**SAINT HILL SPECIAL BRIEFING COURSE
LEVEL B CHECKSHEET
HUBBARD COMMUNICATION AUDITING SPECIALIST**

(Cancels:

BPL 18 Mar 75R II, LEVEL FIVE CHECKSHEET
Rev. 25.3.77 SAINT HILL SPECIAL BRIEFING COURSE
BPL 25 Mar 77 SENIOR SAINT HILL SPECIAL
BRIEFING COURSE)

NAME: _____ ORG: _____

DATE STARTED: _____ DATE COMPLETED: _____

This checksheet contains the chronological development of Dianetic and Scientology Technology from 1955 to 1961. It also covers all data needed to audit a Dn Clear, run Objectives, Havingness, Problems, ARC S/W, Grade 0 and Grade 1. It contains full data on the subject of communication.

PREREQUISITES: (1) Student Hat or PRD (2) New Era Dianetics Course (3) New Era Dianetics Internship (4) Class IV (5) SHSBC Level A course.

PURPOSE: To provide the student with a background of the chronological development of tech from 1955 to 1961 and to teach him the auditing skills of auditing Objectives, Havingness, Problems, ARC S/W, Grade 0 and Grade 1.

LENGTH: Full time (9:00 am - 10:30 pm) - 4¹/₂ weeks
Part time (9:00 am - 6:00 pm) - 6¹/₂ weeks
Foundation hours = 10¹/₂ weeks.

STUDY TECH: This course is studied per HCO PL 25 Sep 79, Issue I - IMPORTANT, SUCCESSFUL TRAINING LINEUP, with full use of study tech.

R-FACTOR: The Theory and Practical Sections of this course are done concurrently. The student audits daily either during his practical time or outside of course hours while continuing through the theory section of the checksheet.

E/P: Certainty that you can audit Objectives, ARC S/W, Grade 0 and Grade 1 with full knowledge of Havingness and Communication.

PRODUCT: An auditor who can audit Objectives, ARC S/W, all the processes of Grade 0 and Grade 1 and who has a background of the chronological development of tech from 1955 to 1961.

CERTIFICATE: SAINT HILL SPECIAL BRIEFING COURSE LEVEL A - HUBBARD COMMUNICATION AUDITING SPECIALIST.

HCO POLICY LETTER OF 7 FEBRUARY 1965
REISSUED 15 JUNE 1970

(Corrected per Flag Issue 28.1.73)

Remimeo
Sthil Students
Assn/Org Sec Hat
HCO Sec Hat
Case Sup Hat
Ds of P Hat
Ds of T Hat
Staff Member Hat
Franchise
(issued May 1965)

Note: Neglect of this Pol Ltr has caused great hardship on staffs, has cost countless millions and made it necessary in 1970 to engage in an all out International effort to restore basic Scientology over the world. Within 5 years after the issue of this PL with me off the lines, violation had almost destroyed orgs. "Quickie grades" entered in and denied gain to tens of thousands of cases. Therefore actions which neglect or violate this Policy Letter are HIGH CRIMES resulting in Comm Evs on ADMINISTRATORS and EXECUTIVES. It is not "entirely a tech matter" as its neglect destroys orgs and caused a 2 year slump. IT IS THE BUSINESS OF EVERY STAFF MEMBER to enforce it.

ALL LEVELS

KEEPING SCIENTOLOGY WORKING

HCO Sec or Communicator Hat Check
on all personnel and new personnel
as taken on.

We have some time since passed the point of achieving uniformly workable technology.

The only thing now is getting the technology applied.

If you can't get the technology applied then you can't deliver what's promised. It's as simple as that. If you can get the technology applied, you can deliver what's promised.

The only thing you can be upbraided for by students or pcs is "no results". Trouble spots occur only where there are "no results". Attacks from governments or monopolies occur only where there are "no results" or "bad results".

Therefore the road before Scientology is clear and its ultimate success is assured if the technology is applied.

So it is the task of the Assn or Org Sec, the HCO Sec, the Case Supervisor, the D of P, the D of T and all staff members to get the correct technology applied.

Getting the correct technology applied consists of:

One: Having the correct technology.

Two: Knowing the technology.

Three: Knowing it is correct.

Four: Teaching correctly the correct technology.

Five: Applying the technology.

Six: Seeing that the technology is correctly applied.

Seven: Hammering out of existence incorrect technology.

Eight: Knocking out incorrect applications.

Nine: Closing the door on any possibility of incorrect technology.

Ten: Closing the door on incorrect application.

One above has been done.

Two has been achieved by many.

Three is achieved by the individual applying the correct technology in a proper manner and observing that it works that way.

Four is being done daily successfully in most parts of the world.

Five is consistently accomplished daily.

Six is achieved by instructors and supervisors consistently.

Seven is done by a few but is a weak point.

Eight is not worked on hard enough.

Nine is impeded by the "reasonable" attitude of the not quite bright.

Ten is seldom done with enough ferocity.

Seven, Eight, Nine and Ten are the only places Scientology can bog down in any area.

The reasons for this are not hard to find. (a) A weak certainty that it works in Three above can lead to weakness in Seven, Eight, Nine and Ten. (b) Further, the not-too-bright have a bad point on the button Self-Importance. (c) The lower the IQ, the more the individual is shut off from the fruits of observation. (d) The service faces of people make them defend themselves against anything they confront good or bad and seek to make it wrong. (e) The bank seeks to knock out the good and perpetuate the bad.

Thus, we as Scientologists and as an organization must be very alert to Seven, Eight, Nine and Ten.

In all the years I have been engaged in research I have kept my comm lines wide open for research data. I once had the idea that a group could evolve truth. A third of Century has thoroughly disabused me of that idea. Willing as I was to accept suggestions and data, only a handful of suggestions (less than twenty) had long run value and none were major or basic; and when I did accept major or basic suggestions and used them, we went astray and I repented and eventually had to "eat crow".

On the other hand there have been thousands and thousands of suggestions and writings which, if accepted and acted upon, would have resulted in the complete destruction of all our work as well as the sanity of pcs. So I know what a group of people will do and how insane they will go in accepting unworkable "technology". By actual record the percentages are

about twenty to 100,000 that a group of human beings will dream up bad technology to destroy good technology. As we could have gotten along without suggestions, then, we had better steel ourselves to continue to do so now that we have made it. This point will, of course, be attacked as “unpopular” “egotistical” and “undemocratic”. It very well may be. But it is also a survival point. And I don’t see that popular measures, self-abnegation and democracy have done anything for Man but push him further into the mud. Currently, popularity endorse degraded novels, self-abnegation has filled the South East Asian jungles with stone idols and corpses, and democracy has given us inflation and income tax.

Our technology has not been discovered by a group. True, if the group had no supported me in many ways I could not have discovered it either. But it remains that in its formative stages it was not discovered by a group, then group efforts, one can safely assume, will not add to it or successfully alter it in the future. I can only say this now that it is done. There remains, of course, group tabulation or co-ordination of what has been done, which will be valuable-only so long as it does not seek to alter basic principles and successful applications.

The contributions that were worth while in this period of forming the technology were help in the form of friendship, of defence, of organization, of dissemination, of application, of advices on results and of finance. These were great contributions and were, and are, appreciated. Many thousands contributed in this way and made us what we are. Discovery contribution was not however part of the broad picture.

We will not speculate here on why this was so or how I came to rise above the bank. We are dealing only in facts and the above is a fact-the group left to its own devices would not have evolved Scientology but with wild dramatization of the bank called “new ideas” would have wiped it out. Supporting this is the fact that Man has never before evolved workable mental technology and emphasizing it is the vicious technology he did evolve-psychiatry, psychology, surgery, shock treatment, whips, duress, punishment, etc, ad infinitum.

So realize that we have climbed out of the mud by whatever good luck and good sense, and refuse to sink back into it again. See that Seven, Eight, Nine and Ten above are ruthlessly followed and we will never be stopped. Relax them, get reasonable about it and we will perish.

So far, while keeping myself in complete communication with all suggestions, I have not failed on Seven, Eight, Nine and Ten in areas I could supervise closely. But it’s not good enough for just myself and a few others to work at this.

Whenever this control as per Seven, Eight, Nine and Ten has been relaxed the whole organizational area has failed. Witness Elizabeth, N.Y., Wichita, the early organizations and groups. They crashed only because I no longer did Seven, Eight, Nine and Ten. Then, when they were all messed up you saw the obvious “reasons” for failure. But ahead of that they ceased to deliver and that involved them in other reasons.

The common denominator of a group is the reactive bank. Thetans without banks have different responses. They only have their banks in common. They agree then only on bank principles. Person to person the bank is identical. So constructive ideas are individual and seldom get broad agreement in a human group. An individual must rise above an avid craving for agreement from a humanoid group to get anything decent done. The bank-agreement has been what has made Earth a Hell-and if you were looking for Hell and found Earth, it would certainly serve. War, famine, agony and disease has been the lot of Man. Right now the great governments of Earth have developed the means of frying every Man, Woman and Child on the planet. That is Bank. That is the result of Collective Thought Agreement. The decent, pleasant things on this planet come from individual actions and ideas that have somehow gotten by the Group Idea. For that matter, look how we ourselves are attacked by “public opinion” media. Yet there is no more ethical group on this planet than ourselves.

Thus each one of us can rise above the domination of the bank and then, as a group of freed beings, achieve freedom and reason. It is only the aberrated group, the mob, that is destructive.

When you don't do Seven, Eight, Nine and Ten actively, you are working for the Bank dominated mob. For it will surely, surely (a) introduce incorrect technology and swear by it, (b) apply technology as incorrectly as possible, (c) open the door to any destructive idea, and (d) encourage incorrect application.

It's the Bank that says the group is all and the individual nothing. It's the Bank that says we must fail.

So just don't play that tune. Do Seven. Eight, Nine and Ten and you will knock out of your road all the future thorns.

Here's an actual example in which a senior executive had to interfere because of a pc spin: A Case Supervisor told Instructor A to have Auditor B run Process X on Preclear C. Auditor B afterwards told Instructor A that "It didn't work." Instructor A was weak on Three above and didn't really believe in Seven, Eight, Nine and Ten. So Instructor A told the Case Supervisor "Process X didn't work on Preclear C." Now this strikes directly at each of One to Six above in Preclear C, Auditor B, Instructor A and the Case Supervisor. It opens the door to the introduction of "new technology" and to failure.

What happened here? Instructor A didn't jump down Auditor B's throat, that's all that happened. This is what he should have done: Grabbed the Auditor's report and looked it over, When a higher executive on this case did so she found what the Case Supervisor and the rest missed: that. Process X increased Preclear C's TA to 25 TA divisions for the session but that near session end Auditor B Qed and Aed with a cognition and abandoned Process X while it still gave high TA and went off running one of Auditor B's own manufacture, which nearly spun Preclear C. Auditor B's IQ on examination turned out to be about 75. Instructor A was found to have huge ideas of how you must never invalidate anyone, even a lunatic. The Case Supervisor was found to be "too busy with admin to have any time for actual cases".

All right, there's an all too typical example. The Instructor should have done Seven, Eight, Nine and Ten. This would have begun this way. Auditor B: "That process X didn't work." Instructor A: "What exactly did you do wrong?" Instant attack. "Where's your auditor's report for the session? Good. Look here, you were getting a lot of TA when you stopped Process X. What did you do?" Then the Pc wouldn't have come close to a spin and all four of these would have retained certainty.

In a year, I had four instances in one small group where the correct process recommended was reported not to have worked. But on review found that each one had (a) increased the TA, (b) had been abandoned, and (c) had been falsely reported as unworkable. Also, despite this abuse, in each of these four cases the recommended, correct process cracked the case. Yet they were reported as not having worked!

Similar examples exist in instruction and these are all the more deadly as every time instruction in correct technology is flubbed, then the resulting error, uncorrected in the auditor, is perpetuated on every pc that auditor audits thereafter. So Seven, Eight, Nine and Ten are even more important in a course than in supervision of cases.

Here's an example: A rave recommendation is given a graduating student "because he gets more TA on pcs than any other student on the course!" Figures of 435 TA divisions a session are reported. "Of course his model session is poor but it's just knack he has" is also included in the recommendation. A careful review is undertake because nobody at levels O to IV is going to get that much TA on pcs. It is found that this student was never taught to read an E-Meter dial! And no instructor observed his handling of a meter and it was not discovered that he "overcompensated" nervously swinging the TA 2 or 3 divisions beyond where it needed to

go to place the needle at “set”. So everyone was about to throw away standard processes and model session because this one student “got such remarkable TA”. They only read the reports and listened to the brags and never looked at this student. The pcs in actual fact were making slightly less than average gain, impeded by a rough model session and misworded processes. Thus, what was making the pcs win (actual Scientology) was hidden under a lot of departures and errors.

I recall one student who was squirreling on an Academy course and running a lot of off-beat whole track on other students after course hours. The academy students were in a state of electrification on all these new experiences and weren't quickly brought under control and the student himself never was given the works on Seven, Eight, Nine and Ten so they stuck. Subsequently, this student prevented another squirrel from being straightened out and his wife died of cancer resulting from physical abuse. A hard, tough instructor at that moment could have salvaged two squirrels and saved the life of a girl. But no, students had a right to do whatever they pleased.

Squirreling (going off into weird practices or altering Scientology) only comes about from non-comprehension. Usually the non-comprehension is not of Scientology but some earlier contact with an off-beat humanoid practice which in its turn was not understood.

When people can't get results from what they think is standard practice, they can be counted upon to squirrel to some degree. The most trouble in the past two years came from orgs where an executive in each could not assimilate straight Scientology under instruction in Scientology they were unable to define terms or demonstrate examples of principles. And the orgs where they were got into plenty of trouble. And worse, it could not be straightened out easily because neither one of these people could or would duplicate instructions. Hence, a debacle resulted in two places, directly traced to failures of instruction earlier. So proper instruction is vital. The D of T and his Instructors and all Scientology Instructors must be merciless in getting Four, Seven, Eight, Nine and Ten into effective action. That one student, dumb and impossible though he may seem and of no use to anyone, may yet some day be the cause of untold upset because nobody was interested enough to make sure Scientology got home to him.

With what we know now, there is no student we enrol who cannot be properly trained. As an instructor, one should be very alert to slow progress and should turn the sluggards inside out personally. No system will do it, only you or me with our sleeve rolled up can crack the back of bad studenting and we can only do it on an individual student, never on a whole class only. He's slow = something is awful wrong. Take fast action to correct it. Don't wait until next week. By then he's got other messes stuck to him. If you can't graduate them with their good sense appealed to and wisdom shining graduate them in such a state of shock they'll have nightmares if they contemplate squirreling. Then experience will gradually bring about Three in them and they'll know better than to chase butterflies when they should be auditing.

When somebody enrolls, consider he or she has joined up for the duration of the universe- never permit an “open-minded” approach. If they're going to quit let them quit fast. If they enrolled, they're aboard, and if they're aboard, they're here on the same terms as the rest of us- win or die in the attempt. Never let them be half-minded about being Scientologists. The finest organizations in history have been tough dedicated organizations. Not one namby-pamby bunch of panty-waist dilettantes have ever made anything. It's a tough universe. The social veneer makes it seem mild. But only the tigers survive-and even they have a hard time. We'll survive because we are tough and are dedicated. When we do instruct somebody properly he becomes more and more tiger. When we instruct half-mindedly and are afraid to offend, scared to enforce, we don't make students into good Scientologists and that let's everybody down. When Mrs. Pattycake comes to us to be taught, turn that wandering doubt in her eye into a fixed, dedicated glare and she'll win and we'll all win. Humour her and we all die a little. The proper instruction attitude is, “You're here so you're a Scientologist Now we're going to make you into an expert auditor no matter what happens. We'd rather have you dead than incapable.”

Fitting that into the economics of the situation and lack of adequate time and you see the cross we have to bear.

But we won't have to bear it forever. The bigger we get the more economics and time we will have to do our job. And the only things which can prevent us from getting that big fast are areas in from One to Ten. Keep those in mind and we'll be able to grow. Fast. And as we grow our shackles will be less and less. Failing to keep One to Ten, will make us grow less.

So the ogre which might eat us up is not the government or the High Priests. It's our possible failure to retain and practise our technology.

An Instructor or Supervisor or Executive must challenge with ferocity instances of "unworkability". They must uncover what did happen, what was run and what was done or not done.

If you have One and Two, you can only acquire Three for all by making sure of all the rest.

We're not playing some minor game in Scientology. It isn't cute or something to do for lack of something better.

The whole agonized future of this planet, every Man, Woman and Child on it, and your own destiny for the next endless trillions of years depends on what you do here and now with and in Scientology.

This is a deadly serious activity. And if we miss getting out of the trap now, we may never again have another chance.

Remember, this is a our first chance to do so in all the endless trillions of years of the past. Don't muff it now because it seems unpleasant or unsocial to do Seven, Eight, Nine and Ten.

Do them and we'll win.

Applies to all
SHs and
Academies
Franchises

*URGENT AND
IMPORTANT*

TECHNICAL DEGRADES

(This PL and HCO PL Feb 7, 1965 must be made part of every study pack as the first items and must be listed on checksheets.)

Any checksheet in use or in stock which carries on it any degrading statement must be destroyed and issued without qualifying statements.

Example: Level 0 to IV Checksheets SH carry "A. Background Material—This section is included as an historical background, but has much interest and value to the student. Most of the processes are no longer used, having been replaced by more modern technology. The student is only required to read this material and ensure he leaves no misunderstood." This heading covers such vital things as TRs, Op Pro by Dup! The statement is a falsehood.

These checksheets were not approved by myself, all the material of the Academy and SH courses IS in use.

Such actions as this gave us "Quickie Grades", ARC Broke the field and downgraded the Academy and SH Courses.

A condition of TREASON or cancellation of certificates or dismissal and a full investigation of the background of any person found guilty, will be activated in the case of anyone committing the following HIGH CRIMES.

1. Abbreviating an official Course in Dianetics and Scientology so as to lose the full theory, processes and effectiveness of the subjects.
2. Adding comments to checksheets or instructions labelling any material "background" or "not used now" or "old" or any similar action which will result in the student not knowing, using, and applying the data in which he is being trained.
3. Employing after 1 Sept 1970 any checksheet for any course not authorized by myself and the SO Organizing Bureau Flag.
4. Failing to strike from any checksheet remaining in use meanwhile any such comments as "historical", "background", "not used", "old", etc. or VERBALLY STATING IT TO STUDENTS.
5. Permitting a pc to attest to more than one grade at a time on the pc's own determinism without hint or evaluation.
6. Running only one process for a grade between 0 to IV.
7. Failing to use all processes for a level.

8. Boasting as to speed of delivery in a session, such as “I put in Grade zero in 3 minutes.” Etc.
9. Shortening time of application of auditing for financial or laborsaving considerations.
10. Acting in any way calculated to lose the technology of Dianetics and Scientology to use or impede its use or shorten its materials or its application.

REASON: The effort to get students through courses and get pcs processed in orgs was considered best handled by reducing materials or deleting processes from grades. The pressure exerted to speed up student completions and auditing completions was mistakenly answered by just not delivering.

The correct way to speed up a student’s progress is by using 2 way comm and applying the study materials to students.

The best way to really handle pcs is to ensure they make each level fully before going on to the next and repairing them when they do not.

The puzzle of the decline of the entire Scientology network in the late 60s is entirely answered by the actions taken to shorten time in study and in processing by deleting materials and actions.

Reinstituting full use and delivery of Dianetics and Scientology is the answer to any recovery.

The product of an org is well taught students and thoroughly audited pcs. When the product vanishes, so does the org. The orgs must survive for the sake of this planet.

SAFEGUARDING TECHNOLOGY

For some years we have had a word “squirreling”. It means altering Scientology, off-beat practices. It is a bad thing. I have found a way to explain why.

Scientology is a *workable* system. This does not mean it is the best possible system or a perfect system. Remember and use that definition. Scientology is a *workable system*.

In fifty thousand years of history on this planet alone, Man never evolved a workable system. It is doubtful if, in foreseeable history, he will ever evolve another.

Man is caught in a huge and complex labyrinth. To get out of it requires that he follow the closely taped path of Scientology.

Scientology will take him out of the labyrinth. But only if he follows the exact markings in the tunnels.

It has taken me a third of a century in this lifetime to tape this route out.

It has been proven that efforts by Man to find different routes came to nothing. It is also a clear fact that the route called Scientology does lead out of the labyrinth Therefore it is a workable system, a route that can be travelled.

What would you think of a guide who, because his party said it was dark and the road rough and who said another tunnel looked better, abandoned the route he knew would lead out and led his party to a lost nowhere in the dark. You’d think he was a pretty wishy-washy guide.

What would you think of a supervisor who let a student depart from procedure the supervisor knew worked. You’d think he was a pretty wishy-washy supervisor.

What would happen in a labyrinth if the guide let some girl stop in a pretty canyon and left her there forever to contemplate the rocks? You’d think he was a pretty heartless guide. You’d expect him to say at least, “Miss, those rocks may be pretty, but the road out doesn’t go that way.”

All right, how about an auditor who abandons the procedure which will make his preclear eventually clear just because the preclear had a cognition?

People have following the route mixed up with “the right to have their own ideas.” Anyone is certainly entitled to have opinions and ideas and cognitions—so long as these do not bar the route out for self and others.

Scientology is a workable system. It white tapes the road out of the labyrinth If there were no white tapes marking the right tunnels, Man would just go on wandering around and around the way he has for eons, darting off on wrong roads, going in circles, ending up in the sticky dark, alone.

Scientology, exactly and correctly followed, takes the person up and out of the mess.

So when you see somebody having a ball getting everyone to take peyote because it restimulates prenatales, know he is pulling people off the route. Realize he is squirreling. He isn't following the route.

Scientology is a new thing- it is a road out. There has not been one. Not all the salesmanship in the world can make a bad route a proper route. And an awful lot of bad routes are being sold. Their end product is further slavery, more darkness, more misery.

Scientology is the only workable system Man has. It has already taken people toward higher I.Q., better lives and all that. No other system has. So realize that it has no competitor.

Scientology is a workable system. It has the route taped. The search is done. Now the route only needs to be walked.

So put the feet of students and preclears on that route. Don't let them off of it no matter how fascinating the side roads seem to them. And move them on up and out.

Squirreling is today destructive of a workable system.

Don't let your party down. By whatever means, keep them on the route. And they'll be free. If you don't, they won't.

7 January 1955

PLOTTING THE PRECLEAR ON THE TONE SCALE

The most important point in entering a case from the viewpoint of the auditor is establishing the position of the preclear on the Chart of Human Evaluation as given and fully described in the publication *Science of Survival*.

Today this is a relatively simple task providing the auditor knows the simple processes which are the basic processes of both Dianetics and Scientology. As given in the last PAB, these processes are: Two-Way Communication, Elementary Straightwire, Opening Procedure 8-C, Opening Procedure by Duplication, Remedying Havingness and Spotting Spots in Space.

The establishing characteristic of the preclear's position on the tone scale is all contained under the heading of communication lag. Today we do not use E-Meters; today we do not use old-time dianometry; today we have a positive and precise method of positioning the preclear.

Communication lag is the length of time intervening between the asking of the question by the auditor and the reply to that specific question by the preclear. The question must be precise; the reply must be precisely to that question. It does not matter what intervenes in the time between the asking of the question and the receipt of the answer. Incidentally, from my experience in training in Phoenix, this is a very hard point for an auditor to grasp. Thus I am stressing it for you in these PABs. It does not matter what intervenes: the preclear may outflow, jabber, discuss, pause, hedge, disperse, dither or be silent; no matter what he does or how he does it, between the asking of the question and the giving of the answer, the *time is* the communication lag. The near answer, a guessing answer, an undecided answer, are alike imprecise answers and are not adequate responses to the question. On receipt of such questionable answers, the auditor must ask the question again. That he asks the question again does not reduce the communication lag; he is still operating from the moment he asked the question the first time. And if he has to ask the question twenty or thirty times more in the next hour in order to get a precise and adequate answer from the preclear, the length of time of the lag would be from the asking of the first question to the final receipt of the answer. Near answers to the question are inadequate and are, themselves, simply part of the communication lag.

Example:

Auditor: *How many chairs are there in this room?*

Preclear: *Now, let me see. I don't know—we're sitting down, anyway.*

This is not an answer to the question. The answer to the question is the exact number of chairs in the room.

There are, of course, certain questions which are "fade-away" questions, to which, because of the characteristics of the mind, there is no possible answer. One of these is "Give me an unknown time." As soon as the preclear starts to answer such a question, he of course

has as-ised a certain amount of unknownness and will know the time. The answer to a fade-away question is also measurable, however; it could be said arbitrarily to be answered when the preclear has as-ised enough unknownness to give a known time. There are relatively few of these questions.

The length of time necessary for an individual to ask and answer questions is actually a complete two-way communication lag, but here, in testing a lag, we are interested simply in the question the auditor asks and the length of time it takes a preclear to answer it.

Now here comes a specialized knowledge on communication lag. A preclear may have a very short lag on social questions. He may be able to answer immediately and expertly what his name is, how old he is and many other things. These questions are actually being answered by “social machinery” or habitual practice. He has actually no lag, apparently; but remember, the auditor in this case is not asking the preclear: he is asking a social response machine for the socially acceptable answer. As an example of this as mentioned in *Dianetics: Evolution of a Science*, I once had a preclear who would answer on any query as to health that she was fine, even though she was lying in the agony of a migraine headache. She had a machine set up to respond. One was not in communication with the preclear; and, indeed, one seldom ever was, for she was psychotic.

Thus, in establishing communication lag, it is necessary for the auditor to ask nonsocial questions. The question “**What is your name?**” may be replied to very readily. However, this is a social question, and thus one would have to ask the question such as “**How many doors in this room?**” or “**How many feet do women ordinarily have?**” in order to pose a question which requires intelligent differentiation on the part of the preclear. The length of time it takes for him to resolve this question as a problem and reply to it is the lag time.

This is an actual measure of the distance and the number of vias on the communication lag line of the preclear.

The phenomenon of communication lag is intensely useful; it tells you immediately how far the individual is out of present time; it tells us also the ability of the preclear to give up a problem. He may be so hungry for problems, and every question is a problem which requires an “answer,” that he simply swallows the problem and refuses to solve it by giving an answer to the question. It also tells us how protective, defensive the preclear is in regard to life and the environment.

An old-time auditor could very probably tell by his tone of voice as he spoke where he was on the emotional tone scale as given in *Science of Survival*. An auditor not so schooled need only glance at the person’s communication lag in order to know where he stood on the tone scale.

There is an additional phenomenon, a “brother to communication lag,” known as “process lag.” This is the length of time it requires for the preclear to obtain a result from a process. “How many chairs are there in this room?” process, and then let us ask the preclear this question “**How many chairs are there in this room?**” and discover how many times he has to be asked the question and has to be made to answer the question precisely in order to do so without protest and with instant response. The length of time it would take him to reduce first his lack of knowledge as to the number of chairs in the room and then his unwillingness to be asked the question many, many times over and over (which is his unwillingness to duplicate) would, on an overall count, be his process lag. The process lag is the length of time it takes to reduce all communication lag from a type of question or action in auditing; and a process lag, then, is peculiar to auditing, unless, of course, you wish to examine the whole subject of communication lags, at which moment you would discover all manner of interesting phenomena not particularly necessary to the auditor.

He would discover, for instance, that the length of time it takes for an individual to learn and adequately use arithmetic could be classed as a process lag. He could discover also that

there is a communication lag going on in nearly all conversations. One asks the social question, "How are you?" and the person responds from his machinery, "Fine"; and then, as though totally disrelated, one-half-hour later suddenly says to his companion who asked the first question, "You know, I feel terrible today." There is, for instance, the physiological communication lag. How long does it take for a man's body to change the consideration that he is tired to the consideration that he is refreshed? How long does it take a certain drug to work? But it is not our purpose to go into the broad study of communication lags, as interesting as that field may be, for we do not need to know any more than communication lag and process lag in order to do a good job of auditing and to position the preclear accurately on the tone scale.

Actually it is the process lag which situates the preclear on the tone scale for the auditor. Let us say that a very long process lag could be classified as "unable to do until processed." Then we would discover that Two-Way Communication as the basic process would be an inability if not done with ease by the preclear; if it is done very arduously by the preclear, it would take the preclear on the lower part of the tone scale. Similarly, if the preclear has enormous lag on Straightwire questions, it would peg him as on another, slightly higher, part of the tone scale; and so forth.

This is extremely useful information for an auditor, for it tells him that anybody below 2.0 on the tone scale is there to be audited into death. He is not there to be made to survive, and thus a case poses a considerable amount of trouble for an auditor when it is below 2.0 on the tone scale. When, in other words, it does not discover in Two-Way Communication and in Elementary Straightwire easy processing.

Just to make sure that no preclear fools an auditor with social responses and just to make sure that every preclear gets well, we process today in this fashion. First we discover and execute Two-Way Communication with the preclear, even though we have to do it in the field of mimicry. Then, when Two-Way Communication is very adequately established between the auditor and the preclear, we continue with Elementary Straightwire, the commands of which are **"Something you wouldn't mind remembering," "Something you wouldn't mind forgetting."** Only then would we go into Opening Procedure of 8-C. It would seem very hard to believe to some people, unless they have considerable experience in auditing, that many people find in Opening Procedure of 8-C a process so arduous that they become sick, fall on the floor and do all manner of weird convulsions. Yet it is true that an individual who has not already been put upscale to Two-Way Communication and Elementary Straightwire will discover considerable difficulty in Opening Procedure of 8-C.

When one has done Two-Way Communication and Elementary Straightwire on a preclear and has recovered the preclear's ability to get well, he can see for the purposes of auditing that the individual has come to a level above 2.0 on the tone scale and he then is ready to embark on Opening Procedure of 8-C, remembering at all times that he must still be able to maintain his two-way communication—that is, not one-way communication, but two-way communication with the preclear, whatever process he does on the preclear, whenever he does it, no matter what actual condition the preclear is in. Many an auditor fails simply because he fails to listen to the preclear when the preclear has something to say and thus the preclear goes into apathy, for he was about to discover to the auditor that the auditor's process had done something fantastically interesting to him, and being unable to communicate this to the auditor, the preclear goes into apathy.

CHART OF PROCESSES

WHERE THEY ARE ON THE ARC TONE SCALE

21 January 1955

TWO-WAY COMMUNICATION IN ACTION

The first thing one should know about communication is its formula. The formula of one-way communication is Cause, Distance, Effect, with Intention and Attention, where that which occurs at Effect Duplicates what emanated from Cause. The elements of communication, then, are Intention, Attention, Cause, Effect, Distance and Duplication. Meaning, Significance, are secondary phenomena.

Communication is part of the triangle of Affinity, Reality and Communication. Reality is composed of the degree of duplication possible, and this is also describable under the heading of Agreement. Reality is a quality which depends upon duplication, and in the action of duplication expertly or poorly done we find agreement and disagreement. The basic definition of Affinity is "co-existence" and as we drift away from actual co-existence, we drift into the ARC triangle and the communication formula. Co-existence is superior to the ARC triangle and the mechanics of living. Here we would find two things occupying the same space. This would be at the top of the scale. Two things with no space, no mass, and no energy. At the bottom of the scale we would find two things compulsively or obsessively *almost* occupying the same space. As Affinity enters into the state of not-quite co-existence, we get the manifestations of particles and significances, symbols, and, of course, much more intimately, Affinity embraces the distance part of the communication formula. It begins with the no distance of co-existence and then, as Affinity drops, the distance factor is more and more important (regardless of whether the distance is far or close) until we have at last a complete and positive objection to proximity, or a complete and positive objection to any distance, and in this "state of mind" we find material objects or the particles which compose them. Under Affinity, of course, we have the emotional scale: Effort, as found in *Science of Survival*, and the Know down to Mystery Scale as discussed in the Advanced Clinical Course Tapes.

The entirety of ARC is the subject of understanding. Knowingness is highest on the scale, and this exceeds ARC and is in the realm of considerations and ideas. The moment we enter into understanding we get into the communication formula and the ARC triangle. Understanding is a highly superior commodity, but still lower than knowing. Understanding itself produces a column of the Chart of Human Evaluation which could be added to it. At the top we would have a complete understanding of all things, and it would be complete knowingness, but this would require no communication to effect. From this knowingness we would drop downscale into understanding, and then into varying but dwindling degrees of understanding until we arrived at 2.0 on the scale, where we would find that understanding had become commixed with incomprehensibilities to such a degree that the entire vectors of life are reversed and become the vectors of physical objects. From 2.0 down we specialize in greater and greater degrees of incomprehensibility.

The subject of incomprehensibility is difficult to comprehend. If we examine the communication formula we discover that a duplication at effect must take place if a communication is to be received from the cause point of the line. Similarly, the cause point of the line has to take into account the fact that effect must be able to duplicate. Thus, the cause

point of the line, if it wishes to communicate, must communicate in a fashion or in a guise which can be duplicated at the effect point of the line. This is not a question of being so stupid or incomprehensible as to cause an effect on any incomprehensibility, but it is a willingness to self-determinedly emanate in such a manner as to allow a duplication to take place at effect.

The basic stuff of the physical universe, to a thetan, is an incomprehensibility, but he is entirely devoted to trying to understand it. A thetan himself, the awareness of awareness unit, *is* understanding. Thus, we have this unit attempting to understand the incomprehensible. A thetan can, with perfect ease, understand incomprehensibility, but sometimes until it is called to his attention, he is continually on the track of trying to find some comprehensibility in the incomprehensible. The very fact that a thing is in a mass form is a puzzle to a thetan, since he, himself, has no mass, no wave length, and no actual position in space other than his own declaration of it. He can easily understand a form, since he is generally “experienced” in forms, but he can’t understand the stuff of which the form is made because that stuff is incomprehensibility. Thus we find the thetan very easily “as-ising” forms and altering them, and we find him considering that he is incapable of altering in its actual substance, creating or destroying the stuff of which the physical universe is made.

A thetan looking at the incomprehensibility of the physical universe is, of course, doing a no-duplicate. He is mocking himself up in the role of having to understand the incomprehensible. Thus we get him fixated on the idea of the physical sciences and eventually degenerating down to a point where he behaves like MEST, and here we have the luckless nuclear physicist who can cause MEST to vanish only by blowing it up, physically—a game which will never win. Here we find science in general, and here we find scientists, and their utter incapability of understanding any slightest particle of human behavior or conduct, and without any beliefs to speak of in humanity, and with a perfect and gruesome willingness to destroy it. These, as awareness of awareness units, have agreed so thoroughly with the physical universe that they have no agreement with actual understanding. They write their books with many communication lags, hemming and hawing, and without any decisions, and thoroughly object to anybody’s writing as though he knows what he is doing. The one thing that the scientist knows is that nobody knows, and this does not happen to be true. Thus, his science is based on a false datum. He originates a theory that man rises from mud because he, himself, is so close to it. When he does go into the field of the human spirit, the spirit itself, and indeed his own beingness, is an other-determinism to him. He sees no virtue in human fellowship or decency and advises in his books the necessity to turn to higher force. Once a scientist has broken through, in a revulsion against himself, his feelings of non-understandingness about people, it is generally on the downward side and it is in the realm where he must obsessively turn to God.

I give you this as an idea of what happens to preclears as they go down the tone scale. When they get close to the bottom they become scientific and pretend they know nothing and fight anything else which might know. When they get a little further down they become more violently neurotic and a little more south they become psychotic and forget even their science. And this is of considerable interest to the auditor, for the auditor is interested in human reactions and actions, and all he has to do is understand that he is looking at an incomprehensibility when he looks at anyone who is that neurotic or psychotic. There is no other causation in psychotic behavior than that everything is incomprehensible. There is no private, secret button which can be hit in a case, magically turning the individual into sanity, unless, of course, we utilize successfully **“Be three feet back of your head”** with some basic preparatory work. But this, of course, returns the person upscale toward understanding since it takes him from such close proximity to mass.

The auditor, then, who is looking at a psychotic, is trying to understand an incomprehensible, and if we were to cease using the word “psychotic” and began to use the word “incomprehensetic,” we would have a word which would serve us extremely well.

Thus, an auditor processes the psychotic with considerable difficulty in the absence of this understanding of incomprehensibility. For the auditor, to get any communication across,

has to mock himself up, at least to some degree, as psychotic before he can communicate. The auditor's fight to keep from being psychotic, or even seeming psychotic, is such that this conflict within himself (not because of any emanation from the psychotic, since these people do not emanate) restimulates him. The best way to handle a psychotic is with physical form, making the psychotic mimic the physical form by mimicking, with the physical form, the psychotic. Thus we have our basic level of mimicry, and thus we have the entering wedge of communication.

One-way communication is a first-dynamic operation. Two-way communication is a third-dynamic operation. An auditor who is playing "the only one" does not engage in third-dynamic activities, much less communication, and so he withdraws into one-way communication, and thus never lets the preclear emanate any communications, and will not listen to anything the preclear has to say. To this one fact alone we attribute the breakdown and lack of forward progress of many cases. The auditor did not pay any attention when the preclear had some vital information he desired to impart.

The process involved with running a two-way communication is best entered in the field of mimicry, and the best two-way process is then, of course, mimicry. Such a process will be given in the next PAB.

On the subject of communication itself, the auditor must realize that two-way communication is part and parcel of every process known in Dianetics and Scientology, and if it is not established, and if it is not continued, and if no attention is paid to two-way communication, only a small amount of benefit will occur. If two-way communication is understood as a process, many cases which previously seemed utterly unsolvable can be resolved with considerable ease.

CHART OF PROCESSES

WHERE THEY ARE ON THE ARC TONE SCALE

| <i>Exteriorized</i> | |
|--------------------------------|------|
| <i>Spotting Spots in Space</i> | 4.0 |
| | 3.6 |
| | 3.5 |
| <i>Remedy of Havingness</i> | 3.1 |
| | 3.0 |
| <i>Op. Pro. by Duplication</i> | 2.6 |
| | 2.5 |
| <i>Opening Procedure 8-C</i> | 1.8 |
| | 1.8 |
| <i>Elementary Straightwire</i> | 1.1 |
| | 1.0 |
| <i>Two-Way Communication</i> | -8.0 |

MIMICRY

The following process was developed by DScn Jan Halpern. Throughout the process the auditor doesn't say a word. He doesn't answer possible questions, he doesn't explain in words what he wants. Under all circumstances he makes like the Tar Baby and "don't say nothin'." He uses any gestures necessary.

Step I-a: The auditor stands in front of the preclear, holding out a small object to him, until the preclear takes it from his hand. As soon as the preclear takes the object, the auditor holds out his hand, palm up, until the preclear places the object in his palm. The auditor immediately then offers it to the preclear again. This is continued until without comm lag. The object should be offered to the preclear from a variety of positions once he has gotten the idea: from down near the floor, far off to either side, over the preclear's head. Likewise, the palm should be held in a variety of positions for the return of the object. Both hands may be used. Get the preclear doing it really fast.

Step I-b: When Step I-a is going swiftly and easily, the auditor introduces a switch. After the preclear has just accepted the article, the auditor, instead of extending his palm for its return, places his hands behind his back briefly, then conveys by gestures that the preclear is to offer the object to him. When the preclear does so, the auditor takes the object from his hand, but does not return it until the preclear holds out his own hand, palm up, to receive it. This exchange is continued until the preclear is offering and accepting the object from as wide a variety of positions as the auditor used, and all other comm lags are flat.

Step II: The auditor, just having accepted the object, makes a gesture that this part is over, then deliberately puts the object down where the preclear can see it, stands back and indicates that the preclear is to pick it up. When the preclear picks it up, the auditor gestures that he is to put it down again anywhere he likes in the room. The instant the preclear does so, the auditor snatches it up and puts it someplace else. You keep this up, till auditor and preclear are racing around the room, seizing the object as soon as the other's fingers have let go of it. The object isn't necessarily placed in a different spot each time. It may be picked up and put down again in the same place, but it must be handled each time. All sorts of tacit rules and understandings will probably develop while this is being run.

This process rehabilitates the sense of play; validates non-verbal ARC; short-circuits verbal circuitry; lets the preclear position matter and energy in space and time; gets the preclear up to speed; murders "there must be a reason" for doingness; processes the auditor and the preclear equally and besides, it's fun.

STRAIGHT WIRE

The oldest form of psychotherapy involved the questioning of the patient about his dreams. This is currently dramatized by psychology. A more modern type of psychotherapy consists of asking a preclear about his past.

Both of these, and many other activities in Dianetics and Scientology could be included under the heading of Straight Wire.

Effective particularly from 1.1 on the tone scale to 1.8, the processes embraced under the heading "Straight Wire" have all one purpose in common: this is the purpose of making the preclear stretch a "straight wire" between Cause and Effect across the intervening distance, whether this "distance" could be a distance in terms of location or a distance in terms of time.

Any process in Dianetics or Scientology is a Third Dynamic process. Thus, any process in Dianetics or Scientology requires communication. In Straight Wire and any other process, this fact must be observed by the auditor: that a two-way communication must be maintained. Thus, when administering any process which could be called "Straight Wire," the auditor should be careful at the same time to maintain two-way communication. When he originally started the session the auditor captured some ground. He established two-way communication, whether by mimicry, conversation, or discussion. He must never lose this captured ground. Thus, when running Straight Wire, when running Opening Procedure of 8-C, Opening Procedure by Duplication, Remedy of Havingness, Spotting Spots in Space or any other process, it is necessary that this gained ground be maintained.

The term "straight wire" itself is meant to describe the imaginary straight line between Cause and Effect. The trouble with a preclear is that he is doing too many things VIA. He is doing anything and everything in life VIA. He is obtaining via food. He is looking via glasses. He is feeling and expressing emotion via glands. He is utilizing or experiencing effort via muscles. He is thinking via (he thinks) a brain. He is obtaining sensation, sustenance, and even revenge, via food. He is experiencing sensation and making the future via his genitals, and he is even trying to experience the origin of life, in most cases, via a church.

His dependency upon objects and services is such that his own creativeness becomes suppressed, submerged, for this working law is always present: that upon which one becomes dependent becomes, at length, one's enslaver. When anyone sets up anything automatically, that thing becomes his randomness at some future date. We can observe this in many ways, but the entire summation of this can be grouped under the heading "VIA."

Should the auditor bring the preclear to a point where a certain cause and a certain effect can be joined together without the intervention of a VIA, then the auditor has materially gained. Such a process is the Opening Procedure of 8-C, for here the preclear is being asked to connect, at least as a body, directly with a wall. As he reaches out to touch a spot on that wall, he is, in effect, stringing a straight line. It is notable that the Opening Procedure of 8-C was

first designed for use upon an exteriorized person, and when one has a preclear exteriorized, running through the steps of the Opening Procedure of 8-C and the remainder of 8-C as given in Issue 24-G of the *Journal of Scientology* produces very marked effects.

If your preclear cannot have an effect he certainly cannot change. If he cannot cause an effect to occur, he certainly cannot change himself. All time is change—change is time. While, basically, time is simply a consideration, the considerations of time itself are mechanically tracked by the alteration of the position of the particles in space. Your preclear is stuck wherever there was no motion of particles, whether the moment is a pleasure moment, a triumph, a failure, or even death. In the absence of particle motion, as far as he is concerned, if he has lost his power to change his considerations, no time has existed. Thus, those things which you find in the engram bank which are most readily available to the preclear are things which contain no change in them, or things which have a change immediately before them and after them, but have no change between. In the absence of this change, we get a condition of timelessness in an engram or facsimile which permits that incident to “float” on the track and thus rise up to present time.

As the preclear becomes more and more embedded in motionless incidents he becomes harder and harder to change himself. Or, as he dramatizes to a marked degree his own bank, in the most ordinary living, then, he dramatizes the changeless moments, and he, himself, does not change.

The basic confusion of a preclear lies in the fact that an awareness of awareness unit basically has no mass, meaning or mobility. It has qualities and potentials, but it does not have position in space, nor, in its highest form, any movement in space. It can be at will in various positions in space, but it is not, itself, in space. As this is the case you can see that a preclear is dramatizing the truth when he is holding himself and motionless incidents motionless. In other words, if change to him is totally a particle shift in space, then he is apt to consider himself moving as the particles move. If he is moving he is actually to some degree disobeying the most basic quality of theta. Motion, then, to him, becomes antipathetic. On the lowest toned catatonic one finds this dramatization in full progress. A motionless person is then dramatizing the truth. But in all aberration we discover that it is the ingredient of truth which maintains the aberration in force. He is dramatizing motionlessness, and is motionless, but the truth of the matter is that, as a thetan, he should be able to make things move at will and appear in various positions in space. Thus, in clinging to the truth he loses his ability to move particles, and thus loses his ability to have time. This is best manifested as his communication, but as his communication drops, so drop his reality and his affinity. In other words, although he clings to the motionlessness of being a thetan, he loses the basic qualities of being a thetan, which are those of Knowingness and Understanding.

The basic confusion of any preclear, then, is to move or not to move. Shakespeare has said “to be or not to be” is the question. When it comes to getting a preclear upscale, the question is “to move or not to move.”

The basics of Straight Wire are designed to bring the preclear into the realization that he, himself, can be at either the cause or effect point of a communication line, and that he, himself, does not have to be the particle moving on that line. Being the particle and insisting upon the truth that he isn't moving simply stops his communication entirely. Particles move on the straight line between Cause and Effect. Cause and Effect themselves are not in motion. The task is to get the individual to assume the responsibility of moving particles. With this comes the realization on his part that he, himself, does not have to move in order to move particles, and thus he will come upscale. Getting him to move his body around the room is an excellent method of accomplishing this, but to many preclears the movement of a body is a near-impossibility. And these can contemplate only the moving of a memory or an idea. Thus, from 1.1 to 1.8 on the tone scale we find the best therapy to be that which directs itself toward the thinkingness below effort—the moving of ideas.

There is no particular reason to concentrate solely upon a preclear's past. Actually, a preclear is not the product of the past, he is the product of himself. All the past can do for him is to accumulate and hold for him the information that it is bad for him to move, or act, or do. So, let us take a preclear whom we have gotten into communication and work with his more elementary ideas and thus get him to string straight lines between Cause and Effect.

Elementary Straight Wire has two commands. The auditor takes the first of these and uses it as long as is necessary to entirely flatten the preclear's hesitancy as represented by his communication lag. His communication lag is merely the expression of VIAs on the line, which amounts to the preclear's unwillingness to string a straight line. The questions are: **"Give me something you wouldn't mind remembering," "Give me something you wouldn't mind forgetting."**

A more elementary form of this would be: **"Remember something," "Forget something,"** but this is far too direct for our preclear. If you will notice, a very direct and forthright person, if surrounded by people who are more covert, gets a very bad going-over for it. Thus it is in processing when you try to string a very straight line with a preclear he will sometimes resist.

Slightly less elementary than Elementary Straight Wire as above is the next-to-the-last list in *Self Analysis*: **"Can you recall something that is really real to you," "Can you recall a time when you were in good communication with someone," "Can you recall a time when someone was in good communication with you," "Can you recall a time when you felt some affinity for someone," "Can you recall a time when someone felt some affinity for you."**

The entire text of *Self Analysis*, in its original edition now available from the Foundation in Phoenix, is devoted to rehashing the preclear's past to show him that it is not quite as dangerous as it is made out to be, and that it won't bite him if he remembers some things about it.

From this form of Straight Wire we go into a more complicated form as given in *Self Analysis in Scientology*, a converted edition of the original *Self Analysis*. The edition is converted, by the way, simply by substituting everywhere in its text for the word "recall" the word "mock up." Simply by substituting "mock up" in the directions at the beginning of each list, one has a modern *Self Analysis*.

Now it is very remarkable that the less specific and sequitur the auditor's questions are, the better the results with the preclear.

Another form of Straight Wire is quite superior to those above, but is a very vicious and violent process. It is contained in *The Creation of Human Ability*, which is the printed edition, much expanded, of the earlier *Auditor's Handbook*. The basic command of this process is: "Start Lying," "Keep on Lying." This can be particularized with: **"Tell me some lies about your past," "Tell me some lies about me present," "Tell me some lies about the future,"** the auditor each time making sure that the preclear is using non-actual places and times.

Remember that while running Straight Wire one must maintain a two-way communication. Many a case has been lost simply because the preclear wanted to say something and the auditor was so intent upon the process that he paid no attention whatsoever to the preclear's urge to communicate. Remember that one-way communication is a First Dynamic operation; that two-way communication is necessary for a Third Dynamic operation; that under one-way communication a preclear will not get well; that under two-way communication a preclear *will* get well. Thus, in running Straight Wire do not begrudge the preclear a few moments' discussion of the incident he has just recalled, or discussion of

phenomena he has suddenly noticed. Do not crush him simply because he wishes to express himself.

This is essentially a subjective process, and the auditor should make sure that the preclear speaks aloud the things he is remembering. The preclear's nod or "yes" to signify that he has recalled something or has invented something is insufficient, and should always be suspect, for preclears who are very bad off pervert or invert every communication line they use and so they will not be doing the process if given any slightest opportunity.

Elementary Straight Wire and other forms of Straight Wire are intensely beneficial from 1.1 to 1.8 on the Tone Scale, but after you have your preclear up to 1.8 or above, remember that there are better processes.

OPENING PROCEDURE 8-C

Report after report from various auditors comes to me stating that they now realize why their auditing of many of their preclears failed. And they uniformly declare that the reason for former failure on preclears was not the case level of the preclear, nor yet the complicated state of processes, but (1) failure on the part of the auditor to get the preclear into two-way communication before proceeding with other processes, and a continuing failure to keep two-way communication established, and (2) not doing enough Opening Procedure of 8-C on the preclear.

An evaluation of a technique does not depend upon the intricacy or brilliance of its theory, but upon its ease of communication to auditors during training, and the ease of their application of it upon preclears. In 8-C we have a process which answers these various conditions. It is very easy to train an auditor to do 8-C. It is very easy for a preclear to do Opening Procedure of 8-C in one form or another.

The entirety of a technique known as Standard Operating Procedure 8-C was intended for exteriorized preclears. Its opening procedure was originally designed to be done by an exteriorized preclear, but it was found to be far less workable for the exteriorized preclear than when done (so far as the opening part of the procedure was concerned) with the preclear moving his body around and making it touch spots.

There are three parts to Opening Procedure of 8-C, and it is necessary for the comm lag as dramatized physically by the preclear to be completely flattened by the auditor on each part before the next is undertaken. Eventually these parts are the gradient scale of decision. In the first part we have the auditor picking out the spots, telling the preclear to walk over to them, telling the preclear to touch them. In the next step, part (b) of Opening Procedure of 8-C, we have the preclear picking out the spots on the auditor's order, and then, on the auditor's order, walking over to them and touching them. And in the third part, part (c), we have the preclear picking out the spots on the auditor's order, walking over to them, and deciding on his own decision, but under the auditor's command, when to touch and let go.

This is not one of those processes one gets "novel" about as an auditor. The process has been found to be workable exactly as it is put forth. Variation, or the introduction of extraneous material beyond that necessary to continue a two-way communication with the preclear is found to be destructive of the process. This process is as workable as it is simple. It is also as workable as the auditor is able to do a process as given.

The first thing that Opening Procedure of 8-C does is to get the preclear used to the idea of following somebody else's directions, and leading him to discover that by following somebody else's directions he does not collapse or become ill or die. In other words, the preclear discovers that he can follow orders without becoming entirely ruined. This is an interesting discovery, since the physical universe is continually ordering him around, and if he

is resisting orders he is resisting the physical universe. Resistance is the one step necessary to entrapment.

There is another point in the Opening Procedure of 8-C which cannot be too thoroughly stressed. Nearly every failure in the past where the preclear has been audited and audited, and audited, the auditor was unaware of the fact that the preclear was not following the directions given him. A survey was taken of preclears who had had a great deal of trouble in being processed in Scientology, and each one of them, either by means of a meter or by their own statement, was discovered to have uniformly avoided running any of the auditing commands given them, even though they were giving the auditor every assurance and appearance of running the auditing commands. Now it could only be possible for a preclear to avoid auditing commands if the auditor was unable to observe directly the workings going on in the preclear. In the Opening Procedure of 8-C it is impossible for the preclear to avoid the auditing command. The auditor can stand or sit and watch the preclear go through the exact orders and observe directly whether or not the preclear is doing what he is told to do. This is a major benefit.

The basic theory of Opening Procedure of 8-C is to make and break communication with the physical universe. Once an individual discovers that he can make and break communication with walls and objects, it will be discovered that he can let go of various pieces of his engram bank. Actually, all the time he is doing 8-C he is letting go of enormous quantities of useless material with which he has cluttered his thinking and life. It is a very direct process and gets the preclear to stretch a very straight line between Cause and Effect.

An auditor while running this should occasionally ask the preclear, **“Who is doing this?”** Preclears who are psychotic will tell the auditor that their finger is doing it, or that the wall is doing it, and then advance on up to where the hand is doing it, the arm is doing it, and finally that the body is doing it, and at last that the preclear himself is doing it. This is the acceptance of responsibility for an action.

A very good description of the Opening Procedure of 8-C exists in the printed edition or the mimeo edition of Intensive Procedure as R2—16, which is the proper technical number of this process. A thorough description of the process is given in PAB No.34 at the beginning of this series. The process is being repeated here in order to give it proper stress. It has, and do not doubt it for a moment, tremendous value.

I have yet to see a preclear who is having physical difficulty of a major sort or mental difficulty, fail to improve under a long and careful and meticulous administration of the Opening Procedure of 8-C.

There are two errors which can be made in the running of the Opening Procedure of 8-C. The first is not to know and do the process, and the second is not to run it long enough. How long is long enough? In many cases, twenty-five hours is not long enough.

In the Opening Procedure of 8-C (R2—16) the auditor has a very powerful tool and is invited to use it thoroughly.

OPENING PROCEDURE BY DUPLICATION

Numbered R2—17 in *The Creation of Human Ability* and the mimeo edition of this, *The Auditor's Handbook*, available from the HASI in Phoenix, Opening Procedure by Duplication has been doing things to cases hitherto untouched by extensive and intricate auditing.

Because this process is very arduous to run on people below boredom on the tone scale, and because it has very often been used on people on whom it should not be used, it was early called "Dirty 30." Actually, "Dirty 30" is Procedure 30, which encompassed what is now R2—17 and two other steps.

Ranting and raving has gone on in various locales because of Opening Procedure by Duplication. It has been branded as a hypnotic technique. The fact of the matter is, it runs out hypnosis and in the process of running it the restimulation of hypnotism is sufficiently marked to make an auditor and a preclear believe that hypnotism is taking place. However, Opening Procedure by Duplication continued on past this point runs out the hypnotism.

Before one does Opening Procedure by Duplication one should have done the earlier steps of the six processes, which are: Two-Way Communication, Elementary Straight Wire, and Opening Procedure of 8-C. Only when these are thoroughly accomplished should one attempt Opening Procedure by Duplication. Furthermore, it is a very good thing for an auditor to have had Opening Procedure by Duplication run on him before he tries to run it on preclears, for the technique is very difficult upon an auditor who, himself, cannot duplicate.

Inability to duplicate is also inability to be cause, and inability to be effect. The reason one has an engram bank is because "it mustn't happen again," or "it must happen again." In order to make sure that something does not happen again, one has a picture of it which he considers necessary to prevent him from duplicating the action. The existence of a picture, of course, will eventually make him follow the action and follow the dictates of the picture. Thus we get the action of an engram and restimulation.

The minimum time to run Opening Procedure by Duplication (R2—17) would be two-and-a-half hours. There is no sense in running the process twenty minutes, for it may well happen that the preclear can bear up for a little while, only to bog thoroughly on the process.

Run on people who are below boredom on the tone scale, the auditor may experience the preclear's bolting from the session.

When Opening Procedure by Duplication is being run, it is common for the preclear, by comments and reactions, to dramatize the Know to Mystery Scale. The Know to Mystery Scale, of course, is a very long, tall scale, but any section of this scale has in it the various levels of Know to Mystery. Thus, one can see a preclear going up from Mystery through Sex, through Eating, through Effort, through Emotion, through Looking, to Knowing, then going through a different, higher harmonic of Mystery, then Sex, then Eating, and so forth. The

auditor may not see him go through all of the grades on the Know to Mystery Scale in order, but will see him spotting one after another of the levels of this scale. The preclear will make such comments as “Looks good enough to eat,” “There’s a lot of work connected with this,” “It’s a mystery to me.” Going up the Mystery to Know Scale, one of course crosses the Emotional Scale, which was described and witnessed in *Dianetics: The Modern Science of Mental Health*, but this Emotional Scale is, of course, a part of the Know to Mystery Scale.

In Great Britain, where auditors have used for the two objects required a book and a bottle, the process is called “Book and Bottle.” These two objects are a very good choice for working the process. A book, for instance, is placed in one part of a room, and a bottle is placed in another part of a room, far enough apart so that a preclear will have to walk between them. The auditor then sends him back and forth from one to the other, using for each item a stereotyped series of questions, which actually, themselves, never vary. Because these questions never vary, the auditor is apt to forget that he must maintain a two-way communication with the preclear. The auditor is not doing Opening Procedure by Duplication, the preclear is doing Opening Procedure by Duplication. When the preclear talks and asks questions and when he volunteers information, the auditor, of course, must answer him. There must be a discussion of some sort from time to time, and the auditor who is not content with the fact that the preclear has actually looked at it should, of course, insist that the preclear look at the object, or that he weigh it more carefully. However, one can err very easily in the direction of varying the process. Remember that no matter how much talking goes on, the basic process is the same. And the order of the commands, and the commands themselves, are all exactly the same.

To quote R2—17 from *The Creation of Human Ability*, which is the printed edition of *The Auditor’s Handbook*:

R2—17: Opening Procedure by Duplication is begun only after the preclear has some reality on his environment. Until the preclear’s reality on his environment is good, Opening Procedure by Duplication should not be done, for the preclear only turns on an unreality circuit and goes through it mechanically. The first part of Opening Procedure by Duplication is to get the preclear to examine, communicate with and own (somewhat on the order of Opening Procedure of 8-C) two dissimilar objects. These objects are then placed several feet apart and at a level so that the preclear can pick them up without bending over, but so that he has to walk between them. Once the auditor is entirely satisfied that the preclear has reality on these objects and can own them he then begins Opening Procedure by Duplication with the following commands, supposing that one of the objects was a book and the other was an ash tray, “**Go over to the book.**” “**Look at it.**” “**Pick it up.**” “**What is its color?**” At this point the preclear must give an answer. “**What is its temperature?**” Here the preclear must answer again. “**What is its weight?**” Here again the preclear must answer. “**Put it down in exactly the same place.**” When the preclear has executed, “**Go over to the ash tray.**” “**Look at it.**” “**Pick it up.**” “**What is its color?**” The preclear says an answer. “**What is its temperature?**” The preclear says his answer. “**What is its weight?**” The preclear says his answer. “**Put it down exactly in the same place.**” When the preclear has executed, “**Go over to the book,**” and the same words and the same formula are used over and over again until the preclear has had a sufficient number of hours of Opening Procedure by Duplication to enable him to do it without communication lag, without protest, without apathy, but only cheerfulness, each time seeing the items newly. This is a process which is done by the hour. The process is better when done consecutively for so many hours rather than done an hour apiece each day for several days. This procedure is the first step of Procedure 30.

THE REMEDY OF HAVINGNESS

There is a great deal of upper-echelon theory connected with the Remedy of Havingness as a process, for here we are dealing with energy and the reasons and operations of a thetan in regard to it.

Just why a thetan should get himself so completely snarled up in energy might be an entire mystery to anyone who did not realize that a thetan has to cut down his knowingness and his total presence in order to have a game. The awareness of awareness unit builds space to cut down knowingness. Space makes it necessary, then, to look at something in order to know about it. The next thing a thetan does to cut down his knowingness is to create energy and to pass it to other thetans and to bring in the energy of other thetans so as to get a duration and a time span. If the thetan is successful and obtains a game in this wise, he continues on with this modus operandi of having a game, and when he does not have a game he simply cuts his knowingness down once more. Of course, he reaches a point eventually where he does not get a game simply by cutting down his knowingness, and eventually assumes a fairly fixed, stupid, aspect. He is below the level of having games, but because he has cut down his knowingness he does not know, now, that he is below the level of having games and thinks that all that is necessary to get another game is to further cut down his knowingness. He is by this time obsessively dramatizing the lowering of knowingness.

When one speaks of knowingness, one should realize that one is speaking of an embracive thing. Everything on the Know to Mystery Scale is simply a greater condensation or reduction of knowingness. At first one simply knows. Then he makes some space and some energy, and so now he has knowingness in terms of looking. By changing the position of the particles of energy thus created, and by exchanging particles with others, extant or self-created, the thetan cuts down his knowingness further, and gets time, and so gets emotion and sensation. When these become solid, he has effort particles and masses. Now, he could cut down his knowingness further by refusing to use emotion and effort, but by thinking about them thus introducing new VIAs into his line of knowingness. And, when he no longer knows entirely by thinking, he ceases to create knowingness and begins to eat, and from eating he drops into the ready-made sensation of sex instead of knowing what happens in the future. And from here he drops down into postulated mystery as something one cannot possibly know about. In other words, one gets a continued reduction of knowingness in order to have games. The greatest chess player in the world has no game, since he can predict that he will win and predict everything that opponents will do, so he will simply demonstrate how to play chess. Sooner or later, he will announce that he is "burned out" or has lost his knack for playing chess, and will go off into some other field where he *can* have a game. The field he will choose will be a less wisdom-demanding field than playing chess. A boxer, such as some of the very great ones of the past, will reduce his timing, which is to say his knowingness of arrival, to a point where he can at least put on a good exhibition, and from this they will further reduce their knowingness, and then not noticing how far they have gone, get themselves thoroughly and consistently beaten. There will be a period, however, when they are fairly evenly matched against their opponents.

To understand this with any thoroughness, one would have to recognize the intention back of all communication. Creation, Survival, and Destruction is knowingness. When somebody talks to you his intention is to continue in a parity where he can have an interchange of communication, which is to say a game. He takes knowingness from you, and gives knowingness to you, with one form of communication or another. Two soldiers fighting and shooting at each other are using a bullet to make the other man know. What is there to know in this situation? That one is dead, of course, and for the victor, that one has won.

It is dangerous, alike, to a thetan, to have too many wins or too many losses. Give him too many wins, and he will correct in the direction of reducing his knowingness as represented by his dexterity, his prediction, his activity. Give him too many losses and he will seek another game, even to the point where he will die and pick up another body. Because the decision is on the basis of knowingness, the decision is always downward. One does not decide upward toward greater knowingness, actually, unless one has the full and complete intention of winning in a new game. If one discovers that there are no wins or losses either to be found in this new game, one will reduce one's own knowingness, even to the point of forgetting all of his knowledge concerning it, in order to ensure a game.

As there is not an infinity of games in progress, one is apt, as he comes down seventy-four trillion years of track, to play out the available games and to put them in the category of "it must not happen again." One then becomes bored. One is only bored when there is no game possible, from his viewpoint. Actually, all he has to do is become enthusiastic about the game on his own consideration and he will begin to know more about it again.

A thetan considers that some form or mass is necessary in order to have a game. He gets into the belief that he cannot create new masses, and so he begins to hold on to old masses, and here, whether he is exteriorized or in a body, we find him holding on hard to old facsimiles, old significances, old decisions, rather than taking on new decisions.

The Remedy of Havingness directly addresses the problems of giving the thetan something "to play with." When he discovers that he can have new masses, he will begin to let go of old masses. It is an easily observed phenomenon while having a preclear Remedy Havingness, that old engrams go into restimulation, go into restimulation and run out, that they show up in front of his face and suddenly explode or disappear. The Remedy of Havingness actively does run out engrams.

This process is used from boredom up to conservatism for its best results.

This process is done by asking the preclear to mock up something and pull it in, or mock up something and throw it away. When a thetan is exteriorized, if you want to see him get very unhappy, make him change space until he begins to lose all the energy he is holding on to, and then fail to remedy his havingness. The thetan will become convinced that he is only a thought, and is therefore, by his standards, unable to have a game. Tell him to mock up eight anchor points in the form of the corners of a cube around him and pull them in upon himself. Ask him to do it several more times, and he immediately brightens up and becomes very happy. Why is this? You have reassured him that he can have a game.

The cutting down of knowingness and the Remedy of Havingness have opposite vectors. The Remedy of Havingness will knock out old energy masses the thetan is holding on to, or that the body is holding on to, which tell the thetan he is stupid. The supplanting of these by new energy masses which do not have the postulate of cutdown knowingness in them of course makes the thetan brighter.

When you find a theory detached from a process and not demonstrating itself in a process, there must be something wrong with the theory. Similarly, if what I say here about condensed knowingness being all other things, and the cut-down of knowingness, were not demonstrated in the process of Remedy of Havingness, then we would have to get ourselves a new theory. However, this is demonstrated very definitely. Those people who cannot remedy

havingness, wherever they are on the tone scale, can be brought to a point where they will remedy havingness simply by asking them what they wouldn't mind knowing. The consideration of what they are willing to know then begins to rise.

If you only could see a Black Five operate you would see that his barriers are all erected toward knowing something. Of course he is very afraid of being told something bad, and so doesn't want to be told anything at all, and when the auditor gives him a command he never receives the command as given, but does something else. He has a block up against knowingness to such a degree that he will eventually permit himself to be pressed into complete inactive stupidity. What are those black screens for? Basically to keep him from knowing. Knowing what? Then one will have to look closely at the definition of a datum. A datum is an invention which has become agreed upon and so solidified. In other words, a datum is to some degree a solidity, even if it is merely a symbol. To get into this state it has to be agreed upon. When it is thoroughly agreed upon it becomes, then, a truth. It is not at all a truth. It is an invention. What made it sure or what made it real was the fact that it was agreed upon. This opens the doors further to other processes.

In order to get the preclear in good condition we would have to put him into some kind of a condition so that he could create. The first thing he is liable to be able to create in auditing is a lie. The word "lie" is simply "invention with a bad connotation." Society gives invention that connotation because of its anxiety to have a game and to agree, and so be able to communicate with one another.

Thus society frowns upon the invention of facts, yet the preclear's sanity and continued happiness absolutely depend upon his ability to create new facts. The technique which remedies this is included in "The Creation of Sanity," number R2-29: "**Start Lying.**" One can vary this auditing command with "**Tell me some lies about your past,**" and then keep the preclear at it long enough so that the preclear is able to come out of the complete blur which will follow on the heels of his taking over the function of and running of his memory machines. The invention of data is a step immediately toward the remedy of havingness. Simply asking the preclear what he wouldn't mind knowing, what he wouldn't mind having other people knowing about him will bring him into a condition where he can mock up and remedy havingness.

The Remedy of Havingness is the companion process to Spotting Spots, which will be taken up in the next PAB. The Remedy of Havingness, simply as a process by itself, if worked up to by getting the preclear willing to know things, and willing for other people to know things, and run thoroughly so that whole avalanches of masses can pour into him or pour out of him, will actually run out an entire engram bank, and thus is an extremely valuable process.

It has been reported by several auditors that exteriorization was accomplished on preclears by making them remedy havingness and do nothing else for eight or ten hours.

The auditing commands for the Remedy of Havingness are: "**Mock up something,**" "**Pull it in,**" until the preclear is doing this easily. Then, "**Mock up something,**" "**Throw it away,**" until the preclear can do this easily. The significance of the object may be added by the auditor with "**Pull in an ideal body,**" or some such thing, but the actual fact is that the actual significance does nothing for the preclear. It is the mass which counts. The auditor can have the preclear pull things in two at a time, six at a time. He can have the preclear mock up something, copy it a dozen times, one time after another, then pull in the whole mass, but the real reason he is doing this with the preclear should never drop from sight. The auditor is remedying havingness in order to give the preclear enough mass to permit him to discard old masses which he is holding on to and doesn't know anything about.

