARY FAILURE

References: HCO B 28 Feb 1971, C/S Series 24,
"Metering Reading Items", and
HCO B 15 Oct 1973, C/S Series 87,
"Nulling and F/Ning Prepared Lists".

A C/S who cannot get a result on his pcs will find the most usual biggest improvement by getting the offending Auditors' ASSESSING handled.

We used to say that "the Auditor's TRs were out" as the most fundamental reason for no results.

This is not specific enough.

THE MOST COMMON REASON FOR FAILED SESSIONS IS THE INABILITY OF THE AUDITOR TO GET READS ON LISTS.

Time after time I have checked this back as the real reason.

It became evident when one could take almost any "null" (no read) list in a pc's folder, give it and the pc to an Auditor who COULD assess and get nice reads on it with consequent gain.

Example: Pc has a high TA. C/S orders a C/S 53RF. List is null. Pc goes on having a high TA. C/S gets inventive, case crashes. Another C/S and another Auditor takes the *same* pc and the same list, gets good reads, handles. Case flies again.

What was wrong was:

- (a) The Auditor's TR 1 was terrible.
- (b) The Auditor couldn't meter.

REMEDY

One takes the above two reference HCO Bs and gets their points fully checked on the flunking Auditor.

The C/S gets the Auditor's TR 1 corrected. In doing the latter one may find a why for the out TR 1 like a notion one must be soft-spoken to stay in ARC or the Auditor is imitating some other Auditor whose TR 1 is faulty.

QUAL CRAMMING

It can happen that these actions are reported done in Qual and the Auditor still flubs.

In this case the C/S has to straighten out Qual Cramming by doing the above reference HCO Bs on the Cramming Officer and getting the Cramming Officer's TR I ideas unscrewed and straight.

REQUIREMENTS

It takes correct metering and IMPINGEMENT to make a list read.

If the auditor does not have these, then drug lists, Dianetic lists, correction lists will all go for nothing.

As the prepared list is the C/S's main tool for discovery and correction an auditor failure to get a list to respond or note it then defeats the C/S completely.

SUMMARY

THE ERROR OF AN AUDITOR BEING UNABLE TO GET A LIST TO READ ON A METER IS A PRIMARY CAUSE OF C/S FAILURE.

To win, correct it!

Dn Checksheet

ASSESSMENT AND INTEREST

An assessment consists simply of calling off the items the pc has given and marking down the reads that occur on the meter. The pc is not required to comment during this action and it is better if he does not.

This action is called "Assessment for Longest Read". It is used mainly in Dianetics.

There are two Scientology assessments which are differently done. These are "Assessment by Elimination" and "Listing and Nulling". They are not used in Dianetics. One does not mix the three types.

In Dianetic Assessment by Longest Read one uses these symbols:

X	—	didn't read
Tick	—	small jerk of needle
sF	—	Small Fall (a quarter to half an inch)
F	—	Fall (about one to 2 inches)
LF	—	Long Fall (2 to 3 inches)
LFBD	—	Long Fall followed by a "blow down" or TA motion downward.

All falls are to the right. A "BD" is a Tone Arm motion to the left made to keep the needle on the dial.

The favoured action for an item is an LFBD and if one item on the list does so, that is it without any further assessment.

The reason one assesses is that **IF AN ITEM DOES NOT READ ON THE METER WHEN ASSESSED IT IS BEYOND THE PC'S LEVEL OF AWARENESS.**

It is very unwise and unsafe to try to run a somatic which has not read on the list. It will be beyond the pc's reality and beyond his awareness and will result in overwhelming him.

That an item reads guarantees that the pc will be able to confront and erase the chain. So that an item reads well is a guarantee that the pc can handle it and will not get in too deep for him.

The exception to this is a PROTEST read. An item, possibly already run, is seen to read. The pc frowns. He is protesting and the meter is registering protest, not the item. One never runs a pc against his protest. To do so will overwhelm him and give a bad result. A protest almost never blows down the TA.

To be *sure* that the item is right, one usually asks the pc if he is interested in the item chosen.

If the pc says no, he doesn't want to run it, this is a protest read.

One then picks the second best reading item on the assessment already done and checks that with the pc for interest. The pc will usually be interested in it.

The pc can almost always be counted on to be interested in any item that gives a LFBD.

One *never* simply asks the pc which on the list he is interested in as “an assessment” as it will be found the pc simply chooses at random and may choose a null item. The result may be a very unsuccessful session.

An auditor may sometimes be astonished by what reads. The pc, let us say, obviously has a broken leg but what reads is an earache. One runs what reads, not what the auditor knows should be run. A “know best” in an auditor can be a fatal fault.

On a second or third assessment, items which were at first null or reading poorly will be found to “come alive” and read well. The pc, by being audited, has had an increase of ability to confront and, if the auditing is standard, an increase in confidence. The result is that items beyond his reach previously (and did not read well) are now available and can be run easily.

The E-Meter measures the awareness depth of the pc. On things which do not read on assessment you would find his reality poor. Things that read well on assessment will be found to be things on which a pc has a high reality and a high interest level.

Only if pushed to audit without a meter could an auditor assess by interest only. There is no real excuse for it if one has an E-Meter.

Auditing without a meter is a chancy activity.

Good assessment by longest read is the best entrance to a successful session.

The same list will serve for the next item to be run and should be used rather than just asking the pc.

HCO POLICY LETTER OF 21 FEBRUARY 1979
CORRECTED & REISSUED 26 APRIL 1979
CORRECTED & REISSUED 6 MAY 1979

Remimeo
Tech
Qual
All Auditors
E-Meter Checksheets

(Corrections in this type style)

**E-METER ESSENTIALS
ERRATA SHEET**

The following corrections are to be made in *E-METER ESSENTIALS*:

RE: THE TONE ARM:

Page 9 Section 10:

Delete: “no matter what the preclear says.”

Add: “until the EP of that process is reached.”

The whole section now reads: “If the Tone Arm shows motion, continue the process, until the EP of that process is reached.”

Page 10. Section 12:

Delete: “is a breach of the Auditor’s Code Clause 13. Also to continue a process that is producing no Tone Arm motion is a breach of the same Clause . “

Add: “will leave the pc with By-Passed Charge. The process should be continued to the EP of that process.”

The whole section now reads: “To change a process while the Tone Arm shows good motion will leave the pc with By-Passed Charge. The process should be continued to the EP of that process.”

RE: THE SENSITIVITY KNOB:

Page 13, Section 5:

Delete: “Have the preclear hold the electrodes comfortably in his hands. Have him tighten his hands and then relax them, still holding the cans. The needle should drop exactly one-third of a dial. Adjust the sensitivity knob by asking the preclear to squeeze the cans again and observing the needle fall.”

The whole section is substituted with the following: “The exact setting of the sensitivity knob is done as follows: Have the preclear hold the electrodes (cans) in his hands with the cans in contact with the cups of his palms and all his fingers and both thumbs in a comfortable grip. Set the sensitivity at 5 and adjust the position of the needle to set. Have the preclear squeeze the cans with an even gradual pressure, not a sudden hard squeeze. Watch the distance the needle drops. If the distance the needle fell is less than one-third of a dial drop, raise the sensitivity some and get another can squeeze, continuing this procedure till you’ve got the sensitivity setting that gives you one third dial drop on the can squeeze. If the can squeeze gave you

more than one-third dial drop at Sens. 5, lower the sensitivity setting a bit, test another can squeeze, continuing this procedure till you get one-third of a dial drop.

In other words, keep adjusting your sensitivity lower or higher according to whether the drop is more or less than one-third of a dial drop, until you get the correct sensitivity setting.”

Page 13. Section 7:

Delete: “Adjust the knob to a still needle that will yet move on needed responses . “

Add: “Adjust the sensitivity knob to get a third of a dial drop on the can squeeze, or as close to that as you can.”

The whole section now reads: “In short, adjust the sensitivity knob to get a third of a dial drop on the can squeeze, or as close to that as you can.”

RE: THE NEEDLE:

Page 14. Section 4:

Delete: “A fall always happens with rapidity, within a second or two.”

Add: “A fall always happens at the exact end of the question asked.”

The whole section now reads: “A falling needle (3) makes a dip to the right as you face the meter. A fall may consist of half a division (about one-eighth of an inch) or may consist of fifteen dials (the whole meter face dropped fifteen times). It is still a fall. A fall always happens at the exact end of the question asked. It is also called a drop, a dip and a register. It denotes that a disagreement with life on which the preclear has greater or lesser reality has met the question asked.”

Page 15. Section 9:

Delete: “upon the question being asked. A fall can be in two stages or more providing they take place within a second or two after the question.”

Add: “at the end of the last word of the question asked.”

The whole section now reads: “A fall follows at once at the end of the last word of the question asked.”

RE: CHANGE OF CHARACTERISTIC:

Page 15. Section 17:

Delete: “we must assume that that is it and we use it.”

Add: “it can be further explored with the suppress and invalidate buttons to see if it develops into a sF, F. or BD, which then can be used.”

The whole section now reads: “Change of characteristic occurs when we hit on something in the preclear’s bank. It occurs only when and each time that we ask that exact question. *As* the question or item alone changes the needle pattern, it can be further explored with the suppress and invalidate buttons to see if it develops into a sF, F. or BD, which then can be used.”

Page 15. Section 18:

Delete: “usually” .

Add: “may”.

The whole section now reads: “A question that stops a rising needle is a change of characteristic question and like a fall means we have struck something. Further exploration may develop it into a fall.”

Page 16, Section 21:

Delete: “within one tenth to one half of a second after you have asked a question of the preclear.”

Add: “An instant read is defined as that reaction of the needle which occurs at the precise end of any major thought voiced by the auditor.”

The whole section now reads: “It is not much used but must be known as it may have to be used sooner or later when we can’t get falls.

“The only needle reactions in which you should be interested are those which occur INSTANTLY. An instant read is defined as that reaction of the needle which occurs at the precise end of any major thought voiced by the auditor.”

RE: ROCK SLAMS:

Page 17, Section 35, ROCK SLAM (7):

Delete: “This originally meant (and still does) that you are on the rock chain.”

Add: “A Rock Slam means a hidden Evil Intention on the subject or question under discussion or auditing.”

The whole section now reads: “In assessing or running you occasionally get a Rock Slam. A Rock Slam means a hidden Evil Intention on the subject or question under discussion or auditing.”

Page 17, Section 36:

Delete: “A Rock Slam is a crazy, irregular, unequal, jerky motion of the needle, narrow as one inch or as wide as three inches happening several times a second. The needle ‘goes crazy’, slamming back and forth, narrowly, widely, over on the left, over on the right, in a mad war dance or as if it were frantically trying to escape. It means hot terminal or hot anything in an assessment and takes precedence over a fall.”

The entire section is replaced with: “A Rock Slam is a crazy, irregular, leftright slashing motion of the needle. It repeats left and right slashes unevenly and savagely, faster than the eye easily follows. The needle is frantic. The width of a Rock Slam (R/S) depends largely on sensitivity setting. It goes from one-fourth inch to whole dial. But it slams back and forth. It means hot item in an assessment and takes precedence over a fall or it means that you have left rings on the pc’s hands or have a loose connection in the leads or meter. If the latter two items verify as not present you are looking at a Rock Slam in the pc.”

RE: FREE NEEDLES:

Page 17, Section 41:

Delete: “It means an idle, uninfluenced motion, no matter what you say about the goal or terminal. It isn’t just null, it’s uninfluenced by anything (except body reactions).”

The entire section is replaced by: “It means the same as a Floating Needle, which is a rhythmic sweep of the dial at a slow, even pace of the needle, back and forth, back and forth, without change in the width of the swing except perhaps to widen as the pc gets off the last small bits of charge. Note that it can get so wide that you have to shift the Tone Arm back and forth, back and forth, to keep the needle on the dial in which case you have a floating tone arm.”

Page 18 Section 44:

Delete: “It doesn’t happen until a person is well above release, so don’t worry about it until you see it.”

The whole section is replaced with: “It can occur after a cognition, blowdown of the Tone Arm, at a release point, or on the erasure of a Dianetic chain.”

Page 18. Section 46:

Delete: “A Free Needle means, when it’s used as a term, ‘The preclear is getting awful close to clear.’“

The whole section is replaced with: “A Free Needle or Floating Needle is one of the parts of the End Phenomena for any process or action.”

RE: SECURITY CHECKING:

Page 21. Section 3:

Delete: “(b) it’s in a past life and he doesn’t consciously know about it (since the meter precedes preclear consciousness).”

The entire line is replaced with: “(b) there’s an earlier similar overt or withhold . “

Page 22. Section 5:

Delete: “In the case of a past life possibility you add, ‘In this lifetime’ to your security question. As you repeat that, if the misdeed was in a past life, the fall will vanish.”

The whole section is replaced with: “In the case of (b) when there’s an earlier similar overt or withhold, you must ask for it and get it.”

Page 22. Section 7:

Delete: “always (as in all Rudiments) ask the question again as this might not be all of it.”

Add: “you get all the data and handle it earlier similar withhold as necessary to an F/N.”

The whole section now reads: “If the preclear tells you a withhold, you get all the data and handle it earlier similar withhold as necessary to an F/N.”

Page 22. Section 9:

Delete: “On a security check sheet, follow up every change of characteristic before you go on.”

Add: “On a security check, follow up every change of characteristic, if it is instant, before you go on.”

The whole section now reads: “On a security check, follow up every change of characteristic, if it is instant, before you go on. Change of characteristic, if it amounts to anything, will develop into a fall.”

Page 22, Section 10:

Delete. “(or it’s a past life)”.

Add: “or there’s an earlier similar overt or withhold”

The whole section now reads: “If the preclear hasn’t told all or there’s an earlier similar overt or withhold, the meter won’t clear.”

Page 22, Section 14:

No deletions.

Add: “except when it’s a false read which can be checked for.”

The whole section now reads: “Grim experience of a decade has taught me that it’s (a) or (b) and never ‘I moved the needle myself’ or ‘I feel nervous just generally’. The E-Meter is right even when it seems to make the preclear wrong, except when it’s a false read which can be checked for.”

RE: METER FRAILTIES:

Page 25, Section 7:

Delete: “if that doesn’t stop it, squirt some lighter fluid into the Tone Arm ‘bearing’ from the meter face side.”

Add: “including the Mark V until February 1979”.

The entire section now reads: “One exception: The British and American Hubbard Electrometer early models including the Mark V until February 1979 had a ‘carbon pot’ which is to say the Tone Arm was in ‘pure carbon bearings’, if you could call it that. A speck of dust can get in the ‘pot’ and cause the needle to rock slam whether connected to the preclear or not. Pull the lead wire jack (disconnecting cans) and if the slam continues, it’s the ‘pot’ that’s wrong. Work the Tone Arm vigorously for a short while. If that doesn’t stop it, turn it in to be repaired. Later models of the British and American Hubbard Electrometer have ‘wire wound pots’ and this doesn’t happen .”

METER TRIM CHECK

E-Meters can go out of trim during a session because of temperature changes.

Thus even if the meter is properly calibrated and reads at 2.0 with a 5,000 ohm resistor across the leads and 3.0 with 12,500 ohms, by the end of the session a pc can be apparently reading below 2.0 because the meter is off trim.

The following meter procedure is therefore to be followed AT THE END OF EACH SESSION (AFTER GIVING "END OF SESSION."):

1. DON'T MOVE THE TRIM KNOB
2. PULL OUT THE JACK PLUG
3. MOVE THE TA UNTIL THE NEEDLE IS ON 'SET' AT THE SENSITIVITY YOU WERE USING IN THE SESSION
4. RECORD THE TA POSITION AT THE BOTTOM OF THE AUDITOR'S REPORT FORM AS:

"Trim check - TA =...."

5. IF YOUR METER IS KNOWN TO BE OUT OF CALIBRATION (as in para 2 above) RECORD ALSO: "Calibration error - on meter = 2.0 actual" at the bottom of the form.

**CHECKLIST FOR SETTING UP
SESSIONS AND AN E-METER**

In order to prevent constant interruptions of a session to get dictionaries, prepared lists, etc. etc. and in the vital interest of keeping the pc smoothly in session—interested in own case and willing to talk to the auditor, the following checklist has been made.

An auditor should drill this checklist until he has it down thoroughly, without reference to it.

A. PRE-APPOINTMENT:

1. Paid invoice slip of pc. _____
2. Pc folders; 2A. Current 2B. Old. _____
3. Pc folder study by auditor. _____
4. Folder Error Summary. _____
5. A C/S for the session. _____
6. Any cramming actions on the C/S. _____

B. CALL IN:

7. Enough time to do session. _____
8. APPOINTMENT (made by auditor or Technical Services). _____
9. Scheduling Board (auditor, pc, room, time). _____

C. ROOM READINESS:

10. Clean up room. _____
11. Smells removed. _____
12. Room temperature handled. _____
13. Area and hall silence signs made. _____
14. Silence signs placed. _____
15. Knowing where the w.c. is. _____
16. Right sized table, sturdy, doesn't squeak. _____
17. Side table. _____
18. Adequate light if room gets dark. _____
19. Flashlight in case power fails. _____
20. Quiet clock or watch. _____
21. Blanket for pc in case gets cold. _____
22. Fan or A/C in case pc gets too hot. _____

D. AUDITING MATERIEL:

23. Paper for W/Ss and lists. _____
24. Ballpoints or pencils. _____
25. Kleenex. _____
26. Anti-perspirant for sweaty palms. _____
27. Hand cream for dry palms. _____

- 28. Dictionaries including Tech and Admin Dictionaries and a non-dinky one in language. _____
- 29. Grammar. _____
- 30. Auditing materiel, white forms, prepared lists including those that might be called for on other prepared lists. _____
- 31. E-Meter. _____
- 32. Spare meter. _____
- 33. Preliminary meter check for charge and operational condition. _____
- 34. Meter shield (to obscure meter from pc). _____
- 25. In Session sign for door. _____
- 36. Extra meter lead. _____
- 37. Different sized cans. _____
- 38. A plastic bag to cover one can for pcs who knock cans together. _____
- 39. Finalize setting up room for session. _____

E. PC ENTRANCE TO AUDITING ROOM:

- 40. In Session sign on door. _____
- 41. Phone shut off. _____
- 42. Putting pc in chair. _____
- 43. Comfort of chair check with pc and handle. _____
- 44. Adjusting pc's chair. _____
- 45. Check pc clothes, shoes for tightness and handle. _____
- 46. Check with pc if room is all right and handle. _____

F. METER SET UP FOR SESSION:

- 47. Check test (for charge). _____
- 48. See that needle is not dancing by itself or auditing itself. _____
- 49. Make sure 2.0 = 2.0 by trim. _____
- 50. Snap in leads jack. _____
- 51. Verify trim by calibration resistor onto alligator clips. _____
- 52. Put needle on set. _____
- 53. Put pc on. _____
- 54. Adjust pc sensitivity for 1/3 dial drop by pc can squeeze. _____
- 55. Go through False TA Correction as needed including change of cans, cream, anti-perspirant as needed. _____
- 56. Have pc take a deep breath and let it out and see if needle gives a latent fall (which it should). _____
- 57. Check for adequate sleep. _____
- 58. Check to be sure pc has eaten and is not hungry. _____
- 59. Ask for any reason not to begin session. _____

G. START THE SESSION.

Word Clearing Series 38

METHOD 5

Method 5 Word Clearing is a System wherein the word clearer feeds words to the person and has him define each. It is called Material Clearing. Those the person cannot define must be looked up.

This method may be done without a meter. It can also be done with a meter.

The reason the Method is needed is because the person often does not know that he does not know. Therefore Method 4 has its limitations as the meter does not always read.

The actions are very precise.

The word clearer asks "What is the definition of _____?" The person gives it. If there is any doubt whatever of it, or if the person is the least bit hesitant, the word is looked up in a proper dictionary.

This method is the method used to clear words or auditing commands or auditing lists.

HCO BULLETIN OF 9 AUGUST 1978
Issue II

Remimeo

(Cancels BTB 2 May 72R, Rev. 10.6.74,
CLEARING COMMANDS.)

CLEARING COMMANDS

(Ref: HCOB 14 Nov 65, CLEARING COMMANDS
HCOB 9 Nov 68, CLEARING COMMANDS, ALL LEVELS
HCO PL 4 Apr 72R ETHICS AND STUDY TECH)

Always when running a process newly or whenever the preclear is confused about the meaning of commands, clear each word of each command with the preclear. using the dictionary if necessary. This has long been standard procedure.

You want a pc set up to run smoothly, knowing what is expected of him and understanding exactly the question being asked or the command being given. A misunderstood word or auditing command can waste hours of auditing time and keep a whole case from moving.

Thus this preliminary step to running a process or procedure for the first time is VITAL.

The rules of clearing commands are:

1. UNDER NO CIRCUMSTANCES IS THE AUDITOR TO EVALUATE FOR THE PC AND TELL HIM WHAT THE WORD OR COMMAND MEANS.
2. ALWAYS HAVE THE NECESSARY (AND *GOOD*) DICTIONARIES IN THE AUDITING ROOM WITH YOU.

This would include the Tech Dictionary, the Admin Dictionary, a good English dictionary, and a good non-dinky dictionary in the pc's native language. For a foreign language case (where the pc's native language is not English) you will also need a dual dictionary for that language and English.

(Example: English word "apple" is looked up in English/French dictionary and "pomme" is found. Now look in the French dictionary to define "pomme.")

So for the foreign language case two dictionaries are needed: (1) English to foreign language (2) foreign language itself.

3. HAVE THE PC ON THE CANS THROUGHOUT THE CLEARING OF THE WORDS AND COMMANDS.
4. CLEAR THE COMMAND (OR QUESTION OR LIST ITEM) BACKWARDS BY FIRST CLEARING IN TURN EACH WORD IN THE COMMAND IN BACKWARDS SEQUENCE.

(Example: To clear the command "Do fish swim?" clear "swim" first, then "fish," then "do.")

This prevents the pc starting to run the process by himself while you are still clearing the words.

4A. NOTE: F/Ns OBTAINED ON CLEARING THE *WORDS* DOES NOT MEAN THE *PROCESS* HAS BEEN RUN.

5. NEXT, CLEAR THE COMMAND ITSELF.

Auditor asks the pc, "What does this command mean to you?" If it is evident from the pc's answer that he has misunderstood a word as it is used in the context of the command:

(a) Re-clear the obvious word (or words) using the dictionary.

(b) Have him use each word in a sentence until he has it. (The worst fault is the pc using a new set of words in place of the actual word and answering the alter-ised word, not the word itself. See HCOB 10 Mar 65, *WORDS, MISUNDERSTOOD GOOFS*.)

(c) Re-clear the command.

(d) If necessary, repeat Steps a, b and c above to make sure he understands the command.

5A. NOTE: THAT A *WORD* READS WHEN CLEARING A COMMAND, AN ASSESSMENT QUESTION OR LISTING QUESTION DOES NOT MEAN THE *COMMAND* OR *QUESTION* ITSELF HAS READ NECESSARILY. MISUNDERSTOOD WORDS READ ON THE METER.

6. WHEN CLEARING THE COMMAND, WATCH THE METER AND NOTE ANY READ ON THE COMMAND. (Ref: HCOB 28 Feb 71, C/S Series 24, *IMPORTANT METERING READING ITEMS*.)

7. DON'T CLEAR THE COMMANDS OF ALL RUDS AND RUN THEM, OR OF ALL PROCESSES AND RUN THEM. YOU'LL MISS F/Ns. THE COMMANDS OF ONE PROCESS ARE CLEARED JUST BEFORE *THAT* PROCESS IS RUN.

8. ARC BREAKS AND LISTS SHOULD BE WORD CLEARED BEFORE A PC GETS INTO THEM AND SHOULD BE TAGGED IN THE PC'S FOLDER ON A YELLOW SHEET AS CLEARED. (Ref: BTB 5 Nov 72R II, Rev. 24.7.74, Auditor Admin Series 6R, *THE YELLOW SHEET*.)

As it is difficult to clear all the words of a correction list on a pc over heavy bypassed charge, it is standard to clear the words of an L1C and ruds very early in auditing and to clear an L4BRA *before* commencing listing processes or an L3RE *before* running R3RA. Then, when the need for these correction lists arises one does not need to clear all the words as it has already been done. Thus, such correction lists can be used without delay.

It is also standard to clear the words of the Word Clearing Correction List early in auditing and before other correction lists are cleared. This way, if the pc bogs on subsequent Word Clearing, you have your Word Clearing Correction List ready to use.

9. IF, HOWEVER, YOUR PC IS SITTING IN THE MIDDLE OF AN ARC BREAK (OR OTHER HEAVY CHARGE) AND THE WORDS OF THE L1C (OR OTHER CORRECTION LIST) HAVE *NOT* BEEN CLEARED YET, DON'T CLEAR FIRST. GO AHEAD AND ASSESS THE LIST TO HANDLE THE CHARGE. OTHERWISE IT'S AUDITING OVER AN ARC BREAK.

In this case you just verify by asking afterwards if he had any misunderstandings on the list. All the words of the LIC (or other correction list) would then be cleared thoroughly at the first opportunity—per your C/S's instructions.

10. DO NOT RE-CLEAR ALL THE WORDS OF ASSESSMENT LISTS EACH TIME THE LIST IS USED ON THE SAME PC. Do it once, fully and properly the first time and note clearly in the folder, on the yellow sheet for future reference, which of the- standard assessment lists have been cleared.
11. THESE RULES APPLY TO ALL PROCESSES, LISTING QUESTIONS AND ASSESSMENTS .
12. THE WORDS OF THE PLATENS OF ADVANCED COURSE MATERIALS ARE NOT SO CLEARED.

Any violation of full and correct clearing of commands or assessment questions, whether done in a formal session or not, is an ethics offense per HCO PL 4 Apr 72R (Rev. 21.6.75) ETHICS AND STUDY TECH, Section 4, which states:

“ANY AUDITOR FAILING TO CLEAR EACH AND EVERY WORD OF EVERY COMMAND OR LIST USED MAY BE SUMMONED BEFORE A COURT OF ETHICS.

“The charge is OUT TECH.”

C/S Series 24

IMPORTANT

METERING READING ITEMS

(NOTE: Observation I have recently done while handling a C/S line has resulted in a necessary clarification of the subject of "a reading item or question" which improves older definitions and saves some cases.)

It can occasionally happen that an auditor misses a read on an item or question and does not run it as it "has not read". This can hang up a pc badly if the item was in fact a reading item or question. It does not get handled and exists in records as "No read" when in fact it DID read.

THEREFORE ALL DIANETIC AUDITORS WHOSE ITEMS OCCASIONALLY "DON'T READ" AND ALL SCIENTOLOGY AUDITORS WHO GET LIST QUESTIONS THAT DON'T READ MUST BE CHECKED OUT ON THIS HCO B IN QUAL OR BY THE C/S OR SUPERVISOR.

These errors come under the heading of Gross Auditing Errors as they affect metering.

1. An Item or Question is said to "Read" when the needle falls. Not when it stops or slows on a rise. A tick is always noted and in some cases becomes a wide read.
2. The read is taken when the pc first says it or when the question is cleared. THIS is the valid time of read. It is duly marked (plus any blow down). THIS reading defines *what* is a *reading item or question*. CALLING IT BACK TO SEE IF IT READ IS NOT A VALID TEST as the surface charge may be gone but the item or question will still run or list.
3. Regardless of any earlier statements or material on READING ITEMS, an item does not have to read when the auditor calls it to be a valid item for running engrams or listing. The test is did it read when the pc first said it on originating it or in Clearing it?
4. That an item or question is marked as having read is sufficient reason to run it or use it or list it. Pc Interest, in Dianetics, is also necessary to run it, but that it did not read *again* is no reason to not use it.
5. When listing items the auditor must have an eye on the meter NOT necessarily the pc and must note on the list he is making the extent of read and any BD and how much. THIS is enough to make it a "reading item" or "reading question".
6. In Clearing a listing Question the auditor watches the meter, NOT necessarily the pc and notes any read while clearing the question.
7. An additional calling of the item or question to see if it read is unnecessary and not a valid action if the item or question read on origination or Clearing.
8. That an item is marked as having read on an earlier Dianetic list is enough (also checking interest) to run it with no further read test.

9. To miss seeing a read on an origin or clearing is a Gross Auditing Error.
10. Failing to mark on the list or worksheet the read and any BD seen during pc origination or clearing the question is a Gross Auditing Error.

EYESIGHT

Auditors who miss reads or have poor eyesight should be tested and should wear the proper glasses while auditing.

GLASSES

The rims of some glasses could obstruct seeing the meter while the auditor is looking at the worksheet or pc.

If this is the case the glasses should be changed to another type with broader vision.

WIDE VISION

A good auditor is expected to see his meter, pc and worksheet all at one time. No matter what he is doing he should always notice any meter movement if the meter needle moves.

If he cannot do this he should use an Azimuth Meter and *not* put paper over its glass but should do his worksheet looking through the glass at his pen and the paper—the original design purpose of the Azimuth Meter. Then even while writing he sees the meter needle move as it is in his line of vision.

CONFUSIONS

Any and all confusions as to what is a “reading item” or “reading question” should be fully cleaned up on any auditor as such omissions or confusions can be responsible for case hang-ups and needless repairs.

NO READ

Any comment that an item or question “did not read” should be at once suspected by a C/S and checked with this HCO B on the auditor. Actually non-Reads, a non-reading item or question means one that did *not* read when originated or cleared and also did not read when called.

One can still call an item or question to get a read. That it now reads is fine. But if it has never read at all, the item will not run and such a list will produce no item on it. It is not forbidden to call an item or question to test it for read. But it is a useless action if the item or question read on origination by the pc or clearing it with him.

IMPORTANT

The data in this HCO B, if not known, can cost case failures. Thus it must be checked out on auditors.

Basic Auditing Series 11

METERING

One does NOT tell the pc anything about the meter or its reads ever, except to indicate an F/N.

Steering a pc with “That—That—That” on something reading is allowable. But that isn’t putting attention on the meter but on his bank.

Definition of “In Session” is “Pc interested in own case and willing to talk to the auditor”.

Saying “That reads”, “That didn’t read”, “That blew down” is illegal. It is no substitute for TR 2. It violates the In Session definition by putting pc’s attention on the meter and can make him very unwilling to talk to the auditor!

(Cancels HCOB 8 Apr 78, An F/N Is A Read)
(Reissued to delete an incorrect reference.)

AN INSTANT F/N IS A READ

Ref: HCOB 2 Nov 68R Case Supervisor Class VIII
The Basic Processes
HCOB 20 Feb 70 Floating Needles and End Phenomena

An instant F/N is an F/N which occurs instantly at the end of the major thought voiced by the auditor or at the end of the major thought voiced by the pc (when he originates items or tells what the command means).

It will most usually be seen as a LFBD/F/N or a LF/F/N.

So what does this mean, "An instant F/N is a read?"

A read means there's charge there to handle. It means there is force connected with that significance which is available to the pc to view and run. It means that item is real to the pc.

An F/N means something has keyed-out.

Now a key-out is what we are looking for on many processes which are run. It means "Stop. End of process, end of rud, end of action." So an instant F/N does not always mean you should take up that item.

To sort this out, you will have to understand the basic mechanics of key-out, keyin and erasure. It will then become clear why an F/N is a read and *when it* is taken up. To confuse this could really mess up a pc.

For example, on ruds, Prepcheck questions, protest, overrun, rehabs, to name a few, an instant F/N would not be taken up. The EP of charge keyed-out has been attained.

But to ignore an instant F/N on Dianetic items and certain correction lists etc., will leave the pc with bypassed charge and major areas of case unhandled. The key is "Is a *handling* required on the item or is an F/N the legitimate EP?"

You will also have to understand that we are talking about INSTANT F/Ns. An F/N which continues to F/N through an assessment means "No Charge."

An instant F/N on an item means charge has just keyed-out on that item, and that it can key back in again. There are actions, as in Dianetics, where a key-out is not what you are going for. You want the postulate off the basic incident of the chain, which indicates you have an erasure.

In Dianetics an instant F/N takes precedence over all other reads. This is because, the pc, having just keyed-out the charge on that item, will find it most real. It will be the most runnable item. An instantly F/Ning item is taken up first. LFBD, LF, F and sF follow in their usual order.

The use of this thing is mainly a C/S use. A C/S can look down a column of two-way comm or look down an L and N list and spot what F/Ned. If the C/S doesn't realize that this was *the* item he can then take erroneously some LFBD item or F item out of the columns of two-way comm as the resulting item for that subject.

The use of an F/N as a read is almost entirely relegated to the next C/S except when used in Dianetics.

Example: A C/S is looking for the actual service facsimile in two-way comm. (You usually L and N to find service facs but you may have an instance where you found one in two-way comm.) The pc mentions several and finally one F/Ns. The C/S knows at once it is *the* service fac.

Example: A two-way comm has operated as a list and the C/S is trying to reconstruct it. Unless he knows that an F/N is a read he might overlook the actual item on that list which is the one which occurred immediately before the F/N. This is the item.

When used in the session itself the auditor has to know that an F/N is a read in doing L and N. The item which F/Ned is of course the item.

In a Dianetic session it is not uncommon to find a brief F/N occurring on a list or a preassessment. In Dianetics we are not interested in key-outs. We are interested in chains and erasures. So the "hottest reading item" on the list is the one that gave an F/N. Usually it will be a BD F/N. If the Dianetic auditor does not know that an instant F/N is a read he is likely to ignore the item that F/Ned.

In Dianetics, you will find that an F/N taken up again, will immediately key-in but this is what the Dianetic auditor wants.

The Scientology auditor is usually handling other phenomena and if he bypassed an F/N and kept on going the TA would go up and he would have trouble.

So the use of this principle is a very touchy thing and has to be understood.

Of course the first thing you have to know about is what an F/N looks like.

This tech fully understood and applied will mean the difference between a case beingfully *handled* and "just doing better." Understand it and use it. You'll see the difference in your results.

NEEDLE REACTIONS ABOVE GRADE IV

In doing Green Forms or Analysis Lists on any Clears (but not in nulling) or doing them on most cases above 5 and some cases below it, there are 2 different E-Meter needle phenomena which have to be given attention:

1. As a Clear's postulates read as a surge, usually fairly long (over 1"), "No" can read if the pc says it to himself as an answer to a question asked.

A read, therefore, does not mean invariably "yes" or that the question is charged. All it means is that the Meter has read.

The Auditor must now find out what the read was before determining he should do something about that portion of the Green Form or List. One doesn't just assume the read was "yes".

One asks about the read as a general rule, not assuming at once the thing asked was charged.

Example—

Auditor: "Do you have a missed withhold?" Meter surges.
Auditor: "What was that?"
Pre OT: "I thought No I don't."
Auditor: "Ok. Do you have a missed withhold?"
Pre OT: "No."—Meter didn't read.
Auditor: "Anything suppressed—asserted—protested—invalidated. Ok that's clean."

Ticks ($\frac{1}{8}$ inch) often mean something is there. A Pre OT's postulates have greater length when they surge.

It is not important how you handle this phenomena of postulate or to-oneself comment by a high level case. It *is* important that the Auditor does not hang the case with a wrong adjudication of what's wrong by thinking every *surge* means "yes", or that the question is charged because it surges. A question is charged only if it won't clean up with buttons until the action itself is taken.

A Pre OT, unlike pcs below Grades I or II, usually recognizes what is wrong as soon as it is mentioned. He or she is more aware.

2. A response like a brief dirty needle on a Pre OT means "No" always.

So there *is* a certain and trustworthy negative to be had on a Pre OT.

A real dirty needle is constant and continues. The same small jerky needle action on a person Grade 5 or above means “No!” or that the question is negative.

On pcs below 5 it means a withhold or an ARC break or almost anything and is of course continuous.

ARBITRARIES

Any arbitrary entered into any line is a way to stop that line.

An auditor doing a job of auditing suddenly enters an arbitrary such as “The pc now has a grief charge so he must have a withhold as I’ve just cleaned up ARC breaks.” Or any such wild think. This arbitrary would stop that pc’s case right now.

You get all there is to know about tech from HCOBs, tapes, books.

This is all.

Here’s one—when the needle on an E-Meter read in the response to an auditor’s question, all you know is that the needle on the E-Meter read. That’s all you know. Now in the next few seconds you will prove out, as to whether the read was to the question or to something else like a protest. To assume anything else in regard to meter reads is an arbitrary and will close up that pc with a bang.

That’s the data. Knock off all the arbitraries NOW.

Punch in hard standard tech. Standard tech is that tech which has absolutely no arbitraries.

UNREADING QUESTIONS AND ITEMS

Reference: HCOB 3 Dec 78 UNREADING FLOWS

Never list a listing question that doesn't read.

Never prepcheck an item that doesn't read.

These rules hold good for all lists, all items, *all flows, including Dianetics.*

A "tick" or a "stop" is not a read. Reads are small falls or falls or long falls or long fall blowdown (of TA).

A preclear's case can be gotten into serious trouble by listing a list that doesn't read or prepchecking *an item that doesn't read* or running an item or flow that doesn't read.

On a list, this is the sort of thing that happens:

The list is "Who or what would fly kites?" The C/S has said to "List this to a BD F/N item." So the auditor *does* list it without checking the read at all. The list can go on 99 pages with the pc protesting, getting upset. This is called a "Dead horse list" because it gave no item. The reason it didn't was that the list question itself didn't read. One does an *L4BRA* on the pc to correct the situation and gets "unnecessary action."

On a list that is getting no item you don't *extend*. *You* correctly use *L4BRA* or any subsequent issue of it. If you extend a "dead horse list" you just make things worse. Use an *L4BRA* and it will set it right.

This weird thing can also happen. C/S says to list "Who or what would kill buffaloes?" The auditor does, gets a BD F/N item "A hunter." The C/S *also* says to list as a second action "Who or what would feel tough?" The auditor fails to test the question for read and lists it. Had he tested it, the list would not have read. But the list comes up with an item, "A mean hunter." It has stirred up charge from the first question and the item "A mean hunter" is a wrong item as it is a misworded variation of the first list's item! Now we have an unnecessary action *and* a wrong item. We do an *L4BRA* and the pc is still upset as maybe only one or the other of the *two* errors read.

In a Dianetic "list" one is not doing a listing action. One is only trying to find a somatic or sensation, etc. that will run. The item must read well. Or it won't produce a chain to run. In actual fact the Dn list Q does usually read but one doesn't bother to test it.

But an item or flow that doesn't read will produce no chain, no basic and the pc will jump around the track trying but just jamming up his bank.

The moral of this story is:

ALWAYS TEST A LISTING QUESTION BEFORE LETTING THE PC LIST.

ALWAYS MARK THE READ IT GAVE (SF, F. LF, LFBD) ON THE WORKSHEET.

ALWAYS TEST AN ITEM FOR READ BEFORE PREPCHECKING A *ND* ALWAYS CHECK AN ITEM AND FLOW BEFORE RUNNING RECALLS OR ENGRAMS.

ALWAYS MARK THE READ AN ITEM GAVE (SF, F. LF, LFBD) ON THE WORKSHEET.

CHARGE

The whole subject of “charge” is based on this. “Charge” is the electrical impulse on the case that activates the meter.

“Charge” shows not only that an area has something in it. It also shows that the pc has possible *reality* on it.

A pc can have a broken leg, yet it might not read on a meter. It would be *charged* but below the pc’s reality. So it won’t read.

THINGS THAT DON’T READ WON’T RUN.

The Case Supervisor always counts on the AUDITOR to test questions and items *and flows* for read before running them.

The auditor, when a question or item or flow doesn’t read, can and should always put in “Suppress” and “Invalidate.” “On this (question) (item) (flow), has anything been suppressed?” “On this (question) (item) (flow), has anything been invalidated?” If either one read, the question or item or flow will also read. The Case Supervisor also counts on the AUDITOR to use Suppress and Invalidate on a question or item or flow. If after this there is still no read on the question or item or flow, that’s it. Don’t use it, don’t list it. Go to the next action on the C/S or end off.

HCO BULLETIN OF 4 SEPTEMBER 1968

Class VIII

Don't force a pc who is ill. The whole intention when auditing a pc who is sick is making him well.

If overts, or M/W/Hs don't read, even though he is nattering, then they are not available to be run right then.

A preclear who is not well cannot look, his havingness is down and he must be handled permissively—*always*.

The mechanism of RELEASE must be well understood to make an ill person well. They plunge down the track madly on any excuse. They require much lighter auditing than they stand up to when well.

FALSE READS

False Reads are handled by checking back any that are false to when they were first "seen" by an auditor.

Sometimes a false read goes on and on, never cleans because there wasn't anything there in the first place.

Find when and where somebody thought it read when it didn't. Can ask, "Who said you had an _____ reading when you didn't have one?"

Also check Protest, Invalidate and Suppress to clean up a false read.

FLOATING NEEDLES AND END PHENOMENA

Now and then you will get a protest from preclears about “floating needles”.

The preclear feels there is more to be done yet the auditor says, “Your needle is floating.”

This is sometimes so bad that in Scientology Reviews one has to Prepcheck the subject of “Floating Needles”.

A lot of by-passed charge can be stirred up which ARC Breaks (upsets) the preclear.

The reason this subject of floating needles gets into trouble is that the auditor has not understood a subject called END PHENOMENA.

END PHENOMENA is defined as “those indicators in the pc and meter which show that a chain or process is ended”. It shows in Dianetics that basic on that chain and flow has been erased, and in Scientology that the pc has been released on that process being run. A new flow or a new process can be embarked upon, of course, when the END PHENOMENA of the previous process is attained.

DIANETICS

Floating needles are only ONE FOURTH OF THE END PHENOMENA in all Dianetic auditing.

Any Dianetic auditing below Power has FOUR DEFINITE REACTIONS IN THE PC WHICH SHOW THE PROCESS IS ENDED.

1. Floating needle.
2. Cognition.
3. Very good indicators (pc happy).
4. Erasure of the final picture audited.

Auditors get panicky about overrun. If you go past the *End Phenomena* the F/N will pack up (cease) and the TA will rise.

BUT that’s if you go past all four parts of the end phenomena, not past a floating needle.

If you watch a needle with care and say nothing but your R3R commands, as it begins to float you will find:

1. It starts to float narrowly.
2. The pc cognites (What do you know—so that’s . . .) and the float widens.
3. Very good indicators come in. And the float gets almost full dial, and
4. The picture, if you inquired, has erased and the needle goes full dial.