15 April 1955

REMEDY OF HAVINGNESS—THE PROCESS

“When in doubt, remedy havingness.”

This is a motto which can well be followed by an auditor doing any process on any preclear.

But, if there is a process which one should do with any other process, then that process should be understood thoroughly, for if done incorrectly it would be likely to produce confusion into all the other processes of Dianetics and Scientology.

Therefore, in the first place, let us examine with rigor the name of this process. It is REMEDY OF HAVINGNESS. By “remedy” one means the correction of any aberrated condition. By “havingness” one means mass or objects. The process could also be called “Remedy of Un-Havingness.” It could also be called “Remedy of Acceptingness.” It could also be called “Remedy of Rejectingness.”

To those people who are deficient in havingness, the process is liable to mean that the auditor should increase the havingness of the preclear. Such an auditor with this misunderstanding would have the preclear put up large masses and push them into his body or himself. The auditor would neglect having the preclear throw away objects and masses.

If the auditor misunderstood the process and simply assumed that it had something to do with havingness, and if his own havingness were too great, he would be likely to specialize on all preclears by having the preclear throw things away.

Actually, the auditor should have the preclear push things into himself and his body and throw things away from himself and his body until the preclear can do both with equal ease. When this has been accomplished the preclear's havingness has been “remedied.”

What, then, does a Remedy of Havingness mean? It means the remedy of a preclear's native ability to acquire things at will and reject them at will. Amongst the havingnesses which would require remedy would be an obsessive inflow of money, sexual objects, troubles, somatics, and difficulties in general. Whenever one of these appeared in the preclear's environment it would have a tendency to inflow on the preclear. The reverse difficulty would be an obsessive outflow, whereby the preclear threw away or wasted anything which he had, such as money, clothes, cars, or living quarters. When the process “Remedy of Havingness” has been done thoroughly and completely, the preclear should be able to reject or accept, at his own discretion, anything in his environment as well as anything in his engram bank.

The earliest use of this process is to be found in GITA, which is to say “Give and Take Processing,” one of the early SOPs which became an SOP-8 “Expanded GITA.” In Issue 16-G of the *Journal of Scientology* we have a long list of key items. The preclear was asked to

waste, accept, and desire these items at will. This was the Desire-Enforcement-Inhibit Scale, or the DEI Scale. This process is the immediate ancestor of the Remedy of Havingness. Indeed, one could do far worse than to take the DEI Expanded GITA list as given in Issue 16-G, and in the form of mock-ups use it as such upon the preclear, or more modernly employ it directly on the Remedy of Havingness on these objects.

If one were to employ such a list in the Remedy of Havingness, one would, of course, have to employ gradient scales. The use of the gradient scale has never been discarded, and the concept and principle of doing things by gradient scales is inherent in auditing itself, for one starts with a process which the preclear can do, and gives him some wins, and on a gradual scale gives him larger and larger wins until he is cleared. Similarly, in remedying havingness, the preclear must be started at the lowest end of the scale and advanced on up to the higher end of the scale. Quantity is one of the methods of doing this. At first one can ask a preclear to mock up one of an item and shove it into his body or throw it away, and then go, finally, when he is doing that well, to two items, three, four, five, and six, all the same, but a greater quantity of the item. An even lower gradient on this scale would be to simply get the idea that something was there, and to progress on forward with the idea into the actual mass. An expert auditor working with this from the idea on through to the object would discover that he had no preclears who could not mock up.

He would have the preclear get the idea out in front of him of a ball, and get the idea of the ball being thrown away; get the idea of a ball up in front of him and get the idea of a ball coming in; he would then, when the preclear could do this excellently well, move forward into the actual mock-up of a ball. The mock-up would get better and better as the process progressed, until at last the preclear could mock up and throw away or push into his body at will, a ball. He could see this ball, he could even feel it, and its weight.

Now you may get the idea occasionally that these PABs are mostly, at least in this series, handling old material. This is not the case. Every time one of these PABs is written I put into it everything that is known up to the date that it is written, and this PAB is no exception. And, let me tell you, this is a very lucky PAB for you because Remedy of Havingness, by a slight change I made some weeks ago, has become a key exteriorization process. So, we have Remedy of Havingness for Exteriorization as a newer process than the old Remedy of Havingness.

Exteriorization Remedy of Havingness, or Exteriorization by Remedy of Havingness, is accomplished by having the preclear SHOVE or PUSH things into his body. One no longer has the preclear PULL things into his body. Simply by having the preclear mock up things and shove them into his body, mock up things and throw them away, mock up things and shove them into his body, mock up things and throw them away, a preclear who has already been run on the earlier steps of the six basic processes will, at this stage, exteriorize quite neatly after as little as fifteen or twenty minutes of the process. If he does not, then the earlier processes have been skimmed and the preclear was really not ready for a full, forthright remedy of havingness.

Even when doing Route I, the preclear is told to push things into himself. This will rather take his flitter away for a moment, for he is there being one viewpoint, and in order to push something into himself he has to be a second viewpoint. In view of the fact that a thetan gets in trouble by being only one viewpoint, this remedies the viewpoint scarcity of the thetan, and he pushes himself up into two viewpoints with great rapidity. Thus we are doing duplication of the thetan at the same time that we are remedying havingness, so one even has the thetan shove things into himself, rather than pull things into himself.

In short, one never has anyone pull things into his body any more. One has a person push things into his body. One has him, for instance, mock up a planet, and push it into the body; mock up a planet and throw it away; mock up a planet and push it into his body; mock up a planet and throw it away; mock up a planet and push it into his body, and then one says, **“Where are you pushing it in from?”** The preclear says, “Out here in front of the body.” The auditor simply goes on doing the process and very shortly the preclear will, if the earlier

steps have been done well, which is to say the Six Basic Processes below Remedy of Havingness, the preclear will be neatly exteriorized and will be ready for Route 1.

One would omit, in such an instance, running Spotting Spots as such, for Change of Space Processing and Communication Processing have a great deal to do with spotting spots already.

If you were to do Remedy of Havingness forthrightly and all-out, and you were to accept this as the only process we had, we would work with its cousin process, R2—63 as given in *The Creation of Human Ability*, “Accept-Reject.” One would ask the preclear for things he could accept, one after the other, until the communication lag was flat, and then would ask the preclear for things he could reject, one after the other, until the communication lag was flat on that. One would then move into the Expanded GITA list and would have the preclear mock up and shove into his body (if interiorized) or into himself (if exteriorized) the various items on the Expanded GITA list as given in Issue 16-G of the *Journal of Scientology*. This would be a long process, and not entirely successful on all counts, but would nevertheless be a very effective and efficient process from the standpoint of gains. One would certainly get the preclear over a very large number of aberrations and would do a great deal for him. However, this is not the advised way of handling this process, for the process itself is not an end-all. Aberrations can be handled much more easily by communication processing as will be given in a later PAB.

The exact use and commands of Remedy of Havingness in ordinary and routine auditing are simple and effective. One has been asking a preclear a great many questions which “as-ised” large masses of energy. One, in handling Change of Space or interiorization and exteriorization into objects while the preclear is exteriorized, has been “burning up” a great deal of energy. Any time the preclear begins to feel dopey or “boil off” he has either run too long on a flow in one direction, in which case reverse the flow, or he has simply reduced his havingness down to a point where he feels tired or sleepy. Without waiting for this manifestation to occur the good auditor simply in the course of Straight Wire or Description Processing, or many other processes, such as those contained in Route 1, remedies havingness. Having achieved something like a momentarily flat comm lag on a process, the auditor says to the preclear, “**Mock up a mass out in front of you.**” When the preclear has done this, the auditor says, “**Shove it into your body.**” When the preclear has done so, the auditor says, “**Mock up another mass out in front of you.**” And when the preclear has done so, the auditor says, “**Throw it away.**” That, as given, is for preclears who are interiorized. It is simply repeated over and over. The mass is not specified. It can be almost anything, and in fact it does not much matter what type of significance the mass has. Any mass is better than no mass, according to the thetan.

If the preclear is exteriorized, the auditor already starts him on the Remedy of Havingness in the Route I step where the preclear is asked to copy what he is looking at (R1—5). When one is doing R1—5, one must be very careful to obey the gradient scale principle behind Remedy of Havingness. He would not make the preclear make twenty copies and then push them all into himself or the body. He would make the preclear make two or three copies and push them in one at a time until the preclear could remedy his havingness with ease. The auditor would then have the preclear “**Mock up a mass and shove it into yourself,**” and then “**Mock up a mass and throw it away,**” and do this back and forth until the preclear could do this easily and well, at which time the auditor would tell the preclear, “**Mock up two masses and shove them into yourself,**” and then “**Mock up two masses and throw them away,**” until finally the auditor has the preclear mock up eight masses as though they were the corners of a cube around the preclear and “**Shove them into yourself,**” and then “**Mock up eight masses and throw them away.**”

One must remember that in spite of the fact that he cannot duplicate mass actually as himself, having no space or mass, natively, the motto of the thetan is “anything is better than nothing.” When you tear up a lot of facsimiles for a thetan and throw them away, he becomes very unhappy unless you have him reconstruct those facsimiles or remedy the mass he has lost

accordingly. When you are having a thetan go into and out of MEST universe masses, a certain amount of energy is burned up, and after the thetan has been run for a short time on this step (R1—9 in *The Creation of Human Ability*), you must be particularly careful to remedy his havingness with eight masses shoved into himself and eight masses thrown away several times. A thetan who has been run a great deal without Remedy of Havingness comes to what is to him a horrible thought: “I am just a concept,” and will sag in tone. He does not come to this state as long as havingness is consistently remedied.

It may be, as you look at Scientology, that you’ve come to the opinion, watching Remedy of Havingness work, that all there is to anything is the Remedy of Havingness, that it is all based on the Remedy of Havingness. If you have a preclear shove enough havingness into his body he will exteriorize in most cases. If you remedy enough havingness while he is chasing around the universe, as in the Grand Tour, he will discover and as-is a great many communication lines which otherwise might be very detrimental. However, it is not true that havingness is the entire key to the human mind. Havingness is the “gimmick” or “weenie” for which the game is played, and having something is very like winning. However, above havingness there is doingness, and above doingness there is beingness, and above beingness there is communicatingness, and above communicatingness there is knowingness, and above knowingness there is postulatingness, and so we see we have a long way to go above havingness in order to get to the top activity of a thetan, which is making postulates, or unmaking them. You could, of course, rationalize each and every action of the thetan with regard to havingness. You could even extend havingness to space, although it normally refers to objects. You could do all manner of interesting things with havingness. You could get as specific and as significant as you like, or as un-significant as you like, and still find Remedy of Havingness working, but we do not have here in Remedy of Havingness the total clue, the total key. But we do have a process and an item which must not be overlooked in auditing.

In the Six Basic Processes the Remedy of Havingness comes after the Opening Procedure by Duplication as a process, itself, but remember that Remedy of Havingness is done and can be done at any time during any of the processes as long as the preclear is even vaguely in communication with the auditor. It does not matter how vague the mass is that the preclear is using to remedy his havingness. Here is a place where certainty is not necessary. An unreal, vague, or flimsy mass, if this is all the preclear can get, will still remedy his havingness. A case comes to mind out of the Advanced Clinical Course where a student was unwilling, after his second day, to continue his studies. He did not believe that he could stand the “hammer and pound,” as he put it, of the terrifically intense schedule. I took him into my office, asked him what he was doing in life, and he replied to me that he was a machinist. Also, it seemed to turn out that he had had something to do with a ship which had sunk under him, although his recollection of this was very unclear. I asked him what kind of a machine he had customarily run, and he told me. Then I had him mock up this machine, and remedy his havingness with it. Then I had him mock up the ship and remedy his havingness with that, just as given above. I did this for about fifteen minutes, and enough change occurred in his case to entirely return his confidence in his ability to stand up to the course and to audit. Yet the mock-ups he was getting were so thin that he could barely vaguely discern them at all.

Mock-ups get unreal because the thetan is not-ising existence. He is trying to destroy masses by saying that they do not exist, that they are not real. He is so bent upon this system of destruction that he is making everything unreal or black. One of the cures for this is End of Cycle Processing run in the following fashion: One has the preclear mock himself up dead (no matter how unreal this mock-up is), then have the mock-up waste away to bone, and have the bones waste away to dust, and then have the preclear shove the dust into himself or, alternately, throw it away. One once more has the preclear mock himself up dead, have the mock-up waste away to bone, have the bones waste away to dust, and then have the preclear remedy his havingness with the dust. One continues this for two or three hours with the preclear if one really wishes the case to make a change.

Where a preclear is getting no reality on mock-ups or blackness, he is most commonly stuck in that Para-Scientological thing, that thing horribly abhorred by psychologists who have

become Dianeticists, or by people who are just plain scared: a past death. If you wanted to convince somebody that past deaths exist, you would run End of Cycle Processing on them. This is a cousin process to the Remedy of Havingness. One could go a very long distance with this process and have the preclear mock up his mother dead, have her waste away to bones, and remedy havingness with the dust, or do this with the dust, or do this with the father or brothers, or grandparents, with a considerable change in the case.

This End of Cycle Processing, by the way, is a very fine process. It has been with us about a year and it has been successful whenever used. It has a tendency to fall into disuse because it has not until now had an exact place on the Six Basic Processes. But End of Cycle is actually an additional process to the Remedy of Havingness and is an effective way of remedying havingness. Do you remember in the old days the Dianetics "corpse case" who would lie upon the couch with his arms crossed neatly, all ready for a lily, and would always audit in this fashion? The solution to this corpse case is End of Cycle Processing, as given here. The preclear is so fixed in a death that he is trying to make everything unreal, and the only real thing, to him, would be the unreality of death.

In these PABs I have been trying to give you the basic auditing as it is done today in Hubbard Professional College in Phoenix, and in London. It is intensely effective auditing. A recent survey of the staff-audited preclears over a period of two months demonstrated by the most arduous and recognized testing that we had been jumping the IQ of preclears an average of ten points apiece for every twenty-five hours of auditing. Many of them went much higher than this. I, myself, in five hours of auditing, was getting this same result which was being obtained by a staff twenty-five hour intensive. But all that I was using, actually, were the Six Basic Processes. All that staff auditors were using were the Six Basic Processes. Of course, our having the know-how of using Remedy of Havingness and Communication Processing in the midst of these Six Basic Processes, these gains were not necessarily the gains being obtained across the broad field of Scientology. There is actually no substitute for good, thorough, professional training. A professionally trained auditor shows up like a lamp in a lighthouse on a dark night, if only by reason of inspecting his results.

You will find the background of this material contained in *Dianetics, 1955!* and in the recent hardcover edition of *Intensive Procedure* which, including now 75 separate processes, is called *The Creation of Human Ability*. This book is obtained from London directly, or from the HASI in Phoenix. Only the British edition is ready, but we have plenty of these, and if you ordered the book from Phoenix it was filed with a London edition. If you want to write for a London edition you will find that the cost is \$5.90, and it will be airmailed to you.

We are discovering that it takes about eight weeks of very intensive training in order to indoctrinate an auditor into an adequate use of these Six Basic Processes. This is done in the HCA, or in London HPA, Course. The course has the additional bonus of getting these processes run on the auditor until he is in pretty good condition, if not cleared. In the upper echelon Phoenix course, which is to say the Graduate Course, all of the various "angles" and alternate uses are taken up. If you are using Scientology or modern Dianetics without professional training you would do very well to have somebody study these processes with you, as given in these recent PABs, and run them on you, just as given, in order for some subjective information concerning them.

Now, another footnote in this PAB. Some last-minute news on these Six Basic Processes is a change from the material given in the PAB on Elementary Straight Wire, and the PAB just before that on Two-Way Communication. In the next PABs [Numbers 57, 58 and 59 written by Jack Parkhouse] we will take up these highly advanced alterations, for the mission of these PABs is to keep you up to date as far as possible.

By the way, I heard from an old HDA recently, via a member of the staff to whom he wrote, and this old HDA complained, "Hubbard does not put out anywhere near enough material to keep us up to date." A search through the PAB files disclosed that this HDA was not on the PAB mailing list. If an individual is not on the PAB mailing list it is certain he will be

convinced that Hubbard isn't putting out any material. The data which you should have in your kit to know Scientology and auditing and be up to date as of now are: *The Creation of Human Ability* from London, *Dianetics, 1955!* from Phoenix, and at least the last ten PABs. With the material which is immediately forthcoming you will be up to date, indeed, if not well into the future, as far as the rest of the human race is concerned.

And by the way, I wish you would write and tell me how you are getting along with these PABs, and how you are getting along with the auditing in general. It just might be that I'd like to know.

THE CREATION
OF
HUMAN ABILITY

A Handbook for Scientologists

BY
L. RON HUBBARD

Go your ways: behold, I send you forth as lambs among wolves.

Carry neither purse, nor scrip, nor shoes: and salute no man by the way.

And into whatsoever house ye enter, first say,

Peace be to this house.

And if the son of peace be there, your peace shall rest upon it: if not, it shall turn to you again.

And in the same house remain, eating and drinking such things as they give:

for the laborer is worthy of his hire.

Go not from house to house.

And into whatsoever city ye enter, and they receive you,

eat such things as are set before you:

And heal the sick that are therein, and say unto them

The kingdom of God is come nigh unto you.

Blessed are the eyes which see the things that ye see:

For I tell you, that many prophets and kings have desired to see those things which ye see,

and have not seen them;

and to hear those things which ye hear,

and have not heard them.

ST LUKE 10: 3-9, 23-24

PREFACE
TO ALL HASI SCHOOLS AND BRITISH ASSOCIATES
SUBJECT: TRAINING

The training program of the HASI was stabilized during the seven Clinical Course units. This has been developed into the HASI training schedule, and it is expected that this schedule will be fitted into the training programs under use with no further modification than is absolutely necessary to fit the peculiar needs of the school.

This training course embraces the grade of Hubbard Certified Auditor, Hubbard Professional Auditor, Bachelor of Scientology and Doctor of Scientology. There is no difference amongst these degrees as to the procedures employed or methods of instruction. The difference of course level amongst these ratings consists of the amount of theory and expansion given to the subject of Intensive Procedure. In all cases, for all courses, we wish at the end of a course to have an auditor in good personal condition who understands thoroughly that the processes enumerated in Intensive Procedure are workable and that they will resolve the problems he faces in preclears and groups and the conviction on the auditor's part that at least some of these processes can be used expertly by himself. The auditor's examination for certification in any grade is based upon the definitions and theories underlying those processes contained in *The Creation of Human Ability -- A Handbook for Scientologists*. The examination should include history, general theory, and conversance with the various publications of Scientology as well as Dianetics. The primary goal of an HCA or HPA school is outlined in the first sentence above. When this has been accomplished, that level of school can consider that it has accomplished its mission.

The primary text of any school of any level is now *The Creation of Human Ability -- A Handbook for Scientologists*. A secondary text, but almost equal in importance is *Scientology: Group Auditor's Handbook*. Concentration on these two publications should be extreme. Only those tapes which will actually supplement these manuals should be employed. Particularly in the HCA -- HPA course, the instructor should be severely reluctant to impart any further data of any kind than that contained in these manuals and the tapes supporting them. A forthcoming popular text book on Scientology is designed to embrace little more in theory and practice than that found crowded into the two handbooks; thus when a person who has read the popular text turns to a school or auditor for training he will discover himself studying in a far more intense form that material on which he has already agreed.

The basic theory in which the student is to be instructed is as follows: Considerations take rank over the mechanics of space, energy, and time and that these mechanics are the product of agreed-upon considerations which life mutually holds. That the mechanics have taken such precedent in man that they have become more important than the considerations and overpower his ability to act freely in the framework of mechanics, which is to say that the picture man presents is an inverted one. That the goal of processing is to bring an individual into such thorough communication with the physical universe that he can regain the power and ability of his own postulates. That Scientology is the science of knowing how to know answers and that a Scientologist is expected to be able to resolve problems in a great many specialized fields of which auditing is the first field he addresses so as to be conversant with and capable in the phenomena of life. That in a world every day more violently impressed with mechanics, chaos may be expected to ensue on a national and community level by many reasons which incidentally include atomic fission. That the role of a Scientologist is to impede this disintegration if possible, but if it occurs to be ready to pick up the pieces. That the Scientologist has no specialized political or religious convictions beyond those dictated by wisdom and his own early training. That the total empire to which a Scientologist aspires is the empire of wisdom.

That an auditor is expected to follow the Auditor's Code 1954 and the Code of Scientologists, and that he is expected to know these Codes by heart. That the only scarcity of preclears which will occur is through his own indigence, and his procurement of preclears or

groups does not depend upon the industry of other auditors but of himself. That L. Ron Hubbard is a human being. The student should be instructed as well in the Organization and functions of the HASI in various certifications and their meaning and in his legal status.

His instruction should begin with the lecture on Scientology and what it is and with an immediate assignment to auditing. This assignment should consist of the most elementary possible technique in order to accustom the auditor into achieving a two-way communication with the preclear. He should be maintained on such an assignment until such time as the instructor is satisfied that he can deliver the auditing commands and maintain his two-way communication with the preclear without falling into any deeper significances and until he has a complete and positive understanding of a communication lag and how to flatten one out. The auditing commands to be used in this first step are, 'Something you wouldn't mind remembering', 'Something you wouldn't mind forgetting'. It is completely vital that the student understand the mechanism of communication lag and its definition that it is the length of time between the moment the auditor poses the question and the moment when that exact question posed is answered positively by the preclear no matter whether silence or talk or incorrect answers occurred in the interim.

Only when the student has become at ease with the above and perfectly comprehendent is he permitted to go further in his training. The next step consists of Opening Procedure of 8-C. The three parts of this are given him one at a time to audit on his fellow students until he has become expert and assured in performing each part. At this same time he must become assured as well of the workability of this process and that it is the only process he must ever employ on psychotics and neurotics. The student must also be made to understand physical communication lag as just another kind of communication lag. And he must become convinced that he must flatten physical communication lags by continuing to use the command which produced them. He must develop precision in his rendition and all sloppiness or carelessness in the running of this process must be ironed out by the instructor. The lecture material at this time should strenuously and repetitively take up the Auditor's Code with examples until the student understands it thoroughly.

The next process in which the student is to be indoctrinated is Opening Procedure by Duplication. He is expected to do this for many hours. He is expected to have this run on him for many hours. After this the Auditor's Code is taken up again. And only at this point should general theory or other data subjects be undertaken by the instructor, either in his own lectures or by tapes.

Once the student is entirely comfortable and familiar and precise with Opening Procedure by Duplication he is instructed in Remediating Havingness and Spotting Spots in Space. Remediating Havingness is emphasized and is senior to Spotting Spots in Space and is taken up in lecture in its various forms before the auditor is permitted to run Spotting Spots in Space. When the auditor has mastered Acceptance Level, Rejection Level and 'Things that you wouldn't mind occupying your space' he is then turned loose to audit Spotting Spots in Space and the Remedy of Havingness using this to clean up various areas or old auditing in his preclears. He is to run this process until he is convinced of its workability and his ability to use it and until he can honestly classify it as his chief emergency assist tool.

Now that the student can remedy havingness on preclears, he is permitted to run Consideration in the form of Significances, having preclears put significances into things. Only when the student has learned to audit significances and has had all the processes he is being taught as above run upon him is it particularly safe to engage upon much theory or upon more complex processes, for the student turned loose to consider at will may otherwise begin to make nothing out of preclears and mountainous somethings out of processes.

At this point, Granting of Beingness in the form given in the Appendix of Issue One of the Handbook for Scientologists should be run thoroughly by the student and on the student and he should hear the LRH lecture on that subject from the Seventh Clinical Course. For until this is remedied, our student will have difficulty, most likely, with his fellow students by being

himself 'the only one' who can grant life. He will also, to some slight degree perhaps, be at war with the subject and his instructors until this is remedied.

Only when all of the above has been accomplished, and with certainty, should the student be embarked upon the use of Intensive Procedure as given, be initiated into the mysteries of exteriorization and the general data of earlier Scientology. We must be very definite at this point that it would be far, far better to turn out a student who had learned the steps prior to studying the Handbook itself, as given above, and graduate with those steps firmly in his grasp than to cover a multitude of subjects and processes in Scientology on which he had a poor reality by the end of the course.

Our course goal is to push the student of the HCA-HPA level as far forward as possible in his period of training into the Handbook for Scientologists and the Group Auditor's Handbook, but to progress him in such a way as to teach him nothing further than he has been taught until we are sure that he has excellent data workability and use reality on what he has been taught at that point. This we learned in the Advanced Clinical Courses was an absolute necessity in order to turn out auditors. It is better for us to have auditors able to use well Opening Procedure of 8-C than auditors who can use every technique we have poorly and ineffectually.

The training materials for the HCA-HPA course should include the 'Professional Course Lectures' by LRH made in July 1954.

The student should clearly understand that training which has been done is not necessarily the retraining which is being and will be done. He should understand that the exigencies of Scientology were such as to turn out as good auditors as we could with what we had to hand and that we are just now stabilized in training and that we expect far more from him than we have ever expected from any auditor in the past.

Sincerely,

L. RON HUBBARD
15 July 1954

THE AUDITOR'S CODE 1954

An auditor must observe the Auditor's Code if he intends to produce beneficial results in a preclear. The auditor's attention is very strongly called to Sections 1 and 13. Section 13 contains the difference between a bad auditor and a good auditor.

Whereas the whole Code is important, Section 13 is vitally important, so much so that an auditor, not understanding it, will not produce good results in a preclear. Section 13 means that an auditor must not change the process just because the preclear's perception or communication is changing. A bad auditor will change the process every time the preclear starts to change.

This is the auditor obsessively duplicating the preclear. A good auditor will run a process until it no longer produces change in the preclear, and only then will go to a new process. A bad auditor can always be estimated by the number of processes he uses on a preclear, for any process in modern procedures, consistently used, will produce considerable change.

When the auditor changes a process just because the preclear starts to change, we call this 'Auditor Q-and-A-ing'. It is a very bad manifestation.

- 1 Do not evaluate for the preclear
- 2 Do not invalidate or correct the preclear's data
- 3 Use the processes which improve the preclear's case
- 4 Keep all appointments once made
- 5 Do not process a preclear after 10:00 p.m.
- 6 Do not process a preclear who is improperly fed
- 7 Do not permit a frequent change of auditors
- 8 Do not sympathize with the preclear
- 9 Never permit the preclear to end the session on his own independent decision
- 10 Never walk off from a preclear during a session
- 11 Never get angry with a preclear
- 12 Always reduce every communication lag encountered by continued use of the same question or process
- 13 Always continue a process as long as it produces change, and no longer
- 14 Be willing to grant beingness to the preclear
- 15 Never mix the processes of Scientology with those of various other practices
- 16 Maintain two-way communication with the preclear
- 17 Never use Scientology to obtain personal and unusual favors or unusual compliance from the preclear for the auditor's own personal profit

- 18 Estimate the current case of your preclear with reality and do not process another imagined case
- 19 Do not explain, justify or make excuses for any auditor mistakes whether real or imagined

The Auditor's Code was evolved from years of observing processing. It is the technical code of Scientology. It contains the important errors which harm cases. It could be called the moral code of Scientology.

THE CODE OF HONOR

No one expects the Code of Honor to be closely and tightly followed.

An ethical code cannot be enforced. Any effort to enforce the Code Of Honor would bring it into the level of a moral code. It cannot be enforced simply because it is a way of life which can exist as a way of life only as long as it is not enforced. Any other use but self-determined use of the Code of Honor would, as any Scientologist could quickly see, produce a considerable deterioration in a person. Therefore its use is a luxury use, and which is done solely on self-determined action, providing one sees eye to eye with the Code of Honor.

- 1 Never desert a comrade in need, in danger or in trouble
- 2 Never withdraw allegiance once granted
- 3 Never desert a group to which you owe your support
- 4 Never disparage yourself or minimize your strength or power
- 5 Never need praise, approval or sympathy
- 6 Never compromise with your own reality
- 7 Never permit your affinity to be alloyed
- 8 Do not give or receive communication unless you yourself desire it
- 9 Your self-determinism and your honor are more important than your immediate life
- 10 Your integrity to yourself is more important than your body
- 11 Never regret yesterday. Life is in you today, and you make your tomorrow
- 12 Never fear to hurt another in a just cause
- 13 Don't desire to be liked or admired
- 14 Be your own adviser, keep your own counsel and select your own decisions
- 15 Be true to your own goals

THE CODE OF A SCIENTOLOGIST

The Code of a Scientologist was evolved to safeguard Scientologists in general, and is subscribed to by leading Scientologists. The Committee of Examination and Services of the HASI has accepted it as an enforceable code.

As a Scientologist, I pledge myself to the Code of Scientology for the good of all.

- 1 To hear or speak no word of disparagement to the press, public or preclears concerning any of my fellow Scientologists, our professional organization or those whose names are closely connected to this science
- 2 To use the best I know of Scientology to the best of my ability to better my preclears, groups and the world
- 3 To refuse to accept for processing and to refuse to accept money from any preclear or group I feel I cannot honestly help
- 4 To deter to the fullest extent of my power anyone misusing or degrading Scientology to harmful ends
- 5 To prevent the use of Scientology in advertisements of other products
- 6 To discourage the abuse of Scientology in the press
- 7 To employ Scientology to the greatest good of the greatest number of dynamics
- 8 To render good processing, sound training and good discipline to those students or peoples entrusted to my care
- 9 To refuse to impart the personal secrets of my preclears
- 10 To engage in no unseemly disputes with the uninformed on the subject of my profession
- 11 To completely refrain from discussing the case of another auditor's preclear with that preclear, or within his hearing

A SUMMARY OF SCIENTOLOGY

Scientology is the science of knowing how to know answers. It is a wisdom in the tradition of ten thousand years of search in Asia and Western Civilization. It is the Science of Human Affairs which treats the livingness and beingness of Man, and demonstrates to him a pathway to greater freedom.

Subjects which were consulted in the organization and development of Scientology include the Veda; the Tao, by Lao Tzu; the Dharma and the Discourses of Gautama Buddha; the general knowingness about life extant in the lamaseries of the Western Hills of China; the technologies and beliefs of various barbaric cultures, the various materials of Christianity, including St Luke; the mathematical and technical methodologies of the early Greeks, Romans, and Arabians; the physical sciences, including what is now known as nuclear physics, including the various speculations of Western Philosophers such as Kant, Nietzsche, Schopenhauer, Herbert Spencer, and Dewey, and the various technologies extant in the civilization of both the Orient and Occident in the first half of the twentieth century. Scientology is an organization of the pertinancies which are mutually held true by all men in all times, and the development of technologies which demonstrate the existence of new phenomena not hitherto known, which are useful in creating states of beingness considered more desirable by man.

There are two distinct divisions in Scientology. The first is philosophic, the second is technical. Under the philosophic heading one discovers the ways and means of forming new ways of life and of evaluating or creating standards of livingness and beingness. By this knowingness alone, and without processing, it should be understood clearly that a new way of life could be created, or an old way of life could be understood and better endured or altered. Under the technical division we have a long series of developed processes which, applied immediately and directly to life or an organism thereof, produce changes at the will of the practitioner.

Scientology concludes and demonstrates certain truths. These truths might be considered to be the highest common denominators of existence itself.

The following summary of these truths has the aspect of precision observations rather than philosophic hazardings. When treated as precision observations, many results occur. When regarded as philosophic opinions, only more philosophy results. Considerations take rank over the mechanics of space, energy, and time. By this it is meant that an idea or opinion is, fundamentally, superior to space, energy, and time, or organizations of form, since it is conceived that space, energy, and time are themselves broadly agreed-upon considerations. That so many minds agree brings about Reality in the form of space, energy, and time. These mechanics, then, of space, energy, and time are the product of agreed-upon considerations mutually held by life.

The aspects of existence when viewed from the level of Man, however, is a reverse of the greater truth above for Man works on the secondary opinion that mechanics are real, and that his own personal considerations are less important than space, energy, and time. This is an inversion. These mechanics of space, energy, and time, the forms, objects and combinations thereof, have taken such precedent in Man that they have become more important than considerations as such, and so his ability is overpowered and he is unable to act freely in the framework of mechanics. Man, therefore, has an inverted view, whereas, considerations such as those he daily makes are the actual source of space, energy, time and forms, Man is operating so as not to alter his basic considerations, he therefore invalidates himself by supposing another determinism of space, energy, time, and form. Although he is part of that which created these, he gives them such strength and validity that his own considerations thereafter must fall subordinate to space, energy, time, and form, and so he cannot alter the Universe in which he dwells.

The freedom of an individual depends upon that individual's freedom to alter his considerations of spacer energy, time, and forms of life and his roles in it. If he cannot change his mind about these, he is then fixed and enslaved amidst barriers such as those of the physical universe, and barriers of his own creation. Man thus is seen to be enslaved by barriers of his own creation. He creates these barriers himself, or by agreeing with things which hold these barriers to be actual.

There is a basic series of assumptions in processing, which assumptions do not alter the philosophy of Scientology. The first of these assumptions is that Man can have a greater freedom. The second is that so long as he remains relatively sane, he desires a greater freedom. And the third assumption is that the auditor desires to deliver a greater freedom to that person with whom he is working. If these assumptions are not agreed upon and are not used, then auditing degenerates into 'the observation of effect', which is, of course, a goal-less, soulless pursuit, and is, indeed, a pursuit which has degraded what is called modern science.

The goal of processing is to bring an individual into such thorough communication with the physical universe that he can regain the power and ability of his own considerations (postulates).

A Scientologist is one who understands life. His technical skill is devoted to the resolution of the problems of life.

The technical information of the Scientologist includes the following, which are a list of usable or self-evident truths as revised from the earlier Logics and Axioms.

1. LIFE IS BASICALLY A STATIC.

Definition: a Life Static has no mass, no motion, no wavelength, no location in space or in time. It has the ability to postulate and to perceive.

2. THE STATIC IS CAPABLE OF CONSIDERATIONS, POSTULATES, AND OPINIONS.

3. SPACE, ENERGY, OBJECTS, FORM, AND TIME ARE THE RESULT OF CONSIDERATIONS MADE AND/OR AGREED UPON OR NOT BY THE STATIC, AND ARE PERCEIVED SOLELY BECAUSE THE STATIC CONSIDERS THAT IT CAN PERCEIVE THEM.

4. SPACE IS A VIEWPOINT OF DIMENSION.

5. ENERGY CONSISTS OF POSTULATED PARTICLES IN SPACE.

6. OBJECTS CONSIST OF GROUPED PARTICLES.

7. TIME IS BASICALLY A POSTULATE THAT SPACE AND PARTICLES WILL PERSIST.

8. THE APPARENCY OF TIME IS THE CHANGE OR POSITION OF PARTICLES IN SPACE.

9. CHANGE IS THE PRIMARY MANIFESTATION OF TIME.

10. THE HIGHEST PURPOSE IN THE UNIVERSE IS THE CREATION OF AN EFFECT.

11. THE CONSIDERATIONS RESULTING IN CONDITIONS OF EXISTENCE ARE FOUR-FOLD:

(a) As-is-ness IS THE CONDITION OF IMMEDIATE CREATION WITHOUT PERSISTENCE, AND IS THE CONDITION OF EXISTENCE WHICH EXISTS AT THE MOMENT OF CREATION AND THE MOMENT OF DESTRUCTION, AND IS DIFFERENT FROM OTHER CONSIDERATIONS IN THAT IT DOES NOT CONTAIN SURVIVAL.

(b) Alter-is-ness IS THE CONSIDERATION WHICH INTRODUCES CHANGE, AND THEREFORE TIME AND PERSISTENCE INTO AN As-is-ness TO OBTAIN PERSISTENCY.

(c) Is-ness IS AN APPARENCY OF EXISTENCE BROUGHT ABOUT BY THE CONTINUOUS ALTERATION OF AN As-is-ness. THIS IS CALLED, WHEN AGREED UPON, REALITY.

(d) Not-is-ness IS THE EFFORT TO HANDLE Is-ness BY REDUCING ITS CONDITION THROUGH THE USE OF FORCE. IT IS AN APPARENCY AND CANNOT ENTIRELY VANQUISH AN Is-ness.

12. THE PRIMARY CONDITION OF ANY UNIVERSE IS THAT TWO SPACES, ENERGIES, OR OBJECTS MUST NOT OCCUPY THE SAME SPACE. WHEN THIS CONDITION IS VIOLATED (PERFECT DUPLICATE) THE APPARENCY OF ANY UNIVERSE OR ANY PART THEREOF IS NULLED.
13. THE CYCLE OF ACTION OF THE PHYSICAL UNIVERSE IS: CREATE, SURVIVE (PERSIST), DESTROY.
14. SURVIVAL IS ACCOMPLISHED BY ALTER-IS-NESS AND NOT-IS-NESS, BY WHICH IS GAINED THE PERSISTENCY KNOWN AS TIME.
15. CREATION IS ACCOMPLISHED BY THE POSTULATION OF AN AS-IS-NESS.
16. COMPLETE DESTRUCTION IS ACCOMPLISHED BY THE POSTULATION OF THE AS-IS-NESS OF ANY EXISTENCE AND THE PARTS THEREOF.
17. THE STATIC, HAVING POSTULATED AS-IS-NESS, THEN PRACTICES ALTER-IS-NESS, AND SO ACHIEVES THE APPARENCY OF IS-NESS AND SO OBTAINS REALITY.
18. THE STATIC, IN PRACTISING NOT-IS-NESS, BRINGS ABOUT THE PERSISTENCE OF UNWANTED EXISTENCES, AND SO BRINGS ABOUT UNREALITY, WHICH INCLUDES FORGETFULNESS, UNCONSCIOUSNESS, AND OTHER UNDESIRABLE STATES.
19. BRINGING THE STATIC TO VIEW AS-IS ANY CONDITION DEVALUATES THAT CONDITION.
20. BRINGING THE STATIC TO CREATE A PERFECT DUPLICATE CAUSES THE VANISHMENT OF ANY EXISTENCE OR PART THEREOF.

A perfect duplicate is an additional creation of the object, its energy, and space, in its own space, in its own time using its own energy. This violates the condition that two objects must not occupy the same space, and causes vanishment of the object.
21. UNDERSTANDING IS COMPOSED OF AFFINITY, REALITY, AND COMMUNICATION.
22. THE PRACTICE OF NOT-IS-NESS REDUCES UNDERSTANDING.

23. THE STATIC HAS THE CAPABILITY OF TOTAL KNOWINGNESS. TOTAL KNOWINGNESS WOULD CONSIST OF TOTAL ARC.
24. TOTAL ARC WOULD BRING ABOUT THE VANISHMENT OF ALL MECHANICAL CONDITIONS OF EXISTENCE.
25. AFFINITY IS A SCALE OF ATTITUDE WHICH FALLS AWAY FROM THE COEXISTENCE OF STATIC, THROUGH THE INTERPOSITIONS OF DISTANCE AND ENERGY, TO CREATE IDENTITY, DOWN TO CLOSE PROXIMITY BUT MYSTERY.

By the practice of Is-ness (Beingness) and Not-is-ness (refusal to Be) individuation progresses from the Knowingness of complete identification down through the introduction of more and more distance and less and less duplication, through Lookingness, Emotingness, Effortingness, Thinkingness, Symbolizingness, Eatingness, Sexingness, and so through to not-knowingness (Mystery). Until the point of mystery is reached) some communication is possible, but even at mystery an attempt to communicate continues. Here we have, in the case of an individual, a gradual falling-away from the belief that one can assume a complete Affinity down to the conviction that all is a complete Mystery. Any individual is somewhere on this Know-to-Mystery scale. The original Chart of Human Evaluation was the Emotion section of this scale.

26. REALITY IS THE AGREED-UPON APPARENCY OF EXISTENCE.
27. AN ACTUALITY CAN EXIST FOR ONE INDIVIDUALLY, BUT WHEN IT IS AGREED WITH BY OTHERS IT CAN THEN BE SAID TO BE A REALITY.

The anatomy of Reality is contained in Is-ness, which is composed of As-is-ness and Alter-is-ness. Is-ness is an apparency, it is not an Actuality. The Actuality is As-is-ness altered so as to obtain a persistency. Unreality is the consequence and apparency of the practice of Not-is-ness.

28. COMMUNICATION IS THE CONSIDERATION AND ACTION OF IMPELLING AN IMPULSE OR PARTICLE FROM SOURCE-POINT ACROSS A DISTANCE TO RECEIPT-POINT, WITH THE INTENTION OF BRINGING INTO BEING AT THE RECEIPT-POINT A DUPLICATION OF THAT WHICH EMANATED FROM THE SOURCE-POINT.

The formula of Communication is: Cause, Distance, Effect, with Attention and Duplication.

The component parts of Communication are Consideration, Intention, Attention, Cause, Source-point, Distance, Effect, Receipt-point, Duplication, the Velocity of the impulse or particle, Nothingness or Somethingness. A non-Communication consists of Barriers. Barriers consist of Space, Interpositions (such as walls and screens of fast-moving particles), and Time. A communication, by definition does not need to be two-way. When a communication is returned, the formula is repeated, with the receipt-point now becoming a source-point and the former source-point now becoming a receipt-point.

29. IN ORDER TO CAUSE AN AS-IS-NESS TO PERSIST, ONE MUST ASSIGN OTHER AUTHORSHIP TO THE CREATION THAN HIS OWN. OTHERWISE, HIS VIEW OF IT WOULD CAUSE ITS VANISHMENT.

Any space, energy, form, object, individual, or physical universe condition can exist only when an alteration has occurred of the original As-is-ness so as to prevent a casual view from vanishing it. In other words, anything which is persisting must contain a 'lie' so that the original consideration is not completely duplicated.

30. THE GENERAL RULE OF AUDITING IS THAT ANYTHING WHICH IS UNWANTED AND YET PERSISTS MUST BE THOROUGHLY VIEWED, AT WHICH TIME IT WILL VANISH.

If only partially viewed, its intensity, at least, will decrease.

31. GOODNESS AND BADNESS, BEAUTIFULNESS AND UGLINESS, ARE ALIKE CONSIDERATIONS AND HAVE NO OTHER BASIS THAN OPINION.

32. ANYTHING WHICH IS NOT DIRECTLY OBSERVED TENDS TO PERSIST.

33. ANY AS-IS-NESS WHICH IS ALTERED BY NOT-IS-NESS (BY FORCE) TENDS TO PERSIST.

34. ANY IS-NESS, WHEN ALTERED BY FORCE, TENDS TO PERSIST.

35. THE ULTIMATE TRUTH IS A STATIC.

A Static has no mass, meaning, mobility, no wavelength, no time, no location in space, no space. This has the technical name of 'Basic Truth'.

36. A LIE IS A SECOND POSTULATE, STATEMENT OR CONDITION DESIGNED TO MASK A PRIMARY POSTULATE WHICH IS PERMITTED TO REMAIN.

Examples:

Neither truth nor a lie is a motion or alteration of a particle from one position to another. A lie is a statement that a particle having moved did not move, or a statement that a particle, not having moved, did move. The basic lie is that a consideration which was made was not made or that it was different.

37. WHEN A PRIMARY CONSIDERATION IS ALTERED BUT STILL EXISTS, PERSISTENCE IS ACHIEVED FOR THE ALTERING CONSIDERATION.

All persistence depends on the Basic Truth, but the persistence is of the altering consideration, for the Basic Truth has neither persistence nor impersistence.

38. 1: STUPIDITY IS THE UNKNOWNNESS OF CONSIDERATION.

2: MECHANICAL DEFINITION: STUPIDITY IS THE UNKNOWNNESS OF TIME, PLACE, FORM, AND EVENT.

1: TRUTH IS THE EXACT CONSIDERATION.

2: TRUTH IS THE EXACT TIME, PLACE, FORM, AND EVENT.

Thus we see that failure to discover Truth brings about stupidity.

Thus we see that the discovery of Truth would bring about an As-is-ness by actual experiment.

Thus we see that an ultimate truth would have no time, place, form or event.

Thus, then, we perceive that we can achieve a persistence only when we mask a truth.

Lying is an alteration of Time, Place, Event, or Form.

Lying becomes Alter-is-ness, becomes Stupidity.

(The blackness of cases is an accumulation of the case's own or another's lies.)

Anything which persists must avoid As-is-ness. Thus, anything, to persist, must contain a lie.

39. LIFE POSES PROBLEMS FOR ITS OWN SOLUTION.
40. ANY PROBLEM, TO BE A PROBLEM, MUST CONTAIN A LIE. IF IT WERE TRUTH, IT WOULD UNMOCK.

An unsolvable problem, would have the greatest persistence. It would also contain the greatest number of altered facts. To make a problem, one must introduce Alter-is-ness.

41. THAT INTO WHICH ALTER-IS-NESS IS INTRODUCED BECOMES A PROBLEM.
42. MEST (MATTER, ENERGY, SPACE, TIME) PERSISTS BECAUSE IT IS A PROBLEM.

It is a problem because it contains Alter-is-ness.

43. TIME IS THE PRIMARY SOURCE OF UNTRUTH.
Time states the untruth of consecutive considerations.
44. THETA (THE STATIC) HAS NO LOCATION IN MATTER, ENERGY, SPACE, OR TIME. IT IS CAPABLE OF CONSIDERATION.
45. THETA CAN CONSIDER ITSELF TO BE PLACED, AT WHICH MOMENT IT BECOMES PLACED, AND TO THAT DEGREE A PROBLEM.
46. THETA CAN BECOME A PROBLEM BY ITS CONSIDERATIONS, BUT THEN BECOMES MEST. A problem is to some degree MEST, MEST IS a problem.
47. THETA CAN RESOLVE PROBLEMS.
48. LIFE IS A GAME WHEREIN THETA AS THE STATIC SOLVES THE PROBLEMS OF THETA AS MEST.
49. TO SOLVE ANY PROBLEM IT IS ONLY NECESSARY TO BECOME THETA, THE SOLVER, RATHER THAN THETA, THE PROBLEM.
50. THETA AS MEST MUST CONTAIN CONSIDERATIONS WHICH ARE LIES.

The above is a summary of states of being which can be used to create, cause to persist, or destroy.

HAVING AGREED TO THE MECHANICS AND RETAINING THE AGREEMENTS, THE THETAN CAN YET MAKE INNUMERABLE POSTULATES WHICH BY THEIR CONTRADICTION AND COMPLEXITY, CREATE, CAUSE TO PERSIST, AND DESTROY HUMAN BEHAVIOR.

INTENSIVE PROCEDURE: OUTLINE

FOR ALL CASES WHO HAVE ANY PSYCHO-SOMATIC ILLS, OR WHO ARE NEUROTIC OR PSYCHOTIC USE ONLY R2-16 ANYWHERE FROM TEN TO A HUNDRED HOURS, OR UNTIL THE PERSON IS NO LONGER ILL, NEUROTIC, OR PSYCHOTIC.

In the use of this procedure, only two types of case are considered, and the procedure is adapted to these two types. The sole criteria of the case is whether or not it can be exteriorized. This is promptly established by the use of ARC Straight-wire. When there is no noticeable communication lag, then Route 1 is employed in this procedure. When there is any noticeable communication lag, Route 2 is employed.

All sessions begin with the first three identical steps. Then, if he has established that there is no noticeable communication lag with ARC Straightwire (the third step), the auditor proceeds on Route 1. However, if a noticeable communication lag exists when using ARC Straightwire, the auditor -- having flattened this lag for the moment -- proceeds on Route 2. The amount of occlusion on the case is not the test.

1. Get into two-way communication with the preclear.
2. Discuss the present time problem, if any.
3. Get the preclear into session with ARC Straightwire.

ROUTE 1

- R1-4: BE THREE FEET BACK OF YOUR HEAD
- R1-5: WHATEVER THE PRECLEAR HAPPENS TO BE LOOKING AT (DO NOT DIRECT HIS ATTENTION TO ANYTHING) HAVE HIM COPY IT ONE AT A TIME, MANY, MANY TIMES. THEN HAVE, HIM LOCATE A NOTHINGNESS AND COPY IT MANY, MANY TIMES
- R1-6: HAVE PRECLEAR HOLD THE TWO UPPER BACK ANCHOR POINTS OF THE ROOM FOR AT LEAST TWO MINUTES BY THE CLOCK
- R1-7: HAVE PRECLEAR LET GO AND FIND MANY PLACES WHERE HE IS NOT. (REPEAT THE COPYING: BACK ANCHOR POINTS AND WHERE HE IS NOT, ONE AFTER THE OTHER, MANY TIMES)
- R1-8: HAVE PRECLEAR DISCOVER MANY THINGS, ONE AFTER ANOTHER, WHICH HE CONSIDERS SAFE TO LOOK AT
- R1-9: GRAND TOUR
- R1-10: HAVE PRECLEAR DISCOVER THINGS HE WOULDN'T MIND OCCUPYING THE SAME SPACE WITH HIM
- R1-11: HAVE PRECLEAR BE PROBLEMS AND SOLUTIONS IN HAVINGNESS
- R1-12: HAVE PRECLEAR MOCK UP GENERATORS, POWER PLANTS AND SUNS TO GIVE HIM ENERGY, ON THAT GRADIENT SCALE, UNTIL HE IS TOTALLY CONVINCED THAT HE DOES NOT HAVE TO RECEIVE ENERGY FROM AN OUTSIDE SOURCE. (A COMPLETE REMEDY OF HAVINGNESS)
- R1-13: HAVE PRECLEAR ADJUST GENETIC ENTITY ANCHOR POINTS
- R1-14: HAVE PRECLEAR CREATE AND DESTROY VARIOUS KINDS OF THETAN MACHINES
- R1-15: REPAIR PRECLEAR'S ABILITY TO COMMUNICATE BY HAVING HIM COPY MANY SCENES IN THE PHYSICAL UNIVERSE

NOW HAVE PRECLEAR RUN EACH AND EVERY ROUTE 2 STEP UNTIL THE AUDITOR IS CONVINCED THAT HE CAN DO THESE EASILY AND ABLY.

ROUTE 2

If the preclear had any appreciable communication lag as established in the third step above, all ROUTE 1 steps are omitted, and the case is entered into ROUTE 2, the first step of which is ROUTE 2-16.

- R2-16: RUN PRECLEAR THROUGH OPENING PROCEDURE OF 8-C PARTS (A), (B), (C), EACH ONE UNTIL THE PHYSICAL COMMUNICATION LAG STABILIZES. THE AUDITOR SHOULD MAKE SURE AT FIRST WHILE RUNNING STEP (A) THAT THE SPOTS HE DESIGNATES ARE HIGHLY GENERALIZED AND ARE NOT SMALL AREAS UNTIL, THE PRECLEAR CAN BE DIRECTED TO SMALL AND PRECISE SPOTS
- R2-17: OPENING PROCEDURE BY DUPLICATION UNTIL PRECLEAR FEELS GOOD ABOUT IT
- R2-18: HAVE PRECLEAR SPOT SPOTS IN SPACE UNTIL HE CAN DO IT EASILY, MEANWHILE REMEDYING HIS HAVINGNESS
- R2-19: HAVE PRECLEAR SPOT SPOTS IN ROOM AND MOVE BODY INTO THEM AND MOVE BODY OUT INTO NEW SPOTS
- R2-20: USE OF PROBLEMS AND SOLUTIONS
- R2-21: GRANTING OF BEINGNESS
- R2-22: SPANNING ATTENTION
- R2-23: ATTENTION BY DUPLICATION
- R2-24: EXTERIORIZATION BY DISTANCE, EXTROVERTED AND INTROVERTED ALTERNATELY
- R2-25: VIEWPOINT AND VIEWPOINT ARC STRAIGHTWIRE
- R2-26: REMEDY OF LAUGHTER
- R2-27: RESOLVE DANGEROUSNESS OF ENVIRONMENT
- R2-28: NOTHING-SOMETHING
- R2-29: TIME TOLERANCE
- R2-30: POSITION BY SECURITY (SOP 8-D)
- R2-31: BEINGNESS PROCESSING
- R2-32: ASSIGNMENT OF ATTRIBUTES
- R2-33: PERFECT DUPLICATION
- R2-34: DESCRIPTION PROCESSING
- R2-35: LOCATION PROCESSES
- R2-36: SELF DETERMINISM

R2-37: YELLING
R2-38: HOLDING ANCHOR POINTS
R2-39: CONCEIVING SOMETHING INTERESTING
R2-40: CONCEIVING A STATIC
R2-41: VIA
R2-42: PAN-DETERMINISM
R2-43: FIGHTING
R2-44: MUST AND MUST NOT HAPPEN
R2-45:
R2-46: OTHER PEOPLE
R2-47: BODY DIFFERENTIATION
R2-48: SEPARATENESS
R2-49: DEI SCALE
R2-50: CHANGING MINDS
R2-51: RISING SCALE PROCESSING
R2-52: UNKNOWNNS
R2-53: REPAIR
R2-54: FLOWS
R2-55: IMPORTANCE
R2-56: GAMES PROCESSING
R2-57: PROCESSES
R2-58: LOSS
R2-59: SURVIVAL
R2-60: THE HIDDEN COMMUNICATION
R2-61: GOOD AND EVIL
R2-62: OVERT ACTS AND MOTIVATORS
R2-63: ACCEPT - REJECT
R2-64: TOUCHING
R2-65: ALTERATION

- R2-66: ELECTING CAUSE
- R2-67: OBJECTS
- R2-68: INCOMPREHENSIBILITY
- R2-69: PLEASE PASS THE OBJECT
- R2-70: EXPECTANCE LEVEL
- R2-71: ANSWERS
- R2-72: SECURITY PROCESSING
- R2-73: MAKING SOMETHING FOR THE FUTURE
- R2-74: PROCESSING
- R2-75: KNOWINGNESS

NOW TAKE A ROUTE 2 PRECLEAR THROUGH ROUTE 1

Follow the Auditor's Code.

'The procedure which turns on a condition will turn it off.' Run a procedure as long as it produces communication changes (perception, changes in altering communication lag).

There has been found by long practice that the only things which spin a preclear are: (1) too many auditors; (2) not enough food, and (3) processing between 10:00 p.m. and 8:00 a.m.

When in doubt, remedy havingness.

When choosing between two procedures, use the simpler one.

CHART OF PROCESSES
WHERE THEY ARE ON THE ARC TONE SCALE

| | 1.1 |
| Two-way Communication | 1.0 |
| | -8.0 |

AUDITING COMMANDS FOR INTENSIVE PROCEDURE

I. GET INTO TWO-WAY COMMUNICATION WITH THE PRECLEAR

Communication is the consideration and action of impelling an impulse or particle from source point across a distance to receipt point with the intention of bringing into being at the receipt point a duplication of that which emanated from the source point. The formula of communication is CAUSE DISTANCE - EFFECT with attention and duplication. The component parts of communication are consideration, intention, attention, cause, source point, distance, effect, receipt point, duplication, the velocity of the impulse or particle, nothingness or somethingness. A non-communication consists of barriers. Barriers consist of space, interpositions (such as walls and screens of fast moving particles) and time. A communication, by definition, does not need to be two-way. When a communication is returned, the formula is repeated with the receipt point now becoming a source point and the former source point now becoming a receipt point. One can be comfortable in communicating only when one is willing to be cause and is willing to be an effect. As the distance factor in communication lessens, or as mass increases in the particle, one views the condensing manifestation of the Know to Sex Scale and a deterioration of the reality factor of the ARC triangle. To improve communication one must lessen mass, increase velocity, and increase the distance factor, improve the quality of duplication, remedy attention, and bring about a willingness on the part of cause to be an effect and on the part of effect to be cause. To reach toward a theoretical perfection in communication, one should be willing to tolerate in any form any of the component parts of communication itself with the understanding that these include affinity and reality. Any sensory perceptic can be utilized in communication in establishing two-way communication.

Communication lag is the interval of time intervening between a posed question and the actual and precise answer to that question. Communication lag is a manifestation of two-way communication. Whether the interval is filled with speech or silence, the definition of communication lag still holds true. An auditor must go by the rule that all questions posed must receive answers, and therefore must be careful that he poses questions which can be answered by a person in the condition of the preclear.

This is the most important step of any auditing session, and its achievement by any perception with affinity and reality is a specific goal of the auditor. If a preclear for any reason drags under processing it is because the auditor was not sure that the preclear was in communication with anything and was not in Communication, actually, with the things to which the auditor directed his attention.

II. DISCUSS THE PRESENT TIME PROBLEM, IF ANY

Discussion of the present time problem is necessary each session so as to discover whether or not the preclear has had a disturbance between sessions which has so fixed his attention that he is unable to give his complete presence to auditing.

III. GET THE PRECLEAR INTO SESSION WITH ARC STRAIGHTWIRE

ARC Straightwire is used to determine the communication lag of the preclear. The steps of ARC Straightwire are 'Can you remember a time which seems real to you?' 'Can you remember a time when you were in communication with someone?' 'Can you remember a time when someone was in communication with you?' 'Can you remember a time when someone agreed with you?' 'Can you remember a time when you agreed with someone?' 'Can you remember a time when someone liked you?' 'Can you remember a time when you liked someone?'

In actual practice, to establish the communication lag it is only necessary to use the first question: 'Can you remember a time which seems real to you?' to establish the lag, and then use this question enough more times to bring the communication lag to a constancy before proceeding on with further steps.

ROUTE 1

R1-4: BE THREE FEET BACK OF YOUR HEAD

The command 'Be three feet back of your head' should be given casually, and if immediately obeyed the auditor with no further discussion should then go on to R1-5. If there is any argument after this command is given, or if the preclear cannot quite understand what is occurring and does not do so, then it is indicated that the auditor switch routes and without further argument on the subject of exteriorization continue the session with R2-16.

NOTE: A thetan located in a space is less than theta itself, but a thetan located is greater than homo sapiens.

R1-5: WHATEVER THE PRECLEAR HAPPENS TO BE LOOKING AT (DO NOT DIRECT HIS ATTENTION TO ANYTHING) HAVE HIM COPY IT ONE AT A TIME, MANY MANY TIMES. THEN HAVE HIM LOCATE A NOTHINGNESS AND COPY IT MANY MANY TIMES

Without directing the preclear's attention to anything, ask him what he is looking at and then have him mock up a copy of whatever he sees, whether it is the room) a picture, or blackness. Have him then make another copy of what he saw) and another one, and another one, and another one, and another one. These copies are all the same as the original sight which he perceived when asked what he was looking at. Acquaint the preclear with the word 'copy' by first asking him to 'make another one just like it' and then for this phrase substitute the word 'copy'. When the preclear has made some two dozen copies, have him do something, anything, with these copies so as to dispose of them. They can be used to supplement havingness, in which case he would be asked to push them all together and pull them in upon himself. In any event, do not leave him with these copies. When the copies are disposed of, have the preclear locate a nothingness by saying, 'Can you find a nothingness somewhere around you?' And then have him copy it by saying, 'Now make another one just like it.' 'Make another one just like it.' 'Now copy that first nothingness again', and so forth until he has copied this a couple of dozen times. Then have him dispose of these nothingnesses.

R1-6: HAVE PRECLEAR HOLD THE TWO UPPER BACK ANCHOR POINTS OF THE ROOM FOR AT LEAST TWO MINUTES BY THE CLOCK

'Locate the two upper back corners of the room (those behind the preclear's body) hold on to them and don't think.' Do this for at least two minutes. The preclear could be alternately asked to find two nothingnesses and hold on to them for two minutes without thinking. The length of time is not mentioned to the preclear. When this has been done, do not neglect to tell the preclear to let go. Do not run the next step with him still holding on to the two back corners of the room.

R1-7: HAVE PRECLEAR LET GO AND FIND MANY PLACES WHERE HE IS NOT. (REPEAT THE COPYING: BACK ANCHOR POINTS AND WHERE HE IS NOT, ONE AFTER THE OTHER MANY TIMES.)

'Now find a place where you are not.' Repeat this command many times until any communication lag developed by the question has been rendered constant.

R1-8: HAVE PRECLEAR DISCOVER MANY THINGS ONE AFTER ANOTHER, WHICH HE CONSIDERS SAFE TO LOOK AT.

This step is the basic theory behind Viewpoint Straightwire. Its intention is to render the preclear comfortable while looking at anything. The keynote here is to use the goal of Viewpoint Straightwire directly. One is interested in having him look at actual things in the MEST universe from Look down to Sex on the Know to Sex Scale. One should include, in particular, turbulent masses and mysteries. The most important part of this process, and the one which should be stressed while others are neglected, is to get the preclear to actually look at actual things, then to have him look at actual emotions, and finally to make very certain that he can be very comfortable in looking at all manner of efforts. To do this one sends the preclear as a thetan out into the world and has him actually find things which it is comfortable for him to look at in the bands of plain lookingness, then emotion, then effort. One starts with the command, 'What would it be all right for you to look at here in this room?' This is done with the body's eyes closed. The preclear is made to give as many things in the room which it would be all right for him to look at as is necessary to bring to constant any communication lag involved. Run the command, 'Now find something it is safe to look at outside this room.' When it is ascertained that, in this exercise of discovering things which are all right for him to look at, the preclear is wandering rather far afield with some confidence the auditor should tell him, 'Now go and find some emotional states which it would be all right for you to look at.' The preclear actually goes around to various parts of the world and sees people and animals in various states of emotion until he discovers he can be completely comfortable in viewing all the emotions on the tone scale in action -- apathy, grief, fear, resentment, anger, antagonism, boredom, enthusiasm, and serenity. When this has been accomplished, have the preclear find some efforts being engaged in by something, anywhere, which it would be comfortable for the preclear to view. It may take some little time to discover something in the line of effort which he can really comfortably perceive. He finds various efforts which he can view and the process should be continued until he can look very comfortably upon wild and turbulent motion. The keynote of this process is to get the preclear completely certain that he can view anything in the universe with aplomb, particularly emotion and effort.

The process can be continued, if with less benefit, with the remainder of the Know to Sex Scale plus Mystery -- Know, Look, Emote, Effort, Think, Symbols, Eat, Sex, Mystery. If in doubt, the auditor should run the entire band from Know to Sex including Mystery. It should be clearly understood by the auditor that the preclear does not simply think about these things or mock them up and view them. The auditor wants the preclear, exteriorized, to go around various places in the actual physical universe and look at things and so build his tolerance on the physical universe. It is important that it may be necessary to remedy the preclear's havingness at intervals while this step is in progress.

R1-9: GRAND TOUR

The commands of the Grand Tour are as follows: 'Be near Earth', 'Be near the Moon', 'Be near the Sun', 'Be near the Earth', 'Be near the Moon', 'Be near the Sun', 'Earth', 'Moon', 'Sun', giving the last three commands many times. Each time the auditor must wait until the preclear signifies that he has completed the command. The preclear is supposed to move near these bodies or simply be near them, it does not matter which. The Grand Tour continues with 'Now find a rock', 'Be inside of it', 'Be outside of it', 'Inside', 'Outside', 'Inside', 'Outside', 'Be in the center of the Earth', 'Be outside of Earth', 'Inside', 'Outside', and back and forth until the preclear is able to do this very rapidly. Then the Grand Tour continues, 'Be near Mars', 'Be at the center of Mars', 'Outside of Mars', 'Center', 'Outside', 'Now more down slowly toward the surface'. The preclear will probably question this, for he has run into a force screen, or thinks he has. 'All right then, be on the surface of Mars', 'Be above Mars', 'Be on the surface', 'Be above Mars', 'Move down to the surface of Mars'. He is shifted into various positions in the vicinity of Mars until he is entirely used to that planet. When the preclear is entirely comfortable in the solar system by reason of running the Grand Tour, do Change of Space with him, first on all the locations where he has received auditing, therapy or treatment of any kind here on Earth. Next do all the key locations mentioned in 'What to Audit' (History of Man) such as the entrance point of the MEST universe, the place where he made his first facsimile, etc. This is run in this fashion: 'Be at the place where you

entered the MEST universe', 'Be at the center of this room', 'Center of this room', 'Entrance point', 'Room' and so forth until the entrance point is in present time. The preclear should be made to run change of space on any area until that area is in present time. Originally it could be conceived that only the place where the preclear is is in present time, that all other places are in past time to the degree that they are far from the preclear. The object is to get all areas into present time. Caution: Change of Space is never run with the command, 'Be here', 'Be there'. For when the preclear is 'there' it has become 'here' to him. Thus the actual designation in brief should be given each time.

IMPORTANT: WHILE RUNNING CHANGE OF SPACE OR ANY PART OF THE GRAND TOUR IT MAY BE NECESSARY TO REMEDY THE HAVINGNESS OF THE PRECLEAR. THIS IS DONE WITH THE COMMAND:

'Put up eight anchor points as though they were the corners of a cube around you', 'Now pull them in on you.' 'Put up eight more.' 'Pull them in on you.' Any dopiness or increasing sadness on the part of the preclear or a feeling of degradation comes about from lack of havingness. In the Grand Tour it is more important for the preclear to locate and occupy exact locations in space and in objects than it is for him to examine the surrounding area.

R1-10: HAVE PRECLEAR DISCOVER THINGS HE WOULDN'T MIND OCCUPYING THE SAME SPACE WITH HIM

Agreement with the physical universe brings about the consideration on the part of the preclear that two things cannot occupy the same space. It is this basic rule which keeps the physical universe 'stretched'. It is not, however, true that two things cannot occupy the same space, and it is particularly untrue when the two things are an object and a thetan, since a thetan can occupy the space any object is occupying. The process is run with the question. 'Now tell me something you wouldn't mind having occupy the same space you are in' or 'Give me something you wouldn't mind having occupy your space'. The auditor must ascertain in any answer the preclear gives whether or not the preclear is absolutely certain he wouldn't object to this mutual occupation of the same space. The preclear is made to get item after item until he recognizes a high reality on it and then is made to occupy the same space as many things (this is comparable to the STEP 1 processes of earlier SOP's where the preclear was made to be in many things). When it has been clearly established that the preclear, with absolute certainty, is perfectly able to tolerate anything occupying his same space, the auditor goes on to the next step.

R1-11: HAVE PRECLEAR BE PROBLEMS AND SOLUTIONS IN HAVINGNESS

Ask the preclear. 'What kind of a problem can you be in havingness?' 'What kind of a problem can you be in not havingness?' many times until he has isolated many problems for many people. 'What kind of a problem can others be to you in havingness?' 'What kind of a problem can others be to you in not havingness?' After this has been well worked over, advance into solutions with: 'What kind of a solution can you be to havingness?' 'What kind of a solution can you be to not havingness?' and so forth. It may be necessary to explain what is meant by havingness, but it has been my experience this has not been so.

R1-12: HAVE PRECLEAR MOCK-UP GENERATORS, POWER PLANTS AND SUNS TO GIVE HIM ENERGY, ON THAT GRADIENT SCALE, UNTIL HE IS TOTALLY CONVINCED THAT HE DOES NOT HAVE TO RECEIVE ENERGY FROM AN OUTSIDE SOURCE. (A COMPLETE REMEDY OF HAVINGNESS)

Having run R1-10 and R1-11, the preclear should be able to get good mock-ups. The main object of this step, however it is done, is to get the preclear to recognize that he himself creates the energy which he uses. One of the methods of doing this is having him mock-up generators of various sizes on a gradient scale, then larger generators, then power plants, lightning bolts, and finally suns to give him energy. At this step a complete remedy of havingness should be accomplished. If it is not adequately accomplished with this step, the auditor should return to R1-10, do that and R1-11, and then repeat R1-12.

R1-13: HAVE PRECLEAR ADJUST GENETIC ENTITY ANCHOR POINTS

Early in processing never direct the preclear's attention to his body. If he happens to be looking at his body, this is all right. But do not tell him to look at his body. To begin R1-13, have preclear duplicate his body many, many times and push the mock-up into it. Have him pretend that, by mock-ups, he is exteriorizing from various other kinds of bodies. Have him interiorize and exteriorize many times from his present body. Then have him mock-up the electronic structure of his body until he can see it easily. Now ask him 'Do you see any gold balls in your head?' If he does not, have him mock-up gold balls until his head's golden balls appear. Now have him move any golden balls he finds which are out of position in his head until they are in the proper position. When an anchor point (golden ball) will not move back into position, have the preclear mock-up many anchor points in that area -- which is to say, remedy the body's havingness in that area. Then, and only then, will it be found that the anchor point of the body itself will go back into that position. Caution: Never let the preclear mock-up an anchor point of his own and put it into position in the body the GE can tolerate only its own anchor points. Ask the preclear, 'Can you find any more of these golden balls which are out of position?' and have him move them back into position or assemble them or remedy them until all the anchor points of the body are in excellent condition and in the proper position.

R1-14: HAVE PRECLEAR CREATE AND DESTROY VARIOUS KINDS OF THETAN MACHINES

A thetan is always equipped with various kinds of machinery. Remedying of havingness should make it very easy for him to dispense with or create new machinery. He has machines which send him places, machines which hide things, and machines which 'zap' him. There are two types of machines those that mock things up, and those which unmock things. But there can be a great variety of considerations in this machinery. Machines are actually machines. He makes them up of tubes and other electronic equipment. Sometimes they look like huge teletypewriters. Simply duplicating a machine many times will at last reduce it to nothingness. A thetan whose havingness has been remedied has relatively little difficulty with machinery as he is not keeping it around to supply him with energy. He has set up machinery which will 'zap' him when he gets into certain positions. This, in life as a homo sapien, is manifested by fear of self-invalidation. It comes from the machine since invalidation, on the upper echelon, is by force. Have him make machinery which actually works. Make the machinery work, and destroy the machinery, until he is totally confident of his ability to make and destroy any and all types of machines. It is important that the machinery he mocks up actually works. The process of making a machine is to make a postulate, fit it into a machine, hide the machine, and forget it. The machine is keyed against something the thetan may think. When the thetan thinks something, the machine goes into action. Be very wary of destroying all of a thetan's machinery. Be also very wary of leaving a thetan with no mass as he feels very unhappy about being only a thought.

R1-15: REPAIR PRECLEAR'S ABILITY TO COMMUNICATE BY HAVING HIM COPY MANY SCENES IN THE PHYSICAL UNIVERSE

This step is actually the same step as R1-5, but it is run on a wider basis. The thetan is sent around to various parts of the world and the universe and asked to copy things. He copies

each one many times until he is satisfied that his copy is exact in all respects with the original in the physical universe. When the thetan has accomplished this he will be able to make things with adequate density and mass.

NOW HAVE PRECLEAR RUN EACH AND EVERY ROUTE 2 STEP UNTIL THE AUDITOR IS CONVINCED THAT HE CAN DO THESE EASILY AND ABLY

ROUTE 2

If the preclear had any appreciable communication lag as established in the III step (ARC Straightwire) above, all RI steps are omitted, and the case is entered into ROUTE 2, the first step of which is R2-16.

R2-16: RUN PRECLEAR THROUGH OPENING PROCEDURE OF 8-C PARTS (A), (B), (C), EACH ONE UNTIL THE PHYSICAL COMMUNICATION LAG STABILIZES. THE AUDITOR SHOULD MAKE SURE AT FIRST WHILE RUNNING STEP (A) THAT THE SPOTS HE DESIGNATES ARE HIGHLY GENERALIZED AND ARE NOT SMALL AREAS UNTIL THE PRECLEAR CAN BE DIRECTED TO SMALL AND PRECISE SPOTS

The entire modus operandi of Opening Procedure of 8-C consists in having the preclear move his body around the room under the auditor's direction until (A) he finds he is in actual communication with many spots on the surface of things in the room, (B) until he can select spots in the room and know that he is selecting them and can communicate with them, and (C) select spots and move to them, decide when to touch them and when to let go. Each one of these steps is done until the auditor is well assured that the preclear has no communication lag.

The auditing commands are as follows: 'Do you see that chair?' 'Go over to it and put your hand on it', 'Now look at that lamp', 'Now walk over to it and put your hand on it. This is done with various objects without specifically designating spots of a more precise nature than an object until the preclear is very certain that he is in good communication with these objects and the walls and other parts of the room. The auditor can say anything he pleases, or seemingly introduce any significance he wishes to so long as he hews very closely to the actual thing in this method which makes it work -- which is to say, perceiving the physical universe and making contact with it. Part (A) has been enlarged by the auditor's selecting exact spots. 'Do you see that black mark on the left arm of that chair?' 'All right, go over to it and put your finger on it', 'Now take your finger off it', 'Do you see the lower bolt on that light switch?' 'All right, go over to it and put your finger on it', 'Take your finger off it'. And so forth until the preclear has a UNIFORM PERCEPTION of any and all objects in the room including the walls, the floor and the ceiling. This step can be kept up for a long time. It has an infinity of variations. But it is not the variations which work, it is the making and breaking of communication with the actual designated spots.

IF AT ANY TIME THERE IS ANY DOUBT ABOUT THE PRECLEAR'S CASE DO THIS STEP, PART (A), UNTIL SATISFIED THAT COMMUNICATION IS GOOD. A CASE WHICH WILL NOT OBEY OPENING PROCEDURE 8-C (A) ORDERS WILL ALWAYS PERVERT OR ALTER COMMANDS TO BE PERFORMED WITH LESS SUPERVISION THAN PERCEPTION OF HIS BODY.

Part (B) has these auditing commands, 'Find a spot in this room'. No further designation is necessary for this spot. Spotting procedure gives the preclear determinism of selection. When the preclear has done so the auditor says, 'Go over to it and put your finger on it'. When the preclear has done this the auditor says, 'Now let go of it'. It must be emphasized that the preclear is not to act upon a command until the command is given and must not let go until told to let go. The preclear is permitted to select spots until such time as all communication lag is flat and until he is freely selecting spots on the walls, objects, chairs, etc. with no specialization whatsoever -which means that his perception of the room has become uniform. Many things turn up in running this procedure such as the fact that the preclear cannot look at walls, etc.

Part (C) of this procedure is run with these auditing commands, 'Find a spot in the room', 'Make up your mind when you are going to touch it and then touch it', 'Make up your mind when you are going to let go of it, and let go'. A variation of this process is to have the

preclear make up his mind about a spot and then have him change his mind and select another spot.

The trouble with most cases, and the trouble with any case which is hung up and is not progressing, is that an insufficient quantity of Opening Procedure 8-C has been used by the auditor. This has been found to be an invariable rule. Preclears will pretend to run commands of a subjective nature but not run them at all. In other words, the auditor is saying do one thing and the preclear is doing quite another. Thus the process is not actually being used on the preclear. The difficulty in this case is a specific difficulty in communication where the preclear cannot duplicate. But more important than that, any preclear whose case is hanging up is out of touch with reality and the environment to such an extent that he has begun to do processes on mock-ups rather than on the actual physical universe. It will be discovered that doing processes on mock-ups such as finding spots in them, finding distances to them, and so forth is productive of no gain, and even negative gain. Only processes which directly address the physical universe are found to raise the tone of the preclear. He has to come up to full tolerance of it before he can get out of it. Thus any case bogging down somewhere in more intricate procedures can be relieved and brought into present time by 8-C. The only caution on the part of the auditor is that he must be very precise about giving his orders and must insist on the preclear being very certain that he is actually seeing spots and touching them and inhibiting the preclear from executing the commands before they are given.

R2-17: OPENING PROCEDURE BY DUPLICATION UNTIL PRECLEAR FEELS GOOD ABOUT IT

Opening Procedure by Duplication is begun only after the preclear has some reality on his environment. Until the preclear's reality on his environment is good, Opening Procedure by Duplication should not be done, for the preclear only turns on an unreality circuit and goes through it mechanically. The first part of Opening Procedure by Duplication is to get the preclear to examine, communicate with and own (somewhat on the order of Opening Procedure of 8-C) two dissimilar objects. These objects are then placed several feet apart and at a level so that the preclear can pick them up without bending over, but so that he has to walk between them. Once the auditor is entirely satisfied that the preclear has reality on these objects and can own them he then begins Opening Procedure by Duplication with the following commands, supposing that one of the objects was a book and the other was an ash tray, 'Go over to the book', 'Look at it', 'Pick it up', 'What is its color?' At this point the preclear must give an answer. 'What is its temperature?', here the preclear must answer again. 'Put it down in exactly the same place.' When the preclear has executed, 'Go over to the ash tray', 'Look at it', 'Pick it up', 'What is its color?' the preclear says his answer. 'What is its temperature?', the preclear says his answer. 'Put it down exactly in the same place.' When the preclear has executed, 'Go over to the book' and the same words and the same formula are used over and over again until the preclear has had a sufficient number of hours of Opening Procedure by Duplication to enable him to do it without communication lag, without protest, without apathy, but only cheerfulness, each time seeing the items newly. This is a process which is done by the hour. The process is better when done consecutively for so many hours rather than done an hour apiece each day for several days. This procedure is the first step of Procedure 30.

R2-18: HAVE PRECLEAR SPOT SPOTS IN SPACE UNTIL HE CAN DO IT EASILY, MEANWHILE REMEDYING HIS HAVINGNESS

As briefly as spotting spots in space and remedying havingness can be stated, this is one of the key processes of Scientology and has an infinity of variations. It is actually two processes stemming from one. While the preclear is still interiorized, spotting spots and remedying havingness is done by the preclear remaining where he is and simply indicating by pointing where the spot is which he is designating. When it is done with the preclear exteriorized, it becomes Change of Space. This process has an infinity of uses and is one of the best processes in rendering an assist. Here in Intensive Procedure we use it in its simplest

form. The auditor says, 'Spot a spot in the space of this room'. The preclear does so. The auditor ascertains whether or not the spot has color, mass, or if it is simply a location in space. A spot should be simply a location in space, it should not have color or mass. The preclear is asked to locate several such spots in the room. It is important that he walk over to them and that he put his finger on them. After he has done this for a very short time it will be discovered that his havingness has decrease markedly. The auditor has him mock up something which is acceptable to him and has him pull it in on his body until any queasiness or physical upset is remedied. As soon as this is accomplished, the auditor has him spot more spots in the space of the room.

R2-19: HAVE PRECLEAR SPOT SPOTS IN ROOM AND MOVE BODY INTO THEM AND MOVE BODY OUT INTO NEW SPOTS

Only when the preclear can do R2-18 comfortably and actually locate locations independent of the objects in the room itself does the auditor go on to the next phase of this process which is, 'Locate a spot in the room which you can then move into your body'. When the preclear has done so the auditor says, 'Move your body over the spot'. When the preclear has done this, 'Move your body off that spot'. It will be discovered that the preclear may find that the spot moves along with his body. One simply wants the location in space, and this, of course, does not move. Only the body moves. This is done many times until the preclear is adept at moving his body over these spots and moving his body off of them. It is understood, of course, that the location simply moves on into the body as the body is moved over it and that the location moves out of the body as the body is moved away from it. In other words, the location is stable, the body is moving. This is done until the preclear is absolutely sure that it is he who is moving his body over such spots. It may be necessary to remedy havingness while this step is being done. The third part of this step is done as follows, 'Spot a spot in the space of this room', 'Now move your body around it', 'Fix your body in that position', 'Now change your mind about staying there'. (And without the preclear moving off the spot, 'Pick out a new spot', 'Now move your body around the new spot'. This process has many variations. One can have a preclear move a chronic somatic around such spots, fix it there and unfix it. One can have a preclear find a spot and then appear there and then disappear there, find a new spot and appear there and disappear there. The main thing is to have the preclear spot spots and move his body around them and then move his body off the spot.

R2-20: USE OF PROBLEMS AND SOLUTIONS

The use of Problems and Solutions is the second step for Procedure 30 and includes the steps already given in R1-11. [These steps come after the steps as given below.] The auditor asks the preclear, 'What kind of a problem could you be to your mother?' And when the preclear has found one, 'All right, can you be that problem?' And when the preclear has become it, 'Can you see your mother figuring about it?' And whether the preclear can or not, 'Give me another problem you could be to your mother', 'Can you be that problem?' etc., until the communication lag is flattened. Then one asks the same question about father and about other people in the preclear's life, asking the preclear each time for the problem then asking him to be the problem and then asking if it makes other people worry and think about it. Finally one asks, 'Now what kind of a problem can you be to ... (preclear's name)?' And when this has finally been flattened to a communication lag constant, one can assume that he has more or less handled this situation for the moment and he uses exactly the same process on solutions. The same wording as above is used with the exception that 'solution' is substituted for 'problem'. When the preclear cannot be a problem, the auditor should find some things that the preclear can be with great certainty, have the preclear be those things, then have the preclear be a problem. When processing an auditor, have him be an auditor and a preclear alternately, physically assuming the proper position for each until all auditing has been run out and the preclear is no longer waiting to find out what is going to happen. The auditor should keep in mind the fact that a preclear can be a 'no-solution' also that the preclear can be a 'no-problem' also that the preclear can be a solution that needs problems. Many various and strange

manifestations take place, but this process very severely uses only the above commands. The process can be continued, and should be, into the commands of R1-11 which take up problems in havingness.

It may occur if the preclear is a mystic or is interested in the occult, that he offers a peculiar problem in problems. Such a preclear may be looking for the solution to all problems, assuming that only one solution is possible for all problems. If he were to discover this solution, he would, of course, find himself completely out of problems. Thus his havingness in terms of problems would be so enormously reduced that he would discover himself without any interest of any kind. But even if the preclear is not in this category, the process which is given in this paragraph is definitely indicated in the field of problems. Actually it is a combination of running significances and handling problems, and it is useful for any state of case except, of course, those upon whom only Opening Procedure of 8-C may be run. The complete remedy of problems, of course, takes place when the preclear is convinced that he can create problems at will. Until he is so convinced, he is going to hold on to old problems. The way to Convince him that he can create problems is to have him pick out, or pick up, an object. Have him examine this object until he is sure it is real. Then ask him the question: 'What problems could this object be to you?' Have him begin to name off various problems. It will be discovered at first, as always in the handling of significances, that he begins to drain the object itself of the problems which are inherent in the object, and then will eventually begin to invent problems. The problem should be run until the preclear is convinced that he can create problems at will. Many objects can be used rather than just one if it is discovered that the preclear's attention is fixing too strongly upon the object.

R2-21: GRANTING OF BEINGNESS

Granting of Beingness (life) to something. The preclear is as well as he can grant life to things, an action which involves the creation of energy. The basic granting of beingness is the thetan duplicating himself as another thinking being. In the mechanics of the granting of beingness we have 'orientation point' and the 'symbol'. An orientation point is that point in relation to which others have location. It is also that point from which the space containing the locations is being created. In the orientation point we have our basic definition of space: 'Space is a viewpoint of dimension'. Dependent upon the orientation for its location and to some degree for its life is the 'symbol'. A symbol is an object which has mass, meaning and mobility. A symbol locates itself, if it does so at all, by the orientation point. It regards the orientation point as a continual source point and itself as a continual effect point of that source point. So long as one can create life, he more or less considers himself an orientation point. And as soon as he is convinced he cannot create life in any degree, he becomes to that degree a symbol. The granting of beingness is a complexity of the communication formula in that we have broadly added space rather than linear distance and have introduced the idea of a continuing orientation point and a continuing symbol. The velocity of the communication formula is expanded to continuing velocities. And we have entered directly from the communication formula into our first understanding of Time and therefore Survival. Its the symbol which is surviving in minute gradients of time and the orientation point which is timeless but which determines the time frame of that space. As a practical example, most preclears consider the childhood home an orientation point and themselves a symbol of that orientation point. Where a preclear has lost too many orientation points successively he begins to consider himself a symbol of a symbol. The concept in some religions of God being everywhere and every place at the same time is a direct and overt effort to loose the worshipper by taking from him a finite position for his orientation point. The processing of the granting of beingness is more complex and therefore less effective than using the communication formula in its simpler form. It is well within the attention of an auditor, and the problems involving it should, to some degree, be resolved with the preclear. The preclear has many times sought to give life to something such as a dying ally or pet or enterprise and has failed to bring it to life. Resultingly he has become convinced that he cannot grant life. But senior to this granting of life is the mechanical matter of orientation point and symbol. A multitude of processes can be applied with profit to this subject. One of the simplest would be to demand of the preclear,

'Where are you from?' and then continue to repeat this question on and on and on, no matter what answer the preclear gave, until the preclear replies that he is from right where he is. At which time the auditor changes the question to 'Where is that?' And to any answer the preclear gives, again asks 'Where is that?' until the preclear ceases to locate himself by his environment and then ceases to locate himself by his body and by himself and comes to the realization that he is exactly where he says he is and no other place. The other-determinism to self-determinism course is marked by the fact that he is first nowhere, then where old orientation points and present locations tell him where he is, and then where his body tells him where he is, and then where he seems to be because he can see certain things, to the final realization that he is where he is by postulate and by that alone. This will exteriorize a preclear if continued long enough. All other processes are only a covert level of this process. He can be made to spot spots which he has considered orientation points, such as the childhood home, and then remedy havingness. He can be asked why the environment is there, and for every answer simply ask again why what he is looking at is there. Or this can be run as the third step of Procedure 30, which is what it is. As the third step of Procedure 30, Granting of Beingness is run in this fashion, 'Who would grant beingness to ...?' And in the blank may be placed psychosomatics, letters, cats, dogs, kings and coal heavers or anything the auditor might think of, each time until the preclear replies without communication lag. The key question would be, 'Who would it be all right to have grant some beingness?' The person the preclear will name will be the person the preclear has most recently depended upon thoroughly as a symbol in lieu of an orientation point. This is continued with 'What else would it be all right for ... (the person he has named) to grant beingness to?' With this last question we are resolving the 'only one' complex. The preclear has gotten into a state, ordinarily, where he is the only one who can grant beingness, but he has so long restrained other people from granting life to things that he himself will no longer grant any life to things. The preclear is engaged in some kind of a giddy contest whereby nobody else can grant beingness to things, but he can grant beingness to them. The resolution of this will mean a considerable increase in case. There is an additional question, 'Who are you eating for?' and 'Who are you doing other things for?' item by item, which processed continuously will eventually bring the preclear into certain changes of consideration. This last technique is a part of one called 'Swizzle-Stick'. An additional process is to simply have the preclear say to himself, 'I am here'. And each time establish for himself the fact that he is. This is done over and over without further variation. A part of the granting of beingness is having symbols 'out there moving around for you'. An individual who cannot be an orientation point and who cannot, therefore, grant beingness does not have symbols. Thus he cannot predict objects even in the immediate environment. A variation is to have him look at various objects and the walls of the room and predict that they will be there in ten seconds, then, to have him count off the ten seconds and find out whether or not they are there.

R2-22: SPANNING ATTENTION

Scarcity of attention is manifested on a gradient scale from the top to the bottom on the Chart of Human Evaluation. An individual has so many times excused his failure to direct attention when it was required by saying that he had not enough attention that eventually things which sought to seize his attention 'distract him'. This brings on a certain franticness. Scarcity of attention is the reason why a preclear cannot look at past engrams and present time at the same time and, be in present time. His attention gets caught or trapped in the past. The scarcity of attention can be directly remedied by having the preclear put his attention on one object until it is thoroughly real to him, then on another object until it is thoroughly real to him, and then put his attention on both objects until they are thoroughly real to him, then his attention on a third object until it is thoroughly real to him, and then his attention on all three objects until they are completely real to him. The caution which must be taken is that one does not fixate his attention on the objects but keeps him answering questions concerning the objects. In all attention processes, an hypnotic condition takes place only when the preclear is unable to comment or respond while his attention is closely fixed upon one object. The body gives the thetan scarcity of attention and therefore a sort of hypnotic trance by having only one direction of attention, i.e., through the eyes. A thetan seeing on a 360 degree periphery, when interiorizing into the head, finds himself looking in only one direction. This is sufficient to

fixate him. Exteriorization by Attention is possible simply by directing the preclear's attention to wider and wider spheres. The technique Spanning of Attention is done with the following commands. The auditor put a match down in front of the preclear, 'Now look at that match', 'Is it real to you?' The auditor puts down another match close to the first match, 'Now look at the second match', 'Is it real to you?' and then works with such question until both the first and second match are real. The auditor then has him put his attention on both matches at once to establish whether or not they are both real at once. Then he has him look at the first match, the second match, and then both matches in that order until the preclear can see both matches as entirely real. A third match is now put down, the auditor saying, 'Now put your attention on this third match'. 'Is it real to you?' When reality on the third match is established, the auditor has the preclear see the first two matches at once, then the second and third matches at once until these two groups, as groups, are real and then has the preclear look at all three matches until they are real. WITH THIS PROCESS THE PRECLEAR'S ATTENTION IS NOT PERMITTED TO LINGER ON ANY ONE OBJECT FOR MORE THAN A FEW SECONDS. CONTINUOUS STARING AT THE OBJECT WILL NOT PRODUCE ANY FURTHER RESULT THAN BOIL OFF. THIS PROCESS IS CONTINUED UNTIL THE PRECLEAR CAN DO THIS -- SEE WITH ENTIRE REALITY TEN MATCHES SIMULTANEOUSLY LAID OUT IN FRONT OF HIM. Now the auditor begins by taking an object in the room, such as a chair, has the preclear examine that until it is entirely real, then takes another chair in the room and establishes its reality with the preclear. Then he works on the first and second chairs and on both until the preclear can see both chairs with complete reality. Then a third chair is picked out and reality is established on the first and second chair, and the second and third chair, and then on all three chairs. This is done until all the objects in the room are included in the reality of the preclear, at which time he will very probably be exteriorized.

R2-23: ATTENTION BY DUPLICATION

Two similar objects, preferably black and not shiny, are placed before the preclear in such a way that they are more or less even with his level gaze and making with each other and the preclear's space a 90 degree angle so that the preclear has to turn at least 45 degrees out of his normal line of sight in order to put his attention on either one of them. The preclear's attention is directed to object one on the right and then is asked to put his attention on object two on the left. 'Put your attention on the right hand object', 'Put your attention on the left hand object'. These two commands are then given consecutively many, many times, each time the auditor waiting for the preclear's execution of the command before giving the next command. The process can be done with only these two commands, for the preclear is not asked to fix his attention on either object, he is only asked to look at these two objects. If there is any question about the preclear's general reality, this should be remedied by Opening Procedure of 8-C. Further, the preclear, prior to the process, no matter what his reality may be, should be put into communication with the two objects. This process is often found to be more workable by having the preclear describe the objects he is looking at each time he looks at them. This keeps the preclear outflowing. And where the preclear begins to demonstrate hypnotic manifestations, the step of making him describe each object should be used. The commands would be 'Now put your attention on object one'. The preclear executes. 'Tell me about it.' The preclear does so. 'Now put your attention on object two.' The preclear does so. 'Tell me about it', 'Put your attention on object one', and so forth, over and over. This process should be run as long as it produces perception changes in the preclear. Attention by Duplication can be applied to any sense perception. Here we have the example of it applied to sight. This step should also apply to Attention by Duplication by hearing. If there is a noise in the room, preferably a monotonous one such as a motor or fan or even a record of a monotonous voice but not the radio, the auditor commands the preclear, 'Listen to that ...' naming the source of sound. And when the preclear has done so for a moment, 'Now put your attention on the silence present in the room', 'Now on the ...' again naming the source of sound. 'Now on the silence', back and forth for a considerable length of time. A second step, both in Attention by Duplication for sight and Attention by Duplication for hearing, is accomplished by adding in the commands, 'Now take your attention off ...' before the next command to put his attention on something is given. In this wise the commands would be for

attention by sight, 'Put your attention on object one' and when the preclear has complied, 'Now take your attention off of object one' and the preclear has complied, 'Now put your attention on object two' and when the preclear has complied, 'Now take your attention off of object two' and so on back and forth between the two objects. An additional step can be run having the preclear decide when to take his attention off the objects. This is similar to the pattern of Opening Procedure of 8-C with the addition that it is run by monotonous duplication of the process and the objects.

R2-24: EXTERIORIZATION BY DISTANCE, EXTROVERTED AND INTROVERTED ALTERNATELY

The simplest form of Exteriorization by Distance is accomplished simply by having the preclear sit still and spot various objects in the room without calling his attention to any distance involved. This would be done with this one command and with no further qualification as to what the preclear puts his attention on, 'Find another spot in this room'. This can be run for hours with benefit. All other Exteriorization by Distance processes are simply complications of this basic process. The next most used Exteriorization by Distance process uses three spots in the room on these commands, 'Find three spots in your body' and when the preclear signifies that he has, 'Now find three spots in the room'. And when the preclear signifies that he has, 'Find three spots in your body'. And when the preclear signifies that he has, 'Now find three spots in the room'. This is done over and over without any change of command. This process is commonly run on groups. Spotting one spot at a time, not designating whether it is in space or on objects, may also be run on groups as above. When a preclear's reality on Exteriorization by Distance is very poor the simpler forms of this process as above should be used. The commands of Exteriorization by Distance are as follows, 'What distance could you tolerate to your right foot?' 'What distance could you tolerate to your left foot?' 'What distance could you tolerate to your genitals?' 'What distance could you tolerate to your stomach?' 'What distance could you tolerate to your rectum?' 'What distance could you tolerate to your back?' 'What distance could you tolerate to your right hand?' 'What distance could you tolerate to your left hand?' 'What distance could you tolerate to your right eye?' 'What distance could you tolerate to your left eye?' 'What distance could you tolerate to your mouth?' and then consecutively 'What distance could your right foot tolerate to a thetan?' 'What distance could your left foot tolerate to a thetan?' 'What distance could your stomach tolerate to a thetan?' 'What distance could your rectum tolerate to a thetan?' 'What distance could your right hand tolerate to a thetan?' 'What distance could your left hand tolerate to a thetan?' 'What distance could your right eye tolerate to a thetan?' 'What distance could your left eye tolerate to a thetan?' 'What distance could your mouth tolerate to a thetan?' 'What distance could your back tolerate to a thetan?'

This complete series on the body is called the introverted part of the process and is immediately followed by these commands: 'What distance could you tolerate to the front wall?' 'What distance could you tolerate to the right wall?', 'What distance could you tolerate to the left wall?' 'What distance could you tolerate to the back wall?' 'What distance could you tolerate to the floor?' 'What distance could you tolerate to the ceiling?' 'What distance could you tolerate to your chair?' and this is followed by: 'What distance could the front wall tolerate to a thetan?' 'What distance could the right wall tolerate to a thetan?' 'What distance could the left wall tolerate to a thetan?' 'What distance could the back wall tolerate to a thetan?' 'What distance could the floor tolerate to a thetan?' 'What distance could the ceiling tolerate to a thetan?' 'What distance could your chair tolerate to a thetan?' And this is followed by the first of the series on the body, 'What distance could you tolerate to your right foot?' and so forth, around and around on these commands.

IMPORTANT: THE PRECLEAR MUST NOT BE PERMITTED TO USE MOCK-UPS IN THE MATTER OF WHAT DISTANCE THE PARTS OF THE BODY OR THE ROOM COULD TOLERATE TO A THETAN. THE AUDITOR WANTS THE ACTUAL PARTS OF THE BODY RIGHT WHERE THEY ARE AND THEIR TOLERANCE TO THE THETAN IN EACH CASE. AND HE WANTS THE PARTS OF THE ROOM RIGHT

WHERE THEY ARE AND THEIR DISTANCE TO THE THETAN. THIS PROCESS IS NOT TO BE DONE BY MOCK-UPS. BUT IF MOCK-UPS APPEAR IN THE MATTER OF WHAT DISTANCE THE THETAN CAN TOLERATE TO THE PARTS OF THE BODY OR ROOM THEY ARE ALLOWABLE BUT ARE NOT ENCOURAGED. IF MOCK-UPS ARE USED IN THE MATTER OF DISTANCE OF THE OBJECTS TO THE THETAN, THE REALITY OF THE PRECLEAR WILL DECREASE MARKEDLY. THE PRECLEAR IS NOT BEING EXTERIORIZED FROM MOCK-UPS, HE IS BEING EXTERIORIZED FROM ACTUAL PHYSICAL UNIVERSE OBJECTS.

R2-25: VIEWPOINT AND VIEWPOINT ARC STRAIGHTWIRE

Viewpoint and Viewpoint ARC Straightwire in a brief form has the following commands, 'Give me some things which it would be comfortable for you to look at'. And when the communication lag on this is flattened, 'Give me some emotions it would be all right for you to look at', 'Give me some efforts it would be all right for you to look at'. These are the chief concerns of the auditor in this process: The auditor must make sure that the preclear is absolutely certain he is comfortable in viewing such objects. The process fails when the auditor is incapable of pressing the preclear until this certainty is attained.

Viewpoint ARC Straightwire then follows, 'Who would it be all right for you to like?' And, as in any of these questions, when the communication lag has been fattened by repeated use of the first question, 'Who would it be all right for you to agree with?' 'Who would it be all right for you to communicate with?' 'Who would it be all right to have like, you?' 'Who would it be all right to have agree with you?' 'Who would it be all right to have communicate with you?' The basic formula and goal of this process is to increase the preclear's ability to tolerate views. The auditor is trying to do two things. He is trying to improve the tolerance and comfort of the preclear in viewing and experiencing knowingness, lookingness, emotingness, effortingness, thinkingness, symbolizingness, eatingness, sexingness, and mystery.

R2-26: REMEDY OF LAUGHTER

The earliest known psychotherapy consisted of getting a patient to laugh. Laughter is rejection. A preclear being continually inflowed upon by the physical universe at length may find it difficult to reject anything. Getting him to reject something could be made an auditing goal. The best manifestation of this is laughter. Laughter includes both surprise and rejection. The individual is surprised into rejecting. In order to laugh, he must have laid aside some of his ability to predict. An individual who is serious has laid aside so much of his ability to predict that he now cannot be surprised into rejection. The anatomy of mystery consists of, in this order, unpredictability, confusion, and chaos covered up because it cannot be tolerated. Therefore, this is also the anatomy of problems. Problems always begin with an unpredictability, deteriorate into a confusion, and then if still unsolved become a mystery which is massed confusion. It will be observed that as a person falls further and further away from the ability to laugh he becomes more and more confused until at last he sees no points in any jokes, he sees only embarrassment when confronted by laughter, and the whole action of laughter itself escapes him. The ability to laugh is rehabilitated in general by Scientology as it advances the ability of the preclear to know -- which is to say, predict. The Remedy of Laughter could be entered simply by having the individual predict that a wall would be there in ten seconds, count off ten seconds on his watch, and then ascertain with thoroughness that the wall is still there, to establish if the wall is there, then to predict that it will be there in ten seconds, then to count off ten seconds on his watch and ascertain if the wall is still there. By thus bringing solid objects into the realm of prediction, an individual at length comes to a point where he can predict very slowly moving objects. A cheap train and track could be set up for this purpose and the preclear could be led to predict with accuracy the position of engines on the small circular track. However, the preclear can be made to watch automobiles on the street -- a process which serves just as well with no such equipment. The preclear would then be led to predict the positions of his own body, first by predicting that it was going to be in a certain spot, then

moving it there and seeing whether or not it had arrived at that spot. He would then be brought to swing his arm in a circle, predict that it would swing faster, and swing it faster. And thus being led to predict the motion of his body with these simplicities, he could be exercised in making his body go tense and go limp by his command until he was thoroughly certain that he could both predict the tension or relaxation by doing it. Then he could be led to predict the positions of people walking on the street until he felt some security in predicting without exercising physical control. By thus remedying his ability to predict, one brings the preclear up into a tolerance of motion. He is then led to put his attention on one moving object, then on two moving objects at once, and so forth using the processes of spanning attention on moving objects. A direct mock-up process can be applied to the Remedy of Laughter by having the preclear mock up alternately himself and others laughing or by having him mock up an acceptable level of amusement and remedy his havingness with it until he can have people laughing very broadly in his mock-ups.

The preclear can also be made simply to stand up and start laughing. He at first will demand to have something to laugh at, but at length will be able to laugh without reason. The goal of the process is contained in the last line -- to regain the ability to laugh without reason. In this Intensive Procedure only two steps are employed to remedy laughter. The first consists of these commands, 'Be completely certain that the wall is there'. And when the preclear has become with considerable conversation completely certain that the wall is there, touching it, pushing against it, and so forth, the auditor then says, 'Sit down, take this (your) watch', 'Now predict that the wall will be there ten seconds from now', 'Have you done so?' 'All right wait ten seconds by your watch'. And when this is done, 'Is the wall still there?' And when the preclear has answered, 'Now make absolutely certain the wall is there' and the preclear does so by touching it, pushing at it, kicking it. 'Now make very sure that the wall is there.' And when the preclear very vigorously has done so, 'Now predict that it will be there in ten seconds'. And when the preclear has done so, the remainder of the commands are given and this is repeated over and over. Then the second part of Intensive Procedures process of laughter, but only after the preclear has experienced considerable relief and is absolutely sure that he can predict that all parts of the room will be there, not only in ten seconds, but in an hour -- although no such timing is used, and only ten seconds of time is employed -- 'Start laughing'. And no matter what the preclear says thereafter, or what arguments he advances, or how many things he asks about, or how many reasons he wants or gives, the auditor merely says (adding words that urge the preclear), 'Start laughing'. And when the preclear at length does so, no matter how half heartedly, 'keep on laughing'. The two commands which are used in addition to Words necessary to urge the preclear without giving the preclear any reason whatsoever are, 'Start laughing' and 'keep on laughing'. This process is then done until the preclear can actually enjoy a laugh without any reason whatsoever, without believing that laughing without reason is insane, without feeling self-conscious about laughing, and without needing any boost from the auditor. The auditor in this second part need take no pains to agree with the preclear by laughing. He need not chuckle or smile nor need he even particularly act seriously, his laughter is not needed or used in the process. An auditor can be as serious as he pleases, and indeed, if he wishes to do so, can be even more serious than is usual when running this second step of R2-26. In earlier Scientology it was learned that serious preclears would often recover considerable ground simply when they were made to do things without any reason whatsoever. This achievement is much greater when they are made to laugh without any reason.

R2-27: RESOLVE DANGEROUSNESS OF ENVIRONMENT

Resolving the Dangerousness of the Environment could be done in many ways, but by experience it should not be done by deleting various things which could be dangerous by the use of mock-ups. If there is any trouble with the preclear it is that the environment is insufficiently dangerous and so does not produce sufficient amusement. The physical body was built in the time when escapes from death by wild animals, by falling, were routine. It was built in an operating climate of great hazard over a period of many millions of years. It requires about three escapes from sudden death daily to stay in present time. Many of the preclears being audited in Scientology are being audited simply to experience a new adventure.

However, it can be said with some truth, and was said in 'Excalibur' in 1938, that a man is as sane as he is dangerous to the environment. What occurs is that the environment becomes dangerous to the man and the man cannot be dangerous to the environment. And his answer to this is immobility and general deterioration. The basic remedy of this condition consists of getting a living thing -- a pet, a child, a sick person -- to reach out towards one's hand. At that moment, without moving so suddenly that the living being will be startled, the person doing the process would withdraw his hand. The auditor would then advance, again to be driven away, over and over. And it would be observed that the living being would strike out with more and more enthusiasm and would recover considerable sanity. This, of course, is done on a gradient scale. While an auditor should know and use this basic process in assists or when processing animals, very small children or people who are extremely ill, the remedy which is used in Intensive Procedure is Cause and Effect. Parts of the body can be used in this process, the whole body, or the thetan. But the auditor must be specific about what he is addressing. The basic commands are, 'What are you willing to cause?' And when the preclear has answered this and the communication lag on the question has been fattened, 'What are you willing to be the effect of.' And when the communication lag has been flattened by the repeated use of this question, 'What are you willing to cause?' and so forth, using just these commands. One can additionally apply this, particularly when the preclear has a psychosomatic illness, to a limb or organ of the body as an assist. But in Intensive Procedure, the most permissive of these questions, as given, is used.

R2-28: NOTHING - SOMETHING

Nothing - Something is run by asking, 'What distance wouldn't you mind making nothing of? and when there is no communication lag on this, 'What distance wouldn't you mind making something of (making longer)?' The process is completed by making certain the preclear can tolerate many nothingnesses and many somethingnesses with complete comfort. If the preclear found R2-24 unreal or did it peculiarly, use R2-28 immediately, then R1-10, then R2-24. The goal of this process is the toleration of nothingnesses and somethingnesses by the thetan.

R2-29: TIME TOLERANCE

This uses the velocity factor of the communication formula. (A) Ask the preclear 'Now much time can you tolerate between yourself and (the door) (the window) (etc.)?' Then make him 'walk it out' in the interval of time he named. Have him do this until, without coaching, he can tolerate a very very slow velocity or a very fast one. (B) Then use this command, 'Start lying about your past' and when he finally does, 'Keep on lying about your past' until he can lie with complete comfort about all phases of his past. (C) Then use this, 'What is the significance of your past?' and keep on asking the question, no matter what the preclear says, until his past is not important. Then 'What is the significance of your future?' (or goals, if that communicates better, 'What are your goals in your future?') and keep on asking it until the preclear feels free to live an unplanned life. NOTE: The present time problem is best resolved by remedying the havingness of the preclear on the subject or people involved in the problem. Have him mock these up in acceptable form and accept many. Then, in rejectable form, and reject many until his 'acceptance level' and 'rejection level' are the same.

R2-30: POSITION BY SECURITY (SOP 8-D)

This is used in Intensive Procedure for only two purposes, to resolve a present time association with a person (Present Time Problem) or to resolve 'Body Recruitment' of the Thetan by some part of the body such as teeth, eyes, stomach, etc. In the matter of a present time problem, using the person involved With the preclear's name, 'Where would ... be safe?' and 'Where would ... find you safe?' as the sole commands, actually having the preclear spot the locations in the MEST universe. In the matter of fixation on teeth, etc., 'Where would ... be

safe?' 'Where would ... find you safe?' Body Recruitment is suspected whenever a preclear cannot exteriorize after a few hours of processing. The part of the body he is most anxious about is then run as responsible for dragging 'in' the thetan.

Another method of running this problem is a variation of Description Processing. The commands are 'Now close does your ... seem to you now?' This is the only command employed. Body parts such as head, genitals, teeth, or the body itself are used in the place of the blank.

R2-31: BEINGNESS PROCESSING

The cardinal rule where mental or physical compulsions are concerned follows: **WHATEVER THE THETAN IS DOING OBSESSIVELY OR COMPULSIVELY, HAVE HIM DO IT ON A SELF-DETERMINED BASIS.**

This applies to machines, habits, twitches, etc.

There is a gradient scale of exteriorization which could be described as follows: first, the thetan without contact With a universe then a thetan in full contact with a universe then a thetan in contact with part of a universe, who considers the remainder of the universe barred to him then a thetan in a universe without any contact with any part of the universe then a thetan unknowingly in contact with a large part of a universe. The first condition would be a true Static, the last condition is called colloquially in Scientology, 'battered all over the universe. As it is with a universe such as the physical universe, so it is with physical bodies. The thetan who has already gone through the cycle on the universe itself may be in contact with a physical body in the same order. At first he would be without association with a physical body then with occasional contact with bodies then with a fixed contact on one body, but exteriorized then interiorized into a body, but easy to exteriorize then in contact with and interiorized into a body, but withdrawn from the various parts of the body and then obsessively 'battered all through the body' then obsessively and unknowingly drawn down to some small portion of the body, and so forth. This is the gradient scale which includes inversion and then inversion of the inversion. The auditor will discover preclears are very variable in the matter of exteriorization. Some preclears, even when they have a dark field, exteriorize rather easily. Others, after a great deal of work, are still found to be difficult to exteriorize. The matter of exteriorization is the matter of which level of inversion the preclear is in. One of the more difficult levels to work is so inverted that he thinks that a thetan is running him. In other words, here is a thetan functioning in a body and actually running it through various covert communication lines, who yet believes he is a body to such an extent that he considers himself, or any life around him to be some other being. When discussing the matter of a thetan, this preclear is likely to tell the auditor, 'I'm over there'. This is about the only signal the auditor gets from such a case which tells him that the preclear is being a body, and considers that he is being run by another thetan. Very often an auditor will 'exteriorize' such a person, he thinks, only to have the preclear say, 'I'm over there'. A thetan who knows he is a thetan is always 'here' and never 'there'.

The diagnostic manifestation, however, which the auditor first encounters in any case where he is having difficulty with exteriorization is contained in Beingness. Those on lower levels of inversion are having a great deal of difficulty being anything. Such people are below the level of being a body, therefore it would be far up-scale for this person to be able to be a body with certainty. A person who cannot exteriorize easily must be brought up to the level where he can be a body before he can then be exteriorized from the body. In other words, an auditor exteriorizing anyone has to follow such a scale as Beingness Processing.

Oddly enough, Beingness Processing is an excellent exteriorization tool, and I say 'Oddly enough' because, in one sense, Beingness Processing is an Alter-is-ness process. When a case is extremely inverted it is necessary to get the case up to a level where it can identify itself with something. Beingness is essentially an identification of self with an object.

The commands used in Beingness Processing should begin with the environment and the vicinity of the preclear. One has the preclear look around the auditing room and select an object, let us say a chair. The auditor does this by saying 'Look around the room and discover some object which you don't mind being present'. Remember always, that when an auditor asks a question, that question has to be answered by the preclear. It is the auditor's bad luck if he asks a question which introduces an enormously long communication lag in the preclear. The preclear must still answer the question. At this question, then, 'Discover something you don't mind being present', it is necessary that the preclear actually locate something, even if a dust mote. The auditor then asks the preclear to 'Locate something else you don't mind being present'. And when all communication lag is gone from this level of process, the auditor then picks out an object which the preclear was comfortable about and says: 'Now see this (chair) here', 'All right, what else wouldn't you mind this (chair) being?' And then, as the preclear answers this, and using this same object, the auditor continues to ask the same question until all communication lag is gone from the question: 'What else wouldn't you mind this (chair) being?'

The auditor then selects other objects in the area and uses the same question on them: 'What wouldn't you mind this (couch) being?', 'What else wouldn't you mind this (couch) being?' When the preclear is perfectly willing to have anything in the room be a large number of things, including the walls, the ceiling, and the floor the auditor asks: 'Now what wouldn't you mind your body being?' And whatever the preclear answers, 'And now what else wouldn't you mind your body being?' Finally, when the preclear is able to do all the foregoing in Beingness Processing, the auditor commands him: 'Now let's find something you wouldn't mind being', and, as this is the question for which the auditor has been working, he uses this question for a very long period of time, asking over and over, 'What else wouldn't you mind being?'

It will be discovered in working Beingness Processing that the entire mechanism of winning Valences occurs. Here, for instance, is a thetan who is caught in a theta trap. After a while he will consider that the trap itself is surviving, which is to say that the motions of the trap have themselves set the thetan into motion so that he now thinks of himself totally as a trap. (This is how anybody gets to be anything -- by getting set into motion by the vibrations in his vicinity.)

At first the thetan is willing to be the trap, but after a while, if asked to be the trap and then asked to be the thetan (and this is not a process), the most terrible apathy will be found to intervene between the two steps. The thetan, while fairly comfortable being the trap, on beginning to recover some of his own identity, will be found to be at a point on the tone scale so low as to contain an unbearable and agonizing apathy.

Beingness Processing recovers the various valences which the thetan is trying to avoid. As a practical example in life, we find a housewife who is incapable of keeping house. Although intelligent and able in most things, we find she cannot sweep, make beds, or even shop for the house. We discover that her mother was an excellent housekeeper, an excellent cook, and could shop very well. If this is the case, then we would also discover that the one person in this world our preclear does not want to be is her mother. In other words, by being unable to be her mother, she is also unable to be all those things which her mother could do or be. In other words, the matter of valences is also a matter of packages of abilities, and where an individual is unable to be something which has certain definite abilities, he also cannot achieve those abilities, and this, in itself, is the heart of disability.

In running Beingness Processing it will be discovered that the imagination of the preclear revives to a marked extent. This is a process which requires a skilled auditor, a patient auditor, and one who is willing to level every communication lag he encounters by repeating the same question over and over, each time waiting to receive a definite answer. It is not a process which one starts and leaves uncompleted.

R2-32: ASSIGNMENT OF ATTRIBUTES

The forerunner of this process was Significance Processing. Significance Processing was done as follows: one had the preclear take some picture or object and assign innumerable significances to it.

This is an excellent process, even now, for those who are always looking for deeper significances in everything. It will be discovered that the preclear with whom one is having difficulty cannot duplicate. He cannot duplicate because he has to make everything more complicated. Everything which is given to him has to be given a deeper significance. However, Significance Processing is quite limited in its effects upon the preclear, and it is not to be compared with SOP 8-C Opening Procedure. Where one has a case who is introducing deep significances into everything, who is pondering and philosophizing during processing, one will discover that Significance Processing is far too heavy for the case.

Opening Procedure of 8-C is all that is indicated for this case for many hours, and this should be followed by Opening Procedure by Duplication for many more hours.

The Assignment of Attributes is a process which uses the principle: **WHATEVER THE THETAN IS DOING OBSESSIVELY OR COMPULSIVELY, HAVE HIM DO IT ON A SELF-DETERMINED BASIS.**

Here we have the entire environment assigning meanings and attributes to the preclear. It seldom occurs to the preclear to assign attributes to himself. Throughout life he has been insulted, made nothing of, or complimented, and he has begun to depend upon other-determined assignment of attributes.

The commands of this process are as follows: 'Assign some attributes to other people'. Now, if at this stage the preclear wants to know what an attribute is, the auditor can tell him 'a quality, characteristic, or ability, factual, insulting, or flattering'. The auditor continues with this command for some time and then as: 'Now have some people assign some attributes to you', and, 'Have them assign you some more attributes', then 'some more', and 'Have them assign you some more attributes'. One then returns to the first command: 'Assign some people some attributes') and so forth. Finally, when the preclear is able to do this easily, the auditor goes to this step of the process: 'Now assign your body some attributes', and continues to have the preclear assign to his body attributes. Preclears have exteriorized on this process.

The preclear uses insults, compliments, abilities, skills and various states of beingness, and will be found to be coming up the tone scale with the attributes he is assigning on each stage of this process.

The auditor should not overlook the fact that this process can be very widely used with the same type of command on any of the Dynamics or on the Know-to-Mystery scale, such as, 'Assign some attributes to Mystery', 'Assign some attributes to sex', 'Assign some attributes to women', 'Assign some attributes to spirits', using each question repetitively until such time as all communication lag is gone in the preclear on this process.

R2-33: PERFECT DUPLICATION

Had this process existed in 1950, there would have been no difficulty in Dianetics, for in the perfect duplicate we find how to vanquish an engram. All one needs to do is to make a perfect duplicate of the engram, and then make a perfect duplicate of having perfectly duplicated the engram, in present time, and the engram is gone. This would also apply to ridges or any other energy manifestation.

It is not the purpose of the Scientologist today to process engrams, or to use this particular process, and it is only called to his attention that by making a perfect duplicate of an engram, the engram disappears entirely, except for the action of making the perfect duplicate in

present time, but when this is perfectly duplicated, then the engram really is gone. Engrams, or whole chains of engrams, can be vanquished in a few seconds by perfect duplication.

Thus it may be seen that the theory of a perfect duplicate is a very valuable one.

There are two kinds of duplicates. The word 'duplicate' is used, rather sloppily, to indicate a copy. However, a copy is not a complete duplicate: a copy is a facsimile, and will remain in suspension as such. A perfect duplicate is one which is made in the same time, in the same place, with the same energies as the original. Now, if you have not had this explained thoroughly in class, you may discover it eluding you slightly, so let us take a good solid look at this, for it means exactly what it says: a perfect duplicate is one which exists in the same instant of time, in the same place, and has the same mass (or particles) as original. A thetan placing a perfect duplicate does not do it along side of the original, nor does he put another image inside the original, nor does he mock up more particles. He makes a perfect duplicate by simply duplicating the original with itself, with its own time, mass (particles), space and motion.

There is something else he can do with an original object. He can simply look at one and claim that it is his duplicate.

The perfect duplicate violates the law of universes which keeps space stretched and causes things to come into existence in the first place, and this law of universes is that two things cannot occupy the same space at the same time.

We then discover that a universe will vanish, or any part of that universe will vanish, the moment this law is violated. A perfect duplicate restores the As-is-ness of an object. A perfect duplicate may also have to contain in it the persistence of the object. It is simply made by postulate, and because the body itself is making imperfect duplicates continually, which is to say is copying and making facsimiles continually, it may be that the thetan has fallen into this, and the making of perfect duplicates is a necessary part of his ability. The auditor should then take an object right in the room with the preclear, and have the preclear make a perfect duplicate of the object, then consider it is there again, then make another perfect duplicate of it, then consider it is there again, then make another perfect duplicate of it, then consider it is there again. With some preclears who are having a difficult time, it will be found that the object will become more pronounced and more real for a short time, and only then will begin to vanish. With thetans who are in fairly good condition, the object dims. With the thetan in excellent condition, the object vanishes.

The commands are as follows: 'Do you see this ash tray?' 'Now make a perfect duplicate of it: a duplicate in the same time, in the same place, with the same energy as the ash tray'.

The preclear may have some difficulty getting this. The auditor should be very watchful, and should coax the preclear, using any language necessary to bring about the preclear's making a perfect duplicate. However, the auditor should not tell the preclear that the object will vanish, or that it will seem to vanish for the preclear. The auditor should simply insist that the preclear make a perfect duplicate of the object, in its same time, and same space, with its same mass or energy. When the preclear finally has this, the auditor then says: 'Now consider that it is there again'. When the preclear has done so, the auditor says: 'Now make a perfect duplicate of it', and when the preclear has done so, 'Now consider that it is there again', 'Make a perfect duplicate of it'. The preclear should be drilled in this until the object appears to vanish very thoroughly for him. If the preclear is actually in very good condition, the object simply will vanish.

This skill and understanding should be thoroughly mastered by the preclear before he is taken on through to Description Processing, R2-34.

Making perfect duplicates of the whole track, which is to say returning to incidents and making duplicates of them at that moment, or sending a remote viewpoint 'down the track' and

having it make a perfect duplicate of incidents, and then making a perfect duplicate of having done so in present time to vanish the present time picture, is the process of vanquishing engrams. However, if the process is done to wipe out engrams, remember to remedy the preclears' havingness as in the last sentences of R2-18.

This practice of As-is-ness, by the way, is the reason why people do not consider it polite for other people to stare. People have a hangover in that they know, instinctively, that if they are completely looked at they would disappear.

Having had the preclear learn how to make perfect duplicates, now ask him this question. 'Give me some things which are not making perfect duplicates of you'. Many times. 'Give me some people who are not making perfect duplicates of you', 'Give me some things of which you are not making perfect duplicates', 'Give me some people of whom you are not making perfect duplicates'.

Healing at a glance is done by a thetan, not interiorized, making perfect duplicates of the illness of a body without perfectly duplicating the body itself. It is not done with energy.

R2-34: DESCRIPTION PROCESSING

Before engaging in Description Processing it will be necessary for the auditor to perform, with the preclear, R2-33. It is not that the preclear is going to make perfect duplicates with this Description Processing, but that the preclear has some understanding of what he is confronting. Description Processing is the single most Powerful Process in Scientology. It uses As-is-ness in present time to remedy the restimulations beheld by the thetan. The total command content of Description Processing is the phrase: 'How does ... seem to you now?' This is used over, and over, and over by the auditor. In the blank he puts any difficulty the preclear is having.

For an old-time auditor, for instance, who has become rather laggardly about auditing, the single question 'How does auditing seem to you now?' asked over and over for about three hours would most probably bring about a complete rehabilitation of the auditor as such.

Here all we are asking the preclear to do is to view the situation. We do not care whether he makes a perfect duplicate of it or not. We merely want him to observe the situation. His observance of the situation determines its As-is-ness, and his health depends upon his ability to accept things as they are. As we run this process we will find that a considerable amount of change takes place in a case. Energy masses move, alter, shift, and the environment takes on different aspects. This is not particularly a good manifestation, it is the manifestation of time, or persistence. We are running an As-is-ness of Alter-is-ness. Thus, the occasional interjection of 'Does it seem to be persisting?' on the part of the auditor, calls the attention of the preclear to the persistence of the manifestations and clears up hang-ups. Now, here in this process, we view the entire philosophy of life. We see quite adequately here that an individual still retains anything which he has never accepted As-is. In other words, if a man has fought evil for years, he has never viewed evil As-is. Thus evil will remain with him. If he has fought ugliness for years, ugliness will remain with him. Terribly enough, because he has accepted As-is the goodness of life, and the beauty of life, these things are continually being un-mocked. We eat good food -- we leave bad food alone. When something smells bad we turn our face away from it. Here we have the entire anatomy of the dwindling spiral. We see that individuals continually take the upper cream off life and leave the skimmed milk, and then take skimmed milk and leave the drowned flies, until they are trying to go all the way to the bottom to close with the basic As-is-ness of existence, and this basic As-is-ness is mystery and stupidity.

This works in other ways. An individual walking through life and seeing, for instance, beautiful people, comes at length into a condition where he does not believe beautiful people exist, for he has taken their As-is-ness so long that the only thing which can make any effect upon him are less beautiful people. These he has not un-mocked. Thus we get the entire

engram bank backing up those things which were never observed directly. One can understand, then, that ten thousand years ago in the civilizations of earth there might have been incredible beauty, and one can easily see that these would have no background in the bank of the preclear. However, the ugly spots of ten thousand years ago would still be there, and so would bring up the humdrum routine present time existing without valor, gallantry, or beauty.

This is the anatomy of what Krishna might have meant when he inferred that the bad must be taken with the good. Here we see, then, the explanation of why some men can tolerate only disease and dirt, why some can tolerate only poverty, and we behold, in short, the entire mechanism behind Acceptance Level. Acceptance Level Processing, as contained in the PAB's was one method of reaching a betterment of conditions. Description Processing is a far better method of reaching that condition.

Now let us take, more or less in their order of importance, the various things with which we fill in 'How does... seem to you now?' The auditor be cautioned that he must never start in on one of these subjects without flattening the communication lag resulting. Any one of these items which is mentioned here might very well take ten hours of questioning before it could be run entirely flat, for these are very powerful items. An auditor might as well poison his preclear as to run this list one item after another without a repetition of the question. The keynote of this entire process is that the auditor asks this question 'How does ... seem to you now.?' over, and over, and over, and over, interjecting only 'Does it seem to be persisting?' The auditor can add dunnage (irrelevant remarks aimed solely to stay in communication with the preclear) only so long as he does not distract the preclear from this process.

The items used follow: TIME, CHANGE, MOTIONLESSNESS, CREATION, SURVIVAL, PERSISTENCE, DESTRUCTION, DISTANCE, AGREEMENT, DISAGREEMENT, STUPIDITY, COPYING, BEAUTY, UGLINESS, PEOPLE, YOU, SERIOUSNESS, RESISTANCE, RESTRAINT, OBJECTION, NOTHINGNESS, any one of the DYNAMICS, and any part of the FUNDAMENTALS OF SCIENTOLOGY. In the matter of time, the preclear must necessarily have been run at least on SOP 8-C Opening Procedure and Opening Procedure by Duplication before the process is attempted. Additionally, he must have been run on Perfect Duplicates so as to gain some stability for him in present time on the subject of looking at things. The question once posed is used over, and over, and over again. Remember that the process, which is to say the phrase, which turns on a somatic, if repeated many times, will turn it off.

Now we have special cases of preclears who seem to be having peculiar difficulties. The first of these is the preclear with the black field. To such a preclear, before anything else except R2-16 and R2-17 are run, blackness should be run: 'How does blackness seem to you now?' Obviously a thetan has always looked toward the light, the brightness, the form, the object, and has ever neglected the dark areas. This can be run objectively by having the preclear sit in a dark room and simply have him look at the darkness, which is the poorer of the methods, by test, or the auditor can have the preclear close his eyes and run the process. If an auditor must address a psychosomatic illness, it is only necessary for him to ask: 'How do your (legs, hands, eyes) seem to you now?' using one of them at a time. The lame can walk simply if asked: 'How do your legs seem to you now?' enough times.

Another version of this was developed by the staff, by combining R2-20, Problems and Solutions, with Description Processing, with these commands: 'Can you recall a problem which concerned you.?' When the preclear does, 'How did it seem to you then?' When he describes this, 'How does it seem to you now?' He is then asked for another problem, using the same commands.

DO NOT FORGET TO REMEDY HAVINGNESS ON A PRECLEAR WHEN YOU RUN ANY AS-IN-NESS PROCESS SUCH AS R2-34.

R2-35: LOCATION PROCESSES

This is an entire class of processes which depends upon the utterance of one challenging question as to location, and repeats that question over and over many times. The simplest phrasing of this is: 'Where are you now?' The auditor, no matter how maddening it may seem to the preclear, simply continues to ask this question. This question, asked for an hour, produces singular results in a preclear. But a word of warning: this question should not be asked of some preclear who is still struggling on SOP 8-C Opening Procedure, or who is definitely out of contact with present time, for the process is butchery. A very effective use of this process is contained in the phrase, 'Where is your face?' This applies very specifically to people who are exteriorized. It does not occur to them sometimes for an hour of 'Where is your face?' that they themselves have no face, and that they are still locating the body's face. They have to understand this on their own.

R2-36: SELF-DETERMINISM

As an up-to-date Scientologist knows, Self-Determinism as an ideal state went out the window with Dianetics. As long as you consider yourself intimately one thing confronting another thing which is not yourself you are not balanced in your environment. Self-Determinism is a much higher peak than that attained by Homo Sapiens previously, but, in Scientology, there is a much better concept -- that of Pan-Determinism.

There are all manner of traps and social twists to keep a person located and identified with one object. The society insists that one have a label. It should be called to the attention of anyone interested in auditing that a symbol has 'three M's', Mass, Meaning, and Mobility. As soon as one accepts entirely meaning, such as a name, and accepts intimately mass, and is made to be mobile, one is then dependent to some degree upon some orientation point in order to have space. One is inhibited in constructing space. Therefore the goal of processing in Scientology is not Self-Determinism. The goal of processing is Pan-Determinism. Spanning of Attention and other processes go in this direction.

The practicality of Pan-Determinism is immediately seen in an elementary,

if uncommon, situation where one is being robbed. If one continues to be solely one's self, the determinism of the robber is left entirely free. The way to combat a robber is, while one is being robbed, be the robber, and go away.

Here, immediately, we cross the bridge into a complete First Dynamic. A complete First Dynamic is a Pan-Determined Dynamic. All earlier processes of Dianetics and Scientology audit mainly the Third Dynamic. The subject of Pan-Determinism is a very touchy subject on a social line, for it becomes apparent immediately that bravery in the face of odds, while dramatic, is less than optimum. One should simply be the target and the odds at the same time. Here we have the whole question of randomness. Randomness comes about when one selects out and gives determinism to another entity or object. This tells you immediately that the problem of healing at a distance could be looked upon with some favor, and this would be true if the concept of Nirvana were true, where all life comes about as a fragmentation of Life. But this is no essay or determination of whether it is bad or good to heal at a distance, or to do healing of the kind which Christ did. The only thing I would care to say on the subject at this time is that if one does healing of this character simply that he should do it well and thoroughly. Such healing does not happen to make Self-Determined individuals out of those so healed, but this again is a matter of ethic and not a matter of practicality. An auditor, by applying processing skills, is actually making somebody well but he is also bringing that person up to the line toward a higher goal of Self-Determinism, and if he wishes, up to a higher goal of Pan-Determinism. There could be billions of Pan-Determining individuals, since a universe is composed of time-continua of particles in common. As long as one does not cross particles into other time-continua and so get two time-continua, one would not get a mergence of universes.

While there are many processes yet to be delineated on the subject of Self-Determinism and Pan-Determinism, one can expect people to confuse the condition of 'battered all over the

universe', 'clairvoyance', 'telepathy', and other half-felt, half-experienced things to be taken up in lieu of clear-sighted, knowing, Pan-Determinism. The first goal of the auditor is to get somebody up into the Self-Determined category, and then to remember afterwards that a person can be in a Pan-Determining category. All a thetan has to do to be Pan-Determining is simply move in back of somebody else's head. It is as simple as this. A thetan should also be able to make perfect duplicates of himself.

The recovery of Pan-Determinism is necessary to get somebody out of the rut of obsessive Self-Determinism. Beingness Processing (R2-31) directly processes obsessive Self-Determinism. Under the heading of Self-Determinism and Pan-Determinism we have, also, the subject of Control. The necessity to predict with actual force or energy the future course of an object is a refusal to have something As-is. Thus, with Control we get persistence, and that individual whose case will not change is in such a level of persistence and obsessive Self-Determinism that he must control everything.

The easiest process with which to approach this problem is contained in the command phrase: 'Indicate something which is not making space for you', and when the preclear has, 'Indicate something else which is not making space for you', and so forth until we have recovered certainty and clarity on the viewpoint of dimension. It will be discovered very rapidly that there are many people making space for the preclear, and that he is to some degree contained in the universe of each one of these people and has many particles in common with them.

R2-37: YELLING

In that man has, for a long time, used words to make space, and as any barbaric people uses noise to make itself big, it will be found that an inhibition of making noise is a major difficulty on the case of any preclear. When this process is done, the auditor should be very careful that the preclear will not be suppressed by his environment. It is more than the auditor's simply being careful of the neighbors. It is the auditor being careful of the preclear, for the preclear will be careful of the neighbors. The auditor should take the preclear to some place where the preclear would be free to yell. The auditing command is: 'Start yelling', and 'keep yelling'. The preclear can be sent off by himself to yell. If a group is being processed where its noise will not disturb others, a back and forth interchange between the auditor and the group will be found beneficial. This process is very limited and has a tendency simply to make people cheerful, but occasionally some cases are so inhibited on the making of noise that they are having difficulty with their vocal cords or with their mouths. Tooth trouble can be traced to the inhibition of making noise. Distaste for singing is equally traced to the making of noise.

This process can also be done by Creative Processing (the making of mock-ups). This is, at first glance, a body process, but it will be discovered in processing a thetan who is exteriorized that he is very afraid to make noise. In such a case the auditor should exteriorize him into some place far from the auditor and far from the body, and the auditor should use Description Processing for a while on the thetan: 'How does making noise seem to you now?' and then 'Start yelling keep on yelling'. This is an exteriorized process.

R2-38: HOLDING ANCHOR POINTS

There are innumerable drills concerning space. In that a thetan, to have vision, must be able to tolerate or make space, and in that three-dimensional space requires four points, one sees that a thetan must be able to view three separate anchor points at once to have the illusion of space.

The hypnotic effect of the body on a thetan is created by narrowing the thetan's view to two eyes, one point. The optical trick of seeing depth with two eyes is not seeing three points at once.

The remedy of the 'hypnotic trance' of the thetan which makes him believe he is a body, is the remedy of his looking through eyes at one point. The simplest and most workable remedy, which results in exteriorization most often, if then after some time, is 'holding corners'. The preclear is seated in a chair -- preclears are audited while seated or standing or walking these days, never lying down -- and is asked to close his eyes.

The commands then are: 'Close your eyes', 'Locate an upper corner of the room behind you'. When he has done so, 'Now locate the other upper corner behind you' 'All right, hold on to these two corners, and don't think'. The preclear is quietly enjoined, from time to time, to continue his attention on the corners and not to think. At the end of 15 minutes the auditor says, 'Now find the third corner behind you', (meaning a lower corner). When the auditor is assured the preclear has done this, he says, 'Now hold on to the same two you had before and the new one'. When the preclear has all three corners at once, the auditor says, 'Now hold on to those three corners and don't think'. The auditor has the preclear continue to do this for at least fifteen minutes. Then, 'Now find the fourth back corner', 'Now hold all four corners, sit back and don't think'. This is done for at least fifteen minutes. The auditor then has the preclear locate all eight corners of the room, and says, 'Now hold on to all eight corners of the room, sit back and don't think'. Occasionally and quietly checking to see that the preclear is following the command, the auditor has the preclear do this for at least fifteen minutes.

If this process is to be done longer than this total time of one hour, as indicated in the above commands, go through the above sequence of commands again as a process for another hour, do not simply have the preclear hold eight corners for another hour. Put him through two corners, three, four and eight again as given. In other words, use this sequence every time you use the process.

If I were processing a difficult preclear I would do Opening Procedure 8-C, R2-16, for at least fifteen hours, then Opening Procedure by Duplication, R2-17, for five hours, then Description Processing, R2-34, for five hours, and finally this holding corners for five hours. And if he stumbled or deteriorated on the way, I would go to R2-16 again and return to where he had stumbled and finish that off.

R2-39: CONCEIVING SOMETHING INTERESTING

Interest is the keynote of interiorization. A preclear who is difficult to exteriorize has become so deeply interested in his body that he has become involved with it.

Experimental proof of this exists. When the preclear who won't exteriorize becomes so ill that he cannot envision any future for his body, he will exteriorize. Indeed, this is the mechanism at death. The body will not be useful, has reached past interest to finality and so the thetan exteriorizes. It is remarkable with what ease. In testing I have purposely brought experimental preclears -- who were as resistive to exteriorization as any to be found -- to a point where they believed it was 'all up' with the body. They left the body then.

Interest is the consideration above the mechanical action of control. Controlling is Starting, Changing, Stopping. Deepening of interest is manifested by a passage from watching to participating. As the thetan watches several particles or bodies in motion he may become prejudiced in favor of one. He sinks from Pan-Determinism to 'Self-Determinism' where 'Self' is the one in which he became interested to the exclusion of others or counter to these others. Now, having become the object, his interest is its interest. It against its environment is a problem the thetan involves himself in solving. He may do this with something he creates or something he finds already created. His interest led him to seek to predict its actions in favor of its survival. When he fails to predict, he may enter a confusion of motion for he 'does not know' the next movement of the object. Confusion then leads to mystery. Thus the anatomy of mystery begins with interest, leads to 'Self-Determinism', leads to Prediction of starting, changing, and stopping (Control), leads to a shortening of communication lines, may become at length confusion, and end with mystery.

Interest is not bad simply because it leads to interiorization, for interiorization ceases, by test, when the thetan can no longer feel there is anything more in which to be interested. A thetan is indestructible.

There are several stages of interest. The qualities of these are represented by the Know-Sex-Mystery scale. Most notable are those used in the Chart of Human Evaluation. Interest is at first without particles, then as 'Self-Determinism' (effort to determine the future of a 'self') enters, postulates dedicated to control are used. As mis-prediction occurs, particles are employed to guide and these are of many qualities and solidities such as enthusiasm or anger, play or work. (See scales.) Inversions take place at those points where the thetan uses the 'self' to acquire, notably, eating and sex.

When the thetan becomes doubtful of the continued 'interest quality' of the self either for other selves or himself, there ensues an undecided period where he is 'not interested'. This is most marked on a social level. But it also occurs on a 'self' level. In such a condition he has not actually despaired of future interest and has not abandoned the 'self' but he declares, often to continue to be interesting, that he has given up. He only gives up when he abandons the group as a body or when he abandons the body as a thetan.