That is the full End Phenomena of Dianetics.

If the auditor sees a float start, as in 1, and says, "I would like to indicate to you your needle is floating," he can upset the pc's bank.

There is still charge. The pc has not been permitted to cognite. VGIs surely won't appear and a piece of the picture is left.

By being impetuous and fearful of overrun, or just being in a hurry, the auditor's premature (too soon) indication to the pc suppresses three quarters of the pc's end phenomena.

SCIENTOLOGY

All this also applies to Scientology auditing.

And *all* Scientology processes below Power have the same end phenomena.

The 0 to IV Scientology End Phenomena are:

- A. Floating needle.
- B. Cognition.
- C. Very good indicators.
- D. Release.

The pc goes through these four steps without fail IF PERMITTED TO DO SO.

As Scientology auditing is more delicate than Dianetic auditing, an overrun (F/N vanished and TA rising, requiring "rehab") can occur more rapidly. Thus the auditor has to be more alert. But this is no excuse to chop off three of the steps of end phenomena.

The same cycle of F/N will occur if the pc is given a chance. On A you get a beginning F/N, on B slightly wider, on C wider still and on D the needle really is floating and widely.

"I would like to indicate to you your needle is floating" can be a chop. Also it's a false report if it isn't widely floating and will keep floating.

Pcs who leave session F/N and arrive at Examiner without F/N, or who eventually do not come to session with an F/N have been misaudited. The least visible way is the F/N chop, as described in this session. The most obvious way is to overrun the process. (Running a pc after he has exteriorized will also give a high TA at Examiner.)

In Dianetics, one more pass through is often required to get 1, 2, 3, 4 End Phenomena above.

I know it said in the Auditor's Code not to by-pass an F/N. Perhaps it should be changed to read "A real wide F/N". Here it's a question of how wide is an F/N? However, the problem is NOT difficult.

I follow this rule—I never jolt or interrupt a pc who is still looking inward. In other words, I don't ever yank his attention over to the auditor. After all, it's *his* case we are handling, not my actions as an auditor.

When I see an F/N begin I listen for the pc's cognition. If it isn't there, I give the next command due. If it still isn't there, I give the 2nd command, etc. Then I get the cognition and shut up. The needle floats more widely, VGIs come in, the F/N goes dial wide. The real skill is involved in knowing when to say nothing more.

Then with the pc all bright, all end phenomena in sight (F/N, Cog, VGIs, Erasure or Release, depending on whether it's Dn or Scn), I say, as though *agreeing* with the pc, "Your needle is floating."

DIANETIC ODDITY

Did you know that you could go through a picture half a dozen times, the F/N getting wider and wider without the pc cogniting? This is rare but it can happen once in a hundred. The picture hasn't been erased yet. Bits of it seem to keep popping in. Then it erases fully and wow, 2, 3 and 4 occur. This isn't grinding. It's waiting for the F/N to broaden to cognition.

The pc who complains about F/Ns is really stating the wrong problem. The actual problem was the auditor distracting the pc from cognition by calling attention to himself and the meter a moment too soon.

The pc who is still looking inward gets upset when his attention is jerked outward. Charge is then left in the area. A pc who has been denied his full end phenomena too often will begin to refuse auditing.

Despite all this, one still must not overrun and get the TA up. But in Dianetics an *erasure* leaves nothing to get the TA up with!

The Scientology auditor has a harder problem with this, as he can overrun more easily. There is a chance of pulling the bank back in. So the problem is more applicable to Scientology as a problem than to Dianetics.

But ALL auditors must realize that the END PHENOMENA of successful auditing is not just an F/N but has 3 more requisites. And an auditor can chop these off.

The mark of the real VIRTUOSO (master) in auditing is his skilled handling of the floating needle.

END PHENOMENA

(Ref: HCO B 20 Feb 1970,
"Floating Needles and End Phenomena")

Different types of auditing call for different handlings of End Phenomena.

End Phenomena will also vary depending on what you're running.

The definition of END PHENOMENA is "those indicators in the pc and meter which show that a chain or process is ended". Misapplication of this definition can result in underrun and overrun processes or actions and the pc snarled up with BPC.

TYPES OF EPs

In Power Processing the auditor waits for a *specific* EP and does not indicate an F/N until he has gotten the specific EP for the process. To miss on this in Power is disastrous, thus Power auditors are drilled and drilled on the handling of Power EPs.

In Dianetics, the EP of a chain is erasure, accompanied by an F/N, cognition and good indicators. You wouldn't necessarily expect rave indicators on a pc in the middle of an assist, under emotional or physical stress until the full assist was completed though. What you would expect is the chain blown with an F/N. Those two things themselves are good indicators. The cognition could simply be "the chain blew".

In Scientology, End Phenomena vary with what you're auditing. An ARC Broken pc on an L-1C will peel off charge and come uptone gradually as each reading line is handled. Sometimes it comes in a spectacular huge cog and VVGIs and dial F/N, but that's usually after charge has been taken off on a gradient. What's expected is an F/N as that charge being handled moves off.

In Ruds it's the same idea. When you've got your F/N and that charge has moved off, indicate it. Don't push the pc on and on for some "EP". You've got it.

Now a major grade process will run to F/N, Cog, VGIs and release. You'll have an ability regained. But that's a *grade* process on a set up flying pc.

F/N ABUSE

Mistakenly applying the Power EP rule to Ruds will have the pc messed up by overrun. It invalidates the pc's wins and keys the charge back in. The pc will start thinking he hasn't blown the charge and can't do anything about it.

In 1970 I had to write the HCO B “F/Ns and End Phenomena” to cure auditors of chopping pc EPs on major actions by indicating F/Ns too soon. This is one type of F/N abuse which has largely been handled.

That bulletin and Power EP handling have been in some instances misapplied in the direction of overrun. “The pc isn’t getting EP on these chains as there’s no cognition, just ‘it erased’,” is one example. Obviously the C/S didn’t understand the definition of cognition or what an EP is. Another example is the pc spots what it is and F/Ns and the auditor carries on, expecting an “EP”.

OTs and EPs

An OT is particularly subject to F/N abuse as he can blow things quite rapidly. If the auditor misses the F/N due to too high a sensitivity setting or doesn’t call it as he’s waiting for an “EP”, overrun occurs. It invalidates an OT’s ability to as-is and causes severe upsets.

This error can also stem from auditor speed. The auditor, used to auditing lower level pcs or never trained to audit OTs, can’t keep up with the OT and misses his F/Ns or reads.

Thus overruns occur and charged areas are bypassed.

This could account for those cases who were flying then fell on their heads with the same problems that blew back again.

REMEDY

The remedy of this problem begins with thoroughly clearing all terms connected with EPs. This is basically Word Clearing Method 6, Key Words.

The next action is to get my HCO Bs on the subject of EPs and also related metering HCO Bs fully understood and starrated. This would be followed by clay demos of various EPs of processes and actions showing the mechanics of the bank and what happens with the pc and meter.

TRs and meter drills on spotting F/Ns would follow, including any needed obnosis drills and correction of meter position so that the auditor could see the pc, meter and his admin at a glance.

Then, the auditor would be gradiently drilled on handling the pc, meter and admin at increasing rates of speed including recognizing and indicating EPs when they occurred. When the auditor could do all of this smoothly at the high rate of speed of an OT blowing things by inspection without fumbling, the last action would be bullbaited drills like TRs 103 and 104, on a gradient to a level of competence whereby the auditor could handle anything that came up at speed and do so smoothly.

Then you’d really have an OT auditor. And that’s what you’ll have to do to make them.

SUMMARY

Overrun and underrun alike mess up cases.

Both stem from an auditor inability to recognize and handle different types of EPs and in expertness in handling the tools of auditing at speed.

Don't overrun pcs and have to repair them.

Let the pc have his wins.

F/N EVERYTHING

Whenever an auditor gets a read on an item from Ruds or a prepared list (LIB, L3A, L4B, etc, etc) IT MUST BE CARRIED TO AN F/N.

To fail to do so is to leave the pc with by-passed charge.

When a pc has had several reads on various lists which were none of them carried to F/N, it can occur that he will become upset or depressed without any other apparent reason. As one has DONE the lists without F/Ning each item, one now has the mystery of what is wrong?

The error is reading items from Ruds or prepared lists cleaned to no read but not carried to F/N.

This action (amongst many such refinements) is what makes Flag auditing so smooth and indeed makes it Flag Auditing.

When an auditor first tries this he may well think it is impossible.

Yet it is simplicity itself. If you know bank structure you know it is necessary to find an earlier item if something does not release. What has been found as a read on a prepared list *would* F/N if it were the basic lock. So if it doesn't F/N, then there is an earlier (or an earlier or an earlier) lock which is preventing it from F/Ning.

So the RULE:

NEVER WALK OFF FROM A READING ITEM ON A RUDIMENT OR A PREPARED REPAIR LIST BEFORE YOU CARRY IT DOWN (EARLIER SIMILAR) TO AN F/N.

Example: ARC Brk reads. Pc says what it is, Auditor does ARCU CDEI. If no F/N, Auditor asks for an earlier similar ARC Brk, gets it, ARCU CDEI, etc until he gets an F/N.

Example: PTP reads. Carry it E/S (earlier similar) until a PTP F/Ns.

Example: L4B: Has an item been denied you? Reads. Answered. No F/N. Is there an earlier similar denied item? Answered. F/N. Go on to next reading item on the list.

Example: GF assessed once through for reads. The next C/S must take every item on it that read, by 2wc or other process, to an F/N.

So there is a much more general rule:

EVERY ITEM THAT READS MUST F/N.

In Dianetics you get the F/N when you run E/S secondaries or engrams to an erasure, F/N, Cog, VGIs.

In Rudiments, every out rud you get a read on is run E/S to F/N.

On a prepared list you take each read to an F/N or E/S to F/N.

On an LX list you run each flow chain to an F/N.

On GF you get by whatever process an F/N.

On Listing by the Laws of Listing and Nulling, your eventual item listed must F/N.

So another rule:

EVERY MAJOR AND MINOR ACTION MUST BE CARRIED TO AN F/N.

There are NO exceptions.

Any exception leaves by-passed charge on the pc.

Also, every F/N is indicated at the conclusion of the action when cog is obtained.

You take too soon an F/N (first twitch) you cut the cognition and leave by-passed charge (a withheld cognition).

I could take any folder and simply write out the ruds and prepared list reading items and then audit the pc and carry each one to F/N and correct every list so disclosed and wind up with a very shining, cool calm pc.

So “Have reading items been left charged?” would be a key question on a case.

Using lists or ruds on high or low TAs that are not meant for high or low TAs will get you reading items that won't F/N.

So, another rule:

NEVER TRY TO FLY RUDS OR DO LIB ON A HIGH OR LOW TA.

One can talk the TA down (see HCO B on Talking the TA Down).

Or one can assess L4B.

About the only prepared lists one can assess are the new Hi-Lo TA HCO B 13 Mar 71 and possibly a GF+40 once through for biggest read. The biggest read will have a blowdown on it and can possibly be brought to F/N. If this occurs then one also handles all other items that read.

The most frequent errors in all this are:

Not taking a read earlier similar but just checking it and leaving it as “clean”.

Not using suppress and false on items.

And of course leaving a pc thinking things are still charged by failing to indicate the F/N.

Indicating an F/N before Cog.

Not going back through the folder to handle ruds and items that read but were called “clean” or were simply abandoned.

A pc audited under tension of poor TRs has a hard time and does not F/N sometimes, inviting overrun.

The rules then to happy pcs are:

GOOD TRs.

F/N EVERYTHING FOUND ON RUDS AND LISTS.

AUDIT WITH TA IN NORMAL RANGE OR REPAIR IT SO IT IS IN NORMAL RANGE.

C/S Series 89

F/N WHAT YOU ASK OR PROGRAM

Ref: HCO B 23 Dec 72 Integrity Processing Series 20
HCO B 21 Nov 73 The Cure of Q and A

When an Auditor asks one question but F/Ns something else it is simply a version of QandA.

Example: AUDITOR: Do you have a problem? PC: (ramble-ramble) I was thinking of last night's dinner. AUDITOR: That F/Ns.

Every few folders you pick up, if you can find examples of this:

The Auditor is not trained not to Q and A.

He is NOT getting answers to his questions.

When the Auditor starts something (such as a question or process) he MUST F/N what he started EVEN THOUGH HE DID SOMETHING ELSE DURING IT AND GOT AN F/N ON SOMETHING ELSE. HE MUST F/N THE ORIGINAL ACTION.

The result can be:

- (a) Missed W/H phenomena.
- (b) High or low TA an hour after the pc "F/Ned at Examiner".
- (c) A stalled case.
- (d) An undone program.
- (e) An unhandled pc.
- (f) Continual need for repair programs.

To get this disease out of an HGC requires that Auditors go through an Anti-Q and A handling.

C/S Q AND A

C/Ses can also Q and A. They simply handle whatever the pc originates to the Examiner or Auditor, over and over and on and on.

The result is:

- A. Incomplete Programs.
- B. Tripled or quadrupled C/S effort as the case never seems to get solved.
- C. Loads of repair programs.

Yet a C/S who does it will never look for it as THE primary error being committed.

The remedy is to have the C/S do an Anti-Q and A program.

URGENT—IMPORTANT

C/S Series 99RA

SCIENTOLOGY F/N AND TA POSITION

Through verbal tech just located, it has been found that some auditors have been ordered to disregard all F/Ns that were above 3.0 or below 2.0 on the meter.

Auditors have also called F/Ns which were ARC break needles, thus falsely indicating to the pc.

These two actions—disregarding actual F/Ns because the TA was not between 2.0 and 3.0 and calling “F/Ns” that were actually ARC break needles—have upset many preclears.

The outnesses here are: A. not considering pc indicators as senior and B. not noting pc indicators when calling an F/N and C. ignoring and giving junior importance to the technology covered in false TAs. (See list of references at end of this HCOB or the Subject Index of the HCOB Volumes.)

Auditors have even been led to falsify worksheets (giving TA as in range when it actually was not when calling an F/N) because they might “get in trouble” for calling an F/N in the wrong range, such as 1.8 or 3.2.

The CORRECT procedure for out of range F/Ns is:

1. Look at the pc’s indicators.
2. Call the F/N regardless of its range.
3. Mark down the ACTUAL TA position.
4. Handle the false TA at the earliest opportunity when it will not intrude into the current cycle on which the pc is being audited. (You don’t interrupt a Quad R3RA, for instance, to handle false TA; you complete it and then, when directed by the C/S, you handle the false TA.)
5. On any pc you suspect has had his F/Ns disregarded because of false TA, you C/S for and get run a repair and rehab of this error.

E-Meter cans can monitor or change TA position when the palms are too dry or too wet or when the cans are too big or too small or when the wrong hand cream is used. The E-Meter does not read on hand moisture alone as was long believed by people in electronics. But TA depends upon resistance to electrical current in the palms, leads, and meter as well as its main resistance which happens to be mental masses or lack of them.

To simply tell some interne “Always disregard an F/N not in correct range” is to set him up for loses and set the pc up for crashes. The correct information is that an F/N which isn’t in

range is accompanied by pc indicators that indicate whether it is an F/N or not. AND indicates you better get the false TA handled fast as soon as it won't interrupt the current cycle. AND you always note where it F/Ned so the C/S can C/S for false TA handling.

Where an ARC break needle (which looks like an F/N) is observed, whether it is in range or out of range (2.0 to 3.0 or below 2.0 or above 3.0) you LOOK at the pc and establish the pc's indicators before falsely calling an F/N. A pc who is about to cry is NOT an F/Ning pc and if you indicate an F/N to that pc you will further the ARC break and suppress the emotional charge that is about to come off.

REPAIR

Where the above matters have not been fully understood and errors have occurred on pcs, it must be assumed that:

1. Auditors have falsified their worksheets as to TA position and thus built up withholds and made themselves blowy.
2. That every pc who has ever had high or low TA trouble has had F/Ns disregarded and ARC break F/Ns falsely indicated.
3. That a briefing and drilling of all internes and auditors must occur on this HCOB.
4. That a brief program of clean-up of disregarded F/Ns and falsely called ARC break F/Ns be done on every pc.
5. That every such pc be considered as having false TA troubles and these must be C/Sed for and corrected.
6. That all auditors and internes be drilled on all HCOBs relating to pc indicators.

SAMPLE CLEAN-UP C/S

Disregard TA position, use only F/Ns and pc indicators in doing this C/S.

1. It has been found that some of your F/Ns (release points) may have been disregarded by past or present auditors.
2. Have you ever felt an F/N (release point or end of an action) had been bypassed on your case? . . .
3. Find and rehab the . . . overrun of *the* release point to F/N. *Check for any other bypassed F/Ns and rehab them.*
4. Have you ever felt an F/N should not have been indicated by the auditor when it was? . . .
5. Find the . . . point and get in Suppress on it and complete the action. *Check "Are there any other F/Ns which should not have been indicated by the auditor when they were?" and handle as above.*
6. Find and run the ARC breaks bypassed, with ARC break handling.
7. Find and handle the false TA in totality.

DIANETIC F/Ns

An F/N seen by the auditor in running R3RA is not called until the full Dianetic EP is reached.

An auditor running R3RA is NOT looking for F/Ns. He is looking for the postulate which is sitting at the bottom of the chain he is running.

The EP of a Dianetic chain is always always always the postulate coming off.

The postulate is what holds the chain in its place. Release the postulate and the chain blows. That's it.

The auditor must recognize the postulate when the pc gives it, note the VGIs, call the F/N and end off auditing that chain.

An F/N seen as the incident is erasing is not called.

The pc does not have to state that the incident has erased. Once he has given up the postulate, the erasure has occurred. The auditor will see an F/N and VGIs. NOW the F/N is called. F/Ns are not indicated until the EP of postulate off, F/N and VGIs is reached.

It's the postulate—not the F/N that we are going for in New Era Dianetics.

POWER F/Ns

F/Ns are disregarded in Power.

Each Power Process has its own end phenomena and is ended only when that is obtained.

**FLOATING NEEDLE AND TA POSITION
MODIFIED**

This bulletin carries further the data given in

HCOB 10 Dec. 76RB Rev. 25.5.80	C/S Series 99RB SCIENTOLOGY F/N AND TA POSITION
-----------------------------------	--

and modifies but does not cancel all HCOBs that mention having to have the TA between 2.0 and 3.0 before the F/N can be considered valid, including:

HCOB 21 Oct. 68R Rev. 9.7.77	FLOATING NEEDLE
HCOB 7 May 69R V Rev. 15.7.77	FLOATING NEEDLE
HCOB 21 Apr. 71RC Rev. 25.7.78	C/S Series 36RC DIANETICS
HCOB 24 Oct. 71RA Rev. 25.5.80	FALSE TA
HCOB 15 Feb. 72R Rev. 26.1.77	FALSE TA ADDITION 2
HCOB 23 Nov. 73RB Rev. 25.5.80	DRY AND WET HANDS MAKE FALSE TA
HCOB 8 June 70	LOW TA HANDLING
HCOB 13 June 70 II	HUBBARD CONSULTANT STUDY STRESS ANALYSIS

Some recent tests I conducted have shown that a floating needle is a floating needle regardless of tone arm position.

This changes an earlier belief that, in order to be valid, the tone arm had to be between 2.0 and 3.0 for it to be called a floating needle.

Carefully examining dozens of F/Ns which occurred with the TA well above 3.0 and looking for any troubles with the case following calling the F/N an F/N, I found that there were no adverse consequences.

Therefore, it can be safely assumed that a floating needle is a floating needle regardless of where the tone arm position may be. It should be called, indicated and written as an F/N, with the TA noted.

Palm moisture, pc grip and other factors alter the TA position but not the F/N. The auditor must also be prepared to handle and handle false TA and nothing in this finding changes handling.

Tone arm positions register the relative mass of the case and nothing in this finding changes that. There are low TA cases and high TA cases and the state of the TA remains important and all data regarding TA positions are valid.

An ARC break needle (an F/N accompanied by bad indicators) remains an ARC break needle and nothing in this finding changes that. It must be handled. (One ordinarily checks for an ARC break in this case.)

This finding about TA position and F/Ns has been corrected earlier. This present issue carries it further, based on very thorough recent testing. There are apparently no liabilities of any kind in calling high and low TA F/Ns F/Ns.

C/S Series 20

PERSISTENT F/N

A FLOATING NEEDLE can *persist*.

This fact tells you at once why you cannot do three major actions in a row in the same ten minutes.

This was the bug behind "Quickie Grades" (0 to IV in one session. This also occurred in Power when it was run all in one day). The auditor would attain a bona fide full dial F/N. The pc was still cogning, still in a big win. The auditor would "clear the next process command", he would see an F/N. He would "clear the next process command", and see an F/N.

BUT IT WAS THE SAME F/N!

Result was that processes 2 and 3 WERE NEVER RUN ON THE CASE.

This is really what is meant by "Quickie Grades".

In 1958 we got real Releases. You could not kill the F/N for *days*, weeks.

Several processes had this effect. Today's real Clear also goes this way. You couldn't kill the F/N with an axe.

By running a lot of Level Zero processes, for instance, you can get a real swinging unkillable F/N.

It not only gets to the Examiner, it comes in at the start of the next day's session!

Now if in one session you ran all of Level Zero and went on up to Level One, you would just be *auditing a persistent F/N*. The pc would get no benefit at all from Level One. He's still going "Wow" on Level Zero.

If you ran Level Zero with one process that got a big wide floating F/N and then "ran" Level I, II, III and IV, you would have just a Level Zero Release. The pc's bank was nowhere to be found. So next week he has problems (Level I) or a Service Fac (Level IV) and he is only a Grade Zero yet it says right there in Certs and Awards log he's a Grade IV. So now we have a "Grade IV" who has Level I, II, III and IV troubles!

A session that tries to go beyond a big dial-wide drifting floating F/N only distracts the pc from his win. **BIG WIN.**

Any *big win* (F/N dial-wide, Cog, VGIs) gives you this kind of persistent F/N.

You at least have to let it go until tomorrow and let the pc have his win.

That is what is meant by letting the pc *have* his win. When you get one of these dial-wide F/Ns, Cog, VGI's WOW you may as well pack it up for the day.

GRADUAL WIDENING

In running a Dianetic chain to basic in triple you will sometimes see in one session a half dial on Flow 1, 3/4 of a dial on Flow 2, a full dial on Flow 3.

Or you may have 4 subjects to two-way comm or prepcheck in one session. First action 1/3 dial F/N. Then no F/N, TA up. Second action 1/2 dial F/N. Then no F/N. Third action 3/4 dial F/N. Fourth action full dial-wide floating swinging idling F/N.

You will also notice in the same session-long time for 1st action, shorter, shorter, shorter for the next three actions.

Now you have an F/N that anything you try to clear and run will just F/N WITHOUT AFFECTING THE CASE AT ALL.

If you audit past that you are wasting your time and processes.

You have hit an "unkillable F/N", properly called a persistent F/N. It's persistent at least for that day. Do any more and it's wasted.

If an auditor has never seen this he had better get his TR0 bullbait flat for 2 hours at one unflunked go and his other TRs in and drill out his flubs. For that's what's supposed to happen.

F/Ns on pcs audited up to (for that session) a persistent F/N always get to the Examiner.

If you only have a "small F/N" it won't get to the Examiner. However, on some pcs maybe that's good enough. May take him several sessions, each one getting a final session F/N a bit wider. Then he gets an F/N that gets to the Examiner. After that, well audited on a continuing basis, the F/N lasts longer and longer.

One day the pc comes into session with a dial-wide floating swinging F/N and anything you say or do does nothing whatever to disturb that F/N.

It's a real Release man. It may last weeks, months, years.

Tell him to come back when he feels he needs some auditing and chalk up the remaining hours (if sold by the hour) as undelivered. Or if sold by result, chalk up the result.

If the F/N is truly persistent he will have no objections. If it isn't, he *will* object. So have him come back tomorrow and carry on whatever you were doing.

SUMMARY

The technical bug back of Quickie Grades or Quickie Power was the Persistent F/N.

This is not to be confused with a Stage 4 (sweep, stick, sweep, stick) or an ARC Broke needle (pc Bad Indicators while F/Ning).

This is not to be used to refuse all further auditing to a pc.

It is to be used to determine when to end a series of major actions in a session.

EXT AND ENDING SESSION

When a pc exteriorizes on a good win in session or if the pc has a big win, usually followed by a persistent F/N, the usual action is to end session.

When ending session in these circumstances the Auditor must not do any other action, but smoothly end session.

This includes asking Say or Ask, running Havingness or anything other than smoothly ending session.

Review Hats

Qual Division

**RELEASE, REHABILITATION OF
FORMER RELEASES AND
THETAN EXTERIORS**

There are probably a great many processes that will recover the state of First Stage Release or First Stage Thetan Exterior or Released OT.

Poorest but easiest of these is plain Itsa. Itsa probably will not recover a floating needle but will pull down the TA. When it's down, stop—don't press your luck too far.

The real technical job (other than Itsa) requires expert metering and a thorough knowledge of dating on a meter and a smooth comm cycle.

Best at it would be an auditor who himself was a Former Release and who had himself (or herself) recovered the state.

The technically correct procedure is unfortunately a delicate one which requires good command of tech on the subject of the Time Track and perception of the pc and meter alert enough to stop exactly when Re-Release occurs and say "That's It!" (Never say "End" in such sessions.)

Remember *all* recovery must be by Key-out, not erasure. Key-outs are done by finding Key-ins. It is de-stimulation, not re-stimulation. Therefore all must be smooth and jolly with no forcing or overrun.

The exact tech follows:

To regain a Former Release (or Thetan Exterior or Keyed-Out OT [Released OT]):

1. Loosely locate the session or time in which it occurred.
2. Get in Suppress, Invalidate buttons on the session or time.
3. Get in "Unacknowledged" or "What was unacknowledged".
4. Indicate anything found to the pc, as By-Passed Charge.
5. Find the *Key-in* that was *Keyed out* in that time or session (the person went release because something keyed out in that time or session).
6. When *this is* found and recognized by the pc, the pc will then return to Release or Released OT.
7. If this does not happen, find what keyed in that ended the state and repeat (1) to (6) on it.

This is all rough to communicate to the pc who is not well trained.

This datum will help (a standard datum of early Dianetics): The analytical mind when it becomes aware of a point in the Reactive Mind, makes it vanish. In other words one needs but become aware of the *actual* cause of an aberration to have it vanish.

We see this mainly in Cognitions. But it is the backbone of all auditing.

When the person was originally released he had become aware of something that caused the reactive mind to de-stimulate at that point or become weak. And so he Released. You have to find that point of sudden awareness again as in (I) to (6) above and if you miss it you can at least find (7). You *could* find both and in a lot of cases will probably do so. But if you win on (I) to (6), for heaven's sakes don't go on to (7). If you do (7) you may suddenly turn up with (5).

When you've done it realize you've done it and come off of it. Don't overrun.

When you *have* done it, tell the person to get trained so he or she can go on to actual Clear.

LIABILITY

The Liability in all this is finding the *original* thing that was keyed in (which when keyed out gave Release).

If this happens you have a *new key-in* in the session you are running right now. It is a new key-in and is handled as one.

TECH COMMENT

This tells us that finding and running out key-ins will make a First Stage Release out of someone who has never been one. Standard Grade Processing does this.

RUDIMENTS

DEFINITIONS AND PATTERN

(Ref: HCOB 15 Aug 69, FLYING RUDS)

(NOTE: This Bulletin in no way summarizes all the data there is to be known about ARC breaks, PTPs and missed withholds, or handling rudiments.)

There is a wealth of technology and data on these subjects contained throughout the Technical Volumes and in Scientology books which the student auditor will need as he progresses up the levels.)

A rudiment is that which is used to get the pc in shape to be audited in that session.

For auditing to take place at all the pc must be in session which means:

1. Willing to talk to the auditor
2. Interested in own case.

That is all you want to accomplish with rudiments. You want to set up the case to run by getting the rudiments in, not use the rudiments to run the case.

ARC breaks, present time problems and withholds all keep a session from occurring. It is elementary auditing knowledge that auditing over the top of an ARC break can reduce a graph, hang the pc up in sessions or worsen his case, and that in the presence of PTPs, overts and missed withholds (a restimulated undisclosed overt) no gains can occur. Thus these are the rudiments we are most concerned with getting in at the beginning of a session so that auditing with gains can occur.

GETTING THE F/N

If you know bank structure you know it is necessary to find an earlier item if something does not release.

If a rud doesn't F/N then there is an earlier (or an earlier or an earlier) lock which is preventing it from F/Ning.

Thus we have the procedure and the rule:

IF A RUD READS YOU ALWAYS TAKE IT EARLIER SIMILAR UNTIL IT F/Ns.

The question used is:

“Is there an earlier similar (ARC break) or (problem) or (missed withhold)?”

If at the beginning of a session the rudiments are *in* (the needle is floating *and* the pc is VGIs), the auditor goes directly into the major actions of the session. If not, the auditor must fly a rud or ruds, as ordered by the C/S.

ARC BREAKS

ARC: A word from the initial letters of Affinity, Reality and Communication which together equate to Understanding.

ARC BREAK: A sudden drop or cutting of one's affinity, reality or communication with someone or something. Upsets with people or things come about because of a lessening or sundering of affinity, reality, communication or understanding.

While the earlier similar rule fully applies to ARC breaks, there is an additional action taken in handling ARC breaks that enables the pc to spot precisely what happened that resulted in the upset.

An ARC break is called that—an “A-R-C break”—instead of an upset because, if one discovers which of the three points of understanding have been cut, one can bring about a rapid recovery in the person's state of mind.

You never audit over the top of an ARC break, and you never *audit* an ARC break itself; they cannot be audited. But they can be *assessed* to locate which of the basic elements of ARC the charge is on.

Thus to handle an ARC break you assess affinity, reality, communication and understanding to find which of these points the break occurred on.

Having determined that, you assess the item found (A or R or C or U) against the Expanded CDEI Scale (curious, desired, enforced, inhibited, no and refused). Ref: HCOB 13 Oct 59, DEI EXPANDED SCALE, *Scientology S8. The Book of Basics*, and HCOB 18 Sep 67, corrected 4.4.74, SCALES.

With this assessment the actual bypassed charge can be located and indicated even more accurately, thus enabling the pc to blow it.

The assessment is done on every ARC break as you go earlier similar until the rudiment is in with F/N and VGIs.

The first rudiment question is:

1. “Do you have an ARC break?”
2. If there is an ARC break, get the data on it briefly.
3. Find out by assessment which point the ARC break occurred on: “Was that a break in Affinity?
Reality?
Communication?
Understanding?”

You assess it *once* and get the read (or the largest read) on, say, communication.

4. Check it with the pc: “Was that a break in (communication)? If he says no, rehandle. If yes, let him tell you about it if he wishes. Then give it to him by indicating it, i.e. “I'd like to indicate that *was* a break in communication.”

PROVIDED THE RIGHT ITEM HAS BEEN GOTTEN, the pc will brighten up, even if ever so slightly, *on the very first assessment*.

NOTE: On Step 4 the pc may originate: “Yes, I guess it was communication but to me it’s really more like a break in reality,” for example. The wise auditor then acknowledges and indicates it was a break in “reality.”

5. Taking the item found in Step 4 above, assess it against the CDEI Scale:

“Was it:

Curious about	(communication) ?
Desired	“ ?
Enforced	“ ?
Inhibited	“ ?
No	“ ?
Refused	“ ?”

6. As in Steps 3 and 4 above, assess it *once*, get the item and check it with the pc:

“Was it (desired) communication?”

If no, rehandle. If yes, indicate it.

7. If no F/N at this point you follow it earlier with the question:

“Is there an earlier similar ARC break?”

8. Get the earlier similar ARC break, get in ARCU, CDEINR, indicate. If no F/N, repeat Step 7, continuing to go earlier, always using ARCU, CDEINR until you get an F/N.

When you get the F/N *and* VGIs you have it.

PRESENT TIME PROBLEM

PROBLEM: A conflict arising from two opposing intentions. It’s one thing versus another thing; an intention-counter-intention that worries the preclear.

PRESENT TIME PROBLEM: . . . A special problem that exists in the physical universe now, on which the pc has his attention fixed.

. . . Any set of circumstances that so engages the attention of the preclear that he feels he should be doing something about it instead of being audited.

A violation of “in session-ness” occurs when the pc’s attention is fixed on some concern that is “right now” in the physical universe. The pc’s attention is “over there” not on his case. If the auditor overlooks and doesn’t handle the PTP then the pc is never in session, grows agitated, ARC breaks. And no gains are made because he is not in session.

The second rudiment question is:

1. “Do you have a present time problem?”
2. If there is a PTP, have the pc tell you about it.
3. If no F/N take it earlier with the question:

“Is there an earlier similar problem?”

4. Get the earlier problem and if no F/N, follow it earlier similar, earlier similar, earlier similar to F/N.

MISSED WITHHOLDS

OVERT ACT: An intentionally committed harmful act committed in an effort to solve a problem.

. . . an act of omission or commission which does the least good for the least number of dynamics or the most harm to the greatest number of dynamics.

That thing which you do which you aren't willing to have happen to you.

WITHHOLD: An undisclosed harmful (contra-survival) act. Something the pc did that he isn't talking about.

MISSED WITHHOLD: An undisclosed contra-survival act which has been restimulated by another but not disclosed. This is a withhold which another person nearly found out about, leaving the person with the withhold in a state of wondering whether his hidden deed is known or not.

The pc with a missed withhold will not be honestly “willing to talk to the auditor” and, therefore, not in session until the missed withhold is pulled.

Missing a withhold or not getting all of it is the sole source of an ARC break. A missed withhold is observable by any of the following: pc not making progress, pc critical of, nattery or angry at the auditor, refusing to talk to the auditor, not desirous of being audited, boiling off, exhausted, foggy at session end, dropped havingness, telling others the auditor is no good, demanding redress of wrongs, critical of Scientology or organizations or people of Scientology, lack of auditing results, dissemination failures. (Ref: HCOB 3 May 62, ARC BREAKS, MISSED WITHHOLDS.) The auditor must *not* overlook any manifestations of a missed withhold.

Thus, if the pc has a missed withhold you get it, get all of it using the system described below, and use the same system on each earlier similar missed withhold until you get the F/N.

The third rudiment question is:

1. “Has a withhold been missed?”
2. If you get a missed withhold, find out:
 - (a) What was it?
 - (b) When was it?
 - (c) Is that all of the withhold?
 - (d) WHO missed it?
 - (e) What did (he/she) do to make you wonder whether or not (he/she) knew?
 - (f) Who else missed it? (Repeat (e) above).

Get another and another who missed it, using the Suppress button as necessary, and repeating (e) above.

3. Clean it to F/N, or if no F/N take it earlier similar with the question:

“Is there an earlier similar missed withhold?”

4. Handle each earlier similar missed withhold you get per Step 2 above, until you get an F/N.

SUPPRESS

If a rudiment doesn't read and is not F/Ning, put in the Suppress button, using:
“On the question ‘Do you have an ARC break?’ has anything been suppressed?”

If it reads, take it and ask ARCU, CDEINR, earlier similar, etc.

Use Suppress in the same way for non-reading PTP and missed withhold rudiments.

FALSE

If the pc protests, comments, or seems bewildered put in the False button. The question used is:

“Has anyone said you had a when you didn't have one?” Get who, what, when and take it earlier, if necessary, to F/N.

END PHENOMENA

In ruds when you've got your F/N and that charge has moved off, indicate it. Don't push the pc on for some other “EP.”

When the pc F/Ns with VGIs, you've got it.

HIGH OR LOW TA

Never try to fly ruds on a high or low TA.

Seeing a high or low TA at session start, the Dianetic or Scientology auditor up to Class II does not start the session but sends the folder back to the C/S for a higher classed auditor to handle. The C/S will order the required correction list to be done by an auditor Class III or above.

FLYING RUDS

To clarify how to fly ruds:

If a rud reads, you get the data and then ask for earlier until you get an F/N.

If a rud doesn't read, put in Suppress and recheck. If it gets any comment, natter or protest or bewilderment, put in False and clean it.

To fly all ruds you ask for an ARC Brk, if no read, put in Suppress. If it reads take it, do ARCU CDEI Earlier ARCU CDEI Earlier until you get an F/N. Then do the same with PTP. Then with MW/Hs.

If in starting a rud does *not* read or F/N even if Suppress is put in go to the next rud until you get one that does read. Follow *it* earlier to F/N.

Then F/N the 2 that didn't read.

INCORRECT

To get a rud reading with or without Suppress and then fail to follow it earlier and to continue to call it and take only reads is incorrect.

CORRECT

If a rud reads you always follow it earlier until it F/Ns.

You do NOT continue to test it with a meter and do NOT leave it just because it fails to read again.

If a rud reads you clean it with earlier, earlier, earlier to F/N.

If a rud reads and the read is false you clean false.

There are TWO actions possible in flying ruds.

1. The rud is not out. If it didn't read you check suppress. If it read but is in any way protested you clean false.
2. The rud is out. You get the data, you follow it earlier earlier until it F/Ns. You do not continue to check it for reads.

GREEN FORM

This applies also to handling ruds on the Green Form.

ARC BREAK

If there is an ARC Break you get it, use ARCU and CDEI, indicate, then if no F/N you follow it earlier, get ARCU CDEI, indicate, if no F/N you get an earlier one on and on, always with ARCU CDEI until you get an F/N.

PTP

If you get a PTP you follow it earlier earlier earlier until you get an F/N.

MISSED WITHHOLD

If you get a withhold you find out WHO missed it, then another and another using Suppress. If protest you put in false. You will find these W/Hs also go earlier like any other chain but they don't have to.

MIXING METHODS

If you get a rud read and the pc gives you one you don't then check the read again. You get more until you get an F/N.

To get a rud answered and then check suppress and its read is mixing 1 and 2 above.

FALSE

"Has anyone said you had awhen you didn't have one?" is the answer to protested ruds.

Any VIII should be able to fly any rud at will. The above clarifies HCOB and Tape data on this subject.

(HCO B 24 May 1970 Revised)

C/S Series 1

AUDITOR'S RIGHTS

(Revised to update and delete the O/R list
and add Auditing Over Out Ruds.
All changes are in this type style.)

AUDITOR RESPONSIBILITY FOR C/Ses

An auditor who receives a Case Supervisor direction (C/S) of what to audit on a pc is NOT discharged of his responsibility as an auditor.

THE AUDITOR HAS A SERIES OF RESPONSIBILITIES THAT ARE PART OF EVERY C/S HE GETS TO AUDIT.

ACCEPTING THE PC

No auditor is required to accept a specific pc just because the pc is assigned to him.

If an auditor does not believe he can help that particular pc or if he dislikes auditing that particular pc the auditor has a right to refuse to audit that pc. The auditor must state why.

The Case Supervisor, Director of Processing or Director of Review, nor any of their seniors, may not discipline the auditor for refusing to audit a particular pc.

An auditor who refuses to audit his quota of hours or sessions is of course subject to action.

Thus refusing to audit a particular pc, so long as one is not refusing to audit other pcs, is not actionable.

"I do not wish to audit this pc because_____. I am willing to audit other pcs," is the legal auditor statement in the matter.

Some pcs get a bad name with some auditors, some don't appreciate the auditing, some conflict with a particular auditor's own personality. There are such instances. It does not mean certain pcs cannot be helped by others.

It is also true that an auditor who dislikes a pc may not do a good job so the rule also has a practical side to it.

One auditor disliked young men and did a bad job on them. Another disliked old ladies and chopped them up in session. One pc had messed up several Scientologists and couldn't find anyone to audit him at all.

We are not auditing people to make amends to the world.

Thus an auditor has a right to reject or accept the pcs he is given.

ACCEPTING A C/S

When the auditor gets a C/S to do on a case and if he thinks it is not the correct thing to do he has the right to reject the C/S for that pc and require another one he can agree to.

The auditor does *not* have the right to start doing a C/S and change it during the session except as noted below.

The auditor may NOT C/S in the auditing chair while auditing the pc. If he has NO Case Supervisor at all the auditor still audits from a C/S. He writes the C/S before session and adheres to it in session. To do something else and not follow the C/S is called "C/Sing in the chair" and is very poor form as it leads to Q and A.

STALE DATED C/S

A C/S that is a week or two old or a Repair (Progress) Pgm that is a month or two old is dynamite.

This is called a "Stale Dated Pgm" or a "Stale Dated C/S" meaning it is too old to be valid.

It should have been done sooner. The pc of last week when the C/S was written may have been well and happily employed but a week later may have headaches and reprimand from the boss.

It is dangerous to accept a Repair (Progress) Pgm if it is old.

The auditor who sees his C/S is old and sees the pc has Bad Indicators is justified in demanding a fresh C/S giving his reasons why.

A program written in January may be completely out of date in June. Who knows what may have happened in between.

Use fresh C/Ses and fresh Pgms.

Stale Dates only occur in poorly run backlogged Divisions anyway. The real remedy is reorganize and hire more and better auditors.

ENDING THE SESSION

When the C/S he has is proving unworkable *during* the session, the auditor has a right to end the session and send the folder to the C/S.

Ending the session is totally up to the auditor.

If the auditor just doesn't complete an action that was producing TA and could be completed it is of course a flunk. Such a case is just not running a basic engram the one more time through that would bring the TA down and give a proper end phenomena. This and similar actions would be an auditor error.

The judgement here is whether or not the auditor's action is justified in ending the session.

Even though he may have made an error, the auditor cannot be blamed for the *ending* off of the session as that is totally up to him. He can be given a flunk for the error

AUDITING OVER OUT RUDS

Auditing a pc on something else whose ruds are out is a MAJOR AUDITING ERROR.

Even if the C/S omits "Fly a rud" or "Fly ruds" this does not justify the auditor auditing the pc over out ruds.

The auditor can do one of two things: He can Fly all ruds or he can return the folder and request ruds be flown.

The DIANETIC AUDITOR is not excused from auditing over out ruds and in an HGC must be specially cautioned not to do so but return the folder for a new C/S. Better still he should learn to Fly ruds.

INABILITY TO FLY RUDS

If an auditor cannot get a rud to F/N, cannot get any rud to F/N, he is justified in starting a Green Form.