The auditor is attempting to exteriorize the preclear so that the preclear can assume a higher Pan-Determinism on the Dynamics and, usually, so that the preclear can again 'run a body' from outside. Where the auditor so fails, the preclear is under the impression that the auditor is trying to get him to abandon the body, thus a sort of grief ensues. (See R2-40.)

When interest becomes fixed we have attention. When attention becomes fixed we have an unawareness of other things than the object of fixation, and a decrease of Pan-Determinism down to 'Self-Determinism'. When this fixity of attention goes to an extreme we have a lessening of Self-Determinism to a point of Other-Determinism. As Self-Determinism lessens, we find an hypnotic state of 'total' other determinism which becomes then Self-Determinism (dramatization). We discover in this last all the mechanisms of the engram and, as well, the mechanism of shifting valences. For the preclear assumes the valence of greatest determinism (winning valence) as being the valence of greatest interest.

The process used to remedy a fixation of interest to the exclusion of self consists of broadening interest. By the broadening of, interest we do not achieve a liability which will again collapse, but a greater freedom. Broaden, do not contract, a preclear's width of interest.

The spheres of interest are the eight Dynamics. A series of concentric spheres each one larger than the last with the First Dynamic at center and the Eighth Dynamic at the extreme of any universe gives a spatial picture of interest. When a retreat or inversion occurs, the Eighth, the extreme outside sphere becomes the inverted First Dynamic, the Seventh becomes the inverted Second, the Sixth the inverted Third, the Fifth the inverted Fourth, the Fourth the inverted Fifth, the Third the inverted Sixth, the Second the inverted Seventh, the First the inverted Eighth. Then they progress, in interest, and Alter-is-ness, outward again. The inverted Eighth becomes the reinverted First, the inverted Seventh becomes the reinverted Second and so forth. Each inversion is occasioned by a falling back of interest while yet retaining contact with the area from which one fell back. Hence we get such manifestations as 'battered all over the universe', and 'my thetan is over there' and such ridiculous manifestations.

The processes of spanning attention, etc., resolve this sort of thing.

Here is the process specifically aimed at interest, for a homo sapiens badly interiorized. 'Mock up (get an imaginary picture on the most interesting body form other people would conceive.)' The preclear may not be able to get visible (to him) mock-ups, but he will mock up something, black or invisible, and this will be the most interesting body form he can conceive. He is so fixed on it he cannot do otherwise than mock it up.

Then have him mock up another by saying: 'Do it again', and another, and another. Have him pull these, visible or not, in upon him to remedy havingness by saying, 'All right, now pull those in upon you'.

Then, 'Mock up the most interesting body form you can conceive', 'And now another', 'And another', 'And another', 'Now pull those in upon you'. Now repeat the first command (other people), have him remedy havingness with what he got. Then the second phrase (his most interesting body) back and forth time after time. He will learn exactly what he conceives to be interesting and what he believes others would find interesting.

Do this for at least half an hour. Four hours would be better. His ability to mock up, his acceptance levels, will change.

The second part of the process consists of a more objective (and better) process. As the preclear is a Man we can suppose that he is interested in his species, but we may have learned in part one of this process that he is more interested in other forms than Man. The auditor assumes that a thetan interiorized into a man would be interested in men or, with an earlier clue, substitutes another form.

The auditing command is, 'What other person could you be interested in?' 'And now another one', 'And another one', until a broad array of people are disclosed. Getting the preclear to pretend he is various objects with various viewpoints also resolves this.

A fundamental way of looking at interest is to qualify its two major divisions as INTERESTED and INTERESTING.

A thetan in good condition is interested. When he has become a 'self' he feels he must have energy from exterior sources and so he becomes interesting. Interested could be said to be an outflow. Interesting could be said to be an inflow. Being interested yet leaves one considerable

freedom. Being interesting pulls in particles upon one and so restricts him. An interested thetan is the solver of problems. An interesting self is a problem.

More broadly, a thetan is interested in problems. MEST is a problem. The passage from interested to interesting has many phases. When one is not longer interested, but is only interesting, he has lost his principle quality as a thetan -- freedom, and the ability to change at will.

Having the preclear mock up interesting bodies, forms, machines, and universes discharges much of his interiorized condition and fixation. Then having him look at actual people and objects and 'get the idea' of how it would be to be them and move them about brings him again towards Pan-Determinism.

NEXT TO THE OPENING PROCEDURES THIS IS THE MOST IMPORTANT PROCESS IN INTENSIVE PROCEDURE.

'Let's find something in which you could be interested.' And when the preclear does, 'Find some more things in which you could be interested'. And when he has, 'Some more things', and so on, with these commands for at least an hour.

Do not use 'interesting', use only 'interested' -- in other words, process the preclear towards theta (interested), not towards MEST (interesting).

You can see that the preclear is 'As-ising' situations, that he is also broadening attention and unfixing from the body. The only thing you can do wrong with this process is not to run it long enough.

The process works subjectively but it is well, if the preclear reaches an impasse, to have him find things in the present time environment in which he can be interested.

Without directing the preclear's attention to specific things, just by running the commands, 'some things in which you could be interested', exteriorization takes place.

The factors which make interest a very important process is the fact that interest is the entrance point to havingness. Heretofore we have used attention, but have used it very sparingly in processing. The reason for this is that attention is into the field of mechanics. It has, however, become evident that interest is more consideration than attention, and is therefore attention with intention. Interest, therefore, could be defined as this -attention with an intention to give or attract attention. If you will have the preclear look around his environment and point out things which have the intention to alter things, and other things which have the attention to keep them from altering things, we will discover that we are running time. The intention to alter and the intention to keep things from altering are together the two factors of change. Interest added to this gives us the determinism of attention. The auditing commands for this would be: 'Look around the environment and find some things which have the intention of altering things', 'Now look at them again and get interested in them' and so forth. 'took around the environment now and find some things which have the intention to keep things from altering. Now get interested in these items one after another', thus directing the preclear's attention and inviting him to mock up interest. It will be readily discovered that he will shift on the time track, and that he will consider himself detached from time.

The keynote of a preclear who is having a difficult time is that he has no interest in outside things. One who is having a less difficult time would be interested only in things in his immediate vicinity. A preclear who is fairly well off has an interest in altering things, or in keeping them from altering. But unless interest can be given on a postulated basis it is obsessive. The only reason a preclear keeps a psychosomatic illness around is that a great deal of residual interest has accumulated in that.

A preclear will have discovered roles up and down the time track which interested people, and he will be trying to occupy these roles in order to increase his own havingness. If you were to ask a preclear 'What were your parents interested in?' he would eventually recover from the very things he is suffering from. Quite normally the whole career of a child is established by the things in which his mother is interested, and the child will try to be those things in which his mother was interested if his mother's attention and interest in him has been slight. Here is the complete backbone of orientation points and symbols. If the orientation point is interested, the symbols are interesting. When one can no longer be an orientation point, he of course becomes a symbol and tries to get interest from the orientation point. The basic orientation points in a family are the parents or grandparents and the symbol is the child.

Usually the preclear has come to the auditor because he feels that the auditor will at least be interested in him. And when the auditor's interest in the preclear is not demonstrated in such ways as not keeping appointments or in failing to let the preclear communicate, the preclear will worsen in the process. However, such an omission can be remedied, although it shouldn't have happened in the first place, by running interest processing. A much later process, OTHER PEOPLE, can be run by picking out in the preclear some obvious difficulty, such as a bad eye or a bad leg and have him get interested in the bad eyes and bad legs which he postulates at people in his vicinity. This puts the preclear into the role of an orientation point and takes him out of the role of a symbol by making him the one who is interested and makes other people in his vicinity the ones who are interesting.

A great many significances can of course be entered into this process. One can have the preclear be interested in things under attack, interested in things not under attack, Picking them out one after another in the environment. The auditor can have the preclear be interested in the weakness of MEST, the forgetfulness of MEST, the non-determinism of MEST, and other factors.

The Mystery to Know scale with the addition of Inhibited, Enforced, and Desired, can be run adding the factor of interest with the following commands: 'Pick out some things which are inhibiting mystery', 'Now one after the other, get interested in them', 'Now pick out some things which are enforcing mystery', 'Now get interested in them one after the other', 'Now pick out some things which desire mystery', 'Now get interested in them'. This can be run straight on through the Mystery to Know Scale which is: Mystery, Sex, Eatingness, Symbols, Thinkingness, Effort, Emotion, Lookingness, and Knowingness, to give it in its most complete form.

R2-40: CONCEIVING A STATIC THIS IS A HEAVY PROCESS. IT IS NOT RECOMMENDED FOR CASES HAVING ANY REAL DIFFICULTY.

Here we use the discovery and principle of Ultimate Truth (see Summary of Scientology).

If one has no prior postulate and makes a postulate, then that postulate cannot be a lie. If one then makes a denying postulate second to this primary postulate, he then has accomplished a lie.

A prime postulate on any subject cannot be a lie. A second postulate can be a lie. In such a case, the second postulate permits the prime postulate to exist. But in such a case it is the second postulate, the lie, which persists. All second postulates depend on prime postulates for their force.

1. All evil depends upon a prime postulate of goodness if the evil is to persist.
 2. The Satanists claim that Satan is God after He made the universe.
 3. A hatred of a person depends for its only strength upon a love for that person prior to the hatred. The hatred persists but only has strength from the love.
 4. A man considers himself to be worthless. This state of mind, persisting, denotes that he must have had a considerable opinion of himself before he felt worthless.
- But beware of thinking that 'all is good' or 'all is evil'. The force comes from prime postulate, the state persisting from the second postulate.

EXAMPLE:

1. A doctor considers himself a good, charitable man, a wholly unselfish healer. On examination we see the second postulate persists, so his goodness must be the second postulate. It must have force from a prime postulate it denies and so we find this doctor entered medicine because it had more chance of easy sex. Then he denied this to himself and argued he did it from humanity. His pious mien ceases to persist and he is freed from this pose by straight-wiring the prime postulate.

RULE:

Always straight-wire out a condition contradicting the condition which exists.

EXAMPLE:

1. We have a preclear with bad legs. We see that bad legs are persisting. Thus we know that the forceful postulate is prior and opposite so we straight-wire out good legs.
2. A man is sick because of a jilt in love. We straight-wire out not the jilt, but the times he loved the girl.
3. Our interiorized preclear is stuck, won't exteriorize. We straight-wire the time he was free and so discharge the stuck (the second) postulate, and thus exteriorize him.

RULE:

That which is closer to an ultimate truth (the Static) gives power to that which contradicts it.

The process, and a vicious one it is, contains only the command, repeated over and over, 'Conceive a thetan'.

Caution: this is a long process. The auditor may have to remedy the havingness of the preclear. (Do not forget SOP 8-C Opening Procedure if the preclear bogs.)

The 'top buttons' of the Chart of Attitudes (see Scientology 8-8008) are the main qualities of a Static. A Static has no quantity: it does have quality and consideration.

R2-41: VIA VIA

VIA VIA is the curse word for existence. VIA means a relay point in a communication line. To talk via a body, to get energy via eating alike are communication by-routes.

We are trying to string, in a preclear, a straight line from Cause to Effect. The reasons we cannot are all via's or complete stops. Enough vias make a stop. A stop is made out of vias.

There is no real reason one should go into the past to straighten the present. There is no time but postulated time. Thus it is all present. Why not, then, postulate the desired condition in the present?

It is painful to do so, for the moment one does he tends to slip from the ideal to the first lie. One slips because the first lie was TIME. Time persists because it is a lie deriving its force from the absence of time in the static. Then forthright postulation of the static at first restimulates time. When the time postulate restimulates the literal blackness of lies, somatics, etc. come into view. All one has to do is endure these and repostulate the static. The reason earlier efforts along this line failed lay in their restimulating the second postulate each time, the lie, and then, not repostulating the static, mooning over the lie or the sign.

Recent efforts, such as Coue-ism, did not postulate the static, but validated time. ('Every day in every way I am getting better and better.') Don't postulate to become beautiful, postulate current beauty. ('I am beautiful.') Thus postulating the static at first swings one into Time and the second postulate, then finally the static itself occurs.

Remember: a static has no mass, wave-length, energy, location, or time. But it can consider, and it has qualities. Those qualities are its basic definition plus the top buttons of the Chart of Attitudes, plus beauty.

A solution would be something which solves the problem. Thus the As-is-ness is the problem is the solution for it would vanish the problem. Thus, in Scientology we have attained an ultimate solution -- the static, and an ultimate truth -- the static. To work this clearly, the auditor commands: 'Get the idea of having infinite leisure'. When the preclear does, 'Now get it again', 'Get it again and better', 'Again' and so forth, regardless of what somatics or locks appear. He does this for at least fifteen minutes. Then, 'Now get the idea of complete freedom'. 'Again.' 'Again', for at least fifteen minutes. Then, 'Get the idea of having total ability', for at least half an hour.

Now use this command but include in it the Chart of Attitudes and beauty: 'Assume complete ...' 'Again', 'Assume complete ... again', 'Again'.

The Chart of Attitude buttons are: SURVIVAL, RIGHTNESS, RESPONSIBILITY, OWNERSHIP, MANKIND, DURATION, MOTION (as source), TRUTH, FAITH, KNOWINGNESS, CAUSE, BEINGNESS, and BEAUTY. Do not do these briefly.

LET THE PRECLEAR EXPLAIN HOW THESE SEEM TO HIM BUT DON'T MIX THIS WITH DESCRIPTION PROCESSING.

R2-42, R2-43 AND R2-44 ARE A PROCESSING GROUP

R2-42: PAN-DETERMINISM

Pan-Determinism is a new idea in Scientology. Its Validity is demonstrated by the fact that it is a 'five-star' process. Pan-Determinism is the ability to regulate the considerations of two or more identities, whether or not opposed. Previously our goal was the relatively limited goal of Self-Determinism. It was for some time realized that this did not embrace the total concept since Self-Determinism expresses in the main the First Dynamic. But the moment one begins to consider the fact that the thetan is controlling the body, one sees that he is not dealing with a person or identity with the First Dynamic but is dealing with the Third Dynamic. Thus we have Self-Determinism as a misnomer. We see that survival is as successful as determinism is stretched across the environment. In other words, up the Dynamics. Certainly where man is concerned it is never a problem, then, of Self-Determinism, it is a problem of Pan-Determinism, for here we have in one individual several items, each distinct, under control. When a thetan came into full control of himself and his activities we would have, and only then have, Self-Determinism. But a thetan, in his playing of the game, is attempting Pan-Determinism, and is assuming Self-Determinism. His first goal might be said to be Pan-Determinism. Under Pan-Determinism we have of course the problem of control. The component parts of control are start, change and stop. Thus a person controlling something is trying to start, change and stop that thing. Where he loses his ability to start and stop it he only retains his ability to change it, and thus we have a low-level case trying desperately to change, being unable to change, and very certainly being unable completely to start and stop. His last effort is to change.

Any time you are addressing a preclear you are addressing something which is attempting Pan-Determinism. Here is a thetan trying to control a body, an engram bank, and the various symbiotes of the body, such as its possessions, vehicles, and servicing items.

In Pan-Determinism we are not concerned with either bad or good. We are only concerned with the fact that a thetan is trying to control many identities, some of them opposed to others, and that his inabilities in the past to control certain beingnesses have brought him to a level of belief where he does not feel that he can control anything, and as a result we discover him unable to because, thus unable to find himself or be at the source-end of a communication line. Pan-Determinism is the direct reason why one becomes 'battered all over the universe'.

This effort toward Pan-Determinism is the monitoring point in all processing. The discovery of Pan-Determinism was the difference between success and failure in many cases.

Under the heading of Pan-Determinism we discover such things as owning, protecting, and hiding bodies. One declares the ownership of something so that he will be given the right to control it. One protects something because he considers that something else is trying to control it. One hides something because he is afraid something else may appear to control it.

An enormous variety of processes stem from Pan-Determinism. Here any and all of the training of an auditor can exert itself. This is the common denominator and the one fast line through to the upper ranges of the tone scale. There is a second line: that which is described in R2-43, FIGHTING. Pan-Determinism is what one is fighting for. It is the 'reason why' behind existence.

The auditing commands for the running of Pan-Determinism are as follows: 'What do you feel you could control', and 'some more things', and 'some more things'.

One runs this so as to improve the considerations of the preclear. He can fully expect the preclear to drop into very deep apathy on occasion, but the process carried forward determinedly by the auditor and not 'patty-caked' or left off simply because the preclear is having difficulty, will produce, all by itself, a considerable resurgence of case. R2-43 takes care of most of the factors which are encountered as the reason why one does not feel one can determine the course of something.

R2-43: FIGHTING

Basically this Universe is a game. The MEST universe pretends to be a universe of peace. In order to become a universe of peace it is necessary to stop everything from fighting. In order to have a game it is necessary to have opponents. If one has opponents there must be fighting. This universe is organized to immobilize a thetan.

So eager is a thetan to have a game that he will adopt to himself all manner of liabilities in order to have a parity with his opponents. One cannot have a game with people who are too inferior in strength or cleverness. Thus one reduces his own strength and cleverness in order to have a game.

As given in R2-42, PAN-DETERMINISM, one uses as his reason why he is fighting the necessity of controlling something else. The effort to control is the 'reason why' for fighting. Fighting itself is the game.

R2-42 and R2-43 are very close together in workability and between them worked one against the other, back and forth, will lift the preclear up through the barriers of force. It could be said that a preclear stops fighting when he considers that other forces or ideas or emotions are too much for him. As given in the Philadelphia lecture series, one has to go up through force before one can cease to use force. If one does not rise superior to force, then one is the subject and slave of force.

Peace is only to be found at the high levels of the tone scale. Any effort to have peace after one has become the victim of force and is afraid of force simply involves further struggle. There is no peace below the level where one cannot fight. We are not here concerned with moral values, we are only concerned with the workability of processes, and whereas it might be said of Scientology that it is attempting to sell fighting and war, this would only be said by those who were themselves badly defeated and afraid of force.

Here we have as well, automaticity and randomness. In order to have more attention to control other things, one sets up the things he is already controlling as automatic. Having done so he has given to them a determinism of their own, and having so given them their own determinism they can, if he ceases thus to control them, attack him. Thus we have the machines of a thetan. These machines work only so long as they are in control of the individual, and then begin to work against the individual. Thus it is with the remainder of the universe. One only fights those things which he has selected out as not under his control. Any thing which is not under an individual's control but which has taken the individual's attention is likely to be an identity used to fight.

The motto of this universe is 'We must have a game'. Games consist of opponents, and reasons to have a game, and things to have a game about. Reasons to have a game are summed up under Pan-Determinism. Things to have a game about are summed up under Havingness.

The game is the thing. The wins and losses are not the thing. One loses every time one wins, for he then has no game. Any cessation will bring about a change in the status of an individual for he will then impose upon himself other penalties and liabilities and impose reasons why upon others so as to create a new game.

Although it is antipathetic to most preclears, as you will discover by processing them, a game is no more and no less than fighting an opposition.

One falls out of having a game when one begins to believe that the forces being used against him, or the ideas being used against him, or the emotions being used against him, are too great to oppose. Once he has this idea he can then be subjected to other forces.

As all forces, emotions, and efforts in general can be categorized under Considerations to have a consideration about a force has greater actuality than having the force itself. Changing one's mind about force is senior to changing force.

It must be realized that an individual who has drawn away from force has also drawn away from the material of which his engram bank is made. People on whom engrams collapse are people who have become afraid of force. This is best approached, not by using work or other factors, but by directly approaching the problem of games and running fighting only.

It will be discovered that most individuals are involved with fighting themselves. After all, an individual is a Third, not a First Dynamic. The body, the engram bank, the thetan, his machines form four items which can be at war, one with another, and when an individual has an insufficiency of fighting out in his environment he will begin to fight with himself. The condition of most preclears who come to an auditor is this. One of the ways to handle this is with the auditing command: 'Point out some things in the environment which are fighting themselves'. This run for an hour or two out where the preclear can actually see things and point them out will key out most of the engram bank with which he is in conflict. He will recognize fully and clearly very shortly after he has started on this process that he is fighting himself.

In view of the fact that there is a scarcity of fighting imposed by police, mores, and the motto Peace! Peace! Peace! of this universe, you will discover that you have to start, and run for a very long time, the factor of wasting. Thus, the first entrance to this problem could be wasting fighting. One would do this in brackets with the following auditing commands: 'Waste some fighting', and when the comm-lag is flat on this, 'Have somebody else waste fighting', 'Waste some fighting', 'Have somebody else waste fighting'. It will be discovered that the preclear will do this for many hours of processing, all with a betterment of his case, before he actually gets up to the point where he can touch the next level of this process, which is accepting fighting. However, one does not at this stage run accepting fighting. The next part of this process is done with the following auditing commands: 'Waste some opponents', 'Have somebody else waste some opponents'.

After the preclear can handle this without any appreciable comm-lag, one then goes to the next part of this process: 'Waste some liabilities', 'Have somebody else waste some liabilities', 'Waste some liabilities', 'Have somebody else waste some liabilities'. And this, too, will have to be run for a long time until the individual has flattened his communication lag.

Having handled the subject of fighting directly, opponents and liabilities, one can then go on to accepting, but one does this only when the communication lag on wasting of fighting, opponents, and liabilities has been done. One uses accepting in this case by remedying Havingness. 'Mock up something you could fight', 'Pull it into you', 'Mock up something else you could fight', 'Pull it into you'. Even though the mock-up is invisible or black it is still done. If you are having the individual point out things he could fight in the environment itself, do not be surprised at this stage if he simply pulls out of his body as a thetan and occupies the area of that which he thinks he could fight. One follows this with: 'Mock up an opponent', 'Pull it into you', 'Mock up another opponent', 'Pull it into you'. One follows this with: 'Mock up a liability', 'Pull it into you', 'Mock up another liability', 'Pull it into you'.

You should run fighting in conjunction with Pan-Determinism and the process 'Must and Must Not Happen'. In other words do not run R2-43 without also running interspersed with it R2-42 and R2-44. These three processes work together. Any time a communication lag is fairly flat on any one of these, you should shift to either of the other two. Remember, R2-42, R2-43, and R2-44 work together interspersed, and make, themselves, a process. If you have a preclear out in the open you can have him point out things in the environment that he could fight. Just as, if you have him out in the open you can have him point out things he wouldn't mind controlling, and in the case of R2-44, things that he wouldn't mind having happen, or not happen, again.

'What would it be safe to fight', until the comm-lag is flat. 'What would others find it safe to fight', 'What would it be safe to fight', 'What would others find it safe to fight', in a continuation of Fighting as a process. 'What thoughts would it be safe for you to fight', 'What thoughts would it be safe for others to fight', run back and forth many times until the comm-lag

is flat. 'What emotions would it be safe for you to fight', 'What emotions would it be safe for others to fight', run back and forth until the comm-lag is flat. 'What efforts would it be safe to fight', 'What efforts would others consider it safe to fight', run back and forth until the comm-lag is flat. 'What imaginings would it be safe to fight', 'What imaginings would others consider it safe to fight. 'Indicate some things which are fighting.' 'Spot all the spots where you had to stop fighting them.' 'Spot all the spots where you won', is excellent since either a win or a lose is a 'stop fighting' and therefore a loss of opponents. You will find many preclears hung up in past moments of victory. This is only because they lost their opponents at that moment, and the loss stuck them on the track by bringing about motionlessness. 'What would you need to fight things', 'What would others need to fight things'.

If you have the preclear out in the open where there are lots of people, a very good method of processing, have him place into these people unknown to them the preclear's own attitudes about fighting. Take one attitude and have him place it in several people, another of the preclear's attitudes about fighting and have him place it in many more people, and you will discover considerable changes take place in the preclear.

'What mechanisms could you use to continue fighting', is another fine process. 'What changes could you make and still fight', is yet another interesting process. 'Describe some fighting that would interest you', is another facet of this process. The key process to alter behavior is, 'Invent some things you could fight', 'Invent some things that could fight you'.

R2-44: MUST AND MUST NOT HAPPEN

A preclear is stuck on the track where motionlessness occurs. One of the reasons he has used to fight was to make something happen or to keep something from happening. Thus it is of interest in the case to undo these stuck points in the preclear. There are many ways these could be undone, but there is apparently only one way that is actually effective. This is done with the following commands. 'Tell me some things you wouldn't want to have happen again', 'Tell me some things you would like to have happen again'. The preclear will get, in accordance with these commands, various recalls, incidents, facsimiles, or environmental situations, or future fears or hopes, and may be steered more directly into these. I first discovered this process by running concepts, but in the running of concepts it has a very limited workability. By pointing out live or imaginary situations great workability is achieved. The auditor must be very careful to do this process long enough so as not to leave the preclear hung up in an incident.

This is the basic key of time.

R2-45: AN ENORMOUSLY EFFECTIVE PROCESS FOR EXTERIORIZATION BUT ITS USE IS FROWNE UPON BY THIS SOCIETY AT THIS TIME

R2-46, R2-47 AND R2-48 ARE A PROCESSING GROUP

R2-46: OTHER PEOPLE

Here is one of the more curious and one of the more swiftly workable processes. An auditor may find himself reluctant to use this process, but experiment has demonstrated that it did not bring harm to other people. This is one of the fastest ways of getting rid of a psychosomatic known in Scientology. It is practically the only method known to get rid of the Unknowns in the bank. It is a direct environmental process utilizing actual, visible, other people. To run this process one must be in a heavily populated area where people are on the street, walking about, sitting down or otherwise directly visible to the preclear. The process is not run in mock-ups. This process has been known to get rid of heavy chronic somatics in a few minutes.

The auditor takes the preclear into a railroad station or a park, or has him sit in a car on a heavily used street and says to him 'What do you think is wrong with you?' He has the preclear name some specific thing, and having named it, the auditor then says 'All right, pick out one of these people, and have that thing wrong with that person', and when the preclear has done so, 'Now pick out another person and have this same thing wrong with that person'. The auditor continues to have the preclear place into these people this thing which is wrong With the preclear only so long as the item is wrong with the preclear, for this is a very rapid process and a very rapid change takes place.

Any concept or idea of any kind can be utilized in this process. The auditor can pick out obvious things the preclear has, and have the preclear find these things wrong with other people around.

This also works if the auditor has the preclear find each person, one after the other which he actually sees during the process, perfect. In other words, the auditor can say, 'Postulate perfection into that person', 'Now postulate perfection into that one'. This is mixing OTHER PEOPLE with CONCEIVING A STATIC, but for that matter almost any process in Scientology can be employed in this fashion.

One of the very effective ways of using this process, OTHER PEOPLE, is to have the preclear place into them 'lostness', or stupidity, inability to locate themselves, and, in short, all the factors making up Unknown as covered in R2-52.

Blackness, inability to get mock-ups, and other Scientological liabilities can also be placed into people in this fashion.

It is interesting to note that the preclear, being incapable along the lines of energy and postulates only very rarely gets through to anybody with this postulation, for the preclear is too 'weak' to cause such effects. However, he should do this with great sincerity and with full belief that he is doing it. After a preclear has exteriorized, it is interesting to note that he still does not have this same effect upon these people. But postulating such items actually does bring about the condition.

R2-47: BODY DIFFERENTIATION

'This process is done in the same manner as R2-46 R2-46, R2-47, and R2-48 being a group of processes.

One has the preclear note the differences between himself and the bodies of the people he can see in his immediate environment. This process is done in a park or a railroad station or on the street, seated in a car. The auditing command is: 'Point out a difference between that person's body and yours'. This command is used over and over.

R2-48: SEPARATENESS

This is a key process attacking individuation. In his effort to control, a thetan spreads himself further and further from the universe, and in his failures to control, withdraws from things he has attempted to control but leaves himself connected with them in terms of 'dead energy'. Thus we get the manifestation 'battered all over the universe'.

This was the process which told me that we are not natively sprung from one 'common body of theta'. If you run Separateness, accentuating the difference in unity of a thetan from other thetans and things and spaces, he continues to gain in tone. If you run this process in reverse, how he is the same as, or is connected to various items, he continues to dwindle in tone. By handling this latter process one can press a thetan down into the rock-bottom state of aberration. We have long known that differentiation was the keynote of sanity, and that

identification was the basis of aberration. This fact is utilized in processing by running separateness.

It can be concluded that the thetan is an individual separate from every other thetan and that he has never been part of any other thetan. There are many 'phony' incidents implanted on the track whereby an individual is made to feel that he is a result of explosion having occurred to a larger body. He is also made to feel that he was at one time 'whole' and is now only a splinter of himself. This is only an effort to reduce him. He has always been himself, he will always be himself, down to a time when he is entirely identified with this universe, at which time he would no longer be himself simply because he would no longer be conscious.

It seems that the only aberration can occur by enforcing Basic Truth. Here we discover that the individual, being separate, is then forced to be separate, and so develops a complex of 'the only one' and tries to fend off the rest of the universe from himself and finally merges with it with his impossibility of fending it off. All you have to do is accentuate truth and force it home as another determinism in order to create an aberration. There is some basic truth, then, in whatever is wrong with a thetan, and of course the basic wrongness is that he is not a static.

Separateness is best run by having the preclear out in an open place inhabited by a great many people, as in R2-46 and R2-47.

The auditing command is: 'Point out some things from which you are separate', 'Point out some more things from which you are separate', 'Point out some more things, from which you are separate'.

You might believe that there might be some value in having him point out some things from which he is not separate in order to 'As-is' his connections to things. However, if you started this process on having him find things from which he is not separate, you will very quickly discover that your preclear is deteriorating in tone and that he does not resurge. This is a one-direction process, having him point out things from which he is separate.

It should occur to you that, as we learn in R2-43, a thetan desires lots of opponents. Of course the more separateness that he discovers the more opponents he can have, and the more fighting he can see before him. This makes him happy. By conceiving himself identified with an enormous number of things, he is, of course, rendered very scarce in opponents, and this makes him unhappy, and makes him choose out only things which he could then fight without being challenged, such as his engram bank or his body or his own machinery.

The basic reason a thetan conceives a great many remote viewpoints is to have a separateness from himself. A thetan can actually be separate from himself as a remote viewpoint and choose out himself, a thetan, as his opponent. Many a person who is thoroughly interiorized is being the body so he can fight himself, a thetan. This is also inverted. When I was making some of these basic discoveries I was puzzled to encounter the fact that in many preclears, the preclear was entirely sold on the fact that he was attacking a demon which was attacking his body. He would analytically conceive himself to be a thetan, but actually was being the body, and as the body and a remote viewpoint in it, was attacking a theta body which actually contained himself a thetan. This complexity came about when he was not even permitted to fight the body.

As the totality of mis-emotion and weakness is exhibited solely when a thetan lacks opponents and feels he cannot have a fight, you will discover, in running separateness, that many mis-emotions, weaknesses, and so forth rise to the surface.

This is a relatively long process by itself, but it should be done in conjunction with R2-46 and R2-47. Remember that the preclear should be absolutely certain that he is separate from the item. Do not take any maybes.

R2-49: DEI SCALE

The scale of Desire-Enforce-Inhibit is repeated over and over in that order as we go down the tone scale, and is therefore repeated in reverse order as we find a preclear rising. In running almost any process it will be discovered that what the preclear is currently desiring will shortly be inhibited by the preclear, and what is being inhibited will shortly be enforced by the preclear, and what is being enforced by the preclear will shortly be desired by the preclear, and this in turn will again be inhibited by the preclear, and so forth.

Step IV of SOP 8 of Expanded GITA gives a great many items which are useful in raising tone. The number of items which produce the greatest effect when used as prescribed in Step IV of SOP 8, given in this book, follow: FIGHTING, SELF-DETERMINISM, ENGRAMS, HEALTH, SANITY, PEACE, EVIL, PRESENT TIME, IMAGINATION, and CONTROL.

Using any one of the above fitted into the place of the blank in those auditing commands, one runs the DEI Scale in this fashion: 'Waste some fighting', 'Have somebody else waste some fighting'. This is done until the communication lag is flat. Then: 'Mock up and pull in some fighting'. 'Waste some ...', 'Have somebody else waste some ...', and so forth until the communication lag has been levelled. 'Mock up and pull in some ...', 'Mock up and pull in some ...', 'Mock up and pull in some ...', again until the preclear has no communication lag.

'Desire some ...', 'Have somebody else desire some ...'. The DEI Scale, then, is approximated in processing by Waste, for Inhibit Accept, for Enforce and simply the idea for Desire.

There are many other factors which could be utilized in this process, and which have been utilized in this process, such as problems, healthy bodies, and so forth, but these are not as effective as the above-given list, which is the choice list of all the other factors which could be utilized.

Another list can be used with considerable effectiveness, and this is the Know to Mystery scale. One would then have the preclear waste, accept, and desire, in that order, the following items in this order: MYSTERIES, PROBLEMS, SEX, EATING, SYMBOLS, EFFORT, EMOTION, VISION, HEARING, and THOUGHT.

It is interesting to note that a person who has sonic shut-off is hanging on to silence. One can have him waste, accept, and desire sonic and vision, pain and unconsciousness.

By running pain with the DEI scale one will discover that the thetan actually desires pain: any sensation is better than no sensation.

R2-50: CHANGING MINDS

The basic process of a thetan is simply getting him to change his mind. Most thetans fall below the level of mechanics. They have to be brought up to a point where they are not being handled by mechanics before they can simply change their considerations. If changing minds worked on any thetan it would then be the only process in Scientology, but it does not work on thetans who are interiorized since they are being other things than themselves, and when they start to change their minds they are simply changing something else.

When you have a thetan exteriorized, all you have to do is ask him to change his mind, and, unless he is still very badly burdened by mechanical considerations with which he has so thoroughly agreed that he cannot immediately change his mind, he will do so.

This process can be used on a non-exteriorized thetan, however, and on those who are uneasily exteriorized, by having them stand in one place with an idea that they have to appear there, and then change their minds, and disappear there. Or simply have them stand in one place until they change their mind, and then go to another place and change their mind, and go to another place and change their mind. This is done, actually, by moving the body around, as most auditing these days is done.

The auditing commands for this would be 'Walk over to this spot' (indicating a spot to the preclear), 'Now decide you have to appear there', 'Now change your mind and decide you have to disappear there', 'Now change your mind and decide you have to appear there', and so on.

This can also be worked into opening procedures by having a preclear select a spot, then change his mind about the spot, select another spot, change his mind about that spot and select another spot, until he knows that he, himself, is changing his mind.

When exteriorized, the thetan can change his mind very easily on any subject simply when told to do so. Very often he does not realize that he can change the factors of his life around simply by changing his mind, and so has to be asked to do so by the auditor.

A note of warning: this does not work on interiorized preclears with any great value.

R2-51: RISING SCALE PROCESSING

This is one of the older processes of Scientology. It consists of the individual being asked to get whatever idea he can about the buttons of the chart of attitudes and then change his ideas upwards. Using this process, the entire endocrine system of the preclear has been altered for the better.

The auditing commands would be dependent upon the chart of attitudes. The buttons of the chart of attitudes are: DEAD - SURVIVE, NOBODY - EVERYONE, DISTRUST - FAITH, LOSE - WIN, RIGHT - WRONG, NEVER - ALWAYS, I KNOW NOT - I KNOW, STOP - START, NO RESPONSIBILITY - FULLY RESPONSIBLE, STOPPED - MOTION SOURCE, FULL EFFECT - CAUSE, IDENTIFICATION - DIFFERENCE, OWNS NOTHING - OWNS ALL, HALLUCINATION - TRUTH, I AM NOT - I AM, HAD - BEING.

The auditing commands involved in this process follow: 'How close can you come to trusting everybody? Now do you have that idea?' and when the preclear has: 'All right, shift that idea as high as you can toward trust'. Do this many times with the preclear on one item of the list before going on to the next.

R2-52: UNKNOWNNS

One of the liabilities of Dianetics was that it took all the data off the bank and left on the bank effort and unknown substances. Efforts and unknowns were not as-ised.

One of the basic auditing commands of this is: 'Give me some unknown incidents'. The preclear, as he tries to do so, will immediately find known incidents turning up rapidly. He is As-ising unknownness. One of the best ways of using unknownness is with a group of separatenesses where the preclear is outside looking at other people. Have him get how much is unknown to each one of these people with the following auditing command: 'Now find a person and put some unknowingness into him', 'Now find another person and put some unknowingness into him'.

A variation of this is: 'Put unknownness of location into a person', 'Now another person', and so on. The reason why location is used is because it is part of the, definition of stupidity. One can also use time, with the following command: 'Put some unknown times into that person', 'Now put some unknown times into that person', and so on.

Remember to always run the same auditing command over, and over, and over, until a change has ceased to occur in the preclear.

R2-53: REPAIR. A FOUR-STAR PROCESS

It seems rather obvious that we should handle 'repair' as a process since that is what we have been doing in Dianetics and Scientology. If a preclear can't himself repair he gets some help, a doctor, a minister. If the auditor can't repair, he won't run processes to make the preclear well. Granting of beingness has 'repair' as a major part of its sphere.

The cycle of action of the MEST universe for this process could be: CREATE - REPAIR (CHANGE) - DETERIORATE (CHANGE) - DESTROY.

The auditing commands for this process are: 'What wouldn't you mind repairing?' 'What wouldn't you mind letting others repair?' 'What would you mind repairing?' 'What would you mind others repairing?' 'What don't you know how to repair?' 'What don't others know how to repair?'

The above is the main process and should be heavily stressed. The comm-lags are very long and the process must not be briefly run. Finish one command, reducing all lag by many times using it, get the question answered every time. Use for hours.

Other indicated questions are run by substituting the following for 'repair' in the above question form: CREATE, (REPAIR) CHANGE, DETERIORATE, DESTROY, or START, (CHANGE) and STOP, the factors of control.

A specific group of processes which have been discovered to do a great deal for preclears consist of R2-53 REPAIR, followed by R2-44 MUST AND MUST NOT HAPPEN, followed by R2-43 FIGHTING, followed by R2-42 PAN-DETERMINISM. This series, run with the auditing commands as given is enormously effective. A complete audit of a preclear in very bad condition could follow this plan: R2-16 OPENING PROCEDURE OF 8-C for several hours R2-17 OPENING PROCEDURE BY DUPLICATION for several hours R2-20 USE OF PROBLEMS AND SOLUTIONS, using the commands given in the last paragraph of that section then, R2-53 REPAIR R2-44 MUST AND MUST NOT HAPPEN R2-43 FIGHTING R2-42 PAN-DETERMINISM R2-39 INTEREST, as given in its last paragraphs R2-54 FLOWS R2-55 IMPORTANCE. Used in this exact order, continuous and very wonderful changes can be made to occur in a preclear even though he began the process as entirely psychotic. Many such routes could be designed, but this particular one happens to have been tested in this order on preclears, and found workable.

R2-54: FLOWS

The processing of flows has several times been tested in Scientology, and each time it has been discovered that there were many preclears who could not handle them with the processes which have already been advanced. The static and the object were, therefore, concentrated upon and flows were avoided. However, R2-54 overcomes this past difficulty. This is a very splendid way to make a preclear change his considerations, but it should be run long enough to take away the somatics which it turns on, for the somatics which R2-54 turns on can be severe.

The process is extremely simple to run, but must, like all other processes here, be run exactly as given to produce the desired result. It consists of having the preclear point out things which inhibit, enforce, and desire flows.

The auditing commands would be as follows: 'Look around you and point out some things, one after the other, which inhibit flows', 'Now point out some more', 'Now point out some more', then 'Look around you and point out some things which enforce flows', 'Now point out some more', 'Now point out some more', 'Now look around you and indicate some things which desire flows', 'Now point out some more', 'Now point out some more', 'Now look around you and point out some things which inhibit flows', 'Now point out some more', 'Now point out some more', and so on.

If the preclear is indicating people, he will discover with some rapidity that people are enforcing and inhibiting flows. He will discover also that speech is a flow. He will discover also that the universe is built of these flows. The preclear should be permitted to discover these things for himself. He will find, for instance, that blackness forces a flow.

If a preclear wishes to know what a flow is, point out to him that a light bulb is flowing light waves out into the room, and that an object is reflecting them.

This process is, of course, worked best as part of the group where the preclear is taken outside and made to point out people and actually belongs with that group. This is definitely a four-star process.

R2-55: IMPORTANCE. A FIVE-STAR PROCESS

It might be a very bad thing to run this process immediately and at once upon a preclear, and an auditor should never begin with such a process on a case. Auditors, today, begin only with Opening procedure of 8-C and follow that with Opening Procedure by Duplication, and ordinarily follow that with Problems and Solutions, and only then go off into processes as difficult as this process.

Although this is a difficult process it is not difficult to do. It is difficult because it produces such rapid change upon the preclear that he is liable to be left in some state where he considers all things unimportant and is made by the process to be out of balance with the universe, and his life, and his environment, and if it were run on a preclear who was having a difficult time without first running Opening Procedure of 8-C and Opening Procedure by Duplication, he would of course have a tendency to stop being audited for he would be plunged into the unimportance of everything including auditing.

The keynote of importance is simply this: anything which is important is solid or big, and the more important a person believes himself to be the bigger he is liable to get, or the more important a person believes something to be, the more solid he is liable to make it. Anybody who believes that minds are important is liable to make them solid, hence we immediately get the type of bank which some people have, with their solid facsimiles, and in consequence masses and ridges.

We began to hit this a number of years ago when we discovered that whatever we validated became more prominent. I did not at that time know why this was, and have now discovered that it is because things, which are considered important, become more solid.

This could also be called games processing, for we are handling here the most important part of importance: the fact that in order to have a game there must be something important, to defend, to have, to attack. There is no game unless one has some item which is important, for it would not be visible to anyone but himself if it were not solid. Important and solid can be considered to be for our purposes synonyms.

The auditing commands which run this are very simple and are pursued for some time without change of command. First: 'Tell me some things which are important', 'Tell me some more things which are important', 'Tell me some things which are important to other people', 'Tell me some more things which are important to other people', back and forth on this. Then: 'Point out some things which are important', 'Point out some more things which are important', 'Point out some things which other people consider important', 'Point out some more things which other people consider important'.

Then: 'Tell me some things which are unimportant', 'Tell me some more things which are unimportant', 'Tell me some things which are unimportant to other people', 'Tell me some more things which are unimportant to other people', back and forth on this.

Then: 'Point out some things which are unimportant', 'Point out some more things which are unimportant', 'Point out some things which other people consider unimportant', 'Point out some more things which other people consider unimportant'.

In view of the fact that each consideration that something is important tends to add mass, and each consideration that something is unimportant tends to detract mass, and in view of the fact that the consideration that something is important is the second postulate to the truth that it was unimportant, we discover the mechanism which causes minds to form large masses such as facsimiles and engrams. At first one considered his mind unimportant, then he considered it important, and then again unimportant, and then again important, and this cyclic activity brings into existence the mind as mass, which is to say creates the reactive mind. We occasionally discover people who are having considerable difficulty, and the wide-open case, and the occluded case, with considerable energy mass which they are calling their mind. They do their thinking by facsimiles, they do their behaving at the orders of the facsimile. This can be traced immediately to the consideration that the mind is important, unimportant, important, unimportant, important, unimportant in a repeating cycle.

An indicated process to remedy this condition would be: 'Spot some spots', 'Spot some more', et cetera. And 'Spot some spots where others thought the mind was unimportant', 'Spot some more such spots', and so forth. 'Spot some spots where you thought the mind was important', 'Spot some more such spots', and so forth. 'Spot some spots where others thought the mind was important', et cetera. This sequence of commands should be run, each one, until the communication lag is flat and then, as in all such sequences in this book, should be gone through again several times.

A vital, if somewhat murderous process, very important to be run on Scientologists is 'Spot some spots where you thought thought was unimportant', 'Some more', etc. 'Spot some spots where others thought thought was unimportant', etc. 'Spot some spots where you thought thought was important', etc. 'Spot some spots where others thought thought was important', etc. This crosses importance with conceiving a static.

Another indicated question is 'What important things could you be?', 'Give me some more important things you can be'. And then: 'Give me some more important things you could do, as a thetan', 'Give me some more important things you could do as a thetan'.

A general formula on importance would be to spot spots where the preclear considered everything on the Mystery to Know scale important, emphasizing words, sounds, sights, blackness and energy. By running this process you can expect a considerable regain of education on the part of the preclear. Almost all education has been hammered into the preclear as a terribly important activity. Actually it will be as much use to him as it is considered casually. This accounts, in some measure for the tremendous difference in the attitude toward education of one trained by casual and interested tutors and one trained between the millstones of the public school system, with all the horrors of the examination for passing, and accounts for the complete failure on the part of universities to educate into existence a leadership class. The secret lies entirely in the fact that education is as effective as it is pleasant, unhurried, casual, and is as ineffective as it is stressed to be important. For example, giving arithmetic the

category of something terribly important is to bring the student at length into possession of a solid lump of energy which, utterly useless to him, will lie there as 'arithmetic'. This also accounts for the failure of the child genius. Generally his parents consider his career so important that eventually his piano playing or painting will be an energy mass. He will be as good as, and as effective as he can change his considerations, and one does not easily change his considerations in the face of such energy masses. Auditors have often wondered at the resistance of the preclear toward turning on sonic and visio and at the persistence of blackness. Here again we have a problem of importance. The deaffer a person becomes, or the less sonic a person has, the more he tends to believe it is important for him to have this attribute, and of course, the less he has it, for the more solid it gets. Solidity could be said to be stupidity. Here, also we have the tremendous stress, as given in BOOK ONE, on words. The more important instructions are, the more important words are. The more important speech becomes, as in General Semantics, the more buried, and therefore the more effective, words become in the reactive bank. If you were to choose a single process out of importance, the one which would probably pay off best would be one which wasted words, accepted them, and desired them in brackets, and then which caused the preclear to spot all the spots where words were considered unimportant, and words were considered important for himself and for others.

We are looking at the Master Trick. A person is as well-off as he is free, and lacking in uncontrolled energy deposits. But these gather to the degree that certain facets of existence are stressed as important.

R2-56: GAMES PROCESSING

Games Processing 1954 is quite different than its predecessors but the fundamentals are the same in Scientology as they have been always. The highest activity, action, or ambition is 'to have a game'. A game requires that one create or have an opponent. The whole series centering around fighting is actually the lower range of Games Processing, which accounts for its tremendous effectiveness.

Processing games directly, the first indicated process would be one taken from Description Processing which would as-is certain undesirable characteristics. This would be done with the command, 'Give me some games which are no fun', 'Give me some more games which are no fun', 'Give me some more games which are no fun', until the apathy and antagonism toward games in general has been to a marked degree 'as-ised'.

As an opponent is an essential part of games, the processing of opponents, in general, produces interesting results in a case. We could simply improve the considerations of the preclear with regard to opponents by asking him 'What sort of opponents could you have', and carrying this forward until all communication lag is gone. Or, one could have the preclear waste, accept and desire opponents, where the accepting is done by having him mock up an opponent and remedying his havingness for it.

Another interesting process which produces excellent results is 'Name some unromantic roles', 'Name some more unromantic roles', and so forth. 'Name some romantic roles', 'Name some more romantic roles', and so forth. 'Name some unromantic roles'. 'Name some more unromantic roles', and so on back and forth until the preclear has regained the ability to imagine some roles. Actually he has been given roles by the motion pictures and television, and his propaganda textbooks, until he will only accept a role which is generally approved by this society as represented in fiction. This could be said to be an intentionally fictionalized society. Marriages quite often go to pieces simply because Jim Jones and Mary Smith did not get married. Jim Jones, posing as Alan Ladd, marries Mary Smith posing as Lana Turner, and a fictional Alan Ladd married to a fictional Lana Turner is going to be disappointed. Whereas, there is no reason under the sun why Jim Jones shouldn't be a good and interesting guy doing an interesting role, and why Mary Smith should not be doing a role herself, as herself, for people are interesting to the degree that they can postulate and act into existence the roles required of them in life. The Bard of Stratford-on-Avon said that 'All the world's a stage', but

didn't give us the process by which we could be players. Your preclear has been audience, and this process boots him out of being audience into being a player, which is more or less what the auditor is trying to do with a preclear. He can't have any games where everybody is being an audience and nobody is playing. The scarcity of roles which a person can actually occupy in this society is such that we commonly discover a preclear continuing to act out any role which he has been given in some school play which he found romantic. I know several preclears whose total difficulty is that they have never ceased to be the gangster they did so well in the High School production of 'Officer 666', or the prostitute they did so excellently in the College Drama Club production of 'Rain'.

A not recommended and rather dead-end process would be involved in asking the preclear for things worth fighting for, in that he can only postulate things worth fighting for, and that he is so far down the scale on this, the process is a difficult one but can be used.

A preclear quite commonly has play and work nicely and neatly separated. The difference between play and work is that play is no fun and work is no fun in the common parlance, until today we have only work. In view of the fact that effort is stupidity unless understood, working at trying to play is the general difficulty with people. Quite often a medical doctor will advise somebody to stop working so hard and start playing. The actual fact of it is, an executive quite commonly has his work as his only play, and so the medical doctor has consigned him to some hard work by telling him he has to play. Thus we have an inversion. 'What kind of a game could you have', 'Give me some more games you could have', is a useful process.

'What would you have to be to have a game?', 'Some more things you would have to be to have a game', carried forward, interspersed with an actual description from the preclear of each game he lists is very effective.

The following process ranks very high in effectiveness in all these procedures: 'What kind of a game could you have involving ...?' In asking this question the auditor points out some object in the immediate environment and the preclear is made to describe what kind of a game he could have with that object. The auditor then points out another object in the environment and asks 'What kind of a game could you have involving ...?' It will soon be borne home to the preclear that he has been trying to play games with the absence of opponents, that he has hung on to most of the disasters that have happened to him in his life because they meant the loss of opponents. Here we find the child who has been raised alone dreaming up illusory opponents, and later on we discover him mocking up demons. Any time you walk into an insane asylum and discover somebody involved with a battle with demons, or who has a demon, or who has a guardian angel, or who has any one of these mythical assistants or opponents, we are looking at somebody who found opponents so scarce that he had to mock them up, and having mocked them up was unable to unmock them, for no new opponent came along. The reason war mobilizes everyone into action and speeds up production in a country is because a tangible opponent has been introduced, and people will accept tangible opponents above illusory opponents. Man's activity in fighting himself, thetan's activities in fighting themselves, all stem from this effort to play games in the absence of opponents. 'What kind of a game could you have involving ...?' should be run until the preclear is cognizant of everything he is doing with regard to opponents, without ever mentioning opponents to him.

R2-57: PROCESSES

The processing of Processes actually belongs to VIA. It is an intensely important thing to do. Cells, trees, the whole of life is engaged in working processes. Normally they work them unconsciously. One of the methods of straightening out this fixation on processes is to have the preclear plan to do something very simple such as move an ash tray. Have him plan it out in its entirety and then have him execute it exactly as he planned it. One does this many times with many objects.

Another way of working this process is 'Discover things in the environment which are using processes', and 'Discover things in the environment for which you could invent processes'.

R2-58: LOSS

The subject of loss is an entire study in itself. It is the subject of havingness as well.

Loss results in Degradation, Memory Failure, Blackness and what we used to call 'stuck on the track'. So it is an important subject.

Loss itself can occur only when the consideration that one wants, needs, has to have, has occurred first. When one loses something 'important' one supplants it by dragging in energy deposits, facsimiles, on himself.

Here is the scale of substitutes acquired by reason of loss:

CUMULATIVE SPIRAL OF STOPPED TIME

OBJECT Loss of this

Substitute: **OBJECT**, owned

Loss of this Substitute: **OBJECT**, others

Loss of this

Substitute: **MOCK-UP**

Loss of this Substitute: **MOCK-UP**, owned

Loss of this

Substitute: **MOCK-UP**, others Loss of this

Substitute: **PROBLEM**

Loss of this

(a) Lost by solution (b) Lost by occlusion

Substitute: **PROBLEM**, owned Loss of this

Substitute: **PROBLEMS**, others Loss of this

Substitute: **BLACKNESS**. ('Something in it?') Loss of this

Substitute: **BLACKNESS**, owned Loss of this

Substitute: **BLACKNESS**, others Loss of this

Substitute: **UNCONSCIOUSNESS** Loss of this

Substitute: **UNCONSCIOUSNESS**, others Loss of this

Substitute: **UNCONSCIOUSNESS**, own Loss of this

Substitute: **UNCONSCIOUSNESS**

Loss of this Substitute: **BLACKNESS**, others

Loss of this Substitute: **BLACKNESS**, own

Loss of this

Substitute: **BLACKNESS**

Loss of this Substitute: **PROBLEMS**, others

Loss of this

Substitute: **PROBLEM**, owned Loss of this

Substitute: **PROBLEM**

Loss of this Substitute: **MOCK-UP**, others

Loss of this

Substitute: **MOCK-UP**, owned Loss of this

Substitute: **MOCK-UP**

Loss of this Substitute: **OBJECT**, others

Loss of this

HALLUCINATION

The Remedy of Havingness is a good process to overcome loss. However, loss is a consideration.

The following processes remedy considerations involving havingness: 'What assistance do you need to survive?', 'What assistance do others need to survive?'

The most effective straight were on this is: 'Name some important possessions', 'Some more important possessions', and so forth. 'Name some things it is important not to have.' As we have havingness going down to ownership, then to protection, then to hiding, we have: 'Name some things it is important to protect', 'Name some things it is important to hide', 'Name some things it is important to display (exhibit)'. These are lower level manifestations. 'Important possessions' will exteriorize.

R2-59: SURVIVAL

Whenever I have found a process unworkable in the past sixteen years, I have found that the unworkable process avoided the dynamic principle of existence: SURVIVE. In other words, it did not greatly matter how this principle was embroidered, if it was included in the process or rationale, some workability resulted.

The dynamic principle of existence, Survive, and its application as the dynamics, is easily the greatest discovery in Dianetics. Even when we add to it the remainder of the curve of the cycle of action of the MEST universe, Create - Survive - Destroy, we find SURVIVE is the potent truth in it.

So, Scientology or Dianetics processes, if we neglect SURVIVAL in our rationale, become unworkable.

Survive has as its dichotomy, Succumb. When one is below 2.0 on the Tone Scale, all survival looks evil to him. LIVE = EVIL in the succumbing case. To punish is to declare a thing evil. To be evil is to refuse survival.

The dynamics are a breakdown of the dynamic Survival into eight parts. Each dynamic in turn breaks down into many parts. Thus we have life. And these interplays of Survival are life.

If your preclear is not clear, he is avoiding survival on one or many dynamics. His considerations about Survival are his personality.

I tell you this lest we forget. Dianetics is a precision science. It stems from this study and codification of Survival. Survival is the reason why.

Opening Procedure of 8-C (R2-16) works because the preclear, in spotting MEST, is recognizing 'Look! After all I've been through, I've survived'. Having a preclear spot, in a crowd, people's survival potential is great processing.

The auditing command 'Point out some things in your surroundings which aren't surviving', will spring grief or apathy. 'Point out some things which are surviving', is quite potent. 'Point out some unknown methods of surviving', is one of those 'fader' questions -- he can almost answer it for hours.

As a thetan is immortal, he cannot do other than survive. When he realizes this his game may become 'How can I succumb?'

Survival has pay. That pay is the sensation of pleasure. This is acquired by Interest. One tries to survive by being interesting. He demands of life that he be interested.

Thus, with the preclear in a crowd: 'What could that person (auditor indicating one), (have, do, be) that would be uninteresting?' 'What could that person (have, do, be) that would be uninteresting to your (ally)?'. The preclear has as-ised all the interest from life and has left

intact uninteresting thing. When he tries to get interested anew, uninteresting ridges soak up his interest. 'What dreams, (goals) would you find uninteresting?' is interest plus future = survival.

A murderous auditing command while the preclear is outside looking at people and the world is: 'What dream could that person have that would not interest you?', 'That would not interest your Mother (and other allies)?'. Interest of allies makes survival possible. Anything which succeeds in interesting allies (orientation points and symbols) then may be a successful mock-up for the preclear all his life. Syphilis, fatness, stupidity, may be 'interesting' enough to allies to leave the preclear with them all his life. For an interested ally means future, and that is Survival.

Get a list of all people he has known since birth, ask him for each one many times, 'What would be interesting to (ally)?' and you will find his service facsimile and the source of his aberrations and psychosomatics. 'What dynamic could you abandon?' could be used on a Scientologist.

The most basic question about bodies, being cellular organisms, is 'What wouldn't a cell survive?' 'What else wouldn't a cell survive?' and so on. This is a very old but very potent Dianetic process for the repair of bodies. Organs, body parts, and types of bodies can be substituted for cells in the above question.

Remember, your goal is to improve the preclear's Survival. If he thinks Survival is evil, if to succumb is the only way he can get interest, your road will be eased by remembering and processing the dynamic principle of existence -- Survive on all or any dynamic by any type of process. And this is the rationale of Dianetics, which may be freely used by a Scientologist.

R2-60: THE HIDDEN COMMUNICATION

'Spot some hidden knowingness', is an auditing command which, pursued properly, opens the gates to freedom.

In 'Scientology 8-80' and 'Scientology 8-8008' you will find a scale which begins at its lowest rung with 'hidden'. Above that is 'protection'. Above that is 'ownership'. I have recently discovered that the DEI cycle and the above low scale join to make the scale read:

CURIOSITY
DESIRE
ENFORCEMENT
INHIBITION
OWNERSHIP
PROTECTION
HIDDEN

and I have discovered that the road upward through this scale is communication.

Knowingness condenses. Trying to know becomes the first level of communication. This 'looking to know' condenses into 'emoting to know', which condenses into 'effort to know', which in turn becomes 'thinking to know', which then condenses into 'symbols to know' which, and this is the astonishing thing, becomes 'eating to know', which becomes 'sexual activity to know', which then turns into oblivion of knowing or 'mystery'.

An energy particle is a condensed knowingness. Trying to discover or move one is an action with the goal of knowingness.

Gravity, grim thought, becomes in the mind, and is, the effort to know, to pull in knowingness. Other-determinism is only other knowingness.

The aspects of know are the common denominators of any scale in Scientology. When knowingness is done by communication, we get emotion and effort particles changing position.

This struggle to know is not just me and thee working on Scientology and gone mad in the process, it is life and all its manifestations including space, energy, matter and time. Each is only a barrier to knowingness. A barrier is a barrier only in that it impedes knowingness. Barriers do not exist for complete knowingness.

And what is there to know? Only that knowingness can vary. One has to invent things to know for there is only knowingness, and knowingness has no data since a datum is an invented, not a true, knowingness. The motto of any particle below knowingness is 'Only energy can tell you'.

We handle R2-60 HIDDEN KNOWINGNESS in this wise: 'Spot some hidden communications', 'And now spot some more hidden communications', and so forth. We may have to direct the preclear closely with, 'Point to the spot', 'How far away does it seem?', 'Are you spotting a hidden communication there?' and such questions, meanwhile keeping good ARC. He could be asked to spot specific kinds of hidden communications as with this command: 'Spot some hidden disease communications', 'Some hidden poisonous communications', or 'Spot some hidden, but uninteresting communications'. But use the question to flatten all communication lags before you change it.

If he goes into the past, let him. He'll come back to the present. He'll find his chronic somatic and do many interesting things, including, perhaps, the data in the text of R2-60 here.

It is curious that the above 'Spot some hidden communications' does not seem to require a remedy of havingness. But it will turn on many heavy ridges and somatics. Having thoroughly worked 'hidden communications' you can now use this command: 'Spot some protected communications', and when that is null, 'Spot some owned communications', and after that has no communication lag, 'Spot some inhibited (stopped) communications'. Then: 'Spot some enforced communications', and then, 'Spot some desired communications'.

Now when all that is done, proceed as follows: 'Spot some hidden knowingness', 'Are you spotting it in the physical universe? If so all right, point to it', 'How far away does it seem?', 'Spot some more hidden knowingness', and so on until after an hour or two (or six) this command is comm-lag-flat.

Now start upscale as follows, making the preclear point and give the distance to the spot (even when trillions of miles away): 'Spot some protected knowingness'. And after many times of that, then: 'Spot some protected knowingness', many times. Then: 'Spot some owned knowingness', many times. Then: 'Spot some inhibited knowingness'. Then: 'Spot some enforced knowingness'. Then: 'Spot some desired knowingness'. Then: 'Spot some knowingness that people could be curious about'.

In R2-60 HIDDEN KNOWINGNESS, we can use the Know - Mystery scale:

'Spot some mysteries'
'Spot some hidden sex'
'Spot some hidden eating' 'Spot some hidden symbols'
'Spot some hidden thinking' 'Spot some hidden efforts'
'Spot some hidden emotions'
'Spot some hidden looking' 'Spot some hidden knowing'
Then: 'Spot some protected mysteries', 'Spot some protected sex', and so on.

You can, using the principles of hidden knowing and communication, combine any other part of Scientology with them, and discover an excellent process. However, the first commands given in R2-60 are the easiest to communicate and to use.

R2-61: GOOD AND EVIL

The factors of good and evil are the factors of accepting other determinism (good) and accepting or giving blows (evil). That which co-operates is 'good'. That which is punished is 'evil'. This is the totality of consideration involved.

'Good' and 'evil' are third dynamic phenomena. But unlike most words one might process, these have definite emotional connotations which, to the preclear, speak louder than the words. These apply from Mystery up to Know.

Just as 'good' and 'evil' are the primary fixation of philosophy, so are they a primary fixation in a preclear. So confused are they, in philosophy or in preclears, that an enormous complexity results. Their resolution would resolve either philosophy or preclears.

The basic auditing commands to handle this extremely important process are: 'Spot a place where you decided to be good', 'Now spot a spot in this room', 'Spot the place again', 'Spot a spot in this room', 'Spot the spot again where you decided to be good', 'Spot a spot in this room', etc., until all comm-lag is gone for one distant spot where the decision was made to be good. Then: 'Now find another spot where you decided to be good', 'Spot a spot in this room', etc., and so on until many spots are 'cleared'. Actually, the auditor wants the distant spot to come into present time before he leaves it, but at least reduce comm-lag for each spot.

Now do exactly the same procedure using the following auditing command: 'Spot a place where another person decided to be good', 'Now spot a spot in this room', alternating back and forth until comm-lag is reduced.

The same is now done for 'evil' with this slight variation: 'Spot a spot where you decided you were evil', 'Spot a spot in this room', 'Spot a spot again where you decided you were evil', 'Spot a spot in this room', etc., as for 'good', picking out new single spots and clearing each one as far as possible.

Then follow the same procedure with the command: 'Spot a place where another person decided he was evil', 'Spot a spot in this room', etc., reducing comm-lag for each spot. Then: 'Point out some unknown evils', and 'Point out what other people would find an unknown evil'.

You may have to remedy havingness for the preclear for this is very destructive of havingness. The preclear will come up with many considerations and changing ideas. Let him voice them, but continue with the process. Don't let your preclear leave the session with a 'good' or 'evil' spot uncleared or in restimulation.

He will become neither saint nor devil from running this he will become more capable of good action.

R2-62: OVERT ACTS AND MOTIVATORS

One of the primary discoveries in Dianetics was the Overt Act - Motivator phenomenon. An OVERT ACT is a harmful act performed against another. A MOTIVATOR is an overt act performed against oneself by another.

If one receives a motivator, he then may consider himself licensed to perform an overt act against the person who harmed him. When one commits an overt act without having received a motivator, he attempts then to 'mock-up' or acquire a proper motivator or 'justify' his own harmful action.

An overt act delivered in the absence of a motivator we call an unmotivated act. A justifier is the technical term we apply to the 'mock-up' or overt act demanded by a person guilty of an unmotivated act.

In that a thetan cannot possibly, actually, be harmed, having no mass, wave-length, or actual location, any harmful act he performs is an unmotivated act. Thus, a thetan basically cannot have a motivator - overt act sequence and always has an unmotivated act justifier sequence.

The 'catch' in this is the idea of 'harmful' (good and evil). An act must be considered harmful or evil to be an overt act. To need a justifier a person must have believed his act to have been harmful.

As the thetan cannot experience a motivator - overt act sequence, we have then the dwindling spiral. He is always justifier hungry. Thus he punishes and restimulates himself. Thus he is always complaining about what others do to him. Thus he is a problem to himself.

Only permit a thetan to get the idea that it is possible to harm others and you have, then, the dwindling spiral.

Use of these data in auditing is simple and intensely profitable. For example, we have a preclear who continually complains about his father, how mean his father was to him. This means precisely that the actual facts of the past include many unmotivated acts against father by the preclear, even though the preclear seems to recall no such acts by himself and many overt acts against himself from father.

This is an excellent process to get a sudden result on a preclear. Ask him, straight wire, for things he has done to his mother, father, any and all allies. Don't let him run things they have done to him.

'Can you recall doing something to your (father, or other ally, or person)?' is the only auditing question.

Having him remedy his havingness with motivators is also a fair process.

R2-63: ACCEPT - REJECT

From acceptance we get a ten-star process. Whatever else you may do with a Preclear, he must be brought to accept the physical universe and his own and other bodies, all in every kind of condition. The way out is the way through. In Eastern practices, the goal was abandonment, desertion. Scientology's main difference from Eastern practices is this: it accepts to free. And it frees. That which one cannot accept chains one. For instance, revulsion to sex inclines at last to slavery to sex. A ruler's motto could be 'make them resist', and his people would become enslaved.

In 1870 we find capitalists resisting Marx. In 1933 we find Marx the basic text of U.S. government. Resistance and restraint are the barbed-wire of this concentration camp. Accept the barbed-wire and there is no camp.

On test this process exteriorizes the worst case if run long enough.

This process is important because it is one of the few (like R2-16) which does not have alter-isness as its operative factor. This is not, then, an altering practice, confirming somatics and aberrations, it is a freeing process.

That which one cannot accept he cannot as-is.

The commands of this process are as follows: 'Find something about yourself which you can accept', 'Something else', 'Find something else you can accept', etc., etc., until there is no comm-lag. Then: 'Find something about yourself you can reject', 'Find something else about yourself you can reject', etc., etc., until there is no comm-lag. Then: 'Find something in this room you can accept', 'Something else', 'Find something else in this room you can accept', etc., etc., 'Find something in this room you can reject', 'Find something else in this room you can reject', etc., etc. Then: 'Find something about this universe you can accept', until the comm-lag is flat. Then: 'Find something in this universe you can reject'.

Remember, this is not an altering process. It is a high value escape process. If your preclear keeps putting conditions of change into everything before he can accept it, you must persuade him to find things he can accept without changing them.

R2-64: TOUCHING

Most thetans are inside because they are afraid to touch the outside. A baby is slapped out of touching things by mamma and the MEST Universe. Some thetans are afraid that if they touch MEST they'll stick to it and so remain 'safely' inside.

There are two possible ways to run this. One is simply, 'What are you willing to touch?', the other is, 'As a thetan, what are you willing to touch?' If the preclear 'no savvy' being a thetan, use the simpler form.

The command is, 'As a thetan, what are you willing to touch?', 'What else are you willing to touch?', 'What else are you willing to touch?' etc., etc. Then: 'What are you willing to have touch you?', 'What else are you willing to have touch you?'

The mind can change without bringing alter-ness into play. Changing the mind is the only possible way to improve without liability. This process alters only the mind. This is a very valuable process. Eight stars.