The auditor solution to no F/N on ruds is to do a GF whether the C/S said to or not.

This is an expected action.

It is understood the auditor would use Suppress and False in trying to Fly ruds.

SESSIONS FAR APART

When a pc has not had a session for some time, or when a pc gets sessions days apart, RUDS MUST BE FLOWN. Otherwise the pc will get audited over out ruds. This can develop mental mass.

Optimum session scheduling is a series of sessions or a whole program done in a block of sessions close together. This prevents the world from throwing the pc's ruds out between sessions.

Giving sessions far apart barely keeps up with life. The auditing time is absorbed in patching life up.

Rapid gain gets above life's annoyances and keeps the pc there.

UNREADING ITEMS

When an item the auditor has been told to run doesn't read on the meter, even when the auditor puts in Suppress and Invalidate on it, the auditor MUST NOT do anything with the item no matter what the C/S said.

It is expected he will see if it reads and use Suppress and Invalidate on it. And if it still doesn't read he will be expected NOT to run it.

LISTS

When an auditor whose C/S told him to list “Who or what _____” or any list question finds that the list question does not read, the auditor MUST NOT list it.

When doing a list ordered by the C/S it is assumed that the auditor will test it for read before listing and that he will NOT list an unreading question. (A read is an actual fall, not a tick or a stop.)

LIST TROUBLE

When an auditor has trouble doing a list and getting an item it is expected he will use a Prepared List like L4B to locate the trouble and handle it.

As it is very hard on a pc to mess up a list it is expected the auditor will handle the situation then and there with no further C/S directions.

HIGH TA

When the auditor sees the TA is high at session start yet the C/S says to “Fly a rud” or run a chain, the AUDITOR MUST NOT TRY TO FLY A RUD and he must not start on a chain.

Trying to bring a TA down with ARC Brks or ruds is very hard on a pc as ARC Breaks aren't the reason TAs go up.

Seeing a high TA at start the Dianetic auditor or Scn auditor up to Class II does *not* start the session but sends the folder back to the C/S and for a higher class auditor to do.

Seeing a high TA at start the Scientology auditor (Class III or above) (a) checks for exteriorization in a recent session and if so the session is ended and the C/S is asked for an “Interiorization Rundown”; (b) if the pc has had an Interiorization Rundown *the auditor asks the C/S for permission to do a “C/S Series 53” or a Hi-Lo TA assessment or whatever the C/S indicates. The Int RD may have been (usually is) overrun and needs rehab or correction and it is usual to check it—it is included in a “C/S 53” and a Hi-Lo TA.*

These actions are expected of the auditor even when not stated in the C/S.

GOING ON HOPING

When a case is running badly session to session the LAST thing you do is go on hoping, either in auditing or C/Sing.

“Let's try _____”, “Then this”, “Then this”, is not going to solve the case.

YOU GET DATA. You can get data by a White Form (Pc Assessment Form). You can get data from a GF fully assessed (Method 5). You can get data by 2-way comm on various subjects. You can have the D of P interview and get answers. You can even ask his mother.

You look for case errors. You study the folder back to where the pc ran well and then come forward and you'll find the error every time.

DO NOT JUST GO ON SESSION AFTER FAILED SESSION HOPING. That's pure idiocy.

You get data! from prepared lists, from life, from the pc, from the folder.

FIND THE BUG!

Ah, good Lord, he is a Pinkerton Agent sworn to secrecy! He does yoga exercises after every session. He was tried for murder when he was 16 and nobody has run the engram of it.

Various auditors ran the same engram chain four times

An auditor ran Int RD twice.

After Power she had her baby and nobody ran the delivery.

He doesn't like to talk but is a "Grade Zero"!

A dozen dozen reasons can exist

An auditor does NOT let a C/S C/S hopefully. He refuses the C/Ses until a Folder Error Summary is done and the bug found.

THINGS DONE TWICE

By carelessness the same rundowns can be called for twice and done twice or even more.

A Folder Summary inside the front cover must exist and must be kept up.

Over it there must be a program on which the case is being audited. But just because it's covered, never neglect entering a session and what was run on the Folder Summary (FS).

If Hold it Still is ordered, see if it was run before.

Don't let major Rundowns be done twice.

DIANETIC ITEMS must NEVER be run twice. Dianetic lists must not be scattered through a folder. Bring them together and keep them together and being brought forward.

COPY

Don't copy Dianetic lists or worksheets from notes or items from lists.

Keep all admin neat and in the original form.

Copying makes errors possible.

RUDS GOING OUT

When the ruds go out during the session the auditor recognizes the following:

Pc Critical = W/H from auditor

Pc Antagonistic = BPC in session

No TA = Problem

Tired = Failed Purpose or no sleep

Sad = ARC Break

Soaring TA = Overrun or Protest

Dope Off = By-passed F/N or not enough sleep

No Interest = Out Ruds or no interest in the first place.

An auditor who isn't sure what it is but runs into trouble with the pc (except on lists which he handles at once always) is smart to end off the session quickly, write down the full observation and get it to the C/S.

The auditor who is an old hand and knows what he is looking at as per above scale (and the C/S the C/S would give) handles it promptly.

Pc Critical = W/H = pull the W/H.

Pc Antagonistic = BPC = assess proper list (such as LI C) and handle.

No TA (or case gain) = Problem = locate the problem.

Tired = no sleep or Failed Purpose = check which it is and handle.

Sad = ARC Brk = locate and handle, Itsa earlier Itsa.

Soaring TA = O/R or Protest = find which and handle. Such an O/R is usually by rehab.

Dope Off = lack of sleep or BP F/N = check on sleep, or rehab F/N.

No Interest = no interest in first place or Out Ruds = check for interest or put in ruds.

List goes wrong = BPC = handle or do L4B or any L4 at once.

Ruds won't fly = some other error = assess GF and handle.

The auditor has no business trying to do the C/S given when it collides with and isn't designed to handle any of the above.

If the previous session disclosed such an error and this session C/S was designed to handle and doesn't, the auditor should end off and the next C/S should be "2-way comm for data".

CASE NOT HANDLED

When the auditor or the Examiner collides with a pc who is asserting his case has not been handled, there should not be a new set of actions based on little data but the auditor should end off and the C/S should order a "way comm on what hasn't been handled".

The auditor should not at once take this up as part of any other C/S.

In other words an auditor doesn't change the C/S to a 2-way comm on something not called for by C/S.

MAJOR ACTIONS

An auditor should *never* begin a major action on a case that is not "set up" for it.

As this can occur during a session it is vital to understand the rule and follow it. Otherwise a case can be bogged right down and will be hard to salvage as now a new action to repair has been added to an unrepaired action. Now, if the auditor starts a major action on a case not "set up" we get 2 things to repair where we only had 1 as the major action won't work either.

Repair = patching up past auditing or recent life errors. This is done by prepared lists or completing the chain or correcting lists or even 2-way comm or prepchecks on auditors, sessions, etc.

Rudiments = setting the case up for the session action. This includes ARC Brks, PTPs, W/Hs, GF or O/R listing or any prepared list (such as L1C, etc).

Set up = getting an F/N showing and VGIs before starting any major action. It means just that—an F/N and VGIs before starting *any* major action. Such may require a repair action and rudiments as well.

Major Action = any—but any—action designed to change a case or general considerations or handle continual illness or improve ability. This means a *Process* or even a series of processes like 3 flows. It doesn't mean a grade. It is any process the case hasn't had.

Grade = a series of processes culminating in an exact ability attained, examined and attested to by the pc.

Program = any series of actions designed by a C/S to bring about definite results in a pc. A program usually includes several sessions.

The vast bulk of auditing errors come about because C/Ses and auditors seek to use a Major Action to repair a case.

It is a responsibility of an auditor to reject a C/S which seeks to use one or more major actions to repair a case that isn't running well.

The auditor must understand this completely. He can be made to accept a wrong C/S for the pc and even more importantly can in his own session make the error and mess up the case.

Example: Pc has not been running well (no real TA or had a grumpy Exam report). Auditor sees C/S has ordered a major action, not a repair by prepared lists, ruds, etc. The auditor must reject the C/S as he will be made to fail in session by it.

Example: Auditor gets a C/S, "(1) Fly a rud; (2) Assess LX3; (3) Run 3-way recall, 3-way secondaries, 3-way engrams on all // X items". The auditor can't get a rud to fly. Does the LX3. In other words he flunks by failing to SET UP the case. It could also go this way. Auditor can't get a rud to fly, does a GF, gets no F/N. He MUST NOT begin a major action but MUST end off right there.

It is fatal to begin any new process on the case designed to change the case if the case is not F/N VGIs.

The pc who starts processing for the first time and is surely not F/N VGIs must be *set up* by repair actions! Simple rudiments, life ruds, O/R list on life, even assessing prepared lists on life, these are repair actions. The pc *will* sooner or later begin to fly. Now at session start you put in a rud, get F/N VGIs and CAN start major actions.

So the auditor has a responsibility not to be led up a garden path by a C/S which orders a major action on a pc who isn't repaired or by not being able in session to get an F/N VGIs by repair.

The *only* exceptions are a touch assist or life ruds or the Dianetic assist all on a temporarily sick pc. But that's repair isn't it?

PROGRAM VIOLATIONS

When an auditor receives a C/S and sees that it violates the pc's program he should reject it.

The pc, let us say, is supposed to finish his Dianetic Triples but is suddenly being given a Group Engram Intensive. That violates the program and also the grade.

If the pc is running badly, a repair should be ordered. If not, the program should be completed.

Example: An effort is being made to get the pc to go backtrack. This is a program containing several major actions which probably consists of several sessions. Before this program is complete and before the pc has gone backtrack, the C/S orders “(1) Fly a rud, (2) 3 S & Ds”. The auditor should recognize in 3 S & Ds a major action being run into the middle of a program and reject it. The correct action is of course the next backtrack process.

GRADE VIOLATIONS

A pc who is on a grade and hasn't attained it yet must not be given major actions not part of that grade.

Example: Pc is on Grade I. C/S orders a list having to do with drinking. It is not a process on that grade. It could be done after Grade I is attained and before Grade II is begun. The C/S is incorrect and should not be accepted.

ABILITY ATTAINED

Now and then before the full major action is complete or before all the grade processes are run, the pc will attain the ability of the grade or the end phenomena of the action.

This is particularly true of valence shifters or Interiorization Rundowns and can happen in grades.

The auditor should recognize it and, with the F/N VGIs always present at such moments, end off.

I know of one case who had a huge cog about Interiorization on Flow I Engrams and was pushed by both C/S and auditor to do Flows 2 and 3 who bogged so badly that it took a long while—weeks—to straighten the case out.

The ability itself gets invalidated by pushing on.

On the other hand this should never be taken as an excuse. “I think he clogged to himself so we ended off.” It must be a real “What do you know!” sort of out-loud cog with a big F/N and VVGIs and directly on the subject to end off a major action or a program or a grade before its actions are all audited.

REVIEWING REVIEWS

An auditor who gets a C/S or an order to repair a case that is running well should reject doing the action.

I have seen a case ordered to repair who had Ext Full Perception Doing Great. The repair bogged the case. The case then got running well again but a second C/S ordered a new repair which of course bogged it. Then major actions were done. The case was again repaired and rehabbed and became ok. Three times the auditor should have said NO.

FALSE REPORTS

The vilest trick that can be played on a pc is for an auditor to falsify an auditing report.

It may be thought to be “good Public Relations” (good PR) for the auditor with the C/S.

Actually it buries an error and puts the pc at risk.

INTEGRITY is a hallmark of Dianetics and Scientology.

Just because psychiatrists were dishonest is no reason for auditors to be.

The results are there to be gotten.

False reports like false attests recoil and badly on both the auditor and pc.

OVERTS ON PCS

When an auditor finds himself being nattery or critical of his pcs he should get his withholds on pcs pulled and overts on them off.

An auditor who goes sad is auditing pcs over his own ARC Break.

An auditor worried about his pc is working over a Problem.

Getting one’s ruds in on pcs or C/Ses or the org can bring new zest to life.

AUDITORS DON’T HAVE CASES

In the chair no auditor has a case.

If breath shows on a mirror held to his face he can audit.

Faint afterwards if you must but see that the pc gets to the Examiner with his F/N.

Then get yourself handled.

“WHAT HE DID WRONG”

An auditor has a right to know what he did wrong in the session that went wrong.

Most often a sour session occurs only when the rules and data in this HCO B have been violated.

But an auditor’s TRs can go out or his listing and nulling is in error.

After a session that went wrong somebody else (not the auditor) should ask the pc what the auditor did. This sometimes spots a false auditing report. But it also sometimes is a false report by the pc.

In any event, the auditor has a right to know. Then he can either correct his auditing or his know-how or he can advise the C/S the pc’s report is untrue and better repair can be done on the pc.

Savage action against an auditor is almost never called for. He was trying to help. Some people are hard to help.

Not only does an auditor have the right to be told what was wrong but he must be given the exact HCO B, date and title, that he violated.

Never take a verbal or written correction that is not in an HCO B or tape.

Don't be party to a "hidden data line" that doesn't exist

"You ruined the pc!" is not a valid statement. "You violated HCO B page____" is the charge.

No auditor may be disciplined for asking, "May I please have the tape or HCO B that was violated so I can read it or go to Cramming. "

If it isn't on a tape, a book or an HCO B I T IS NOT TRUE and no auditor has to accept any criticism that is not based on the actual source data.

"If it isn't written it isn't true" is the best defense and the best way to improve your tech.

These are the rights of the auditor with relation to a C/S. They are all technical rights based on sound principles.

An auditor should know them and use them.

If an auditor stands on these rights and gets beaten down he should put all the facts before his nearest OTL or SO ship as something would be very wrong somewhere.

Auditing is a happy business—when it is done right.

HAVINGNESS

FINDING AND RUNNING THE PC'S HAVINGNESS PROCESS

Ref: HCOB 11 Jan 62, Security Checking Twenty-Ten Theory
HCOB 29 Sep 60, Havingness and Duplication
HCOB 6 Oct 60R, Thirty-Six New Presessions
Rev. 8 May 74
Book: *E-Meter Essentials*, Section G:
Finding Havingness & Confront Processes

NOTE: This issue is by no means a complete summary of the subject of havingness. There is a vast amount of material on havingness and the remedy of havingness in early publications and other HCOBs to be found in the Technical Volumes—data the student will acquire as he continues to train up the levels and on the SHSBC.

This issue is to give the beginning auditor a working knowledge of the subject of havingness.

“HAVINGNESS: 1) that which permits the experience of mass and pressure. 2) the feeling that one owns or possesses. 3) can be simply defined as ARC with the environment.... 6) the ability to duplicate that which one perceives, or to be willing to create a duplication of it.... 8) havingness is the concept of being able to reach or not being prevented from reaching.... 4) that activity which is run when needed and when it will not violently deflect the pc's attention.”

(From the Technical Dictionary.)

The above are all valid, but the final definition of havingness can be simply stated as:

HAVINGNESS IS THE CONCEPT OF BEING ABLE TO REACH. NO HAVINGNESS IS THE CONCEPT OF NOT BEING ABLE TO REACH.

Inherent in the ability to reach is the willingness and ability to duplicate. That which makes *communication* work in processes is the duplication part of the communication formula (Axiom 28 Amended).

The position of a being on the Tone Scale is determined by his ability to reach (and thus his willingness and ability to duplicate, to communicate and experience). The lower the tone of the being the less willing he is to reach, communicate with and experience his present time environment, and the less willing he is to reach and duplicate events of the past or permit them to happen again.

This is remedied by Objective Havingness Processes. These are processes that deal with observing and touching objects in the auditing room or in the environment. They are “look around” or physical contact processes, used to remedy a low or “no havingness” condition.

Thus we find the pc's Havingness Process early on in auditing and use it to gain or remedy havingness before or after processes or at session end.

FINDING AND RUNNING THE PC'S HAVINGNESS PROCESS

The preclear's Havingness Process is tested for on the meter in an exact way. You test it on the *needle* with can squeezes from the pc.

Use HCOB 6 October 1960R, Revised 8 May 74, "Thirty-Six New Presessions."

1. Set the sensitivity for 1/3 of a dial drop when the pc squeezes the cans. (See E-Meter Drill 5, *The Book of E-Meter Drills.*)
2. Run 5 to 8 commands of the first Havingness Process on the above bulletin, with the pc on the meter.
3. Then have the pc squeeze the cans, noting the size of the needle read now. If this second can squeeze shows the needle looser (wider swing) than the first can squeeze did, you've got it. The Havingness Process you've tested is the Havingness Process for the preclear and may be used to remedy his havingness as necessary.
4. If the process *tightens* the needle during the test, don't use it. Don't bridge off. Just get off the process now and test the next process, or the next, continuing until you find a Havingness Process that does loosen the needle and gives a wider swing. One will be found among the list of Havingness Processes on HCOB 6 Oct 60R.
5. The correct Havingness Process selected is then run 10 to 12 commands at a time, usually just before ending off a session.

A pc's Havingness Process can change as the pc changes with auditing. If at some point in the auditing the Havingness Process which has been being used fails to get the desired result, simply re-test for a new Havingness Process, find one that works and use it.

Even the right Havingness Process, if run too much at one time (more than 10 or 20 commands) will start running the bank. It doesn't harm the preclear but that isn't its use, as there are other processes that run the bank better.

The *purpose* of a Havingness Process is to get the preclear stabilized in his environment.

HCO BULLETIN OF 6 OCTOBER 1960R
REVISED 8 MAY 1974

(Revision in this type style)

Remimeo

THIRTY-SIX NEW PRESESSIONS

The following material was developed for the 1st Saint Hill ACC. All cases of this ACC were well started toward clear, 25 of them started for the first time. These new presessions were employed. Two of the cases started with two-way comm on failed help only after which some of the presessions following worked.

NOTE: These presessions are subject to revision after my further study. Their numbers will not be changed. I will probably change some of the processes and commands. They are given here exactly as developed and in the order of development, not workability.

NOTE: The assistance of Dick and Jan Halpern, ACC Instructors, is gratefully acknowledged for the discussion and testing of these presessions.

NOTE: Pre-session I is to be found in HCO Bulletin of 25 August 1960 and is not actually part of this series, not being a havingness confront pre-session.

PRESESSION II:

Havingness: "Look around here and find something you could have."

Confront: "What could you confront?" "What would you rather not confront?"

PRESESSION III:

Havingness: "Point out something in this room you could confront."
"Point out something in this room you would rather not confront."

Confront: "What unconfrontable thing could you present?"

PRESESSION IV:

Havingness: "What part of a beingness around here could you have?"

Confront: "What beingness could others not confront?"

PRESESSION V:

Havingness: "Point out something in this room you could confront."
"Point out something in this room you would rather not confront."

Confront: "Point out a place where you are not being confronted."

PRESESSION VI:

Havingness: "Look around here and point out an effect you could prevent."

Confront: "What would deter another?" "Where would you put it?"

PRESESSION VII:

Havingness: "Point out something."

Confront: "Tell me something I am not doing to you."

PRESESSION VIII:

Havingness: "Where is the (room object)?"

Confront: "Recall something really real to you."
"Recall a time you liked something."
"Recall a time you communicated with something."

PRESESSION IX:

Havingness: "Look around here and find an object you are not in."

Confront: "Recall somebody who was real to you."
"Recall somebody you really liked."
"Recall somebody you could really communicate with."

PRESESSION X:

Havingness: "Look around here and find something you could have."

Confront: "What beingness could you confront?"
"What beingness would you rather not confront?"

PRESESSION XI:

Have: "Notice that (indicated object)." (No acknowledgement.)
"What aren't you putting into it?"

Confront: "Tell me something you might not be confronting."

PRESESSION XII:

Have: "Look around here and find something you can agree with."

Confront: "What is understandable?"
"What is understanding?"

PRESESSION XIII:

Have: "Look around here and find something you could have."
"Look around here and find something you could withhold."

Confront: "What have you done?"
"What have you withheld?"

PRESESSION XIV:

Have: "Notice that (room object). Get the idea of making it connect with you."

Confront: (First ask: “Is there anything around here that is absolutely still?” If the answer is yes, continue. If no, use another pre-session.) “Look around here and find something you could stop,” (to change of needle pattern or tone arm) then: “Look around here and find something you could start,” (to change of needle pattern or tone arm) then, when neither command unsettles needle pattern or tone arm any more, use 5 or 6 commands of “Look around here and find something you could change.” Then return to “stop”.

PRESESSION XV:

Have: “Look around here and find something you could withhold.”

Confront: “What would you rather not duplicate?”

PRESESSION XVI:

Have: “Point out something around here that is like something else.”

Confront: “What is something?” “What makes sense?”

PRESESSION XVII:

Have: “Where isn’t that (indicated object)?”

Confront: “What unkind thought have you withheld?”

PRESESSION XVIII:

Have: “What else is that (indicated object)?”

Confront: “What would make everything the same?”

PRESESSION XIX:

Have: “What is the emotion of that (indicated object)?”

Confront: “What intention failed?”

PRESESSION XX:

Have: “What is that (indicated object) not duplicating?”

Confront: “What two thoughts aren’t the same?”

PRESESSION XXI:

Have: “What scene could that (indicated object) be part of?”

Confront: “What past beingness would best suit you?”
“What past thing would best suit you?”

PRESESSION XXII:

Have: “Duplicate something.”

Confront: “What would be a betrayal?”

PRESESSION XXIII:

Have: "What is the condition of that (indicated object)?"

Confront: "Describe a bad case."

PRESESSION XXI V:

Have: "What is the condition of that person?"

Confront: "What is a bad object?"

PRESESSION XXV:

Have: "What aren't you putting into that body?"

Confront: "What beingness would it be all right to confront?"

PRESESSION XXVI:

Have: "What bad activity is that (indicated object) not part of?"

Confront: "How would you not duplicate a bad person?"
"How would you not duplicate a bad thing?"

PRESESSION XXVII:

Have: "Where would that wall have to be located so you wouldn't have to restrain it?"

Confront: "Describe an unpleasant environment."

PRESESSION XX VIII:

Have: (a) "What around here would you permit to be duplicated?" or,
(b) "What is the safest thing in this room?"

Confront: "Describe a removal."

PRESESSION XXIX:

Have: "Who would that (indicated object) be a good example to?"

Confront: "What would that person be a good example to?"

PRESESSION XXX:

Have: "What would you have to do to that (indicated object) in order to have it?"

Confront: "Spot a change in your life."

PRESESSION XXXI:

Have: (Auditor holds two *small* objects, one in each hand. Exposes them alternately to pc, with as little motion of arms and hands as possible.) "Look at this."
(No acknowledgement.) "What around here isn't this duplicating?"

PRESESSION XXXII:

Have: "How could you deter a"?
"What have you not given a"?"

Confront: "What could you own?"
"What have you denied owning?"

(To clean up Scientology auditing or instruction run on "auditor", "pc",
"instructors", "student", as indicated.)

"What would a.....own?"
"What would anot own?")

PRESESSION XXXIII: (This is used as a "post-session" to clear up an intensive at the end.)

Have: Whatever havingness runs best on pc, as havingness command.

Confront: "What have you done in this room?"
"What have you withheld in this room?"

(To clean up all auditing, use "an auditing room".)

PRESESSION XXXIV:

Have: Whatever pc runs best, as havingness command.

Confront: "Who have you overwhelmed?"
"Who have you not overwhelmed?"

PRESESSION XXXV:

Have: "Notice that (indicated room object)." "How could you get it to help you?"

Confront: "Whom have you failed to help?"

(This will fish up a case who is out the bottom with ARC Breaks. Corrects
alter-issness.)

PRESESSION XXXVI:

Have: "Notice that (room object)." "How could you fail to help it?"

Confront: "Think of a victim."

Replace Havingness of Pre-session XXV with:

Have: "Notice that body."
"What aren't you putting into it?"

3 Versions of—Regimen 6 O/W Commands:

1. "Get the idea of doing something to"
"Get the idea of withholding something from"
2. "What have you done to ?"
"What have you withheld from?"
3. "Get the idea of having done something to"

“Get the idea of having withheld something from

*Assessed *6th* Dynamic terminal.
(Number 3 runs regret.)

HCO BULLETIN OF 11 AUGUST 1978
Issue II

Remimeo
All Auditors

(Cancels BTB 18 Nov 68R, MODEL SESSION)

MODEL SESSION

(Note: If a Dianetic or Level 0, I, II auditor is not trained in flying rudiments he would have to get a Level III (or above) auditor to fly the pc's ruds before starting the major action of the session.)

1. Setting Up for the Session

Prior to the session the auditor is to make sure the room and session are set up, to ensure a smooth session with no interruptions or distractions.

Use HCOB 4 December 1977, "Checklist for Setting Up Sessions and An E-Meter," getting in every point of the checklist.

The pc is seated in the chair furthest from the door. From the time he is asked to pick up the cans he remains on the meter until the end of the session.

When it is established there is no reason not to begin the session the auditor starts the session.

2. Start of Session

The auditor says: "This is the session." (Tone 40.)

If the needle is floating and the pc has VGIs, the auditor goes directly into the major action of the session. If not, the auditor must fly a rud.

3. Rudiments

Rudiments are handled per HCOB 11 August 1978, Issue I, "Rudiments, Definitions and Patter."

(If the TA is high or low at session start, or if the auditor cannot get a rud to fly, he ends off and sends the pc folder to the C/S. A Class IV auditor (or above) may do a Green Form or another type of correction list.)

When the pc has F/N, VGIs the auditor goes into the major action of the session.

4. Major Action of the Session

a) R-Factor to the pc. The auditor informs the pc what is going to be done in the session with:

"Now we are going to handle ."

b) Clearing commands. The commands of the process are cleared per HCOB 9 August 1978 Issue II, "Clearing Commands."

c) The process. The auditor runs the process or completes the C/S instructions for the session to end phenomena.

In Dianetics, the end phenomena would be: F/N, erasure of the chain, cognition, postulate (if not voiced in the cognition) and VGIs.

In Scientology processes, the end phenomena is: F/N, cognition, VGIs. The Power Processes have their own EP.

5. Havingness

When Havingness is indicated or included in the C/S instructions, the auditor runs approximately 10 to 12 commands of the pc's Havingness Process to where the pc is bright, F/Ning and in PT. (Note: Havingness is never run to obscure or hide the fact of failure to F/N the main process or an auditing or Confessional question.)

(Ref: HCOB 7 August 78, "Havingness, Finding & Running The Pc's Havingness Process. ")

6. End of Session

a) When the auditor is ready to end the session he gives the R-Factor that he will be ending the session.

b) Then he asks: "Is there anything you would care to say or ask before I end this session?" Pc answers. Auditor acknowledges and notes down the answer.

c) If the pc asks a question, answer it if you can or acknowledge and say, "I will note that down for the C/S."

d) Auditor ends the session with: "End of session." (Tone 40.)

(Note: The phrase "That's it" is incorrect for the purpose of ending a session and is not used. The correct phrase is "*End of Session.*")

Immediately after the end of session the auditor or a Page takes the pc to the pc Examiner.

HUBBARD COMMUNICATIONS OFFICE
Saint Hill Manor, East Grinstead, Sussex

HCO BULLETIN OF 15 JULY 1978

Remimeo

(Cancels BTB 8 Jan 71R, Auditing CS-1
for Dianetics and Scientology)

**SCIENTOLOGY
AUDITING CS-1**

The Scientology CS-1 is to give a pc new to Scientology or a previously audited pc, as needed, the necessary data and R-Factor on basics and auditing procedure so that he understands and is able and willing to be audited successfully.

NOTE: Some pcs who have been trained or audited previously may protest that they know the terms and procedure. If this happens, acknowledge with excellent TRs and without invalidation or evaluation and tell them that this CS is intended to make auditing more effective for all pcs. If the auditor uses excellent TRs and good R-Factor, no ARC breaks should ever occur and the pc will have tremendous wins.

It is not necessary to reclear those sections of this Scn CS-1 which the pc may have already covered in a recent and thorough Dianetics CS-1, *provided* the auditor is *certain* of the pc's understanding of the terms.

The auditor should be fully familiar with this issue as well as:

HCOB 17 Oct 64 III ALL LEVELS GETTING THE PC SESSIONABLE
HCOB 5 Apr 69 NEW PRECLEARS, THE WORKABILITY OF
SCIENTOLOGY
HCOB 16 Jun 70 C/S Series 6 WHAT THE C/S IS DOING

He will need to take a very thorough look at what has to be covered with the pc in this CS-1 and *know* his materials very well and have them ready in the CS-1 session for reference and clearing any misunderstandings or questions the pc may have.

The following will be needed in the auditing room:

Technical Dictionary
Admin Dictionary

A good English dictionary

A good dictionary in the pc's native language, and for a foreign language case a dual dictionary (English-to-foreign language and foreign language itself).

Scn CS-1 Definitions Sheet—Attachment No. 1 of this issue.

The Basic Scientology Picture Book
Fundamentals of Thought

HCOB 14 Oct 68R, The Auditor's Code

Demo Kit

and the auditor makes full use of these as necessary. If further references are

- b) Then clear: “earlier similar.” Give the pc examples of where it would be used.
16. Clear with the pc what a repetitive process is. Ensure he understands why and how it is done. Have the pc demo it for you.
 17.
 - a) Clear the word: flow.
 - b) Clear each of the Flows 1, 2, 3, 0.
 - c) Have the pc give you an example and demo of each.
 18. Clear the words: a) assess b) assessment.
 19.
 - a) Explain to the pc that if at any time there is any difficulty in the auditing, you (or another auditor) will be using a prepared list to find and handle the exact difficulty.
 - b) Ensure he understands that when such a list is being assessed he sits quietly holding the cans while the auditor calls the list and takes meter reads to locate the difficulty.
 20. Go over the Auditor’s Code, Items 1, 2, 3, 4, 5, 6, 8, 9, 14, 17, 18, 19 and 22.
Check for and clear up any questions or misunderstands the pc may have on this.
 21.
 - a) Clear: Examiner.
 - b) Give the pc an R-Factor on the Examiner and the fact that he will go to the Examiner immediately after each auditing session. Ensure he understands the Examiner says nothing to the preclear at that time, only recording what the pc says and noting down the tone arm position and state of the needle.

Also, be sure the pc understands that the Examiner is the person he sees if he wishes to make any sort of statement regarding his case.

22. Turn the folder in to the C/S.

The C/S can also order any additional actions to the above.

The Scientology Auditing CS-1 can usually be completed in one session. If it takes more than one session, the first session should be ended off at the end of a step or completion of a word or demonstration—never in the middle of an action.

Make sure you do not leave your preclear with a question or a misunderstood or confusion. Know the preclear in front of you and get your product of an educated pc who can run Scientology processes easily and with gain.

CLEARING COMMANDS

The Scientology Auditing CS-1 does not preclude clearing the commands of each process or clearing a procedure in a session where the pc is begun on a new process or procedure. (Ref: HCOB 9 Aug 78 II, CLEARING COMMANDS)

This would include the first time the pc is given a two-way comm session or a listing & nulling session, where the procedure would first be fully cleared on the pc by the auditor.

CLEARING WORDS ON CORRECTION LISTS

In addition to the CS-1, to fully prepare the pc for his auditing up the Grade Chart, it is standard to clear the words on the various correction lists very early in auditing, before the need for them arises. (Otherwise, it is difficult to clear the words of a correction list over heavy bypassed charge.) Thus, when the need for correction lists does arise the words have already been cleared and the correction list can be used without delay. (Ref: HCOB 9 Aug 78 II, CLEARING COMMANDS, Items 7 and 8.)

This would be done as ordered by the C/S.

SCIENTOLOGY CS-1 DEFINITIONS SHEET

The following definitions have been taken from the Technical Dictionary and from the glossary of the book *Dianetics Today*.

Use these in conjunction with the *Basic Scientology Picture Book*. If further references are needed when clearing these terms and concepts, ensure source materials are used. For any non-Scientology terms use a good non-dinky dictionary.

SCIENTOLOGY:

An applied religious philosophy developed by L. Ron Hubbard dealing with the study of knowledge, which through the application of its technology can bring about desirable changes in the conditions of life.

(Taken from the Latin word *scio*, knowing in the fullest sense of the word, and the Greek word *logos*, to study.)

A body of knowledge which, when properly used, gives freedom and truth to the individual.

AUDITING:

Processing, the application of Scientology (or Dianetic) processes and procedures to someone by a trained auditor. The exact definition of auditing is: the action of asking a preclear a question (which he can understand and answer), getting an answer to that question and acknowledging him for that answer.

AUDITING SESSION:

A period in which an auditor and preclear are in a quiet place where they will not be disturbed. The auditor gives the preclear certain and exact commands which the preclear can follow.

AUDITOR:

A person trained and qualified in applying Scientology and/or Dianetic processes and procedures to individuals for their betterment; called an auditor because auditor means "one who listens." An auditor is a minister of the Church of Scientology.

CLEAR:

A thetan who can be at cause knowingly and at will over mental matter, energy, space and time as regards the first dynamic (survival for self). The state of Clear is above the release grades of Scientology (all of which are requisite to clearing) and is attained by completion of the Clearing Course at an Advanced Church of Scientology.

PRECLEAR:

From pre-Clear, a person not yet Clear; generally a person being audited, who is thus on the road to Clear; a person who, through Scientology and Dianetic processing, is finding out more about himself and life.

THETAN:

From THETA (life static), a word taken from the Greek symbol or letter: theta, traditional symbol for thought or spirit. The thetan is the individual himself—not the body or the mind. The thetan is the “I”; one doesn’t have or own a thetan; one is a thetan.

MIND:

A control system between the thetan and the physical universe. It is *not* the brain. The mind is the accumulated recordings of thoughts, conclusions, decisions, observations and perceptions of a thetan throughout his entire existence. The thetan can and does use the mind in handling life and the physical universe.

BODY:

The organized physical composition or substance of an animal or man whether living or dead.

PICTURE:

An exact likeness; image. A mental image.

MENTAL IMAGE PICTURE:

Mental pictures; facsimiles and mock-ups; a copy of one’s perceptions of the physical universe sometime in the past.

REACTIVE MIND:

Reactive bank. The portion of the mind which works on a stimulus-response basis (given a certain stimulus it will automatically give a certain response) which is not under a person’s volitional control and which exerts force and power over a person’s awareness, purposes, thoughts, body and actions.

The reactive mind never stops operating. Pictures of the environment, of a very low order, are taken by this mind even in some states of unconsciousness.

BANK:

A colloquial name for the reactive mind. The mental image picture collection of the pc.

COMMUNICATION CYCLE:

A completed communication, including origination of the communication, receipt of the communication, and answer or acknowledgement of the communication. A communication cycle consists of just: cause, distance, effect, with intention, attention, duplication and understanding.

AUDITING COMM CYCLE:

(HCOB 30 Apr 71) This is the auditing comm cycle that is *always* in use:

- (1) is the pc ready to receive the command? (appearance, presence)
- (2) auditor gives command/question to pc (cause, distance, effect)
- (3) pc looks to bank for answer . . .
- (4) pc receives answer from bank

- (5) pc gives answer to auditor (cause, distance, effect)
- (6) auditor acknowledges pc
- (7) auditor sees that pc received acknowledgement (attention)
- (8) new cycle beginning with (1).

CHARGE:

The stored quantities of energy in the time track; stored energy or stored or recreatable potentials of energy. The electrical impulse on the case that activates the meter. Harmful energy or force accumulated and generated in the reactive mind, resulting from the conflicts and unpleasant experiences that a person has had.

MENTAL MASS:

Mocking up matter, energy, space and time. Its proportionate weight would be terribly slight compared to the real object which the person is mocking up a picture of.

KEY-IN:

The action of recording a lock on a secondary or engram; the moment an earlier upset or earlier incident has been restimulated.

KEY-OUT:

An action of an engram or secondary dropping away without being erased. Released or separate from one's reactive mind or some portion of it.

RELEASE:

A preclear whose reactive mind or some major portion of it is keyed-out and is not influencing him.

A series of gradual key-outs. At any given one of those key-outs the individual detaches from the remainder of his reactive bank.

In Scientology processing there are eight major grades of Release. They are, from the lowest to the highest: Grade 0 Communications Release, Grade I Problems Release, Grade II Relief Release, Grade III Freedom Release, Grade IV Ability Release, Grade V Power Release, Grade VA Power Plus Release, Grade VI Whole Track Release. Each is a distinct and definite step toward greater levels of awareness and ability.

POSTULATE:

A conclusion, decision or resolution made by the individual himself; to conclude, decide or resolve a problem or to set a pattern for the future or to nullify a pattern of the past.

. . . We mean, by postulate, a self-created truth. A postulate is, of course, that thing which is directed desire or order, or inhibition, or enforcement, on the part of the individual in the form of an idea.

. . . Postulate means to cause a thinkingness or consideration.

COGNITION:

A pc origination indicating he has “come to realize.” It’s a “What do you know? I . . .” statement. A new realization of life. It results in a higher degree of awareness and consequently a greater ability to succeed with one’s endeavors in life.

FLOATING NEEDLE:

A floating needle is a rhythmic sweep of the dial at a slow, even pace of the needle.

It is always accompanied by very good indicators in the pc. (Ref: HCOB 10 Dec 76R, C/S Series 99R SCN F/N AND TA POSITION, HCOB 21 Jul 78 WHAT IS AN F/N.)

RUDIMENTS:

First principles, steps, stages or conditions. The basic actions done at the beginning of a session to set up the pc for the major session action; ARC breaks, PTPs, withholds.

AFFINITY:

Degree of liking or affection or lack of it. Affinity is a tolerance of distance. A great affinity would be a tolerance of or liking of close proximity. A lack of affinity would be an intolerance of or dislike of close proximity. Affinity is one of the components of understanding, the other components being reality and communication.

REALITY:

The agreed upon apparency of existence. A reality is any data that agrees with the person’s perceptions, computations and education. Reality is one of the components of understanding. Reality is what is.

COMMUNICATION:

The interchange of ideas or objects between two people or terminals. More precisely the definition of communication is the consideration and action of impelling an impulse or particle from source point across a distance to receipt point, with the intention of bringing into being at the receipt point a duplication of that which emanated from the source point. The formula of communication is: cause, distance, effect, with attention and duplication. Communication by definition does not need to be two-way. Communication is one of the component parts of understanding.

ARC BREAK:

A sudden drop or cutting of one’s affinity, reality or communication with someone or something. It is pronounced by its letters *A-R-C break*.

PROBLEM:

Anything which has opposing sides of equal force; especially postulate-counterpostulate, intention-counter-intention or idea-counter-idea; an intention-counterintention that worries the preclear.

PRESENT TIME PROBLEM:

A specific problem that exists in the physical universe *now*, on which a person has his attention fixed.

. . . Any set of circumstances that so engages the attention of the preclear that he feels he should be doing something about it instead of being audited.

OVERT:

An overt act is an act of omission or commission which does the least good for the least number of dynamics or the most harm to the greatest number of dynamics.

. . . An aggressive or destructive act by the individual against one or more of the eight dynamics (self, family, group, mankind, animals or plants, mest, life or the infinite). That thing which you do which you aren't willing to have happen to you.

WITHHOLD:

An undisclosed harmful (contra-survival) act.

MISSED WITHHOLD:

An undisclosed contra-survival act which has been restimulated by another but not disclosed. This is a withhold which another person nearly found out about, leaving the person with the withhold in a state of wondering whether his hidden deed is known or not.

REPETITIVE PROCESS:

... A process that is run over and over with the same question of the pc.... we don't expect the auditor to do anything but state the command (or ask the question) with no variation, acknowledge the pc's answer and handle the pc origins by understanding and acknowledging what the pc said. A process which permits the individual to examine his mind and environment and out of it select the unimportances and importances.

FLOW:

A progress of energy between two points.

An impulse or direction of energy particles or thought or masses between terminals.

The progress of particles or impulses or waves from Point A to Point B.

ASSESS:

To choose, from a list of statements—which item or thing has the longest read and the pc's interest. The longest read usually will also have the pc's interest.

ASSESSMENT:

. . . an action done from a prepared list. Assessment is done by the auditor between the pc's bank and the meter.... just notes which item has the longest fall or Lowdown. The auditor looks at the meter while doing an assessment. Assessment is the whole action of obtaining a significant item from a pc.

EXAMINER:

Preclear Examiner. The person in a Scientology church to whom preclears are sent immediately after any auditing session. The Examiner says nothing to the preclear in this situation, noting only what the pc's tone arm position and state of the needle are on the E-Meter and recording what the pc says, if anything. The Examiner is also the person a preclear sees if he wishes to make any sort of statement regarding his case, or if there is something he wants handled regarding his case.

ALL LEVELS

GETTING THE PC SESSIONABLE

When you start to audit new pcs the liabilities are these:

1. If you do not show him what auditing is, he does not know what is expected of him. Thus he is not only not in session but in mystery.
2. If you do not indoctrinate him into what he is supposed to do when the auditor gives him a question or command, he often does not answer the question or comply with the command and only then can things go wrong in the session.
3. If the pc is not in the auditor's control and if anything goes wrong, then the auditor can do nothing about it as he does not have any session or control of the pc.

COVERT AUDITING

Some, particularly HAS students, are very remiss in this and "covertly audit".

In "talking" to someone they also seek to audit that person "without the person knowing anything about it".

This of course is nonsense since auditing results are best achieved in a session and a session depends upon a *self-determined agreement* to be audited.

You can achieve changes in a person with covert auditing—I won't say you can't since I have done so. But it is uncertain and not very popular.

You have to audit without agreement when the pc is unconscious and can't respond.

But to make it a common practice when it is really used only in emergency (as in unconsciousness or when you have no time) would be foolish.

Further, using Scientology to handle situations in life is a whole subject in itself and it isn't auditing. (Example: Person angry, a Scientologist locates and indicates the by-passed charge. Example: On a raving psychotic, the Scientologist arranges for the person to have a rest away from his ordinary environment and associates and forbids damaging "treatments". Example: Somebody seems to have lots of problems so the Scientologist teaches him what a problem is. Example: By observing the anxiousness of a person to receive motivators the Scientologist estimates the degree of overts the person has committed. Example: One sees a difficulty in planning is not getting any better so he decides there must be a lie in the plan and locates it at which time a good plan can emerge.)

There are countless ways to use the philosophy of Scientology in direct application to life. And even hopeless physical conditions respond to just understanding more about life. For instance there are many cases on record of a bedridden person reading no more than *Dianetics: The Evolution of a Science* and becoming well and active.