R2-65: ALTERATION

As any energy or space condition survives only because it has been and is being altered, the primary unmotivated act would be changing the condition of energy, space, and objects. The mind can change without liability. When a mind changes energy or space we get a persistence of that energy or space. As persistence or survival is good and bad only to those who desire to succumb, we do not see in alteration of energy or space, any crime. But when we alter only 'bad' conditions of space and energy we make the 'bad conditions' persist. Hence it would be of value to a case to at least straight wire out some of the times when he attempted to alter energy, spaces, or bodies of people. (To an auditor who works to exteriorize a preclear and change his mind, there is small liability and great personal advance. To an auditor who works only to change the body, the ridges, the somatics, there is failure, fixation of condition in the preclear, and restimulation occurs. Successful auditing of the thetan actually improves the auditor.) Failure is the biggest lock on alter-ness of course.

The preclear who is obsessively trying to change himself by self-auditing or whatever means, has failed many times to effect a change in the condition of this universe or in the bodies of others, or has the space and energy of this universe as a stable constant.

The commands are: 'Can you recall a time when you failed to change some energy in this universe?' etc., etc. And when this is flat, 'Can you recall a time when you failed to change some space?' Then: 'Can you recall a time when you failed to change a body?' This last question is the one you stress. He may get nothing on the space question at all but such incidents are in his recall or space would not exist at all for him.

Also, 'Can you recall a time when you failed to change a memory?' etc., etc. Wherever or however the preclear is stuck in tone or condition, there he has failed to change something or somebody.

This can also be run on the 'theta aide of the ledger' 'Can you recall a time when you successfully changed something?' until the lag is flat. Even more simply: 'Can you recall a time of change?'

R2-66: ELECTING CAUSE

Worry and anxiety have their root in the changing election of cause. People who elect cause other than self are often shifting responsibility and refusing to fix actual cause. The 'black five' is a no-responsibility case.

This process is a brutal one, but it is a five-star process. It often sets off a worry machine and runs it out.

The auditing command is: 'Point out some things which are causing things', 'Point out some more things which are causing things' etc., etc., until the lag is flat.

R2-67: OBJECTS

To a person who cannot hold the two back corners of the room, the simple location of objects is valuable. When a person is self-auditing, this is a very valuable solo process.

The command is: 'Locate some objects', etc. The person looks at them or puts his attention on them and notes what they are. This is all there is to the process. For variation, one locates some more objects. By object is meant physical universe, present time, visible objects.

R2-68: INCOMPREHENSIBILITY

A thetan is understanding. A space or mass is no understanding. A Thetan is no mass. An object is mass. Duplication is thus difficult.

A thetan must be able to be a mass or a space and to experience at will incomprehensibility in order to see spaces and masses. It is a new understanding to understand that something can be incomprehensible.

The tone scale is a study of varying degrees of ARC. Affinity, Reality and Communication comprise understanding. With knowingness at the top of the scale, we come down in 'understanding' -- (Third Dynamic knowingness), then down through relative understandings and increasing incomprehensibility until at bottom scale (MEST) we have total incomprehensibility and total non-comprehension.

A 'difficult' case is simply an incomprehensible case. The processing on this is done by the command: 'Spot something incomprehensible', repeated many, many times. This 'ups' I.Q. and raises perception. This is a good process.

R2-69: PLEASE PASS THE OBJECT

This process was developed by long-time auditor and D.SCN., Jan Halpern. It is a very fine process and is recommended anywhere on the scale.

Throughout the process, the auditor doesn't say a word. He doesn't answer possible questions, he doesn't explain in words what he wants. Under all circumstances he makes like the Tar Baby and 'don't say nothin''. He uses any gestures necessary.

STEP 1-A: Auditor stands in front of preclear, holding out a small object to him, until the preclear takes it from his hand. As soon as the preclear takes the object, the auditor holds out his hand, palm up, until the preclear places the object in his palm. The auditor immediately offers it to the preclear again. This is continued until without comm-lag. The object should be offered to the preclear from a variety of positions, once he has gotten the idea: from down near the floor, or off to either side, over the preclear's head. The palm should be held in a variety of positions for the return of the object. Both hands may be used. Get the preclear doing this really fast.

STEP I-B: When step 1-A is going swiftly and easily, the auditor introduces a switch. After the preclear has just accepted the article, the auditor, instead of extending his palm for its return, places his hands behind his back briefly, then conveys by gestures that the preclear is to offer the object to him. When the preclear does so, the auditor takes the object from his hand, but does not return it until the preclear holds out his own hand, palm up to receive it. This exchange is continued until the preclear is offering and accepting the object from as wide a variety of positions as the auditor used, and all other comm-lags are flat.

STEP II: The auditor, just having accepted the object, makes a gesture that this part is over, then deliberately puts the object down where the preclear can see it, stands back, and indicates that the preclear is to pick it up. When the preclear picks it up, the auditor gestures that he is to put it down again anywhere he likes in the room. The instant the preclear does so, the auditor snatches it up and puts it somewhere else. This is continued until the auditor and preclear are racing around the room, seizing the object as soon as the other's fingers have let go of it.

The object isn't necessarily placed in a different spot each time. It may be picked up and put down again in the same place, but it must be handled each time. All sorts of tacit rules and understandings will probably develop while this is being run.

This process rehabilitates the sense of play validates non-verbal ARC short-circuits 'verbal machinery' lets the preclear position matter and energy in space and time gets the preclear up to speed murders 'there must be a reason' for doingness processes both auditor and preclear equally, and, besides, it's fun.

R2-70: EXPECTANCE LEVEL

This is a future type 'acceptance level'. The process was contributed to by B.SCN. Millen Belknap.

The commands are: 'What do you expect from ...?' The auditor fills the blank. It is a cousin of description processing.

This process is not for low-level cases.

R2-71: ANSWERS

A relative of PROBLEMS AND SOLUTIONS' is 'Give me some answers', as a constantly repeated question.

It is a valuable process.

R2-72: SECURITY PROCESSING

It is safe to do what your parents do -- and that is evolution. Death, failure, rejection, are safe if your parents did them.

The auditing command is: 'Tell me some things it is safe to be', etc. 'Tell me some things it is safe to do', etc. 'Tell me some things it is safe to have.'

This works very well.

R2-73: MAKING SOMETHING FOR THE FUTURE

The auditing command is: 'Point out some things which are making things for the future'.

This is a brutal process.

R2-74: PROCESSING

The auditing command is: 'Point out some things that are processing things'. This cures obsessive self-auditing.

R2-75: KNOWINGNESS

As everything is a condensation of knowingness, the following commands explain much and do much.

'Tell me something you wouldn't mind knowing', 'Something you wouldn't mind others knowing', 'Invent something to know'. A ten-star process.

L'ENVOI

As a summary comment on these processes, it cannot be indicated too strongly that a preclear who is psychotic, neurotic, or who is having any psychosomatic difficulty must be run on Opening Procedure of 8C, R2-16, for many, many, many, many hours. It will be discovered that on such preclears the use of subjective processes, which is to say those processes which intimately address the internal world of the preclear, is fruitless. The processes which produce large results and effects will not make the preclear well. As an example of this, many persons have been run by the 'best processes' for fifty hours or more, only to have their cases remain stagnant, and then these same persons, being run on R2-16, Opening Procedure of 8-C, have, day after day, with an hour or two of such running per day, commenced steady and stable gains, which they have retained. When in doubt, then, on any process, run R2-16 and when the case claims that nothing is happening, run R2-16 and when the case is going very jumpily forward with many losses and few gains, run R2-16 and when R2-16 has been thoroughly run, then turn to R2-17.

The reason why R2-16 is so effective is that it immediately addresses the problem of barriers. The preclear who is having difficulty will be found to be confounded by mechanics, which is to say the barriers of space, energy, and mass, and that these barriers have entered into his own universe so that he himself, in his own thinking, is encountering barriers. By making the preclear put his attention on objects, walls, floors, ceilings, the preclear will eventually come into the state where he, himself, is stopping his sight on the barrier, rather than the barrier stopping the sight of the preclear, for all perception is done by stopping the perception on what is looked at. This is only one of the reasons why Opening Procedure 8-C works. Use it.

Although the foregoing is the totality of what we are using and calling Intensive Procedure, any well trained auditor is expected to have at his command any of the processes of Scientology and to use them when the occasion arises. It will be found that the older processes are complexities of these Intensive Procedure processes, and it has been found by experience that the simpler processes produce results on even the more complicated and difficult cases. In fact, it requires the simplest possible process to acquire the greatest possible recovery on a difficult case. Subjective processes should be avoided. By subjective processes is meant consultation with the preclear's own universe, with his mock-ups, and with his own thoughts and considerations. For it will be found that any homo sapiens is far below the point of simply changing his mind to make a new condition take place. This is the basic process of the thetan. A thetan who is in good condition need only to change his mind or change his postulates in order to alter a condition. On a case which does not exteriorize easily or which, when exteriorized, is found to be using large quantities of energy, subjective processes must be severely avoided. The formula of communication itself, as contained in Intensive Procedure and in this order, should be very closely observed. Processes which are not included in Intensive Procedure but which are very effective are End of Cycle processes. An End of Cycle process run subjectively would be 'What are you willing to destroy?', 'What are you willing to have destroy you?' As the preclear is sitting on Survive (persist) and will not change, and as this is what is wrong with the preclear, we see that he has drifted far from being able to create and being able to destroy. Thus this process will be found to achieve results. However, it is omitted because it is too much of a temptation for an auditor to run such a process on a heavily interiorized preclear. The preclear will recover much better by use of the formula of communication.

The keynote of Intensive Procedure is making and breaking communication.

When in doubt, all you need do is have the preclear make and break communication with objects or spaces in the physical universe and remedy any difficulty in havingness which results by having the preclear duplicate anything he can see. This would apply to an interiorized or exteriorized case. Actually, the sole use of mock-ups today is in duplication and in the Remedy of Havingness. All processes except the Remedy of Havingness itself are done with

great attention to the certainty of the preclear. This is stressed. In the matter of Remedy of Havingness, it is beneficial for the preclear to remedy havingness with mock-ups which are vague and of which he is not even vaguely certain. As havingness itself does not depend upon any reality, so does the Remedy of Havingness work in the absence of reality. Only in the case of the Remedy of Havingness, however, is uncertainty or unreality on the part of the preclear tolerated. At all other times the auditor must be very certain that the preclear is sure of what he is doing.

The attitude of the auditor giving Intensive Procedure is not today expected to be a sympathetic or coddling one. Scientology processing today is done overtly, challengingly. An auditor is expected to be top scale on the Chart of Attitudes in all departments except Trust. He is expected to distrust the preclear, and even act like he distrusts the preclear. This attitude will be found to be far more acceptable to the preclear than a trustful one. While the auditor never gets angry at the preclear, never dramatizes at the preclear, and sticks to his task in auditing, he should be markedly insistent on the certainty. He should be very challenging about the fact that the preclear said it was certain. The auditor does not believe the fact that the preclear found whatever it was real. By doing this the preclear is made to postulate over and over and over that he is in communication.

Many a preclear does something, then sits back to see if anything happened. This, when a severe condition (the 'observer', where the preclear cannot be anything -- cannot occupy a source point or receipt point) can be remedied by having the preclear touch a part of his body or the room with his finger and then stand back to see if anything happened. His communication lags can be long on this. The commands are, 'Touch your nose', 'Now let go and see if anything happens'. This must be done, to be effective, for some time. Its goal as a process is to wipe out fear of consequences.

For a preclear who has suffered much loss, the auditor can have the preclear place an object (matches, a handkerchief or anything the preclear owns) out in front of the preclear, then have the preclear let go of it, sit back and wait for it to come to him (which it won't, of course, without volition on the part of the preclear). Then he repeats the action, waiting for the object to go away from him. The communication lag of recognition of the process and the somatics can be severe. The waiting should be in terms of many minutes each time.

IMPORTANT: IN PROCESSING PSYCHOTICS AND NEUROTICS OF WHATEVER DEGREE, USE ONLY R2-16, OPENING PROCEDURE 8-C, EACH PART UNTIL THE PERSON IS SURE WHO IS DOING IT. USE ONLY R2-16 UNTIL THE CASE IS FULLY SANE. USE NO OTHER PROCESS OF ANY KIND.

The first and most basic definition of any part of communication is that communication or any part thereof is a consideration. If this were not so, communication in this universe would be impossible as a perfect communication requires an exact duplication of source point at receipt point. A duplication, to be perfect, would mean a 'copy' in the same time, same space, with the same mass. The law that two objects cannot occupy the same space is peculiar to the MEST Universe and is the law which keeps it space stretched. Thus a perfect duplication defies the basic law of the Universe. But as duplication is a consideration, communication is possible to the degree that the preclear can freely make considerations. Any process which improves the ability to duplicate by removing the fear of it or improving the ability of the preclear to consider freely without large reasons improves as well, duplication.

'Things you are not duplicating', 'Things which are not duplicating you' is one of a variety of processes.

The game of the preclear is to set up things which cannot be duplicated and to duplicate anything set up. He can play it as well as he can consider freely or as well as he can duplicate.

Considerations are bettered by having the preclear put considerations into any object for a long time, then having the preclear make the object have considerations about him. The

commands are, 'Put some considerations into that ...', 'Have the ... have some considerations about you'. All comm-lag, as in all other processes, must be reduced. Havingness may have to be remedied.

THIS IS A LIST TO BE RUN BY CHANGE OF SPACE PROCESSING

1. The first geographic location of the Thetan in the MEST Universe as soon as he came from the Home Universe.
2. The geographic location where he created his first facsimile.
3. Where the Thetan received his first motivator in the MEST Universe.
4. Where the Thetan committed his first overt act in the MEST Universe.
5. Where he started the first spiral. Also the end of the spiral. Do this with all spirals up to present time.
6. The geographic location where the Thetan first was in contact with a body in any way.
7. The jack-in-the-box.
8. The Obsession.
9. The first blanketing.
10. The halver.
11. Facsimile One.
12. Before Earth.
13. Before MEST Universe.
14. The joiner.
15. The Assumption.
16. His first borrowing.
17. His first nipping.
18. The Ice Cube.
19. The first between lives area.
20. The Emanator.
21. The first Theta Trap.
22. The body in pawn.
23. The Body Builder.
24. The Jiggler.
25. The Whirler.
26. The Bouncer.
27. The Spinner.
28. The Rocker.
29. The Boxer.
30. The Faller.
31. The Education.
32. The Fly Trap.
33. The Ded.
34. The Dedex.
35. The Mis-assist.
36. The first geographical location the Thetan took on Earth.
37. Glare Fights.
38. Implant station.

SOP 8-D

This procedure is for use by a trained Scientologist. It can be used in conjunction with **ADVANCED COURSE PROCEDURE** and its primary goal is the delivery of heavy cases however it can be extensively applied to all cases. It is better to run a Step 1 well on 8-C before using this process upon him.

OPENING PROCEDURE: Have PC move his body around the room locating **SPOTS IN MEST SPACE**. Have him locate many such spots and designate them with his finger. Have him do this until he can do it very well and until he obeys an auditor's directions easily.

STEP I: Ask preclear to be three feet back of his chair. This is the total step. The auditor does not press the matter further even if the PC is.

STEP II: Have preclear look at his environment and whatever he sees have him duplicate it many times. Then have him duplicate a nothingness he makes or finds, many times.

STEP III: Have preclear hold the two back corners of the room (2 minutes at least or two or more hours). Then have him locate spots in space where he is not.

STEP IV: AN E-METER STEP. Give PC a full assessment by putting him on an E-Meter at this point and asking him to name the people with whom he has been associated since birth. The auditor writes these down and indicates by a symbol after each name whether the action of the needle is stuck, small, medium or violent.

On a consistently stuck needle, use next to last list of Self Analysis until needle frees. Then choose that person who got the biggest reaction on the meter and using this person have preclear find spots or spaces where this person would be safe. The preclear must be certain of the fact. The auditing command is, 'Find some places where ... would be safe'.

One continues this until the needle shows no further reaction, on just this first person. Then one goes to **OPENING PROCEDURE** and starts all the way through the steps again. Now one takes the same person as the auditor first chose and runs this processing question only. 'Spot some things which your ... does not own.' This is the total question. (One to two hour communication lag may not be unusual.) The auditor continues to ask this question and the preclear continues to spot things which this person does not own until the needle is relatively inactive.

Then the auditor goes to **OPENING PROCEDURE** above and continues through the steps. But now he takes a new assessment and proceeds exactly as before. 'Places where ... would be safe' is Universe Processing. 'Things ... does not own' is Ownership Processing.

No variations of command of any kind whatsoever should be used by the auditor as these are not dichotomies and variations can be very hard on the preclear, even making him ill. The auditor should add 'The spirit of Man', 'The spirit of Woman', God, and the body.

STUDY THIS PROCESS WELL BEFORE USING IT. DO NOT DEPART FROM IT OR VARY IT UNTIL PRECLEAR IS STABLY EXTERIORIZED. THE ACTUAL GOAL OF THIS PROCESS IS TO BRING THE PRECLEAR TO TOLERATE ANY VIEWPOINT.

OUTLINE OF LECTURES 1-3 OF PROFESSIONAL COURSE JULY, 1954

SCIENTOLOGY, ITS BACKGROUND
or a history of Knowledge.

SCIENTOLOGY

the Western Anglicized continuance of many earlier forms of wisdom. Scio -- study

EARLIEST VERSION -- THE VEDA

Knowingness or sacred lore

The most ancient sacred literature of the Hindus comprising over a hundred extant books. One or all four of the canonical collection of hymns, prayers and formulas which are the foundation of the Vedic religion

The Rig-Veda

Yajur-Veda

Sama-Veda

Atharva-Veda

The Cycle of Action

The meaning of Veda -- Knowingness

Mention of the Book of Job as oldest written work from India

THE TAO -- THE WAY

Realization of the mystery of mysteries -- i.e., the way to attain knowingness The Tao-Teh-King by Lao-Tzu (604-531 B)

Taught conformity with the cosmic order and simplicity in social and political organization

Entirely concentrated on the mind and its discipline

Contemporary with Confucius

The principle of wu-wei (non assertion or non-compulsion) control by permitting self-determinism

THE DHYANA -- KNOWINGNESS AND LOOKINGNESS

From mythical times. Named from the legendary Hindu Sage Dharma whose many progeny were the personifications of virtue and religious rights. We are familiar with the Dhyana in the form of Buddhism. A BOHDI is one who has attained intellectual and ethical perfection by human means, comparable to our theta-clear in Scientology.

GAUTAMA SAKYAMUNI (563-483 B)

Looked upon as founder of the Dhyana. Never claimed to be anything but a human being, did not profess to bring any revelation from a supernatural source, did not proclaim himself a savior. He professed only to teach men to liberate themselves as he had liberated himself.

From the Dharmapada, a collection of verses said to have been written by Gautama:

'All that we are is the result of what we have thought: it is founded on our thoughts, it is made up of our thoughts.'

'By oneself evil is done by oneself one suffers by oneself evil is left undone by oneself one is purified. Purity and impurity belong to oneself no one can purify another.'

'You yourself must make an effort the Buddhas are only preachers. The thoughtful who enter the way are freed from the bondage of sin.'

'He who does not rouse himself when it is time to rise, who, though young and strong, is full of sloth, whose will and thoughts are weak, that lazy and idle man will never find the way to enlightenment.'

'Strenuousness is the path of immortality, sloth the path of death. Those who are strenuous do not die those who are slothful are as if dead already.'

The religion of Buddhism, carried by its teachers, brought civilization into the existing barbarisms of India, China, Japan and the Near East -or about two thirds of Earth's population. Here was the first broadcast wisdom which summated into high cultures.

THE HEBREWS

Their definition of MESSIAH is a 'teacher or bringer of wisdom'. Their holy work, known to us as the 'Old Testament' leans heavily on the sources we have already mentioned.

JESUS OF NAZARETH

The legend of his study in India
Age of 30-33 teaching and healing
Use of parables like Gautama
Buddhist principles of brotherly love and compassion
Death by Crucifixion

SPREAD OF CHRISTIANITY INTO THE BARBARISM OF EUROPE

Religion with fur breech-clouts

CLOSE OF THE TRADE ROUTES

WESTERN SEEKERS OF WISDOM

The separation of science and search from religion -- artificial division
The Early Greeks
Lucretius
Spinoza
Nietzsche
Schopenhauer
Spencer
Freud
We think of these as beginning our intellectualism. They quickened it. The bulk of their sources was Asiatic.

DEFINITION OF RELIGION -- WEBSTER

'(3) The profession or practice of religious beliefs religious observances collectively rites.'
'(4) Devotion or fidelity, conscientiousness.'

RELIGION -- RELIGIOUS PHILOSOPHY

Scientology has accomplished the goal of religion expressed in all Man's written history, the freeing of the soul by wisdom.
It is a far more intellectual religion than that known to the West as late as 1950.
If we, without therapy, simply taught our truths we would bring civilization to a barbaric West.

THIS IS SCIENTOLOGY - THE SCIENCE OF CERTAINTY

FOREWORD

For nearly a quarter of a century, I have been engaged in the investigation of the fundamentals of life, the material universe and human behavior. Such an adventure leads one down many highways, through many byroads, into many back alleys of uncertainty, through many strata of life, through many personal vicissitudes, into the teeth of vested interests, across the rim of hell and into the very arms of heaven. Many before me have made their way across these tumultuous oceans of data, where every drop of water appears to be any other drop of water and yet where one must find the drop. Almost everything I have studied and observed has been evaluated otherwise somewhere, at some time, in relation to this or that.

What equipment must one have to venture upon these wastes? Where are the rule-books, the maps, the signposts? All one perceives when he peers into the darkness of the unknown are the lonely bones of those who, reaching before, have found their hands empty and their lives destroyed. Such a thing is a lonely drama one must cheer one's own triumphs and weep to himself his despair. The cold brutality of the scientific method fails far back, almost at the starting point. The airy spirallings and dread mysteries of India, where I drank deep, lead only into traps. The euphoria of religion, the ecstasies of worship and debauchery, become as meaningless as sand when one seeks in them the answer to the riddle of all existence. Many have roved upon this unmapped track. Some have survived to say a fraction of what they knew, some have observed one thing and said quite another, some looked knowing and said naught. One engaged upon such a quest does not even know the answer to that most important question of all: Will it be good for man to loose upon him all in a rush as an avalanche, the knowingness of eternity?

There are those who would tell you that only a fiend would set you free, and that freedom leads at best into the darkest hells, and there are those to inform you that freedom is for you and not for them, but there are also men of kind heart who know how precious is the cup and drink of wide, unbounded ways. Who is to say whether man will benefit at all from this knowledge hardly won? You are the only one who can say.

Observation, application, experience and test will tell you if the trek has been made and the answer found. For this is the science of knowing how to know. It is a science which does not include within it cold and musty data, data to be thrust down the throat without examination and acceptance. This is the track of knowing how to know. Travel it and see.

THE FACTORS

(Summation of the considerations and examinations of the human spirit and the material universe completed between A.D. 1923 and 1953)

1. Before the beginning was a Cause and the entire purpose of the Cause was the creation of effect.
2. In the beginning and forever is the decision and the decision is TO BE.
3. The first action of beingness is to assume a viewpoint.
4. The second action of beingness is to extend from the viewpoint, points to view, which are dimension points.
5. Thus there is space created, for the definition of space is: viewpoint of dimension. And the purpose of a dimension point is space and a point of view.
6. The action of a dimension point is reaching and withdrawing.
7. And from the viewpoint to the dimension points there are connection and interchange. Thus new dimension points are made. Thus there is communication.
8. And thus there is light.
9. And thus there is energy.
10. And thus there is life.
11. But there are other viewpoints and these viewpoints outthrust points to view. And there comes about an interchange amongst viewpoints but the interchange is never otherwise than in terms of exchanging dimension points.
12. The dimension point can be moved by the viewpoint, for the viewpoint, in addition to creative ability and consideration, possesses volition and potential independence of action and the viewpoint, viewing dimension points, can change in relation to its own or other dimension points or viewpoints. Thus comes about all the fundamentals there are to motion.
13. The dimension points are each and every one, whether large or small, solid. And they are solid solely because the viewpoints say they are solid.
14. Many dimension points combine into larger gases, fluids or solids. Thus there is matter. But the most valued point is admiration, and admiration is so strong its absence alone permits persistence.
15. The dimension point can be different from other dimension points and thus can possess an individual quality. And many dimension points can possess a similar quality, and others can possess a similar quality unto themselves. Thus comes about the quality of classes of matter.
16. The viewpoint can combine dimension points into forms and the forms can be simple or complex and can be at different distances from the viewpoints and so there can be combinations of form. And the forms are capable of motion and the viewpoints are capable of motion and so there can be motion of forms.
17. And the opinion of the viewpoint regulates the consideration of the forms, their stillness or their motion, and these considerations consist of assignment of beauty or ugliness to the forms and these considerations alone are art.
18. It is the opinions of the viewpoints that some of these forms should endure. Thus there is survival.
19. And the viewpoint can never perish but the form can perish.
20. And the many viewpoints, interacting, become dependent upon one another's forms and do not choose to distinguish completely the ownership of dimension points and so comes about a dependency upon the dimension points and upon the other viewpoints.
21. From this comes a consistency of viewpoint of the interaction of dimension points and this, regulated is TIME.
22. And there are universes.
23. The universes, then, are three in number: the universe created by one viewpoint, the universe created by every other viewpoint, the universe created by the mutual action of viewpoints which is agreed to be upheld -- the physical universe.
24. And the viewpoints are never seen. And the viewpoints consider more and more that the dimension points are valuable. And the viewpoints try to become the anchor points and

- forget that they can create more points and space and forms. Thus comes about scarcity. And the dimension points can perish and so the viewpoints assume that they, too, can perish.
25. Thus comes about death.
 26. The manifestations of pleasure and pain, of thought, emotion and effort, of thinking, of sensation, of affinity, reality, communication, of behavior and being are thus derived and the riddles of our universe are apparently contained and answered herein.
 27. There is beingness, but Man believes there is only becomingness.
 28. The resolution of any problem posed hereby is the establishment of viewpoints and dimension points, the betterment of condition and concourse amongst dimension points, and, thereby, viewpoints, and the remedy of abundance or scarcity in all things, pleasant or ugly, by the rehabilitation of the ability of the viewpoint to assume points of view and create and uncreate, neglect, start, change and stop dimension points of any kind at the determinism of the viewpoint. Certainty in all three universes must be regained, for certainty, not data, is knowledge.
 29. In the opinion of the viewpoint, any beingness, any thing, is better than no thing, any effect is better than no effect, any universe better than no universe, any particle better than no particle, but the particle of admiration is best of all.
 30. And above these things there might be speculation only. And below these things there is the playing of the game. But these things which are written here Man can experience and know. And some may care to teach these things and some may care to use them to assist those in distress and some may desire to employ them to make individuals and organizations more able and so give to Earth a culture of which we can be proud.

Humbly tendered as a gift to Man
by L. Ron Hubbard
April 23, 1953

THIS IS SCIENTOLOGY

Scientology is the science of knowledge. It contains many parts. Its most fundamental division is Scientology itself and Para-Scientology. Under Scientology we group those things of which we can be certain and only those things of which we can be certain. Knowledge itself is certainty knowledge is not data. Knowingness itself is certainty. Sanity is certainty, providing only that that certainty does not fall beyond the conviction of another when he views it. To obtain a certainty one must be able to observe.

But what is the level of certainty we require? And what is the level of observation we require for a certainty or a knowledge to exist? If a man can stand before a tree and by sight, touch or other perception know that he is confronting a tree and be able to perceive its form and be quite sure he is confronting a tree, we have the level of certainty we require. If the man will not look at the tree or, although it is observably a tree to others, if he discovers it to be a blade of grass or a sun, then he is below the level of certainty required and would not be able to grasp Scientology. Some other person, helpfully inclined, would have to direct his perception to the tree until the man perceived without duress that it was indeed a tree he confronted. That is the only level of certainty we require in order to qualify knowledge.

For knowledge is observation and is given to those who would look. Things about which there is observational difficulty, such as mirror mazes, items hidden in smoke, objects guessed at in the dark, are outside the boundaries of Scientology.

In order to obtain knowledge and certainty, it is necessary to be able to observe, in fact, three universes in which there could be trees. The first of these is one's own universe one should be able to create for his own observation in its total form for total perception, a tree. The second universe would be the material universe, which is the universe of matter, energy, space and time, which is the common meeting ground of all of us. The third universe is actually a class of universes, which could be called 'the other fellow's universe', for he and all the class of 'other fellows' have universes of their own. A complete clarity on all three universes would be well above any goal attempted even in Scientology, and it is not necessary that one be as certain as this of three universes before one can be certain of Scientology, for certainty of Scientology requires only the same order of certainty one would have to have to know he was confronting a physical universe tree.

Para-Scientology is that large bin which includes all greater or lesser uncertainties.

Here are the questionable things, the things of which the common normal observer cannot be sure with a little study.

Here are theories, here are groups of data, even groups commonly accepted as 'known'. Some of the classified bodies of data which fall in Para-Scientology are: Dianetics, incidents on the 'whole-track', the immortality of Man, the existence of God, engrams containing pain and unconsciousness and yet all perception, pre-natals, clears, character, and many other things which, even when closely and minutely observed, still are not certain things to those who observe them. Such things have relative truth. They have to some a high degree of reality they have to others non-existence. They require a highly specialized system in order to observe them at all.

Working with such uncertainties one can produce broad and sweeping results: one can make the ill well again, one can right even the day which went most wrong but those things which require highly specialized communication systems remain uncertain to many. Because Dianetics is placed in this category does not mean it is disowned, it means simply that it is a specialized thing based on theory which, no matter how workable, requires specialized observation. It does not mean Dianetics will cease to work, but it means that Dianetics is not easily nor quickly forwarded into a complete certainty.

Yet Dianetics is more of an exact science than many which have before borne that name and Dianetics is an intimate part of Scientology, for it is through its special communication processes that the data was won which has become Scientology.

Also under the heading of Para-Scientology one would place such things as past lives, mysterious influences, astrology, mysticism, religion, psychology, psychiatry, nuclear physics and any other science based on theory.

A doctor, for instance, may seem entirely certain of the cause of some disease, yet it depends upon the doctor's certainty for the layman to accept that cause of the disease. Here we have a specialized communications system. We may have an arduously trained observer, a highly mechanistic observation resting upon a theory which is not, even at this late date, entirely accepted even in the best circles. That penicillin cures certain things is a certainty to the doctor even when penicillin suddenly and inexplicably fails to cure something. Any inexplicable failure introduces an uncertainty, which thereafter removes the subject from the realm of an easily obtained certainty.

Hypnotism, no matter how certain the hypnotist may be that he is effective on some people, is a wild variable and, even in expert practice, is a definite uncertainty. The use of drugs or shock produce such variable results that they class far down a gradient scale which would begin with a fair degree of certainty and which would end with almost no certainty of any kind.

We have here, then, a parallel between certainty and sanity.

The less certain the individual on any subject, the less sane he could be said to be upon that subject the less certain he is of what he views in the material universe, what he views in his own or the other fellow's universe, the less sane he could be said to be.

The road to sanity is demonstrably the road to increasing certainty. Starting at any level, it is only necessary to obtain a fair degree of certainty on the MEST universe to improve considerably one's beingness. Above that, one obtains some certainty of his own universe and some certainty of the other fellow's universe.

Certainty, then, is clarity of observation. Of course above this, vitally so, is certainty in creation. Here is the artist, here is the master, here is the very great spirit.

As one advances he discovers that what he first perceived as a certainty can be considerably improved. Thus we have certainty as a gradient scale. It is not an absolute, but it is defined as the certainty that one perceives or the certainty that one creates what one perceives or the certainty that there is perception. Sanity and perception, certainty and perception, knowledge and observation are and then all of a kind, and amongst them we have sanity.

What will Scientology do? It has already been observed by many who are not that doubtful thing, the 'qualified observer', that people who have travelled a road toward certainty improve in the many ways people consider it desirable to improve.

The road into uncertainty is the road toward psychosomatic illness, doubts, anxieties, fears, worries and vanishing awareness. As awareness is decreased, so does certainty decrease and the end of this road is a nothingness quite opposite from the nothingness which can create. It is a nothingness which is a total effect.

Simplicity, it would be suspected, would be the keynote of any process, any communications system, which would deliver into a person's hands the command of his own beingness. The simplicity consists of the observation of three universes. The first step is the observation of one's own universe and what has taken place in that universe in the past. The second step would be observation of the material universe and direct consultation with it to discover its forms, depth, emptinesses and solidities. The third step would be the observation

of other people's universes or their observation of the MEST universe, for there are a multitude of viewpoints of these three universes.

Where observation of one of these three is suppressed, hidden, denied, the individual is unable to mount beyond a certain point into certainty. Here we have a triangle not unlike the affinity, reality, communication triangle of Dianetics. These three universes are interactive to the degree that one raises all three by raising one, but one can raise two only so far before it is restrained by the uncertainty on the third. Thus, any point on this triangle is capable of suppressing the other two points and any point of this triangle is capable of raising the other two points.

THE TRIANGLE OF CERTAINTY OF AWARENESS

This drawing could be called the scale of awareness. It is also the scale of action and the cycle of action.

The numbers represent entirely arbitrary levels which yet can be found to mean levels of predictable attitudes. It would be found that humanity at this time hovers in terms of awareness at the level of 2.0, slightly above or slightly below here is scarcely any awareness at all compared to the awareness which is available. It is very puzzling to people at higher levels of awareness why people behave towards them as they do such higher level people have not realized that they are not seen, much less understood. People at low levels of awareness do not observe, but substitute for observation preconceptions, evaluation and suppositions, and even physical pain by which to attain their certainties. In the field of Zen Buddhism there is a practice of administering a sudden blow by which is obtained a feeling of certainty. Here is a relatively false certainty -- the certainty of impact, although all certainty actually is derived below the level of 10.0 from prior impact for its conviction. After a brutal accident or operation under anaesthetic, it can be observed that individuals will sometimes react with an enormous conviction which yet does not seem to be based upon any fact. A certainty has been carried home to them in terms of a physical impact. This, then, is not a self-determined certainty and the self-determined certainty carries one into high echelons. The mistaken use of shock by the ancient Greek upon the insane, the use of whips in old Bedlam, all sought to deliver sufficient certainty to the insane to cause them to be less insane.

Certainty delivered by blow and punishment is a non-self-determined certainty. It is productive of stimulus-response behavior. At a given stimulus a dog who has been beaten, for instance, will react invariably, providing he has been sufficiently beaten, but if he has been beaten too much, the stimulus will result only in confused bewilderment. Thus certainty delivered by blows, by applied force, eventually brings about a certainty as absolute as one could desire -- total unawareness. Unconsciousness itself is a certainty which is sought by many individuals who have failed repeatedly to reach any high level of awareness certainty. These people then desire an unawareness certainty. So it seems that the thirst for certainty can lead one into oblivion if one seeks it as an effect.

An uncertainty is the product of two certainties. One of these is a conviction, whether arrived at by observation (causative) or by a blow (effected). The other is a negative certainty. One can be sure that something is and one can be sure that something is not. He can be sure there is something, no matter what it is, present, and there that is nothing present. These two certainties commingling create a condition of uncertainty known as 'maybe'. A 'maybe' continues to be held in suspense in an individual's mind simply because he cannot decide whether it is nothing or something. He grasps and holds the certainties each time he has been given evidence or has made the decision that it is a somethingness and each time he has come to suppose that it is a nothingness. Where these two certainties of something and nothing are concerned with and can vitally influence one's continuance in a state of beingness or where one merely supposes they can influence such a state of beingness, a condition of anxiety arises. Thus anxiety, indecision, uncertainty, a state of 'maybe', can exist only in the presence of poor observation or the inability to observe. Such a state can be remedied simply by eradicating from the past of the individual, first the conviction that the matter is important, next the conviction that it is totally unimportant, next all the times when he was certain of the somethingness and then all the times he was certain of the nothingness. One merely causes the individual to observe in terms of the three universes.

We face, then, two general types of mind. One is an analytical thing which depends for its conclusions upon perception or even creation of things to perceive and bases its judgment on observation in terms of three universes. This we call the 'analytical mind'. We could also call it the spirit. We could also call it the 'awareness of awareness unit'. We could call it the conscious individual himself in the best of his beingness. We could call it the mathematical term thetan. Whatever its name we could have precisely the same thing, a viewpoint capable of

creation and observation of things created which concludes and directs action in terms of the existing state of three universes, as they are observed directly.

The other type of mind resembles nothing if not an electronic brain. It receives its data in terms of conviction, delivered by force. It is directed by and reacts to hidden influences rather than observed influences and is, to a large extent, the reverse image and has reverse intentions to the analytical mind.

This we call the reactive mind. It is an actual entity and it operates in terms of experience and theory. It sets up thinking machinery around uncertainties and the course of its thinking is downward. It seeks to direct and dictate out of pain and the effort to avoid pain.

The primary difference between these two 'minds' is that one, the analytical mind, is without finite duration, and the other, the reactive mind, is susceptible to death.

These two minds are a certainty since they can be observed by anyone, even in himself. He knows he is aware of things around him, and he knows that he has definite desires which are perfectly reasonable and he knows, if he is a homo sapiens or animal, that internal commands and compulsions, even those which tell him to eat and tell his heart to beat, are not directly within his control.

All thinking can then be divided for our purposes into thinking based upon direct observation and conclusions from observation, and thinking which has to know before it can be or observe. Analytical thought can be called analytical thought because it directly observes and analyzes what it observes in terms of observations which are immediately present. The reactive mind concludes and acts entirely on experience and with only a fragmentary regard to things present which could be observed. The reactive mind begins and continues with uncertainties and, where the course of the analytical mind is progressively upward, the course of the reactive mind is progressively downward.

The reactive mind comes into being as a servant of the analytical mind, and is set up by the analytical mind to work upon and store data about the basic uncertainty that there might be something and there might be nothing. The reactive mind then continues in growth and from the servant, if the analytical mind does not observe it, tends to become the master.

The goals of the two minds are not separate goals. The reactive mind is a makeshift effort on the part of the viewpoint to perceive things which it believes to be unperceivable except by comparison of uncertainties. Both minds are seeking to persist and endure through time, which is to say, survive. The analytical mind can, unless it becomes too uncertain and by that uncertainty has set up too many reactive mechanisms, persist indefinitely. The reactive mind pursues the cycle of life span.

The analytical mind seeks by creation to cause an effect the reactive mind seeks by duplication, borrowing, and experience to cause an effect. Both minds, then, are seeking to cause an effect, and this is their entire motivation for action.

Each of the three universes seeks to persist indefinitely. Each is continuously caused, and each is continually receiving an effect. Each has its own adjudication of what it should receive as an effect and what it should cause.

Time itself consists of a continuous interaction of the universes. Each may have its own space each has its own particular energy.

The urge of any of these three universes towards survival is sub-divisible for each of the three universes into eight dynamics. There are, then, four groups of eight dynamics each: the eight dynamics of one's own universe, the eight dynamics of the physical universe, the eight dynamics of the other's universe, as well as the eight dynamics of the triangle itself.

These dynamics could be sub-divided as follows: the first dynamic would be that one most intimate to the universe which could be said to be the dynamic urging the survival of self. The second dynamic would be that one of the persistence of admiration in many forms in one's own and the other's universe. This admiration could take the form of sex, eating, or purely the sensation of creation such as sex and children. In the physical universe it would be that light emanation similar to sunlight. The third dynamic could be said to be that dynamic embracing persistence of groups of objects or entities. The fourth dynamic would concern itself with an entire species. The fifth dynamic would concern itself with other living species and would embrace all other living species. The sixth dynamic would embrace, in terms of survival, the space, energy, matter and forms of the universe as themselves. The seventh dynamic would be the urge to survive of the spirits or spiritual aspects of each universe. The eighth dynamic would be the overall creativeness or destructiveness as a continuing impulse.

Each impulse is concerned wholly with systems of communication. Communication requires a viewpoint and a destination in its most elementary form, and as this grows more complex and as it grows more 'important', communication grows more rigid and fixed as to its codes and lines. The reason for communication is to effect effects and observe effects.

Each of the three universes has its own triangle of affinity, reality and communication. These three things are interdependent one upon another and one cannot exist independent of the other two. Affinity is the characteristic of the energy as to its vibration, condensation, rarefaction, and, in the physical universe, its degree of cohesion or dispersion. Reality depends upon coincidence or non-coincidence of flow and is marked mainly by the direction of flow. It is essentially agreement. Communication is the volume of flow or lack of flow. Of these three, communication is by far the most important. Affinity and reality exist to further communication. Under affinity we have, for instance, all the varied emotions which go from apathy at 0.1 through grief, fear, anger, antagonism, boredom, enthusiasm, exhilaration and serenity in that order. It is affinity and this rising scale of the characteristics of emotion which give us the tone-scale. The tone-scale can be a certainty to anyone who has seen other beings react emotionally, who has himself felt emotion, and who has seen the varied moods of the physical universe itself. The periodic chart of chemistry is itself a sort of tone-scale.

There is a downward spiral on the tone-scale and an upward spiral. These spirals are marked by decreasing or increasing awareness. To go up scale one must increase his power to observe with certainty to go down scale one must decrease his power to observe. There are two certainties here. One is a complete certainty of total awareness which would be at 40.0 on the tone-scale, and the other is a certainty of total unawareness which would be 0.0 on the tone-scale or nearly so. Neither end, however, is itself an absolute for the analytical mind, and the analytical mind can go below 0 of the reactive mind. However, these two classes of certainty are very wide in their satisfaction of the qualifications of a certainty. Because the two extremes of the scale are both zeros in terms of space, it is possible to confuse one for the other and so make it appear that total awareness would be total unawareness. Experience and observation can disabuse one of this idea. The scale is not circular.

The characteristics and potentiality of the top of the scale or near the top of the scale are unbounded creation, outflow, certainty, going-awayness, explosion, holding apart, spreading apart, letting go, reaching, goals of a causative nature, widening space, freedom from time, separateness, differentiation, givingness of sensation, vapourisingness, glowingness, lightness, whiteness, desolidifyingness, total awareness, total understanding, total ARC.

The bottom of the scale and the vicinity around it includes death, inflow, certainty, coming-backness, implosion, letting-come-together, pulling together, holding together, withdrawing, effect goals (ambition to be an effect rather than a cause), contracting space, no time or infinite time in a moment, connectingness, identification, identity, receivingness of sensation, condensation, blackness, solidification, no-awareness, no understanding, no ARC.

The various characteristics or intentions are observable for any dynamic and any universe.

Between these two extremes is the mean of action where complete freedom to do any of these things of the top or bottom of the scale is exercised. Therefore, somewhere between 3.5 on the tone scale and 36.5 there is action.

The above conditions of top and bottom of the scale, of course, reach away from the extreme and towards each other.

As awareness becomes more fixed, intentions become less flexible in action. Communications systems become more rigid, more complex and less susceptible of alteration. One alters these communications systems, however, by raising or lowering certainty on the three universes.

The principal difference between the analytical mind in a state of awareness itself, and the reactive mind, is that the analytical mind, highly aware, knows that it is not the thing but is the viewpoint of things. Of this it can be very certain as it increases in awareness.

The reactive mind conceives itself to be the thing. The analytical mind is in a state of becoming without reaching the point of being. The reactive mind conceives itself to be in a state of being and so resists becoming.

Perception is accomplished by the analytical mind in a high state of awareness by its own outflow and inflow or by its receipt of inflows which it can outflow. The reactive mind perceives by inflow only, and makes complete recordings of the inflow.

The analytical mind is capable of developing its own energy. It is the energy of the analytical mind which empowers the reactive mind, but the reactive mind can be empowered as well by the energy of other minds and by the life energy contained in any living thing. Thus the reactive mind can become the servant of all things, it can believe it is anything, it can believe it is owned or has the identity of anyone, regardless of whom it was created to serve. The analytical mind serves itself in a continuing knowledge of serving itself, but it serves as well and knows it serves the other two universes.

The analytical mind extends from it points or observes points extended from it and thus conceives space. Space is only the viewpoint of dimension. The dimension depends upon those points which give it boundary. Within these dimensions called space, the analytical mind can create energy and form and thus, by change of form, beget time.

Whether created by or within any one of the three universes, flow of energy is accomplished by setting up a terminal and flowing towards it from a viewpoint a stream of energy or by setting up two terminals and causing a flow between them. Each universe could be said to be a two-terminal universe, but flows can be set up on a basis of more than two terminals. The basic unit of any universe in terms of energy is two. This, however, does not restrict nor qualify the number of viewpoints which any universe can have.

A physical universe, however, is observably a two-terminal universe and a two-point universe, and it is also observable that the other two universes set up almost invariably two terminals or more and utilize two viewpoints each.

Very low on the scale in terms of awareness, the analytical mind conceives itself to be the reactive mind and so does not act or perform to put out dimension points so as to get space, and does not generate for its own accountability energy. It does, however, always generate energy whether it admits it is doing so or not.

The concern of two viewpoints is attention. Each viewpoint is apt to be curious about or desire the attention of another viewpoint. The most valuable part of an attention interchange is admiration. Admiration is a special particle. It is a universal solvent. It is the very substance of a communication line, and it is that thing which is considered desirable in the game of the three universes. Admiration goes into the interplay of the universes in the form of made-up objects or

even in the form of bodies. These made-up objects could be called 'creative pictures'. These, as they become more complex in form, take on the aspect of a life of their own and become animated beings.

Two viewpoints setting up terminals to be viewed by the other viewpoint demand attention one from the other and will invent all manner of 'reasons' to command the continuing attention of the other viewpoint. One of the primary methods of operation is to make one's object or action of object so strange that the other viewpoint cannot look away. Another is to make the object or action of object so artistic or colorful or interesting that the other viewpoint cannot look away. Another method is the command by force for attention. Another method is to inhibit the attention so as to invite it solely to one's objects.

One can plot this as a cycle of demand for attention with curiosity below 40.0, desire below that, enforcement down to as low as 1.5 on the scale, and inhibition at 1.1 on down. The lowest methods of this scale are quite observable amongst men, and the primary operation, very low on the scale, is inhibition of attention elsewhere. By cutting the communication lines of another viewpoint, an effect is created on the other viewpoint by which that viewpoint fixes with whatever emotion (since any attention is better than no attention) upon the products or objects of that one who cut the communication line. There are many methods of cutting communication lines. A common one could be summarized as 'It's too horrible over that way for you to look'. Viewpoints are thus given the understanding that they are surrounded by horrible things which they have never perceived and which, indeed, have never existed but which are said to be there so that they will be forced to give attention.

Hidden influences are the commonest methods of enforcing attention. Of course, any analytical mind is itself a hidden influence since it cannot as itself be perceived. Only its energy and objects can be perceived. Thus comes about the worship of the hidden influence, the fear of the hidden influence, the neurosis about hidden influences.

The goal of seeking attention is to receive the particle admiration. One creates effects simply in order to create effects, but he is given the bonus of admiration when he creates sufficient effect or, what is most important, when he demands, commands and is able to effect admiration by duress.

It might be said that there was no eating until one was so furious about not being admired that one slew as a punishment. The tiger, walking through the woods with his beautiful stripes, it could be humorously offered, would never have eaten a thing and would not be eating today if some monkey had not chattered insults at him instead of admiring him. The tiger compelled the admiration of the monkey by pinning him down and eating him up. It can be observed that the eating of living flesh or live cells delivers a kind of admiration to the taste, and it can be observed that under torture, duress of all kinds, the tortured one will suddenly, if degradedly, admire his torturer.

Energy pictures which we call 'mock-ups' are created things which themselves contain admiration. It could be said that these are prior to bodies. The acquisition of admiration by pain, by eating, or by devouring something that belongs to somebody else was later succeeded by a better communications system which would prevent eating on such a rigorous scale. This thing was sex, which is an interchange of condensed admiration particles which forwards new bodies into being. So far as the body of homo sapiens is concerned, its desire not to be eaten has been answered evidently by sex, and sex performs the function of continued survival of form. Thus, so long as one has the symbol of sex to offer, one feels relatively secure and when he does not have that symbol to offer, one feels insecure.

But of this evolution of admiration and of evolution itself, we have no high degree of certainty as we first begin to observe, and it is offered here as an explanation of why it is a thing we do not particularly need and a thing of which we will or will not gain a future certainty as we go up the scale of awareness. Many things are non-existent low on the scale. Many things are uncertain on the scale at low levels, which become high level certainties up on the

scale but this certainty only depends on the positiveness of observation or the positiveness of observation which says the thing does not exist. It is not the purpose of Scientology to present an uncertainty and then demand that it be accepted, for here is the gradient scale of a process by which one can become more certain. If there be immortality or even the lack of necessity on the part of the analytical mind to be a specific object, then one will find it out in due course as he is processed. If they do not exist, again one will find it out. This would be a matter of progressive observation. Where a thing exists in the form of an uncertainty it has a tendency to plague the reactive mind, for the reactive mind itself deals only with uncertainties and its convictions are based entirely on blows and pain.

A very basic uncertainty comes about on the subject of applause. High on the scale one performs for an effect and knows that it is an effect, whether or not there is any attention or admiration, which is to say applause. A little lower on the scale, one desires a nod or the actual substance of admiration. If it does not come, he is not concerned. But even lower on the scale the individual actively invites and requests applause. Lower than that, he becomes angry in the absence of applause. Lower than that, he exhibits fear, grief, and apathy in the lack of applause. Apathy is the realization that there will never be any applause for any effect.

That which is not admired tends to persist, for the reactive mind does not destroy. One can become fixed upon producing a certain effect simply by insisting that it be admired. The longer it is not admired, the longer one is likely to persist in demanding that it be admired, which is to say exhibiting it, until at length it breaks down scale to a lower level and he realizes it will not be admired, at which time he becomes the effect of it. Here one has become the effect of one's own cause. Here is the psychosomatic illness which began as a pretended infirmity in order to create an effect. Perhaps it was once applauded but not sufficiently, and after a while was not applauded at all, and one was forced to applaud it himself and believe it himself and so it came into existence and was for him a certainty. This, too, is the course of responsibility which degenerates into irresponsibility. At the top of the scale one knows that he is causing the effect.

Lower on the scale he says he is not causing the effect (even though he is causing the effect, only he knows he causes it). Even lower on the scale he does not take the middle step he causes an effect and instantly believes that something else caused the effect rather than himself and that he is the effect of the effect.

One can see cause and effect working in terms of viewpoints. If one has not been applauded for many things, one will begin to take the position of the audience. One does the trick, creates the thing, and then goes out front, sits down over the whole theater and applauds it, for one can be a knowing viewpoint from many places. This is often the case with a writer who is seldom confronted by his readers. Indeed, most editors are so low toned that they cut off all the admiring letters of a writer and leave him to wonder. As other things influence the writer, he goes down scale to a point where he believes the things he writes are not admired, and so he has to go out and sit in the audience. This is the first step to becoming the effect of his own cause. After a while he thinks he is the audience. When he does this, he is no longer the writer. Thus with the painter, thus with anyone.

The little child is quite bent on causing effects and getting things admired. He is continually being evaluated in terms of what is to be admired.

Evaluation is the reactive mind's conception of viewpoint. The reactive mind does not perceive, it evaluates. To the analytical mind it may sometimes appear that the reactive mind has a viewpoint. The reactive mind does not have a viewpoint, it has an evaluation of viewpoint. Thus the viewpoint of the analytical mind is an actual point from which one perceives. Perception is done by sight, sound, smell, tactile, etc. The reactive mind's 'viewpoint' is an opinion based on another opinion and upon a very small amount of observation, and that observation would be formed out of uncertainties. Thus the confusion of the word viewpoint itself. It can be a point from which one can be aware, which is its analytical definition, and it can be somebody's ideas on a certain subject which is the reactive definition.

Because the analytical mind and reactive mind in men can become confused, one with the other, one is most prone to assume the actual perception point of that person who has most evaluated for him. Father and mother, for instance, have evaluated about art, habits, goodness, behavior, badness, how one should dress, what manners are, to such a degree that the child has no choice, it seems to him, but to assume their 'points to look from', and so we will find the child observing things as his father or mother would observe them and even wearing his father's glasses or his mother's glasses as he grows older. He has confused evaluation with actual perception. Where he has been told that he is bad looking, ugly, ridiculous, unmannerly, crude and so forth by somebody else continually, his reactive mind (which, like a prostitute, cares nothing for its master and serves anyone) eventually causes him to lose his viewpoint of himself and he sees himself not by observation but by evaluation as something undesirable. Of course, he would rather be something than nothing. He has, indeed, a horror of being nothing. So it is better to be something ugly about which he is guessing than to be nothing at all, and so he persists and continues as he is. Furthermore, because he has been talked to so much about talking, about looking, about perceiving in general, he has gotten the idea that his communications system is unalterable. His whole business of living actually is a communications system with the motivation of causing effects. Thus the lower he is on the tone scale the more he persists without change except downward.

The characteristic actions of the energy produced by the analytical mind are summarized above in terms of the top and bottom of the scale. However, the most important of these seem to be reaching and withdrawing. In the MEST universe, we have start, stop, and change as the characteristics of motion. The analytical mind, however, with its dimension points, is more concerned with reaching and withdrawing. This is the way it perceives. It can control by creating or using energy such as that in the physical universe, and it uses this energy to start, stop, and change other energy. But in itself, its handling of dimension points direction consists of reaching and withdrawing. Compulsive reaching, compulsive withdrawing, bring about many odd and interesting manifestations.

The sensation of pain is actually a sensation of loss. It is a loss of beingness, loss of position and awareness. Therefore, when one loses anything, he has a tendency to perceive less, for there is less to perceive. Something has withdrawn from him without his consent. This would be the definition of loss. This brings about eventually a condition of darkness. This could also be called an ARC break. If he has lost something, the guilty party is probably in the other two universes. It is either the physical universe or another's universe which has caused the loss. Thus he has less communication since he is unwilling to communicate, which is to say, put out things in the direction of something which is going to take them and carry them away without his further consent. This brings about a reduction of the desire to be aware which is the reduction of affinity, reduction of agreement (reality) and the reduction of communication in general. In a moment of severe disappointment in one's fellow man, the universe around him actually grows dark. Simply as an experiment, one can say to himself that he has the only viewpoint there is, that all other viewpoints are simply mocked up by him, he will get an almost immediate diminution of lightness around him. This is the same mechanism as the mechanism of loss. The result of too much loss is darkness.

Another mechanism of the darkness and unawareness settling over a person is brought about by the loss of a viewpoint which has greatly evaluated for one. One has had a mother or a father who over evaluated about everything, and then this parent or guardian or ally in life, such as a teacher, died or inexplicably disappeared. One was depending for actual looking, seeing, hearing, upon the continued existence of this individual. Suddenly that individual goes and all becomes dark. After that one is not able to perceive one's own universe, for one was most of the time actually perceiving the lost person's universe, and now that universe is no longer there, which gives one the idea that he has no universe to perceive. This even dims his perception of the physical universe, of course, because of the interdependence of the triangle of the three universes.

When one has had an insufficient amount of admiration from sexual partners, the physical body which depends mainly upon sex for its sensation and continuance to almost as

great a degree as upon eating, will actually begin to change viewpoint to the other sex. Thus we find some older men becoming as women, some older women becoming as men.

Thus we get the failure of the androgen and estrogen balances and the resultant decay of the body. Here in the matter of sex, one finds reaching and withdrawing rising to considerable magnitude. The reactive mind operating the body conceives itself to be withdrawing and does not know from what it is withdrawing, for it perceives itself to be under the compulsion of reaching and does not know for what it is reaching.

In terms of processing, it is withdrawing from or reaching towards sexual partners. When it withdraws a great deal, or when it has been withdrawn from a great deal, the reactive mind conceives the body to be covered with blackness. This resolves in terms of sex and eating. It should be fully understood, however, that this is the resolution of the problem of the body and this resolution is employed only when the analytical mind cannot be brought itself into an immediate height of awareness, using SOP 8.

When one addresses the body itself, and only the body, one addresses the subject of sex and the subject of eating in terms of reaching and withdrawing. The particular processes used on this are called matched terminalling or double terminalling. This is done in the following fashion. Even when the individual cannot create forms of his own, he can at least create two ideas in front of him. He can put a form with an idea or an idea itself facing another idea out in front of him, both of them exactly alike, 'withdrawing from sex', 'reaching towards sex'.

He will very often find other terminals he did not create suddenly appearing. When he has run withdrawing, those things he puts up will be black and the object from which it is withdrawing will be white. He should get the idea that the whitish object is reaching and the blackish object is withdrawing.

He should then run this identical terminal as though it is being put up by somebody else not himself, again with withdrawing for blackness, reaching for greyness. And then he should run it as though somebody is putting it up for somebody else other than himself.

These three causations of putting up this identical idea facing itself are himself, another for him, and others for others. This is called Matched Terminalling. Double Terminalling simply puts up two pairs of matched terminals. The pairs may each be of two different things but each pair contains one thing the same as the other pair in other words, husband and wife is one pair and husband and wife is the other pair. These, parallel, give one the two-terminal effect necessary for a discharge. One will find that these terminals discharge one against the other.

However, this is a physical body technique and it is limited in use. If one becomes very ill in doing it, he should turn to what is called later on an unlimited technique or he should do the next to last list in the book *Self Analysis in Scientology* and do it over and over, or he should simply go straight through Short Eight.

It has many remedies. This Matched Terminalling for oneself, others for oneself, and others for others on the subject of reaching and withdrawing on sex, can of course be considerably expanded as a technique. It can have in it compulsion to reach, compulsion to withdraw, compulsion to reach while somebody else is withdrawing compulsion not to reach, and it can be addressed in terms of all those complexes and things which Sigmund Freud observed empirically while investigating in his practice.

Sigmund Freud observed, even as you may have observed, that a person's concern and trouble with his body commonly began at the age of puberty, and that a curve of his ups and downs did sudden changes at those points where he was defeated sexually, where his sexual impotence ceased and where it increased. Dr Freud unfortunately developed no fast or deeply workable techniques to resolve problems posed by these observations, mainly because the

selection of sex as the prime motivator was not the selection of the basic mechanics of beingness.

However, the brilliance of Freud's theories and his extrapolations from a limited amount of data, and his courage in standing before a whole world and declaring that an unpopular subject was the root of all evil, has no parallel in history. The complexes he mentioned, each and every one, are discoverable in the mind by direct observation or electropsychometry and are resolvable in the body by the technique of 'Matched Terminals in Brackets' which is the proper name for the above.

Where the level of the case is Step IV or Step V or below in SOP 8, it is necessary to free the analytical mind of the grip of the body. The analytical mind cannot withdraw. The body is most swiftly reduced to compliance by running the second dynamic. This is very far from the end of all of processing, but it is the fastest method I have developed for remedying occlusion or accomplishing exteriorization in low step cases. In sex and eating, the body desires to be an effect most strongly and in these things one does find the strongest desire on the part of the body in terms of immediate accessibility. The analytical mind, on the other hand, can create its own sensation, but it has become dependent upon the body. Even so, it is that part of the beingness which desires to give sensation rather than receive it. Thus, one has the conflict of desire to give sensation crossed with the desire to receive sensation on the part of the reactive mind.

The body's desire to receive sensation is so strong that an extremely powerful and persistent uncertainty ('maybe') develops, and the primary conflict of the analytical mind and the body's reactive mind comes about. I cannot help but give forth my own admiration to a man who, working without prior art, without electropsychometry, without nuclear physics, without any broad observation of primitive tribes or ethnology in general, separated from his conclusion by every convention of his age, yet hit upon and set forth with the weight of logic alone, the center of disturbance in the human body.

He did not live to see his theory completely validated. He was deserted by his students, who began to write fantastic theories, completely unworkable and far from the point, which yet were better accepted.

In discouragement, at the end of his career, he wrote a paper called Psychoanalysis, Terminable and Interminable. Freud, with no method of direct observation, spoke of pre-natals, birth trauma, and verbally, if not in writing, of past existences and of the continuing immortality of the individual. No praise can be great enough to give such a man, and the credit I give him for my own inspiration and work is entirely without reservation or bounds. My only regret is that I do not know where he is today to show him his 1894 libido theory completely vindicated and a Freudian psychoanalysis delivered beyond his expectations in five hours of auditing.

The analytical mind can be processed directly, and it improves simply by changing its mind about things. But so long as it believes itself to be closely dependent upon the reactive mind and the body, it cannot change its opinions. These opinions, however, are not simple shifts of mind. They are changes of experience.

The analytical mind must discover that it can perceive, that it can perceive accurately in three universes, that it does not need to be dependent upon the body and that it can handle any reactive mind. This is done by increasing its powers of perception, increasing the number of viewpoints it can assume, and increasing its ability to locate spaces, actions and objects in time and space, and by increasing its ability above that to create space, energy and objects. This is done by drills and by the procedure of the first three steps of SOP 8.

It should not for one moment be thought that one is trying to perform by the gradient scale of increasing certainties in Scientology all the tricks and exhibitions of which the ancients speak. We are not even vaguely interested in moving physical universe objects, throwing

lighting about, or in creating solids which can be seen by others. We are only interested in the rehabilitation of the analytical mind to a point where it can handle any reactive mind, whatever its proximity to that reactive mind. We are not interested, in other words, in the objective reality from another viewpoint of the capabilities of the analytical mind in performing various types of tricks.

Whether it can do these things or not do these things falls into the realm of Para-Scientology, for it is completely beyond the ability to be certain where the analytical mind is not processed well up and where the observer is very low on the tone scale. We are not trying to achieve the certainty of mysticism, necromancy, or, to be blunt, the Indian rope-trick. We are trying to make sane, well beings.

The analytical mind, when it is in close proximity to the body, is unwittingly continually restimulating a reactive mind which, some say, evolved through very difficult and savage stages. just as Freud said, the suppression in the mind is the suppression of things so bestial, so savage that the preclear undergoing professional processing is extremely shocked.

Almost anything, and almost any impulse, including a thirst for pain and a desire to create any kind of effect, no matter how bad, will manifest itself while processing the reactive mind. Cannibalism, purely for sensation, so as to get the last remnants of admiration of the tortured and dying being, becomes a subjective certainty to the preclear who undergoes processing and has to have his reactive mind addressed before he can be himself, which is, of course, his analytical mind. The more suppression his reactive mind gets, the more it restimulates its beastliness.

The analytical mind is basically good. It has suffered from this proximity to the reactive mind. It is no wonder that Plato wrote as he did in an essay about the conduct and behavior of man. It is no wonder that states are completely convinced that man is a beast and must be held in check at pistol point. The wonder is that in a civilized world, so few crimes are committed. Our desire is to reach the basic goodness of the individual and bring him into a level of activity where he does not have to do terrible and gruesome things in order to produce an effect.

There are various levels as one goes up scale where these manifestations seem to be the all and everything of existence. One becomes completely downhearted at the thought that one goes upscale simply to get to a point where he can kill and maim and hurt with impunity. One's feelings of honor, ethics, all his finer beingness, is revolted at the idea that this is, in actuality, life. He should say instead that this is life in a stupid conflict of uncertainties. The goal is not to get above such things and ignore them. The goal is to achieve the basic decency which is inherent in all of us.

Although I have given you here 'Matched Terminal Brackets' on the subject of reach and withdraw, with particular attention to sex, you must understand that this is a professional auditor's technique. The first three steps of SOP 8. when they can be done, can be done by alert, interested people. From Step IV down, a professional auditor is not simply desirable, he is completely necessary.

This technique which I have given you here turns on, when one runs its compulsive aspects, particularly when one must reach and can't reach, the emotion which we see in sanatoriums which is called insanity. And although the turn-on is brief and temporary and would wear away in about three days, an inexperienced auditor could become quite frightened. Simply by carrying on with the technique or by getting back to unlimited techniques or by taking Self Analysis with its next to last list, these things could be remedied, but these techniques walk on the rim of hell where they are addressed to cases below the level of IV.

If the test subject or the preclear cannot make space, which is to say Step III of SOP 8, let a professional auditor have him. The professional auditor, by using 'Matched Terminal Brackets' of reach and withdraw with attention to sex, will be able to exteriorize this analytical

mind and turn on its perceptions. This is skilled work, however, and is a little too shockingly intimate to the seamier side of life for tender hands and tender minds.

Even the operation of wasting which is contained in expanded GITA is capable of turning on a vast amount of illness and somatic on the part of the preclear. Expanded GITA is a limited technique, which is to say it can be audited perhaps only for ten minutes, and at the most for 50 or 60 hours, without finding the preclear on the down grade. One has to turn to an unlimited technique such as contained in Short Eight if the preclear becomes too ill trying to waste things.

Just because an unlimited technique is labelled unlimited is no reason why it is a faint technique. These unlimited techniques are extremely powerful. They're very simple, but again, when one of them becomes too strong for the preclear, it is necessary to turn on to something simpler and easier.

Simply getting the idea in two places, the idea, so to speak, facing the idea 'There by nothing', will turn on a sick sensation in many preclears. This fear of being nothing is very great. He will be anything rather than nothing.

A safe technique is that technique which always -- I repeat, always: deals in things of which the preclear is certain. When one deals with uncertainties, one is dealing with circuits. One can use double terminalling, which is to say, two pairs of matched terminals, of the preclear being certain of things.

One never runs things or puts the preclear up against things of which one is uncertain or of which the preclear is uncertain, if one wishes the preclear to come on up the tone scale. As an example of this, on any object, thing or idea, on any psychosomatic ill or numb portion of the body, one has only to run 'There is something there, there is nothing there'.

Have it saying 'There is something here, there is nothing here'. One can do a complete bracket on this, having the numb or painful or injured area saying, 'There is something here, there is nothing here', having it then say, 'There is something there, there is nothing there', having the preclear say about the area, 'There is something there, there is nothing there', and then the preclear about himself, 'There is something here, there is nothing here'. This makes a complete bracket. This turns on and off interesting somatics.

A professional auditor could get the somatic or numb area to get the feeling it is reaching while the preclear is withdrawing, the preclear reaching while it is withdrawing, and bring about a change in any somatic.

As one is dealing with communications systems, one must realize that communication depends upon certainty of despatch and receipt, and certainty of what it is that is being despatched and received. Thus one does not deal in uncertainties. There is something, there is nothing, are of course, observable certainties because one is top-scale, the other is bottom-scale. One does not say what the something is and, of course, nothingness needs no qualifications.

In the case of the person who has been and is trying to become again, one should run out by concepts the former successes, the triumphs of that person and the times when he was absolutely certain he had failed. One does this with double terminals or 'Matched Terminal Brackets'. This is a professional technique.

It was mentioned to me by Meredith Starr, one of the great mystics from Cyprus, that Jung had once had a great experience and had sought ever since to recover it. He gave this as another man's opinion of Jung. This gives you some clue as to what happens to someone who has a great triumph. He ever afterwards is not seeking to duplicate the triumph, he is seeking the triumph itself. This puts him back on the time-track. This is particularly applicable to old

people. One hangs, then, on to certainties. The certainties are important. The uncertainties are important only in their production of psychosis.

It is possible to take a sick animal and rehabilitate his idea that he is dangerous by dodging every time he strikes out, no matter how faintly, at one. It is possible to rehabilitate an individual who is very low on the tone-scale merely by coaxing him to reach out and touch the material universe and, touching it, to be certain that it is there, and having touched it, to withdraw the touch and to be certain that he could withdraw.

Certainty is a wonderful thing. The road toward realizing what certainty is has led these investigations through many uncertainties. One had to find out what was, before one could find out what could be.

That work is done. It is possible to take large groups and, using Short Eight, to bring them, each and every one, into higher levels of certainty. And bringing them into higher levels of certainty brings them into higher levels of communication, communication not only with their own bodies but with others and with the material universe. And as one raises that level of awareness, one raises also the ability to be, to do, to live.