So one doesn't have to "covertly audit" if any communication is possible. One can teach, advise, orient someone in existence, applying the truths and knowledge of Scientology.

The point is, when *auditing is* begun it is best done by agreement to be audited and is most successful when the preclear understands what he is supposed to do in response to auditor actions, and is only disastrous when there is not enough control in the session to set things right if they start to go wrong.

Any auditor who just sits and lets a pc ramble on and on with no regard to the subject being handled, even in Itsa, is very foolish, has no session and is wasting time.

The *wrong* thing to do is chop the pc up and cut his comm because he is so far adrift.

The right thing to do is to prevent it before it happens by not auditing preclears who have not agreed to be audited or who have no faintest idea of what's expected of them.

In the hands of an unskilled "auditor" I have seen a preclear, who was running a psycho-analytic type session, giving all the expected psycho-analytic symptoms and responses. And getting nowhere.

There are two ways it could have been handled—one is to have explained this wasn't psycho-analysis and then explained the auditing cycle. The other would have been to run O/W on the analysis the pc had had or even do a by-passed charge assessment on the analysis. Probably both would be necessary if mere information about how auditing was done did not care for the condition.

One of the rules of auditing is never to let any part of any question or command be agreed upon once and never repeated. Example: The auditor tells the pc, "When I say 'her' in this command, I mean your mother. Now what have you done to her?" The pc is always having to think back to this agreement to answer the command.

Educating a pc is not the same thing. Here one is knocking out past response patterns, as in social actions or some earlier form of treatment. One is in effect cancelling out earlier habits of response in order to get auditing to occur. Once that is done one does not of course have to do it again and what the pc says in a session is what the pc says. Sometimes he wanders all about before he answers the question. But the *auditor* in any case *must* get his question answered or the command complied with.

So auditing in general is a clean-cut agreement to be audited, a session is conducted with an auditing cycle, no matter how long or short that cycle may be.

C/S Series 97

AUDITING REPORTS, FALSIFYING OF

Probably the most covert and vicious crime in auditing is falsifying an auditing report.

At first glance, to someone who is trying to PR himself as an auditor or to escape consequences of session goofs, this might not seem to be the huge crime that it is.

When an auditing report is falsified, means of repairing the pc are denied, out tech and a need for re-study or re-drilling of materials is covered up, out tech is spread about and the repute of the org and Scientology are at risk.

There are many ways of falsifying an auditing report. Chief amongst them is omission of vital data in the report. Another is faking the things run or the pc's actions or reactions.

To the person doing this it may seem that he has covered up his incompetence but in actual fact it is eventually detected.

A twice declared person recently messed up the cases of several VIPs by simply omitting some of their disagreements with what was being done.

Three SPs, now declared, some years ago had a mutual understanding that they would not put down each other's withholds. These three also falsified auditing reports to the effect that they had run certain things on pcs "and there was nothing on them," when in fact they either had not run them or there was reaction which they did not put into the report. They messed up about a dozen people before they were caught and it took many, many hours of careful C/Sing and auditing to salvage those cases (and it also took about two years). They made several hundred serious enemies for themselves and today I doubt any Scientologist would even speak to them and their names are remembered with scathing contempt.

It is not only easy to detect a falsified auditing report, it is also inevitable that it will be detected.

The person whose auditing reports have been falsified is easy to spot in folders and records. The auditor marks "VGIs, F/N" and the examiner notes by-passed charge and Bad Indicators. An auditor seeking to prevent this being detected has been known to take the examiner report from the folder but that there is no examiner report would be the first thing a C/S would notice. Examiner reports have been forged and exchanged with the actual one but this too is very visible.

Lack of a proper success story points directly to out tech and if it is not visible in the folder then that folder contains falsified auditing reports.

The pc in the midst of his auditing, refuses to re-sign for more. An inspection of folder either finds the out tech in the auditing reports or it doesn't. If the Folder Error Summary finds no out tech, the next thing that is looked for is falsified auditing reports and this is extended to looking at the other cases this auditor has handled to see if there is any similarity of reaction.

A D of P interview with the pc will reveal falsified auditing reports. It will contain data that does not appear in the auditing reports. The first thing suspect is the auditing reports.

Basically, correct tech applied by a competent auditor who has been trained and interned, works and works every time. When it "doesn't work," a C/S begins to look for the real scene. There are many ways he can ascertain the actual scene. Amongst these are outside-the-door session taping, monitors, interviews, lack of success stories, failures to declare, failures to re-sign, examiner reports at variance with the session reports, personal check up into the case and many others.

The only thing which temporarily misleads a C/S is a falsified auditing report. But in all our experience with these, the detection of such reports is inevitable even if it occurs a long time afterwards.

The person who would falsify an auditing report is usually found to be a suppressive with abundant R/Ses and evil intentions who never should have been trained in the first place.

Therefore, the penalty for knowingly falsifying an auditing report in order to make oneself seem more competent than one is or to hide departures from the C/S or to omit vital data necessary to C/Sing, resulting in upsets to a case and time spent in investigation by seniors, is actionable by a Committee of Evidence and if the matter is proven beyond reasonable doubt, a cancellation of all certificates and awards, a declare and an expulsion order are mandatory.

Should the person perpetrating the falsification of auditing reports run away (blow) before action can be taken, the result is the same and is enforceable even if the person is not present.

A green auditor may look upon the offense as slight. If he is too untrained to realize that proper application of tech works every time and that improper application is a gross overt act, he may not realize the seriousness of his action. This however cannot be pleaded as a defense. It is not a light thing to end the hopes and close the door on a pc just because one is trying to cover up his blunders. The blundering auditor can be repaired by cramming and retraining. But only if it is known how he has blundered. That in itself is nowhere near as serious as hiding the fact.

Honesty is the road to truth.

C/S Series 98

**AUDITING FOLDERS,
OMISSIONS IN COMPLETENESS**

(Ref: HCO PL 26 OCT 76 Issue I
HCO B 26 OCT 76)

Omissions from folders and complete loss of folders is a very serious matter.

A Case Supervisor, as well as a Folder Error Summary Auditor and the Auditor himself can be impeded greatly by folder omissions. Loss of folders entirely is a much greater catastrophe.

While cases and even folders can be reconstructed and eventually handled (at enormous trouble and time to the pc and technical people) this does not minimize the offense.

Usually Folder Pages are regarded too lightly as a post and are subject to much transfer even when posted. The Director of Tech Services is often far too lax in posting a Folder Archives I/C even as a double hat. Space restrictions often impede the careful preservation of folders in orgs. But all these posts and spaces are vital to a smooth delivery of auditing and should not be lightly looked upon.

The commonest (and most senseless) omissions from folders are:

1. **WORD CLEARING WORKSHEETS.** These are done in Academies or training or Interne areas as well as the HGC and it is often an omitted action to forward them to the person's pc folder. Often the lines to do so are unknown or completely missing. Yet *every* metered word clearing action should not only be the subject of a worksheet but also must be included in the person's pc folder in date order. Word clearer can fail to F/N a chain or even fail to clear a word as a chain when it doesn't F/N. Such goofs can mess up cases and leave a C/S perplexed as to how the pc was running well one day and badly the next—yet there is no word clearing worksheet there, so the fact of ANOTHER AUDITOR on the case is hidden.

2. **QUAL WHY FINDING ACTIONS.** As why finding also includes listing, possibly the most vicious omission is the failure to include Why Finding worksheets in the person's folder or even do a worksheet on it. Yet at least one org has been temporarily wrecked by indiscriminate "why finding" in Qual that resulted in wrong items and wrong lists and messed up the cases of whole staffs. This poor why finding has led at times to why finding becoming a restricted or forbidden practice. Qual worksheets of why finding **MUST** be included in the person's folder along with any list made which itself must include the question asked.

3. HCO WHY FINDING. These actions must also be the subject of worksheets and must also be included in the person's folder.

4. ALL SEC CHECKS AND INTEGRITY PROCESS LISTS AND ACTIONS. It doesn't matter who or what is doing the sec check, the resulting action is NOT the property of the department or branch or person doing the sec checking. A full worksheet must be made and ALL such actions done MUST be included in the routine pc folder of the person.

As it is very vital that a pc's folder be COMPLETE as well as exist, hereinafter the loss of a pc's folders and the failure to make worksheets and include them in the person's pc folder shall be actionable by a Committee of Evidence, to be convened by the Senior C/S of an org, and applies to any person or Auditor whether staff, mission or field.

Auditor Admin Series 1R

THE AUDITOR ADMIN SERIES FOR USE BY ALL AUDITORS

PURPOSE

Over the years much "know-how" has been developed in Auditor Administration.

The purpose of this Series is to bring a standard in Auditor Administration throughout the world.

DEFINITIONS

AUDITOR— A listener or one who listens carefully to what people have to say. An Auditor is a person trained and qualified in applying Scientology processes to others for their betterment.

ADMINISTRATION— Consists of the formation and handling of the lines and terminals involved in production.

AUDITOR ADMINISTRATION— would include:

1. The know-how of writing session reports.
2. The know-how of folder arrangement.
3. The know-how of all lines and terminals in the Tech Area. (Covered mainly in C/S Series 25.)
4. The know-how of other lines and terminals in the Org that directly relate to an Auditor getting out his product.

LRH QUOTES

"ALWAYS ADMINISTRATION IS A COMMUNICATION."

"Administration is important because the Administration is a piece of truth."

"'Administration of a Folder' is a responsibility and so is 'The Administrative Lines of the Technical Division'."

“NO AUDITOR HAS ANY BUSINESS BEING IGNORANT OF ADMINISTRATION.”

(Reference: TAPE 12.6.71 WELCOME TO THE FLAG INTERN COURSE)

C/S SERIES 56

C/S Series 56 can be considered as Auditor Admin Series 2 and comes next in this Series.

C/S Series 56 covers the function of Administration in obtaining excellent case results.

USE OF THE SERIES

The Auditor Admin Series is made into packs.

The packs are made available to Student Auditors, HGC Auditors, C/Ses, HGC Admin Personnel, Cramming, the Qual Library, and all Technical Executives.

The Series is added to Auditor and C/S Course Checksheets.

It is used by HGC Auditors and Internes to check if the Admin they are turning in is “by the book”.

It can be used by the C/S through the Cramming Officer to cram an Auditor on an Admin Error.

An Error would be handled by directing the Auditor to one specific HCO B or BTB in the Series that dealt with that specific point. Continuing Admin Errors would get the whole pack.

PRODUCT

The product of the application of this Series is Standard Auditor Administration throughout the world, with the viability of improved Auditing Delivery and Results.

Auditor Admin Series 2

C/S Series 56

HOW TO GET RESULTS IN AN HGC

Obtaining excellent case results is an ADMINISTRATIVE not a wholly technical function.

Auditors and C/Ses are often weak on Administrative. They think general tech results improve only by more tech study. If they continue to think this way they wind up squirreling. For they are working on a wrong target for improvement, a wrong WHY or reason.

Auditing is a *team* activity. The day of the individual country doctor is dead. Even if an individual field auditor starts out as an individual he goes one of two directions—he overworks and squirrels himself into failure or he builds up a team—may only be a receptionist and an apprentice auditor but he is still building up a team. I have never seen individual auditors succeed over a long period. Failing to form or become part of a team, they eventually fade out or squirrel.

The reason is simple enough.

These rules apply:

TO IMPROVE TECH RESULTS YOU MUST IMPROVE ADMINISTRATION.

And I don't mean just writing better in folders.

DEFINITION

ADMINISTRATION consists of the formation and handling of the lines and terminals involved in production.

Unless an auditor understands this fully, he will never insist on a Tech Sec, a Tech Establishment Officer, D of P, C/S, Examiner, Pages, Folder Admin and himself will begin to omit keeping a Folder Summary and then omit the session actions and then, with big loses, retire from it all.

If I were an auditor and saw some of these things missing, I'd be liable to say, "Are you guys kidding? I thought we were here to audit pcs."

Without the correct pattern of lines and terminals YOU DON'T GET RESULTS, you get headaches, mad neighbors and refunds.

Auditing on lines, an auditor should regard himself as a highly skilled expert, a technical specialist whose work requires respect and *service*.

And Case Supervising on lines, a Case Supervisor should consider himself a sort of Czar whose word is so law even the Exec Director thinks several times before he approaches—duly servile of course and bowing the prescribed three times as he exits.

A Class XII on Flag is listened to by others with a hush even if he is only commenting on the weather.

These are the stars of the team. Their worldwide reputation for smooth flubless auditing is an *administrative* result!

Short of space, overloaded, short of admin personnel, turning out the highest well done hours in the world, Flag's Div IV produces because of an *Admin* system.

The highest of these C/Ses and auditors goes to Cramming if he misplaces a comma or drops a TR 1.

If the sessions' exams at Examiner drop from 90% F/N the whole place gets overhauled.

Folders are Folder Error Summaried by an FES section. The Folder Summary is kept up each session (or Cramming). The folder is studied and C/Sed. The D of P assigns the sessions. The C/S is done correctly (or Cramming). The folder travels on *its* lines. The tests are done.

In short it is a complex but constantly flowing pattern of moving pcs, folders and examinations interspersed with testing and interviews and re-registration.

There is a *right* way to do it.

RESULTS

If an org has only 65% of its sessions F/N VGIs at Examiner the *right* answer is to organize the place.

Why?

Well, the first answer is that the *third* dynamic is stronger than the *first* dynamic.

An auditor auditing alone is a first dynamic. The pc is a first dynamic. As it is the auditor plus pc that must be greater than the reactive mind, one can easily work the rest out.

If the auditor is part of a functioning third dynamic, not just an individual, the auditor plus pc versus the bank is a LOT more than the bank.

Another answer is that an auditor knows the pc, if only because of sessions, and personal opinion enters into it. That is not a pure technical view as a C/S's must be.

Another answer is that an auditor in a group gets more *auditing* done.

Individually practicing auditors often fail because nobody is taking care of the auditor as a person. Further they get loses. No one sends them to Cramming. When they get loses they often start squirreling. Then they *really* get loses.

That ends them as auditors.

An auditor working in a good on policy organization is given service. He does get sent to Cramming. He does keep his tech updated. He gets wins. When he doesn't he's put back on standard tech. So he happily keeps going and makes lots of happy people.

So if I were auditing in a group I would *insist* as a condition of work that Div IV and Div V be good on policy divisions, fully organized with no nonsense.

I know whereof I speak. As a part-time duty I work as a consulting C/S with a good IV and a good V. Sometimes I have had to take over the whole C/S line. When the organization bogs in any way I know the whole thing is heading toward single-handing the lot. So I get the lines back in and get people to Cramming and get the F/N at Examiner ratio approaching 100% again.

Thus, the advice you get about C/Sing is live-live-live, not canned theory.

ORG WINS

Being on administrative lines to all orgs, I can tell you pointblank that

THEIR STATS DEPEND ON THEIR VOLUME AND QUALITY OF SERVICE.

That isn't propaganda. It's pure fact.

The F/N-no F/N at Examiner ratio tells you at once if Divs IV and V are organized and operating or if they are just fooling about.

At 50% to 75% F/N at Examiner the administrative functions of Divs IV and V are stinking bad. C/S Series 25 is out. Cramming is out. Hidden data lines exist. HCO Bs, books and tapes are not used.

The public, at that % of F/N, will stay away in droves. Registrars will go batty and adopt "Hot Prospect Systems".

The staff will go low pay and the execs will be a perpetual dark shade of purple from yelling. The cash-bills ratio will be the subject of finance missions and the neighbors will be phoning the police.

Why?

Because an org is itself a technical delivery organization and 50% to 75% F/N at Examiner is an overt product.

The Academy has already failed to apply student study tech and word clearing. Qual is a joke.

There is no library of tech available and if available isn't read.

The org as a tech service delivery unit is treating its public to a no-auditing situation and will get in trouble.

REMEDY

The way to remedy is to get on policy with tech organization.

Put in a Qual with word clearing and a library and cramming.

Put in the C/S Series 25 Tech lines.

Tolerate NO out-tech or out-admin in folders.

Dummy run the lines until they're in.

Cram Cram Cram C/S and auditor and tech personnel flubs whenever they occur.

Get the organization *functioning*.

Your F/N at Examiner ratio will climb straight up to 90% 95% 98%.

By actual *test pcs* will flood in, Reg lines will get easy, success stats soar.

More auditors more C/Ses, more organization. A second, a third HGC.

And the more thoroughly the admin lines are manned the better the tech lines work.

This conclusion came from actual inspections of orgs and studies of their stats.

Orgs should be selling more training than processing.

But why train if you can't interne them in a good Qual and HGC? They'll never amount to anything as auditors unless they work in an organization that is on tech and on policy.

So you need an HGC.

Tech, done in a proper administrative framework, works.

Some orgs really don't believe they could ever attain the flubless auditing quality of Flag.

But they *can*.

It is even easy.

It is even easier to attain flubless quality of auditing than any other kind.

You put in a real on policy admin pattern in IV and V. You begin with a Qual Interne Course.

You send to Cramming for any C/S or auditing error no matter how minute.

The results come up.

The errors cease.

You're a success! If you do it.

Auditor Admin Series 3R

THE PC FOLDER AND ITS CONTENTS

The "current" folder being used for the Pc is arranged into four basic parts:

THE FOLDER

The Folder is a folded sheet of cardboard which encloses all the session reports and other items. The folder is foolscap size, light cardboard.

FRONT COVER ITEMS

The case Progress Sheet is a sheet which details the Levels of Processing and Training the Pc has achieved while moving up the Grade Chart. It also lists Incidental Rundowns and Set-up Actions the Pc has had. The Sheet gives at a glance the Pc's progress to OT.

The Yellow Sheet is a sheet detailing each Correction List or Set of Commands which have been Word Cleared. It also lists the Pc's current Havingness process and the type of cans the Pc uses.

The Folder Summary is written on sheets located inside the Front Cover and is an adequate summary of actions taken on a Pc in consecutive order.

The OCA Graph is a specially prepared graph which plots 10 traits of a Pc's personality from a Personality Test taken by the Pc.

OCA = Oxford Capacity Analysis.

The Personality Test is also known as the APA = American Personality Analysis.

The Program Sheet is a sheet which outlines the sequence of actions, session by session, to be run on the Pc to bring about a definite result.

The Case Progress Sheet, Yellow Sheet and Folder Summary are stapled inside the Front Cover. The OCA Graph and Program Sheets are clipped over the Folder Summary with a big wide paper clip.

THE FOLDER CONTENTS

The Auditor's C/S is a sheet on which the Auditor writes the C/S instructions for the next session.

The Exam Report is a report made out by the Qual Examiner when the Pc goes to Exams after session or goes on his own volition. It contains the Meter details, Pc's indicators and the Pc's statement.

The Summary Report Form is written by the Auditor after the session on a fill-in type standard form and is simply an exact record of what happened and what was observed during the session.

The Auditor's Report Form is made out at the end of each session and is an outline of what actions were taken during the session.

The Worksheets are the sheets on which the Auditor writes a complete running record of the session from beginning to end, page after page, as the session goes along.

A Correction List is a list of prepared questions on a mimeoed sheet which is used by the Auditor for the repair of a particular situation, action, or Rundown.

An L&N List (Listing and Nulling List) is a list of items given by a Pc in response to a Listing Question and written down by the Auditor in the exact sequence that they are given to him by the preclear. Each list is done on a separate sheet.

A Dianetic Assessment List is a list of somatic items given by a Pc and written down by the Auditor with the reads marked that occur on the Meter.

A Miscellaneous Report is a report such as an MO Report, a D of P Interview, an Ethics Report, a Success Story, etc, which is put in the Pc's folder and gives a C/S more information about the case.

The reports filed in the folder from one session consist of:

The Worksheets stapled together with the Auditor's Report Form on Top. Any Correction List used goes under the Worksheets and is included in the stapling.

Any L&N Lists or Dn Assessment Lists are not so stapled but remain loose and are put under the other session reports.

On top of the stapled sheaf comes the Summary Report Form, then the Exam Report and then the Auditor's C/S.

All the session reports are now paper clipped together.

Session Reports as above are put in the folder consecutively with more recent on top.

Any Miscellaneous Reports are filed appropriately at the correct chronological point in the folder.

THE BACK COVER ITEMS

A Dianetic Flow Table is a chronological list of Dn Items run, from earliest to latest, with the flows that have been run.

An FES (Folder Error Summary) is a summary of auditing errors in a folder and on a Pc's case not corrected at the time the summary is done.

The Routing Form is the form that lists the Org terminals the Pc has to check through in order to arrive in the HGC and in the auditing chair.

The Invoice Form is a summary sheet of how much auditing a Pc has signed up and paid for, and how much of that has been delivered.

The Invoice Form is stapled to the back cover. The rest of the items are paper clipped inside the cover.

Auditor Admin Series 4

THE FOLDER

A Folder is provided for each pc. The folder is foolscap size, light card.

The pc's name and Grade is printed (using a fat felt pen) on the front of the folder and also along the spine. It's on the spine so you can pull it out of a stack, if they are lying in piles.

Folders of pcs on Advanced Course levels are marked "Confidential" and striped on the front cover with green tape for R6EW and Clear, and gold (yellow in practice because gold tape not so readily available) for OT I—VIII.

Expanded Dn folders are marked with red coloured tape, from the front cover round the back of the bind, so they can be picked out of a folder stack.

If an Org has two HGCs, coloured tape can be used similarly to distinguish which folder goes to which C/S.

Tape colour flashes so far in use are:

Red —Expanded Dianetic Folders

Green —Folders of pcs at Advanced Courses Levels R6EW and Clear

Gold —Folders of pcs at Advanced Courses Levels OT I—OT VIII

and these colours should not be used for any other purpose.

EXAMPLE:

This is the folder of pc Helen Long, OT IIIIX, who is currently having Exp Dn auditing.

A rubber band or elastic garter is placed around each folder to prevent loss of contents and make for easier handling.

NEW FOLDERS

HGC Admin should not let the folders get too fat as this wrecks the folder and makes handling difficult.

When the current folder gets too fat (approximately 2 1/2'' or 6 cms) a new folder is started.

The Case Progress Sheet, Yellow Sheet, Folder Summary, OCA Graph and Program Sheets are all carried forward to the front of the new folder. The Invoice Form, Routing Form, Dn Flow Table and FES are also transferred to the back of the folder.

The new folder is given a folder number (for example 2) which is marked boldly on the bottom left-hand side of the front cover and along the spine.

The old folder which already is numbered (with the folder number 1) has the dates of the contents marked against the number 1 (on the front and on the spine).

i.e. (1) 25 MAR 71----- 4 OCT 71

The fact of the change to a new folder is marked in on the Folder Summary.

Solo Folders are similarly given numbers SOLO 1, SOLO 2, SOLO 3, etc, and when a new Solo Folder is started, the change to a new folder is marked in the Folder Summary of the current HGC folder.

In this way a C/S can tell if he has *all* the folders.

It is the responsibility of HGC Admin (or Adv Courses Admin) to see that all the above is done.

DIANETIC FOLDERS

NO separate Dianetic folders are kept. All auditing reports of whatever type of action are simply filed chronologically in the current HGC folder.

The only separate category of folders is Solo Folders held by Advanced Courses.

STORAGE OF FOLDERS

Old folders and those of pcs not currently on auditing lines are filed in alphabetical order in a store.

A log book of pc folders is maintained. This includes the number of folders for each pc (and where stored if not in current use).

TRANSPORT OF FOLDERS

Folders are *never* handed to the pc. They are handled as per C/S Series 25.

When pc folders are sent to another Org (such as an AO or Flag) the folders are checked for completeness, packaged securely, and tied with string which is sealed (with a sealing wax).

A "Mail Slip" system is used to ensure that the folders are not lost in transit.

The mail slips are done in 3 copies: plain paper or 3 copy invoice books can be purchased.

The original is kept by the sender. The other two copies (and they must be dark and legible) go inside the mail pack. They may *not* be put in an envelope in the pack. They are left on the top visible.

The package is addressed to "The Director of Tech Services" of the Org to which it is being mailed.

On receipt of the folders, one of the copies is sent on normal dispatch lines back to the originating Org to complete the cycle.

NO ADMIN FOLDER

The practice of starting a separate "Admin Folder" to hold all the admin bits and pieces is not necessary and is not standard admin.

THE YELLOW SHEET

The Yellow Sheet is a sheet detailing each Correction List or set of commands which have been Word Cleared. It also lists the Pc's current Havingness process and the type of cans the Pc uses.

Example:

	RUDS	20.8.72	20.8.72	FOOTPLATES
	WCCL	21.8.72		
R3R COMMANDS		21.8.72	20.8.72	Notice that _____
	L3RD	21.8.72	19.10.72	Feel that _____

The sheet is kept up by the Auditor.

THE FOLDER SUMMARY

The Folder Summary is written on sheets located on the inside of the Front Cover and is an adequate summary of the actions taken on a pc in consecutive order.

It is stapled inside the Front Cover of the pc's current folder and requires the following data:

1. ADMIN DETAILS

Session date, length of time of session and admin time. When a new folder is started. The total time of a series of auditing sessions. When OCA taken. When an FES done.

2. PROCESS DETAILS

What was run and whether it ran. Mark an EP beside each action taken, or if it was not taken to EP mark in red UNFLAT, O/R, or whatever.

The listing question of an L&N action is written out in full.

R3R items are written out in full.

If an item or terminal R/Ses in session, it is noted in red on the Summary Report with the page number and circled.

Similarly an evil purpose arising in a session is marked in red with the date and circled.

3. EXAM REPORT

At the bottom of the process details mark F/N indicating an F/N occurred at the Examiner, or BER (red) if a Bad Exam Report. If TA was high or low at exam, it can also be noted.

4. ATTESTS

Date and what attested.

If pc sent to attest but did NOT this is noted.

5. ADVANCED COURSE DATA

Date started Advanced Course, Level, Date attested to Completion.

(The individual solo sessions are NOT noted but should be entered on a separate Folder Summary in the Advanced Course Folder.)

6. MEDICAL DATA

When pc reports sick.

Date and brief statement of illness.

Then a further entry when pc OFF M.O. Lines.

7. ETHICS DATA

Any Ethics cycles or Conditions.

A BLUE or BLACK pen is used for normal entries. A RED pen is used to mark any R/Sing item, Ev Purp, list or Dn item correction, BER, high or low TA at Exams, flubbed attest, medical action or Ethics cycle.

In the HGC the Auditor is responsible for keeping up this Summary after each session and immediately on receipt of a Medical Report or pc volunteered BER. It is standard part of the Auditor's Session Admin.

When the pc goes into Advanced Courses all folders (HGC and any Advanced Course folders) go to the Advanced Course C/S who keeps the Case Progress Sheet, Yellow Sheet, and Summary Sheet in the HGC folder updated as outlined above.

The Solo Auditor keeps updated the separate Solo Folder Summary on the inside front cover of his current Solo Folder.

The Folder Summary Sheets are foolscap, divided into four columns. Below is an example of how the Folder Summary is kept:

1 Jun 72	M.O. REPORT pc hurt elbow (red)	(When pc is later on Advanced Courses the F/S would look like this.)	
2 Jun 72	(Session time) (Admin time) R3R Narr on elbow inc. Triple to EP. R3R "pn in my elbow" F 1,2,3 to EP. F/N.	10 Aug 72	OT I Started
3hrs 20m 20m		14 Aug 72	OT I Completed <i>Declared</i>
2 Jun 72		16 Aug 72	Set Up for OT II TRIPLE RUDS to EP Study + W/C M4 on OT II Materials 2wc re the level to EP F/N.
2 Jun 72	Pc Off M.O. Lines (red)		
3 Jun 72	New Folder No. 3		
4 Jun 72	2wc "What do you really want handled" to EP. R/S on "boats" p. 4 (red) L&N "What intention is connected to the sea" to BD F/N item. R3R "The intention to be shipwrecked" F 1, 2 to EP. F3 BOGGED (red) (red) BER TA 4.2	17 Aug 72	OT II Started
4hrs 28m 20m		28 Aug 72	Pc bogged on OT II (red) BER (red)
		29 Aug 72	L-7 Word Cleared L-7 assessed and handled to EP. F/N.

HUBBARD COMMUNICATIONS OFFICE
Saint Hill Manor, East Grinstead, Sussex

HCO BULLETIN OF 7 MAY 1969
Issue VI

Remimeo
CI VIII
Dianetic
Course

(Revision of HCOB 1 September 1968)

**SUMMARY OF HOW TO WRITE AN AUDITOR'S REPORT,
WORKSHEETS AND SUMMARY REPORT, WITH SOME
ADDITIONAL INFORMATION**

AUDITOR'S REPORT

An Auditor's Report should contain:

Date
Name of Auditor
Name of Pc
Condition of Pc
Length of Session
Time Session started and ended
TA at beginning and end of Session
Rudiments
What Process was run—LISTING THE EXACT
COMMANDS (often forgotten by most auditors)
Time of Start and End of Process
Whether Process is flat or not Any F/Ns.

WORK SHEETS

A Work Sheet is supposed to be the complete running record of the session from beginning to end. The Auditor should not be skipping from one page to another but should just be writing page after page as the session goes along.

A Work Sheet is always foolscap, 8 x 13 inches, written on both sides and each page is numbered. Pc's name is written on each separate sheet.

A Work Sheet may be in 2 columns depending on how big the writing is of the Auditor.

When the session is completed, the Work Sheets are put in proper sequence and stapled with the Auditor's Report Form on top from beginning to end of session.

TA and time notations should be made at *regular* intervals throughout the session.

When making a list on a Pc:

1. Always mark a read as it reads—F. LF. BD.
2. Always circle the reading item. Mark if indicated to the Pc with *IND*.

3. Always when extending a list put in a line from where it has been extended, e.g.

Item	Joe	
	Shoes	
	Socks	
<hr/>		extended
	Sky	
	Wax	
	Pigs, etc., etc.	

NOTE: When you repair an old auditing session you *always* write on the old auditing report and W/sheets in a *different coloured pen* with the date of the-report.

When running various processes in a session, mark each F/N clearly noting time and TA.

SUMMARY REPORT

A Summary Report is written exactly as per HCOB 17 March 1969, "Summary Report".

Two gross goofs I have noticed since case supervising folders on the RSM is that Auditors have not been turning in Ethics cases to the MAA. In one instance, a Pc was audited by 2 auditors in 2 different sessions, got a R/S on crimes against Scientologists and M/W/Hs and neither auditor turned the Pc in to Ethics. This is not the only instance. The second thing is that Auditors are very evaluative of the Pc's case as indicated by their comments on the Summary Report. This is incorrect; this report is used simply as an exact record of what happened during the session. It is not up to the auditor to evaluate the Pc's Case, this is the Case Supervisor's job. The auditor may suggest what is to be run, at which time the Case Supervisor will review the session, what was run, how the Pc went in relation to what was being run and then give his directions.

Auditor Report Forms or W/sheets are never recopied. The Auditor should always read over his W/sheets before turning in folder to the Case Supervisor and, if any words or letters are missing or cannot be read, they should be written in with a different coloured pen.

If these rules are followed it will make the Case Supervisor's job much much easier and auditors' reports more valuable.

To add the obvious, it is a CRIME to give any session or assist without making an Auditor's Report or to copy the original actual report after the session and submit a copy instead of the real report. Assist reports that use only contact or touch assists may be written after a session and sent to Qual.

Auditor Admin Series 13R

THE AUDITOR REPORT FORM

An Auditor's Report Form is made out at the end of each session. It gives an outline of what actions were taken during the session.

Each Report Form should be filled in at the top with:

- (a) Preclear's name (full name) and Grade (very prominent).
- (b) Auditor's name (full name).
- (c) Date.
- (d) No. of intensive hours scheduled ($12\frac{1}{2}$ —25—50 etc).
- (e) Time length of session excluding time for breaks (example 5 hrs 15 m). This is "hours in the chair".
- (f) Running total of scheduled hours completed to date.
- (g) Total TA for session. Often neglected but important as an indicator of case progress.

The body of the form is filled in with the following information:

- (h) Time started and ended session.
- (i) Condition of pc.
- (j) TA and Sensitivity setting at beginning and end of session.
- (k) Rudiments.
- (l) What process was run—LISTING THE EXACT COMMANDS (often forgotten by most Auditors).
- (m) Time, TA and Sens at start and end of process.
- (n) Whether process is flat or not.
- (o) Any F/Ns.
- (p) Any R/S Items or Ev Purps are noted in the right-hand column, in red.
- (q) TA range.

At the bottom of the form the Trim Check result is noted.

Example:

AUDITOR'S REPORT FORM

Date 22 Oct 72

No. of Intensive hours 25

Preclear EMILE TOGG Va

No. of hours 2 hrs 58 min

Auditor DAVE SWIFT

Total hours 14 hrs 23 min

Total TA 8 divs

Environment	Auditor		Withholds	PTP
Process	Time	Tone Arm Reads	Sensitivity	Results & Comments
THIS IS THE SESSION	3.20	3.2	6	PC A BIT WHITE
DO YOU HAVE AN ARC BREAK	3.28	2.8	6	F/N VGIs PC BRIGHTER
LIC METHOD 3 "RECENTLY"	4.58	2.6	6	F/N VGIs COG
O/W				
1. WHAT HAVE YOU DONE TO A POLICEMAN				R/S ON MONEY (red)
2. WHAT HAVE YOU WITHHELD FROM A POLICEMAN	6.16	2.5	6	TO EP F/N VGIs COG
THAT'S IT	6.18	2.5	6	FACE PINK – NO LONGER WHITE
TA RANGE 2.5 – 3.8				TRIM CHECK TA = 2.0

HCO BULLETIN OF 6 NOVEMBER 1972

Issue VII

SAME TITLE

(The only revision is under CONTENT OF WORKSHEET:
“G. Reads” was added.)

Auditor Admin Series 14R

THE WORKSHEETS

The Worksheets are the sheets on which the Auditor writes a complete running record of the session from beginning to end, page after page, as the session goes along.

A Worksheet is always foolscap, 8 x 13 inches, written on both sides and each page is numbered, back and front, top center of page.

This is so an Auditor can say, “Now the R/S occurred on page 25,” which saves a lot of time. Further it gives the proper number of pages the session went.

The Worksheet is written in two columns. The Auditor writes down the left-hand column and then down the right-hand column.

CONTENT OF WORKSHEET

The most important parts of the session to be noted are:

- A. When the TA goes up (on what?)
- B. When the TA goes down (on what?)
- C. When an F/N occurs (on what—any cog?)
- D. When VGIs occur (on what?)
- E. When BIs occur (on what?)
- F. How the process ran (what commands are being run?)
- G. Reads

TA and time notations should be made at *regular* intervals throughout the session.

When a process reaches EP—write in the pc’s cognition, circle the F/N and whether or not it was indicated, note the pc’s indicators, the time and TA.

When Two-Way Comming a subject it is essential that all items (terminals, statements, etc) that read are so marked on the worksheets—LF, LFBD. All reading items are circled in green after the session.

R/S items, Ethics situations, Ser Facs and Evil Purps are marked, after the session, by ringing them on the W/S with a red pen.

SHORTHANDING

Auditors usually develop a system of shorthandening the session actions being done, so that session speed is not hampered by Admin.

For example, the repetitive process:

Recall a change
Recall a no-change
Recall a failed change

is run as a bracket (the pc is given the first command, then the second and then the third and then the first and then the second, etc).

The first command can be abbreviated to 1, the second to 2, and the third to 3.

The W/S therefore would look like:

12.32 2.8
a

failed

(note that each word of the command is cleared before clearing the command as a whole)

change

no-change

recall (F/N)

1.

cleared

2.

cleared

3.

cleared

12.49 2.6

1. Mother went on holiday

2. at school

3. didn't sell bike

1. moved to new house

2. etc.

After the session when the commands are written out in full on the Auditor's Report Form, the numbers are again noted so that the C/S can refer to them.

WHATEVER SYSTEM OF ABBREVIATION IS USED BY THE AUDITOR, THE WORKSHEET MUST COMMUNICATE TO THE C/S WHAT ACTIONS WERE TAKEN DURING THE SESSION.

LEGIBILITY

Worksheets should be written legibly. They are never recopied.

The Auditor should always read over his W/sheets before turning in the folder to the Case Supervisor and if any words or letters are missing or cannot be read, they should be put in block print, in red.

Example:

TOTALLY ← (red)
want to get ~~totally~~ well
 ↑
(illegible word)

This can be overdone, to the extent that it is almost sarcasm. At the most it should just run into one or two corrections to a page. If the Auditor is having to correct the page more than that he should learn how to write rapidly and legibly. See HCOB 3 Nov 71, C/S Series 66, "Auditor's Worksheets", which also appears as Auditor Admin Series 15 and comes next in this series.

NECESSITY OF WORKSHEETS

It is a CRIME to give any session without making an Auditor's Report (i.e. actual W/S taken at that time) or to copy the original W/sheets after the session and submit a copy instead of the real reports.

Assist Reports that use only Contact or Touch Assist are written after the session and sent to HGC Admin to be filed in the pc folder. The pc is sent to the Examiner after an assist.

Auditor Admin Series 15

C/S Series 66

AUDITOR'S WORKSHEETS

A very fast way for a C/S to do himself in is to fail to insist on GOOD LEGIBLE HANDWRITING.

When a C/S has auditors who can't write well and rapidly, he gets misunderstood words when he tries to read the worksheets.

One temporary solution is to make the auditor block print the word in red above each hard to read word. Some auditors go to an extreme of block printing the whole WIS.

The more permanent solution is to have Auditors in Cramming practice writing WELL and CLEARLY no matter how slowly and then, maintaining the same clarity, speed it up. The auditor after many such practice sessions winds up writing clearly and fast. This can be increased until an auditor can write clearly as fast as people talk.

The occasional headaches a C/S might get are not from the restim of the case he's studying but are from the words on W/Ses he can't make out.

If a C/S does not insist on both block print clarification *and* auditor writing practice, he will wind up not reading worksheets and may even get foggy about certain cases.

A remedy is to go back to the first folders not understood and get the words clarified and then keep this C/S Series HCO B IN.

L. RON HUBBARD
Founder

PS: In the 19th Century secretaries wrote beautiful copperplate longhand faster than a man could talk. So don't say it can't be done.

Auditor Admin Series 20R

MISCELLANEOUS REPORTS

A Miscellaneous Report is a report such as an MO Report, a D of P Interview, an Ethics Report, a Success Story, etc, which is put in the pc's folder and gives a C/S more information about a case.

It is the responsibility of HGC Admin to see that Miscellaneous Reports get into the folder.

It is the Auditor's responsibility to enter these details in the Folder Summary.

D OF P INTERVIEWS

D of P Interviews are always done on a meter, and the report from the interview is filed in the folder.

DECLARE?

When a person goes to Declare? and through lines, the Exam Report, Attestation and Success Story are stapled together and go into the folder. The fact is noted in the Folder Summary.

MIS-DECLARE

A pc who will not Declare? or who does not have F/N VGIs on a Declare? examination is not sent through to Certs and Awards.

The folder is sent through to the Senior C/S or Qual Sec and any outnesses are located and the C/S and Auditor get cramming.

The folder is then sent back to the C/S and the HGC to handle.

The fact of a mis-declare is noted in red on the Folder Summary.

Corrective actions on persons sent incorrectly to Declare? are rapidly handled with no delay to the pc as he is Red-Tagged.

CRAMMING ORDERS

Tech Cramming Orders are written in *duplicate*. The original goes direct to the Cramming Officer *and* the second in the pc folder.

By leaving a copy in the folder the corrective actions given an Auditor can be viewed.

When the folder arrives at a Senior Org the Flub Catch System can be activated on the C/S as well as the Auditor.

References: HCO B 6 Oct 70 C/S Series 19, "Folder Error Summaries"
BPL 4 Sept 72 "Cramming Admin & Lines"
BTB 12 Dec 71R C/S Series 69, "Mandatory C/Sing Checklist"

MEDICAL OFFICER REPORTS

A pc goes to the MO via the Examiner. The Pc Examiner makes a carbon copy of any Medical Exam Report and gives it to the MO and gets the original to Tech Services quickly.

This must get into the folder so the C/S does not order a major action done on a sick pc.

While the pc is on MO lines, reports from the MO get filed in the folder.

The pc when going off MO lines goes to the Examiner and the "now well" Exam report goes over to Tech Services who puts it in the pc's folder.

References: Tape 4 Mar 71, "Short Conference of the C/S Policy and Tech Lines"
Flag Ship Order 259, 3 Mar 71, "Current C/S Policy"

ETHICS REPORTS

When an Auditor finds an Ethics Situation he should mark it and circle it in red after the session. The pc is not necessarily turned in because a pc cannot be tried on his auditing, it's illegal, but the Auditor should make mention of it on his Auditor's C/S.

If it is a serious Ethics Situation that affects others, then it is the Auditor's responsibility to report it.

The Auditor would make out the report with a carbon copy. He marks it

"SESSION KNOWLEDGE REPORT
NON-ACTIONABLE ON (pc's name)"

and makes out the report. Both copies are left in the folder. The C/S initials the one for Ethics and sends it on. The other stays in the folder.

Sometimes one finds another person's offences than the pc's in getting off withholds. These when serious should be reported to Ethics for investigation.

Pcs *can* be sent to Ethics (i.e. for PTS handling, Court of Ethics for refusing to answer an Auditing Question, etc, etc) but the following rule applies:

**THERE IS NO DIRECT ROUTING OF PRECLEARS TO THE ETHICS OFFICER
EXCEPT THROUGH THE CHANNELS OF THE QUALIFICATIONS DIVISION.**

When the C/S decides to send the pc to Ethics, he marks a small goldenrod card "ETH", clips it to the folder and sends the folder to the Examiner.

The Examiner checks over the folder, and calls pc in via Qual I&I for an Examination. *If folder not okay, it is returned to the C/S with appropriate Cramming Orders.*

If all is *correct* the Examiner sends the pc direct to Ethics.

If not, pc is routed *back to the HGC and the Examiner or Cramming Officer writes up the required Cramming Orders.*

When pc has finished his Ethics Cycle he is routed back to the Examiner and is returned to the HGC via Qual I & I.

It is *D of P's* responsibility to keep a tension line in with Ethics to make sure the Ethics cycle is completed and the pc is returned to Tech lines.

If the pc is returned to HGC lines for a PTS situation to be handled by auditing, a small yellow card is clipped to the outside of the folder by *the C/S* until the pc finishes the PTS R/D.

All data about such actions are filed in the folder, *including a copy of the Ethics Officer Interview notes.*

It is the responsibility of HGC Admin to see that Conditions Orders and Ethics Orders that affect the preclear's auditing progress get put in the pc's folder for the C/S to see.

Cases undergoing Ethics actions, Comm Evs, amends projects or low conditions should not be audited until the Ethics matter is cleared up and complete. It only louses up their cases to audit them when under such stress.

Pcs in lowered conditions should be encouraged to work out of the condition and when they reach Emergency the auditing may be resumed.

Details of these Ethics cycles should be entered by the Auditor in the Folder Summary.

EXAMINER'S 24 HOUR RULE

A flubbed session is visible at the Examiner.

Regardless of the worksheet or report, any session ending with Bad Indicators, above 3.0 TA or below 2.0 with no F/N or an ARC Break needle, a Stage 4 needle, a rock slam, a stuck needle, still or a dirty needle independent of TA position indicates a non-optimum session.

When an Examiner sees any one of these following four manifestations in a pc after a session:

1. Non-optimum TA position (above 3, below 2).
2. Non-optimum needle (ARC Brk needle, Stage 4, rock slam, stuck, still or dirty).
3. Bad Indicators as per HCOB on BIs.
4. Non-optimum statement from pc, critical, hostile, belittling, sad, etc.

The Examiner applies the 24 Hour Rule.

This Rule is:

ANY GOOFED SESSION MUST BE REPAIRED WITHIN 24 HOURS.

The reason for the rule is that occasionally, particularly when a person has had a sickly life, physical illness will key in after a session goof.

Such are purely C/S or auditing flubs.

A C/S flub consists of gross violations of case programming.

Auditing flubs consist of corny things like running a Rud but no F/N, failure to flatten a Chain, bad TRs, auditing over out-ruds, chopping the pc before full End Phenomena is attained.

Evaluation or even chatter after the session can upset a pc that ended session on F/N VGIs.

IN ALL CASES as per I to 4 above the EXAMINER paper clips a RED CARD on the outside of the FRONT COVER OF THE FOLDER and marks on it THE DATE AND HOUR of the Examination as well as places the EXAM REPORT in the folder, the Examiner logs it in his log in RED BALLPOINT.

The EXAMINER must see that the C/S receives this folder as soon as possible.

The C/S gives total priority to C/Sing it and it is given priority in auditing that C/S.

The pc may even be asked to wait if it can be done in the next hour or two.

THE FASTER THE FLUBBED SESSION IS REPAIRED THE EASIER IT IS TO REPAIR.

Sessions which are left unrepaired for more than 24 hours occasionally find the pc physically ill. If repaired quickly or at least within 24 hours no physical reaction results.

The illness will be a key-in of illnesses the pc often had before any auditing. All the flubbed auditing does is key it in, it itself makes no one ill.

If you check folders of ill pcs you will find usually a long period of no-auditing or a flubbed session a few days before the onset of the illness.

Pcs who have not been properly programmed but have been audited on random this or that instead of Progress, Advance and Class and Grade Chart to fully completed grades are the most likely to become ill.

Penalty for violation of the 24 Hour Rule is loss of a day's stats for the division, the day being that day when the unrepaired flub occurred and subtracted at the time the flub is found.

If a flubbed session is found hidden and not disclosed the division loses all its stats for that week.

This action is important.

If C/Ses and auditors made no flubs whatever they would really be getting top results on pcs.

EXAM 24 HOUR RULE

(Additional Information)

When it comes to light that a pc has roller coastered despite an F/N at session end and at Examiner's and if neither Tech nor Qual makes any effort to remedy, then the matter becomes a High Crime.

Example: If a pc at the Examiner's F/Ns and yet within a few hours returns for a second Examination with a complaint which does not F/N, then the 24 hour rule applies.

If the Tech C/S ignores it and no repair is done within 24 hours by Tech or Qual, both lose their stats for that day.

If the matter continues unhandled the matter becomes a High Crime.

HIDDEN FAILURES

If due to failure to repair or handle session errors or failure to complete a major action, a pc becomes ill or unable to work, and if no effort is made by Tech or Qual to handle, the matter becomes a High Crime under

HCO PL 7 Feb 65, reissued 15 June 1970, "Keeping Scientology Working" (see Note at the beginning of that Policy Letter), and

HCO PL 7 Mar 65, OEC Volume 1, page 550, No. 3 Crimes: Placing Scientology or Scientologists at risk.

In such a case a Comm Ev must be convened and having fixed the cause of neglect and the persons responsible may, in addition to any fines or penalties, cost Tech and Qual all stats and bonuses for a reasonable period following the occurrence as set by the Comm Ev and as refundable by the divisional personnel from future pay.

THE RED TAG LINE

(Corrections in this type style)

Ref:	HCO PL	8 Sep 70RA	Examiner's 24 Hour Rule
	HCO PL	13 Jan 71	Exam 24 Hour Rule
	HCO PL	20 Jul 70	Cases and Morale of Staff
	BTB	6 Oct 71R	C/S Series 65R Auditing of Staff & Public

There is a precise line for handling Red Tags which must be put in and maintained.

A Red Tag is a large red card placed on the outside front cover of a Pc folder which indicates that a REPAIR SESSION must be done within 24 hours. *An FES may be called for but does not waive the 24 hr rule.*

A Red Tag is placed on the front of a folder by the Pc Examiner, C/S, Senior C/S or Qual Sec for one or more of the following reasons:

- A. No F/N at Exams after a session, word clearing, product or post purpose clearing or Why Finding or 3 May 72 PL or PTS Check.
- B. Roller-coaster bad exam report within a few hours of a session.
- C. Pc ill within a few days of any major case action, or word clearing, product or post purpose clearing or Why Finding or 3 May 72 PL or PTS Check.
- D. Flunked Declare of any major action or Grade, accompanied by a BER.

This pertains to staff and students as well as HGC Pcs.

The Red Tag Line is handled in the following manner:

1. PC RED TAGS, AS PER A—D ABOVE.
2. EXAMINER PAPER CLIPS A RED TAG TO THE EXAM FORM, LOGS THE EXAM IN THE EXAMS LOG BOOK IN RED AND BODY ROUTES (OR GETS IT BODY ROUTED BY QUAL PAGE) THE EXAM FORM INTO THE HANDS OF THE DTS FOR IMMEDIATE HANDLING. THE DTS NOTIFIES THE D OF P.

3. If red tagged after a session the Auditor is expected to take the Pc back into session for the appropriate correction list. If this has been done yet the Pc remains red tagged the Auditor must immediately write up the session for the C/S. The DTS in this case verifies that one or the other of these actions is occurring.
4. The D of P is responsible for seeing that an Auditor is assigned to the Pc.
5. The DTS is responsible for seeing that the folder gets to the C/S and that *all* necessary arrangements are made to get the Pc and Auditor into session as rapidly as possible.
6. The C/S is responsible to see that the folder is immediately C/Sed *and* the Auditor corrected. He puts the exam Red Tag on the folder.
7. Once the folder is C/Sed the DTS ensures that the session takes place.
8. After the session is given and Pc is now F/Ning, the Auditor, Pc and folder revert to routine traffic lines. The C/S would remove the red tag at this point.
9. *ALL red tags must be seen by the Snr C/S preferably before the next session. This may not always be possible in orgs where the Senior C/S has other duties.*

In no case should this take more than 24 hours and, in most, it should be handled the same afternoon or evening.

None of this, of course, relieves the Auditor (even if taken off the case by reason of retread, retrain or higher class Auditor needed) of his responsibility for seeing that *his* Pc is rapidly handled and F/Ning again.

As the HGC operates on Intensive Auditing, bit and piece repair actions would be disruptive of scheduling and delivery. For that reason an Org would do well to invest in a Qual Emergency Review Auditor to handle Word Clearing and Why Finding flubs, assists for loss, illness and injury, student review, etc. In that case the DPE and Qual Page would substitute for D of P and DTS in the line. The HGC would handle its own red tags as part of their intensives.

In order to ensure no red tagged Pcs get lost, on lines and not handled in 24 hours the following must be done:

Pc Examiner sends a daily list at the end of each day of all Red Tags to the Cramming Officer and Senior C/S. For the C/S this provides a confirmatory line against his own marked Red Tags for the day. For the Cramming Officer, this provides data on who should be sent for Cramming. If those persons do not report for Cramming within 24 hours, the Cramming Off must report to the Dir Correction or Qual Sec for investigation and handling. The Examiner must verify that any Red Tagged Pc has been handled within 24 hours or report any not handled to the Senior C/S, Qual Sec and Dir I & R for investigation and handling. When handled he crosses off the Red Tag in his log.

AOs AND SOLO

All the above applies to Solo Auditing also and a Red Tagged Solo Auditor must keep himself available for a Cram, Solo Repair C/S or Review Session. His folder would get immediate C/S attention.

Regardless of whether the Red Tag was handled or not any non-F/N session logged by the Examiner is included in the Senior C/S F/N Percentage stat. The Pd Comps bonus for F/N percentage remains as per the Pd Comps BTB.

A D of P is well advised to have an Auditor on standby who is not assigned regular Pcs, to handle Red Tag repair sessions when the Auditor cannot complete the action, through retread or retrain required.

The Qual Sec and Senior C/S are responsible for getting this line in and drilled and the Qual Sec is responsible for maintaining it. A wall chart should be made up for drills and Chinese School.

PENALTY

“Penalty for violation of the 24 Hr Rule is loss of a day’s stats for the Division, the day being that day when the unrepaired flub occurred and subtracted at the time the flub is found”—HCO PL 8 Sep 70RA, EXAMINER’S 24 HOUR RULE.

If all on the line assume their share of responsibility for the well-being of Pcs, the penalty should never occur.

C/S Series 107
Cramming Series 20
Qual Corrective Actions on OTs Series 1

**AUDITOR ASSIGNMENT POLICIES,
CRAMMING ASSIGNMENT POLICIES**

(Ref: HCOB 23 Jul AD19 AUDITOR ASSIGNMENT POLICIES)

We have long had the rule that auditor-pc assignments must be by comparable grade and class. Reasons for this are given in HCOB 23 Jul AD19, which also sets the policy: "Therefore it is policy not to assign an auditor whose grade and class is less than that of the pc."

This policy becomes even more important when handling assignments on pre-OTs, because if the auditor were of lower case grade it would prevent the pre-OT from communicating to the auditor and the auditor not being aware of or trained on the materials of the level of case of the pre-OT, would not be able to audit that pre-OT and would risk disaster for the pre-OT as well as himself.

As Cramming Officers fly ruds in Cramming and as some of the Cramming and Qual corrective actions can get into a person's case, this policy is extended to apply to Cramming Officers, as well as auditors.

Therefore the following policies apply:

1. IT IS POLICY NOT TO ASSIGN AN AUDITOR WHOSE GRADE AND CLASS IS LESS THAN THAT OF THE PC. (HCOB 23 Jul AD19)
2. IT IS POLICY TO ASSIGN ONLY GOOD PROVEN AUDITORS TO GOOD AUDITORS. (HCOB 23 Jul AD19)
3. IT IS POLICY NOT TO ASSIGN NON-OT CRAMMING OFFICERS TO OTs AND THE CRAMMING OFFICER MUST NOT BE OF LOWER CASE LEVEL THAN THE OT.
4. A PERSON WHO HAS BEEN AUDITED ON NED FOR OTs, MAY ONLY BE AUDITED OR CRAMMED BY A NED FOR OTs AUDITOR.

The terms "auditor" and "Cramming Officer" in these policies above are intended to include anyone acting in the capacity of an auditor or Cramming Officer and the fact that one is not a trained or posted auditor or Cramming Officer does not permit one to do auditing or Qual corrective actions in violation of the policies above.

These policies apply to any auditing actions and to Qual corrective actions such as Why Finding, metered debug actions, False Data Stripping, Confessionals (whether done in Qual or

HCO), Clay Table auditing and these policies are intended to apply to any new Qual corrective actions released in the future.

Subjective questions and metered actions which lead into a person's case are not OK on OTs. Such actions are not advised on lower level cases either, unless these have been C/Sed for and are part of standard tech. Otherwise this type of action is only a covert way of auditing the person while not calling it auditing and is forbidden in C/S Series 29 CASE ACTIONS, OFFLINE. Nonstandard actions or interviews done by untrained persons whose TRs and metering are out are especially forbidden, as detrimental to cases. Definition of "subjective": "Consultation with the preclear's own universe, with his mock ups, and with his own thoughts and considerations." (COHA, page 167) "Recall, think, remember or return on the time track processes are subjective." (HCOB 2 Nov 57RA)

There are actions which are OK to do in Cramming. These are not related to the person's case. They relate to his post and performance. These are *objective* questions or actions. Definition of "objective": "Of or having to do with a material object as distinguished from a mental concept, idea or belief." (Dictionary) "Means here and now objects in PT as opposed to 'subjective'." (HCOB 2 Nov 57RA) Questions or actions by the Cramming Officer which are objective and pertain to the person's post, the materials which cover his post or that he is studying, clearing words misunderstood, hatting actions and post or Product Debugs (provided subjective questions are not asked on OTs) are all OK. The most usual and successful cramming action is simply to take the materials or text that covers the subject of the cramming order and word clear and cram those materials. This is always safe and OK to do. (The only other caution is not to give verbal data, nor to evaluate or invalidate or throw the person's ruds out while doing the cram!)

It is not that OTs are difficult to handle. To the contrary OTs are far easier and faster to handle than non-OTs. But OT cases must be handled as OT cases or the person doing the handling risks invalidation of case level of the OT and could get into aspects of the case that he/she knows nothing about and is thus incapable of handling or repairing. OTs when handled on the appropriate auditing and Qual corrective actions for their state of case by auditors, Cramming Officers and C/Ses who are qualified to do so, make very fast and spectacular gains.

Auditor Admin Series 22 RA

FOLDER ERROR SUMMARIES

Ref: HCO B 6 Oct 70 C/S Series 19,
"Folder Error Summaries"
TAPE 7 Apr 72 Ex Dn Tape 3,
"Auditor Administration"

*(NOTE: Data for this revision was taken from LRH's written
reply to a letter from former Tech C/S ASHO.)*

TWO METHODS OF FESing

There are two methods of FESing a case. The first is a full detailed FES where one goes back and picks up and notes down all past errors on the case so that a Progress and Advance Program can be done.

Where the C/S is interested in handling the case more rapidly, the procedure is to go back to where the Pc was running well and come forward, looking for the goofs to repair. This would also apply in the case of a Pc who, already repaired, was goofed in further auditing. These are different FES methods—a Progress Program and Repair C/Sing. Neither one includes Admin errors or errors which do not affect the case.

THE FLAW

Folder Error Summaries (FESes) which do not show clearly whether an error has been corrected later in the Pc's auditing, can lead the C/S into over-repair. Such a flaw lessens the usefulness of an FES.

NEW FORMAT

To handle the above flaw, the layout and contents of the FES have been revised. The following is the format of the FES which should be on legal or equivalent size pink or red paper according to availability.

One can see at a glance that all the noted errors have been corrected. A blank space in the right-hand column would indicate that the error had not yet been fixed.

This column is filled in by the FESer as he goes along, or by the Auditor as correction is done. For example a note: "Chronic high TA" would be marked off by the Auditor "C/S 53RJ to F/N List. TA normal" with the date, when that action had been completed.

Any error noted in the correction of the case IS NOTED AS A NEW ERROR ON THE FES.

THE FES IS KEPT IN PT BY THE AUDITOR AS ERRORS ARE NOTED.

The C/S will use the FES as a help in further programming of the Pc.

It is kept in the inside back cover of the Pc's folder.

	(PC NAME)	(GRADE)	(PAGE NO.)
DATE	C/S AUDITOR	ERROR	HANDLING DONE
22/10/71	C/S: J. Boggs Aud: R. Gulch	Drug R/D attested with no objective processes.	Objectives run to EP 23/9/72.
22/10/71	C/S: Same Aud: Same	Reading item on Drug R/D lists not run due to "No Interest".	All "No Interest" items completed. Attested 14/10/72.
17/ 1/72	C/S: Same Aud: B. Bingo	Pc rollercoaster, Sick. Interview shows PTS to mother.	Handled as Type "A" 18/1/72 PTS R/D completed 19/11/72.
18/10/72	C/S: Same Aud: Same	Sick after list: "W/W WOULD EAT APPLES" Item: "A GOURMET".	Corrected w/ L4BR 19/10/72.

WHAT IS WANTED IN AN FES

An FES should contain those points of error in the auditing of a case which might cause the Pc future difficulty or may require handling. These would include rundowns left unflat or with missing steps; signs of unflat grades; absence of any of the parts of EP, noting what was being run; any chronic problem or difficulty; by-passed EP on any rundown; illness or ethics trouble after an auditing cycle.

The most important points which can bog a case are well covered in the C/S Series, with which an FESer should be familiar. In particular, anyone doing an FES must know very well C/S Series 1, 2, 15, 19, 29, 30, 34, 38, 59. He must be able to recognize and pick out any of the case errors described in the above issues.

Anyone doing FES work must be thoroughly familiar with the GF40XRR. Anything on the case which falls under any of the headings on this list should also be clearly noted in the FES, "Pc was a member of black magic society" could be the thing which is stalling her case.

WHAT ISN'T WANTED

An FES is NOT the same as an FS. The 2 must not be combined or confused.

Opinions have no part in FES.

Do not note admin errors in an FES.

Any error which is not part of the case or its auditing has no place on the FES.

It can be the subject of a chit or separate report.

Examples of this would be: "Auditor did not fill in the Folder Summary" or "Pc not being audited on any program" or "No-one C/Sing the folder".

Statements which R/Sed, and Ev Purps given off by the Pc are not usually noted in an FES. THE FACT THAT HE DOES R/S, OR DOES GIVE OFF EV PURPS MUST BE NOTED ON THE LEFT-HAND EDGE OF THE PC'S TOPMOST PROGRAM.

R/S statements (which the Pc said that R/Sed when he said it) and Ev Purps are noted on the Pgm in red ink and may be noted on the FS.

Dianetic chains that did not go to EP, flows not run, are noted on a Full Flow Table, not on the FES. The fact that a series of items was run F1 only, or did not EP, *is* noted on the FES, to be marked off when corrected.

A C/S and his FES unit work closely together and the C/S would usually apprentice these people until they can very rapidly and accurately FES even a thick folder.

FES CHECKLISTS AND SUMMARY

References:

HCO B 24 Jan 77 TECH CORRECTION ROUND-UP
HCO B 20 Dec 80 PREREQUISITES FOR SOLO AUDITOR
COURSE AND ADVANCED COURSE LEVELS

In order to program a pc for optimum progress up the Grade Chart, a Case Supervisor must have an accurate picture of the full state of case of any pc. The C/S must know of any errors on such things as Int, L & N. drug handling, missed levels, etc., and thus relies on the FESer to provide him with a clear, summarized view of a case.

There are several FES checklists which exist for use by C/Ses to ensure full setups have been done for the major levels. These checklists are filled out by FESers and used by the C/S in programming the case.

FES checklists for starting or continuing Dianetics and Expanded Grades are attached to this HCOB. Copies of this HCOB for Flag have an additional FES checklist attached for starting or continuing L-10, 11 or 12. These are "Flag Only" rundowns.

The appropriate FES checklist is filled out before starting the major action. Each requisite is checked off on the list to ensure they have all been met. The completed checklist is then attached to the inside left cover of the pc folder.

These checklist6, properly used, will prevent pcs from being audited on skipped gradients and will ensure pcs are being fully set up for their next level.

FES SUMMARY

In addition to these checklists, an FES summary form is also attached to this HCOB.

This is an additional tool for C/S use.

The purpose of the FES summary is to provide the C/S with a list of key items he needs to know to properly program a case.

The FES summary is filled out by the FESer and it is stapled to the top of the completed FES. Whenever a new FES is done or updated, the summary is also redone or updated.

Items on the summary which are important to handle and should be brought to the attention of the C/S are marked or circled in red. The dates when actions were completed or repaired would be filled in on the summary form as well.

The C/S can then easily refer to the FBS or Folder Summary to get the exact details as needed.

(corrected and reissued)

C/S Series 62

KNOW BEFORE YOU GO

A C/S may and *should* know exactly what is wrong with a case.

When he “knows” by hunches or intuition and does not bother to confirm or make a wider effort, he can miss the case entirely.

Example: C/S says to himself—I know what’s wrong with Joe. His wife. So I’ll C/S “O/W on your wife”.

Some of the time the C/S will be right. This gives him a win and confirms him in sloppy C/Sing. He does not bother to know before he C/Ses.

A C/S who gets a low percentage of cracked cases and a low percent of F/N VGIs at Examiner usually fails to “know before he goes”. He just goes, which is to say he just writes programs and C/Ses without finding out enough about the case.

A skilled C/S may very well be able to figure out exactly what’s wrong with the case. That’s his job. But how does he find out anything about the case at all?

The answer is very simple. So simple it gets missed. **THE C/S GETS DATA ON THE CASE.**

How does he do this?

The broadest, most used answer to how to know is prepared lists. These have all sorts of questions on them that read or don’t read. There are *lots* of these lists beginning with the famous PC Assessment Form. There are all sorts of lists. An end product of any list is **DATA ON THE PC ONE USES TO PROGRAM AND C/S THE CASE.**

The next answer to how to get data is lists prepared by the C/S himself and which are assessed by the Auditor.

Another answer is 2-way comm on questions written by the C/S. “What do you consider hasn’t been handled on your case?” is a jewel which gives you the hidden standard to List and Null and run Who or what would have ___ to BD F/N Item and O/W on the item found. But there are dozens more. “How do you feel about your family?” “R Factor: The C/S is concerned about your saying your case sags after wins in auditing. Could you tell me exactly what happens and what your history has been on this?” There is no limit to such questions. And, if taken from what the pc says to Examiner or from auditors’ comments on Worksheets, they will usually F/N. But mainly they give *data*.

When regular actions fail, there is always the D of P. “D of P to Interview Richard Roe and find out what he’s trying to do in session. Also how he looks, mannerisms, etc.”

Data, Data, Data. Now you have a picture of this case.

COMBINED ACTION

Usually, by prepared lists issued or from C/S prepared lists, the C/S finds and *gets* handled by the auditor in the same session much of what is wrong. This combines finding out with handling.

Any prepared list carried to F/N on each read (Method 3) or the indicated action done will give case gain. Maybe it's all the case gain one could ask for.

But such reads even if F/Ned and the text in the Worksheet give the C/S new data about this case.

BROAD SHOOTING

Even if he now KNOWS, the C/S does not narrowly shoot at one target. He gives alternatives as well in his C/S.

Example: C/S knows pc is concerned about F/Ns. He does not necessarily just write "Prepcheck F/Ns". Instead the C/S writes "Assess Auditors, Auditing, Dianetics, Scientology, F/Ns, Processing, false reads. Prepcheck each reading item, taking largest read first." This gives a broader band, more chance of hitting the button needed.

There are many ways to do this. Example: You "know" it is a misdefined word. You don't C/S "Find the misdefined word". You write, "Assess Method 3 and Handle the Word Clearing Correction List". For you see, the session might also have been run over an out rud.

EVALUATION

To abruptly C/S everything the pc has just said is a Q and A. But worse, it can lead to evaluation.

LITTLE FLAGS

Pc Remarks are like little Flags that may signal a much deeper deposit of aberration. Only the little flag shows. "I don't like women," can uncover a whole background. "I keep getting this pain in my side" opens the door to a whole chain of operations and one to be done next week!

But by the broad rule, the C/S doesn't dive at it. He says "Pc has pain in side. I . C/S 54."

Not "List the somatics in his side". But a whole coverage of accidents, illnesses. *One* will also have a side pain as a result. "Appendicitis Operation" is enough to give anyone a pain in the side if never audited out!

TAGGING CASES

A C/S who sees a case is thick foldered and not well tags the case "Resistive". There are 7 resistive cases listed in the Class VIII material. For this the C/S has "GF40 Expanded Method 3" and then handles the lists and engrams indicated in it in his next C/S.

If *this* doesn't handle, the case is in an out Ethics situation that should be looked into.

The C/S mentally tags the easy ones and the tough ones. The tough ones he plays on the Resistive Cases side.

The C/S can also find an auditor considers a fast case a bad case when it is just a fast case.

PRIMARY RECORD

The primary record is the pc's folder. When the case does not run well it can be assumed that the case is

- (a) Resistive
- (b) Errors have been made in auditing.

These two assumptions are valid in all cases which do not easily resolve. They are both valid because the case, being resistive, was running poorly, was hard to audit and C/S earlier.

From the folder, from prepared lists, from C/S's own additions to prepared lists, from C/S's own prepared lists, from 2wc on questions and from D of P Interviews one can get ENOUGH DATA TO INTELLIGENTLY PROGRAM AND C/S A CASE.

All this may seem very obvious. BUT, in word clearing the most Common C/S error has been to fail to order a Word Clearing Correction List done. Instead one reads, "Correct the last word found". This misses that the whole thing may be being done over a withhold or ARC Break. It might be another word entirely. So a C/S who does this risks the wrong target. He is not C/Sing broadly enough.

Also one sees a repair or life program consisting of two or three special processes and without any lists at all.

One also sees a program which seeks to handle several things the C/S "knew" were wrong followed by "8. C/S 53, 9. GF 40X, 10. C/S 54." Having gone, this program then seeks to find out. It's quite backwards.

Thus the C/S who goes before he knows is going to have an awful lot of no F/Ns at the Examiner.

The watchword is KNOW BEFORE YOU GO.

C/S Series 1

AUDITOR'S RIGHTS

(Revised to update and delete the O/R list
and add Auditing Over Out Ruds.
All changes are in this type style.)

AUDITOR RESPONSIBILITY FOR C/Ses

An auditor who receives a Case Supervisor direction (C/S) of what to audit on a pc is NOT discharged of his responsibility as an auditor.

THE AUDITOR HAS A SERIES OF RESPONSIBILITIES THAT ARE PART OF EVERY C/S HE GETS TO AUDIT.

ACCEPTING THE PC

No auditor is required to accept a specific pc just because the pc is assigned to him.

If an auditor does not believe he can help that particular pc or if he dislikes auditing that particular pc the auditor has a right to refuse to audit that pc. The auditor must state why.

The Case Supervisor, Director of Processing or Director of Review, nor any of their seniors, may not discipline the auditor for refusing to audit a particular pc.

An auditor who refuses to audit his quota of hours or sessions is of course subject to action.

Thus refusing to audit a particular pc, so long as one is not refusing to audit other pcs, is not actionable.

"I do not wish to audit this pc because_____. I am willing to audit other pcs," is the legal auditor statement in the matter.

Some pcs get a bad name with some auditors, some don't appreciate the auditing, some conflict with a particular auditor's own personality. There are such instances. It does not mean certain pcs cannot be helped by others.

It is also true that an auditor who dislikes a pc may not do a good job so the rule also has a practical side to it.

One auditor disliked young men and did a bad job on them. Another disliked old ladies and chopped them up in session. One pc had messed up several Scientologists and couldn't find anyone to audit him at all.

We are not auditing people to make amends to the world.

Thus an auditor has a right to reject or accept the pcs he is given.

ACCEPTING A C/S

When the auditor gets a C/S to do on a case and if he thinks it is not the correct thing to do he has the right to reject the C/S for that pc and require another one he can agree to.

The auditor does *not* have the right to start doing a C/S and change it during the session except as noted below.

The auditor may NOT C/S in the auditing chair while auditing the pc. If he has NO Case Supervisor at all the auditor still audits from a C/S. He writes the C/S before session and adheres to it in session. To do something else and not follow the C/S is called "C/Sing in the chair" and is very poor form as it leads to Q and A.

STALE DATED C/S

A C/S that is a week or two old or a Repair (Progress) Pgm that is a month or two old is dynamite.

This is called a "Stale Dated Pgm" or a "Stale Dated C/S" meaning it is too old to be valid.

It should have been done sooner. The pc of last week when the C/S was written may have been well and happily employed but a week later may have headaches and reprimand from the boss.

It is dangerous to accept a Repair (Progress) Pgm if it is old.

The auditor who sees his C/S is old and sees the pc has Bad Indicators is justified in demanding a fresh C/S giving his reasons why.

A program written in January may be completely out of date in June. Who knows what may have happened in between.

Use fresh C/Ses and fresh Pgms.

Stale Dates only occur in poorly run backlogged Divisions anyway. The real remedy is reorganize and hire more and better auditors.

ENDING THE SESSION

When the C/S he has is proving unworkable *during* the session, the auditor has a right to end the session and send the folder to the C/S.

Ending the session is totally up to the auditor.

If the auditor just doesn't complete an action that was producing TA and could be completed it is of course a flunk. Such a case is just not running a basic engram the one more time through that would bring the TA down and give a proper end phenomena. This and similar actions would be an auditor error.

The judgement here is whether or not the auditor's action is justified in ending the session.

Even though he may have made an error, the auditor cannot be blamed for the *ending* off of the session as that is totally up to him. He can be given a flunk for the error

AUDITING OVER OUT RUDS

Auditing a pc on something else whose ruds are out is a MAJOR AUDITING ERROR.

Even if the C/S omits “Fly a rud” or “Fly ruds” this does not justify the auditor auditing the pc over out ruds.

The auditor can do one of two things: He can Fly all ruds or he can return the folder and request ruds be flown.

The DIANETIC AUDITOR is not excused from auditing over out ruds and in an HGC must be specially cautioned not to do so but return the folder for a new C/S. Better still he should learn to Fly ruds.

INABILITY TO FLY RUDS

If an auditor cannot get a rud to F/N, cannot get any rud to F/N, he is justified in starting a Green Form.

The auditor solution to no F/N on ruds is to do a GF whether the C/S said to or not.

This is an expected action.

It is understood the auditor would use Suppress and False in trying to Fly ruds.

SESSIONS FAR APART

When a pc has not had a session for some time, or when a pc gets sessions days apart, RUDS MUST BE FLOWN. Otherwise the pc will get audited over out ruds. This can develop mental mass.

Optimum session scheduling is a series of sessions or a whole program done in a block of sessions close together. This prevents the world from throwing the pc's ruds out between sessions.

Giving sessions far apart barely keeps up with life. The auditing time is absorbed in patching life up.

Rapid gain gets above life's annoyances and keeps the pc there.

UNREADING ITEMS

When an item the auditor has been told to run doesn't read on the meter, even when the auditor puts in Suppress and Invalidate on it, the auditor MUST NOT do anything with the item no matter what the C/S said.

It is expected he will see if it reads and use Suppress and Invalidate on it. And if it still doesn't read he will be expected NOT to run it.

LISTS

When an auditor whose C/S told him to list “Who or what _____” or any list question finds that the list question does not read, the auditor MUST NOT list it.

When doing a list ordered by the C/S it is assumed that the auditor will test it for read before listing and that he will NOT list an unreading question. (A read is an actual fall, not a tick or a stop.)

LIST TROUBLE

When an auditor has trouble doing a list and getting an item it is expected he will use a Prepared List like L4B to locate the trouble and handle it.

As it is very hard on a pc to mess up a list it is expected the auditor will handle the situation then and there with no further C/S directions.

HIGH TA

When the auditor sees the TA is high at session start yet the C/S says to “Fly a rud” or run a chain, the AUDITOR MUST NOT TRY TO FLY A RUD and he must not start on a chain.

Trying to bring a TA down with ARC Brks or ruds is very hard on a pc as ARC Breaks aren’t the reason TAs go up.

Seeing a high TA at start the Dianetic auditor or Scn auditor up to Class II does *not* start the session but sends the folder back to the C/S and for a higher class auditor to do.

Seeing a high TA at start the Scientology auditor (Class III or above) (a) checks for exteriorization in a recent session and if so the session is ended and the C/S is asked for an “Interiorization Rundown”; (b) if the pc has had an Interiorization Rundown *the auditor asks the C/S for permission to do a “C/S Series 53” or a Hi-Lo TA assessment or whatever the C/S indicates. The Int RD may have been (usually is) overrun and needs rehab or correction and it is usual to check it—it is included in a “C/S 53” and a Hi-Lo TA.*

These actions are expected of the auditor even when not stated in the C/S.

GOING ON HOPING

When a case is running badly session to session the LAST thing you do is go on hoping, either in auditing or C/Sing.

“Let’s try _____”, “Then this”, “Then this”, is not going to solve the case.

YOU GET DATA. You can get data by a White Form (Pc Assessment Form). You can get data from a GF fully assessed (Method 5). You can get data by 2-way comm on various subjects. You can have the D of P interview and get answers. You can even ask his mother.

You look for case errors. You study the folder back to where the pc ran well and then come forward and you’ll find the error every time.

DO NOT JUST GO ON SESSION AFTER FAILED SESSION HOPING. That’s pure idiocy.

You get data! from prepared lists, from life, from the pc, from the folder.

FIND THE BUG!

Ah, good Lord, he is a Pinkerton Agent sworn to secrecy! He does yoga exercises after every session. He was tried for murder when he was 16 and nobody has run the engram of it.

Various auditors ran the same engram chain four times

An auditor ran Int RD twice.

After Power she had her baby and nobody ran the delivery.

He doesn't like to talk but is a "Grade Zero"!

A dozen dozen reasons can exist

An auditor does NOT let a C/S C/S hopefully. He refuses the C/Ses until a Folder Error Summary is done and the bug found.

THINGS DONE TWICE

By carelessness the same rundowns can be called for twice and done twice or even more.

A Folder Summary inside the front cover must exist and must be kept up.

Over it there must be a program on which the case is being audited. But just because it's covered, never neglect entering a session and what was run on the Folder Summary (FS).

If Hold it Still is ordered, see if it was run before.

Don't let major Rundowns be done twice.

DIANETIC ITEMS must NEVER be run twice. Dianetic lists must not be scattered through a folder. Bring them together and keep them together and being brought forward.

COPY

Don't copy Dianetic lists or worksheets from notes or items from lists.

Keep all admin neat and in the original form.

Copying makes errors possible.

RUDS GOING OUT

When the ruds go out during the session the auditor recognizes the following:

Pc Critical = W/H from auditor

Pc Antagonistic = BPC in session

No TA = Problem

Tired = Failed Purpose or no sleep

Sad = ARC Break

Soaring TA = Overrun or Protest

Dope Off = By-passed F/N or not enough sleep

No Interest = Out Ruds or no interest in the first place.

An auditor who isn't sure what it is but runs into trouble with the pc (except on lists which he handles at once always) is smart to end off the session quickly, write down the full observation and get it to the C/S.

The auditor who is an old hand and knows what he is looking at as per above scale (and the C/S the C/S would give) handles it promptly.

Pc Critical = W/H = pull the W/H.

Pc Antagonistic = BPC = assess proper list (such as L1C) and handle.

No TA (or case gain) = Problem = locate the problem.

Tired = no sleep or Failed Purpose = check which it is and handle.

Sad = ARC Brk = locate and handle, Itsa earlier Itsa.

Soaring TA = O/R or Protest = find which and handle. Such an O/R is usually by rehab.

Dope Off = lack of sleep or BP F/N = check on sleep, or rehab F/N.

No Interest = no interest in first place or Out Ruds = check for interest or put in ruds.

List goes wrong = BPC = handle or do L4B or any L4 at once.

Ruds won't fly = some other error = assess GF and handle.

The auditor has no business trying to do the C/S given when it collides with and isn't designed to handle any of the above.

If the previous session disclosed such an error and this session C/S was designed to handle and doesn't, the auditor should end off and the next C/S should be "2-way comm for data".

CASE NOT HANDLED

When the auditor or the Examiner collides with a pc who is asserting his case has not been handled, there should not be a new set of actions based on little data but the auditor should end off and the C/S should order a "way comm on what hasn't been handled".

The auditor should not at once take this up as part of any other C/S.

In other words an auditor doesn't change the C/S to a 2-way comm on something not called for by C/S.

MAJOR ACTIONS

An auditor should *never* begin a major action on a case that is not "set up" for it.

As this can occur during a session it is vital to understand the rule and follow it. Otherwise a case can be bogged right down and will be hard to salvage as now a new action to repair has been added to an unrepaired action. Now, if the auditor starts a major action on a case not "set up" we get 2 things to repair where we only had 1 as the major action won't work either.

Repair = patching up past auditing or recent life errors. This is done by prepared lists or completing the chain or correcting lists or even 2-way comm or prepchecks on auditors, sessions, etc.

Rudiments = setting the case up for the session action. This includes ARC Brks, PTPs, W/Hs, GF or O/R listing or any prepared list (such as L1C, etc).

Set up = getting an F/N showing and VGIs before starting any major action. It means just that—an F/N and VGIs before starting *any* major action. Such may require a repair action and rudiments as well.

Major Action = any—but any—action designed to change a case or general considerations or handle continual illness or improve ability. This means a *Process* or even a series of processes like 3 flows. It doesn't mean a grade. It is any process the case hasn't had.

Grade = a series of processes culminating in an exact ability attained, examined and attested to by the pc.

Program = any series of actions designed by a C/S to bring about definite results in a pc. A program usually includes several sessions.

The vast bulk of auditing errors come about because C/Ses and auditors seek to use a Major Action to repair a case.

It is a responsibility of an auditor to reject a C/S which seeks to use one or more major actions to repair a case that isn't running well.

The auditor must understand this completely. He can be made to accept a wrong C/S for the pc and even more importantly can in his own session make the error and mess up the case.

Example: Pc has not been running well (no real TA or had a grumpy Exam report). Auditor sees C/S has ordered a major action, not a repair by prepared lists, ruds, etc. The auditor must reject the C/S as he will be made to fail in session by it.

Example: Auditor gets a C/S, "(1) Fly a rud; (2) Assess LX3; (3) Run 3-way recall, 3-way secondaries, 3-way engrams on all // X items". The auditor can't get a rud to fly. Does the LX3. In other words he flunks by failing to SET UP the case. It could also go this way. Auditor can't get a rud to fly, does a GF, gets no F/N. He MUST NOT begin a major action but MUST end off right there.

It is fatal to begin any new process on the case designed to change the case if the case is not F/N VGIs.

The pc who starts processing for the first time and is surely not F/N VGIs must be *set up* by repair actions! Simple rudiments, life ruds, O/R list on life, even assessing prepared lists on life, these are repair actions. The pc *will* sooner or later begin to fly. Now at session start you put in a rud, get F/N VGIs and CAN start major actions.

So the auditor has a responsibility not to be led up a garden path by a C/S which orders a major action on a pc who isn't repaired or by not being able in session to get an F/N VGIs by repair.

The *only* exceptions are a touch assist or life ruds or the Dianetic assist all on a temporarily sick pc. But that's repair isn't it?

PROGRAM VIOLATIONS

When an auditor receives a C/S and sees that it violates the pc's program he should reject it.

The pc, let us say, is supposed to finish his Dianetic Triples but is suddenly being given a Group Engram Intensive. That violates the program and also the grade.

If the pc is running badly, a repair should be ordered. If not, the program should be completed.

Example: An effort is being made to get the pc to go backtrack. This is a program containing several major actions which probably consists of several sessions. Before this

program is complete and before the pc has gone backtrack, the C/S orders “(1) Fly a rud, (2) 3 S & Ds”. The auditor should recognize in 3 S & Ds a major action being run into the middle of a program and reject it. The correct action is of course the next backtrack process.

GRADE VIOLATIONS

A pc who is on a grade and hasn't attained it yet must not be given major actions not part of that grade.

Example: Pc is on Grade I. C/S orders a list having to do with drinking. It is not a process on that grade. It could be done after Grade I is attained and before Grade II is begun. The C/S is incorrect and should not be accepted.

ABILITY ATTAINED

Now and then before the full major action is complete or before all the grade processes are run, the pc will attain the ability of the grade or the end phenomena of the action.

This is particularly true of valence shifters or Interiorization Rundowns and can happen in grades.

The auditor should recognize it and, with the F/N VGIs always present at such moments, end off.

I know of one case who had a huge cog about Interiorization on Flow I Engrams and was pushed by both C/S and auditor to do Flows 2 and 3 who bogged so badly that it took a long while—weeks—to straighten the case out.

The ability itself gets invalidated by pushing on.

On the other hand this should never be taken as an excuse. “I think he cogged to himself so we ended off.” It must be a real “What do you know!” sort of out-loud cog with a big F/N and VVGIs and directly on the subject to end off a major action or a program or a grade before its actions are all audited.

REVIEWING REVIEWS

An auditor who gets a C/S or an order to repair a case that is running well should reject doing the action.

I have seen a case ordered to repair who had Ext Full Perception Doing Great. The repair bogged the case. The case then got running well again but a second C/S ordered a new repair which of course bogged it. Then major actions were done. The case was again repaired and rehabbed and became ok. Three times the auditor should have said NO.

FALSE REPORTS

The vilest trick that can be played on a pc is for an auditor to falsify an auditing report.

It may be thought to be “good Public Relations” (good PR) for the auditor with the C/S.

Actually it buries an error and puts the pc at risk.

INTEGRITY is a hallmark of Dianetics and Scientology.

Just because psychiatrists were dishonest is no reason for auditors to be.

The results are there to be gotten.

False reports like false attestations recoil and badly on both the auditor and pc.

OVERTS ON PCS

When an auditor finds himself being nattered or critical of his pcs he should get his withholds on pcs pulled and overts on them off.

An auditor who goes sad is auditing pcs over his own ARC Break.

An auditor worried about his pc is working over a Problem.

Getting one's ruds in on pcs or C/Ses or the org can bring new zest to life.

AUDITORS DON'T HAVE CASES

In the chair no auditor has a case.

If breath shows on a mirror held to his face he can audit.

Faint afterwards if you must but see that the pc gets to the Examiner with his F/N.

Then get yourself handled.

“WHAT HE DID WRONG”

An auditor has a right to know what he did wrong in the session that went wrong.

Most often a sour session occurs only when the rules and data in this HCO B have been violated.

But an auditor's TRs can go out or his listing and nulling is in error.

After a session that went wrong somebody else (not the auditor) should ask the pc what the auditor did. This sometimes spots a false auditing report. But it also sometimes is a false report by the pc.