Today this world suffers from an increasing incidence of neurosis brought about by a dependency upon mechanical things which do not think, which do not feel but which can give pain to those that live. It suffers with an overdose of agreement that there is only one universe. So long as it believes that there is only one universe, that there is only one universe to study, to be studied, only one universe to agree with, it will continue to seek the lowest end of the scale, which is to say, that point where all universes become one universe. Where the triangle vanishes to a single point it vanishes completely, and where one studies but one corner of the triangle and ignores the other two corners of the triangle, and agrees only with one corner of the triangle such as the physical universe, one will tend toward that point where that corner of the triangle is coincident with the other two corners, and this is death.

The curse of this world is not actually its atom bomb, though that is bad enough. The curse of this world is the irresponsibility of those who, seeking to study but one universe, the physical universe, try to depress all beings down to the low order of mechanically motivated, undreaming, unaesthetic things.

Science as a word has been disgraced, for the word science means truth and truth means light. A continual fixation and dependence upon only one universe while ignoring the other two universes leads to darkness, to despair, to nothingness. There is nothing wrong with the physical universe one should not cease to observe the physical universe, but one certainly should not concentrate upon it so that he can agree with it and its laws only. He has laws of his own. It is better, far better, for the individual to concentrate upon his own universe than to concentrate upon the MEST universe, but this in itself is not the final answer. A balance is achieved in the three universes and certainty upon those universes.

All control is effected by introducing uncertainties and hidden influences. 'Look how bad it is over there, so you'll have to look back at me.' This slavery is effected solely by getting people to fix on one thing. That one thing in this case is the physical universe.

Science, so called, today produces machines to blow your nose, produces machines to think for you, produces every possible argument as to why you should consider your body frail and unexpendable. Science, under the domination of capital, creates scarcity. It creates a scarcity of universes in fixing one upon one universe only. Those things which are scarce are those things which the individual has lost his faith in creating, in having. An individual who cannot create has to hold on to what he has.

This leads him into holding on to what he has had. Where he has had a certainty in the past that something existed, he begins to grip it closer and closer to him his space lessens, his beingness lessens, he becomes less active. The reactive mind that cannot create children, has

lost its hope of creation. It then can influence the analytical mind into believing that it can no longer create. The analytical mind creating artistically in the MEST universe and not in its own universe at all, and not in other people's universes that it can recognize, goes down scale until it meets on its own level the reactive mind. And here at this level we find the enslaver, the person who makes things scarce, the fellow who uses his ethics, so called, to enforce his crude judgments and to make things out of beings that could be men.

Here, where the reactive mind and the analytical mind have come into a parity, we have the only effect that can be produced -- the effect of pain. Where we have an active desire for pain masking in a thousand guises, where every good impulse high on the scale is turned into a mockery, here we have crime, here we have war. These things are not awareness. These things merely act on a stimulus-response mechanism. Up scale is the high, bright breadth of being, breadth of understanding, breadth of awareness. To get there all one must do is to become aware of the existence of the three universes by direct observation.

STANDARD OPERATING PROCEDURES

STEP I --

Ask preclear to be three feet behind his head. If stable there, have him be in various pleasant places until any feeling of scarcity of viewpoints is resolved. Then have him be in several undesirable places, then several pleasant places then have him be in a slightly dangerous place, then in more and more dangerous places until he can sit in the center of the Sun. Be sure to observe a gradient scale of ugliness and dangerousness of places. Do not let the preclear fail. Then do remaining steps with preclear exteriorized.

STEP II --

Have preclear mock up own body. If he does this easily and clearly, have him mock up own body until he slips out of it. When he is exteriorized and knows it thoroughly (the condition of all exteriorization) do STEP I. If his mock-up was not clear, go to STEP III immediately.

STEP III -- SPACATION

Have preclear close his eyes and find upper corners of the room. Have him sit there, not thinking refusing to think of anything, interested only in the corners until he is completely exteriorized without strain. Then do a spacation (constructing own space with eight anchor points and holding it stable without effort) and go to STEP I. If preclear was unable to locate corners of the room easily with his eyes closed, go to STEP IV.

STEP IV -- EXPANDED GITA.

This is an extension of Give and Take processing Test preclear to see if he can get a mock-up he can see, no matter how vague. Then have him WASTE, ACCEPT UNDER DURESS, DESIRE and finally be able to take or leave alone each of the items listed below. He does this with mock-ups or ideas. He must do the sequence of waste -- etc. in the order given here for each item. He wastes it by having it at remote distances in places where it will do no good, being used or done or observed by something which cannot appreciate it. When he is able to waste it in vast quantities the auditor then has him accept it in mock-up form until he no longer is antagonistic to having to accept it even when it is unpleasant and great force is applied to make him take it. Again, with mock-ups, he must be able to bring himself to desire it even in its worst form then, by mock-ups of it in its most desirable form he must come to be able to leave it entirely alone or take it in its worst form without caring. EXPANDED GITA remedies contra-survival abundance and scarcity. It will be found that before one can accept a very scarce (to him) thing, he has to give it away. A person with a milk allergy must be able to give away, in mock-up, enormous quantities of milk, wasting it, before he can accept any himself. The items in this list are compounded of several years of isolating what factors were more important to minds than others. The list lacks very few of the very important items, if any. Additions to or subtractions from this list should not be attempted. Viewpoint, Work and Pain should be heavily and often stressed and given priority.

Waste, Have forced Upon, Desire, Be Able to Give or Take, in that order, each of the following: (Order of items here is random.) Viewpoint, Work, Pain, Beauty, Motion, Engrams, Ugliness, Logic, Pictures, Confinement, Money, Parents, Blackness, Police, Light, Explosions, Bodies, Degradation, Male Bodies, Female Bodies, Babies, Children Male, Children Female, Strange and Peculiar Bodies, Dead Bodies, Affinity (Love), Agreement, Beautiful Bodies, People, Attention, Admiration, Force, Energy, Lightning, Unconsciousness, Problems, Antagonism, Reverence, Fear, Objects, Time, Eating Human Bodies, Sound, Grief, Beautiful Sadness, Hidden Influences, Hidden Communications, Doubts, Faces, Dimension Points, Anger, Apathy, Ideas, Enthusiasm, Disagreement, Hate, Sex, Reward, Eating Parents, Eaten by Mother, Eaten by Father, Eating Men, Eaten by Men, Eating Women, Eaten by Women, Start, Broken Communications, Written Communications, Stillness, Exhaustion,

Stopping Motion Women, Changing Motion Women, Changing Motion Men, Changing Motion Babies, Changing Motion Children, Starting Motion Men, Starting Motion Women, Starting Motion Children, Starting Motion Objects, Starting Motion Self, Omens, Wickedness, Forgiveness, Play, Games, Sound, Machinery, Touch, Traffic, Stolen Goods, Stolen Pictures, Homes, Blasphemy, Caves, Medicine, Glass, Mirrors, Pride, Musical Instruments, Dirty Words, Space, Wild Animals, Pets, Birds, Air, Water, Food, Milk, Garbage, Gases, Excreta, Rooms, Beds, Punishment, Boredom, Confusion, Soldiers, Executioners, Doctors, Judges, Psychiatrists, Alcoholic Liquor, Drugs, Masturbation, Rewards, Heat, Cold, Forbidden Things, God, The Devil, Spirits, Bacteria, Glory, Dependence, Responsibility, Wrongness, Rightness, Insanity, Sanity, Faith, Christ, Death, Rank, Poverty, Maps, Irresponsibility, Greetings, Farewells, Credit, Loneliness, Jewels, Teeth, Genitalia, Complications, Help, Pretense, Truth, Lies, Assurance, Contempt, Predictability, Unpredictability, Vacuums, White Clouds, Black Clouds, Unattainables, Hidden Things, Worry, Revenge, Textbooks, Kisses, The Past, The Future, The Present, Arms, Stomachs, Bowels, Mouths, Cigarettes, Smoke, Urine, Vomit, Convulsions, Saliva, Flowers, Semen, Blackboards, Fireworks, Toys, Vehicles, Dolls, Audiences, Doors, Walls, Weapons, Blood, Ambitions, Illusions, Betrayal, Ridicule, Hope, Happiness, Mothers, Fathers, Grandparents, Suns, Planets, Moons, Sensation, Looking, Incidents, Waiting, Silence, Talking, Knowing, Not Knowing, Doubts, Fac One, Remembering, Forgetting, Auditing, Minds, Fame, Power, Accidents, Illnesses, Approval, Tiredness, Faces, Acting, Drama, Costumes, Sleep, Holding Things Apart, Holding Things Together, Destroying Things, Sending Things Away, Making Things Go Fast, Making Things Appear, Making Things Vanish, Convictions, Stability, Changing People, Silent Men, Silent Women, Silent Children, Symbols of Weakness, Symbols of Force, Disabilities, Education, Languages, Bestiality, Homosexuality, Invisible Bodies, Invisible Acts, Invisible Scenes, Accepting Things Back, Games, Rules, Players, Restimulation, Sexual Restimulation, Space Reduction, Size Reduction, Entertainment, Cheerfulness, Freedom for Others to Talk, Act, Feel Pain, Be Sad, Thetans, Personalities, Cruelty, Organizations, TRY FIRST: Healthy Bodies, Strong Bodies, Good Perception, Good Recall.

WARNING: Should your preclear become unstable or upset doing this process take him to STEP VI. Then return to this list.

COMMENT: The mind is sufficiently complicated that it can be expected to have computations on almost all the above. Thus there is no single clearing button and search for it is at the dictate of a circuit, the mechanism of circuits being to search for something hidden. Thus, your preclear may begin to compute and philosophize and seek to find the 'button' that will release all this. All this releases all the buttons so tell him to relax and go on with the process every time he starts to compute.

NOTE: Running the above will bring to the surface without further attention the 'computation on the case' and the service facsimile. Do not audit these. Run EXPANDED GITA.

STEP V -- PRESENT TIME DIFFERENTIATION. EXTERIORIZATION BY SCENERY.

Have preclear, with his body's eyes, study and see the difference between similar real objects such as the two legs of a chair, the spaces between the back, two cigarettes, two trees, two girls. He must see and study the objects. It is not enough to remember the objects. The definition of a CASE V is 'no mock-ups, only blackness'. Have him continue this process until he is alert. Use liberally and often.

Then exteriorize by having the preclear close his eyes and move actual places on Earth under him, preferably places he has not been. Have him bring these up to him. Find two similar things in the scene and observe the difference between them. Move him over oceans and cities until he is certain that he is exteriorized.

Then, preferably while exteriorized, have him do STEP I.

This case has to know before he can be. His viewpoint is in the past. Give him present time viewpoints until he is a STEP I by the methods given for STEP V.

(COMMENT: PRESENT TIME DIFFERENTIATION is a very good general technique and resolves chronic somatics and improves tone.)

Assume other people's viewpoints as a drill -- not what they think about things, but as they look at things in the material universe. Attempt to be in the location of a leaf, blade of grass, car headlamp, etc., and view the universe.

STEP VI --

ARC STRAIGHT WIRE using next to last list of Self Analysis in Scientology which asks preclear to recall something really real to him, etc. Then use the list in Self Analysis. This level is the neurotic. It is identified by the preclear having mock-ups which will not persist or which won't go away. Use also PRESENT TIME DIFFERENTIATION. Then go to STEP IV. At any drop in tone, return case to STEP VI.

STEP VII -- PSYCHOTIC CASES (whether in or out of body).

The psychotic appears to be in such desperate straits that the auditor often errs in thinking desperate measures are necessary. Use the lightest possible methods. Give case space and freedom where possible. Have psychotic imitate (not mock up) various things. Have him do PRESENT TIME DIFFERENTIATION. Get him to tell the difference between things by actual touch. Have him locate, differentiate and touch things that are really real to him (real objects or items). If inaccessible, mimic him with own body, whatever he does, until he comes into communication. Have him locate corners of the room and hold them without thinking. As soon as his communication is up go to STEP VI, but be very sure he changes any mock-up around until he knows it is a mock-up, that it exists, and that he himself made it. Do not run engrams. He is psychotic because viewpoints in present time are so scarce that he has gone into the past for viewpoints which at least he knew existed. By PRESENT TIME DIFFERENTIATION, by tactile on objects, restore his idea of an abundance of viewpoint in present time. If he has been given electric shock, do not process it or any other brutality. Work him for very brief periods, for his attention span is short. Always work psychotics with another auditor or a companion present.

NOTE: All steps for all cases. If in doubt as to condition of case, test with STEP VI.

NOTE: An operating thetan must also be able to manufacture particles of admiration and force in abundance.

APPENDIX TO SOP 8 NO. 1

(Any alterations in SOP 8 will appear in appendices as they are expected to be minor and to make no radical change in the design of the steps in general.)

STEP I --

The Operating Thetan must be able to manufacture and experience to his complete satisfaction all sensations including pain in mock-up form, and all energies such as admiration and force. It will be found that some STEP I cases will not be able to manufacture admiration particles.

STEP II --

Be very careful not to make a lower step preclear, while still in a body, mock up his own body too long. Any mock-up will appear if it is simply put there often enough and long enough -- providing the preclear doesn't spin in the process. The long term manufacture of mock-ups of one's own body and of admiration may not produce quite the results expected -- communication lines which should remain shut may open with bad results. These lines that are shut appear like hard, black cords to the preclear.

There are two types of techniques in general, POSITIVE GAIN and NEGATIVE GAIN, as defined in the above text. POSITIVE GAIN can be administered in unlimited amounts without harm. NEGATIVE GAIN techniques such as the reduction of engrams and locks, double-terminalling, black and white, are often limited in the length of time they can be given. After a few hundred hours of early type auditing the case could be found to slump. Thus we have in POSITIVE GAIN the unlimited technique which improves the analytical mind.

In NEGATIVE GAIN we have a limited (in terms of the time it can be audited) technique. In SOP 8 the following steps and processes may be audited without limit: STEP I, STEP III, STEP V, STEP VI, STEP VII. The following steps are limited and should not be audited many hours without changing to another type (unlimited) for a while, after which the following steps could be resumed: STEP II, STEP IV.

The following steps can be used on groups: STEP III, STEP V part I and part 2, STEP VI, STEP VII.

APPENDIX NO. 2 SOP 8 CERTAINTY PROCESSING

The anatomy of maybe consists of uncertainties and is resolved by the processing of certainties. It is not resolved by the processing of uncertainties.

An uncertainty is held in suspense solely because the preclear is holding on so hard to certainties. The basic thing he is holding on to is 'I have a solution' 'I have no solution'. One of these is positive, the other is negative. A complete positive and a complete negative are alike a certainty. The basic certainty is 'There is something' 'There is nothing'. A person can be certain there is something he can be certain there is nothing.

'There is something' 'There is nothing' resolves chronic somatics in this order. One gets the preclear to have the center of the somatic say 'There is something here', 'There is nothing here'. Then he gets the center of the somatic to say 'There is something there', 'There is nothing there'. Then the auditor has the preclear say towards the somatic 'There is something there', 'There is nothing there'. And then he gets the preclear to say about himself 'There is something here', 'There is nothing here'. This is a very fast resolution of chronic somatics. Quite ordinarily three or four minutes of this will resolve an acute state and fifteen or twenty minutes of it will resolve a chronic state.

This matter of certainties goes further. It has been determined by my recent investigations that the reason behind what is happening is the desire of a cause to bring about an effect. Something is better than nothing, anything is better than nothing. If you will match terminals in brackets 'There is nothing' you will find that a lot of your preclears become very ill. This should be turned around into 'There is something'.

The way one does Matched Terminals is to have the preclear facing the preclear or his father facing his father. In other words, two of each of anything, one facing the other. These two things will discharge one into the other, thus running off the difficulty. By bracket we mean, of course, running this with the preclear putting them up as himself as though they were put up by somebody else, the somebody else facing the somebody else, and the matched terminal again put up by others facing others.

The clue to all this is positive and negative in terms of certainties. The positive plus the negative in conflict make an uncertainty. A great number of combinations of things can be run. Here's a list of the combinations:

The button behind sex is 'I can begin life anew', 'I cannot begin life anew', 'I can make life persist', 'I cannot make life persist', 'I can stop life', 'I cannot stop life', 'I can change life', 'I cannot change life', 'I can start life', 'I cannot start life'.

A very effective process 'Something wrong --', 'Nothing wrong --' with 'you, me, they, my mind, communication, various allies'.

A very basic resolution of the lack of space of an individual is to locate these people and these objects which you've been using as anchor points such as father, mother and so forth and putting them into matched terminal brackets with this: 'There is father', 'There is no father', 'There is grandfather', 'There is no grandfather'. In the compulsive line this can be changed to 'There must be no father', 'There must be a father'. One takes all the allies of an individual and runs them in this fashion.

The basic law underneath this is that a person becomes the effect of anything upon which he has had to depend. This would tell you immediately that the sixth dynamic, the MEST universe, is the largest dependency of the individual. This can be run out, but then any dynamic can be run out in this fashion. 'There is myself', 'There is no self' and so on up the dynamics. '(Any dynamic) is preventing me from communicating', '(Any dynamic) is not preventing me

from communicating' is intensely effective. Any such technique can be varied by applying the sub-zero scale as found in Scientology 8-8008 which is also to be found in an earlier issue of the Journal of Scientology.

One runs any certainty out because he knows that between this certainty there is an opposite negative certainty and that between these lies a maybe, and that the maybe stays in suspense in time. The basic operation of the reactive mind is to solve problems. It is based on uncertainties about observation. Thus one runs out certainties of observation. The MEST general shotgun technique would have to do with 'There is sex', 'There is no sex', 'There is force', 'There is no force'. This could be run, of course, in terms of matched terminal brackets or even as concepts, but one must not neglect to run the overt act phenomenon, which is to say getting somebody else getting the concept.

The processing out of certainties would then embrace 'I have a solution', 'There is no solution'. These two opposite ends would take care of any individual who was hung on the track with some solution, for that solution had its opposite. People who have studied medicine begin by being certain that medicine works and end by being certain that medicine doesn't work. They begin by studying psychology on a supposition that it is the solution, and finish up believing that it is not the solution. This also happens to superficial students of Dianetics and Scientology, thus one should also run 'Dianetics is a solution', 'Dianetics is not the solution'. This would get one off the maybe on the subject.

We are essentially processing communications systems. The entire process of auditing is concentrated upon withdrawing communications from the preclear as predicated on the basis of the body and that the preclear cannot handle communications. Thus 'The preclear can handle communications', 'The preclear cannot handle communications' is a shotgun technique which resolves maybes about his communications.

An intensely interesting aspect of Certainty Processing is that it shows up intimately where the preclear is aberrated.

Here is the overall basic technique. One runs 'There is --', 'There is not --' the following: Communications, Talk, Letters, Love, Agreement Sex, Pain, Work, Bodies, Minds, Curiosity, Control Enforcement, Compulsion, Inhibition, Food, Money, People, Ability, Beauty, Ugliness, Presents, and both the top and bottom of the Chart of Attitudes, positive and negative in each one.

Basic in all this is the urge of the preclear to produce an effect, so one can run 'I can produce an effect upon mama', 'I cannot produce an effect upon mama', and so forth for all allies and one will resolve the fixations of attention on the part of the preclear. Thus fixations of attention are resolved by Certainty Processing, processing out the production of effect.

One can occasionally, if he so desires, process the direct center of the maybe, which is to say doubt itself, in terms of Matched Terminals. This, however, is risky for it throws the preclear into a general state of doubt.

The key to any such processing is the recovery of viewpoints. 'I can have grandfather's viewpoint', 'I cannot have grandfather's viewpoint' and so on, particularly with sexual partners, will prove intensely interesting on a case. 'There are viewpoints', 'There are no viewpoints', 'I have a viewpoint', 'I don't have a viewpoint', 'Blank has a viewpoint', 'Blank has no viewpoint' resolves problems.

One should also realize that when one is processing facsimiles, he is processing at one time energy, sensation and aesthetics. The facsimile is a picture. The preclear is being affected by pictures mainly, and so 'There are no pictures', 'There are pictures' forward the case towards handling pictures, which is to say facsimiles.

A person tends to ally himself with somebody whom he considers capable of producing greater effects than himself, so 'I, she, he, it can create greater effects', 'I, she, he, it can create no effect' should be run.

When one is processing, he is trying to withdraw communications. Reach and Withdraw are the two fundamentals in the action of theta. Must Reach and Can't Reach, Must Withdraw and Can't Withdraw are compulsions which when run in combination, produce the manifestation of insanity in a preclear.

'I can Reach', 'I can't Reach', 'I can Withdraw', 'I can't Withdraw' open up into the fact that remembering and forgetting are dependent upon the ability to reach and withdraw. You will find that a preclear will respond to 'You must' or 'You can', 'You must not', 'You cannot', 'There is', 'There is not' forgetting and remembering.

The only reason a person is hanging on to a body or facsimile is that he has lost his belief in his ability to create. The rehabilitation of this ability to create is resolved, for instance, in a person who has had an ambition to write with 'I can write', 'I cannot write' -- and so forth. The loss of this creative ability made the person hang on to what he had. The fact that a preclear has forgotten how to, or no longer can himself generate force makes him hold on to stores of force. These are very often mistaken by the auditor for facsimiles. The preclear doesn't care for the facsimile, he simply cares for the force contained in the facsimile because he knows he doesn't have any force any more.

It should be kept in mind that reaching and withdrawing are intensely productive of reaction in a preclear. But that preclear who does not respond to REACHING and WITHDRAWING and certainty thereon, is hung up in a very special condition: he is trying to prevent something from happening. He also prevents auditing from happening. He has lost allies, he has had accidents, and he's hung up at all those points on the track where he feels he should have prevented something from happening. This is resolved by running 'I must prevent it from happening', 'I cannot prevent it from happening', 'I must regain control', 'I must lose all control'.

Blackness is the desire to be an effect and the inability to be cause. 'I can create grandfather (or ally)', 'I cannot create grandfather (or ally)' solves scarcity of allies. 'I want to be aware', 'I want no awareness' is a technique which is basic in attitudes. Run this as others, in Matched Terminal Brackets or in EXPANDED GITA.

Certainty there is a past, Certainty there is no past Certainty there is a future, Certainty there is no future Certainty it means something else, Certainty it does not mean anything else Certainty there is space, Certainty there is no space Certainty there is energy, Certainty there is no energy Certainty there are objects, Certainty there are no objects.

SHORT 8

This is a short form of STANDARD OPERATING PROCEDURE 8 of Scientology 8-8008. It can be used on any preclear without any survey of the case and will not get him into any difficulties and should resolve his various computations. This can also be used on groups. Just do the lettered steps in order.

(A) Next to last in Self Analysis Remembering Something Real etc., until auditor is certain preclear has and can do so easily. In a group ask for a show of hands the moment something real is recalled. Take those hands that went up in a couple of seconds and use them for the rest of this. Take the no-hands or slow hands as a special group under somebody else and simply drill them on this step until their speed is well up. Then put them back into the main group, or keep all in one group and so on.

(B) Examine and compare two similar MEST objects or spaces and tell the difference. Keep this up for at least 20 minutes. It can be kept up for hours with astonishing case improvement.

(C) Run WASTING HEALTHY BODIES, then ACCEPTING THEM UNDER DURESS, then WASTING THEM, then ACCEPTING THEM UNDER DURESS. Do this for 20 minutes or an hour until preclear or group shows signs of relief or amusement.

(D) Run next to the last list of Self Analysis for five minutes.

(E) Run DUPLICATION. This process is the basis of making facsimiles. Have preclear or group look at a MEST object, then have him or them mock up a mock-up similar to it but beside it. Have the MEST object and the mock-up compared to tell the difference. Some people get none of the duplicates for quite a while but will eventually. Some start making much fancier objects of the same sort. In any result, keep this up for 20 minutes.

(F) Have preclear or group close eyes and locate the corners of the room behind them and keep interested in those corners and not thinking for several minutes.

(G) Have preclear or group move MEST scenery under them individually but at the command of the auditor. The scenery is, preferably, that not before viewed by the preclear or preclears. Don't let them invalidate what they see. This is Exteriorization by Scenery. Keep up for 20 minutes.

(H) Do next to last list of Self Analysis 5 minutes.

(I) Examine and compare two present time objects.

(J) Have one of the members go to the window and look out of the window. Have the remainder of the group assuming his Viewpoint to see what he sees out of the window. Do this for 10 minutes.

(K) Start at beginning again and use list over and over. What they waste each time through can be changed to work and anchor points. Avoid pain with this Short 8. Run 'healthy bodies' for it instead.

SOP 8 is a professional auditor technique which deals with the problems of the reactive mind. SOP 8 from STEP IV down and including STEP IV is a professional auditor technique. SHORT EIGHT is done by someone who has been trained, preferably by a professional auditor. It can be done on a group no matter how large. SELF ANALYSIS IN SCIENTOLOGY is a group technique aimed at the rehabilitation of one's own universe so as to bring it up to a level of comparability with one's observations of the MEST universe, and can be delivered to groups of children or adults by a person trained only through the text of SELF

ANALYSIS IN SCIENTOLOGY. Associates have courses in group auditing which are given free of charge and which consist of six hours of tape lectures by L. Ron Hubbard on the administration of **SELF ANALYSIS IN SCIENTOLOGY** and the general techniques of group auditing.

SOP 8-C: THE REHABILITATION OF THE HUMAN SPIRIT

Scientology, the science of knowing how to know, has been developed for various applications in the field of human experience.

Where it is utilized by skilled persons to enhance the personal ability and knowledge of others, a recommended process is Standard Operating Procedure 8 C.

SOP 8-C was developed after almost a year of observing SOP 8 in action in other hands than mine, and after observing the frailties and talents of human auditors. SOP 8-C might be called SOP 8 modified for clinical, laboratory, and individual human applications.

The goal of the system of operation is to return to the individual his Knowledge, Skill and Knowingness, and to enhance his perception, his reaction time and serenity.

It is entirely incidental that SOP 8-C is effective on 'psycho-somatic' illness, on human aberration and social difficulties. It is not the intent or purpose of Scientology to repair. The science is a creative science. If the fact that human illness, disability and aberration uniformly cease to be, because of Scientology, the effect is not intended to be primary and the goal of SOP 8-C is not their remedy. Indeed if SOP 8-C is used to remedy these only, it fails as a system. SOP 8-C succeeds only when it is addressed towards higher knowingness and beingness -ironically, in using it, human ills vanish only when the Auditor concentrates on the goals of the system and neglects the obvious physical disabilities of the preclear.

In that one creates that which one concentrates upon, a treatment of illness which validates it in treatment will always tend to be unsuccessful.

SOP 8-C was the subject of the Camden Indoctrination Course B, from 16 November to 23 December, as well as the subject of the Phoenix International Congress of 28 December 1953.

Specifically, the use of these processes obtain, when correctly used, without further evaluation for, or indoctrination of the preclear, the knowledge that he is not a body, that he is a creative energy-production unit, and demonstrates to him his purposes and abilities.

This energy-space production unit we call a 'thetan', that being a coined word taken from a mathematical symbol, the Greek letter 'theta'. This is the preclear. One does not send 'one's thetan' anywhere. One goes as a thetan. When a preclear is detected being in one place and finding 'his thetan' in another ('I'm over there') he is not exteriorized. To be 'exteriorized' the preclear must be certain that he is outside his body. An uncertain 'exteriorization' requires more work before it becomes an exteriorization.

SOP 8-C brings about a condition designated as 'theta clear'. This is a relative, not an absolute term. It means that the person, this thought unit, is clear of his body, his engrams, his facsimiles, but can handle and safely control a body.

The state of Operating Thetan is higher than Theta Clear and means that the person does not need a body to communicate or Work. It is accomplished with SOP 8-C.

The highest theory of SOP 8-C is that the being is engaged upon a game called Physical Universe. This is a game requiring barriers, which is to say, walls, planets, time and vast distances (which last two are also barriers). In engaging upon this game he has at last become so conscious of barriers that he is limited in his actions and thoughts. He thinks, in the case of homo sapiens, that he is a body (a barrier) hemmed in by vast distances (barriers) and pinned in a time-stream (a system of moving barriers) so as to reach only the present. These combined barriers have become so formidable that they are not even well-perceived, but from being

strong have become unreal to him. The matter is further complicated by 'invisible barriers' such as the eyes or glasses.

In actuality, the thetan is a knowingness, total in a cleared state, who yet can create space and time and objects to locate in them. He reduces his knowingness only to have action. Knowingness is reduced by assuming that one cannot know or knows wrongly. Knowingness is reduced by assuming one must be in certain places to perceive and so know and that one cannot be in certain places.

Space is, but does not have to be, the first barrier of knowingness. With Scientology we have the first definition of space -- Space is a viewpoint of dimension. Given a viewpoint and four, eight or more points to view, one has space. Space is a problem of observation, not of physics.

There is no question here of whether space, energy or objects are real. Things are as real as one is certain of their reality. Reality is, here on Earth, agreement as to what is. This does not prevent barriers, or time from being formidably real. It does not mean either that space, energy or time are illusions. It is as one knows it is. For one makes, by a process of continuous automatic duplication, all that one perceives. So much for theory -- in application this theory obtains results of considerable magnitude in changing beingness.

The thetan is continuously engaged upon cycles of action. The basic cycle of action is 'Create, resist effects (survive) and Destroy'. This can be stated in various ways: 'Create an object, have it resist effects (survive) and then destroy it'. Or, 'Create a situation, continue it and change it, and destroy or end it'. When a thetan leaves a cycle which is important to him unfinished, he tends to strive to finish it elsewhere or later in disrelated circumstances.

Further, he can become overly concentrated upon creating or persistence (surviving) or upon destroying and so form an unbalanced state of beingness.

Time exists in those things a thetan creates. It is a shift of particles, always making new space, always at an agreed-upon rate. A thetan does not change in time, but as he can view particles (objects, spaces, barriers) from many viewpoints, he can consider himself to be in a 'time-stream' which he is not. A thetan's ideas (postulates, commands, beliefs) change particles change the thetan does not change either in space or in time.

Just as he is making an effort to do something he cannot help but do -survive -- he is also fighting against doing the only thing he does -- sit fixed in one 'position'.

The thetan, to produce interest and action, operates as a paradox. He cannot die so he firmly insists and proves continually that he can die. He never changes location but only views new locations and constantly lives in horror of being fixed in time and space. Above that, he knows the past and the future and all of the present, and so fights to obscure the past and guess the future.

Less theoretically, the individual who is processed is at first, usually, 'in' the body and perceiving with the body's eyes. When exteriorized (placed 'three feet back of his head'), he is actually out of the body and still 'in' physical universe space. He can, exteriorized, move about and be in places just as though he had a body, seeing without eyes, hearing without ears, and feeling without fingers -- ordinarily better than with these 'aids'. This is not like 'astral walking' which is done by the individual who 'sends a body' or a viewpoint to some other place and perceives with it. A thetan is as much present where he is as if he were there in body. He isn't 'somebody else' than the preclear moving dimly about. He is the preclear, he is there. At first he may be uncertain as to what he is seeing. This faculty becomes better as his ability to look, hear and feel while exteriorized improves. SOP 8-C improves this perception. Because the body only perceives what the thetan is perceiving anyway, looking, feeling, hearing of the body is also better with SOP 8-C but this is only incidental.

When a thetan believes too thoroughly he is a body, he is generally unhappy, afraid, doubts his own (and validates the body's) existence and worries about his inabilities. When he is out of the sphere of influence of the body (a very small one) he becomes serene, confident and knowing. He can handle a body better, can act faster, can recall more and do more while exteriorized than he can while in a body.

Society, thirsting for more control of more people substitutes religion for the spirit, the body for the soul, an identity for the individual and science and data for truth. In this direction lies insanity, increasing slavery, less knowingness, greater scarcity and less society.

Scientology has opened the gates to a better World. It is not a psycho-therapy nor a religion. It is a body of knowledge which, when properly used, gives freedom and truth to the individual.

It could be said that Man exists in a partially hypnotized state. He believes on other-determinism in many things, to his detriment, He will be as well as he is self-determined. The processes of Scientology could be described as methods of 'unhypnotizing' men to their own freer choice and better life.

THE USE OF SOP 8-C

This process is designed to be administered by one person (the Auditor) to another (the preclear).

SOP 8-C is first used step by step from STEP I on until the person to whom it is addressed knows he is back of his head and no longer in the body. If the preclear is very difficult to exteriorize, the person should be referred to an Auditor trained at the HASI Clinical Center (for there are special methods of exteriorization for difficult cases which are contained in but are not at once visible in SOP 8-C). The first three steps are exteriorization steps. They should be repeated over and over until certain exteriorization takes place.

The Auditor can go through the first steps many times one after the other with the preclear until exteriorization occurs. Doing STEPS IV to VII on a person not exteriorized should be minimized. (Earlier SOP's used all seven steps for exteriorization, a practice not followed in SOP 8-C where only the first three steps are used.)

When the preclear has exteriorized one then begins again with STEP I and continues to STEP VII in order with the preclear exteriorized. Here in SOP 8-C, the emphasis is upon an exteriorized thetan. When the Auditor has taken the exteriorized preclear thoroughly, and correctly through STEPS I to VII at least twice, one has then what may be considered a theta clear.

To repeat, one uses SOP 8-C STEPS I to III in that order. On one of these, the first time through, the majority of people exteriorize with certainty. As soon as exteriorization takes place, the Auditor starts with STEP I again, does it thoroughly on the exteriorized preclear, then the Auditor applies STEP II thoroughly and so on until all seven are done.

The Auditor knows when the preclear exteriorizes by asking him or by the preclear volunteering the information.

CAUTION: Do not ask the preclear to look at his body.

If the preclear fails to exteriorize sometime during the first three steps, the Auditor should simply do them again. If the preclear fails the second time, the Auditor patiently goes through them a third time, and so on. If the matter then seems too difficult, contact an Auditor trained during late 1954 at London, by the HASI itself.

The least possible result in going over these first three steps many times will be a considerably bettered condition of the preclear, superior to all past results. Only a very few preclears fail to exteriorize after STEPS I to III have been several times repeated.

CAUTION: Although this process is as foolproof as it can be made, it can be maliciously used in this wise -- by giving the preclear constant losses -by giving him no chance to win -- by bullying him -- by evaluating for him -by insisting he is 'outside' when he is not -- by invalidating him -- by pretending to see him or his mock-ups or saying that one does if he does.

SOP 8-C FORMULAS AND STEPS OPENING PROCEDURE

(10 minutes to two hours -- with MEST body.)

(A) Send preclear to exact places in room, one place at a time.

(B) Have preclear select places in the room and move to them one at a time, still under auditor's direction.

(C) Have preclear drill in physically holding on to and letting go of objects and spaces on his own decision to hold on, decision to let go.

STEP I: LOCATION

PRE-LOGIC: Theta orients objects in space and time.

AXIOM: In life experience space becomes beingness.

FORMULA I: Permitting the preclear to discover with certainty where people and things are not in the present, past and future recovers sufficient orientation to establish his knowledge and certainty of where he is and they are the application of this is accomplished by negative orientation of beingness, havingness and doingness on each of eight dynamics in the present, past and future.

STEP I

(A) Ask preclear to be three feet back of chair. Ask him for things, people, which are not giving him directions (orders). For things, persons, he is not giving orders to. For things, persons, which are not giving directions to other things. Ask preclear for goals he does not have. For goals others do not have for others. For goals another does not have for him. For goals he does not have for another. For persons he is not. For animals he is not. For places where he is not. Where bacteria is not. Where objects are not. For places where he is not thinking.

NOTE: All of the above are done in 'brackets' for present, past, and future.

(B) If exteriorized. Have him drill while exteriorized into holding on to and letting go of objects on his specific decision. Ask him to be in places which are safe, dangerous, pleasant, unpleasant, beautiful, ugly.

STEP II: BODIES

AXIOM: In life experience energy becomes doingness.

AXIOM: Compulsive position precedes compulsive thinking.

AXIOM: That which changes the preclear in space can evaluate for him.

FORMULA II: Permit the preclear to discover that he handles bodies and allow him to handle bodies in mock-ups and actuality and remedy his thirst for attention which he has received by contagion from bodies.

STEP II

(A) Have preclear mock up bodies and unmock them. Have him get somethingnesses and nothingnesses of bodies until he feels better about them. Ask him to be three feet back of chair.

(B) If exteriorized. Have him complete II-A many times and then move body while he is outside.

STEP III: SPACE

PRE-LOGIC: Theta creates space and time and objects to locate in them.

DEFINITION: Space is a viewpoint of dimension.

AXIOM: Energy derives from imposition of space between terminals and a reduction and expansion of that space.

FORMULA III: Permit the preclear to regain his ability to create space and impose it upon terminals, to remove it from between terminals and to regain his security concerning the stability of MEST space.

STEP III

(A) Have preclear hold two back corners of room and not think.

(B) If exteriorized. Have preclear complete spacation.

NOTE: If not exteriorized return to STEP I.

STEP IV: HAVINGNESS

AXIOM: In life experience matter becomes havingness.

OBSERVATION: To a thetan, ANYTHING is better than nothing.

OBSERVATION: Any preclear is suffering from problems of too little havingness and any reduction of his existing energy, if not replaced, will cause him to drop in tone.

FORMULA IV:

(A) The remedy of problems of havingness is accomplished by creating an abundance of all things.

(B) As the preclear has rendered automatic his desires and ability to create and destroy, and has thus placed havingness beyond his control, the Auditor should place in the control of the preclear his automaticities of havingness and unhavingness and permit him, on his own self-determinism, to balance his havingness.

(C) How to make havingness: Have preclear put out eight anchor points of size, thus creating a space. Have him pull in these eight to the center and have him retain the resulting mass. Do this using large and various objects for anchor points. Do this until he is willing to release such old energy deposits as engrams and ridges but still continue to make havingness.

STEP IV

Have preclear remedy problems of havingness by mocking up and pulling together sets of eight anchor points. Do this many times. Do not have him make anchor points explode in this fashion. Have him save masses thus created. Have preclear adjust anchor points in body.

STEP V: TERMINALS

AXIOM: Space exists by reason of anchor points.

DEFINITION: An anchor point is any particle or mass or terminal.

AXIOM: Energy is derived from mass by fixing two terminals in proximity in space.

AXIOM: Self-determinism is related to the ability to impose space between terminals.

AXIOM: Cause is a potential source of flow.

AXIOM: Effect is a potential receipt of flow.

AXIOM: Communication is the duplication of the receipt point of that which emanated at a cause point.

AXIOM: Wrongness in terms of flow is inflow.

FORMULA V: The thetan is rehabilitated as to energy and terminals by remedying his postulates about outflow and inflow and drills relating to the outflow and inflow of energy according to the above axioms.

STEP V

(A) Ask preclear for times he could do something. Times when he couldn't do anything. For things he can do. For things he can't do. For things other people can, can't do. For things other people can do for others. For things another specific person can't do for him. For things he cannot do for another or others.

(B) Ask preclear for objects, actions, persons, ideas he is not destroying. For objects, actions, persons, ideas he is not making survive (persist). For objects, actions, persons, ideas he is not creating. Present, past, and future in brackets. (NOTE: Ideas are the most important here, in brackets.)

(C) Ask preclear for objects, persons, energies, times which are not touching him. Which he is not touching. Which are not reaching for him. For which he is not reaching. For objects, persons, times from which he is not withdrawing. Which are not withdrawing from him. In brackets.

(D) Ask preclear for sights which will not blind him. For people he will not blind if they see him. For noises which will not deafen him. For people he will not deafen. For spoken words that will not hurt him. For spoken words which will not hurt others. In brackets.

(E) Ask preclear for ideas that will not destroy, cause to survive (persist), create, or upset others. In brackets.

(F) Ask preclear for ideas, sounds, sights that will not fix people or unfix them from specific places.

(G) Ask preclear for ideas he is not trying to fix in things. For ideas he is not trying to unfix from things. In brackets.

(H) Have him unmock and mock up terminals and move them together and apart until he can make them generate currents.

STEP VI: SYMBOLIZATION

DEFINITION: A symbol is an idea fixed in energy and mobile in space.

FORMULA VI: The thetan who has been moved about by symbols is strengthened by mocking up and moving about and fixing in space ideas which have formerly moved him.

STEP VI

Have preclear create symbols which mean nothing. Ask PC for ideas he is not trying to destroy. For ideas he is not trying to make survive (persist). For ideas he is not trying to create.

NOTE: The above are done in brackets. Have him mock up ideas and move them about.

STEP VII: BARRIERS

AXIOM: The MEST universe is a game consisting of barriers.

DEFINITION: A barrier is space, energy, object, obstacles, or time.

FORMULA VII: Problems of barriers or their lack are resolved by contacting and penetrating, creating and destroying, validating and neglecting barriers by changing them or substituting others for them, by fixing and unfixing attention upon their somethingness and nothingness.

STEP VII

(A) Have preclear reach and withdraw (physically then as himself) from spaces, walls, objects, times.

(B) Have preclear do six ways to 'nothing'.

(C) Have him create and destroy barriers.

STEP VIII: DUPLICATION FUNDAMENTAL: The basic action of existence is duplication.

LOGIC: All operating principles of life may be derived from duplication.

AXIOM: Communication is as exact as it approaches duplication.

AXIOM: Unwillingness to be cause is monitored by unwillingness to be duplicated.

AXIOM: Unwillingness to be an effect is monitored by unwillingness to duplicate.

AXIOM: An inability to remain in a geographical position brings about an unwillingness to duplicate.

AXIOM: An enforced fixation in a geographical position brings about an unwillingness to duplicate.

AXIOM: Inability to duplicate on any dynamic is the primary degeneration of the thetan.

AXIOM: Perception depends upon duplication.

AXIOM: Communication depends upon duplication.

AXIOM: In the MEST universe, the single crime is duplication.

FORMULA VIII: The primary ability and willingness of the thetan to duplicate must be rehabilitated by handling desires, enforcements and inhibitions relating to it on all dynamics.

STEP VIII

(A) Ask preclear for actions, forms and ideas which do, do not, duplicate specific other people. For actions, forms, ideas by which specific other people do, do not duplicate specific other people. For actions, forms, ideas of others which do, do not, duplicate him.

(B) Have preclear duplicate physical objects and people and possess himself of duplicates.

(C) Have him make 'no-duplicates' of objects and people.

(D) Have him duplicate somethings and 'nothings'.

GROUP C

'Group C' is a process used on large numbers of people. It is composed of the following steps of SOP 8-C: STEP 1-A, STEP II-A, STEP III-A, STEP V-A to H, STEP VI, STEP VII, STEP VIII.

GLOSSARY

PC: Stands for 'preclear', a person being processed.

MOCK-UP: A self-created image the preclear can see.

BRACKET: Is done as follows: for preclear, for another, others for others, others for self, another for preclear, preclear for another. See STEP IA.

SPECIAL NOTE: The first three steps of SOP 8-C could be classified as beingness steps. The remaining five steps of SOP 8-C could be classified as havingness steps. SOP, itself, in all eight steps constitutes doingness, thus approximating as described in 'Scientology 8-8008' the space-be, energy-do, time-have triangle.

SPECIAL NOTE: In its entirety, SOP 8-C could be considered as various exercises in FORMULA H which involves the most basic action of the thetan which is reaching and withdrawing.

SPECIAL NOTE: It will be noted that the negative orientation techniques are done in such a way as to make the preclear, without his being told to do so, create space. The auditor should pay specific attention when the preclear is discovering where things are not that the preclear be caused to note specifically each time the exact location and position where the thing does not exist. This calls the preclear's attention to various positions which in themselves, thus located, create space. Thus, throughout SOP 8-C, the rehabilitation of space is also to be found, the definition of space being 'space is a viewpoint of dimension'.

SPECIAL NOTE: In his auditing, if the Auditor does not get a communication change on the part of the preclear, whether better or worse, every five or ten minutes, either the Auditor is using the wrong step at the time, in which case he should progress on into the steps or the preclear, even if he says he is, is not complying with the Auditor's orders. The Auditor, thus, should remain in continuous communication with the preclear so far as possible and should ascertain with great care what the preclear is doing after he indicates that he has complied with the direction and to discover every five or ten minutes if there has been a change in certainties or communication. The commonest source of failure in any step in SOP 8-C is a failure on the part of the preclear to execute the orders given as it was intended to be executed, or on the part of the Auditor in failing to ascertain whether or not the preclear is executing properly or if there has been a communication change. A careful check of Auditors and preclears utilizing SOP 8-C has demonstrated in each case where its use was becoming lengthy that the Auditor was failing to ascertain from the preclear whether or not there had been communication changes, and it was also uniformly discovered that the preclear who was failing to get results while being audited with SOP 8-C was not doing the steps as directed but was either avoiding by not doing them at all although he said he was doing them or was failing to understand the direction and so was executing the step in some other way.

The first goal which an Auditor must achieve is willingness in the preclear to receive directions. The condition of the preclear is such, in nearly all cases, that he has chosen as a main point of resistance in life, direction of himself other than his own. Because the physical universe is designed to resist and overcome that which resists it, a continuous resistance to other direction than one's own results finally in a loss of ability to greater or lesser degree to direct oneself. In that it is the ability to direct himself which the Auditor is seeking to return to the preclear, it must be demonstrated to the preclear solely by the process of good auditing that other direction is not necessarily harmful or in the worst interest of the preclear. Thus, to some degree, he ceases to resist incoming direction, and by ceasing to resist it, no longer validates it as a barrier, and so is not concentrating attention on resisting direction but is able to use it freely in his own self-direction. The self-determinism of a preclear is proportional to the amount of self-direction he is capable of executing and deteriorates markedly when a great deal of his attention is devoted to preventing other direction. Directing himself, the preclear becomes

capable of execution preventing direction of himself (resisting the direction of others) brings about a condition where he is mainly devoted to resisting his environment. The latter results in a diminishing of space of the preclear.

The first step in the rehabilitation of the preclear in self-direction is therefore a limiting of the amount of resistance he is concentrating on 'other direction' and demonstrating to him that his following of the steps of SOP 8-C under the direction of an Auditor is not harmful but, on the contrary, increases his command and control of himself and brings him at last to the point where he can neglect and ignore the continuous stimulus response operation of the physical universe.

It can be seen clearly then that the Auditor who sets himself up to be resisted will fail, for the preclear is mainly concentrating upon resisting the Auditor. This is the primary factor in all auditing.

The preclear is brought to a point of co-operation in terms of direction without the use of hypnosis or drugs and without argument or 'convincingness' on the part of the Auditor, by which is meant overbearing demeanor. At the same time it should be the sole intention and operation of the Auditor that his own directions be carried out explicitly by the preclear, and that these be performed with a minimum of communication break and with a maximum of affinity, communication and reality.

Using the formula that that which changes the individual's position in space can evaluate for the individual, the Auditor in using SOP 8-C should use, at the beginning of the first session and in any session where the preclear becomes unreasonably uncooperative in following simple directions, the following procedure. The Auditor has the preclear walk to specific points in the room, touch, hold and let go of various specific objects. The Auditor should be very exact in his directions. The Auditor should do this even on an apparently co-operative case at least twenty minutes before going on to the next step in Opening Procedure.

When the preclear, drilled in this fashion, has at length realized without being told that the Auditor's directions are quiet, reliable, exact and to be performed and not until then uses this process:

Preclear is asked to send himself to various parts of the room and do specific things. The Auditor is very specific and exact about this, in that he has the preclear decide on his own determinism and, before moving from the spot where he is standing, what part of the room he is going to send himself to. When the preclear has decided this, and only then (but not necessarily telling the Auditor), the preclear then takes himself to that part of the room. The Auditor must be very exact that the decision to go to a certain part of the room and to reach or withdraw from a certain thing is made before the preclear takes an actual action. And then the Auditor should make sure that the preclear has done exactly what he decided he would do before he moved. In such a wise, coached by the Auditor, the preclear is led to direct himself to various parts of the room until he is entirely sure that he is directing himself to certain parts of the room and that the orders are coming from nobody but himself. Of course, before each new place is chosen, the Auditor tells the preclear to choose a new place and tells him when to go there.

The third stage of this Opening Procedure is then as follows:

The Auditor has the preclear be in one spot in the room and then has the preclear decide there to go to another spot in the room. The preclear leaves. The Auditor has the preclear change his own mind, and go to yet another spot. This last is done to lessen the preclear's fear of changing his mind, to strengthen his decision and to lessen his reaction to his own mistakes.

The last two steps of Opening Procedure are done at some length. It is profitable by the experience of many Auditors to spend as much as an hour on Opening Procedure even in a case which is not in poor condition. When Opening Procedure is omitted or is not carried on far

enough, the Auditor may discover that it will take him from five to ten hours to 'get the case working'. This time is saved by the expenditure of much less time in using Opening Procedure. Even when the preclear is complacent, even when the preclear is an obvious 'STEP 1', even when the preclear shows no outward sign of resistance to other direction than his own, the first communication lag lessening which the Auditor will perceive on the case will probably occur during the use of Opening Procedure. Further, the certainty of the case is heightened. Further, Opening Procedure is, for any level of case, an excellent process.

The preclear who is familiar with SOP 8 may conceive that he is doing a step which is 'reserved for psychotics'. The preclear should be disabused of such a concept, since the step is used today on all cases.

In the case of a preclear who is very resistive, Opening Procedure can be used with considerable profit for many hours. For such activity, however, an auditing room of the usual dimensions is usually too constrictive and the drill may be carried on as well out of doors even if only on a street.

GROUP PROCESSING

For successful group processing the following are near absolutes.

1. The group auditor must be able to grant beingness to the group. Stage fright and timid commands have no place in group auditing. An auditor who is afraid of a group will 'Q and A' with the group (as soon as it gets an effect, he changes the process -- he changes commands when the group changes aspect).

2. Commands must be simple, clear, concise, evenly spaced, without sudden breaks of pace or jarring interjections of loudness.

3. The processes should be objective, addressing the environment not the thinkingness of the group. Opening Procedure, adapted to a group, run long enough, would exteriorize everyone present.

4. Every command given should be run long enough to flatten every communication lag present.

5. Every process used should be run long enough consecutively to 'flatten' the process itself.

6. The Auditor's Code in full should be obeyed. If these rules are vigorously followed, good results can be attained in group processing.

Here are some standard processes for groups. Each is a one hour session.

SESSION 1: 'Spot some spots on the front wall.' 'Spot some more spots', 'Spot some more spots', and so on for some time. Then: 'Spot some spots on the floor', 'Spot some more spots on the floor', and so on for some time. Then: 'Without turning around, spot some spots on the back wall', 'Some more spots', and so on. Then spot spots on the front wall again, then the floor, then the back wall. If the ceiling is used in this their necks get tired very quickly.

SESSION 2: 'Spot some spots in your body.' Pause. 'Spot some spots in the room.' Pause. 'Spot some spots in your body.' Pause. 'Spot some spots in the room.' Alternate these two commands for at least one hour.

SESSION 3: 'Examine your chair.' Pause. 'Examine the floor.' Pause. 'Examine your chair.' Pause. 'Examine the floor', and alternate these for at least one hour.

SESSION 4: 'Where's your face?' Pause. 'Where's your face?' Pause. 'Where's your face?' Pause, and so on for at least one hour.

SESSION 5: 'Start laughing.' Pause. 'Keep on laughing.' Pause. 'Laugh.' Pause. 'Keep on laughing.' just these for at least an hour.

SESSION 6: 'Where are you?' Pause. 'Where are you?' Pause. 'Where are you?' Pause. For at least one hour.

SESSION 7: A very arduous one. OPENING PROCEDURE BY DUPLICATION. Have each person in the group hold two objects, one in each hand. Be very sure, as an auditor, not to vary your commands. 'Call the object in your left hand Object One. Call the object in your right hand Object Two.' 'Look at Object One. What is its color? Temperature? Weight?' 'Look at Object Two. What is its color? Temperature? Weight?' 'Look at Object One. What is its color? Temperature? Weight?' 'Look at Object Two. What is its color? Temperature? Weight?' Use these over and over for at least an hour. Never give less than an hour of

OPENING PROCEDURE BY DUPLICATION -- never do it for only half an hour, much less fifteen minutes. This is the first step of what Scientologists call 'Dirty 30'.

For the convenience of the auditor, this list is given:

OBJECT ONE: Color Temperature Weight

OBJECT TWO: Color Temperature Weight.

SESSION 8: This is very arduous. DUPLICATION BY ATTENTION. Put up two black pieces of material somewhat above eye level, at least ninety degrees apart from the preclear. Hang them up on the walls, ahead of the group so all can see them. (One on the forward right wall, one on the forward left wall is best.) Describe them to the group as Object One and Object Two. 'Put your attention on Object One.' 'Now put your attention on Object Two.' 'Now put your attention on Object One.' 'Now put your attention on Object Two.' Do this without variation for at least an hour. On duplication processes, somebody in the audience usually claims this is 'hypnotism', for it runs out hypnotism. It induces no trances. People who think so simply don't know much about hypnotism.

SESSION 9: This is in four parts. Do each part exactly fifteen minutes. It is run with the group's eyes closed. 'Find the two back corners of the room, hold on to them, and don't think.' The auditor repeats this quietly and reassuringly every few minutes until fifteen minutes is reached. Then at fifteen minutes past the hour he says, 'Now find a third back corner of the room. Hold on to three of the back corners of the room. Sit still, and don't think.' He repeats: 'Hold on to three of the back corners of the room and sit still and don't think'. At the half hour, he says, 'Now find all four back corners of the room, hold on, and don't think'. He repeats every few minutes, 'The four back corners of the room and don't think'. When the forty-five minutes mark of the process has been reached, the auditor says, 'Now locate the eight corners of this room, hold on, and don't think', and repeats, 'Eight corners, don't think', every few minutes. At the hour mark, the process could be repeated. If so, do it again exactly as above.

SESSION 10: Description Processing should not be done on the groups, some of whose members have questionable stability. Use only SESSIONS 1 to 6 on such groups. When a group has been much run, almost any form of Description Processing can be used. SESSION 10, however, consists entirely of one command which is not changed for at least half an hour. This is, 'How close does your body seem to you now?' Pause. 'How close does your body seem to you now?' Pause. 'How close does your body seem to you now?' and so on.

In processing groups, duplication of command is part of the process.

Keep it simple. Grant them beingness. Keep them in contact with present time and out of their facsimile bank and you'll get group processing clears. Make it complicated, make them 'figure', be shy, and the group won't come back. Never worry about boring them. The reason they're spun in is because 'the body and the confusion were so interesting'.

GLOSSARY ADAPTED AND EXPANDED BY W.B.B. JR.
FROM 'The Appositions of Scientology' BY A.H.

ABERRATION

A sub-optimum or other-determined condition or consideration which a person is unable to change at will.

ACCEPTANCE LEVEL

The acceptance level of a preclear is the condition in which a person or object must be, in order that the preclear be able to accept it freely. (See REJECTION LEVEL.)

AFFINITY

A scale of attitude which falls away from the co-existence of Static, through the interposition of distance and energy, to create identity, down to close proximity but mystery.

ALLY

A person who has aided in the survival of the preclear under engramic or highly emotional circumstances, and whom the preclear reactively regards as important to his further survival.

ANALYTICAL MIND

That part of a person's thinking machinery and memories over which he has relatively full control.

A-R-C

Affinity, Reality, and Communication: the component parts of understanding.

AUDITOR

A Scientologist: one whose technical skill is devoted to the resolution of the problems of life.

AUDITOR'S CODE

The technical code of Scientology: a list of 'do's' and 'don'ts' which experience has shown insure optimum progress in auditing a case.

AXIOMS

Webster: 'A statement of self-evident truth ... an established principle which is universally received.' The Axioms in Scientology, dating back to 1951, have been one of the principle bases on which progress from that date has been made.

BARRIER

A consideration or idea that limits other considerations or ideas. This, of course, includes emotional and physical universe barriers.

BOIL-OFF

A state of lessened awareness to the point of unconsciousness, caused by impaired Havingness.

DOPE-OFF

is a state of lessened awareness, still above unconsciousness, and manifested principally by communication-lag. Dope-off is also caused by impaired Havingness.

CHARGE

Energy being held in present time in relation to an incident or chain of incidents.

CHRONIC SOMATIC

A sub-optimum physical condition or a pain which resists change and remains over a long period of time or recurs frequently.

CIRCUIT

A fixed energy pattern set up in an engram. The circuit, when restimulated, takes over from the thetan operation of the organism.

CLEAR, THETA

An individual who, as a thetan, is certain of his identity apart from that of the body, and who habitually operates the body from outside.

CODE OF HONOR

The ethical code of Scientology the code one uses, not because he has to, but because he can afford such a luxury.

COMMUNICATION

The consideration and action of impelling an impulse or particle from source-point across a distance to receipt-point, with the intention of bringing into being at the receipt-point a duplication of that which emanated from the source-point. (See PERFECT DUPLICATE.)

COMMUNICATION, TWO-WAY

Two people alternating as cause and effect in the communication formula. Any sensory perceptic can be utilized in establishing two-way communication. The establishment of certain two-way communication is the first step in every auditing session, and nothing else is attempted until this has been done.

COMMUNICATION LAG

The length of time between the moment the auditor poses the question and the moment when the exact question posed is answered positively by the preclear, no matter whether silence or talk or incorrect answers occur during the interim. It is also the length of time between the giving of a command and the moment when a preclear carries out the exact command correctly.

CONSIDERATION

The highest capability of life, taking rank over the mechanics of Space, Energy, and Time.

COPY

A duplicate, distinguished from a Perfect Duplicate, in that it does not necessarily occupy the same space, same time, nor use the same energies as the original. (See PERFECT DUPLICATE.)

CREATIVE PROCESSING

A process little used now except when making copies or perfect duplicates. It consists of having the preclear make, with his own creative energies, a mock-up. (See MOCK-UP.)

DIANETICS

The first fully validated psycho-therapy. Dianetics dealt with the problems of homo sapiens and was released to the public in 1950 after twenty years of research by its discoverer, L. Ron Hubbard.

DICHOTOMY

A pair of opposites, such as black - white, good - evil, love - hate.

DRAMATIZATION

A carrying out by words or action of a fixed behavior pattern, which is repeated in a set manner whenever restimulated. A dramatization is based upon the content of an engram.

DUPLICATE, PERFECT

A perfect duplicate is one which is made in the same time, in the same place, and with the same energies as the original. The term 'duplicate' by itself is sometimes used to refer to a 'copy' which is a reproduction of the original, but not necessarily using the same space, time, or energies. (A perfect duplicate is not a full communication. When it is used in communication, it is the act of making something 'communicate with itself' and so causes its Vanishment.) (See R2-40.) Duplication, or perfect duplication is the act of making a duplicate or a perfect duplicate.

DYNAMIC

Any one of eight motivating drives along which each individual operates toward the goal of survival. These are survival through 1. Self 2. Sex and family (future generations) 3. Group (racial, geographical, national, etc.) 4. Mankind as a whole 5. Life forms 6. MEST, (the physical universe) 7. Spirits (individual thetans) 8. (Sometimes written on its side as infinity), the Supreme Being, all Theta, the Life Static itself.

ELECTROPSYCHOMETER OR E-METER

An electronic instrument for measuring the psychological and emotional state of the preclear and any changes that take place in this state.

EFFORT

Force with direction. A physical effort in the MEST universe.

EMOTION

A connector between thought and effort. It is a manifestation of beingness, and closely related to motion. One handles motion on a direct ratio with his ability to handle emotion the higher his emotion level, the more control he can exert over motion the lower his emotion level, the more he succumbs to motion.

ENERGY

Postulated particles in space.

ENGRAM

From Dianetics. An experience containing pain, unconsciousness, and a real or fancied threat to survival. An engram is to a greater or lesser degree unavailable to the conscious awareness of the individual and its content has command value at the reactive level.

EXTERIORIZATION

The act of moving the thetan outside the body. When this is done the person achieves a certainty of his beingness or identity completely apart from that of the body.

FACSIMILE

A recording in energy of an incident or part of an incident from the past. The facsimile contains all the perceptics of the original. It is an involuntary duplicate or copy (not a perfect duplicate).

GENETIC ENTITY

Sometimes referred to as the GE. The entity or machine set up to carry out the automatic functions of the body. This entity or machine in a lower level case may work at considerable cross-purposes with the thetan.

GRAND TOUR

A process used on an exteriorized thetan to free him from the craving for mass and to bring into present time a greater portion of the MEST universe.

HAVINGNESS

Mass occupying the same space as the preclear. Over his total experience the preclear has become accustomed to having or identifying himself with considerable mass, both in the form of physical universe matter and in the form of energy masses such as facsimiles. Until the

thetan has rehabilitated his considerations that he can create mass at will, the loss of any mass causes discomfort and lessened awareness. When havingness is remedied by having the preclear bring in masses these symptoms disappear.

'I'

The thetan, the center of awareness, that part of the total organism that is fundamentally cause.

INVALIDATION

A statement, action or inference that makes the preclear appear wrong. Invalidation, along with evaluation, i.e. pressing on the preclear an other-determined consideration, are the two 'shuns' to be most strenuously avoided by the auditor.

INVERSION

A switch to an opposite obsessive consideration such as from compulsion to inhibition. There may be many inversions on any consideration, each leading further from Self-Determinism.

KEY-IN

The incident that first brings about restimulation of an engram. For the key-in of an engram, there must be some degree of lessened awareness plus a similarity of situation to that of the engram. However, Once an engram is keyed in a similarity of situation alone is enough to restimulate it.

LIE

A second postulate, statement, or condition, designed to mask a primary postulate which is permitted to remain.

LIFE-CONTINUUM

One individual attempting to carry on the life of another deceased individual by means of generating in his own body the infirmities and mannerisms of the deceased and by patterning his life in a manner which appears to him to be a continuation of the pattern of the deceased. This condition usually comes about when there have been real or fancied overt acts by the individual against the deceased.

LINE CHARGE

A prolonged spell of uncontrolled laughter or crying which may be continued for several hours. Once started a line charge can usually be reinforced by the occasional interjection of almost any word or phrase by the auditor. The line charge usually signals the sudden release of a large amount of charge and brings about a marked change in the case.

LOCK

An apparently minor incident which assumes an unreasonable importance due to its containing some similarity to, and restimulating, an earlier engram or engram chain. Also, an incident containing enforcement or inhibition of Affinity, Reality, or Communication.

MATTER

Grouped particles of energy located in a relatively stable relationship to one another.

MEST

The initial letters of Matter, Energy, Space, and Time the Scientological term for the physical universe.

MIND

The machines, circuits, facsimiles, memories, etc., which are used in the individual's thinking processes. The mind is not a part of the thetan and is not necessary for the higher-level activities of the thetan. (See THOUGHT, THINKINGNESS.)

MOCK-UP

A full-perceptive energy picture in three dimensions, created by the thetan, and having location in space and time. A mock-up is distinct from a facsimile in that it is created volitionally, does not necessarily copy any previous experience, and is under the full control of the preclear.

MOTIVATOR

An overt act by another determinism against the preclear. A person tends to keep overt acts and motivators balanced up. If he commits too many overt acts he will seek motivators and vice versa.

NECESSITY LEVEL

The degree of emergency in the present time environment. When, in a state of emergency, the survival of the organism depends on the changing of certain aberrated patterns of behavior, these patterns are sometimes temporarily cast aside, allowing the individual to act at a much higher level than his chronic one.

NOTHINGNESS

Absence of everything no time, no space, no energy, no thought, etc. A specific nothingness, such as a nothingness of chairs, is just that, absolutely no chairs. A specific nothingness is usually qualified as to time and space.

OCCLUSION

Something hidden, an occlusion of memory is something forgotten, i.e., not available to conscious recall. An occluded case is one whose memory is usually largely occluded and whose field of awareness is black or very dark.

ORGANISM

A physical manifestation of Life a material form organized and controlled by theta.

ORIENTATION POINT

A point of reference from which the position of other objects is judged. People are often found still using orientation points from childhood which may be thousands of miles from their present time location. The goal of Scientology is that the thetan be his own principal orientation point, and that he have the ability to use or discard any other point of reference.

OVERT ACT

The administration of pain or destruction to another organism. The theory of overt acts and motivators opens a new field of understanding of human behavior. (See MOTIVATOR.)

PAN-DETERMINISM

The ability to regulate the considerations of two or more identities, whether or not they are opposed. A much broader concept than Self-Determinism, since the latter makes a randomness of anything not considered 'self'.

PERCEPTION

Any means of communicating below the level of knowingness. There are more than fifty perceptions used by the physical body, the best-known of which are sight, hearing, touch, taste, and smell.

POSTULATE

A decision regarding a state of beingness. A consideration. (See CONSIDERATION.)

PRECLEAR

Technically this covers anyone who is not a clear. However, it is principally used to describe a person undergoing processing with the techniques of Scientology.

PSYCHOTIC

A person completely out of present time and out of agreement with his environment and those around him.

RANDOMITY

The ratio of unpredicted motion to predicted motion. Something one picks out and agrees not to predict. At very low case levels it appears that everything is randomness, but as the case level rises it can actually reach a point where the preclear fears that he is approaching too little randomness to find life still interesting.

REACTIVE MIND

That portion of a person's mind which is not under his volitional command or recall, and which exerts the power of command over his thinking and actions. (See CIRCUIT.)

REALITY

The agreed-upon apparency of existence.

RECALL

The re-experiencing of the perceptions of past incidents.

REJECTION LEVEL

The condition in which a person or object must be in order that the preclear be able to reject it freely. (See ACCEPTANCE LEVEL.)

RELEASE

The state of a preclear, who, while not necessarily clear, has resolved his chronic somatic and/or his major problems. Also, the resolution of a specific problem or chronic somatic. This term is not used very frequently in Scientology.

RESPONSIBILITY

To accept responsibility for something is to accept that one operated as cause in the matter. Responsibility refers solely to cause and not to other considerations such as goodness or badness of the thing caused. It should be clearly distinguished from such lower level considerations as blame, praise, etc., which include further evaluation.

SANITY

The degree to which an individual is able to operate with Self-Determinism, or above this, with Pan-Determinism. An individual is as un-sane as he is motivated by other-determinism. Sanity is also measured by the degree to which the individual accepts responsibility for himself, his actions, and his environment.

SCIENTOLOGY

The Science of knowing how to know answers. It is a wisdom in the tradition of 10,000 years of search in Asia and Western Civilization. It is the Science of Human Affairs, which treats the livingness and beingness of Man and demonstrates to him a pathway to greater freedom.

SELF-DETERMINISM The ability to regulate and take responsibility for one's own considerations. Motivation by the thetan rather than by the environment. A low-level case is determined almost entirely by its present and past environments. The goal of processing is to restore to him Self-Determinism, and above this Pan-Determinism.

SOMATIC

A pain, the physical origin of which is in the past. The pain may have perfectly valid present time causes, such as constriction of the blood vessels, tensions in the muscles, etc. However, the original injury to the body by the environment is not in present time, but has been restimulated by something in the present environment similar to that at the time of the original injury. Somatic is also used to refer to a sub-optimum physical condition, the origin of which is in the past.

SPACE

A viewpoint of dimension.

STATIC

A Static has no mass, no motion, no wave-length, and no position in space or time, no meaning, and no mobility. While a Static may have qualities, it has no quantities.

STRAIGHT WIRE

This term refers to processes using direct memory. Term taken by analogy from electronic communication systems.

SYMBOL Anything having Mass, Meaning, and Mobility.

THETA

The only known Static. (See STATIC.)

THETAN

The energy and space-production unit for the body. A Static with the ability to consider, postulate, and have opinions, that has, through postulates and considerations, developed a differentiation from the Static, theta. The thetan is the 'I', the individual, that force, not a part of the physical universe, which is directing the organism.

THINKINGNESS

The potential of considering.

THOUGHT

As a colloquialism 'thought' is seen to embrace all of Life. In Scientology 'thought' refers to everything below Effort on the scale of KNOW, LOOK, EMOTE, EFFORT, THINK, SYMBOL, EAT, SEX, and MYSTERY.

TIME

The postulate that space and particles will persist.

TIME, PRESENT

The agreed-upon consideration regarding the relationship of the particles that form the MEST universe at any given instant, for that instant.

STONE

A level of sanity based on the Stone Scale.

STONE SCALE

A Scale measuring Sanity and relating the various factors of behavior, emotion, and thought, to levels on the scale. The stone scale was first put into relatively complete form in 1951 by its discoverer, L. Ron Hubbard, in his book 'The Science of Survival'. It was found to be more accurate in predicting the behavior of individuals than even its discoverer had supposed, and has been an invaluable tool in the hands of Scientologists.

TRUTH

The exact consideration. (See CONSIDERATION.)

TRUTH, BASIC

The technical name for Ultimate Truth. (See ULTIMATE TRUTH.)

TRUTH, ULTIMATE

A Static. (See STATIC.)

VALENCE

The assumption, at the reactive level, by one individual of the characteristics of another individual. An individual may have a number of valences which he puts on and off as he might hats. Often these changes are so marked that an observant person can notice him dropping one valence and putting on another. The shift from valence to valence is usually completely outside the awareness and control of the individual doing so. In other cases an individual has one valence, not his own, in which he is thoroughly stuck.

VALENCE, WINNING

The assumption by an individual in a particular situation, of the characteristics of another individual, who, in the consideration of the first, was habitually successful in similar situations. For example: if the preclear's father was domineering toward the mother, and usually got his own way, it would be quite common to find the preclear assuming the Valence of his father in his dealings with his wife, or even with women in general.

VIEWPOINT

A point from which to view. The first consideration of a thetan in creation is the assumption of a Viewpoint from which to view that to be created.

VIEWPOINT, REMOTE

A viewpoint without the consideration by the thetan that he is located at that point. The thetan may have any number of remote viewpoints.

SPOTTING SPOTS

The essentials of this process are contained in R2—18 of Intensive Procedure as given in *The Auditor's Handbook* or *The Creation of Human Ability*.

The goal of the process is to bring the preclear to a point where he can spot locations in space which do not have color, mass or shape, but which are simply locations, and spot that same location repeatedly without variation.

The auditor says, "**Spot a spot in the space of this room.**" The preclear does so. The auditor ascertains whether or not the spot has color, mass, or whether it is simply a location in space, which is what he wants. The spot should not have color or mass, it should have only location. The preclear is asked to locate several such spots in the room and is asked to walk over and put his finger on them. Spotting Spots markedly decreases havingness, so a Remedy of Havingness is necessary after a very few spots have been spotted in this fashion. The auditor will discover that if the preclear is asked to put his finger on the same spot and take his finger off and put it back on several times, that a preclear in bad condition will locate the spot in various places close to the original spot, but will not locate the original spot again. A preclear must be brought to a point where he will locate the original spot every time. Good two-way communication, as in all processes, is maintained while Spotting Spots is progressing.

When the preclear can adequately locate repeatedly and without upset spots of no mass or color in the room, he is then asked to locate them outside the room.

The ordinary phenomenon is that the preclear has various spots in this universe out of location.

A much more modern method of running Spotting Spots in Space is to locate a spot and say "hello" to it, and have it say "okay" back, and then have the spot say "hello" and have the preclear say "okay" back to it until the spot, itself, is in present time. The auditor can go into this even further, having the preclear sending showers of "hellos" and receiving back showers of "okays" from the spot, and having the spot sending showers of "hellos," and having the preclear sending showers of "okays" back to the spot. This can be done with any spot, whether significant or not. It can be done to the place where an accident has just occurred. It can be done to the area where the delivery of birth was effected on the preclear's body. It can be done to his school. It can be done variously and continually.

Grand Tour is the Route 1 or exteriorized version of Spotting Spots. The auditor asks the preclear to be in a spot of a certain description, such as his home town, asks him to be in the auditing room, asks him to be in his home town, asks him to be in the auditing room. This is the modern way of running Grand Tour. The modern way of running Grand Tour is when the preclear is asked to be in a spot immediately above his home town, to have the preclear send showers of "hellos" and receive showers of "okays" from the home town, and then when he is asked to be back at the auditing room, to send showers of "hellos" and "okays" at it. In other

words, any position, or any motion, in the Grand Tour is accompanied by “hellos” and “okays” on a two-way basis. Naturally, once one has had showers of “hellos” sent to a spot and it has sent back showers of “okays” one must now have the spot send showers of “hellos” to the preclear and he must send showers of “okays” back at it. This will be found to remedy positional difficulties with the preclear as well as time difficulties.

The reason an engram comes into being and expresses itself on a preclear’s body is a lack of communication. The communication has become solid. It expresses itself as an engram, as a facsimile, as a lock, as a secondary. This expression comes about through absence of two-way communication. The moment that one runs two-way communication in upon the process, the spot has a tendency to go back to its original location. This is the phenomenon known as snapping or closing terminals.

It quite often occurs that when the preclear is asked to spot, let us say, London, he actually points in an entirely incorrect position and direction. London is sufficiently disoriented, as far as he is concerned, to cause him to lose it. He may have a picture of London sitting right in front of him, and yet he is being audited in South Africa. He will spot this picture as the location of London. London has snapped terminals upon him or he has snapped terminals upon London. In other words, there is no distance between the spot where he is and where London is. This means that the material on the subject of London is engramic. Lack of mass is one explanation of why the terminal snap occurs. Fear of and resistance to the spot is the actual reason why it closes terminals.

In doing the Grand Tour one will discover, if he sends the preclear between the Empire State Building in New York City and the Washington Monument [in Washington, D.C.], that a preclear who is having difficulty with havingness and locations will at first discover the Empire State Building to be some distance from the Washington Monument, and then will discover that the Empire State Building and the Washington Monument are almost exactly together, and then will discover that they have sprung apart. The auditing command producing this phenomenon is simply: **“Be over the Empire State Building. Okay. Be over the Washington Monument. Okay. Be over the Empire State Building. Okay. Be over the Washington Monument. Okay.”** In other words, the spots snap together. Actually, the spots themselves are not snapping together. What is snapping together is the facsimiles of the spots. As long as a location is expressing itself in terms of facsimile, one knows immediately two things: that the havingness of the area is low, and there is a lack of communication in existence about this spot. The preclear does not want to communicate about it. One remedies this in the crudest form by having “hellos” sent between himself and the spot. One, by adding the factor of communication to this, would have a process run with the following commands: **“Be over the Washington Monument.”** When the preclear is there: **“Send a shower of ‘hellos’ at it.”** **“Have it send you a shower of ‘okays.’** **“Have it send you a shower of ‘hellos.’** **“Send it a shower of ‘okays.’** The auditor, of course, each time the preclear performs any action in any auditing of any kind, acknowledges the fact aloud with an “all right,” or a “fine,” or a “good,” or an “okay,” thus adding to the amount of communication on the subject. Failure of the auditor to do this has a tendency to stick the preclear in the session.

DIANETICS and SCIENTOLOGY
from
Phoenix, Arizona

The Scale of Awareness

L. Ron Hubbard

This article is a transcription of an important preliminary discussion by Ron of his investigations out of which have come very practical advances in the handling of communication and the discovery of the preclear's level of reality in processing. The talk was given at a Staff Auditor-ACC Conference of April 4, 1955.

. . . I'll give you a quick rundown on some data which has just materialized here—it's an experimental scale and this experimental scale is quite interesting. It really is a Scale of Awareness. A scale of awareness would begin at the top with, of course, AWARE OF BEING AWARE. If a person were really aware of being aware it would be sufficient communication for him merely to be aware of the existing environment. If he were simply aware of the existing environment he would feel he was in communication and would feel very good—he wouldn't have to talk about it. You get that level?

All right now, we drop down from there and it's easier to describe from the bottom up. On the bottom is COMMUNICATION WITH SELF WITH SIGNIFICANCE. Worry. He can communicate with himself and he can worry. Now that isn't the exact bottom of the scale, but the next lower level—and that's UNCONSCIOUSNESS—becomes questionable as a communication level. But nevertheless, it really belongs with this scale. So we look at this and we find out that the guy could be aware of thinking a thought containing much significance, but not expressing it. Immediately below this level, as I say, is unconsciousness, which, of course, goes off the awareness scale and is the reverse of awareness.

But, as we work up from absolute unconsciousness we find UNCONSCIOUSNESS IS THE ONLY THING WHICH EACH HIGHER STEP HAS IN COMMON WITH THE LAST STEP UNTIL WE GET TO TOTAL AWARENESS OF AWARENESS. So each one of these steps is to some degree salted with unconsciousness, and up to the moment when you would get to ABSOLUTE, complete unconsciousness, every one of these steps would have some unconsciousness in it. But, absolute, complete unconsciousness happens to be an absolute. It happens to be unobtainable. Complete unconsciousness is not obtainable. Nobody has ever been or ever will be completely unconscious. And this is a fact, because processes do work out on unconsciousness, so the bottom of the scale would be absolute, complete unconsciousness, but it's not the bottom of the scale, because that can't exist.

So we would go up there to lesser and lesser degrees of unconsciousness and greater and greater degrees of consciousness. Now one of the best descriptions around that I have written on this unconsciousness business is *Self Analysis*. The first few chapters on *Self Analysis* is a discussion of unconsciousness. And when we consider alertness, we are considering ability. Now, we've been talking about this for some time. We consider alertness, then we consider ability. Awareness. If a person is aware of something he normally can control it.

All right, we look this over, and we find out that the place for a person to be on the tone scale would be at AWARENESS OF AWARENESS and we find out that he, there, would have sufficient communication just with his environment to stay cleared. Get that? He could stay cleared. But, now let's start out from this level of complete unconsciousness—let's go into

the first point on the scale which is actually there on the scale. Some small, no matter how small, awareness that he is thinking a thought and communicating with the thought he is thinking. And that level includes the deepest anaesthetic possible, and it includes death. He always has some tiny little spark of awareness there, in spite of the ambition of the medico, the anaesthetist, etc.

He is aware that he is thinking something, no matter whether he thinks that it's somebody else's thinking or not. He's just aware of some thinking.

The next broad level here is **COMMUNICATION WITH SIGNIFICANCE**. (Of course, in between, thinking a thought and thinking it to himself we get gradients of that, so the individual knows when he is thinking a thought, and knows when he's not thinking a thought. Naturally that's part of that same scale.)

The next broad level is this: **COMMUNICATION WITH SIGNIFICANCE WITH SOMEBODY ELSE**. You know what we mean, "with significance," it's got to have a reason, it's got to have meaning, there has to be an intent. The next big broad scale that's parked right up above this is **SIMPLY COMMUNICATION, WITH INTENT TO COMMUNICATE**.

The next broad level up above this simply requires **THAT ONE KNOWS OF THE EXISTENCE OF COMMUNICATION**.

And the next level above that is simply **AWARENESS OF AN ENVIRONMENT AS SUFFICIENT COMMUNICATION**.

Now, as we go down from that to the bottom we find out we are more and more fixed and less and less capable of spanning attention. So let's look at communication between two people as a fixed double-terminal affair. The individual is less aware of his immediate environment. At Communication with Self he's not aware of his environment out here at all. And so we get the contracting perimeter of the dynamics, which we've discussed before. As we go down this Awareness Scale, which is also Communication Scale, we get the individual closer and closer in until—one of the early symptoms of it—he doesn't think anybody could possibly hear him unless he's standing with his face right in their face. And the next spot below that is real worry. Now this individual may be across the room. It doesn't matter. Now let's add to this, and we get the actual name of this scale. And it is the Scale of Reality. That is the name of the scale. Now this seems strange, if it has to do with awareness and communication, that we call it the Scale of Reality, because it is the scale, a practical scale which is useful in processing.

Now, how is it useful in processing? We're looking at a preclear that can't find anything real very easily. We suspect he doesn't even know he can't find anything real. You know, it's just the way the case behaves—it's kind of spooky. Well, this guy, the realest thing he could do would be to think a thought and know that he thought the thought. That's the realest thing the guy could do. Now, if you were to graduate him upscale from this, the next thing he could do that would be real to him would be to get the idea of saying something to somebody that has lots of significance to it, and having that person say something to him. Mythical personnel. And that's their reality. With significance.

Now we go up above this, and we find out that the individual could have something real just by "hello" and "O.K." And one of the reasons we're using hello and O.K. is that it is an unreal communication. If a preclear can handle hello and O.K. without balking and consider it a real communication, this preclear is at that band. If he insists that that's a bad reply—you know, he "really wouldn't say hello" and then somebody else "wouldn't say O.K."—he would go at it possibly on hello's back and forth, but he would go on it much better with significances. "WHAT COULD YOU SAY TO Pop?" "What could you say to your Mother?" And he'd give you significances. "Now, what could your Mother say to you?"

The funny thing about this is the way this scale was traced out. It's very interesting. It was traced out by watching the separation of universes, and when these universes come apart they first come apart as a **WORRY, WORRY**—then, "Think a thought"—"Think a thought the other fellow would think"—"Think a thought that you would think"—"Think a thought that the other fellow would think," and all of a sudden the individual differentiates between the kind of things the other universe thinks and the kind of things that his universe thinks. So we get this differentiation.

Our next differentiation up the line would be **SOMETHING YOU COULD SAY** to that other universe and something it could say to you. And significance, significance, significance, and then I discovered that we had a point in the separation of each one of these universes when

hello, hello, hello, with the answer hello was REAL. Perfectly real and acceptable. The preclear was not even vaguely uncomfortable about it. And then hello and O.K.—a perfectly real communication. And then, THE FACT THAT THE PERSON EXISTED was itself communication, and then THE FACT THAT THE UNIVERSE EXISTED AND THE REST OF THE ENVIRONMENT EXISTED, too, was a sufficient cognition without any further processing.

When you start to pull universes apart on the individual, these universes have a tendency to go through that span, and the universes we don't see are the universes which are totally introverted. An individual is actually BEING his body, you see. He is in his body. He is actually, really being his body, and then his body is being his father's universe. We could start in by thinking that the most BASIC universe to separate would be father and mother from him, but this isn't the case at all. It would really be the thetan. So you could separate these other universes, but don't forget that we have an artificial enclosure of universe with the thetan in the body and here we're immediately talking about exteriorization, aren't we?

So you could be almost any one of these universes. You'd find you'd go up on this gradient of reality. At first you could have the preclear think a thought and think a thought and think a thought, you of course making him express a thought, you're making him communicate with you, but he doesn't notice that. And think another thought, think another thought. Now, what kind of a thought could this other universe think? Another thought the other universe could think, another thought. When these become at last flat and squared away you've got these universes well on the way towards separation and then you can go into communication and separate them. Now, this is not a hard and fast rule because I have to do considerable more experimentation on it. I'm just letting you in on a particular echelon of the spirit. This might not hold true, we might be able to separate them all, all the way up the line, by simply thought, thought, "Think a thought," "What kind of a thought would the other person think?" "What kind of a thought would you think?"

The way I've been doing it with great success has been just: ask the individual what he could then SAY to his father. Now, he has just discovered he can separate out his father's pattern of thinking from his own pattern of thinking. Now, it's time to communicate. Now we've got a distance, so we get "What could you say to your father?" Well, have him say, "Okay." "That's fine. Now, what else could you say to your father?" etc., and then you get this very flat.

In its turn THINKING A THOUGHT itself became flat, THINKING HIS FATHER'S THOUGHTS became flat, and then we got COMMUNICATION WITH SIGNIFICANCE flat and then we got BOTH WAYS flat on that, and then we got to this point where it is ENOUGH FOR HIM TO SAY "HELLO" or have his father say hello. And he says hello and his father says hello; he says hello and his father says hello, and then you could—you don't have to—move him out of that bracket and have him say hello and his father say O.K. And this is still real, good communication and then he becomes AWARE OF WHERE HIS FATHER IS and at that moment you run into Spotting Spots. Got this? Up to this time all spots are misplaced with connection with this person. But, right about that time the spots start to go into their proper places.

The same phenomenon occurs somewhere in that band of "Hello and O.K. with Pop" if it's sneaked up on in this fashion as occurred in running 8-D in a limited number of cases, and all of a sudden his universe starts to un-spin and he's aware of this and aware of that and aware of where his father has been and aware of where he has been in regard to his father, and he starts to get directionally accurate. DIRECTIONALLY AND DISTANTLY ACCURATE. And up to that time it's just enough to be aware, as far as his father's concerned just be AWARE OF EXISTENCE of father and NOT AWARE. That's enough, that's a cleared sphere. Now, do you see where we sneak up on something like this?

Well, that's an interesting scale. It's a scale of reality. I've been working for some time trying to get some way to sneak up on reality.

Now, how does this fit in with the real universe and objects? Well, there's a little kicker in here. Along about the time of "What could you say to your father?" and "What could your father say to you?" and "What could you say to your mother?" "What could your mother say to you?"—in other words, separating part of these universes—we know that sooner or later we would take up "What could you say to a body?" "What could a body say to you?" We know we

will run into that one, but that's not so real sometimes. We've got to get him out of some other universes before we get him out of the body's universe.

Right about the point where we would pass from that into communication by hello-hello, the individual on an 8-C level can spot unrealities. Isn't that good. He can spot unreality. Your pc today, Crystal, was just about ready to take a look at the environment. But, he could spot unrealities much faster than he could spot realities. Now, you know what I mean by unreality. Supposing you ran 8-C on unrealities. It's along about that point you could take up something like this if you wanted to. You'd run 8C— "Spot something unreal in this room," "Spot something else unreal in this room." Then the individual would spot a lot of things, the wall behind him might be unreal, or something like that, you see, and he'll get out to a point where he'll recognize that his sight line to the horizon is real, but beyond that it's unreal, and he gets the idea of sort of living on a saucer. It's a little saucer which goes exactly out to the horizon and no further, and everything beyond that is unreal.

Ask him to spot some unrealities in his environment until it's real to him. It sneaks up on the preclear after a while because he finds out things are getting LESS AND LESS UNREAL. It's as-ising unreality.

When we're graduating a pc up the line it is very easy for the auditor to monitor the pc so that the pc can apparently run the most impossible, complex, the most advanced processes you ever heard of and just stall right there. The pc goes right on running them, "It's all unreal and it doesn't matter anyway," and he just goes on through it and the auditor kind of monitors the preclear in every step and sneeze if we just keep on going. Well, there is where we sometimes come a cropper in auditing. We audit somebody in a rather advanced process and it's unreal. Now, we've just had an experience of this happening. The guy apparently was just going bangity, bangity, bang, and yet it wasn't real.

Well, it won't do them any good unless it's real. This is the way to sneak up, then, on a preclear and make sure it's real all the way.

AUDITING THE "WHOLE TRACK"

Let us move into top-echelon Scientology and utilize anything we know from Book One right on up to present time.

One is quite aware of the facsimile phenomenon, the engram phenomenon, and one can use this with Spotting Spots and Communication. (See earlier PABs.) When a preclear has an engram he is out of position with regard to the spot where the incident occurred. There is a very adequate description of this in Book One, centering around the activities and engramic content in the bank of a fish. Now, under Spotting Spots and Communication Processing we can at last handle this. And here come E-Meters back into the picture. The HASI is, at this moment, building a new and better E-Meter than has ever been built before, under the trademarked name of Physio-galvanometer, or O-Meter. It has very little in common with the old type E-Meter. Nevertheless, an old type E-Meter can be utilized.

By asking, as in *Electropsychometric Auditing*, one discovers the length of time back to where the preclear is stuck. It does not matter how far back he discovers the preclear to be stuck. As soon as he ascertains where the preclear is stuck on the whole track, he swings into Spotting Spots and Communication Processing with the following commands. Let us say he has discovered the preclear to be stuck on the Genetic Line as a plankton in the ocean. The auditor says, "**Tell me some things you can say to a plankton.**" The preclear then says something that he could say to a plankton, although there may be a great deal of comm lag connected with this. As soon as he has made this statement, the auditor says, "**Now have the plankton say 'okay.'**" The auditor runs this on the preclear using only the plankton until the preclear has no communication lag in giving things he could say to the plankton. As soon as this occurs, the auditor then says, "**Give me some things which the plankton could say to you.**" The preclear then gets some statement that the plankton could say to him, and the auditor has the preclear say "okay" to that statement. This, then, is run until the communication lag is flat. The auditor can then take up the sea with "**What can you say to the sea?**" And when the preclear has made some statement as to what he could say to the sea, the auditor has the preclear have the sea say "okay" to the preclear. Then, when this has been run thoroughly, "**What could the sea say to you?**" asks the auditor. The preclear gives aloud some statement the sea could say to him, and the auditor has the preclear say "okay" to that statement. It will be discovered that the preclear has certain energy masses connected with the sea, the plankton, and that he is out of location, which is to say that these spots, these facsimiles, are not in their original position but are impinged upon the body itself, and as this process is run it will be discovered that the original location tends to assert itself and become stripped of the energy masses connected with it which keep it out of present time. The location will become clean after a while, which is to say the spots are in present time.

Now this particular process can be run on anything in any fashion, whether Book One, *What to Audit [History of Man]*, or Universes.

To run this process on universes it is necessary to select out what universes the preclear is interiorized into. It will be discovered immediately that he was probably interiorized into his father's or his mother's universe. One ascertains this by asking the preclear, **"Whom do you most resemble in the family?"** And after careful questioning of the preclear, establishes that the preclear is thinking the thoughts of, and having the problems of, some member of the family. Then the auditor says, **"What could you say to this person?"** mentioning the person. And the preclear tells the auditor something he could say to this person. The auditor now has the preclear have that person, more or less located where the person actually is, say "okay" back to the preclear. The preclear, of course, makes the person say this "okay." When this is flat, the auditor then says, **"Now what could that person say to you?"** And when the preclear has told the auditor something, the auditor says, **"All right, now say 'okay' to that person."** Working this back and forth one gets the preclear out of various universes, which is to say out of coincidence with various spots where he has interiorized into another universe.

The whole problem of interiorization is a problem of coinciding spots which do not actually coincide. According to the preclear and the body, the place where he had an automobile accident yesterday is right here with him today. It's not down on the corner. The trick is to get that spot clean and into present time, and at its proper distance from the preclear.

Naturally, the process could be extended to exteriorizing the preclear out of this universe, and should be, but remember this is probably not feasible until a great many incidents have been run with the preclear brought into present time. Practically any and every psychosomatic illness there is is represented by and caused by a facsimile on the whole track which is in suspension, with its location out of location as far as the preclear is concerned.

So we are running engrams again. So we are using a mechanical aid in order to establish this. The reason we are doing this is because the preclear does not get out of a body which is so out of position that the preclear doesn't really know where he is. The body has birth in restimulation, has some whole track incidents in restimulation, and the preclear, being used to taking his data from the body, does not know where he is. Getting the body into present time, more or less, will permit the preclear to exteriorize. Further, cases which have not exteriorized easily in the past, or which have not stayed exteriorized, can be made stable by the use of this communication process in conjunction with Spotting Spots.

One does not have to pay too much attention to the Remedy of Havingness while he is running this type of process. It is an oddity that two-way communication applied to a mass will as-is the mass without particularly depleting the havingness of the preclear. The reason he had the mass in the first place, evidently, was to have something to talk about. He is being permitted to talk about it, over it, and through it, and so is ending the cycle of why he would have that mass. In actual practice, very little Remedy of Havingness is necessary when running this type of Communication Processing as given in the above paragraph. However, there is a tendency on the part of most preclears to "chew around" or change the direction or position of the energy masses which they are handling, and when this is the case there is a certain loss of havingness by reason of heat and friction. Thus, a Remedy of Havingness sooner or later is actually used, even though Communication Processing itself does not materially reduce havingness.

It is very astonishing to find ourselves at this late date suddenly scooping back and encompassing a tremendous amount of data which we thought had been passed over and forgotten. It is startling to discover that everything we know about engrams, facsimiles, secondaries, the whole track, of the interiorization of the various types of traps, of adventures and misadventures of the thetan, without number, are all of use suddenly and forcefully to the auditor.

As a case history, an individual who has been run for some five hundred hours by various good auditors, and who is reputedly one of the toughest cases ever seen in Scientology, had his case broken completely a few days ago by the use of Spotting Spots and

Communication in combination, as given. The individual was stuck in a certain present lifetime area. He was not so much stuck in one incident as he was stuck in all the incidents which took place between his eighteenth and twenty-second year. Everything and anything in that area was engramic and it was totally in restimulation, with all of its spots out of position and surrounding the preclear. One was then not auditing a preclear in present time at all, he was auditing a preclear in the area of the eighteenth or nineteenth year. The preclear was trapped in that area. The auditor asked the preclear for some things he could say to that area. The preclear then gave them to the auditor. Each time the auditor had the area say "okay" back. The auditor finally asked the preclear for things that area could say to him, and the preclear, each time, gave an "okay" back to that area. The area, at length, sprung out and took its proper position and came up to present time, and at this moment exteriorization was possible for this preclear.

Mass can be disintegrated, no matter what type of mass it is, by two-way communication. There are two types of mass. There is the first type which is simply mocked up mass in mocked up space. This we know by agreement to be the physical universe. There is a second type of mass, which is the space-mass experience mass, which we call a facsimile or an engram. This type of mass has been our target and goal since the earliest days of Dianetics, and two-way communication, used in the above fashion, can resolve this.

Some more data on this subject will be given in your next PAB. The announcement which this PAB contains is definitely a major point in the research and investigation in Dianetics and Scientology and pulls together many of the loose ends and details over which we have gone. I have worked very arduously to discover, first, data about the anatomy of man and his mind, second, the full details of this data, and third, methods of handling this data. At this time we have a method of handling this data which is very superior to anything we have had in the past and which can evidently work at any level. I invite you to try this on your preclears and then tell me how it works for you.

Best regards,

Ron

OWNERSHIP

SPECIAL PAB

I wonder if you realize that research is paying off and has continued to pay off over the last hectic five years. In 1950 when organizations and the paper chains within them threatened to engulf all of my time, and when the absurdities in California where else?—of personal attack all but wrecked the continuing advance and finance of research, I pulled back sharply from organization and organizational matters, and made the decision that whatever else happened I would continue this line of investigation which I had begun in 1932 and would bring it forward to completion. It was my belief that this subject would go as far in the society as it worked, and no further. I confirmed this opinion in 1951 and 1952 when Big Business decided that the thing to do with Dianetics was to make millions of dollars with it, and that any further research in the matter was nonsense. The whole theory lying behind Dianetics and Scientology is a very easy one to comprehend, where it comes to its development, and that is, the subject will go as far in the societies of Man as it is workable, and no further, and no amount of advertising, and no amount of frilly stationery is going to push it an inch beyond its workability. Thus, I have continued research, whatever else I have done. Whoever and whatever has gone on harassing and barking, and whining and snarling on a hypercritical level in whatever part of the country, I have known and continued to act upon this formula.

At one time I envisioned huge staffs capable of correlating data and discovering many things. These staffs have never materialized. Where a “research department” has been formulated, as in the Elizabeth Foundation, it has been a joke, and has actually done more to impede the forward progress of research than otherwise. The sole purpose of organization has been to continue the finance of research and investigation into the human mind. The amount of finance demanded has not been very great. General Electric throws away more money on research in any month than has been spent on the entirety of Dianetics and Scientology, and they buy less for it. One of my friends—and I certainly do have them—commented the other day that Dianetics and Scientology, in the field of research, present the most astonishing picture that has ever appeared in the field of research. More actual biting data has been developed by myself under less money and under greater duress than in any other time or place. Maybe his statement was merely kind, but from where I sit, it certainly looks like it.

Very often a student or a preclear of the HASI wonders why he is paying what he does to be trained. Actually it costs about half the sum he pays to train or process him. The remainder is devoted to research. When a person buys a membership of whatever classification, almost all of that money goes into research or financing the dissemination of the material; although it costs quite a bit to keep the skeletal framework of an organization as big as the HASI running, it is yet capable of continuing on the funds it receives. Very few people, even students and preclears, realize this, but here is what is being done; and it's time you took a good square look at this, when people out in the bullrushes start whining about the HASI. Every dime spent with the HASI is guaranteeing the continued freedom of Dianetics and Scientology. These subjects have been lucky enough not to get into such financial straits that they could not extricate

themselves from ownership and control of persons who would have utilized them to the detriment of Man. Dianetics and Scientology have not depended upon large donations from personally interested persons. It is highly doubtful if the HASI would accept a colored donation which was meant in actuality to guide or steer the policy of "develop and disseminate." Although various materials of Dianetics and Scientology have occasionally been tendered to official and private agencies, any effort on the part of these to monopolize or to classify under security headings this data, would not only have been resisted, it would have been defeated. Because Dianetics and Scientology and the existing organizations have been financed in this fashion, Dianetics and Scientology are free, and will not be used in the direction of some George Orwellian nightmare.

If you find something wrong with the organization of the HASI, its personnel or people, and if you criticize this weakly or strongly, remember you are criticizing your own organization. It's not somebody else's organization—it's yours; and if you criticize constantly and continually about the various ills to which any human organization is subject, allowing of course that the HASI IS a human organization, you're making it just that much tougher to get this job done. Actually, flatly, there is nothing wrong that cannot be corrected with any part of the organization of Dianetics and Scientology anywhere in the world. The HASI is far more efficient than most modern businesses, but rubbing elbows as it does with the human race day after day it is subject to breaks and omissions. The difference is that when it becomes aware of them it repairs them. If you think this level of efficiency should be raised, then why don't you come down to Phoenix or London, or any other central office, and get to work. It's your organization.

Or why don't you do a better job of dissemination right where you are. The HASI today on the local scene is cutting a very deep swath into the society where it is immediately centered. Its main job, of course, is an international job and it pays most attention to this. It is actually doing a very great deal these days right here in Phoenix. It is working on very friendly terms with most of the civic organizations in town, and it is now working with the probation officers on juvenile delinquency and criminal problems.

Maybe one of the first things people should learn about Dianetics and Scientology is that there is nothing selfish in its forward thrust, and the only toes it ever steps on are the inefficient or the vicious ones. If the HASI makes an error, or some auditor makes an error, it should be put down to inefficiency, or lack of time, or too much to do, and from my experience, exempting of course those few auditors whose certificates have been yanked for very good and ample reason, the heart with which people in Scientology work is a good heart. They may make mistakes, but they don't make them knowingly, and what is most important, they correct them when they have made them.

I hear a lot of whining and moaning here and there about how bad it is over here, but I notice it is always from people who are totally incompetent and who depend for their communication line on their imagination, and with as little recourse to fact as possible.

It is quite interesting that almost any influential person who is interested in Dianetics and Scientology sooner or later will begin to be the target of squirrel publications. These publications are uniformly run by people who will not accept processing, and none of these squirrel publications are written or published by personnel trained in Dianetics and Scientology, and most of the people back of these squirrel publications are M.D.'s or Psychologists. Now, it is a remarkable thing that influential people receiving this literature believe they are receiving material from Dianeticists or Scientologists. The moment I became aware of the fact that this was going on and that poorly informed people actually did believe that Dianeticists and Scientologists trained in the subject were the authors of this barrage of nutty literature, I began to take action on a punitive level. And I can solemnly guarantee you that in a relatively short space of time none of these squirrel publications written by unlettered and untrained goof-balls will be in existence, for it has been clearly indicated to me that they have very often impeded the organization and made the HASI struggle in order to get this job of research done. If one of these publications prevented just one desperate preclear from seeking and obtaining the help he

needed from the HASI, then frankly, I can promise a short circuit. We have begun to act very punitively in this direction—as a minor endeavor, to be sure, but nevertheless as an effective one, for remember that we have never done anything that is not eventually effective. That is a very awesome record. I would also like to point out to you that each and every one of the squirrels of yesteryear have met disaster. The biggest squirrel in Great Britain, Derricke Ridgway, was recently to be found in bankruptcy court. I wonder how he got there? We wouldn't know anything about *that*, of course!

Recently we tackled California where half a dozen people have been keeping several million from having any respect for or interest in Dianetics and Scientology. These people would call a vast number of potentially interested public in and then tell them things which were calculated to disgrace and discredit the subject. The auditors in California sat around supinely and thought there must be some very good reason why these people kept on doing this. Of course the amazing thing is the apathy of the auditor himself who would permit this sort of thing to go on. I know if anybody were operating in my area with a media-type of attitude toward Scientology, who sent out vast numbers of postcards to mailing lists and got all the people in so that he could make an ass out of himself about how awful Scientology really was, and how bad the organization really was, and how it was all wild and flighty anyhow, I would have had a good fight on my hands, and somebody would have lost, and I don't think it would have been me. Personally, if I were an auditor and found my area being muddied up to that extent, I would have a definite feeling, if I permitted it to go on, that I was not doing all I could do to spread Scientology in my area. I would have taken such a screwball out of the running so fast he would have thought he had been hit by a Mack truck, and I don't mean thought-wise. But then the difference between me and an apathetic auditor is that I fight, and I get things done.

Of course there is always liability in attacking a source of entheta. One always gets a certain amount rubbed off on himself, but I am not so scared of this stuff that I won't contact it. Right after we found that the CADA* in California was trying to put out of the running any and all Dianetic Auditing in the entire state by having legislation passed to forbid it, and after we pulled the certificates of the ringleaders for this entheta activity, a great many things happened—very strange things.

I don't intend to stop anybody's communication line as long as it has a shadow of truth in it, but when a communication line is woven from totally self-interested lies, I will not only cut the line, I will make it bounce.

Now the only real trouble with Dianetic and Scientology organizations in the past is because of this matter of research. We have not been very alert to people working their ill will from whatever reasons or causes in our own ranks. We just haven't been interested. The important thing was to get the material researched and to get people trained. When we had that job done and when it was done very, very well, the spread of Dianetics and Scientology in the society would be inevitable. We need five thousand trained auditors. That is our first step toward this dissemination, for believe me, what we are doing with cases today wasn't done last year, and has never before been done in the history of the human race. We need a clear public presence, and so we are taking a bulldozer to the communication perverters. We are putting ourselves in solid on every front where we can be effective. It is interesting that the American Psychological Association lost, hands down, a bill which was directly aimed at the HASI in Arizona. It lost so badly that it is doubtful that it will ever recover. We are not even vaguely propitiative toward medicine or psychiatry, and we are overtly intent upon assimilating every function they are now performing. We have great belief in the value of a welltrained doctor, and the psychiatrist is certainly welcome to the psychotic. We do not believe that the organizations of these people should have any bearing or influence in the world at large, for they have used their influence in the past to impede research.

We get terribly amused when some auditor writes in and says he has managed to address the local medical association, and when we hear that somebody is now calling himself a psychologist. These short-sighted people believe that the labor union called the AMA or the

APA is worth propitiating and will be there long enough to influence anything. The general attitude amongst the Powers That Be in these organizations has definitely changed toward Dianetics and Scientology. They now regard these as a very serious and deadly menace. These people are getting scared. We know this because we had a recent reaction at a very high echelon. There is no real danger in these organizations. There is more danger in our own stupidity and in an apathy which would permit our fields to be plowed by any untrained fool who wants to tell us all how bad it is over there. We've been told how bad it is over there for seventy-six trillion years. It's about time somebody said how good it can be somewhere. And that's what we are doing.

I am telling you this because I want you to know how I feel about this, and maybe knowing how I feel about it, and knowing how inevitable I feel about the success of Dianetics and Scientology in this society of Man, you will be better able to understand both what we have been doing, what we are doing, and what we are going to do in Dianetics and Scientology.

5506C03 ASMC-3 History of Research and Investigation

One good thing about a hellfire and brimstone type of religion is that it at least acknowledges the existence of the spirit. The Scopes trial was a turning point, in which the theory that man is merely a machine became fashionable.

In past years, there was great spiritual awareness and perception. Even as recently as the sixteenth century, duelist's used to have an embarrassing thing happen: when they killed the opponent, he'd exteriorize and zap them and pester them afterwards. As mechanical knowledge increased, spiritual awareness decreased; people thought this was progress, despite the increase in amount of madness. If there's no spiritual liability to destroying other people and their possessions, one would expect crime to become more prevalent, and so it does.

5506C06 ASMC-15 What Scientology is Doing

We need a better social order. When an organization says it's above reproach or an individual claims he's untouchable, chaos ensues. The control and direction of man depends upon the good will and good state of man, not upon iron bars, cells, shock machines. A society is as sick as it has sick members. The way to make a society well, however, isn't just to cure the sick only. If the members of the society were sufficiently well, they'd have no problem pulling the fallen out of the mud. This depends on the condition of man, not on a few specialists. When it becomes a specialty, man is dead, because the best of man comes into being when he can aid his needy fellows. When men are made to feel they have no right to assist their fellows, the society is sick.

In creating an organization, LRH doesn't want to merely replace one despotic system with another one, using the existing comm lines: This is what happens in a revolution. No nation is ever overthrown; they are just substituted for. If scientology did this, they could probably create an organization powerful enough to overrun all in its path. But then this would just have to be overthrown.

Scientology possesses great potential for good or evil, depending on how it is relayed. Poorly relayed, used just for gain, it could be very destructive. LRH has already had three offers by persons in places of power to hand over a great deal of information and stop talking.

Helping the insane is usually an effort to reverse whatever self-determinism they have left. A person who is psychotic has at one time decided to die; he has not subsequently decided to live. They abandon the body, unable to let go and unwilling to reassume responsibility. The longer you stop a being that wants to die from dying, the worse off he gets. The truly insane should not have therapy, but space, sunlight, minimal restraints, quiet, food. This gives the individual a chance to change his mind and decide to live again. Exhaustion and insanity are almost synonymous. A person who is sane, who wants to live, who is willing to take responsibility for doing something about his condition, can be in much worse shape than an insane person, but he will be auditable and will get better because he wants to live. Insanity is a death wish of great magnitude; sanity returns when a person decides to live.

Psychosomatic illness is overrated, being universally present as unwanted sensation or absence of sensation; it's not illness. It comes about when someone is called upon to prove something and fails. Some processes for this:

1. What have you got that would prove it? (not about anything specific) or

1.a. What will (disability) get you into? b. What will (disability) get you out of?

then, when flat:

2. What can you prove with it? [the disability].

Here we run into the computation that any sensation is better than no sensation and that he should have something to get sympathy and avoid guilt. But the thetan is to be able to invent a whole new category of ills before he'll give up one he's got. [Hence, "Invent something worse than (illness)."]

Death was invented on the whole track as a substitute for insanity, which was being so irresponsible that punishment was pointless. You could get anyone to change his mind about wanting to die if you could get into comm with him.

"I want you to come into possession of all that you know, and I want you to use that knowledge with security. And any mission I have here on this planet at this time will be successful at that time when what I have just said has been accomplished."

REALITY LEVEL OF PRECLEAR

Find the reality of the preclear. This is the watchword of processing. Although communication, as completely outlined in *Dianetics, 1955!* is a universal solvent, remember that there are also two other comers to the triangle, and that one of these corners is Reality. That R corner of the triangle is very important to you as an auditor because you, having very great certainties on this and on that, are very prone to forget that your Realities are greater than those of your preclear.

The reality level of the preclear is dependent on how much he is "not-ising" his environment. If he is not-ising it, he must believe that it is dangerous, and must believe that he himself does not have the power to make anything in it disappear or vanish for himself. Therefore, his reality level is as great as he is strong, and it is as poor as he is weak. Do you know that you are processing preclears who do not believe that thought has anything to do with action? You are processing preclears who believe that thinking a thought will influence nothing. You are processing preclears who believe that thinkingness is one thing and actingness is an entirely different thing, and that no amount of thinkingness is going to influence any amount of actingness. This is apathy, indeed, and along with that goes an unreality which would appall you.

Yes, these preclears can get mock-ups. They can get concepts. They can be very obedient. They can even be run with SOP 8-C and somehow or another muddle through it, but the joker here is that the auditor is actually monitoring the body of the preclear, and of course a body can respond to orders, and will respond probably faster to the auditor's orders than to the thetan the auditor is processing. Thus a preclear can be put through any number of contortions and convolutions in processing without getting anywhere at all. The auditor is simply doing it.

Find the reality level of your preclear. Unless you find the reality level of the preclear you are not going to reach the preclear, because the preclear is as alive as things are real.

Now, if this is so important, then let us see how far south we would have to go to reach some preclears. Mechanical two-way communication might very well be much too tough for 75% of the preclears you will process. Just ordinary conversation is actually over their heads. People that we are trying to reach do not know the auditor is acknowledging them when he says "Okay."

Let us look at this acknowledgment of the preclear, and let us discover that the auditor, in order to acknowledge the preclear, must also make the preclear aware that he is being acknowledged. Thus, when an auditor says "Okay," or "All right," or "That's fine," the other part of the statement is to make the preclear aware that an acknowledgment has been delivered. Thus, a "Did you hear me?" is quite often beneficial. When the preclear finally admits that he did hear the "Okay," and when the auditor makes sure that he time after time hears the "Okay," you will notice that the communication, on the acknowledgment level, starts to work with the preclear. But it won't work as long as the preclear is oblivious of the "Okays" the auditor is

giving. Of course, you must give the preclear an “Okay” for every action or completed thought he performs. You must acknowledge what he has said or done, but you must also be very sure that he receives that acknowledgment. It is not out of order to face him squarely and hold up one finger and say, “Wait a minute, did you hear me say ‘Okay’?”

Now there are two processes which are at once the most basic of processes and which are very low on the Reality Scale as well as high on it. A person processed on these processes should not believe that the auditor believes his reality level is low. Quite the contrary. Such a process as this one happens to be very good anywhere on the tone scale. And this process is, **“Think a thought,” “Receive a thought.”**

You are in essence processing thinkingness. I wonder how long and how often you have processed preclears who could not clearly or differentiatively understand that they were thinking a thought? The auditing command is simply, **“Think a thought.”** The preclear is given this command time and time again, and he vocalizes the thought back to the auditor, and the auditor acknowledges the fact that he has received that thought, aloud. And the preclear is run until the preclear knows, absolutely, that he himself, not some machine, not some energy mass, not his toe, or his hat, is thinking the thought. The preclear will start out thinking thoughts which are actually handed to him from some mysterious source. When the communication lag on this is entirely flat, and when the preclear knows that he himself is thinking the thought, the auditor can then run the other side of the process.

“Receive a thought” is run with the following auditing command: **“Tell me a thought you would be willing to receive.”** This is then run until it, as a process, is entirely flat: when it is no longer producing any result or comm lag.

Part of the “Think a thought” process is to have the preclear place the thought in various locations after he has thought it. Have his shoe think a thought, have his hat think a thought, have a lamp think the thought, have a rug think the thought. This gets the preclear into the practice of placing the thought somewhere. Thus, thoughts are less likely to appear suddenly and magically out of his machinery.

Very curious phenomena result from “Think a thought” and “Receive a thought.” It will be found sometimes that it is easier for the preclear to think a thought for another universe than for himself to think a thought. Let us take for example a preclear who is entirely interiorized into the universe of his mother. It would, therefore, evidently be much easier for him to have his mother think a thought than for the preclear himself to think a thought. As a matter of fact it might be an enormous struggle, resulting in rebellion, for the preclear himself to think a thought, but it would be very easy for the preclear to have his mother think a thought. The way to go about this would be to take an E-Meter, or simply estimate, by finding out who the preclear most resembles, the probable universe into which the preclear is interiorized. Having established this (and you would only do this if the preclear were rebellious about thinking a thought himself) you would then have this likely universe think a thought, with the auditing command (having established that he is interiorized into his mother’s or his father’s universe): **“Have your mother (father) think a thought.”** This would then be carried out until the preclear was absolutely sure that he was making his mother or his father think a thought. This would betoken an initial division of the universe.

Slicing up universes with communication processes is a very easy thing to do. All one has to do is use the process: **“What could you say to your father?”** and have the preclear say it, and get an Okay from his father. And when this was flat, **“What could your father say to you?”**, and when the preclear has vocalized this, the auditor would say, **“Now give your father an ‘Okay’ to this.”** However, this workable process which splits universes (in old-time parlance “valences”) is yet much too high for a preclear who is very low on reality, and would take a very long time to do. It would be a process into which you would eventually move the preclear who had been thinking a thought for his mother, but remember that thinking a thought for his mother would be only a start into communication processing, and would be an elementary process, run until the preclear is entirely certain that he is thinking a thought that his

mother would think or that he can make his mother think a thought—the latter being the most desirable condition.

You should be aware of the fact that you are processing thinkingness. You are not processing spaces, you are not processing masses at this day and state of development of Dianetics and Scientology. You are processing thinkingness. A man is as well as he thinks. The more masses and spaces, phrases and engrams you process, the less you are validating the fact that you are actually processing a thinkingness: a thinkingness that we call a thetan. To process this directly is, of course, the most indicated process there could be, and sure enough, we are producing good results with it. But the remarkable thing about the process is that it works on people who heretofore have had very, very poor reality.

Now there is a process which is a little bit lower than this “Think a thought” process, and this is the process of finding something real in the room. Recently I have had some very excellent results with **“Find something in this room that is comfortably real.”** This is a variation on the initial auditing command as given in the early SOPs. It is apparently better. A preclear who is not-ising everything in sight will find things real, he says, but actually he is not comfortable about it, and if you ask him to find something that is comfortably real, it may take him a long time to discover anything that he would tolerate to continue existence, and once you have begun this process of toleration you would be able to do a great deal for his case.

“Find something comfortably real” is not necessarily a low-toned process. It will work in varying degrees on anyone. It is not recommended for any particular case level. If a preclear utterly bogs on **“Think a thought”** (which isn’t likely), then you should have him **“Find something in this room that is comfortably real to you.”**

I am reminded of an auditor recently processing a very bad arthritic, who processed him as an exteriorized case for some little time without any apparent gain in the case before it occurred to this auditor that something must be wrong. Actually, a great amount of time was invested. The auditor asked Nibs, my boy who was then instructing the ACC course in the United States, and who is at this writing in England, teaching the BScn course there, what could possibly be wrong with this hung-fire preclear. Nibs looked him over and discovered that the auditor had never yet gotten the preclear into any kind of a situation which was even vaguely real to the preclear. The auditor in one chair and the preclear in the other chair was not a real situation to this preclear, and yet the auditor was running him as an exteriorized case. Of course he was exteriorized, but with such a low level of reality that very little benefit of course was resulting from the processing.

Processing is as beneficial as it is real and factual to the preclear, and if you cannot raise the preclear’s reality level by the use of Affinity and Communication, then you are letting the whole triangle hang fire. This triangle of ARC may have suddenly gotten very important on the C corner, but it is still foremost in the tool-kit of the auditor.

Now you will want to know why you should use “Think a thought” when what is obviously wrong with the preclear you have in mind is a withered leg. Let me assure you that if you process directly this withered leg, you are processing something and somebody who probably has a very low level of reality. He wouldn’t have a withered leg if he had a high level of reality. Where you have anybody who is neurologically, physically, or psychosomatically ill, unless it be from an acute infection or an accident, you have somebody who has been trying to not-is his body. When an individual is not-ising his body, making his legs wither, or his stomach get ulcers, or his head get migraine headaches, or his teeth fall out, you have somebody who is trying to not-is the environment. He is already going in the direction of succumb. The one thing that would make him very happy would be the entire disappearance of the physical universe. Well, with modern processing you can make this happen, too, and maybe this is something you should have happen for him in order to demonstrate that it could happen. Of course, if you did this you would have to go through a modern BScn course at least, for this is a very tricky procedure. In view of the fact that unreality is the action of realizing things are there and then saying they aren’t there (not-ising them; see *Creation of*

Human Ability and the Axioms of Scientology) you are dealing with a protest against reality which results in unreality. A person will let things be as real as he is willing to let them exist. When an individual isn't willing to let a leg or a tree, or this universe exist, then things are not real to him. One of the best ways you could get him to raise his level of reality would be to give him some reality on thinkingness. It isn't actingness, it isn't getting tired, it isn't being unable to work, it isn't the second dynamic that impedes your preclear—it is his thinkingness. All you have to do is to get him to change his mind. If you could get anyone to change his mind enough he could then command anything that was bothering him. But a preclear who is not-ising things is trying to use force and pressure of one kind or another against physical objects and spaces in order to push them out of existence. This will never win, let me assure you. Energy will never destroy energy, I don't care how many atomic bombs the peanut whistly brigade builds, they will never destroy any space or energy with them. Your preclear who finds things unreal has stopped trying to do anything with thought and is trying to do something with force. He no longer conceives that thought can generate or handle or give existence or life to space and energy.

Now you take this to heart, and take a good, hard look at some of these preclears you have been processing on very fancy and frilly processes, and you take a think back over all of these preclears who, after you processed them, didn't think anything had happened. When the preclear didn't think anything had happened, nothing happened. What was in error? You were processing him above his level of reality. If you could get him to think a thought and know he thought it, and receive a thought and know he had received it, even though he put it there to receive it, which is what he does, you would then be directly addressing the very thing that is doing unreality and reality. An individual who has a compulsive outflow is simply unwilling to receive a thought. An individual who is silent simply can't think of anything. Thus, if an individual had control of his thoughts he would have control of the universe. We can prove this now in a process.

And don't think you are going to finish this process, either side of it, in a half-hour or forty-five minutes. Some of these glib preclears you process will "fall in" on this process and begin to comm-lag an hour or two after you start processing them on it. The main errors which have been made with this process so far have been failing to run it long enough to have the preclear really know and really understand that he, himself, has thought the thought and that he, himself, has received the thought, or is willing to receive the thought.

"Find the reality level of the preclear" is one of those bywords that you can't use too often or look at enough.

STRAIGHT WIRE

A MANUAL OF OPERATION

L. Ron Hubbard

ARTICLE ONE

Modern Straight Wire

On the theory that someone may pick up this book and have only time to read a few lines, or have a constricted ability in amount of material assimilable, right here in a hurry I wish to give you the type of Straight Wire which is today producing phenomenal results on preclears.

THE COMMAND: Recall a moment of _____ .

NUMBER OF TIMES COMMAND USED: Until the complete flattening of the preclear's communication lag takes place, so that he can readily and at some length and quantity give replies without any difficulty.

COMMUNICATION: Always acknowledge with an "O.K." or an "all right" every answer which the preclear gives you. Always let the preclear originate any communication he wishes to originate, or comment on the process, and acknowledge his origin of communication or comment. In other words, do not override his effort to communicate to you as this will considerably reduce his tone rise.

DUPLICATION: Make sure that you, the auditor, duplicate the command over, and over, and over until the comm lag is flat, and do not be detoured by any rationale of your own into any other process simply because you are unwilling to continue the duplication of the command.

APPLICATION: In the blank space of the command can be placed any subject of any concern or consideration of the preclear whether theta or entheta.

EXAMPLE: The preclear is studious. The auditor then applies Straight Wire in this fashion: "Recall a moment of studiousness." The preclear does so and says that he has or describes the time. It will be observed that the first one may take a considerable length of time and that the length of time intervening between the question and the reply will vary from here on until the communication lag is entirely flat, which means that the process may have to be continued for half an hour, an hour, or many hours. The communication lag is known to be flat when the replies are readily given without pause or hesitation and without any comment on the preclear's part. The moment the preclear says he has recalled a time or describes the time he has recalled, which is optional, the auditor says, "O.K." or "all right," acknowledging the fact that he has received the preclear's communication, at which moment the auditor then places the exact question once more. An additional symptom of a flat process is that the preclear will no longer be studious. But, as preclears do not know how studious they are, it is best to run the process until the communication lag is flat. It is not necessary for the auditor to demand NEW times every time. The preclear can recall the same time if he desires to do so.

OBSERVED PHENOMENON: The time track phenomenon will be observed while delivering this Straight Wire question. It will manifest itself in this fashion. The first answers of the preclear will probably be relatively close to present time and then will be further back into the past, at which time they will begin to progress (at some time they will begin to progress forward into the future) and will come close to present time again, when they will once more turn around and go into the past and then come into the future. In other words, the preclear will give the time A DAY OR SO AGO when he was studious, then a time A YEAR OR SO AGO when he was studious, then a time WHEN HE WAS A CHILD when he was studious, then a time WHEN HE WAS SIXTEEN when he was studious, then a time LAST YEAR when he was studious, then a time THREE DAYS AGO when he was studious, then a time TWO YEARS AGO when he was studious, then a time when he was THREE YEARS OLD and he was studious, then a time when he was EIGHT YEARS OLD and he was studious, then a time YESTERDAY when he was studious, and so forth. In other words, the preclear sweeps up and down the time track. The caution to be observed in this is, never leave the process when the preclear is recalling moments which are far into the past. Leave the process when the preclear is recalling times relatively close to present time. Otherwise you stick the preclear on the track.

GOAL OF THE PROCESS: The goal of many processes is to raise the self-determinism of the preclear. Memory is an automaticity which is not under the control of the preclear. By taking over the automaticities of memory and forgetting the preclear is capable of greater self-determinism. In view of the fact that all mass could be said to be memory, you will see at once that Straight Wire leads to the control of mass.

PREREQUISITES TO SESSION: Present must be an auditor, a preclear, a place to audit and time in which to audit.

WHEN THE SESSION HAS BEGUN: The session is actually in progress and the process is ready to be administered only when the preclear is aware of the fact that an auditor is present, that HE is present, that the auditing room is present and that an auditing session is in progress. TWO-WAY COMMUNICATION or asking the preclear to locate objects in the room simply by NOTICING THAT THEY ARE THERE (a lower process than Two-Way Communication) should then be engaged upon until such time as the preclear is aware of his surroundings and the condition.

ON WHAT PRECLEAR TO USE STRAIGHT WIRE: Straight Wire can be used on any preclear who is AWARE OF HIS SURROUNDINGS, THE AUDITOR, AND AUDITING SESSION AND WHO HAS REALITY UPON THE GOAL OF AUDITING. This is signaled by the preclear being in fairly good two-way communication with the auditor. Straight Wire should not be employed on preclears who are in very poor two-way communication.

SUBJECTS ON WHICH STRAIGHT WIRE CAN BE USED: Straight Wire can be employed on ANY SUBJECT OR CONDITION. It will be discovered that the straight wire processes are PROBABLY THE BEST RESOLUTION OF BLACK CASES. The resolution of a black case is indeed contained rather succinctly in the auditing command, **“Recall a time when you were looking at blackness.”** The entire HIDE to SERENITY scale can be employed with considerable tone change in the preclear. The key to exteriorization lies in the auditing command: **“Recall a time when you were in or associated with a body.”** Peculiarities, physical deformities or conditions of any kind could be used on the above straight wire basis with success.

I have given you this brief rundown on Modern Straight Wire, not because it is all there is to say on the subject, but because I wanted to give you the exact essentials present in Modern Straight Wire as rapidly and as efficiently as possible, so that they could be used without having to go through a great deal of material. However, a person, to use Straight Wire, should know a great deal about Straight Wire. While he could simply use the essentials above and could produce a considerable change in a case on any subject, an auditor who is not skilled would be held up by the duplication factor. He would have a tendency, under, of course, very good alibis of his own, to desert the command itself before the process was flat. He would have a tendency to change the command to something else. He would have a tendency to go on excursive trips into the side roads of the process, since a great many comments, considerations and phenomena will come up while Straight Wire is in progress. The self-discipline necessary to continue an auditing command over, and over, and over, and over is not a light discipline. In

fact we could say that an auditor who has not himself had a great deal of duplication run would find himself very resistive to repeating this auditing command to a preclear for a long period of time. However, this does not go to say that an auditor in terrible condition himself, knowing this fact, could not then grit his teeth and pitch in and go on and continue a two-way communication with the preclear, and go on and ask this auditing question over, and over, and over, and over until the preclear's case was solved. Not only is this possible, but it has been done very often. And, in fact, we have a great deal of respect for auditors who, although they themselves are in relatively poor condition, yet go on and produce tremendous advances in cases. We, of course, get more enthusiastic about auditors who are in good shape, producing good results, but we cannot but admire the stick-to-it-ivity some auditors have in carrying through processes which are above their own case level.

Now, just because we have a modern Straight Wire which is interestingly exact in its application and very predictable in its results, is no reason why we have to throw away all other processes. The Six Basic Steps, done as they are done today, are, of course, of great value and do not go into the discard simply because we have a more effective, more exact and simpler Straight Wire.

There is one particular caution which should be observed in administering Straight Wire: that A PRECLEAR WILL VERY OFTEN GIVE A NO-COMM-LAG REACTION TO A PROCESS WHICH IS ABOVE HIS LEVEL. He will not get well on the process; he will not improve on the process, but also he does not comm-lag on the process. The process is being done more or less by some circuit. It is being done without any reality and it is not involving the preclear at all. One has to go far enough south so that the preclear develops a comm lag. Now, if you were to run Straight Wire on some preclear and simply get your answers every two or three seconds and keep getting answers for a long period of time, you would discover at length that the process was not improving the preclear. The reason the process is not improving the preclear is because the process is above the preclear and the preclear has no reality upon his recalls or his answers. In such a wise it would be very wise to start in below Two-Way Communication and get the preclear to spot objects in the room. Not walk over to them, or perform an 8-C, which is above Straight Wire on the tone scale, but simply to look around and find that there is a chair in the room, that there is a table, and so on. This done for a while orients the preclear and it is discovered that he will go into two-way communication with the auditor. Two-Way Communication, then, about the preclear's everyday life should ensue, and after this, R2-20, PROBLEMS AND SOLUTIONS, should be run flat on the preclear, for the preclear who is very short on problems and who is incapable of arriving at solutions is not likely to give up any case problem and is not likely to arrive at any solution. So, we understand that there are actually three points below Straight Wire. Now, a preclear who would need Problems and Solutions run on him at great length is liable, oddly enough, not to comm-lag on Straight Wire and also not to improve upon it. In this wise, the preclear's reality on the question or the response is very low and he is simply being monitored by the auditor. The auditor is more or less running all of the preclear's machinery, an oddity which we observe in some auditing sessions. Although the auditor is running the preclear's machinery, neither the auditor nor the preclear is aware of it. The auditor isn't aware of it because he would rather not be, and the preclear isn't aware of it because he isn't aware of very much anyhow. Just as an automobile doesn't much care who drives it, so do some low toned preclears not care who is running the circuits.

A variation on Modern Straight Wire, a little older but still quite effective, is **“Give me something you wouldn't mind remembering,”** and **“Give me something you wouldn't mind forgetting.”** These two commands are run independently of each other, not alternately, and each is flattened. These are very, very effective commands. It is remarkable that “Give me something you wouldn't mind forgetting” hits people who are dislocated so hard that a many-hour comm lag may ensue on the question. These people are afraid to forget anything. This is very, very effective auditing and is not discarded. It can be used a little lower on the scale than Modern Straight Wire, but it is slower.

An auditor should test Straight Wire very rigorously in the recommended form given above before forming any forthright opinions concerning it. He should observe that running this Straight Wire on a very low toned preclear produces no comm lag and no betterment of the preclear. This is the first thing he should learn about it. Then he should learn that run in its proper place on a preclear who is in two-way communication and is in fair condition, it

produces remarkable, stable results which last for a very long time. It is not a trick process. It is a plow-horse sort of process, but once it has hauled the preclear up the scale it leaves him there. A preclear's continued stability for a long time after an auditing session is very desirable. The trick momentary flash results sometimes do not last. An auditor should also learn that he himself is capable of repeating one command over, and over, and over, and over, without varying it, without getting so bored with it that he himself goes out of the auditing session. Remember, when the auditor leaves the auditing session (although he is still there giving auditing commands) it sometimes occurs that very little auditing gets done, since an auditing session of necessity has to have an auditor and a preclear present and auditing in progress.

It will be startling to you to know that this process is a specific process for a black case and does relieve the black case's blackness. And, after and above the black case level this process is a specific for non-exteriorization and will produce exteriorization if **“Recall a time when you were in or associated with a body”** is employed over a long enough period of time.

There is a great deal more to know about Straight Wire. There are a great deal of phenomena which occur in Straight Wire and there are many other data to be studied about Straight Wire. However, if the auditor cares to study these, first let him learn thoroughly what we mean by Modern Straight Wire and that is laid out above with exactness.

ARTICLE TWO

The History of Straight Wire

The old Dianetic auditor will have no difficulty in recalling the earliest days of Straight Wire.

Once upon a time Straight Wire was one of the most intricate, tricky, intuitive processes known. There were auditors who were excellent at this, but they were alone in their skill. There were many, many auditors who never did make Straight Wire work.

Straight Wire of the old Dianetic type, expertly done, many times produced such fascinating results that auditors would then specialize in it, but, because it has often failed, their specialization would be tempered with a restless search for some other process that would do the job with greater exactness.

The genus of Straight Wire immediately followed the release of “The First Book,” *Dianetics: The Modern Science of Mental Health*, on May 9, 1950. I developed Straight Wire a little too late to get it into the text of that book, but taught the first ten students at 42 Aberdeen Road, Elizabeth, New Jersey, this process and actually got these students sufficiently expert in the use of Straight Wire that they could straighten out present time problems on preclears with remarkable facility.

Here is an example of the earliest form of Straight Wire: A preclear is observed to be possessed of a nervous affliction—the rapid blinking of one eye. The auditor asks him, **“Who had that affliction?”** and asks him this with sufficient communication and discussion so that the preclear at length actually SPOTS A TIME WHEN HE OBSERVED THIS AFFLICTION IN ANOTHER THAN HIMSELF. Now, today with our understanding of Ownership Processing, as covered in the Congress of Eastern Scientologists on June third to sixth [1955] at the Shoreham Hotel in Washington, D.C., it becomes highly technical, for naturally the affliction, if it persisted, must be misowned. But, it would also be understood that the preclear himself might be the creator of the condition. If the preclear himself had created the eye twitch at some time in his past, recalling it in somebody else would simply reinforce the eye twitch; thus Straight Wire would not work. As, let us say crudely, this condition exists in about 50% of the cases on whom Straight Wire was used, we certainly would have, by the factors involving ownership, a misunderstanding of the process and a great many failures.

In view of the fact that a thing persists only if it is misowned—if a person himself has created it and says somebody else has created it or if a person is saying he created something which somebody else actually created—we get a persistence of the space or mass. If a person created the condition and then says that he himself created the condition, a vanishment of the condition will occur. If somebody else, a specific person, created the condition and the preclear says that person created the condition, then again we get a vanishment. Only when we misown

or miscall the creation of a condition do we get a persistence. Thus we can see that the earliest Straight Wire depended in a great measure upon calling the correct ownership; and recalling the correct ownership by recalling observation of the condition in somebody else would be then sufficient to bring about a diminishment of the condition.

Thus, repeating, Straight Wire would not work on conditions which the person had himself created, as long as the auditing command was **“Recall a time when you saw that in somebody else.”** This would have to be supplemented by **“Recall a time when you decided this was a good thing.”** And if those two auditing commands had been used on any condition and if we had also known about comm lag and duplication of the question, then Straight Wire would have been very successful. As a matter of fact it was quite successful and quite startling but had the above limitations.

Now, the earliest type of Straight Wire was interesting in that it did not embrace the case that couldn't remember. To handle this type of case we invented a variation, which was simply to ask the preclear to remember something, anything, and keep him remembering something or anything until his confidence in his own memory rose to a point where he could remember and thus could experience the benefit of old-time Straight Wire. An example of this variation was to ask somebody if he could remember something that had happened today or something that he had had for breakfast, and keep on asking him for various things until he did have a solid reality on one recall or another.

But this too was quite limited as to process, and in order to further improve memories we came out with what is now known as the next-to-the-last list of *Self Analysis*, which is **“Recall something real,” “Recall a time when you were in communication with someone,” “Recall a time when someone was in communication with you,” “Recall a time when you felt some affinity for someone,” “Recall a time when someone felt some affinity for you,”** which process capitalized on the ARC triangle which we came out with in July of 1950, which was much better described in the book *Notes on the Lectures* of November of 1950 and expanded considerably in *Science of Survival* which was written in the spring of 1951 and released that summer, the above list appearing in *Self Analysis*, which was written in September of 1951.

Succeeding this “next-to-the-last list of *Self Analysis*” was Validation Straight Wire, the theory of which was to validate all the good moments in the preclear's past by having him recall them. An oddity immediately demonstrated itself, however, in the use of Validation Straight Wire to the effect that the preclear would recall just so many moments which were good and would then fall off into moments which were very bad indeed. This phenomenon had, by the way, been observed much earlier as a comment on the running of pleasure moments, a process developed by Parker Morgan in Elizabeth in 1950.

After Validation Straight Wire the whole subject of Straight Wire more or less fell into disrepute and decay, and a great deal of concentration was given to actual incidents on the whole track and an enormous amount of phenomena which had been dug up through my work in Wichita. Only “next-to-the-last list of *Self Analysis*” continued to be used right up to the time when we developed **“Something you wouldn't mind remembering,” “Something you wouldn't mind forgetting,”** in one of the clinical units of the summer of 1954. Immediately a great many limitations on Straight Wire were swept away and Straight Wire became a much more important process because it was getting much better results. Here for the first time we had entered into the idea that forgettingness was an actual attribute. In other words, it was a skill. A person forgot things so that he could have things. And, realizing that this was a skill and that it was on full automatic we, of course, had the reason why people were not able to remember. They were so anxious to forget.

In the spring of 1955, in the tenth clinical unit, we discovered that “something you wouldn't mind FORGETTING” was far, far more important than “something you wouldn't mind remembering,” and made several tests which demonstrated a considerable rise in tone as a result of using this single command: **“Something you wouldn't mind forgetting.”** However, because many more interesting things were showing up and occurring we did not give this really the attention it deserved, and actually to this moment the process is not as thoroughly tried as it might be. It might very well occur that this process would succeed many other processes as something which would produce a long-continued and stable result.

With the first clinical unit [October 5—November 16, 1953], which was taught in Camden, New Jersey, we made a considerable codification of “automaticity” and “randomity,”

which had first been introduced in the Philadelphia lectures of December, 1952. The understanding of these two things demonstrated that THE GREATEST AUTOMATICITY IN WHICH ANYONE WAS ENGAGED WAS REMEMBERING AND FORGETTING. Thus, exercises on remembering and forgetting were, of course, very, very important.

It should be understood, then, that no amount of engram running or present time processes would handle this highly specialized thing, automatic remembering and automatic forgetting. And in view of the role remembering and forgetting play in everyday living we couldn't consider the person very thoroughly processed unless we had taken his memory into account. Thus, whatever other processes are run on the individual, something should be done in order to bring this automatic memory factor under control.

We have rather suspected of recent months that it is not necessary to have a great versatility of subject in remembering in order to restore memory. The mere act of remembering something is enough to take over the automaticity. In other words, there isn't an automaticity for every subject you can remember; there is simply an automaticity on the subject of memory. Similarly on forgetting. One might think there was a forgetting automaticity on every type and subject known, but there is only one mechanism behind all of this and that is simply an automaticity of forgetting.

Now, if you were to stabilize a preclear in present time and do all sorts of other things with him and yet neglect exercising his memory in any degree it is probable that you would have left the sphere of recall untouched to his detriment and would have left him with this automaticity. And the automaticity of remembering and the automaticity of forgetting could, of course, push him on down again. So, we should say that any preclear who becomes stable should have had exercises in remembering and forgetting.

The actual history of Straight Wire is of course a very old one, much older than Dianetics. We did not invent Straight Wire. We discovered and observed a great many mechanics about memory which had been neglected hitherto. But, we find that Straight Wire or memory exercises are actually very ancient and have been used for at least sixty-five years.