In any event, the auditor has a right to know. Then he can either correct his auditing or his know-how or he can advise the C/S the pc's report is untrue and better repair can be done on the pc.

Savage action against an auditor is almost never called for. He was trying to help. Some people are hard to help.

Not only does an auditor have the right to be told what was wrong but he must be given the exact HCO B, date and title, that he violated.

Never take a verbal or written correction that is not in an HCO B or tape.

Don't be party to a “hidden data line” that doesn't exist

“You ruined the pc!” is not a valid statement. “You violated HCO B page_____” is the charge.

No auditor may be disciplined for asking, “May I please have the tape or HCO B that was violated so I can read it or go to Cramming.”

If it isn't on a tape, a book or an HCO B IT IS NOT TRUE and no auditor has to accept any criticism that is not based on the actual source data.

“If it isn't written it isn't true” is the best defense and the best way to improve your tech.

These are the rights of the auditor with relation to a C/S. They are all technical rights based on sound principles.

An auditor should know them and use them.

If an auditor stands on these rights and gets beaten down he should put all the facts before his nearest OTL or SO ship as something would be very wrong somewhere.

Auditing is a happy business—when it is done right.

C/S Series 2

(C/S Series 1 is "Auditor's Rights",
HCO B 24 May 1970, not so marked.)

PROGRAMMING OF CASES

Every action taken on a Case by a CASE SUPERVISOR (or an auditor doing his own C/S actions) should be part of a definite outlined PROGRAM for that case.

PROGRAM Definition—A program is defined as the sequence of actions session by session to be undertaken on a case by the C/S in his directions to the auditor or auditors auditing the case.

The master program for every case is given on the Classification and Gradation Chart issued from time to time. The earliest of these Charts was 1965 followed by 1st December 1966 followed by 1st January 1968 followed by 1st December 1969. The reissues of the Chart are done to improve the communication of the data on the Chart. The program factor has not much changed since its earliest issue. Tapes about this Chart were made for the SHSBC at its first issue and of course remain valid. The processes called for on the Chart are all part of the SHSBC or for upper levels part of the SH and AO Confidential materials. From time to time they are reissued but they remain standard and have been so since the first issue of the Chart.

The Chart and its materials have now and again been neglected or disregarded and THE NEGLECT HAS RESULTED IN FIELD FLAPS AND DOWN STATS.

Omitting this gradient of processes not only stalls cases but results in a case manifesting out-grade phenomena.

A pc must attain the full ability noted on the Chart before going up to the next level of the Chart.

Telling the pc he has made it is of course evaluation.

The outnesses which have occurred surrounding this Chart are hard to believe. They consist of total abandonment of the Chart, degrading and losing all its lower grade processes, feeding a pc at Dianetic level data at Class VI and telling him, who has not made Dianetics yet, he is now Clear, cutting down all processes from the Chart bottom up to IV to be able to do them in 21/2 minutes, neglecting all levels up to OT V and then trying to put in a few lower grades and sending on to OT VI, having the pc after one trivial session attest all abilities at once and many other errors.

This is crazy driving. If a bus were driven along a road this way it would soon be wrecked and back where it started but in an ash heap.

Genius in C/Sing is normally required only when some former driver wrecked the thing instead of driving it right in the first place.

To Case Supervise one has to accept the following facts:

1. Dianetics and Scientology work.
2. The subjects are serious subjects not experimental toys.
3. The basics and fundamentals are stated early in the period of development and have not changed.
4. The “newest and latest” is usually a recovery of basics and better statements of them.
5. The purpose of the subject has not altered and continues to be the attainment of ability and freedom for the individual.
6. That things which were true early in the subjects are still true.
7. That the mind responds on a gradient of improvement not suddenly like a bomb explosion.
8. That the Classification and Gradation Chart and *all* its processes and steps IS the basic program of *any* case.
9. That all other programs are efforts to get the pc or pre-OT back on the basic program.
10. That there is no hidden data line and that the materials and procedures are refined mainly to facilitate use and communication of them.
11. That auditing is for the pc, not the org or the auditor.
12. That major processes are done to improve the case.
13. That repair is undertaken to eradicate errors made in auditing or the environment which impede the use of major processes.
14. That a case has to be programmed by the C/S to get it advancing as it should have been in the first place on the Classification and Gradation Chart.
15. That a C/S is not being called upon to develop a new Chart for the case but only to get the case back on the basic Chart and get it done.

3 PROGRAMS

There are then 3 types of Programs:

1. THE program laid out in the Classification and Gradation Chart. (Called The Basic Program.)
2. Repair Programs to eradicate case mishandling by current life or auditing errors. (Called a Set-Up Program.)
3. Major actions to be undertaken to get the case back on the Class Chart from wherever he has erroneously gotten to on it. (Called a Return Program.)

It has been a very common C/S action to disperse away from a program laid out. This has been happening ever since the first issue of the Class Chart and has been a principal source of trouble for C/Ses.

This happens in several ways:

1. Not knowing the importance of the Class Chart.
2. Not knowing basics.
3. Falling for SP propaganda that “we don’t use that now”, “the material is old”, “it’s only background data”, etc, that deteriorates what one *does* know and could use.
4. Failure of auditors to give good sessions and do the Usual required in a session.
5. Abandonment of the C/S’s own Repair or Return Program—usually because of false auditor reports or operating on insufficient data from the pc.

The correct way to go about all this is to:

- A. Repair the case thoroughly with minor actions like GFs, prepared lists, ruds, two-way comm.
- B. Acquire adequate data on the pc.
- C. Complete any C/S Return Program begun.
- D. Get the pc back on the Class Chart without any processes of the grade skipped.
- E. Run the case on the Class Chart.
- F. Repair any departures or errors made in life or auditing.
- G. Get the pc back on the Class Chart.

DISPERSAL

Not following any program is a complete exercise in non-sequitur (means one step does not follow the last but is different and unrelated).

In giving a pc process after process that are not related to each other and follow no Repair Program or Return Program is non-sequitur in the extreme.

If processes were remarks one would get a sequence of processes given the pc sounding like this. “The submarine just went by so we will order a hundred tons of bread. There wasn’t any beer so birds are seldom seen. The dance was very fast so we fixed the carburetor. He has very long hair so we decorated his father’s tomb.”

“Give pc Scn Triples then do his Dianetics then fix up his hidden standard,” would be a series of crazy non-sequitur C/Ses. Nothing is connected to or proceeds from anything. That would be a dispersed program for sure.

It actually happens horribly enough. Study a Class Chart and then look through some old folders. At once, the sequence of processes ordered sounds like “The submarine just went by so order a hundred tons of bread.”

Such C/Sing has no cause and effect in it. A person totally ignorant of basic cause and effect gets “Pc nattery. Run Dianetics.” “Pc’s case not advancing. Do Grade 0.” The cause of the pc condition is not understood. A nattery pc has withholds. A case not advancing has problems. That’s real actual basic tech (see Auditor’s Rights HCO B for the table). This data is over 15 years old at this writing, is part of proper Academy courses and the SHSBC and is even in Class VIII materials. The reasons for the pc’s behavior or trouble are not mysterious reasons never revealed. They are all very well given in course materials.

Here is an actual case, a folder I examined of a pc who is now in trouble and needing a Repair and Return Program.

Pc was an accident prone (person who is apparently dedicated to having accidents). Very low aptitude score (about 30). Had been skipped over almost the entire Class Chart and given Power.

To handle accident proneness was given CCHs. This cured it.

Had Exteriorized so was given Interiorization Rundown without a 2-way comm session.

Pc subsequently developed bad somatics. (Dianetics was never flattened or completed.)

A quarter of an inch of Examiner's reports wherein the pc was asking for help or medicine to get rid of somatics was then put one by one into the folder.

Despite this the "C/S" saw "Va" on the pc's folder and ordered R6EW.

More Examiner's calls collected.

The pc ran one item, making one mark on a worksheet and attested R6EW.

More Examiner's reports collected, pc reporting self ill.

"C/S" seeing R6EW attested ordered pc to Clearing Course.

Pc did one brief session attested Clear.

More Examiner's reports into folder, pc in pain and now in Ethics trouble.

"C/S" ordered pc to OT 1.

Pc spent 35 minutes on OT 1 in terror of it, hastily attested, had 5 accidents in 3 days.

Folder sent to me as a "baffling case".

So the correct actions now have to be taken.

1. Repair pc with every list known to Man or Beast to get off BPC collected in these overwhelming levels.
2. Repair pc in errors in current life.
3. Return Program the pc by running simple things, 2-way comm, to give pc some wins in actual case gain by maybe handling by 2-way comm minor this life or childhood upsets with family, maybe putting in ruds on some early subject that turns up.
4. Put pc back on the Class Chart TO COMPLETE THE INCOMPLETE GRADE (Dianetics) to its full end phenomena as per Class Chart.
5. Bring the pc on up the Class Chart using all processes for each grade and honestly attesting each grade in turn.

It's all a shame because the pc had a lose on *status*. She wanted to be Clear and OT, was actually on it and never walked up the stairs to get to it.

PROGRAM NECESSITY

One can see from all this the NECESSITY of working by program on a case.

Even when one starts an honest program for the case one can get thrown off of it and begin to do something else.

If the pc goes exterior, of course, one has to handle by Interiorization Rundown before the case can be audited at all. But that's no reason to then skip all the grades! A pc can go exterior at any point. Thus it must be handled when it occurs. But that does not mean anything happened to one's program or the Class Chart. Exterior or Interior, a pc unflat on Dianetics (not attained the ability marked on the Class Chart) is unflat on Dianetics!

And a pc who is unflat on Dianetics will have out lower grades.

Jumping processes on the Class Chart set the pc up to fall on his head later. An "OT VI with problems" is really just an unflat Grade I. And until Grade I is flattened to permanent Ability Attained on the Class Chart, he remains an unflat Grade I.

A C/S who gets wound up in this sort of skipped everything and made nothing, of course has an awful mess on his hands. He can feel as lost as Hansel or Gretel. But waiting to get covered up by leaves is for the birds.

If one finds the pc off the road, the thing to do is return the pc to the road at the point he didn't walk it AND THERE ARE NO SHORTCUTS FOR THE MIND.

The utter despair and insane barbarism psychiatry descended into was patient lost, psychiatrist lost, patient crazy, psychiatrist into insane sadism.

So maybe the first lesson a C/S really has to learn is:

THERE IS A KNOWN ROAD OUT.

There is no shortcut, it has to be walked every inch of it.

And therefore the greatest enemy of the C/S is the SP who says "that's all old" "we don't use that now" "that's just background data" and thereby obscures the actual road.

And another enemy is the pc who screamingly demands to be put up to Clear at once so he won't have this awful headache!

STEADY ON

Thus the measures a C/S takes to hold a steady course will profit him greatly in the end with good solid gains for the pc.

As the pc should no longer be a total humanoid by Class IV the lower grade gains are the most important of all.

A C/S who puts a Class Chart into every folder he handles is doing a wise thing. Even if it's big, clumsy, hard to handle, it is at least thorough.

If on it he marks in red things the pc has gotten to falsely and if in green things the pc made from the bottom walking an honest road, he knows where he is at! Seeing the whole training cycle half of the Chart continue blank means that much more ignorance and trouble for the pc in making his gains stably.

If the C/S put his Repair Program on a *Red* sheet in the folder and dated it out session by session to be audited until it was DONE and all flubs made in doing it also marked in and repaired, the C/S wouldn't lose his place in the book. For a red sheet stands out in amongst

other folder papers. A red sheet with a “folder error summary” on one side of it and the C/S’s Repair Pgm on the other keeps the pc’s progress located. When that Red sheet is done it should be signed by the C/S as DONE which retires all errors to that point.

A bright *blue* sheet giving the C/S RETURN PGM properly dated also gives one a chance to not get steered off. A new Red Repair Pgm sheet fixing up errors occurring in doing the Blue sheet can be pushed into the folder but the Blue sheet can be resumed again.

The Blue sheet completed should find the pc back on the Class Chart.

A list of processes run tallied up by the auditor each session keeps the C/S from repeating a process and gives him the Dn items used singly to be done triple.

While all this Admin may seem time consuming, lack of it mounts up into valuable AUDITOR TIME being thrown away.

C/Sing is a road. It has milestones. When the pc didn’t pass one honestly he got lost.

There’s no reason for pc, auditor and C/S to *all* get lost.

The C/S has an exact road to hold to, return to and repairs to get done so the pc can get moving on the Return Pgm and the Class Chart which IS the road.

It took too many trillions to find this road for it to be neglected. For if the C/S neglects it people won’t arrive anywhere but get lost as well.

The right idea is the road.

C/S Series 3

**SESSION PRIORITIES
REPAIR PGMS
AND THEIR PRIORITY**

When a pc has had an incorrectly run session, one that did not wind up with F/N Cog VGIs, it is often harmful to delay the repair session.

Most cases of pcs becoming ill or having accidents stem from

- A. Major Errors in Programming the case.
- B. Delay in Repairing a goofed session.

There have been several examples recently of pcs ending session with an unflat process after which the repair session was delayed for several days or even weeks and the pc came down with a cold or had some minor accident or got in Ethics trouble.

Thus Repair has priority.

PROGRAM ERRORS

Under A. a major error in programming lays the case open to having goofed sessions and exposes the auditor to some risk of making errors. The reason for this is that the pc gets overwhelmed or bogged simply by not coming up through all the processes of each level on the Class Chart.

Let us say the pc is trying to make it on R6EW Solo Study but keeps having *Problems* with it and can't get on with it.

The uninformed C/S orders a Student Rescue Intensive. This is all right as far as it goes. But a more searching look into the records is likely to find that this pc had exactly 10 minutes on the whole of Grade I!

The Out-Program is far more likely to play havoc with this pc than just problems. He is possibly in doubt as to case gains and his reality is poor and yet he is being exposed to the highly restimulative materials of an upper level to which he has never climbed.

A direct effort now to put in problems Grade I also puts an auditor at risk.

Instead of merely being able to run problems as he would have been able to earlier, the pc is in some sort of overwhelm and is nervous or scared or believes *he is* at fault some way. He will look everywhere but in the right direction.

The answer to an incorrectly programmed case is, of course, a repair program and the sooner the better.

Such repair programs must be very light. Prepared lists to find charge, 2 way comm on various subjects, take a walk. And such a repair program **MUST NOT**

- (a) Let the pc dive into rough heavy charge, or
- (b) Be overdone to total boredom.

SELF AUDITING

Some pcs “self audit”, which is different than Solo auditing since it has no meter or session and is just wandering about the bank (some overwhelmed pcs self audit in Solo wandering all over the place).

This is a symptom of session or study or life overwhelm.

It requires a Repair Program.

EP OF REPAIR

The End Phenomena of a Repair Program is the pc feeling great and feeling he can get Case Gain.

A good, clever Repair Program produces what badly programmed cases would consider total recovery.

It is a good idea to have the pc attest to

“I have had definite gains from the recent sessions and feel great.” Or with a hearty “Yes” to “Does Scientology really work for you.”

Oh, you say, how could *that* much gain come from just repair?

Well, Repair is almost always being done on a pc who was overwhelmed by life or auditing in the first place.

Life we know has a way of overwhelming people.

When a person is overwhelmed by life, an auditing error is more likely to occur.

When Incorrect Programming occurs, then any auditing on it can add up to more overwhelm which adds up to more errors.

CONSISTENT COMPLAINT

The pc whose Examiner forms routinely have a sour note in them should not be continued on the Class Chart or any Return Program.

He is a Repair pc and nothing else.

If you get the idea that any lower level can produce large changes in a person you will see that lower level processes are being mis-programmed if they are producing only the gains of Repair actions.

The sign of mis-programming is most often seen in Examiner reports where the pc’s comments or demands are “for more auditing” or “Got to have a session” or “wasn’t really handled” or sour comments or cracks.

When you examine some folders you will see some pc has more than his share of this.

That's a sign to LIGHTLY DO IT.

The wrong way to go is plunge!

I have seen a C/S order 2 major actions in one session after a bad session on a pc in a DESPERATE effort to reach the case!

The exact reverse is required.

Repair the case by:

- I. Patch the session goof.
- II. Use prepared lists for locating session charge in past sessions.
- III. Use prepared lists and two way comm on items found.
- IV. Get ruds in on periods of the pc's life.
- V. Get ruds in on parts of the pc's body that are ailing.

This is not a model Repair Program but only a sample of one. It isn't a model because the pcs have different things wrong with them.

But you could blindly do all of the above and still wind up with case gain and a win for a staggering pc.

Then you would do a Return Pgm to get the pc back on the Class Chart. But not until then.

I have seen a pc stagger along for years getting auditing (of a sort) while still retaining a set characteristic or somatic who when handled with *very* mild processes had a case gain and then returned to the Class Chart HAVE A COMPLETE CHANGE OF THE CHARACTERISTIC.

EFFECT SCALE

A C/S can get into the lower end of the effect scale and feel that desperate that he begins to throw away every major process he can order on the pc, even 2 or 3 per session! But the direction of win was LIGHTER not heavier action.

Sort of like "this sparrow keeps getting bowled out with rocks. Let's try real artillery on him!"

If one is trying to make a better sparrow he should lay off the rocks and lighten it up, not step up the barrage! Some cotton tufts might do wonders! Might even make the sparrow reach!

The basic trouble with ALL past efforts at "psychotherapy" and "religious uplift" and "self betterment" and healing was:

The more desperate the situation the more desperate was the remedy used.

The right answer is:

THE WORSE THE CONDITION THE LIGHTER THE REMEDY REQUIRED.

Dealing with psychotics in an institution you would find that “Hello” pleasantly said would do more for cases than all the drug firms and electric shock machines and brain icepicks have ever done in all their existence.

Well if it applies to psychotics, it applies surely to people that aren't.

Simple interest and listening can crack an awful lot of overwhelmed cases that would only bog further if not first repaired.

BPC

The exact BPC of the last session handled is always the first action in Repair Programming.

This is the exact BPC. An unfinished Dianetic Chain is BPC. So get it handled. The wrong list item is heavy BPC so get it handled.

And get this BPC off now! Now! Don't wait 2 days or a week. Repair it on priority.

OVERWHELM

Don't always blame the auditor. He may goof and he shouldn't. But if his procedure and TRs were reasonably correct, how come the pc got a tangled session.

If the auditor has a usually good record and you get a goofed session, then realize the pc is a bit troublesome and was not running standardly.

Of course this doesn't excuse student goofs or plain lousy auditing. But when the auditor does all right, then the case must be in an overwhelm of some sort.

So we have 2 variables here for C/S decision.

x1-Auditor fault?

or

x2-Pc in an overwhelm?

There is a decision here to be made by the C/S. It's resolved by folder inspection and knowledge of the auditor.

All right—Auditor usually okay. That eliminates x1. So we have a pc in overwhelm? Look over past record of pc. Runs okay. That cancels x2.

So we repair that *one* session and its goof and continue with the Return Pgm or the Class Pgm whichever the pc was on.

What if x1 showed lots of bad sessions by the auditor and x2 showed pc usually okay. Investigate auditor's auditing and send to Cramming for TRs, etc.

What if x 1 Auditor okay and x2 pc has lots of trouble?

NOW we get to an overwhelmed pc.

You see how it's sorted out by the C/S?

From inspecting two things only the C/S can decide what's to be done now. If the decision isn't clear-cut get the auditor looked into and the pc asked about the auditor's actions *and* his own case. If his "case has lots of trouble" skip worrying the auditor further unless that discloses other errors on other cases.

Okay. So the pc is running badly. So he's in an overwhelm.

Inspection will reveal one or more of three things.

1. Case didn't come up the Class Chart right.
2. Case being run in a temporary Life overwhelm.
3. Former errors not repaired.

1 and 3 may both exist.

The correct C/S action is a Repair Program in any case. If 3 is true you engage in that first.

If 2 is true you use Repair actions on life as the second part of your Repair Program.

If 1 is true you will also have a Repair Program to lay out first in any event and just include it in.

Write it all up on a red sheet and follow the sheet session by session as you C/S.

You will now have handled the overwhelm if your Repair Pgm is good and fully done and not brushed off at the first sign of VGIs in the pc at Examiner.

If 1 is true you now do a Return Pgm. This of course is what processes you're going to get run to fill in the processes that haven't been run to get the Class Chart all done and the pc back up to where he was. He has run *some* after all.

INGENUITY

The genius and bright ideas of a C/S are not exerted with major processes ever. Only the Interiorization Rundown after the pc exteriorized or when it is discovered he has and possibly a Student Rescue or a sickness assist are the exceptions to this.

One doesn't Repair with major processes! That's like "The engine wouldn't run so he hit it with a sledge hammer."

Ingenuity is required of a C/S only in the area of repair.

Locating BPC is rather standard in repair action.

But fishing up the case by 2 way comm and little prepchecks and getting in ruds on things or times require a certain flair in a C/S.

I recall one pc who was staggering on engrams, couldn't talk to people and was a general mess. The wrong action would be to run a major grade like Comm on the pc. The pc had to be handled with 2 way comm of *some* sort. Yet she couldn't talk auditing or anything else fluently enough about anything to clear anything up. I asked her what would it be awful to say and she went scarlet, hemmed and hawed and blurted out "Swearing!" So we 2 way commed about it! What a torrent! Recovered completely. Recovered so well she thought that was all there was to auditing and was immensely gratified!

Another pc had lost his job and couldn't face any part of it. I 2 way commed what his job had consisted of. He promptly went out and got another.

Sometimes it takes a lot of sessions and a lot of reading worksheets to find subjects.

BUT IF YOU CAN PERSUADE AUDITORS TO MARK EVERY FALL AND BD IN 2 WAY COMM SESSIONS you will find exactly where the pc is hung up and ordering 2 way comm on that and related things does wonders.

But all repair isn't two way comm. Touching things is a very good way to handle repairs. Cars, typewriters, airplanes, or book pictures thereof or anything or any picture of anything also works.

The "touch assist" is a little fragment of a whole array of "touch".

Cases sometimes flinch at remembering anything at all. The answer is touch things and "Reach and withdraw" is part of this and is used in repair.

TRs (all of them 0 to IX) are so good in repair action that they actually cure 50% or more drug addicts when run for weeks in groups such as on the HAS Course. It is even reported that when run on people still on drugs over periods of weeks they come *off* the drugs of their own volition. TRs are a fine unlimited repair action.

Prepared lists run on all sorts of things can repair a whole life.

"Look at me. Who am I?" is used in a Repair Session when a pc goes too wild to audit. (An exception is list errors when the only remedy is a fast L4A.)

Mimicry is actually too high for Repair.

Repair is its own subject.

The only demand in Programming it is to give priority to recent auditing errors or recent life catastrophes.

Many cases obviously have to begin processing with a Repair. Life overwhelm is the reason. And an S & D can be far too steep.

Next to skimming lower grades, Repair is too little used.

And it is needed. And the urgency is to not let things go too long unrepaired.

Auditor Admin Series 9R

THE PROGRAM SHEET

A program by definition is "the sequence of actions, session by session, to be undertaken on a case by the C/S in his directions to the Auditor or Auditors auditing the case" LRH, and is "any series of actions designed by a C/S to bring about definite results in a pc." LRH (References: HCO B 23 August 1971, C/S Series 1, and HCO B 12 June 1970, C/S Series 2.)

THE THREE TYPES OF PROGRAMS

There are three types of programs:

1. *THE PROGRESS (REPAIR) PROGRAM*: to eradicate case mishandling by current life or auditing errors. This program is written on a red sheet.
2. *THE ADVANCE (RETURN) PROGRAM*: major actions to be undertaken to get the case back on the Class Chart from wherever he has erroneously gotten to on it. This program is written on a blue sheet.
3. *THE BASIC PROGRAM*: laid out in the Classification and Gradation Chart.

(*Note*: An Exp Dn Program is written on a green sheet.)

The Program consists of the pc's name, the date, brief case notes of why the program is being written, and the actions numbered 1, 2, 3, etc to be done on the pc to bring about a definite result. The person writing the program prints his name at the bottom.

These Program Sheets are kept paper clipped on the inside of the Front Cover, earliest at the bottom to latest on top.

THE RESPONSIBILITY OF THE C/S

A C/S works at completing the program that is topmost. As each step of the program is completed it is ticked off marked "DONE" with the date.

When the whole program is done, it is marked "PROGRAM DONE (DATE)".

All flubs made in doing the program are marked in and repaired.

If while doing a blue (or green) program an extensive repair is undertaken then this is programmed on a red sheet and then this becomes the topmost program. The blue sheet should however be marked at the point it was left and can be resumed when the red one is done.

Any program retired because of new data about a case should be so marked with the date.

The auditor as C/S is responsible for marking off the programs as above.

EVIL PURPOSES AND R/Ses

Evil Purposes and R/S items are marked on the left-hand edge of the topmost program in red with the date and worksheet page number.

THE AUDITOR'S C/S

The Auditor's C/S is a sheet on which the Auditor writes the C/S instructions for the next session.

This is per C/S Series 25:

Full blank page.

Pc's Name (red)
Auditor's Name (red)

Date
Class of Auditor
required next session

(Session Grade) left blank

Auditor's comment (red) or think about the case if he wishes.

The next C/S

1. _____ Blue

2. _____ Blue

3. _____ Blue

4. _____ Blue

Auditor Signature (red)

The Auditor does not grade his own session. He leaves this blank.

BARRIERS TO STUDY

There are three different sets of physiological and mental reactions that come from 3 different aspects of study. They are three different sets of symptoms.

(1) Education in the absence of the *mass* in which the technology will be involved is very hard on the student.

It actually makes him feel squashed. Makes him feel bent, sort of spinny, sort of dead, bored, exasperated.

If he is studying the doingness of something in which the mass is absent this will be the result.

Photographs help and motion pictures would do pretty good as they are a sort of promise or hope of the mass but the printed page and the spoken word are not a substitute for a tractor if he's studying about tractors.

You have to understand this data in its purity—and that is that educating a person in a mass that they don't have and which isn't available produces physiological reactions. That is what I am trying to teach you.

It's just a fact.

You're trying to teach this fellow all about tractors and you're not giving him any tractors—well he's going to wind up with a face that feels squashed, with headaches and with his stomach feeling funny. He's going to feel dizzy from time to time and very often his eyes are going to hurt.

It's a physiological datum that has to do with processing and the field of the mind.

You could therefore expect the greatest incidence of suicide or illness in that field of education most devoted to studying absent masses.

This one of studying the something without its mass ever being around produces the most distinctly recognizable reactions.

If a child felt sick in the field of study and it were traced back to this one, the positive remedy would be to supply the mass—the object or a reasonable substitute—and it would clear it up.

(2) There is another series of physiological phenomena that exist which is based on the fact of too steep a study gradient.

That's another source of physiological study reaction because of too steep a gradient.

It is a sort of a confusion or a reelingness that goes with this one.

You've hit too steep a gradient.

There was too much of a jump because he didn't understand what he was doing and he jumped to the next thing and that was too steep and he went too fast and he will *assign* all of his difficulties to this new thing.

Now differentiate here—because gradients sounds terribly like the 3rd one of these study hang-ups, definitions—but remember that they are quite distinctly different.

Gradients are more pronounced in the field of doingness but they still hang over into the field of understanding. In gradients however it is the *actions* we are interested in. We have a plotted course of forward motion of actions. We find he was terribly confused on the second action he was supposed to do. We must assume then that he never really got out of the first one.

The remedy for this one of too steep a gradient is cutting back. Find out when he was not confused on the gradient, then what new action he undertook to do. Find what action he understood well. Just before he was all confused what did he understand well—and then we find out that he didn't understand it well.

It's really at the tail end of what he understood and then he went over the gradient you see.

It is most recognizable and most applicable in the field of doingness.

That's the gradient barrier and one full set of phenomena accompanies that.

(3) There is this third one. An entirely different set of physiological reactions brought about through—a bypassed definition. A bypassed definition gives one a distinctly blank feeling or a washed-out feeling. A not-there feeling and a sort of nervous hysteria will follow in the back of that.

The manifestation of “blow” stems from this 3rd aspect of study which is the misunderstood definition or the not comprehended definition, *the undefined word*.

That's the one that produces the blow.

The person doesn't necessarily blow on these other two—they are not pronouncedly blow phenomena. They are simply physiological phenomena.

This one of the misunderstood definition is so much more important. It's the make-up of human relations, the mind and subjects. It establishes aptitude and lack of aptitude and it's what psychologists have been trying to test for years without recognizing what it was.

It's the definitions of words.

The misunderstood word.

That's all it goes back to and that produces such a vast panorama of mental effects that it itself is the prime factor involved with stupidity and the prime factor involved with many other things.

If a person didn't have misunderstands his *talent* might or might not be present but his *doingness* would be present.

We can't say that Joe would paint as *well* as Bill if both were unaberrated in the field of art, but we can say that the *inability* of Joe to paint compared with the *ability* of Joe to do the motions of painting is dependent exclusively and only upon definitions—exclusively and only upon definitions.

There is some word in the field of art that the person who is inept didn't define or understand and that is followed by an inability to act in the field of the arts.

That's very important because it tells you what happens to doingness and that the restoration of doingness depends only upon the restoration of understanding on the misunderstood word—misunderstood definition.

This is very fast processing. There is a very swift wide big result obtainable in this.

It has a technology which is a very simple technology.

It enters in at the lower levels because it has to. This doesn't mean it is unimportant, it means it has to be at the entrance gates of Scientology.

It is a sweepingly fantastic discovery in the field of education and don't neglect it.

You can trace back the subject a person is dumb in or any allied subject that got mixed up with it. The psychologist doesn't understand Scientology. He never understood a word in psychology so he doesn't understand Scientology.

Well that opens the gate to Education. Although I've given this one of the misunderstood definition last it is the most important one.

**SUPERVISOR TWO-WAY COMM AND
THE MISUNDERSTOOD WORD**

*(From LRH taped briefing to Lt Bill Foster
14 June 71)*

Two-way comm where it has been described has been described for the use of an auditor, not a Supervisor of a Course.

Supervisors not knowing this then run around itsa-ing students.

They let the students itsa and they think they are going to get some place.

It's the most incredible scene that you ever heard of and the boom could go bust *only* on this one point. *I've got it narrowed down to this.*

Apparently no matter how many times the study tapes have been played, nobody has ever heard of them.

I watched a recent course run to find out how deep they would let the students struggle—how long it would stay bogged—and it would have stayed bogged from here on out !

And do you know what's out?

It's the study data tapes just that—and that's all that's out on a course.

So when *they* say "2-way comm the students" you'll find the Supervisors instantly start to itsa them and are using *auditor* 2-way comm on these courses. It doesn't belong on these courses.

I'll give you now the total dialogue of a Supervisor:

The Supervisor shows interest. There can be a little bit of chatter, like—"I see you've just completed. Great!"—something like that, or he shows interest—"How are you doing?"

Student replies—"Ah well, I'm doing all right."

Supervisor—"Now are there any words there in that, that you have misunderstood?"

Student—"No ... no...."

Supervisor—"Well what is the word that you didn't quite understand?"

Student—"Ah well . . . ah . . . this one."

Supervisor—”*Good*. Now look that word up.... Now what’s the word in the paragraph above that, where’s that? . . . Alright let’s look that up. Now use it in a sentence a couple of times and I’ll be back in a minute.”

He comes back, the student gives him the sentences for it and straightens it out and he sees the student’s got it.

That’s the 2-way comm of a Supervisor.

If a Supervisor does any other thing you’ve got a wrecked course. I’ve got the proof of it.

The way you teach a TR Course is you give the student the bulletin and you have him read it. You *don’t check the guy out on the bulletin, he just reads it*.

When you come back you say, “Alright, have you read it?”

“Yeah. I’ve read it.”

“What word *don’t* you understand on it?”

You will find things like HCO B and TR, and you get those *cleared up*, etc.

I am having some roaring success stories from FEBC students who are through this.

One had gone through the bulletin 10 times and had found words he didn’t know all 10 times, and he was all of a sudden finding new things on the bulletin that he’d never heard of before.

Another student had gone through it 20 times with the same result and they were doing fine and getting down to TRs and passing them.

On a TR Course you give them the bulletin and let them read it and you find what word they didn’t understand. That’s the routine.

Now that sounds so impossible—and it’s been on the study tapes for so long—that you wouldn’t believe that this thing is the key.

Do you know there were students there for 15 or 20 days until we started doing this, then all of a sudden there was a breakthrough and their enthusiasm started coming up.

They had been just going lose, lose, lose, out the bottom because Supervisors were letting them itsa.

Maybe Supervisors thought they were auditors.

They aren’t.

Neither are they supposed to give advice or tell students how—or ask them if they blinked or anything else.

The other thing they were doing was *only* emphasizing all the “can’ts”.

The students just went into despair.

This was because the Supervisors were inviting all kinds of itsa and criticizing and so forth.

You may say, “Gee! Everybody knows it’s a misunderstood word.”

Yeh—but they don’t use it.

Now I’ll give you another one.

I set up a test so that each student was brought up to the D of T who had a meter on his desk and he’d ask them if they had anything they misunderstood—and see if they got a read on the meter.

If it didn’t clear up at once he’d send them back to get the definitions and look the thing up and of course use the word in a couple of sentences and *then* if it didn’t clear up he’d send them to the word clearer and really let them get worked over because it goes way back.

They even found a student who had a misunderstood word clear back into his last life.

There wasn’t any other 2-way comm and no other interest and they just about blew the roof off with student stat points.

This is the action of a Supervisor and that’s *ALL* the action a Supervisor does—and he *can do that*.

The course has plenty of dictionaries and so on.

But, the main point is, it *is* the misunderstood word. This has been proven again.

On a TR practical course it’s the misunderstood word and the misunderstood action.

On other courses it’s just misunderstood words and misunderstood words and misunderstood words, one right after the other.

As fast as they clear this up—up the student’s production goes.

It’s painfully slow on some of them at first and I suppose the Supervisors have so many misunderstood words of their own that they just won’t key into doing this action and that’s what’s wrecking courses.

It’s elementary, and it’s the wildest discovery of all time but they don’t use it.

If it *is* used, your courses start running fast, your students start learning quickly *and* all *starts* going well.

Other course outnesses like Supervisors not giving anybody a pack or no one to give checkouts are all Administrative outnesses.

As far as actual Supervision is concerned it’s this other *line* of handling misunderstood words.

The second that line is in there are wins all over the place.

The second that line is out there is no delivery.

If auditors are goofing, then in their training they have not been made to look up the misunderstood word and a lot of itsa has gone on and people have evaluated for them. Then these auditors having made mistakes they never corrected with this tech, think they need something new to run on pcs, but they just wreck new tech too.

We are shooting for a target, using just this misunderstood word tech, of a reduction of time by about a third on all major courses.

Just using this misunderstood word tech. That's all.

If some student is a totally slow student, you can get him back to the first bulletin or book he ever read and make him get every word in it he didn't understand, and it will go up in a chain.

People on courses were being itsa'd to death.

SUPERVISOR TWO-WAY COMM EXPLAINED

(From LRH Lecture Tape 16/6/71
Briefing to Aides Council)

I don't think from the day they were spoken until now, anybody has understood or used "The Study Tapes".

This is the *only* piece of Technology that you *use* on a course.

There is no other teaching technology of any kind used on a course.

The 2-way comm HCOBs are *Auditor 2-way comm*.

The *Supervisor* has to know 2-way comm simply so that he can ask these burning questions:

"How are you doing?" (Not with a lot of student itsa.)

"Is there any word you haven't understood?"

"Look it up."

"Use it in a sentence a few times."

That's the *TOTALITY*. That's *all* there is to teaching a course as far as the technology goes.

It's contained in *the* few words *which I have just given you* and there's *no* other technology.

That's all there is to teaching a course because that's all that's wrong with students.

You can monitor it this way. You can watch a student's stats *day to day*. His stats are down today compared with yesterday's so you go over and talk to him. He says, "Yes. I had a hard night last night, up all night arguing with my wife," etc—which could go on for hours.

But the Supervisor says, "Now yesterday or today what word did you run across that you didn't understand?"

The meter gives a LF.

He says, "Yes! Well I didn't understand the word 'waffle-waffle'."

The Supervisor says, “Well let’s look it up and get it defined.”

The student says, “Well it wasn’t *that* word, it was the word before that.”

Supervisor, “Good—let’s get this looked up *and used a couple of times in a sentence.*”

The student does and he gets an F/N and it’s all fine.

His study stats go back up.

That’s *all* there is to it!

There are two ways to fail to communicate the tech. One is not to read the HCO Bs and the other is not to use the misunderstood word tech.

(Of course you can have no course and nobody there even trying.)

The worst thing would be to pretend to have a course but have missing materials and Supervisors giving verbal advice or tech. That is deadly and will turn any Academy sour.

Verbal tech comes about when course materials are not available to students and no or faulty Word Clearing is used.

As long as the Administration of the course *is in and all the course materials are available*, the *sole* course Tech is this misunderstood word tech.

Word Clearing Series 16 R

CONFUSED IDEAS

Whenever a person has a confused idea of something or believes there is some conflict of ideas IT IS ALWAYS TRUE THAT A MISUNDERSTOOD WORD EXISTS AT THE BOTTOM OF THAT CONFUSION.

Example: "I just don't understand this idea of opposing forces. I think it all ought to be rewritten and"

Method 2 Word Clearer: "Is there any word there you don't understand?" READ! *STUDENT*: "Oh no, I understand all the words. It's" "What word is this that's reading on the meter?" "Er. . . ah . . . Forces?" "Yes, that reads and blows down. Let's look it up." "Oh no, I know what it means. It's the idea that" "Let's look it up!" "Well, all right. Let's see D . . . E . . . F . . . FO . . . FORCES. Here it is. 'That which changes the motion of a body on which it acts.'" *WD CLEARER*: "Use it in a sentence several times." *Student does*. ". . . er . . . ah. I've got it. Hell I thought it meant police brutality! Couldn't figure out why two police forces would fight!" Word Clearer: "Now how do you feel about this idea of opposing forces?" "Oh, let's see. Why that's clear enough. Just like I'd never read it before!" *METER*: F/N.

Every green body of students will argue and fuss about ideas or confusions in the directions or material they are given to read.

They will generate weird ideas and erroneous concepts of what the text says. They do wrong things and say the text said to. They ask strange ideas of their instructors. They clamor for "clarifications".

AND AT THE BOTTOM OF ALL THIS IS SIMPLY MISUNDERSTOOD WORDS.

There is not *also* misunderstood ideas. There is *only* the misunderstood *word* which breeds, then, huge towering wrong *ideas*.

A MISUNDERSTOOD WORD BREEDS STRANGE IDEAS.

Word Clearing Series 19

ALTERATIONS

There is a basic law in Word Clearing:

**AT THE BOTTOM OF ALL ALTERATION OF MEANING
OR ACTION IS A MISUNDERSTOOD WORD.**

This law at once explains why communication, ideas or application become falsified, twisted and corrupted.

This law is of great use in Word Clearing:

A. It indicates who has to be word cleared FAST, at once, NOW, before duties go off the rails any further.

B. It detects the area just before which there is a misunderstood word.

A is useful to the administrator. Knowing it and knowing Word Clearing and being able to do it himself or get it done, he can avoid wholesale dismissals, frantic transfers, general inefficiency and organizational strain.

B is very useful to the Word Clearer.

Example of B. A person can do everything on an order except "File the Folder's" which he insists on delivering to a wrong room. Look over the order and find where in it talks about filing folders. Just above or beside that will be a misunderstood word. Locate it, get it identified, defined and used in sentences. The person can suddenly file folders!

Just BEFORE or WITH the point a person begins to alter will be found a misunderstood word.

Thus

1. Discover what a person alters.
2. Find what came just before that.
3. Find the misunderstood word.
4. Get it looked up.
5. Get it used in sentences as long as it moves a meter tone arm.
6. End off on F/N VGIs.

The ability to do it straight will have been returned.

It is very magical.

Word Clearing Series 20

SIMPLE WORDS

You might suppose at once that it is the BIG words or the technical words which are most misunderstood.

This is NOT the case.

On actual test, it was English simple words and NOT Dianetics and Scientology words which prevented understanding.

For some reason Dianetics and Scientology words are more easily grasped than simple English.

Words like "a", "the", "exist", "such" and other "everybody knows" words show up with great frequency when doing a Method 2 Word Clearing. They read.

It takes a BIG dictionary to define these simple words fully. This is another oddity. The small dictionaries also suppose everybody knows.

It is almost incredible to see that a university graduate has gone through years and years of study of complex subjects and yet does not know what "or" or "by" or "an" means. It has to be seen to be believed. Yet when cleaned up his whole education turns from a solid mass of question marks to a clean useful view.

A test of schoolchildren in Johannesburg once showed that Intelligence DECREASED with each new year of school!

The answer to the puzzle was simply that each year they added a few dozen more crushing misunderstood words onto an already confused vocabulary that no one ever got them to look up.

Stupidity *is* the effect of misunderstood words.

In those areas which give Man the most trouble you will find the most alteration of fact, the most confused and conflicting ideas and of course the greatest number of misunderstood words. Take "economics" for example.

The subject of psychology began its texts by saying they did not know what the word means. So the subject itself never arrived. Professor Wundt of Leipzig University in 1879 perverted the term. It really means just "a study (ology) of the soul (psyche)". But Wundt, working under the eye of Bismarck, the greatest of German military fascists, at the height of German war ambitions, had to deny Man had a soul. So there went the whole subject! Men were thereafter animals (it is all right to kill animals) and Man had no soul, so the word psychology could no longer be defined.

THE EARLIEST MISUNDERSTOOD WORD IN A SUBJECT IS A KEY TO LATER MISUNDERSTOOD WORDS IN THAT SUBJECT.

“HCO B” (Hubbard Communications Office Bulletin), “Remimeo” (Orgs which receive this must mimeograph it again and distribute it to staff), “TR” (Training Drill), “Issue I” (first issue of that date), are the commonest misunderstands. Because they occur at the beginning of an HCO B!

Then come words like “a”, “the” and other simple English as the next words that often read.

In studying a foreign language it is often found that the grammar words of one’s *own* language that tell about the grammar in the foreign language are basic to not being able to learn the foreign language.

The test of whether the person understands a word is “does it read on the meter as a fall when he reads the word in the material being cleared”.

That a person *says* he knows the meaning is *not* acceptable. Have him look it up no matter how simple the word is.

WORD CLEARING—OK TO DO

The following points concerning Course Word Clearing have recently been clarified by Ron.

1. Course Word Clearing *can* be done on a student currently being audited.
2. An F/N does *not* have to be obtained (by rudiments or talking the TA down) before Course Room Word Clearing can be started.
3. If the TA is high (above 3.5) or low (below 2.0) or the student is upset (or becomes upset) this *must* be reported *at once* to Department 14 and handled by a Word Clearing Correction List or C/S 53RI.
4. Course Room Word Clearing must be started with the statement "I am not auditing you".
5. Course Room Word Clearing does *not* have to be C/Sed. (Worksheets must be made however, and sent to the student's preclear folder.)
6. The student does not have to see the Pc Examiner after having metered Word Clearing on course; but the Student C/S should be alert for any flubs, especially words not cleared to F/N.
7. If a Tech Word Clearer flubs or causes upsets on Word Clearing, the correct action is for the Supervisor to send the Word Clearer to Cramming. Qual crams all flubs in Word Clearing.
8. All metered Classroom Word Clearing takes each word to F/N.
9. A Supervisor can order any student who is not an F/Ning student to Word Clearing.
10. Methods 2, 3, 4, 6, 7, 8 and 9 can be done in the Classroom.

Word Clearing Series 36

GRAMMAR

In all word clearing all Grammatical Words and small words SHOULD BE LOOKED UP IN A SIMPLE GRAMMAR TEXTBOOK.

Very few dictionaries have full definitions for such words AND THEY HAVE NO EXAMPLES .

Words like “a” “the” “and” are really parts of language construction and are more complex than they at first appear.

A Word Clearing Auditor should have a simple grammar book to hand as well as dictionaries.

The best Grammar textbooks are those compiled for persons foreign to a language, like immigrants. These do not contain the supposition that the student is already an English professor.

Lots of EXAMPLES is the real test of a good grammar.

When doing the Study Tapes or Student Hat lack of a simple grammar textbook can really throw the student off.

Those “simple” words can be the huge rocks that stand on the highway to becoming a WORD CLEAR.

So a Grammar is needed.

If a student is VERY deficient (lacking) in grammar it is best to make him do a whole simple grammar text first before he begins to get into just words. The words won't hang together for him.

It takes less time to do a short textbook in Grammar than it does to struggle with grammar all the way through.

Grammar can look like a ghastly subject until one really looks at it. Then it's easy.

Word Clearing Series 37

DINKY DICTIONARIES

(Dinky: Small, insignificant.)

In learning the meaning of words small dictionaries are very often a greater liability than they are a help.

The meanings they give are often circular: Like "CAT: An Animal." "ANIMAL: A Cat." They do not give enough meaning to escape the circle.

The meanings given are often inadequate to get a real concept of the word.

The words are too few and even common words are often missing.

HUGE dictionaries can also be confusing as the words they use to define are often too big or too rare and make one chase through 20 new words to get the meaning of the original.

The best dictionaries are the very large child's dictionaries like THE WORLD BOOK DICTIONARY (A Thorndike-Barnhart Dictionary published exclusively for Field Enterprises Educational Corporation, Merchandise Mart Plaza, Chicago, Illinois 60654 or Doubleday and Company. Thorndike-Barnhart has a whole series of dictionaries of which this is a special one. Field Enterprises has offices in Chicago, London, Rome, Sydney, Toronto. The World Book Dictionary is in two volumes, each 28 1/2 cm [11 1/4 inches] by 22 cm [8 5/8 inches] by 5.8 cm [2 1/4 inches], so it is no small dictionary!) (Also it defines Dianetics correctly and isn't determined on a course of propaganda to re-educate the public unlike Merriam Webster's dictionaries.)

Little pocket book dictionaries may have their uses for traveling and reading newspapers, but they *do* get people in trouble. I have seen people find a word in them and then look around in total confusion. For the dinky dictionary did not give the full meaning or the second meaning they really needed.

So the dinky dictionary may fit in your pocket but not in your mind.

Word Clearing Series 53R

(Revisions in this type style)

CLEAR TO F/N

(Word Clearing Series 32R has been corrected
as 32RA to require the F/Ning of all words
and forbids W/Cing on a high TA.)

Do NOT try to Word Clear a person *Method 1, 2 or 4* whose TA is high at session start. Use standard auditing procedures by an Auditor of the required class to get the TA down to normal range. (Usually a C/S Series 53RG and handling.)

If the TA is high at start of session one of course cannot F/N a TA on Word Clearing *when* it is high for some other reason.

ALWAYS F/N a word being cleared *on the meter*. It may happen there is a chain and the word has to be earlier similar. But even then, when the *chain is F/Ned*, the words on the chain that didn't F/N must F/N.

Example: A chemical *type* word reading. Doesn't F/N. E/S it on E/S words, comes down to a lecture in school. The Mis-U word there F/Ns. Now check the words touched while going E/S. Usually they just F/N.

Do NOT do a lot of words to "Clean" and say the person has been "Word Cleared". Cases are messed up because the Word Clearing may be over out rudiments or even out lists or out Int.

A Word Clearing worksheet must show truthfully all words F/Ned.

RED TAB

Where a pc has been Word Cleared *on the meter* without F/Ning or with or to a high or low TA, THE WHOLE FOLDER MUST BE RED TABBED.

W/Cing worksheets must go into the pc's folder, just as why finding and touch assists and other auditing actions must be put in the folder.

A pc red tabbed because of Word Clearing must be repaired within 24 hours, as in the case of any other red tab.

Stalled cases have been traced to Word Clearing errors. Repair of these will get them going again.

SUPERLITERACY AND THE CLEARED WORD

SUPER—Superiority in size, quality, number or degree.

LITERACY—The ability to read and write.

Almost everyone these days is able to read and write. This was not true a century ago but, with modern stress on education, it is true today.

But is this enough today?

It is an instruction book world. The civilization in which we live is highly technical.

Education today goes into the twenties.

That's a third of one's life.

And what happens when one leaves school?

Can he *do* what he studied?

Does he *have* all his education or did it get left behind?

Literacy is not enough.

Today's schools and today's world require a new ability—the ability to look at a page without any strain and absorb what it says and then apply it right now without any stress at all.

And is that possible?

Am I talking about speed reading?

No. That is just being able to read rapidly. It does not improve the *comfort of* reading and it does not improve the ability to apply.

What is really needed is the ability to COMFORTABLY and QUICKLY take data from a page and be able at once to APPLY it.

Anyone who could do that would be SUPER-LITERATE.

What happens?

The average person-literate—is able to read words and mentally record words.

Like this:

When he writes he writes:

In his mind words are "understood" as other words like this:

When one is Super-Literate, this is what happens:

Therefore as he is dealing in *concepts* (ideas or understandings) this can happen:

And he thinks in concepts to which he can fit words easily and so can write clearly.

In other words, when one is Super-Literate, one reads not words but understandings. And so one can act.

CONCEPTS

The idea of grasping word meanings conceptually is something new to the field of Linguistics. The endless Semantic circles pursued by Korzybski and company (see Data Series 1, "The Anatomy of Thought") never really led to the realization that a word and its meanings are embodied in the basic *concept* or *idea* symbolized by that word.

That conceptualization of meanings is foreign to dictionary writers and “experts” is evidenced by the fact that definitions are so subject to alter-is and change with the passage of time.

For example, modern definitions of the word “understand” are found to be largely inadequate. A really full and meaningful definition of it could only be found in a First Edition of *Webster’s Dictionary of Synonyms, 1942*:

“Understand. To have a clear and true idea or conception, or full and exact knowledge, of something. In general it may be said that understand refers to the result of a mental process or processes (a clear and exact idea or notion, or full knowledge). Understand implies the power to receive and register a clear and true impression.”

CLEARED WORDS

Operating within a society steeped in misunderstood words and mis-definitions, Study Tech is subject to arbitraries. Thus, a *CLEARED WORD* is defined as follows:

A WORD WHICH HAS BEEN CLEARED TO THE POINT OF FULL CONCEPTUAL UNDERSTANDING.

In Metered Word Clearing this translates as:

F/N, VGIs.

There are many ways and combinations to achieve this EP. Using the word in sentences until the meaning is grasped conceptually is the most common. Diagrams, demos, clay, in fact the entire body of Study Tech and its methods are applicable.

These are vital tools. For use. Protect them and KEEP SCIENTOLOGY WORKING.

Word Clearing Series 55

HOW TO WIN WITH WORD CLEARING

By actual application of the tech Word Clearers can obtain much higher results and wins. Several recent examples have come up where some top tech and admin personnel were not duplicating issues and instructions yet they had been word cleared on these materials with no MUs found. When word cleared again by someone who really knew his business the MUs came off for hours with a resurgence of activity at the end. In a number of the cases success stories were written about never having found a misunderstood word before! All of the examples cited had the following common denominators:

1. The Word Clearer could really handle a meter and make a question read.
2. The Word Clearers had personal certainty on the workability of Word Clearing and could apply it exactly and find MUs to rave results.

TRs AND METERING

The fact that most Word Clearing starts off with the phrase "I am not auditing you" does not mean that TRs and metering do not apply. Quite the contrary they are vital skills that need to be kept sharp by daily TRs just like any auditor and a weekly or monthly Qual check on TR 1 and the ability to make a question read. The reason is quite simple. A Word Clearer must grasp that all forms of Word Clearing that he can apply, either metered or unmetered, were developed to help the individual find the MUs he was unable to find himself. One must assume that the person has already looked up all the MUs he could find (it is after all an ethics offense to fail to clarify words not understood) and is now putting himself in the hands of the Word Clearer to find any MUs that may be just beyond his awareness. Any lack of impingement on metered Word Clearing or reasonableness about slips and slurs or missed definitions on non-metered Word Clearing will leave a person "knowing" he has no MUs but wondering why he still has difficulty with the subject or post.

It may just be that people who find themselves resistive to Word Clearing have not grasped these points either, and wonder why they need Word Clearing when they don't "think" they have MUs.

PERSONAL CERTAINTY

Word Clearing works. There is no shortage of people who can attest to that. The only times Word Clearing would seem to fail would be if there were errors such as:

- a) No reads or missed reads.
- b) Ignored slips and flubs in non-metered Word Clearing.
- c) Getting off into considerations or confusions without getting to the MUs that always exist at the bottom and then getting the MUs fully defined.

The remedy is simple. If one has been word cleared on an area without a resolution of the original difficulty then MUs have been missed and one need only report right back to a Word Clearer and say "I want my MUs found!" In some cases a WCCL may be required, but more often than not it's just find the missed MUs.

For anyone who has not yet experienced what it's like to find a real MU then just report to a Word Clearer and pick *any* subject or area of difficulty and start getting the MUs found until the subject or area now makes sense. Continue this on as many subjects as needed to leave no doubt as to the workability of Word Clearing. (The case gain from a real MU found can sometimes rival the biggest wins in auditing.) Any Word Clearer must have this certainty and pass it on to those he word clears.

The wins and gains are there for the taking. A better functioning org with highly productive staff and public is the reward. You deserve it. Just follow the tech as laid out in the Word Clearing Series and you will have it.

ETHICS PENALTY FOR WORD CLEARERS

(Ref: HCOB 13 Sep 71, Para No. 3)

It has been found that the reason Word Clearers cease to be Word Clearers and blow Word Clearing and the reason Word Clearing drops out in orgs lies in the failure of the Word Clearer to clear the words on himself at the same time he was clearing them on the preclear. This is done without losing one's presence as an auditor or Word Clearer and without winding up with the student word clearing the Word Clearer.

Hereafter when it is found that a Word Clearer has been accumulating misunderstood words by failure to clear them on himself he will be subject to a Court of Ethics with minimum penalty the loss of a week's pay or allowance and if the offence is repeated he will be subject to a Comm Ev.

The offences on this are frequent and are a basic Why on Word Clearing dropping out in orgs.

CLEARING WORDS

(Ref: HCOB 7 Sep 74 Word Clearing Series 54
 SUPERLITERACY AND THE
 CLEARED WORD
 HCOB 17 Jul 79 I Word Clearing Series 64
 THE MISUNDERSTOOD WORD,
 DEFINED)

In research concerning Word Clearing, study and training done with various groups over the recent past months, it has become all too obvious that a misunderstood word remains misunderstood and will later hang a person up unless he clears the meaning of the word in the context of the materials being read or studied *and also* clears it in all of its various uses in general communication.

When a word has several different definitions, one cannot limit his understanding of the word to one definition only and call the word "understood." One must be able to understand the word when, at a later date, it is used in a different way.

HOW TO CLEAR A WORD

To clear a word one looks it up in a good dictionary. Dictionaries recommended are The Oxford English Dictionary or the Shorter Oxford Dictionary and Funk and Wagnalls Standard English Dictionary.

The first step is to look rapidly over the definitions to find the one which applies to the context in which the word was misunderstood. One reads the definition and uses it in sentences until one has a clear concept of that meaning of the word. This could require ten or more sentences.

Then one clears each of the other definitions of that word, using each in sentences until one has a conceptual understanding of each definition.

The next thing to do is to clear the derivation—which is the explanation of where the word came from originally. This will help gain a basic understanding of the word.

Don't clear the technical or specialized definitions (math, biology, etc.) or obsolete (no longer used) or archaic (ancient and no longer in general use) definitions unless the word is being used that way in the context where it was misunderstood.

Most dictionaries give the idioms of a word. An idiom is a phrase or expression whose meaning cannot be understood from the ordinary meanings of the words. For example, "give

in” is an English idiom meaning “yield.” Quite a few words in English have idiomatic uses and these are usually given in a dictionary after the definitions of the word itself. These idioms have to be cleared.

One must also clear any other information given about the word, such as notes on its usage, synonyms, etc. so as to have a full understanding of the word.

If one encounters a misunderstood word or symbol in the definition of a word being cleared, one must clear it right away using this same procedure and then return to the definition one was clearing. (Dictionary symbols and abbreviations are usually given in the front of the dictionary.)

EXAMPLE

You are reading the sentence “He used to clean chimneys for a living” and you’re not sure what “chimneys” means.

You find it in the dictionary and look through the definitions for the one that applies. It says “A flue for the smoke or gases from a fire.”

You’re not sure what “flue” means so you look that up: it says “A channel or passage for smoke, air or gasses of combustion.” That fits and makes sense so you use it in some sentences until you have a clear concept of it.

“Flue” in this dictionary has other definitions, each of which you would clear and use in sentences.

Look up the derivation of the word “flue.”

Now go back to “chimney.” The definition “A flue for the smoke or gases from a fire,” now makes sense so you use it in sentences until you have a concept of it.

You then clear the other definitions. One dictionary has an obsolete definition and a geological definition. You would skip both of these as they aren’t in common usage.

Now clear up the derivation of the word. One finds in the derivation that it originally came from the Greek word “kaminos,” which means “furnace.”

If the word had any synonym studies, usage notes or idioms, they would all be cleared too.

That would be the end of clearing “chimney.”

CONTEXT UNKNOWN

If you don’t know the context of the word, as in Word Clearing Methods 1, 5 (when done from a list), 6 or 8, you should start with the first definition and clear *all* definitions, derivation, idioms, etc. as covered above.

“WORD CHAINS”

If you find yourself spending a lot of time clearing words within definitions of words, you should get a simpler dictionary. A good dictionary will enable you to clear a word without having to look up a lot of other ones in the process.

CLEARED WORDS

A CLEARED WORD IS ONE WHICH HAS BEEN CLEARED TO THE POINT OF FULL CONCEPTUAL UNDERSTANDING BY CLEARING EACH OF THE COMMON MEANINGS OF THAT WORD PLUS ANY TECHNICAL OR SPECIALIZED MEANINGS OF THAT WORD THAT PERTAIN TO THE SUBJECT BEING HANDLED.

That's what a cleared word is. It is a word that is understood. In metered Word Clearing this would be accompanied by a floating needle and very good indicators. There can be more than one F/N per word. Clearing a word must end in an F/N and VGIs. Off the meter this would be accompanied by very good indicators.

The above is the way a word should be cleared.

When words are understood, communication can take place and with communication any given subject can be understood.

Rev. 2.9.79 Word Clearing Series 60RB
Product Debug Series 7R
MISUNDERSTOOD WORDS AND
CYCLES OF ACTION

“MIS-UNDERSTOOD” or “NOT-UNDERSTOOD” are terms used to define any error or omission in comprehension of a word, concept, symbol or status.

Most people go around thinking that a misunderstood is just something they obviously don't know—a “not-understood.”

A “not-understood” is a misunderstood but there are additional ways a person can misunderstand a word.

A MISUNDERSTOOD *WORD* OR SYMBOL IS DEFINED AS A WORD OR SYMBOL FOR WHICH THE STUDENT HAS:

1. *A FALSE {TOTALLY WRONG} DEFINITION:* A definition that has no relationship to the actual meaning of the word or symbol whatsoever.

Example: The person reads or hears the word “cat” and thinks that “cat” means “box.” You can't get more wrong.

Example: A person sees an equals sign (=) and thinks it means to subtract something twice.

2. *AN INVENTED DEFINITION:* An invented definition is a version of a false definition. The person has made it up himself or has been given an invented definition. Not knowing the actual definition he invents one for it. This is sometimes difficult to detect because he is certain he knows it, after all he invented it himself. There is enough protest preceding his invention of it to make it read on a meter. In such a case he will be certain he knows the definition of the word or symbol.

Example: The person when very young was always called “a girl” by his pals when he refused to do anything daring. He invents the definition of “girl” to be “a cowardly person.”

Example: A person never knew the meaning of the symbol for an exclamation point (!) but seeing it in comic strips as representing swear words invents the definition for it “a foul curse” and regards it accordingly in everything he reads.

3. *AN INCORRECT DEFINITION:* A definition that is not right but may have some relationship to the word or symbol or be in a similar category.

Example: The person reads or hears the word “computer” and thinks it is “typewriter.” This is an incorrect meaning for “computer” even though a typewriter and a computer are both types of machines.

Example: A person thinks a period (.) after an abbreviation means that you halt in reading at that point.

4. **AN INCOMPLETE DEFINITION:** A definition that is inadequate.

Example: The person reads the word “office” and thinks it means “room.” The definition of the word “office” is: “a room or building in which a person transacts his business or carries on his stated occupation.” (Ref: Funk and Wagnalls Standard Dictionary of the English Language) The person’s definition is incomplete for the word “office.”

Example: The person sees an apostrophe (‘) and knows that it means that something is owned (‘s) but does not know that it also is used to show that a letter has been left out of a word. He sees the word “can’t” and immediately tries to figure out who can is.

5. **AN UNSUITABLE DEFINITION:** A definition that does not fit the word as it is used in the context of the sentence one has heard or read.

Example: The person hears the sentence: “I am dressing a turkey.” The person’s understanding of “dressing” is “putting clothes on.” That is *one* definition of “dressing” but it is an unsuitable definition for the word as it is used in the sentence he has heard. Because he has an unsuitable definition he thinks someone is putting clothes on a turkey. As a result the sentence he has heard doesn’t really make sense to him. The definition of “dressing” that correctly applies in the sentence he has heard is: “to prepared for use as food, by making ready to cook, or by cooking.” (Ref: The Oxford English Dictionary)

The person will only truly understand what he is hearing when he has fully cleared the word “dressing” in all its meanings. as he will then also have the definition that correctly applies in the context.

Example: The person sees a dash (-) in the sentence: “I finished numbers 3 - 7 today.” He thinks a dash is a minus sign, realizes you cannot subtract 7 from 3 and so cannot understand it.

6. **A HOMONYMIC (one word which has two or more distinctly separate meanings) DEFINITION:** A homonym is a word that is used to designate several different things which have totally different meanings; or a homonym can be one of two or more words that have the same sound, sometimes the same spelling, but differ in meaning.

Example: The person reads the sentence: “I like to box.” The person understands this sentence to mean that someone likes to put things in “containers.”

The person has the right meaning for the word “box,” but he has the wrong word! There is another word “box” which is being used in the sentence he has just read and means: “to fight another in a boxing match.” (Ref: Funk and Wagnalls Standard Dictionary of the English Language)

The person has a misunderstood because he has a homonymic definition for the word “box” and will have to clear the second word “box” before he understands the sentence.

Example: The person sees a plus sign (+) and as it resembles a cross he thinks it is something religious.

Example: The person hears the word “period” in the sentence: “It was a disorderly period in history” and knowing that “period” comes at the end of a sentence and means stop, supposes that the world ended at that point.

Example: Homonymic misunderstands can also occur when a person does not know the informal or slang usage of a word. The person hears someone on the radio singing: “When my *Honey* walks down the street.” The person thinks a “thick, sweet, yellow or golden

liquid, good to eat, that bees make out of the nectar they collect from flowers” is walking down the street! He doesn’t know the informal definition of “honey” which is: “sweet one: a pet name.” which is how it is being used in the song. (Ref: Funk and Wagnalls Standard Dictionary of the English Language)

7. *A SUBSTITUTE {SYNONYM—*a word which has a similar but not the same meaning*)*
DEFINITION: A substitute definition occurs when a person uses a synonym for the definition of a word. A synonym is not a definition. A synonym is a word having a meaning *similar* to that of another word.

Example: The person reads the word “portly” and thinks the definition of the word is “fat.” “Fat” is a synonym for the word “portly.” The person has a misunderstood because the word “portly” means: “of a stately appearance and carriage; impressive, especially on account of size.” (Ref: Funk and Wagnalls Standard Dictionary of the English Language) The person does not have the full meaning of “portly” if he thinks it just means “fat.”

Knowing synonyms for words increases your vocabulary but it does not mean you understand the *meaning* of a word. Learn the full definition for a word as well as its synonyms.

8. *AN OMITTED {MISSING} DEFINITION:* An omitted definition is a definition of a word that the person is missing or is omitted from the dictionary he is using.

Example: The person hears the line “The food here is too rich.” This person knows two definitions for the word “rich.” He knows that “rich” means “having much money, land, goods, etc.” and “wealthy people.” Neither of these definitions make much sense to him in the sentence he has just heard. He cannot understand what food could have to do with having a lot of money.

Omitted definitions can come about from using dinky dictionaries. If the person had looked up “rich” in a small paperback dictionary, he would probably still be stuck with his misunderstood. A dinky dictionary probably will not give him the definition he needs. In order to understand the word he would have to get a good sized dictionary to ensure it gives him the omitted definition which is: “having in a high degree qualities pleasing to the senses; luscious to the taste: often implying an unwholesome excess of butter, fats, flavoring, etc.” (Ref: Funk and Wagnalls Standard Dictionary of the English Language)

Example: The person reads “He estimated the light at f 5.6.” He can’t figure what this “f” is, so he looks up “f” in the American Heritage Dictionary and wonders if it is temperature or money or sports for “foul” or maybe the money “franc.” The text doesn’t refer to France so he can’t figure it out. Omitted in the American Heritage is the photography definition of “f” which simply means “the number which shows the width of the hole the light goes through in the lens.” The moral of this is to have enough dictionaries around.

NOTE: It can occur that an accurate definition for a word is not given in any dictionary which is an error in the language itself.

9. *A NO-DEFINITION:* A no-definition is a “not-understood” word or symbol.

Example: The person reads the sentence “The business produced no lucre.” No understanding occurs, as he has no definition for “lucre.” The word means: “money, especially as the object of greed; gain.” (Ref: Funk and Wagnalls Standard Dictionary of the English Language) It isn’t that he has the word incorrectly, unsuitable or any other way defined, he has *no* definition for it at all. He has never looked it up and gotten it defined. Thus he does not understand it. The definition does not exist for him until he looks it up and gets it clearly understood .

Example: The person sees a dot at the end of a word on a printed page and having no definition for “a period (.)” tends to run all of his sentences together.

10. *A REJECTED DEFINITION:* A rejected definition is a definition of a word which the person will not accept. The reasons why he will not accept it are usually based on emotional

reactions connected with it. The person finds the definition degrading to himself or his friends or group in some imagined way or restimulative to him in some fashion. Although he may have a total misunderstanding on the word he may refuse to have it explained or look it up.

Example: The person refuses to look up the word “mathematics.” He doesn’t know what it means, he doesn’t want to know what it means, and he won’t have anything to do with it. A discussion of why he refuses to look it up discloses that he was expelled from school because he flunked with violence his first month of his first course in mathematics. If he were to realize that he flunked because he didn’t know what he was supposed to study he would then be willing to look the word up.

Example: The person refuses to look up the definition of asterisk (*). On discussion it turns out that every time he sees an asterisk on the page he knows the material will be “very hard to read” and is “literary,” “difficult” and “highbrow.”

Discussion of why he won’t look it up usually reveals and releases the emotional charge connected with it which he may never have looked at before. Properly handled he will now want to look it up, having gained an insight into why he wouldn’t.

Any word you come across which fits one or more of the above definitions of a misunderstood word or symbol must be cleared up, using a good size dictionary or more than one dictionary or text book or encyclopedia.

It is catastrophic to go on past or ignore a misunderstood word or symbol as one simply will not understand what he is studying.

A student must discipline himself not to go past misunderstood words. He should learn to recognize from his reaction to what he is reading, especially the mental blankness which usually ensues right after one, that he has gone by a misunderstood. He should look them up and get them fully defined before going on with his reading. Students must be persuaded to do this. It is a self-discipline that has to be learned.

The definitions of “misunderstood” and “not-understood” and their different types, must be clearly understood by a person seeking to clear them in himself and others. The commonest error in Word Clearing is for the person being word cleared to believe that a misunderstood is something he simply does not know. With this limited definition he cannot adequately be word cleared nor can he adequately word clear others. So these definitions of “misunderstood” and “not-understood” should be very well known as it will often be necessary to clarify them to the person being word cleared.

Good reading.

Word Clearing Series 66

CONCEPTUAL UNDERSTANDING

People who have no idea of concept get bogged into terms and mechanics. They can't operate at the level of concept and are extremely literal.

If anybody did this he couldn't do otherwise than find himself mixed up in tanglefoot. It does a lot of good to clean up his tanglefoot and meanings of words but unless this gets him up to conceptual thinking he'll just continue to get in more and more tanglefoot.

Understanding is conceptual. You could handle things, objects and symbols endlessly without achieving understanding or real communication unless one finally was able to graduate up to conceptual comprehension.

People who are literal rather than literate simply haven't achieved conceptual understanding.

C/S Series 92R

(Revisions in this type style)

WORD CLEARING ERRORS

*(Applies to Methods 1, 2, 4 and 5
done on a meter.)*

The attention of the C/S is called to the revised Word Clearing Series 32RA which requires words be F/Ned and to HCO B 8 July 74 of the Word Clearing Series which requires word clearing errors be RED TABBED and that all Word Clearing worksheets be placed in folders.

Case troubles have occasionally been traced to *metered* W/Cing over a High TA or failure to F/N words.

This is a hidden area from the C/S unless W/C worksheets are included in folders and the RED TAB system for non-F/N at conclusion is used. Only in this way is a C/S able to get all the data.

Correction of W/C errors is done by a Word Clearing Correction List.

High TA or Low TA at start of a W/C session is usually handled by C/S 53RG.

All "non-session" worksheets such as why finding, contact or touch assists and Word Clearing should go into the pc's folder.

None of this can be used as an excuse not to word clear somebody. Make a C/S handle that TA fast and Red Tab the folder until handling occurs. Then do the Word Clearing.

Ds of P

REVISED 3 OCTOBER 1980
RE-REVISED 2 OCTOBER 1983
RE-REVISED 1 JULY 1985

(This issue was revised 2 Oct 83 to: a) delete arbitraries entered into training prerequisites by another; b) clarify at which points on the Grade Chart Method One may be done; c) clarify where Method One auditor training and co-audit courses can be obtained; and d) reiterate the importance of Method One for all students and preclears. Those revisions are not shown in script.)

METHOD ONE WORD CLEARING

CANCELS HCO PLs 25 Sep 70, Issue II and 25 Sep 79R, Issue II, same title, which were written by another.

MODIFIES any issue or checksheet stating that Method One Word Clearing is a mandatory prerequisite to Academy training or admin courses.

(Ref: HCOB 30 Jun 71R II Rev. 11.5.72	STANDARD C/S FOR WORD CLEARING IN SESSION METHOD I
HCOB 12 Nov 81RC Re-rev. 1.1.85	GRADE CHART STREAMLINED FOR LOWER GRADES
HCOB 23 Dec 71RA Re-rev. 1.1.85	THE NO-INTERFERENeE AREA CLARIFIED AND RE-ENFORCED
HCOB 23 Aug 71	C/S Series 1, AUDITOR'S RIGHTS
HCOB 13 Aug 72RA Rev. 30.8.83	FAST FLOW TRAINING)

Method One Word Clearing is the action taken to clean up all misunderstands in every subject one has studied. It is done on a meter in session with a word clearing auditor.

When properly done and completed, the result of Method One Word Clearing is: RECOVERY OF ONE'S EDUCATION.

That factor in itself can mean a tremendous gain for the person. The added dividend is that, with misunderstands in earlier subjects now cleaned up, the way is clear for the student to get the most out of his current training course or activity. He can now study and grasp the materials of any subject more easily, as he will no longer be bogged down by and stumbling over the earlier misunderstands.

METHOD ONE A REQUIREMENT FOR ACADEMY AND 'OEC' TRAINING

Method One has for years been a requirement for anyone doing Academy or OEC training, and rightfully so -- it has been proven conclusively that those who've had M-1 before embarking on these major training levels get through their checksheets faster and have a better grasp of what they studied, resulting in much more, competent auditors and administrators. It was expected that if, for some Case reason the student should not be programmed to receive M-1 at that moment, he would still be permitted to study but would need to star-rate all star-rated materials on the checksheet until such time as he did get M-1.

However, a PL of 25 Sept 79 was issued by another which entered an arbitrary on the line that if a student could not get his M-1 then he could not do ANY further Academy training. Such a rule is completely against basic policy on training. The PL of 25 Sept 79 Issue II and also its revision of 3 Oct 80 are both hereby CANCELLED and replaced by this HCO Policy Letter.

METHOD ONE WORD CLEARING IS VERY DEFINITELY A PREREQUISITE FOR ANY ACADEMY OR OEC/FEBC TRAINING. (And "Academy training" as used here, includes Levels O-IV, NED and any, higher level auditor training; and Course Supervisor, C/S, Word Clearer or Cramming Officer training.) BUT IF THE STUDENT DOES NOT HAVE A C/S OK TO RECEIVE METHOD ONE WORD CLEARING HE IS NOT TO BE HELD UP OR DENIED ACADEMY OR OEC TRAINING. THE STUDENT IS ALLOWED TO DO THESE COURSES, HOWEVER HE MUST STAR-RATE ALL THE STAR-RATED MATERIALS ON THE CHECKSHEET AND ADDITIONALLY MUST PASS AN EXAMINATION IN THE QUALIFICATIONS DIVISION BEFORE BEING PERMITTED TO GRADUATE THE COURSE.

METHOD ONE A REQUIREMENT FOR FAST FLOW TRAINING

A Fast Flow student is one who may attest to the theory and practical items on his course when he has fully covered the materials and can apply them. There is no examination. This applies to any course checksheets any training.

In order to qualify as a East Flow student, the person must have completed the Student Hat and Method One Word Clearing. (Completion of the full Primary Rundown also qualifies a student to fast flow his courses.)

ONE MUST HAVE RECEIVED METHOD ONE WORD CLEARING AND ALSO COMPLETED THE STUDENT HAT COURSE TO QUALIFY AS A FAST FLOW STUDENT.

Students who are not Fast Flow may still enroll on Academy and other courses. They study the course materials with full use of Study Tech and Word Clearing Tech, as do Fast Flow students, but they additionally must star-rate check out on all star-rated materials and must pass an examination on the course before graduation.

WHEN METHOD ONE CAN BE DONE

Method One can be done at any point on the Grade Chart except in the No-Interference Area (the zone between the start of New OT I and the completion of OT III, for those who went Clear on NED, or from the beginning of R6EW to the Completion of OT III, for those who did not go Clear on NED.) It may be done after completion of OT III or any higher OT Level. Thus, with the exception of those in the No-Interference Area, it may be done on preclears,

Clears and OTs. (Ref: HCOB 23 Dec 71RA, C/S Series 73RA; THE NON-INTERFERENCE AREA CLARIFIED AND RE-ENFORCED. }

Of course, it would not be done in the middle of another incomplete auditing action. (Ref: HCOB 28 Sept 82, C/S Series 115, MIXING RUNDOWNS & REPAIRS.)

Ideally one should get Method One early on in his auditing, before getting onto NED, whether the person is taking the training route (and co-auditing up the Bridge) or the pc route. M-1 is not only valuable for those who plan to be professional auditors. It will stand one in good stead on Solo Auditor training, on the OT courses and on up the lines

CASE SET UP

As Method One is a major case action, the case must be set up with an F/N before the action is started, but this most often does not require a lengthy program. Usually all that 's needed is flying the rudiments. (Ref: HCOB 23 Aug 71, C/S Series 1, AUDITOR'S RIGHTS and HCOB 30 June 71R, Issue II, STANDARD CJS FOR WORD CLEARING IN SESSION METHOD 1.)

Some cases who have had heavy drugs may not be able to get through Method One or other Word Clearing until the drugs are handled, The handling is then to first get them through the Purification Rundown, Objectives and in some cases a Drug Rundown. [Ref: HCOB 12 Nov 81RC, GRADE CHART STREAMLINED FOR LOWER GRADES, and HCOB 4 Apr 72R, PRIMARY RUNDOWN (REVISED)].

HOW TO GET METHOD ONE

One can get Method One Word Clearing as a public pc in the HGC in any org and it is also available in missions.

One can receive M-1 as student auditing from another student, or it may be obtained by enrolling on the Method One Co-Audit Course at an org and co-auditing M-1 with another.

Method One can give a remarkable boost in the ability to study. It is a VITALLY important rundown for all students and preclears.

TAPES_____

Add items dealing with this specific Pc's life.

3. Ask the Question, "Is there any word on this list you didn't understand?" Clear it. *Then do Step 5 on it before going on.* (Do not reassess *this list* because there was a list word not understood.)
4. Take *the remaining* reading items from the best read on down and with E/S pull each one to F/N. *Get each word you find to F/N. There can be many F/Ns per subject End off with a win on the subject*
5. "In the subject of _____ what word has been misunderstood?"

He **MUST** look them up, so have a good dictionary handy. Do not accept "I know the meaning" if the subject or word reads. **CLEAR "GRAMMAR" or grammatical words out of a simple book of grammar, not a dictionary.**

It isn't an earlier time he misunderstood *that* word. It's an earlier word in that subject and it can be an earlier subject.

Considerations about it and other questions are not touched.

Overts, W/Hs, etc are *neglected*. They are not done on the subject of the word. They are done in the session ruds.

Just do the process and it will eventually F/N on each chain.

6. When all reads on the first assessment are handled to F/N, REASSESS the whole list. Do not take off the list items already handled.
7. Repeat Step 4.
8. Repeat Step 5.
9. Repeat Step 6, etc.
10. *IN CASE OF ANY BOG OR SOMATIC USE THE WORD CLEARING CORRECTION LIST TO CORRECT THE BOG.*
11. A persistent F/N should be attained on assessing the whole list as the End Phenomena of the Word Clearing sessions.

WORD CLEARING CLARIFICATION

Reference HCO B 24 June 71, "Word Clearing"

Method No. 1 Word Clearing has yet to foul up any other auditing. When Method No. 2 is done it is far more likely to foul up auditing.

Persons just reporting to courses are the first candidates for Word Clearing.

Qual usually gets itself across numerous lines when it begins to Word Clear. I don't know why it should. The most fantastic figure-figure occurs around this action.

It is wholly unlimited. If No. 1 Method is done on Monday, it can be done again, same actions, same list assessed, same items left on the list, on Tuesday—and Weds and Thurs!

It can even be done with no folder to hand.

The only change would be to *add* some subjects if one wishes. But even that isn't vital.

A pc has spoken millions of languages.

The EP is not "He was word cleared once". It would be a persistent F/N on the whole list.

Who knows what the word clearing will lay bare in other languages or when one will attain the EP forever.

But there are too many strings being put into it like needing a folder, using tech pages, etc, etc. The action is in V. Well, why is Div IV getting in on it unless Div V is pulling it in?

You frankly have no idea what it takes to get tech really applied. The simplicity of hats, lines and tech actions gets overlaid with complexities.

Probably misunderstands attract complexities.

EP OF WORD CLEARING

This *BTB* gives an observation by the Flag Word Clearer and some LRH C/S'd Word Clearing Sessions to clarify the EP required from full session Word Clearing.

A) From the Flag Word Clearer:

“The true EP of Word Clearing is an ‘F/Ning List’, meaning the whole list (all items and any added ones) F/N throughout the assessment of the *fun* list with no reads or slows in the F/N as all the items are called.

“As a point of interest I notice in looking back through the folders that TA action ceased as much as two or three sessions prior to a final full EP.

“The majority of sessions have been about an hour to 2 hours long and have ended on a very big cog and wide, persistent F/N.

“I’ve not then reassessed in that session but have done a new session the next day with the same phenomena. Finally on assessing the list the whole list has F/Ned with no reads on anything.

“It’s taken a number of sessions and in the last one or two the reads have been just stops or slows in an otherwise floating needle.

“I recently heard of someone getting EP in one session. From what I’ve experienced on the LRH C/S'd sessions that sounds suspicious. It’s not really harmful as from what LRH says you can always reassess the list later.

“The still TA and the F/N that just slows as a ‘read’ when items are called is to me a good indicator that we’re getting *close* to EP—not that we’ve made it yet.

R.H.”

B) Some LRH C/Ses from Word Clearing sessions are included here to give you a better reality on the EP that is to be attained.

i) “Well Done

Several Reading subjects not handled—List not F/Ned.

1. Fly a Rud if no F/N.

2. Reassess Subject List, leave all items on it always.
3. Clear it up.

LRH”

ii) “Well Done

The EP is an F/Ning list.
No evidence the whole list F/Ned.
THAT is the EP. (May just be an admin error but it’s an error.)

1. Fly a Rud if no F/N.
2. Assess Subjects List. If it does not fully F/N, handle those that read.
3. Reassess list.

Get your EP. An F/Ning list.

LRH”

(On one specific case the following C/Ses were given.)

iii) “Well Done

TO WORD CLEARING

Add ‘Bulletins’
‘Policy Letters’
‘Despatches’

to the list.

Full clearing.

LRH”

iv) “V. Well Done

1. Fly a Rud. Check Protest.
2. Ask if any other subjects ought to be on list. Add.
3. Reassess whole list.
4. Continue to EP.

LRH”

Make sure you get full EP on Word Clearing.

Word Clearing Series 21

**CORRECT SEQUENCE
QUALIFICATIONS OF WORD CLEARERS**

The principal methods of word clearing are numbered No. 1 for the full in-session rundown, No. 2 for the metered action of clearing up words in specific materials and No. 3 for looking up words seen and not understood by the student or reader.

This is correct sequence for doing the three types of word clearing.

By doing No. 1 in full session, using the list for assessment, one obtains the basic word and meaning errors of the past. By getting these out of the way, it is now possible to clean up current materials much more rapidly with Method 2, where the person is put on a meter and reads the material to another who is watching the meter and catching each read.

With Method 1 out of the way, Method 2 becomes more rapid.

Method 3 will then be done by the person himself because he now knows better.

No. 2 and No. 3 can be used on and on one or the other.

If you do it backwards, beginning with Method No. 3, much more time is consumed. If Method No. 2 is used without No. 1 being done, much more work has to be done to clean up an existing piece of study material or text.

So the correct sequence is No. 1, No. 2 and then No. 3.

This does not mean you cannot start with No. 3 or No. 2. It just means it is much faster to do them in correct sequence.

PURPOSE CLEARING

When purpose of the post is to be cleared it is done *after* Method No. 1 in general and Method No. 2 has been done on the duties and texts of the post.

With all such material handled with word clearing it is time then to do a Purpose Clearing of the person's job or situation in life.

PROGRAM

Thus a general program could be laid down as

1. Handle all ARC Breaks, present time problems and withholds, or set up the case with a Progress Program.
2. Method No. 1 Word Clearing.
3. Method No. 2 Word Clearing on the materials or duties the person has.

4. Purpose Clearing of the purpose of the post.

(In choosing the materials to be cleared in No. 3 above choose the texts, handbooks or materials most closely related to the post and most basic to the post.)

(In choosing the post, if the person is not employed remember that “student”, “housewife” and even “a human being” are posts.)

WD CLEARING WD CLEARERS

When there is no qualified word clearer to word clear others, the program is changed for the word clearer to:

1. Choose 2 word clearers who then work on each other.
2. Any Progress Program for each one.
3. Word Clear the Word Clearing Series by Method 2.
4. Check out on the auditing required for Method 1.
5. Do Method No. 1 on each other.
6. Do Purpose Clearing on each other.

This greatly reduces any errors in application.

(Note: A “Progress Program” or a “Repair Program” is a Scientology auditing program to clean up upsets in life.)

(“ARC Break” means A-Affinity, R-Reality, C-Communication, a break in any one of the three which has caused upset in the past.)

(A Class III Academy Auditor qualification is required to do Method No. 1 as the action requires assessing and the handling of ARC Breaks, problems and withholds, for which a Class III is trained. Anyone who is able to handle a meter is qualified to do Method No. 2. Any person can do Method No. 3.)

(Purpose Clearing also requires a Class III Academy Auditor.)

(By “meter” throughout this series is meant an “E-Meter” which means an “electro-psycometer”, an instrument which measures emotional reaction by tiny electrical impulses generated by thought.)

Word Clearing Series 24

LIBRARY

You will begin to get an idea of how much library you will need when you have done a large number of word clearings.

The important thing is to realize that a library is necessary.

In an org this will be in Department 14 under the Librarian.

The greatest demand will be for dictionaries of many kinds.

First there is the consideration of just English dictionaries. Several, including large ones, should be to hand. Those that use big words to define words keep a pc chasing around and around and are of course poor dictionaries. Often one dictionary gives a better definition than another. So an assortment of English dictionaries is a first requirement.

Then come technical dictionaries or texts like engineering, physics, medical, chemistry, mechanics, seamanship, aviation, astronomy, military, etc, etc.

Then come philosophical, psychiatric and religious dictionaries if they can be found.

Foreign language dictionaries Latin, Greek, French, etc are a must.

An auditor doing word clearing can come up with some remarkable demands.

Texts or dictionaries covering the subject given on the assessment list (Word Clearing Series 8RR) are a basic starter.

I can see a word clearing auditor poking about in old mouldy bookshops and coming up with triumph—"Ah, look! Priceless. A slang dictionary on oil fields published in 1932! Priceless!"

If you get too stopped and are in a major city, you *could* end the session and send the pc to the local library. But if so have him write the definition down. It is not recommended but can be done.

The best solution is to have a good library covering the assessed subjects.

Word Clearing Series 47R

DIFFICULTIES WITH WORD CLEARING

The first and major reason for difficulties in Word Clearing is failure to immediately use a Word Clearing Correction List at the first hint of trouble.

The second is Word Clearing over the fact of no Method One. Word Clearing can become lengthy until Method One is completed.

Some people have severe difficulty with all forms of Word Clearing until a full and complete M1 with additional applicable subjects added and fully handled. The symptom of a person requiring *M1 or M1 Expanded* would be approaching *all forms of Word Clearing* on a "subject" basis and handling chains on each word approached. This makes these shorter forms of Word Clearing very lengthy. This can happen on the *PRD* causing a bogged or very slow student. He can be cleaned up with a WCCL in Qual followed by a completed Method One. If this doesn't handle it, the student needs additional correction or the Primary Correction Rundown. Everyone runs better on all forms of Word Clearing when Method One is fully completed. Others may require a full Primary Correction Rundown before they can easily tackle day to day Word Clearing, as is required in any Org.

In some rare cases, there may be a misunderstood symbol in the alphabet itself. M7, as the major undercut Word Clearing process, may require an undercut, by a direct address to the alphabet. This can easily be done by getting the person to rattle off the alphabet and handling it itself with M7, handling all letters on which a person has difficulty, can't remember, stumbles on, etc, until the person can rattle them all off without hesitation. The full New World Dictionary contains a section at the beginning of each letter, which may be of assistance in cleaning up the alphabet.

INTERRELATED USES OF WORD CLEARING

All forms of Word Clearing can be utilized to get a result. The fact of using one form does not mean that another will not locate more misunderstandings.

For example, a staff member could have M7 Word Clearing to improve his reading to an EP, then have M6 on the key words of his post, then M7 the one or two key PLs of his post, then study them and have a final M4 check before starrating.

Don't drop out M2 as one of the effective forms of Word Clearing. It has a specialized use on whole texts of materials or tapes. The clearing of first or earlier materials plays a key

factor in unlocking some PT study problems or situations. A person will actually do better on M2 if he has done M7 on a general text first. In some cases, when the person's vocabulary is very poor, M7 has to be done before M1.

USE ALL FORMS OF WORD CLEARING IN VOLUME AND EVERYBODY WILL WIN.

Reissued 5 July 1974 as BTB

Word Clearing Series 48

**WORD CLEARING ON FOREIGN LANGUAGE
STUDENTS, PCS OR STAFF**

Very careful handling of foreign language students on Word Clearing is required.

The first requirement is Method One in the person's basic language. If the person speaks several languages, or lived in several countries, the languages would be handled in the sequence they were encountered.

To do Method One in English on a French person without first doing M1 in French is more or less a waste of time. The person won't make it in English until the earlier misunderstandings connected with the earlier language are fully handled.

When Word Clearing a person who speaks a foreign language, it is imperative to have a proper dictionary in that language to hand. Do not use the English/French or English/German "dictionary" for it is not a dictionary but a reference manual only and does not contain full and proper definitions.

The most charged language(s) will be that first learned and that used in school.

Obviously, it is best for a foreign language person to be audited on M1 by an Auditor who speaks the same language. However, if one was not available, it could be done by writing up the M1 list phonetically in the language concerned and running a standard M1, making sure that the Pc keeps the Auditor very well informed on the definitions in the dictionary.

Foreign language students on Courses are usually provided with translated tape courses. In this case, the full technology on handling tape courses and their repair must be fully applied. M2 and 4 on tapes must be set up for immediate handling in Tech and Qual.

It could be also that a foreign language student cannot read English because of unhandled problems on reading his own language and so would greatly benefit from an M7 on a reading text in his own language.

If a foreign language student is studying an English text, he must have an English *and* the foreign language dictionary to hand, so that if he runs into difficulty on the English definition, he can check up on the foreign language definition difficulty, straighten that one, then handle the English definition.

We can get any student, Pc or staff member through IF we fully use all forms of Word Clearing fully.

HOW TO READ THROUGH AN F/N

(Ref: HCOB 15 Oct 73RB, C/S Series 87RB,
NULLING AND F/NING PREPARED LISTS)

**WHEN TAKING A LIST TO F/NING ASSESSMENT AN AUDITOR MUST KNOW
HOW TO READ THROUGH AN F/N.**

This is a skill that, up to this point, has been used routinely only by highly trained auditors or a few very sharp Class IIIs or IVs or above. But with the difficulty auditors have had in F/Ning prepared lists, it becomes obvious that, from Class III on up, all auditors should be trained to read the meter through an F/N.

It is the answer to almost any difficulty an auditor has had in taking a list to F/Ning assessment.

An F/N speeds up or slows down or does different things while still remaining an F/N and one *can* read through it.

It is done like this: The swinging weight of the needle (F/Ning from an earlier item) has momentum and it will tend to obscure the read on another item. It will almost obscure it, but not quite. You'll see the F/N "check" or slow up briefly and then continue and this means you have a hot item. Any item that would cause an F/N to "check" will be hot. The auditor who can read through an F/N will spot this and handle the item then and there. Then he continues on down the list, missing nothing, handling what is there to be handled and, with this skilled metering, takes it to a genuinely F/Ning list on assessment. And it doesn't take days or even several sessions, necessarily, to do it.

If an auditor can't read through an F/N he'll miss this. He's going down the list, the F/N "checks" or slows and he doesn't see it so he goes right on by it. Then, within the next couple of items the F/N kills. He's going to have a hard time F/Ning that list because he's now got a suppressed read.

Example:

Auditor in assessing starts with an F/N which continues as he goes on down the list calling the items. On, say, item 5 the F/N "checks" or slows briefly. Auditor can't read through an F/N so he misses this and goes on by. On about the 6th or 7th item the F/N packs up, and the auditor is in a quandary because the F/N has turned off but he didn't get a read on items 6 or 7 either. Or he may misduplicate the killed F/N as a read on items 6 or 7 and attempt to take up one or the other of them. Either way he's in for trouble because he's missed the actual item and he may even try to handle a wrong item. He's going to find it difficult to take that list to an F/Ning assessment.

The correct action when an F/N packs up this way is to go back up the list and reassess the last several items to find the missed read. But one should be able to read through an F/N.

Probably the main reason for pc upset or protest against "overrepair" and being handled again and again with repair lists lies in this factor alone—the auditor can't read through an F/N.

Thus he misses the charged items and takes up items that are uncharged. And the repair goes on interminably, as the charged lines are not found and handled.

This is also probably the reason that auditors have been known to back off from having to F/N a list. They “know” from experience that it is a laborious business.

The truth is it’s not necessary for an auditor to labor over taking a list to F/Ning assessment. It simply requires good TRs and skilled metering, including the ability to read through F/Ns.

An auditor can be trained to see a read through an F/N. The drill would be to sit him down in front of a meter with an F/Ning student on the cans and assess the prepared lists in *The Book of E-Meter Drills*, spotting each time he gets a “check” or a “slow” or any change in an otherwise continuing F/N. He’ll find that he *can* read through an F/N and become very adept at this, and from then on he won’t miss.

You’ll have an auditor who is confident of his ability to F/N a list accurately and thoroughly in one-half the time (and trauma) it would take otherwise.

And far fewer “overrepaired” pcs. (“Overrepaired” pcs are usually pcs with actual reads missed and false reads taken up. So “overrepair” is really “misrepaired” or “not repaired.”)

This is metering at its best and most accurate. We now expect the best and most accurate metering from the auditor who is in the business of F/Ning prepared lists.

Word Clearing Series 17

WORDS AND POSTS

Those who do not want their posts generally do not know what their posts are.

The reason they do not know what their posts are is a host of misunderstood basic words connected with that post.

Put a person on a meter: Have the person read some of the material relating to his post or hat, beginning with the most basic material about it and starting at the very top of the first page, including even the heading and issue numbers.

Watch the meter carefully.

Halt the person at *each* read and whether he says he knows the meaning or not, if it read, have him look it up in a good (big) dictionary.

Have him use the word in sentences of his own invention. Make him do this as long as it is bringing the TA down. If you get into trouble with him go back and find the misunderstood you missed.

Keep hunting and keep working at it and his misunderstood words will blow and his inability to understand the post will blow.

EXPLANATION

Failed posts and duties trace back to misunderstood words. Until you see it you won't believe it.

One student who had studied his post for a third of a year was given Method 2 on its materials.

It took 15 hours of Method 2 work, protests, blows, upsets to finally discover that he did not know what POST meant! OR what the words in the title meant.

Another person studied half a year to be an administrator. Yet when he was given his personnel orders appointing him, and Method 2 was done on them, in the first 50 words of the personnel order there were 13 individual misunderstood words each one of which related to the post and were simple English. A similar ratio continued throughout the personnel order.

He was about to fail with a fanfare. Behind post failure the explanation IS misunderstood words.

Psychosis (evil intention) is the only other reason for failure but even this can be handled by auditing today. And even psychosis lessens when misunderstood words are handled.

SUCSESSES

It is not difficult to use Method 2 Word Clearing.

One must be able to handle ARC Breaks, Problems and withholds and read a meter.

One must have a very big dictionary available when little ones fail.

One must be persistent and not buy explanations or let the person run away.

And the Successes one has are fantastic!

Word Clearing Series 30

WC1 COMES FIRST

Don't try to Word Clear Materials by Word Clearing Method 2 before the person has had a Word Clear Method 1.

Actual experience shows that doing WC2 without WC1 restimulates earlier charge on words that have been misunderstood in the past.

When a person has not had Word Clear Method 1 and tries to do Word Clear Method 2 on materials, it can go very slowly, the student (due to earlier charge on words) can become quite misemotional.

Using Method 3 (going back to find the misunderstood word) is all right. And using common ordinary "Look up, don't go past a misunderstood word" is all right.

METHOD 2 EP

The End Phenomena (what occurs at the end) of Word Clearing Method 2 is a continuing F/N on the materials.

When the person is constantly F/Ning on the materials being word cleared Method 2, that is the time to end off. The "EP" has been reached.

When the word clearer forces the student to go on beyond this, the reads gotten are often false or are from protest.

Reads that are false come from cognitions (realizations) on the material. Protest reads come from just plain annoyance with having to go on.

When the EP of 2 is reached on a specific set of materials, the student is then permitted to go on by himself, looking up words he doesn't know or going back to find one that was missed.

A person who enters a new subject or a new branch of a subject should be given WC2 on it. A person who begins a higher level of a subject should be given WC2 on it.

If thereafter there is any bog or failure to understand or apply or pass an exam on the subject, a WC Correction List can be done on it and the bog found and handled.

This EP is *only* valid if the person has had WC Method 1 before the WC Method 2 was begun.

The EP of Method 2 can be many times repeated on different subjects or branches of subjects.

Word Clearing Series 2

WORD CLEARING

If anyone has “word cleared” you without these steps it is incorrect.

- (1) By Meter in Session: A full assessment of many many subjects is done. The *auditor* then takes each reading subject and clears the chain back to earlier words and/or words in earlier subjects until he gets an F/N VGIs.
- (2) By Meter in Classroom: The earlier passage is read by the student while on a meter and the misunderstood word is found. Then it is fully defined by dictionary. The word is then used several times in sentences of the student’s own verbal composing. The misunderstood area is then reread until understood.
- (3) Verbal in classroom: The student says he does not understand something. The Supervisor has him look earlier in the text for a misunderstood word, gets the student to look it up, use it verbally several times in sentences of his own composition, then read the text that contained it. Then come forward in the text to the area of the subject he did not understand.

If any other word clearing is going on it is OUT tech.

There is a C/S on HCOB 30 June 71 to be followed exactly on word clearing in a session. Do not follow any other version or excerpt. There is NO other way to do it.

If you are not auditing this way or using word clearing this way or if words are not being cleared this way, report it to Ethics.

Once development and issue has occurred the next step is to get it understood and applied EXACTLY.

Then in both Tech and Admin we have successes.

Word Clearing Series 39

METHOD 6

Method 6 Word Clearing is called KEY WORD CLEARING.

It is used on posts and specific subjects.

It is a heavier form than Method 5.

Method 6 is used without a meter.

Where a person is new on post or new to a subject or where there has just been a goof, an error or an Ethics action, these steps are done in the following manner.

1. The Word Clearer makes a list of the KEY (or most important) words relating to the person's duties or post or the new subject.

This is made up as a list. The Word Clearer looks up each word in the dictionary and writes down the definitions.

The list may have as few as three words or as many as twenty or thirty.

(Example: A bank clerk's key words would be "bank" "clerk" "money" "cash" "drafts" "teller" "accounts" "customer" etc.)

(Example: There has just been a goof resulting in an upset. The goof centered around "radio" "repairs" "operation" "operator" "electronics" etc.)

2. The Word Clearer, without showing the person the definitions, asks him to define each word.

3. The Word Clearer checks the definition on his list for *general* correctness not word for word but meaning.

4. Any slow or hesitancy or misdefinition is met with having the person look the word up and look up any word in the definition the person does not have a grasp of.

5. One completes his list.

6. By then the person has been jarred into looking further by the above actions. The Word Clearer asks "What other word relating to your post (or subject or error) didn't you understand?"

7. Each one mentioned is now defined by looking it up.

8. The person can now be Method 4ed relating to his post to be sure all is clean and there are no upsets.

Note: Where the person has just had an accident or ethics action it may be necessary to delay the action until the person is calmer or not so upset as the action can be a heavy distraction if the person is hurt or frightened and will not be successful.

IT WILL BE FOUND THAT LAZINESS, INACTIVITY, SLOWNESS AND ERRORS ON A POST OR IN USING A SUBJECT TRACE TO MISUNDERSTOOD KEY WORDS.

THE REMEDY IS WC METHOD 6.

Word Clearing Series 40

METHOD 7

Whenever one is working with children or foreign language persons or semiliterates Method 7 READING ALOUD is used.

In this method the person is made to read *aloud* to find out what he is doing.

It is a very simple method. It is done without a meter.

It is used on such persons before other methods in order to get the person untangled.

If a person does not seem to be progressing by studying silently, one has him read aloud.

Another copy of the same text must also be followed by the Word Clearer as the person reads.

Startling things can be observed.

The person may omit the word "is" whenever it occurs. The person doesn't read it. He may have some strange meaning for it like "Israel" (actual occurrence).

He may omit "didn't" each time it occurs and the reason traced to not knowing what the apostrophe is (actual occurrence).

He may call one word quite another word such as "stop" for "happen" or "green" for "mean".

He may hesitate over certain words.

The procedure is

1. Have him read aloud.
2. Note each omission or word change or hesitation or frown as he reads and take it up at once.
3. Correct it by looking it up for him or explaining it to him.
4. Have him go on reading, noting the next omission, word change or hesitation or frown.
5. Repeat steps 2 to 4.

By doing this a person can be brought up to literacy.

His next actions would be learning how to use a dictionary and look up words.

Then a simple grammar.

A very backward student can be boosted up to literacy by this method.

Word Clearing Series 41

METHOD 8

(If a student has trouble with this Method he should do Method 7 first. Method One should also be done.)

Method 8 is an action used in the "Primary Rundown" where one is studying Study Tech or where one is seeking a full grasp of a subject. Its End Product is SUPER-LITERACY.

The steps are these:

Usually an alphabetical list of every word or term in the text of a paper, a chapter or a recorded tape is available or provided.

1. The person looks up each word on the alphabetical list and uses each in sentences until he has the meaning conceptually.

The words are looked up in a big dictionary.

The grammatical words or small words are looked up in a simple grammar. If the person has too much trouble with grammar he should do the whole simple grammar text before going on.

Any technical terms not in the dictionary are looked up in a technical dictionary or glossary or in bulletins on the materials, i.e. a photographic dictionary.

This is not done for the whole subject, it is done for a paper or a chapter or one tape of a series.

2. One then reads or listens to the paper, chapter or tape for its sense or general meaning.

3. Method 4 is then done on the person to find any misunderstandings.

4. These are cleared up per Method 4 procedure.

5. The person reads or listens to the material again.

6. The person is again checked for any misunderstandings.

7. If there are any misunderstandings the person again does steps 4 & 5.

8. When the material is fully heard or understood as per above steps and checks, end off on that paper, chapter, tape and go on to the next one.

9. An alphabetical list is made or exists for the next paper, chapter or tape. Steps 1 to 8 are done on it.

10. Each succeeding paper or chapter or tape is done with steps 1 to 8.

When *all* the material has been done in this way, the person will be fully able to apply all the material.

Usually Method 8 is reserved for the Scientology Study Tapes which contain how to study and the Student Hat.

It can also be used to master a major subject.

IT WILL BE FOUND THAT METHOD 8 (or Method 2 or 3 or 4 or 6) ARE VERY LENGTHY AND HARD TO DO UNLESS ONE HAS FIRST HAD A METHOD ONE WORD CLEARING.

A Word Clearing Correction List is used on Method 8 whenever a student bogs heavily. This list will, when assessed on a meter properly, locate the errors and they can be corrected.

When used on the Study Tech itself and Student Hat, Method 8 HONESTLY DONE makes a person SUPER-LITERATE. It is like hearing and seeing and reading for the first time!

Reading a text or instruction or book is comfortable. One has it in conceptual form. One can APPLY the material learned.

It is a new state.

Word Clearing Series 46 RA

METHOD 9

Method 9 Word Clearing is CORRECTIVE Word Clearing, as compared to Method 7 which is EDUCATIONAL Word Clearing, and has its own exact procedure.

Method 9 is done on any specific written text, usually by subject, for example, the C/S Series, the Data Series, or one or more PLs or HCO Bs on a related subject, for example, Listing and Nulling, Rudiments, or a key Hat PL or PLs.

The procedure is:

1. Student or staff member reads the text out loud. He is not on the meter.
2. The Word Clearer has a copy of the text and reads along with the student silently.
3. If the student leaves out a word or stumbles or exhibits any physical or verbal manifestation while reading the text, the Word Clearer immediately asks for the misunderstood word or term and gets the meanings cleared with a dictionary and put into sentences until the word is understood and VGIs are present.
4. Student *rereads the last section and* continues the text to completion, picking up and handling all misunderstood words, as evidenced by verbal or physical manifestations.
5. Student or staff member is sent to Pc Examiner for F/N VGIs check. If no F/N VGIs, student or staff member returns to Word Clearer to complete to F/N VGIs or WCCL, if required.
6. The text is now restudied by the student or staff member.

Method 9 can be used before or after the fact of a flub. For example, any *upper level C/S* to get an OK to C/S should M9 the C/S Series, restudy and starrate and do in clay as a basic action in Qual. Or an Auditor who is flubbing on Assessment gets M9 on the Assessment pack. Or a Supervisor who is flubby gets M9 on *key* MCSC materials. In each case, the materials word cleared must be restudied *and starrated*.

Word Clearers must be specifically and extensively drilled to do M9 (or M7) so that they can read a text and pick up any and all physical manifestations at the same time. Only then is an OK to do M9 (or M7) issued.

The fact of having had material word cleared using a different method does not prevent M9 being used. In fact, it would not be unusual for specific material to be handled first with M6, then M9 then M4, if one wanted to be very thorough.

In order to ensure application, all Word Clearing must be followed by a restudy of the materials word cleared. Word Clearing clears the material so it can now be studied and applied.

Method 9 is extremely powerful and effective.

Word Clearing Series 23

TROUBLE SHOOTING

In Word Clearing the troubles are actually very few.

However there are a few.

It is possible for an auditor or student doing word clearing on another to get misunderstood words himself unless he also looks at the definitions and understands them at the same time he is clearing them on the other person. This requires no extra step. In fact it would be rather hard not to also see the definition of the word.

A person trying to “blow” (leave) and refusing further Word Clearing almost always has a HUGE misunderstood on some word not yet located. The correct action is to get him back and FIND AND CLEAR THE WORD.

Not getting a good result using Methods 1, 2 or 3 is cured by using the Word Clearing Correction List, HCO B 21 July 71, Revised 9 August 71.

This Correction List applies to all methods of word clearing.

For instance, if Method 2 goes sour and the student “knew all the words anyway” or “doesn’t understand it any better” or is critical or demonstrates any other unfavorable reactions which do not win through, there is always Word Clearing Correction List.

This list is done by a Class III or above auditor. It is quite miraculous.

Example: Student badly bogged after Method 2 by his twin. Handling: A Class III auditor does the Word Clearing Correction List on him.

The Correction List is handled as per HCO B 14 Mar 71, “F/N Everything”. In other words, one takes all reads on it to Floating Needle. Any other list called for by reads on the Correction List is taken to F/N and when that called-for list F/Ns then one considers that the Word Clearing Correction List line has F/Ned. (Correction List reads on 4. List Error. The auditor takes a list called L4B which corrects lists and makes every read on “L4B” F/N. Then “4. List Error” is marked “F/N”.)

The technology of handling a Word Clearing Correction List is all covered in the general materials of auditing.

Not knowing how to use a Meter can cause trouble.

A special Course in using an E-Meter is available. The E-Meter Drill Book gives all the drills. It does not take long to learn. Also E-Meters are abundantly available today.

Learning to be a Class III or preferably a Class IV Academy Auditor is not difficult IF one uses word clearing!

All word clearing is done under the discipline of The Auditor’s Code.

One's "TRs" (TR = Training drills for auditing) can be straightened out on a TR Course on which one learns to confront, to speak so one can be heard, to acknowledge, to be able to repeat commands and to handle originations by the student.

Troubles in word clearing, then can be listed as coming from lack of training. So anyone doing word clearing should organize himself to (1) Do a TR Course, (2) Learn to use and acquire an E-Meter, (3) Learn the Auditor's Code and, (4) If not one already, learn to be an Academy Class III Auditor.

Knowing how to do 1 to 3 above is essential to do Method 2 Word Clearing. And the skills under (1) to (3) are very easy to acquire. Further, it is not all that difficult to become a Class III Auditor.

People sometimes think only someone who wants to be a professional auditor studies in the Academy, a false impression. One can't imagine how a father or businessman or mother or clerk or official could succeed without knowing the basics of human reaction and how to handle them. Someone who is a Class III or Class IV knows how. The real professional usually becomes a Class VI and the real experts are the VIIIs, IXs and Xs. It's a matter of how expert you want to be. A Flag Ship Class XII could turn a severe mental case from raving lunacy to not only sane but bright and normal in about 8 or 9 hours and a normal person to a genius in 15 to 20 hours.

But here we are dealing with the whole range of the human mind.

In word clearing Method 2 one certainly should know his "TRs", his Auditor's Code and his Meter. And for Method I it takes a Class III Academy Auditor.

Almost all troubles will be found to stem from an omission of these requirements AND not using Word Clearing on the materials one is studying to achieve these skills.

Very few troubles actually will be encountered if this HCO B is followed.

Word Clearing IS a precision technology and there IS something to know about it as it has never before been known.

Word Clearing Correction List Revised)

Word Clearing Series 35RF

WORD CLEARING CORRECTION LIST

The WCCL is the list to use when any form of Word Clearing bogs down. Any and all trouble with Word Clearing should be corrected by assessing and handling this list. The WCCL has been designed to parallel errors made in *Word Clearing*. not study, not the person's case, and it is to be used in Word Clearing sessions to correct Word Clearing errors.

If, after the Word Clearing Correction List has been fully handled, there seems to be other bypassed charge connected with the subject of study, a Study Green Form should be done.

This list can be assessed Method 3 or Method 5.

All Word Clearers are to check out on and use this list to correct Word Clearing errors.

1. IS THERE SOMETHING WRONG WITH YOUR CASE? _____
If this list is being assessed during course room metered Word Clearing, end off for C/S instructions, otherwise assess and handle a C/S Series 53.
2. HAVE YOU BEEN WORD CLEARED OVER OUT-RUDS? _____
Find out which and handle to F/N and VGIs.
3. IS A WORD STILL MISUNDERSTOOD? _____
Find out which and get it cleared to F/N. (If Method 1 Word Clearing, clear it E/S to EP.)
4. WAS A WORD IN A DEFINITION MISUNDERSTOOD? _____
Find out which word and get it cleared to F/N.
5. COULDN'T YOU FIND THE ACTUAL MISUNDERSTOOD? _____
Using your meter and 2WC, find the misunderstood word and clear to F/N. (If Method 1 Word Clearing clear it E/S to EP.)
6. DID YOU NOT GET THE BASIC WORD? _____
Find out which word or subject was not taken to EP, locate the misunderstood words and clear each to F/N, going E/S to EP.
7. DID YOU FAIL TO USE THE WORD YOU WERE CLEARING IN ENOUGH SENTENCES? _____
Get the word used in sentences until it is fully understood, to F/N and VGIs.
8. DID YOU NEED TO DEMO THE WORD YOU WERE CLEARING? _____
Get the word demoed to full understanding, F/N and VGIs.

9. WERE YOU USING AN IMPROPER DICTIONARY? _____
Find out what word and what dictionary. Get a proper dictionary and clear it to F/N and VGIs.
10. WAS THERE AN EARLIER SIMILAR MISUNDERSTOOD WORD NOT CLEARED? _____
Find out what it is and clear it to F/N. (If Method 1 Word Clearing, clear it E/S to EP.)
11. DID YOU NOT FEEL GOOD ABOUT A WORD WHEN IT WAS CLEARED? _____
Find the word and reclear it to F/N.
12. DO YOU KEEP FORGETTING WORDS YOU HAVE ALREADY DEFINED? _____
Locate the other or related word he didn't define and clear it to F/N.
13. DID YOU HAVE TO CLEAR A WORD YOU ALREADY KNEW? _____
Find out what the word was and indicate. If no F/N get off any protest or inval and rehab to F/N.
14. WAS A WORD OVERRUN? _____
Find out what word and rehab.
15. WAS A WORD READING ON PROTEST? _____
Get which word, indicate. If no F/N handle with itsa E/S itsa to F/N.
16. DID A WORD NOT REALLY READ? _____
Get which word, indicate. If no F/N handle with itsa E/S itsa to F/N.
17. COULDN'T YOU HEAR THE WORD CLEARER? _____
Itsa E/S itsa to F/N.
18. DIDN'T YOU UNDERSTAND WHAT THE WORD CLEARER SAID? _____
Itsa E/S itsa to F/N.
19. DIDN'T YOU UNDERSTAND THE ACTION BEING DONE? _____
Find out what it was and handle with itsa E/S itsa to F/N or clear it up with correct references to F/N and VGIs.
20. WERE YOU CONFUSED BY SOMETHING? _____
Find out what it was and handle with itsa E/S itsa to F/N or clear it up with correct references to F/N and VGIs.
21. WERE YOU PUZZLED WHY THE WORD CLEARER KEPT ON WORD CLEARING? _____
Find out what happened and handle with itsa E/S itsa to F/N or rehab the win.
22. ON WORD CLEARING DID YOU FEEL OVERWHELMED? _____
Find out what happened and handle with itsa E/S itsa to F/N.
23. ON WORD CLEARING DID YOU FEEL HOPELESS? _____
Find out what happened and handle with itsa E/S itsa to F/N.
24. ON WORD CLEARING DID YOU FEEL INVALIDATED? _____
Find out what happened and handle with itsa E/S itsa to F/N.

25. ON WORD CLEARING WAS THERE ANY EVALUATION?
Find out what happened and handle with itsa E/S itsa to F/N.
26. ON WORD CLEARING WERE YOU PROTESTING? _____
Itsa E/S itsa to F/N.
27. DID YOU GET DISTRACTED DURING WORD CLEARING? _____
Find out what happened and handle with itsa E/S itsa to F/N.
28. WAS THERE SOMETHING WRONG WITH THE F/Ns INDICATED? _____
Find out what happened and handle with itsa E/S itsa to F/N or clear to F/N any words not fully cleared.
29. DID YOU HAVE TO LOOK UP TECHNICAL OR SPECIALIZED DEFINITIONS OF WORDS THAT DIDN'T APPLY? _____
Find out what the word was. Indicate this was an unnecessary action. Correctly clear the word to F/N. (If Method 1 Word Clearing, take E/S to EP.)
30. DID YOU TELL THE WORD CLEARER IT WAS UNDERSTOOD JUST TO GET RID OF HIM? _____
Get the word (plus any others) and clear each to F/N.
31. WAS IT NOT YOUR MISUNDERSTOOD? _____
Itsa E/S itsa to F/N.
32. WAS THERE INVALIDATION OF KNOWINGNESS? _____
Find out what it was, and handle with itsa E/S itsa to F/N.
33. DID YOU USE THE WRONG SIZED CANS? _____
False TA Checklist. Work out the right sized cans with the pc.
34. DID YOUR HANDS GET TIRED IN WORD CLEARING? _____
False TA Checklist. Work out the right sized cans with the pc.
35. WAS A WORD ON THE LIST OF SUBJECTS MISUNDERSTOOD? _____
Find out what it is and clear to F/N. (If Method 1 Word Clearing, take E/S to EP.)
36. IS A SUBJECT STILL MISUNDERSTOOD? _____
Get which subject and which word and clear it to F/N. (If Method 1 Word Clearing, take E/S to EP.)
37. DID YOU NOT GET THE BASIC SUBJECT? _____
Find out what subject is incomplete by 2WC, locate the misunderstood words in it and clear each to F/N. (If Method 1 Word Clearing, take E/S to EP.)
38. IN REGARD TO EARLIER SUBJECTS OR COURSES YOU STUDIED DID YOU FIND ANY OF THEM DIFFICULT? _____
When this question is answered ask this second question: WERE THERE ANY WORDS ON THESE COURSES THAT YOU DIDN'T FULLY UNDERSTAND? Find by subject and get each defined. Then do steps again until both questions F/N.
39. DO YOU STILL HAVE MISUNDERSTOODS ON EARLIER COURSES? _____

Find out which course (or courses) and get each misunderstood word cleared. Then recheck the question and handle until it F/Ns on checking.

- 40. DO YOU HAVE MISUNDERSTOODS ON YOUR EARLIER THAN SCIENTOLOGY SCHOOL OR FAMILY TRAINING?
When this question has been answered, ask: WAS THERE ANY WORD IN (SUBJECT NAMED) YOU DIDN'T UNDERSTAND? Get it fully defined to F/N and all such words cleared up for that subject. Handle all subjects the person has named as above. Then recheck the original question and handle until it F/Ns on checking. _____
- 41. WERE YOU BEING WORD CLEARED ON AN UNREADING SUBJECT?
Find out what. Indicate. If no F/N rehab or Date/Locate. _____
- 42. WAS A SUBJECT OVERRUN?
Find out what and indicate. If no F/N rehab. _____
- 43. WAS A MISUNDERSTOOD SUBJECT MISSED?
Find out which subject(s) and which words and clear each to F/N. (If Method 1 Word Clearing, take E/S to EP.) _____
- 44. DID YOU TRY TO MAKE THE LIST F/N?
Put in ruds on Word Clearing, each to F/N, VGIs. Rehab any overruns. _____
- 45. IS THERE A SUBJECT WHICH SHOULD HAVE BEEN ON THE LIST BUT WASN'T?
Find out what the subject is and clear all misunderstood words to F/N, going E/S to EP. _____
- 46. HAS A WIN BEEN BYPASSED?
Find out what and rehab. _____
- 47. IS THERE SOMETHING ELSE WRONG?
Find out what and handle or return to the C/S. _____
- 48. WAS THERE NOTHING WRONG IN THE FIRST PLACE?
Indicate. If no F/N rehab or Date/Locate. _____
- 49. IS THERE SOME OTHER BYPASSED CHARGE ON THE SUBJECT OF STUDY?
Assess and handle a Study Green Form. _____

ROUTINE 2H
ARC BREAKS BY ASSESSMENT

This is not just a training process. It is a very valuable *unlimited* process that undercuts Repetitive Processes and produces tone arm action on cases that have none on repetitive processes.

R2H, however, is a training *must* before an auditor is permitted to run engrams. It does not have to be run on a pc before engrams are run. Only when an auditor can produce results with R2H should he or she run engrams on any pc. For R2H combines the most difficult steps of engram running, dating, assessing, locating and indicating by-passed charge. If an auditor can date skillfully and quickly handle ARC Breaks (and handle the Time Track) he or she is a safe auditor on R3R. If not, that auditor will not produce results with R3R or make any OTs.

In Academies and the SHSBC, R2H is placed after skill is attained in Model Session and repetitive processes. In auditing programming R2H comes immediately after Reach and Withdraw and the CCHs.

For sweetening a pc's temper and life, R2H has had no equal for cases above but not including level 8.

ARC stands for the Affinity—Reality—Communication triangle from which comes the Tone Scale and is best covered by the booklet "Notes on Lectures".

By-passed charge is covered very fully in recent HCOBs on ARC Breaks.

R2H BY STEPS

The auditing actions of Routine 2H are complex and must be done with great precision.

The actions are done in Routine 3 Model Session. Mid Ruds and Missed Withholds may be used.

STEP ONE:

Tell the pc, "Recall an ARC Break."

When pc has done so acknowledge that the pc has done so. Do not ask the pc what it is. If pc says what it is, simply acknowledge. It is no business of R2H to know what the ARC Break consists of!

STEP TWO:

Date the ARC Break on the meter. If the pc volunteers the date *do not* verify it on the meter further. Accept it at once and write it down. The date is more important than the content of the ARC Break.

STEP THREE:

Assess the ARC Break for by-passed charge, using the attached list.
Find the greatest read.

The assessment is seldom gone over more than once as a whole and those that read are then read again until one remains.

This is a rapid action on the meter. Look only for tiny ticks or falls or a small left to right slash of the needle. Do not expect large reactions. The Mark V meter is indispensable.

STEP FOUR:

Indicate to the pc what charge was missed in that ARC Break he or she has recalled .

The pc must be satisfied that that was the charge missed.

The pc may try to recall what it was that was indicated. This is not a vital part of the drill but **THE PC MUST BE SATISFIED THAT THE LOCATED BY-PASSED CHARGE WAS THE SOURCE OF THE ARC BREAK.**

There is a danger here of a great deal of auditor ad-libbing and tanglefoot. If the pc is not satisfied and *happier* about it, the wrong by-passed charge has been found and Step Three must be re-done.

It is no part of this process to run an engram or secondary thus located.

THE ASSESSMENT FORM

This is a *sample* form. It may be necessary to add to it. Some lines of it may eventually be omitted. However, this form does work. The auditor may add a few lines to it.

In asking the questions preface the whole assessment with, "In the ARC Break you recalled _____." Do not preface each question so unless pc goes adrift.

A dirty needle means pc has started to speculate. Ask, "Have you thought of anything?" and clean needle.

Had an engram been missed? Had a withhold been missed? Had some emotion been rejected? Had some affection been rejected? Had a reality been rejected? Had a communication been ignored? Had a similar incident occurred before? Had a goal been disappointed? Had some help been rejected? Was an engram restimulated? Had an overt been committed? Had an overt been contemplated? Had an overt been prevented? Was there a secret?

Routine 2H is a skilled operation. Practice gives the auditor a knack of doing it rapidly.

An ARC Break should be disposed of about every fifteen minutes of auditing time. Longer shows ineptitude.

SCIENTOLOGY III

AUDITING BY LISTS

(Note: We now F/N everything. We do NOT
tell the pc what the meter is doing. This
changes "Auditing By Lists" in both respects.
We do not say to the pc. "That's clean" or
"that reads.")

Ref: HCOB 14 Mar 71 F/N EVERYTHING
HCOB 4 Dec 77 CHECKLIST FOR
SETTING UP SESSIONS
AND AN E-METER
HCOB 24 Jan 77 TECH CORRECTION
ROUND-UP
HCOB 7 Feb 79R E-METER DRILL 5RA CAN SQUEEZE
HCOB 8 Dec 78II GREEN FORM AND EXPANDED GREEN FORM
40RD, USE OF

Use any authorized published LIST. (Green Form for general review, L1C for ARC Brks, L4BRA for *list errors*.)

METHOD 3

Set the sensitivity for 1/3 of a dial drop on a correct can squeeze per E-Meter Drill 5RA (Reference: HCOB 7 Feb 79R E-METER DRILL 5RA CAN SQUEEZE).

Have your meter in a position (line of sight) so you can see the list and the needle or you can see the needle and the pc. The meter position is important.

Hold the mimeoed list close beside the meter. Have your worksheet more to the right. Keep record on your worksheet. Mark the pc's name and date on it. Mark what list it is on the W/S with time. It remains in the folder stapled to the W/S.

Read the question on the list, note if it reads. Do NOT read it while looking at the pc, do NOT read it to yourself and then say it while looking at the pc. These are the L10 actions and are called Method 6, not Method 3. It is more important to see the pc's cans than his face as can fiddle can fake or upset reads.

TR 1 must be good so the pc clearly hears it.

You are looking for an INSTANT READ that occurs at the end of the exact last syllable of the question.

If it does not read, mark the list X. If the list is being done through an F/N and the F/N just continues, mark the question F/N.

If the question reads, do *not* say “That reads.” Mark the read at once (tick, SF, F, LF, LFBD, R/S), transfer the number of the Q to the W/S and look expectantly at the pc. You can repeat the Q by just saying it again if pc doesn’t begin to talk. He has probably already begun to answer as the Q was live in his bank as noted by the meter.

Take down the pc’s remarks in shortened form on the W/S. Note any TA changes on the W/S.

If the pc’s answer results in an F/N (cog VGIs sometimes follow, GIs always accompany a real F/N), mark it rapidly on the W/S and say, “Thank you. I would like to indicate your needle is floating.”

Do NOT wait endlessly for the pc to say more. If you do he will go into doubt and find more, also do NOT chop what he is saying. Both are TR errors that are very bad.

If there is no F/N, at the first pause that looks like the pc thinks he has said it, ask for an earlier similar whatever the question concerned. Do NOT change the Q. Do NOT fail to repeat what the question is. “Was there an earlier similar restimulation of ‘rejected affinity’?” This is the “E/S” part of it. You do *not* leave such a question merely “clean.”

It does not matter now if you look at the pc when you say it or not. But you can look at the pc when you say it.

The pc will answer. If he comes to a “looks like he thinks he said it” and no F/N, you ask the same Q as above.

You ask this Q “Was there an earlier similar “ until you finally get an F/N and GIs. You indicate the F/N.

That is the last of that particular question.

You mark “F/N” on the list and call the next question on the list. You call this and other questions without looking at the pc.

Those that do not read, you X as out.

The next question that reads, you mark it on the list, transfer the question number to the W/S.

Take the pc’s answer.

Follow the above E/S procedure as needed until you get an F/N and GIs for the question. Ack. Indicate and return to the mimeoed list.

You keep this up until you have done the whole list in this fashion.

If you got no read on the list question but the pc volunteers some answer to an unreading question, do NOT take it up. Just ack and carry on with your mimeoed list.

BELIEVE YOUR METER. Do not take up things that don’t read. Don’t get “hunches.” Don’t let the pc run his own case by answering nonreading items and then the auditor taking them up. Also don’t let a pc “fiddle the cans” to get a false read or to obscure a real one. (Very rare but these two actions have happened.)

BIG WIN

If halfway down a prepared list (the last part not yet done) the pc on some question gets a wide F/N, big cog, VGIs, the auditor is justified in calling the list complete and going to the next C/S action or ending the session, *except in the case where an F/Ning list is C/Sed for, e.g. C/S 53RL. The auditor does not violate C/S Series 20 PERSISTENT F/N. If he is intending to F/N the list, and the pc is on a big win, the auditor would end off, let the pc have his win, and then in another later session, continue with the list.*

There are two reasons for this—one, the F/N will usually just persist and can't be read through and further action will tend to invalidate the win.

The auditor can also carry on to the end of the prepared list if he thinks there may be something else on it, *if it does not violate C/S Series 20 PERSISTENT F/N.*

GF AND METHOD 3

When a GF is taken up Method 3 (item by item, one at a time) *one ends it at the first F/N (Reference: HCOB 8 Dec 78 II GREEN FORM AND EXPANDED GREEN FORM 40RD, USE OF). If the auditor were to continue, it can occur that the TA will go suddenly high. The pc feels he is being repaired, that the clearing up of the first item on the GF handled it and protests. It is the protest that sends the TA up.*

Thus a GF is best done by Method 5 (once through for reads, then the reads handled) .

L1C, L3RF, L7 and other such lists are best done Method 3.

The above steps and actions are exactly how you do Auditing by List today. Any earlier data contrary to this is canceled. Only 2 points change—we F/N everything that reads by E/S or a process to handle (L3RF requires processes, not E/S to get an F/N) or *else check for false read if the pc shows manifestations of this, and we never tell the pc that it read or didn't read, thus putting his attention on the meter.*

We still indicate F/Ns to the pc as a form of completion.

L1C and Method 3 are NOT used on high or very low TAs to get them down or up.

The purpose of these lists is to clean up bypassed charge.

An auditor also indicates when he has finished with the list.

An auditor should dummy drill this action both on a doll and bullbait.

The action is very successful when precisely done.

Auditor Admin Series 16R

CORRECTION LISTS

A Correction List is a list of prepared questions on a mimeoed sheet which is used by the Auditor for the repair of a particular situation, action or rundown.

If a Correction List is used it must be stapled at the back of the W/Sheets.

The Correction List must not be omitted and must be in the session reports so the C/S can look at the original assessment.

If a Correction List is not completely handled in one session, it is not stapled as above but left free. It is stapled to the worksheets of the session in which its handling is completed.

RELATION TO WORKSHEET ADMIN

When using a Correction List, the number of the question being handled is marked on the W/Sheet.

Example:

On an L1C question 2 "Has a withhold been missed?" reads.

WORKSHEET:

- L1C
2. SF
Well I took the money and etc, etc.

The List is marked to show it is handled.

Example:

1. Has there been an error in listing?
(If this reads change to L4BR at once) X
2. Has a withhold been missed? SF to F/N

3. Has some emotion been rejected? X
4. etc.