There were many excursions and experiments made in Straight Wire in early Dianetic days. One of these was Repetitive Straight Wire. Simply asking a person to remember something over, and over, and over again. This naturally succeeded from the running of an engram. Running an engram through, and through, and through eventually erases it, so it was tried with Straight Wire and it was discovered that this was fairly effective, but again was not an answer.

The old Dianetic auditor can probably remember early Straight Wire with affection and probably can remember a great many successes as a result of using it. And strictly as a nostalgic exercise, he should know now that with OWNERSHIP PROCESSING as given in the Congress of Eastern Scientologists, he could make old-time Straight Wire totally effective with the question **“Can you recall a time when somebody else had that condition?”** **“Can you recall a time when you decided to have that condition?”** on all those cases who are already in fairly good condition in the memory department. He would have to ask BOTH of these questions of ANY case in order to get a result and he would have to ask BOTH of these questions MANY, MANY TIMES, until the preclear had flattened his comm lag. This would be a rather crude form of Straight Wire, but it would at least be completing the cycle of action from olden times.

Straight Wire is one of the most agreed upon things in Dianetics and Scientology. There may have been many people who questioned the advisability of running engrams or running secondaries or scanning engrams or doing something else, but, nobody ever questioned very seriously the efficacy of Straight Wire when it worked. It is, and has been broadly accepted as a near synonym for Dianetics and Scientology.

ARTICLE THREE

The Theory of Straight Wire

Memory has played an intimate part in existence since the first Thetan. The creation of time and the creation of memory were concurrent incidents. Let us take a single particle. We find that with this single particle no time is possible, since the space occupied by the single

particle would be indeterminate in placing the particle. Unless, of course, there were eight particles demarking the space itself, at which time you would now have nine particles, and it would be very simple to have time. But, with one particle we cannot have time. We have to have two particles to have time. And we have to have two particles to have memory.

We have to have two particles to have memory because we would have to have a reference point for establishing where the moving particle had been if one had remained motionless. In other words, let us take a motionless particle and then let us have another particle move in relationship to that motionless particle; we would then be able to tell that it had moved by remembering that it had been where it was originally. And then remembering successively the positions it had gone through until it arrived at its present time position. The moment that it moved further one would have a situation again of remembering what had been present time for it, but observing what was now its present time position.

MEMORY IS THEN, MECHANICALLY, THE TRACKING OF POSITIONS. Where POSTULATES or CONSIDERATIONS are concerned, however, we must first have the consideration that space, particles in time can exist and then THAT ONE CAN REMEMBER. This latter is more important than the mechanical facts of time. For if one continually makes the consideration that he cannot remember, he is at once making the consideration that he cannot discover the former position of earlier particles, and any advanced student who knows about PERFECT DUPLICATION, or if you care to read about that in *The Creation of Human Ability*, will find that it would now be next to impossible for the individual to cause the vanquishment of the particle. In other words, if the person cannot remember where the particle came from originally, he cannot establish its original position. And being unable to establish its original position he cannot get an exact duplication of it, which is to say a perfect duplicate of it, and so will get a persistence of the particle. Once one has forgotten its original position, which is the mechanical aspect of this, one is then no longer able to cause it to disappear.

In processing we very often run into a person who has “heavy facsimiles.” In other words, these facsimiles are so heavy and so weighty that he can barely push them around. This is simply basically a postulate that these things are heavy, that energy is heavy, but next to that it is a consideration that one cannot do anything to them. One cannot cause them to vanish—therefore, one cannot cause them to affect one less.

Observing, then, that things tend to become more permanent and more solid the less one can remember where they came from (though this is not a total truth, you understand), we could consider that ALL OBJECTS ARE MEMORY. Or more accurately, that ALL OBJECTS ARE MIS-MEMORY. If an object is there, one comment you could make about it is that everybody has forgotten when and where it was created. And having forgotten when and where it was created, it now persists. Thus, you might say that objects depend, or persistent spaces depend, entirely for their persistence upon forgettingness. Which is to say, mis-memory.

Now, as memory applies to postulates and considerations as well as to spaces and masses, it becomes obvious that conditions, good conditions or bad, would tend to persist where they were mis-remembered. In other words, if you knew exactly where all the particles of your car were created and how many movements back they were created and who had created them (the more important fact) and who had assembled them into a car you would not have any car. It would simply disappear. In other words, a perfect memory would bring about a vanishment of all objects and spaces.

Well, at least that is the theory and the theory is borne out by the fact that it is only necessary to remember who created something to have it diminish in density, or, in case of a light mass of energy, such as an engram, to vanish.

In that Thetans become very possessed with the idea of making nothing out of everything (their primary obsession), memory, an exact and persistent memory, becomes an obsession with the Thetan. He knows that when he no longer remembers the exact genus of all those things in his vicinity he will no longer be able to make them disappear. Therefore, a failure in memory causes a Thetan to be very frantic.

Now, we needn't go too deeply into just exactly why this is, but I will brush it in passing. ALL THINGS LIKE TO BE DUPLICATED. A THETAN HAS NO MASS, NO SPACE, NO WAVELENGTH, AND NO TIME. Therefore to get a perfect perception of anything, he thinks the best choice would be to look at something which has no mass, no space, no wavelength, and no time. Of course, this is impossible. But, this is a Thetan being

duplicated, and this, indeed, would be the most comfortable frame of mind for a Thetan—to have no persistence or non-persistence of any kind in its vicinity. Thus, when a Thetan begins to see more and more spaces (and he is not space) and when he begins to see more and more masses (and he is not mass) and when he begins to see more and more wave motion (and he is not wave motion) he conceives the fact that nothing is duplicating him, which is to say that nothing is taking a look at his nothingness and becoming nothing. In other words, he's losing control of things.

Well, it just so happens that a Thetan knows that if he could remember the exact place everything had been generated, the exact time and the exact conditions and the exact person who did it, he would then get a disappearance. Thus, when a Thetan begins to object to life and considers that this idea of masses and spaces is foolish and should be discontinued (as the boys evidently believe in the nuclear physics department) they can only think in frantic terms of making nothing out of everything.

It does not happen to be a healthy frame of mind for a Thetan to be obsessed with making nothing out of things. We see people around who, themselves, have considerable bulk but who are unable to make nothing out of things but who try all the time to do so anyway. For instance, you tell a joke; they say, well that's nothing, and they've heard that before. You buy a new hat and they say they've always liked it. You invent a new dance step and they say it has been done before. They are, on a covert level, trying to make nothing out of something. These people already know they can't make nothing out of masses and spaces. They are already obsessed with the idea that masses and spaces are dangerous to them and therefore, they do have to make nothing out of them. And these people at the same time will be obsessed with problems in memory and will probably develop a fantastic comm lag on the auditing question **“Give me something you wouldn't mind forgetting.”** It does not follow that everybody who wants to improve his memory is obsessed with making nothing out of everything. But it does demonstrate how we get these obsessions on the subject of memory. Actually you could probably remember one-one hundredth of what you are able to remember and still get along. Certainly I know lots of places where people would employ you if you could remember just one-thousandth of what you are able to remember at this moment. The income tax bureau is one of them.

Memory, strangely enough, has very little to do with intelligence. Intelligence is the ability to pose and resolve problems relating to survival. Without some memory, one would have no track of time, but, an absolutely perfect memory does not necessarily connote a perfect intelligence. If one's memory were really perfect, he would have no objects or spaces with which to pose or resolve problems. So, therefore, a certain amount of mis-memory (or forgettingness) is necessary to have factors with which to play a game.

When memory is entered as a factor into the posing and resolving of problems one then gets the phenomenon of time track. One conceives through “experience” the IDENTITIES, SIMILARITIES AND DIFFERENCES BETWEEN THE PRESENT TIME FACTORS AND THE FACTORS OF THE PAST. AND HERE WE HAVE THE KEY TO ABERRATION.

Theoretically, a person could not be aberrated who was not living on a time track, since he would have no need of any kind to associate any spaces or objects of the present with any spaces or objects of the past. Now, naturally, no spaces or objects of the present are ever exactly identical to spaces or objects of the past. But, a person through mis-memory will eventually come into a situation where he does actually conceive a present time situation to be identical with a past situation. When he conceives this automatically and with great ease he is then in a fair way to being aberrated.

One could not go so far as to say that no experience at all is necessary to the living of life. But, one could go so far as to say that a total reliance upon experience or hearsay or second-hand observation in life brings a person into a very frightening state of mind.

Therefore, mis-memory could be of this kind. One sees a certain number of factors before him. One misremembers some factors that happened to him earlier sufficiently to conceive that these earlier factors are now identical with the factors he faces. When he has managed this he has essentially no time. In other words, IDENTITY does not give him PAST. He says the factors I face right now ARE the factors which confronted me five years ago. But he does not conceive this articulately. He conceives this on a mis-memory basis. He “feels” that the present factors have a significance which is due to nothing but themselves, but it's actually

due to a combination of past factors. This essentially is about all there is to aberration. Aberration is "NO TIME." It does not conceive that there is any earlier position for any particle.

Thus, we have the interesting fact that a perfect memory to an extreme and absolute that has never existed would bring about a situation of NO UNIVERSE, NO FORM, NO MASS, NO SPACE. And that a completely IMPERFECT memory, which again has never existed, would bring about a total COLLAPSE of all time, and would bring all factors into the present. Now, somewhere between these two lies the game called SANITY. It is in the effort to attain this game called sanity that the auditor exercises the memory of the preclear. He must exercise the memory in such a way as to uncover a great many similarities which the preclear thought were identities.

Now, here is the subject of valence. By valence we mean personality. Theoretically a person could have his own valence. But, more familiarly the term is used to denote the borrowing of the personality of another. A preclear "in his father's valence" is acting as though he were his father. The word "valence" means in Latin, strength (*valentia*). We use it in Dianetics and Scientology as meaning personality, but it has not escaped the value of strength. A person takes at will the valences of a commanding nature or valences of a very obedient nature in order to answer up to various situations. One person may routinely use several valences. In order to handle women he takes the valence of his father, in order to handle students he takes the valence of a bulldog. In order to get drunk he takes the valence of a horse. There may or may not be any sense to the valence beyond the fact that it was a strong valence in a situation relating to the subject. In other words, he has mental image pictures unconsciously experienced by him which have as their dominant or obedient personality things related to the subject which he then identifies with the subject. Many a psychotic is in the valence of a bedpost. Others are in the valence of God. But these are totally stuck valences; any sane person routinely uses in his modus operandi of existence a vast category of valences. To say that somebody is capable of two or three valences would be a misnomer. A person takes many valences. Now, it is not necessary to pick up these valences or these personalities or "strengths" or "weaknesses" in our expanded understanding of the word in order to handle existence. A Thetan is perfectly capable of mocking up a beingness or valence sufficient to the situation simply compounded from the elements of the situation. If he does this easily he is very intelligent. He has a good imagination. Or you might say a good valencination. Only when he has a tremendous successful valence in the past which has enormous command value or enormous obedience value and then when he forgets this and conceives that it is all in the present does he assume anything like a fixed valence. He then is, you might say, "himself." The "himself" or "herself" is simply a valence which is moderately commanding, moderately obedient and which is "dreamed up" or "taken out of past experience."

The automaticities of memory are dependent upon this valence situation. By automaticity we mean anything that goes on running outside the control of the individual. This in its severest definition would seem to indicate that everything was automatic except those things upon which the person had his immediate attention. And this is not too far from wrong. It is not bad to have things automatic, it is bad to have placed things on automatic which are detrimental to one's happiness and life. The more automaticities exist around the individual the less living that individual is likely to do.

This is quite interesting to observe, off the subject a little, in a business office which is determined to modernize with all the latest machinery and equipment. It is the theory that the introduction of all these automaticities will bring down the number of people on staff and will bring up the volume of work. Now, there is a make-or-break point beyond which the introduction of automaticities is detrimental to the business itself and will actually cut down the amount of outgoing communication. In fact, in a great many overly machined business offices the greatest amount of work done is by the repairmen, keeping the machinery in action. But, without a certain amount of automaticity in an office, it is true that very little work gets done.

Harm comes from this factor of automaticity only when people have forgotten that something has been put on automatic, for when a thing is put on automatic, which is to say, when it is put in a situation where it is intended to run without any observation of any kind from anybody and without any knowledge on the part of anybody that it is running, we suddenly find a sphere of deterioration, and we cannot trace it. We do not know what has broken down since we did not know what was there and had been placed on automatic.

Here memory plays an interesting role. The first requisite to putting something on automatic is to forget that it has been placed on automatic. And that in the severest Scientological use of the word is what we mean by a full automaticity. Something is going on and we do not know its cause. We do not know its cause because we have forgotten that we have placed it there. Or, we have forgotten that anyone placed it there. We do not even know that anything IS there. But, something is happening in that sphere.

Now, although this relates to many parts of life we are apt to specialize on the psychosomatic character of this manifestation. We have forgotten or maybe never did know who put a bad leg into this body. A bad leg is in this body. We try, by moving it around or by manipulation, to change the bad leg and find out that we get an additional persistence to the bad leg. Only by discovering the ownership of the decision or idea or mass of the bad leg would we get a complete vanquishment of the bad leg. Now, if we went just a little bit further and remembered also who made the leg in the first place, and remembered this fully to the extent of remembering who made all the particles that went together and made the leg and who made all of the organizations of food which fed the leg, we would have no leg. So, we see that we could carry memory through to a complete vanquishment.

But, automaticity and memory do not happen to be limited entirely and completely to just one factor—psychosomatic illness. In fact, a person who would work memory simply to get somebody over a psychosomatic illness has himself a very bad identification. Life does not consist of psychosomatic illnesses. As a matter of fact, the Scientology auditor who tells preclears that he is going to get them over their psychosomatic illness has already created a new automaticity, as far as the preclear is concerned.

Now, the PRECLEAR isn't going to go do it; the AUDITOR, by some necromancy, is going to do it and we're likely to get a failure on the part of the auditor to remedy that psychosomatic illness. As a matter of fact, an auditor has no business at all promising anybody that he will ever do anything about a psychosomatic illness. Not, of course, because he can't, because of all the professionals in the world, the auditor is probably the one most likely to knock out a psychosomatic illness. But an auditor who says he's going to knock out a psychosomatic illness and goes in the direction of knocking such things out is limiting himself so woefully that it's hardly worth while knowing how to audit. When preclears start telling us that they want to get rid of such and such a psychosomatic illness we are apt to gaze at them with a questioning eye since the person has an insufficiency of problems or he wouldn't have the psychosomatic illness, and if we took it away he would just get another one unless we also remedied PROBLEMS. And all we can see out of this statement of the preclear is that this preclear has his attention fixed on something and he ought to have his attention unfixed off of it. Well, if he has his attention this thoroughly fixed on a psychosomatic illness he probably, on a gradient scale, has his attention fixed on a great many other and unpleasant things. And as a result we have a problem here in an individual who is stuck all over the track. He's identifying, he's misremembering, he is in, to say the least, an interesting state. And even if we did get him over the psychosomatic illness we probably, if we limited the auditing to this, would not have made him happy. So what we tell such a preclear is, "Well, I may or may not do something about the psychosomatic illness, but I will certainly make you feel happier about it." Usually he is fairly satisfied with such an answer.

The earliest coining of the memory exercises known as "Straight Wire" came from the formula of cause and effect. In 1950 in the early HDA Lectures we described this as the act of stringing a line between present time and some incident in the past, and stringing that line directly and without any detours. In other words, we conceived the auditor was stringing a straight wire of memory between the actual genus of a condition and present time, thus demonstrating that there was a difference of time and space in the condition then and the condition now, and that the preclear conceding this difference would then rid himself of the condition or at least be able to handle it. This essentially was the overcoming of automaticities or the locating of automaticities. The preclear had some engram that had a command value over him and it was necessary to locate the source of that situation in order to bring it under the preclear's control. The term "Straight Wire" was used to differentiate between Dianetic memory exercises and those which had been used by psychotherapy in the past. And a great need for such differentiation was necessary, because there's many a Dianetic auditor who permitted "free association" and other unworkable techniques to go on in the guise of auditing. Hence the

term "Straight Wire," and that term seems to be an apt one since it stuck with auditors all during these years.

The motto of Straight Wire could be said to be, DISCOVER THE ACTUAL GENUS OF ANY CONDITION AND YOU WILL PLACE THE CONDITION UNDER THE CONTROL OF THE PRECLEAR.

ARTICLE FOUR

Straight Wire and Present Time

One of the earliest observations of Straight Wire which we made was on no less a preclear than Burke Belknap (then studying to be an HDA) in the small reception room at 42 Aberdeen Road in Elizabeth, New Jersey. Burke had come in complaining of a headache and in an offhand way I said, "I'll handle that" and asked him to remember who had a headache. He promptly came up with a memory of someone else having a headache and then someone else having a headache and finally of someone who complained about headaches and abruptly his headache was gone. Well, this was very triumphant, but I did not have enough sense to quit at that exact moment but started to run him through the incident he had last recalled, and instantly his headache was back.

Now, we are telling you this for more reason than nostalgia. This was the first time we observed the difference between Straight Wire and engram running to the degree that: Straight Wire did not run out the engram but only got it out of present time. Naturally, in theory, we had had this around for some time. But, here was an exact example of this very thing occurring. In other words, you could remember something and feel good, and then could run immediately into the engram and feel terrible all over again. Now, this immediately and instantly gives us the reason why psychotherapy was unworkable before Dianetics. One would get the preclear into present time (and of course the preclear is always in present time but the engrams are there also, so it is more accurate to say, get the engrams out of present time) and then have the engram get into present time again and have the preclear in the same state as before. In other words, as long as and as often as we wanted to get these mental image pictures of pain and unconsciousness into and out of present time we would have a change accordingly in the preclear. Theoretically we could throw birth into present time and out of present time, into present time and out of present time, and have the preclear as rapidly have and not have the symptoms of birth. Now when we realize that our machinery as a body-plus-Thetan is being continually monitored by the environment and that the machinery which throws engrams into present time is also monitorable by the environment and by others in it, we see that simply throwing the engrams out of present time and keeping the preclear in present time would apparently be inadequate processing. Here evidently we would make a preclear well and would then make him unwell just to the degree that we took out of present time and put into present time the engram causing that unwellness.

Now, in view of the fact that an engram contains pain and unconsciousness, it is very likely to become an automaticity. Thus, we are playing tag with an unknown genus whenever we are playing tag with engrams. A preclear does not like to look at things which suddenly make him feel like his head is being torn half off. Thus, he will continue to keep out of existence for himself, and to refuse control over, all engrams.

By old Dianetic standards, then, Straight Wire was merely a patch-up process. It did not do too much for the preclear but made him momentarily comfortable. It did this simply by slipping out of present time, engrams. Engrams were held in present time by the preclear's making a bridge between present time and the engram, of locks, which is to say conscious moments which lay on top of the engram. In other words, we could have a sort of a picture of a dark, Lying-in-wait engram, which had happened or had been created at some early date, which had been keyed in by a conscious incident a little bit later, which had been bridged by a repetition of similarities until at last the preclear conceived an identity between the moment of the engram's occurrence and present time. By this bridge of locks we would then have an engram being present time.

So much for the early attitude. What is the attitude about this now? There is no real change. It's just that THE PRECLEAR CAN BE BROUGHT TO CONTROL A MASS OF

ENERGY AS HEAVY AS AN ENGRAM BY THE GRADIENT SCALE OF CONTROLLING LIGHTER MASSES.

Here we have essentially the idea of the person who lifts a calf every day until the calf becomes a bull. Then we have a person who is able to lift a huge animal. Now, I don't know that anybody ever tried this, but theoretically it would actually occur. Certainly, it is much more likely that this gradient scale of lifting would more workably apply to locks and engrams than to pure bull.

By Straight Wire, on modern standards, we get the preclear to handle the light key-ins. Over and over and over, new incidents or the same incidents until at last he is able to handle the actual genus of the situation, at which time the condition, of course, will vanish.

The great oddity is that a preclear is so wary of a heavy, hidden mass like an engram, that when it comes into present time automatically he will not or cannot throw it out of present time. And this is the main thing which is wrong with the preclear. A heavy mental image from the past comes into present time, then the preclear cannot throw it out of present time. If he is unable to throw it out of present time it will stay in present time, which is to say, ride along with the preclear.

One of the goals of Modern Straight Wire is to get the preclear to throw the engram out of present time or into present time at will. In other words, to teach him that he doesn't necessarily have to vanquish all energy masses—that he can handle these energy masses and get them up to him or away from him at will.

A clear, by definition, is somebody who does not have any engrams in present time with him. By actual practice a clear would have to be a stable Thetan exterior since the body itself is composed of energy masses which unfortunately contain engrams.

We are no longer trying to rid present time of all engrams. We are simply trying to bring about an ABILITY on the part of the preclear to handle energy masses in the past or in present time at will. And by a gradient scale to cure his fright of being confronted with a picture and his compulsion and necessity to obey that picture.

ARTICLE FIVE

Straight Wire and Pictures

With the advent of communication processing a new method of handling pictures arose. Within minutes after the first discovery that communication alone would vanquish masses we found that communication would handle pictures themselves. In view of the fact that pictures have been more or less a common denominator of investigation since the earliest Dianetic days, we became very interested in this startling new method of handling the bank.

Whenever a person of the usual Mark I Homo Sapiens type is asked to remember something, he gets a picture along with it. This, no matter what names or description you place upon it, is simply a picture which has been taken of an event in the past, said picture now being in the present. This automatic feed mechanism has gone relatively unnoticed but occasionally described back through the centuries. It seems that this should be considered very usual. However, it was not until Dianetics that anyone made any kind of a thorough study of these pictures.

In the first place, of what were these pictures composed? It was an old saw in mysticism that mental energy was one thing and physical energy was another thing. I suppose this was stated many times out of hopefulness rather than fact. Today enough data has come to hand to establish that this mental energy, such as is contained in a picture, and the energy of earth or of the electric light company, are different only in wavelength. The proof of this is that a person, by remedying havingness, can increase his weight if he only pulls the havingness in, and can decrease his actual weight by throwing the havingness away. Of course, a preclear has to be in fairly good condition and has to be able to throw away or possess havingness at will in order to do this, but in actual experiment weight has been changed many pounds either way by this. And, believe me, if you can weigh mental energy on a set of Toledo scales you certainly have something very intimate to the energy of the electric light company, and you don't have anything different than the energy of the electric light company, save only in characteristic.

These mental image pictures, then, are actually composed of energy. They have mass, they exist in space, and they follow some very, very definite routines of behavior, the most interesting of which to us just now is the fact that they appear when somebody thinks of something. He thinks of a certain dog, he gets a picture of the dog. When a person is rather far gone, when he thinks of the dog he gets the picture of a house. When he thinks of a house he gets a picture of a cactus. This person's pictures are not associated with his own thoughts, but are occurring on a total automaticity.

But, what do we have in the first place but an automaticity? An individual thinks of a dog and he gets a picture of that dog. This carried on long enough would bring it about where he would think of one dog and get the picture of another dog. And a little bit further, he would merely think the thought and get a picture without any relationship between the thought and the picture.

Well, if these pictures are actually more or less the same stuff as is sold to you for five cents a kilowatt hour by the power company, then you could suppose that they would have some effect on the human body, and so they do. Pictures are continually being taken by the body or the Thetan or the Thetan's machinery or the body machinery. You never saw such a complete cinematographic plant in your life as the Thetan-plus-body, Mark I, Homo Sapiens. Something even takes pictures when he is deeply unconscious and during an operation.

Not only does a person take pictures of anything and everything just as you right this moment are taking a picture of this page (if you don't believe it, close your eyes and take a look at the page again) (oh, you didn't know you were taking pictures all the time?), but also these pictures then react back on the individual more or less as the incident itself reacted on the individual. Thus, if a person had a bang on the thumb from a hammer, he is certain to have taken a picture of this. Later on this picture gets into present time and his thumb hurts. It is a picture which is impinged upon his beingness so as to reproduce some of the qualities in the picture.

One of the oldest obedience stunts on the track was to convince the Thetan that he ought to "obey the picture." In fact, according to the O-Meter, people within the last many generations have taught their children to "obey the picture." In other words, made use of these mental image pictures in order to produce a higher level of obedience on the part of a child. Certainly it might or might not have produced a higher level of obedience, but it did produce a much higher level of conscience and it is in itself practically the anatomy of conscience. Overt act-motivator sequence is itself only the action and reaction of these pictures. A person takes a picture and then the picture turns on him.

Thus, the handling of these pictures becomes very important if one's going to change the characteristics of an individual. One of the first things, then, that an individual ought to be able to do is to handle these pictures. An individual can't handle these pictures? He's in bad shape.

Now, let's take this thing we call a Black Five. This poor fellow is so far gone he can't even see pictures any more. He only sees blackness in front of him. Well, this blackness may be some kind of a screen; it may be anything; but at least it prevents him from seeing pictures, and he's very often keeping himself from being victimized by all these pictures by having a continuous black screen in front of him. That the pictures reach THROUGH the black screen and do influence him anyhow, he hopefully overlooks. However, remember that THIS BLACKNESS ITSELF IS ONLY A PICTURE, and so we don't have a special category of (1) people who get pictures, and (2) people who get blackness. We have only one category. We get people who have pictures of various things and people who have pictures of special things. And this is simply a GRADIENT SCALE of how easily does the individual handle these pictures that get into present time. When he handles present time returned pictures very poorly more and more pictures get stacked up in present time and pretty soon he is a fairly "massive" case.

Hence you can appreciate our excitement when we found a new way of handling pictures. There have since been developed, as we became more versed in handling special problems, additional ways, such as Ownership Processing. But to this moment we know of no better routine way of handling pictures than a combination of Straight Wire and the data which we are going to give you here.

Before we go very deeply into this, you should realize that pictures are not bad, and that blackness is not totally bad. Pictures are used by the Thetan to assist his memory. They are not necessary to his memory, but he begins to play with the idea of taking pictures of everything

and remembering by pictures as a sort of a game. It is an interesting game. Gives him something to look at. Gives him some mass and makes him happy—up to the point when he collects pictures of great unhappiness; then these moments of unhappiness stay with him simply because he has pictures of them and really for no other reason. As far as blackness is concerned, blackness is usually the protective coating between the preclear and the pictures. Not unusual for a preclear to have a machine, either of his own or belonging to his body, which black-coats every picture that shows up before he looks at it. This keeps him from getting stunned by these pictures. This, by the way, is somewhat different than having blackness in continual and total restimulation. Both of these conditions regarding blackness exist: the machine that makes blackness, and having a black picture in restimulation. There is also simply the blackness of looking around inside of a head, and as yet, the modernness of science has not installed electric lighting inside skulls.

We also get the condition, where these pictures are concerned, of the Thetan's machinery taking pictures and then trying to show them to the Thetan while the Thetan is inside the head. This is a very interesting condition because the machinery cannot reach the Thetan, but reaches the head of the body instead, and if this machinery is very powerful, which it usually is, the body becomes very uncomfortable solely by reason of having pictures shoved up against it by machinery which is foreign to it.

So we get a lot of conditions which are germane to pictures. But these pictures are not all bad, and the whole subject of pictures is not a bad subject.

And again, before we go any further, you should realize that it is not ABSOLUTELY necessary for the auditor to handle pictures in the fashion we are going to outline now in order to have Straight Wire as given in an earlier article work. But, this is the fillip which really handles pictures and is called "HELLOS AND O.K.'s TO PICTURES."

The technique has limitations. It is limited by the fact that the auditor can audit Straight Wire on preclears lower on the scale than those who can handle pictures with hellos and O.K.'s. In other words, a rather low toned preclear can simply be run on Straight Wire as given earlier, but when he comes upscale and starts to get pictures this process can then be applied.

The anatomy of the process is simple indeed. Every time the preclear remembers something the auditor asks him, "**Did you get a picture?**" If the preclear did, which is usually the case, the auditor tells him, "**Throw a shower of hellos at it.**" The preclear does. The auditor then says, "**Have it throw a shower of O.K.'s at you.**" The preclear does. The auditor then says, "**Is the picture still there?**" If the preclear says it is the auditor simply has the preclear complete the cycle of two-way communication with, "**Have the picture send a shower of hellos at you,**" and when the preclear does, the auditor says, "**Throw a shower of O.K.'s at the picture,**" which the preclear does. Again the auditor asks him, "**Is the picture still there?**" If it is, the auditor simply repeats the four commands given above, which is to say, he has the preclear throw a shower of hellos at the picture, has the picture throw a shower of O.K.'s to the preclear, has the picture send a shower of hellos to the preclear, and the preclear send a shower of O.K.'s to the picture. Actually the auditor can have the preclear do this over and over until the picture is gone, for that is the single and solitary goal of the process: to make the picture disappear. It will be discovered that early in processing the auditor will have to make the preclear complete several two-way cycles of communication with the picture before it vanishes, but, as processing continues and as the preclear becomes more and more capable, that fewer and fewer two-way exchanges are necessary to make the picture vanish. And at length all the auditor has to say is, "**Throw it away,**" and the preclear will be able to do so. Of course, the case which can simply throw the picture away in the first place and get it back at will does not need to use communication processing on this, a fact which most auditors overlook—they neglect to test the preclear to find out whether or not the preclear can throw these pictures away. Now, in the case of blackness this is rather foolish, to ask the preclear to throw hellos at the blackness, since these screens are very resistive, indeed. In the case of blackness one would simply use STRAIGHT WIRE with the question, "**Recall a time when you were looking at blackness**" over and over and over until the blackness was gone. If the blackness doesn't go, then it's a machine which is making the blackness, but this is found to be handleable too by the same process, if it is carried on long enough. And even if that did not work, machine processing would.

Very well. We have here, by throwing showers of hellos and O.K.'s back and forth between the preclear and the picture, a method of vanquishing the picture. BUT, IF YOU AS AN AUDITOR ASSUME THAT ALL PICTURES ARE BAD AND OUGHT TO BE THROWN AWAY, YOU WILL HAVE IN YOUR HANDS IN A VERY SHORT SPACE OF TIME A VERY UNHAPPY PRECLEAR. If he is fairly upscale he will tell you why he is unhappy. If he's fairly well downscale he will simply hug it bitterly to his bosom. The fact is, you are getting rid of his pictures, and his pictures are not a bad phenomenon, totally. Thus, you were robbing him continually. Now, the old Dianetic auditor who is trained only to make pictures vanish or a person who is obsessed with the idea of making nothing out of everything, is liable to neglect this vital little step, and if this vital little step is neglected this entire process will wind the preclear up in an unhappy state of mind. So, after the picture has been vanquished by either throwing it away or by throwing hellos and O.K.'s back and forth between the preclear and it, the auditor MUST ask the preclear TO GET THE PICTURE BACK. This is, of course, part of the automaticity cycle. The picture got there automatically; well, the preclear had better take over that automaticity—for all automaticities are conquered by having the preclear do what is being done automatically, or by simply sighting the genus of the automaticity.

Thus, having completed this two-way cycle of hellos and O.K.'s, the auditor now says, **“Get the picture back.”** This usually startles the preclear, for at first the preclear will be very victorious at having gotten rid of this automatic function of pictures. But the preclear, one way or another, will get the picture back. He may get back some other facet of the scene. He may get back a picture different from the first one, but what you want is that same picture. Of course, don't badger and hound your preclear until he goes out of communication with you to get the same picture back. You can tolerate a certain amount of looseness at this stage of the processing, but what you really want is the same picture back again. Now, having gotten the preclear to get the picture back, you now have him throw once more showers of hellos at it, have it throw showers of O.K.'s at him, have it throw showers of hellos to him, and he throw showers of O.K.'s to it, until it vanishes again. And when it is vanished, you ask the preclear to get the picture back. Now, before you have handled this picture very much you will find usually that the preclear can simply bring the picture up and throw it away at will, at which moment you go on to the next auditing question on Straight Wire, which is, **“Recall a time when—” or “Recall a moment of—”** whatever you were asking before. And once more you ask him, **“Did you get a picture?”** You handle it in this fashion. You have him throw hellos and O.K.'s back and forth. You have him throw it away, get it back—you have him handle it, in other words. After a while you will find the preclear will be able to get all sorts of pictures at will and throw them away at will. You will also find that some of his automatic machinery starts to break down. If this starts to happen, why just continue him on the process. You may have to drill him for a short time on mocking up pictures. If you knock out his automatic machinery which is giving him pictures—doing the mock-ups for him—you have made it necessary for you to give him the assurance that he can make pictures, which will again make him happy. Very often a preclear who is unable to make pictures but is getting everything automatically will recover his ability to create pictures once he brings this automaticity under control.

“HELLOS AND O.K.'S TO PICTURES” is a very valuable process. A preclear will work up a gradient scale to where he can throw some hellos and O.K.'s to engrams that pop up and will then be able to bring engrams into present time or throw them out of present time at will. And when he can do this he has no further worries or upsets about energy masses.

You will understand that this process of communication is entirely independent of locating the genus of the picture. The actual knockout of the machinery making the pictures could be accomplished by having the preclear state that this or that **CREATED** or **OWNED** the machine, including himself, until the machine was gone. But, this is not a very good process. It is robbing the preclear of something on which he has no reality. However, we expect future developments will embrace something which gives us a superior process along ownership lines.

Remember, now, that our goal is not to make the preclear get rid of every picture that pops up. Our goal is to make him capable of handling those pictures which pop up, throwing them away and getting them back at will.

This process is also used with the technique “**Tell me something you wouldn’t mind remembering,**” “**Tell me something you wouldn’t mind forgetting,**” and was originally employed as part of this process.

ARTICLE SIX

Psychoanalysis and Straight Wire

When Sigmund Freud and Breuer first began working on the theory that if an individual could recall enough he could be well, they were working primarily on the assumption that there was something wrong, which they now had to make right, and that the wrongness was a hidden or buried memory.

It is notable to remark today that Scientology does not try to find something wrong in order to make that wrongness right. This introduces a via on the line, introduces an assumption into the case which is not justified. All we assume is that an individual can be more able than he is and we take it from there. We are not looking for hidden memories.

Another thing which Freud assumed was that guilt underlay these hidden memories as their primary propulsive mechanism. This was not necessarily true, for you will discover that anyone, no matter how innocent, who has been struck, if he has been struck hard enough, will begin to believe that he must have been guilty of something. In other words, he gets a reason why he has been punished, which may or may not have any actuality in fact. In other words, any sudden blow or duress can be expected to have as its consequence the feeling that one has been guilty. In order to stay a reasonable or rational being an individual has to assume that there must be a reason for everything. This is not necessarily true at all. Thus, guilt comes about merely from a blow or duress. I imagine if you put a man in prison long enough he would be absolutely certain at the end of that time that he had committed the crime for which he was incarcerated. I suppose that if you questioned a man long enough about his guilt, if this questioning were under duress, he would begin to feel he was guilty of the crime of which he was being accused, which accounts for many of the confessions which are brought forth by third-degree methods. Even the police have begun to question these, having discovered all too often that the person was really innocent although he now believed he was completely guilty. Thus, we have the fact that physical pain and unconsciousness in a memory would produce a HIDINGNESS in the memory, since a person would not want to confront a painful picture, and would bring about a feeling of guilt. All this is resolved simply by **MAKING THE INDIVIDUAL CAPABLE OF HANDLING ENERGY PICTURES OR ENERGY MASSES OR SPACES REGARDLESS OF THEIR SIZE, SHAPE OR THREAT.**

In performing a psychoanalysis, emphasis was then laid upon memory and upon things about which society expected people to feel guilty. In this alone we have the reason why psychoanalysis is such a long drawn-out affair and why it leaves a person in such a careful frame of mind.

The psychoanalytic patient was expected to talk long enough—without much acknowledgment from the analyst—to disclose hidden memories. The actual hidden memories were, of course, moments of pain and unconsciousness, and if the psychoanalyst had ever gotten a patient into one of these moments of pain and unconsciousness he wouldn’t have known what to do about it. But this was outside the theory if well inside the practice.

In the process of trying to recover hidden memories the analyst was continually in combat with the automatic forgettingness of the patient. By asking a person to recall and recall and recall and recall and think about the past, the analyst often got the individual back down the time track and didn’t get him up again. In the first place, the analyst, not being very able in the field of **DUPLICATION** seldom gave a repetitive question which would have freed the patient from one line of action.

Further, the analyst was insufficiently observant and inquiring. He may or may not have noticed this phenomenon of energy pictures but, being trained in a rather mystic school, he probably did not believe that these energy pictures possessed any energy and so could not do the patient any harm.

But, let us suppose that we were actually trying to uncover hidden memories for the preclear. If this were the case, then, we would have to get his forgettingness off of automatic and into his control.

If you wish to reform the entire field of psychoanalysis, which is not any particular mission for the Scientologist, as Scientology is not psychotherapy, you yet could do so by the publication of this material:

Have the patient relax and become aware of the fact that you, the analyst, are there, that he is there, that the room is there and that you are about to do some psychoanalysis.

Enter into a discussion with the patient concerning his trials and tribulations in the present-time world, permitting the patient to originate communications and become relaxed about talking with the analyst.

Now that these steps have been accomplished, ask the patient this question, and use no other question aside from incidental and momentary discussions and acknowledgments, no other: **“Tell me something you wouldn’t mind forgetting.”**

No matter how long the patient took to answer this question, do not abandon it and do not go away from the question. But, at last, still maintaining pleasant relations with the patient, obtain an answer to this question.

Having obtained the patient’s statement that he has at last found something that he is very certain he wouldn’t mind forgetting, the analyst should then say, “Very well,” as an acknowledgment of the fact that the question has been answered. And the analyst should never at any future time omit to acknowledge with a “Very well” or some such statement the fact that the patient has completed the analyst’s command.

Having received an answer to this question, the analyst must now repeat the very same question and again must get an answer to this question and again must acknowledge the fact that an answer has been received.

The analyst should not go into discussions of the material and should not tell the patient what the material means, for the analyst should be well aware of the fact that if the patient has already reached this depth in his psyche he must perforce be capable of reaching much deeper depths and that better information will always be forthcoming.

Even though the analyst finds himself becoming inattentive or upset by the repetition of the same question over and over he must continue this. He must, each time the patient has complied and the analyst has acknowledged, ask again, **“Tell me something else you wouldn’t mind forgetting.”**

This should be the sum total of the analysis and this program should be continued as long as the patient is being analyzed, whether that be four times a week for a year or four times a week for two years. No other interchange or material should be discussed or addressed than these things the patient would not mind forgetting.

If an analyst were to follow this program and if he were capable of repeating this question or duplicating so often and so long, he would discover that his patient had come into more possession about his life and his beingness than any other program could have accomplished, and that it will no longer be necessary for the analyst to evaluate for or make decisions for the patient.

We recommend that this process be coached to analysts in the hope that the field of psychoanalysis could be made into a successful psychotherapy, for Scientology is not a psychotherapy and does not intend to take the place of any existing psychotherapy.

ARTICLE SEVEN

How to Do Straight Wire

There is a happy medium of two-way communication which must be present in all processing, whether that processing be Opening Procedure by Duplication or Straight Wire.

ENOUGH TWO-WAY COMMUNICATION WILL KEEP THE PRECLEAR AWARE OF BEING AUDITED AND AWARE OF THE AUDITOR’S INTEREST. AN INSUFFICIENT AMOUNT OF TWO-WAY COMMUNICATION MAY CAUSE THE PRECLEAR TO FEEL A LACK OF PARTICIPATION IN HIS CASE, WHICH WILL CAUSE THAT CASE TO SAG OR BOG. TOO MUCH TWO-WAY COMMUNICATION

WILL SIMPLY GET IN THE ROAD OF THE PROCESS. An auditor must be aware of these factors and have a feeling for the right amount of two-way communication whenever he is processing a preclear.

One of the most delicate subjects in all auditing and one of the most delicate skills in auditing consists of knowing HOW MUCH TWO-WAY COMMUNICATION TO ENTER UPON AS AN AUDITOR WITH THE PRECLEAR.

Straight Wire requires this as in any other process. However, many errors can be made in Straight Wire with two-way communication which would have peculiarly detrimental effects. The preclear, you must understand, is indulging in recalling his past, and we can forgive preclears for being excited about remembering various pleasant parts or various unpleasant parts of the past. We can also forgive the preclear for trying to justify some of the actions he has suddenly recalled having entered upon in his past. Thus, we can understand that it is necessary for the preclear to be permitted to communicate about what he is doing; otherwise he will feel suppressed and straitjacketed by the auditor who refuses to let him talk. BUT, THE PRECLEAR WHO JUST GOES ON TALKING ENDLESSLY ABOUT WHAT HE IS RECALLING IS NOT DOING HIMSELF ANY GOOD. HE IS NOT DOING THE PROCESS, HE IS TALKING ABOUT THE PROCESS. Thus, to some slight degree he must be checked on this excessive comm lag. The auditor should be very definitely aware of what comm lag is before he does very much auditing. He must also be aware of what acknowledgment is before he does very much auditing.

COMM LAG—COMMUNICATION LAG—IS THE INTERVAL OF TIME BETWEEN THE MOMENT OF THE AUDITOR'S ASKING THE QUESTION AND THE REPLY TO THAT EXACT QUESTION BY THE PRECLEAR. A near reply is not a reply. A reply to some related question is not a reply. The interval between may be occupied by argument from the preclear, talk from the preclear or silence from the preclear. It does not matter what goes on between the asking of the question and the answer to the question; the internal is communication lag. In other words, communication is not taking place during this interval.

A COMMUNICATION LAG IS FLAT WHEN IT IS CONSISTENT. A person may have a habitual lag of ten seconds. He may answer everything after a ten-second pause. If a person then answers after a ten-second pause on a particular process it could be said that his communication lag was flat, since his communication lag is always ten seconds. We say that a question is flat when the communication lag has been similar for three successive questions. Now, that is a FLAT QUESTION. The communication lag might be five seconds, five seconds and five seconds. We would still say with some justice that the QUESTION lag was flat. However, the process lag would not be flat until the actual normal exchange lag was present. The question would no longer influence the communication factors of the preclear when the process is flat. Usually, because these processes are very beneficial, it occurs that the individual under processing talks very rapidly after a process is flat. His basic lag has changed.

There is another kind of communication lag with an automaticity of communication which an auditor should understand. When the question has excited a machine into answer it is quite common for the answers to come very rapidly, often too rapidly for the preclear to articulate. When this occurs the auditor is advancing against a communication SPEED which is as artificial as a communication LAG, and it will be discovered after the question is answered several times that this communication speed will drop into a normal and will then expand out into a communication lag.

ACKNOWLEDGMENT is a very necessary study. AN AUDITOR MUST ALWAYS ACKNOWLEDGE WHAT THE PRECLEAR HAS SAID. This may enter a compulsiveness into auditing for the auditor, but it is nevertheless true that a preclear will keep on talking until he KNOWS he has been acknowledged. Some people would require a sledgehammer in the face to know that they had been acknowledged. One auditor stood in front of a preclear and wagged his finger close to the preclear's nose for several seconds and said very loudly, "Good!" and the preclear knew she had been acknowledged. It very often happens that the auditor is saying O.K. but is not acknowledging the preclear because the preclear does not understand or even hear the auditor saying O.K. Thus, occasionally an auditor should ask, "**I just said O.K. Did you hear that?**" And the preclear will sometimes look rather sheepish and realize that he has not known that his statement was acknowledged.

Very often the crankiness or upset of old people or children simply stems from the fact that nobody acknowledges them. They begin to say something and then can't stop saying it,

and will keep on saying it until it has been acknowledged by someone that they have said it. They would have to know that that statement had been acknowledged before they could “come off” the statement. You could say that a thing persists until it is acknowledged. This, by the way, is quite applicable to machinery. Machinery keeps putting up pictures until the pictures are acknowledged, and the Thetan seldom acknowledges these pictures, and so we get into a dwindling spiral of automaticity which ends up in blackness. It is not a cure, however, to simply have the preclear say “O.K.” to all the machinery.

The auditor should also understand THE AXIOMS as contained in *The Creation of Human Ability*, particularly the CONDITIONS OF EXISTENCE which are outlined in THE AXIOMS. These are quite important. Particularly important are those axioms devoted to “ISNESS” and “NOT-ISNESS.” We find that a person very often not-ises his pictures or not-ises his memory. In other words, he meets his memory or pictures with force. He pushes force against force and then we have accumulation of force, and this is not particularly good. The apparency, or isness, condition of existence comes about, of course, through alter-isness. Where we try to change a mass for a long time we eventually get a mass which is persisting and that persistence is isness. So, we see that CHANGING MASSES WITH ANYTHING LESS THAN LIFE OR MEMORY OR COMMUNICATION OR POSTULATE BRINGS US INTO A CONDITION OF PERSISTENCE OF A CONDITION. The auditor who knows this well knows that if he were to try to change with not-isness or alter-isness a deformed shoulder he would find that the condition of the deformed shoulder was persisting greater than ever.

SUCH A WELL INFORMED AND SKILLED AUDITOR MIGHT USE, WITH GREAT PROFIT, AN ADDITIONAL COMMAND—MAKING TWO STRAIGHT WIRE COMMANDS IN ALL. THE ADDITIONAL COMMAND WOULD BE “**RECALL A MOMENT OF PREVENTED _____.**”

EXAMPLE: THE PROCESS WOULD THEN BE “**RECALL A MOMENT OF STUDIOUSNESS.**” AND WHEN THIS COMMAND SEEMS FLAT, “**RECALL A MOMENT OF PREVENTED STUDIOUSNESS.**” THE LATTER COMMAND TAKES OUT THE NOT-ISNESS OF THE PRECLEAR.

ACTUALLY THE BEST RESULTS ARE OBTAINED BY USING THESE TWO COMMANDS, SUPPLYING WHATEVER IS NECESSARY IN THE BLANK. ONE IS RUN FAIRLY FLAT. THEN THE OTHER IS RUN UNTIL IT IS FAIRLY FLAT. THEN THE FIRST IS RUN AGAIN. WHEN IT IS AGAIN FLAT, RUN THE SECOND AND SO ON—AS NEW MATERIAL THUS IS DEVELOPED.

The duplication of questions is something that is very hard for an auditor who has not had much processing to do. He will get discursive, he will go off away from this necessity to duplicate it over and over and over. Thus, many processes are rendered null and void by an auditor failing to complete the process. He cannot stand the idea of duplicating, doing the same thing again and again and again, because he apparently is stacking his time track up. Actually he is not doing so and if he did it long enough, if he simply would go ahead and audit and ask the same question over and over and over again long enough, he would get a drill for himself which would cure him of his inability to duplicate. The biggest stumbling block to auditing is the obsessive change factor on the part of some auditors. Actually, when an auditor has an obsessive change factor he seldom makes a good auditor, because his obsession to change gets into his auditing. He has an obsession to change the preclear so he starts to force the preclear into changes which the preclear does not particularly want. The preclear may want changes but not necessarily the kind the auditor wants. The auditor precomputes the case, in other words, and decides in which direction he’s going to change this preclear. That’s all right and an auditor can do it, but when an auditor obsessively has to change the preclear we discover that the auditor at the same time will change THE PROCESS. In other words, both of these are inability to duplicate. An auditor can also err in the opposite direction. He can use the process so long and so consistently and so far beyond its doing the preclear any good that the whole idea of auditing is defeated. For more data on this look at the new Auditor’s Code, which is printed in *The Creation of Human Ability* and in *Dianetics, 1955!* These enjoin the auditor to run the process as long as it produces change. When it no longer produces change don’t run it. However, an auditor who changes the process and says to himself, “Well I changed this process because it was no longer producing change,” when in reality it was, and the auditor couldn’t stand the duplication any longer, is, of course, reasoning himself out of good results for the preclear.

The auditor should understand that the discovery of the actual creator or genus of anything will bring about its vanishment. This is also done by communication only. Ownership Processing can be used very effectively on preclears and in Straight Wire, but actually using communication as given in an earlier article is a superior activity. Ownership Processing is run by having the preclear state that this owns the condition or that owns the condition, and just have him keep stating that this or that or the other thing, and including himself, and his machinery and the body's machinery owns or made the condition, or the pictures own or made the condition until the condition vanishes. One has sighted the actual owner often enough. However, if one went on sighting the wrong owner often enough the picture or condition would strengthen. In other words, you would be mis-owning it. All masses, spaces, conditions depend on mis-ownership for their persistence. In the absence of mis-ownership—we own up to the ownership of everything that we did and know the ownership of everything that everybody else did, or has—why everything would disappear. Ownership Processing is declaring the proper owner. It's a very amusing process.

Ownership Processing is best done using an O-Meter or any type of physiogalvanometer. Here we see at once that the principal ownership is the response that we get on the meter. We get greater masses when we get mis-ownership. We get more reaction when we get mis-ownership. All the needle of a lie detector or any such instrument registers is mis-ownership. When mis-ownership is present the needle registers and when it is not present the needle doesn't register. Thus, a lie detector does not detect a lie; it merely detects the mis-ownership of the picture of the incident. A criminal who says that he didn't do a thing when he did will of course make the picture of the incident become stronger; thus, it will register. Similarly, the criminal could say, "I did it," when somebody else did and you would get an additional lie or the same reaction. If the preclear says that he caused the picture when something else caused the picture the picture will become stronger and the needle of the meter will register. This is about all there is to electropsychometric auditing.

One of the most notably lacking qualities in the unsuccessful auditor is charity. I am reminded of a section in the new testament which I misquote, because it sounds better, to the effect, "Though I speak with the tongues of angels or of men, though I have not charity, I am as sounding brass or the tinkling of the temple bell." An auditor who has no charity, who is continually critical of the preclear, who is trying to change the preclear because the preclear is so bad, seldom achieves very great results with the preclear because he's out of ARC with the preclear. Mercy, charity, kindness are qualities which are not low scale. They are the highest and kingliest qualities there are. And an auditor should never forget them.

ARTICLE EIGHT

Scientology and Straight Wire

It is a great temptation to call anything a psychotherapy which uses memory. Because psychotherapy has devoted itself to memory in the past. This is a fluke or a freak. Psychotherapy should devote itself to aberration.

Because Scientology has a process known as Straight Wire, which uses memory, it might be very easy to conclude that Scientology was then a psychotherapy. And this, of course, would be true if the goals of Scientology were those of psychotherapy.

The goals of psychotherapy are to eradicate unsocial or aberrated behavior in an individual.

The goals of Scientology are to create better abilities in the individual.

Scientology is far more closely related to education and its goals than it is to psychotherapy, but because of the factors which Scientology handles it is perforce not only intimately related to but is basic religion.

If you find anything disturbing about that association—Scientology and religion—we might cockily ask, "If religion treats of the human soul has there ever been a religion before Scientology?"—since there was precious little information available about the human soul until we took our textbooks in hand.

Naturally when you know the broad principles of anything, such as memory and forgettingness (these being two different items), you can apply them to almost anything you

want to. And, as we have stated in an earlier article, you certainly could take an elementary form of Straight Wire and apply it to the field of psychoanalysis and let the analyst go on and do much of the things he does. As a matter of fact, if I were a Scientologist practicing in an area which contained some psychoanalysts I would definitely make it my business to associate myself with these people, and train them to give the same question as given in an earlier article, over and over, to duplicate, to acknowledge and to get some good works out of their patients. This is a very simple thing to train somebody in a sharp discipline and it would not be out of order for a Scientologist to take this under his wing because, Lord knows, the analyst has a hard time in the society and has a hard time with his patients. Furthermore, it is not unusual for the field of psychotherapy to turn to the church when it is blocked. And we hope it is not unusual for the church to try to make the world a better place to live in.

But, when you are using Scientology as a Scientologist, and you're employing Straight Wire, you had better realize that your best results come about BY RETURNING SELF-DETERMINISM TO THE PRECLEAR. Which is to say, make him better able to handle and control himself and his environment. In fact, you will not be able to achieve any results of any lasting quality or of note unless you do this for the preclear. Therefore, the degree to which you suppress his self-determinism by finding things wrong with him will depress as well the results of auditing. As a Scientologist you should concentrate on increasing the abilities of a person.

In the field of education memory is of the essence. Unless we could handle memory well we could not educate people well. Automatic forgettingness sets in on a student almost as fast as the textbook is closed. This is because he is on a forced draft of memory. He is expected to remember everything. Until the day comes when he can forget and remember at will he will be no better than the book from which he has studied. Thus, as a Scientologist you could explain this to an educator and use your skills and technologies to train this educator into the elementary steps of Straight Wire. The delivery of the question, the giving of the acknowledgment, the duplication of the question. You could train the educator into this as a necessary step to education, since every student he has who is failing, is failing not because of a real antipathy toward the subject, but because the automatic characters of his memory are not properly engaged and in gear. Before we would spend years and great quantities of wealth upon the education of a young man, we would certainly see that he was in shape to REMEMBER OR FORGET HIS MATERIAL AT WILL. We would also see to it, even as importantly, THAT HE WAS ABLE TO POSE AND RESOLVE PROBLEMS RELATED TO ANY SUBJECT. Were he able to do these two things he would always be an honor student. Why should we waste time as educators, and as a nation obsessed with education, in handling minds which cannot remember and forget, which cannot pose and resolve problems? Were we to practice this on an educational level and if we were to be careful at all times with all students to bring them into a state of ability with regard to memory and problems and solutions, before we gave them things to have memory and forgettingness about, and problems and solutions, we could probably place eight or nine foreign languages and eighteen or twenty new majors in any standard educational span and do it with success. Therefore, education would be far more effective and would have much greater duration with the individual, and as a result we would have a much higher culture.

In the field of business efficiency, memory, forgettingness and the posing and resolving of problems are the difference between an ineffective slavey and a powerful executive. With these processes, almost any second-rate file clerk could be moved into a valuable asset, and certainly the moving of a business executive from the lower brackets of ability in memory, forgettingness and posing and resolving problems to an upper bracket might mean the make or break of that business.

While Straight Wire does not, in any way, supplant any of the other of the Six Basic Processes, you can be very certain that it can stand by itself as a process. It is very important to know this, for it is the easiest process to teach anyone, and it is the easiest way to obtain stable results.

If you were to essay to teach those people who had the handling of other people in their charge the elements of Straight Wire, exactly how to do it as a drill, not to burden them in any degree with any theory, to reassure them about the phenomena and to turn them loose to do exactly the drill called Straight Wire on those intimate to them, you would have Scientology spreading at a very rapid rate.

The only other solution akin to this would be to teach everyone 8-C. Particularly parents who ordinarily run very poor 8-C on their children. However, 8-C appears to be more childish than Straight Wire. Straight Wire appears to be deep and has great significances connected with it and would be done by adults much more easily. Furthermore, an individual could conceive himself to be very wise in delivering Straight Wire and listening to the answers he got from it, but do not let your student, of course, get so wise that he will stray from the process.

In other words, I recommend to you that you would take some of the people who have some vague interest in Scientology and take a certain facet of their existence and run the basic Straight Wire question given in the earliest article in this series on that one facet until they understand something has happened. Then teach them how to do the process on others. **TEACH THEM THESE EXACT RUDIMENTS:**

ONE: Awareness of the auditor, the auditing room, that an auditing session is in progress.

TWO: Two-way communication on a casual basis.

THREE: The delivery of the question.

FOUR: Communication lag.

FIVE: The acknowledgment of the question.

SIX: The duplication of that exact question.

Having taught a person to do these things and having taught him to do them well, you could see that you have expanded his livingness and his beingness. He can MEAN more to more people by this knowledge. This knowledge is not difficult to learn; it is not difficult to teach, and we hope that we have placed in your hands at this time something which will help you to disseminate the information of Scientology and to bring about a better culture than that we have.

AXIOM 51 AND COMMUNICATION PROCESSING

Let me give you a small review on communication. Axiom 51 says that MEST cannot change MEST, and we find that postulates and live communication do change MEST. MEST cannot change MEST, therefore a pair of forceps cannot basically change a tooth condition. This is sweeping and I want you to realize how sweeping it actually is. A medical doctor would not be able to alter completely a broken leg. You may say, "That's silly, of course he could. He could come in and snap the bone back into place and the fellow would feel a lot better." No, I'm sorry, a medical doctor cannot over a period of time change a broken leg. Do you know what will happen? Let's look at it from the standpoint of life, now, and we find out that the individual got attention for his broken leg, didn't he? It will emerge as rheumatism some day. In the next life it will emerge as two broken legs! We're going to get a repetition of this because as soon as you attempt to change MEST with MEST in one fashion or another you are going to get persistence, and that is all. Persistence of what?

In view of the fact that all conditions are postulated conditions, and that the consideration behind them that they are bad or good is simply again a consideration, if we say persist it doesn't mean that it is either bad or good, it simply means *that condition*. What condition is it? The condition we are trying to change. And whenever we try to change MEST with MEST we get a persistence of that condition. It will crop up one way or another, and you will see this time after time.

Dealing as we are in a very high echelon of live communication, when we try to alter a condition with MEST we get this persistence. Restimulation is the condition persisting in the auditor, as an auditor who goes around altering energy masses gets restimulated. The auditor comes along and says, "Now all I have to do is change this energy mass one way or the other," and he may succeed in doing so as far as he can see for the moment. So he goes off restimulated. That is the condition persisting. It's going to persist, one way or the other. The only motto back of MEST is "PERSIST."

But we have this licked. Hence Axiom 51. Postulates and live communication actually can bring about a permanent change and can actually stop a persistence.

Now, this process, "**What wouldn't you mind ___ communicating with?**" "**What wouldn't ___ mind you communicating with?**" is actually not a low echelon process. A low-echelon preclear, one with no mock-ups and very little reality, one who is not well off, will not be touched by this process. He cannot assimilate the process. Why? Because, to run this process, you have to have the cooperation of the preclear's ability to as-is. You have to have the ability of the preclear to have a cognition and the ability of the preclear to as-is a piece of energy, that is, to make a perfect duplicate of it.

Where, then, does that leave this process to be totally functional? It leaves it upstairs, because when you run it downstairs, the individual begins to "chew energy." Just "chewing the

energy around” doesn’t make it persist, but, with all this chewing, he isn’t as-is-ing anything. All he is doing is moving mass “A” to position “B.” Anybody who is doing this gets no cognition out of it at all. He is waiting for that piece of energy to tell him something, and this tells you a great deal about the preclear who couldn’t run an engram. He was waiting for the MEST to say something.

The preclear who could run engrams could still play a game well enough to make the MEST say over and over again what the MEST had imprinted on it. That is exactly why an engram could run and why we had success in running engrams, and when an engram disappeared that is exactly what happened. It was up there all right, it was up there in lights, but it wasn’t saying anything. It was a bunch of sound waves imprinted on a bunch of molecules of one kind or another, and the preclear had to sort of pretend it was saying these things over and over. In other words, he made it talk. Now today an individual gets an engram in front of his face and you just tell him to make it talk. Make it say, if you please, exactly what is in the engram, or make it say anything—it doesn’t matter which.

As we look over this running of an engram, let us say that we are getting an individual to run birth. What we are doing is to get an energy mass called birth to articulate to an individual, and it would run very handsomely indeed if we had the preclear saying Okay. This is actually a terrifically effective way to run an engram. If we wanted to start today running engrams, we could, full out, and achieve tremendously superior successes because we could certainly run any kind of an engram in the bank. We could dream it up, and the preclear could dream it up, could do anything he wanted to, just to make these energy masses talk.

Of course very strange phenomena happen on an occluded case when you have him dream up the fact that he has the concept of an engram in front of him. You just look at him and you say, “Now let’s make believe that you have birth in restimulation in front of you.” (This would be a roughie, and a weird way to go about it.) “And now let’s pick up the engram at the point where the doctor is saying, ‘If you will just take this pint of strychnine, mamma, the child will be born much earlier.’ “ You have him to make this concept say this, and have him say Okay to that.

The strange part of it is that you don’t have to pay any attention to whether birth shows up or not. I counted the number of births on an individual one time and it was several thousand, believe me, and they all go back to Fac Ones and things like that. So we just have him get the idea that he has birth in front of him and have it articulate. Quite often this totally occluded case will have a complete birth show up and begin to run off. But, he was totally occluded, wasn’t he? He couldn’t run an engram.

We could just buckle right down at that point and actually run that engram with Okays from the preclear, just as it showed up, or we could go on running a synthetic engram. In either case facsimiles would go out of restimulation in the individual. As long as we have communication those energy masses will disintegrate and you will stop the persistence of the condition.

So let’s look at the optimum way that I know of at this moment—the best way I know of—to separate universes, on which I have had considerable success and to date have had no failures as long as the preclear could at least articulate anything. As long as you can make him do anything at all you can make him do this. You have seen the process already.

“Give me some things you could say to your mother.” If you wanted to make this very perfect, if he is unable to play a game you don’t have to (very often the preclear is unable to play a game), you would say, **“Now get the idea mamma is out there saying Okay to all of this.”** **“Now give me something else you could say to your mother.”** Then you say, **“Get the idea mamma is out there and have her say ‘Okay.’ “** **“Now give me some things that mamma could say to you.”**

Now you will get a positive blow-apart in a fairly rapid order of the interiorization of the universe. We know very well that people interiorize into a body, into other bodies, into MEST objects, into planets. So, if you were to run this one all the way backward you would take somebody who is obviously seen to be interiorized into earth, and what would you have him do?

You would say, **“All right now, give me something earth could say to you.”** If he is really interiorized into earth he’ll think up something. Then you have him say Okay. The next thing you know he will get the ball of earth ‘way out there somewhere. Maybe it’s the first picture he has ever had! You will say, **“That’s fine. Now give me some more things that earth could say to you.”** **“Now give me some things you could say to earth,”** and very ordinarily he will come right on up the tone scale. You will never see such perfect behavior of a tone scale as when you use a MEST object.

Then we would pick out (if we really were bent on exteriorizing Mr. Doakes and Mr. Doakes was interiorized into the interiorizations) another universe when we knew that we had the first one blown, and we would know that because his physiological condition would very definitely alter. We would go on to the next likely universe.

We find this fellow who has been a linotype operator for eight thousand seven hundred and sixty-two months, or something of the sort. We don’t have to be specific. We pick a linotype machine, and we say if he got into earth he certainly got there via some sort of apparatus he was controlling, so we say, **“All right, what could a linotype machine say to you?”** He would think it over for a moment. A very literal-minded fellow would probably say, “It could say ‘clank.’ “

“Okay, have it say clank.”

“You know, I don’t get any sonic on this,” he’d say. (I’ve had this happen.)

“Well, just get the idea of its saying clank.”

“Well, it’s going clank, all right.”

(“Oh no you don’t,” says the auditor, aside and to himself.) “Have it SAY clank.”

“Have it SAY clank? A linotype machine can’t . . . well, I guess it could. On thinking it over I guess a linotype machine could.... All right, I’ll have it say clank.”

“All right. Now have it say something else.” He does, and we blow him out of the universe of the linotype machine.

Now let’s pick the wife he hates worst, or something like that. What could she say? etc. Admittedly this is not a short process, but it keeps going faster and faster. Next we would pull him out of papa and mamma, and maybe grandma and grandpa, and so on. We are doing one of these schoolbook, by the table, separations. Then we say, **“Now give me something your body could say to you.”**

“My body say something to me?”

And away we would go, and we would blow him out of his head.

It will work with almost that mechanical ease. The question is, how many hours of auditing would it take to bring somebody who is totally interiorized into a planet out through these various stages and finally out of his head? As far as I’m concerned it is the minimum number of hours he could be audited for maximum result.

We could do a tremendous number of things for him. We could do a momentary patch-up on a lot of things, we could do this and we could do that, but if we were going straight toward the goal of making this individual into the highest level of condition that we could make him into, we would follow a process just about like this. It would be slow, and it would be arduous, but we would get better, and better, and better. He would finally get to a point where he could feel these things blow off and blow out on him.

I went so far one time as to try to exteriorize a fellow from his engram bank. I think I exteriorized a lot of thetans from that bank, but I never got the fellow out of it entirely because I didn't have the time. His track finally stretched out in all directions and he could view it clearly, and then he was terribly interested and wanted to run and have to do with each individual engram—and there were about seventy-six trillion years worth of them. Then there was the whole GE line. So I abandoned that attempt. He felt wonderful, though, and went around telling everybody he was cleared. Compared to his earlier state he sure was. He was cleared easily from eight or nine heavy engrams in about eight or nine hours' auditing.

The articulation of the actual communication would be something you would do on an individual who is having the vaguest difficulty playing a game, who couldn't as-is birth at a glance. And this is the conclusion I have reached rather arduously over these past weeks on this. I give you data when I have it.

Axiom 51 is right. It says you can't change MEST with MEST, but postulates and live communication can change it. But realization on the part of a preclear with no cognition is not possible. So if he can't realize, that means he can't as-is, so if he can't as-is, there he is. But I have seen preclears pass right on up the line from cognition zero to almost instantaneous cognition. In the Air Force they have ceiling zero. We have cognition zero, but it's the same thing—total fog.

It is immensely safe for an auditor to change by communication. There is no restimulation involved.

“ANYTHING—EVERYTHING—NOTHING”

I want to call your attention to something you might watch with some interest. It is the systematized generality with which a certain type of preclear answers questions. He categorizes. You ask him about a cat and he gives you all cats. Many people will answer in that way, and they very often answer with system.

There is nothing mysterious about this, but it denotes the existence of groupers, good old Book One groupers. When a preclear answers in this fashion, his track is very grouped, whether he knows it or not.

In auditing this type of preclear, I have countered this with some highly general processes. I took up solutions, but I didn't leave them specific. Why did I leave them unspecific? Why didn't I leave solutions and problems as solutions and problems? Simply because such a preclear's attention needs direction.

One of the handiest ways to go about this is just to take the Eight Dynamics with the Know to Mystery Scale. If you are going to categorize something you will have it well covered, and you are going to hit most of the corners of the universe one way or the other.

By way of example, I would like to tell you a little more in detail about one such case I audited. Although his case level was in poor condition, psychometrically and actually conversationally, this man was sane among sane. He had a very good impulse toward healing, he was very sensible and so forth. He was rather intensely local in his Scientology interests, and he had a tendency toward “the only one” and rather resented anything that might come in from another quarter on this. (This is the critical level.) He was not really powerful, but he was a fine man and had done a lot of good processing.

At the beginning, I had to actually work around in the session to get some sort of communication with the man so he could answer questions. In other words, “**Give me some solutions for God**” was utterly beyond him. He couldn't communicate on this basis. “**What is God a solution to?**” did communicate, so that was the question we settled with, and from there he went on down through all the dynamics. We did not bother to take up “himself” very much because his generality was so great that he probably wasn't there!

Now this man was not in bad shape. He was in pretty good shape, but case-wise the mechanical aspects of his case—he was grouped, generalized, and far, far too fixated on others to the exclusion of himself. He wasn't there. The optimum situation is: Earth is here, other people are here, I'm here, my machines are here, my body is here, the reactive bank is here—awareness of all these things. He, however, was so far from being exteriorizable from the body

that he had to be pulled out of the planet, then out of some other bodies, and then out of his own head, one way or another. It took some doing!

At first I could only try to develop some kind of two-way communication with this man. I found him hell-for-leather on an obsession toward knowledge, and telling a person that you did not know something was not a communication to him. If you said “When does the train leave?” and he told you “I don’t know,” he would not have communicated to you. I almost bludgeoned him into the recognition that there was a communication involved in telling somebody “I don’t know,” that you did refer to the problem or situation if you said “I don’t know” and went right on off on one of those techniques which can be used on a low-level case: **“Give me an unknown datum.”**

Consider the case reality! If I asked him for **“Something you wouldn’t mind remembering; something you wouldn’t mind forgetting,”** I would have actually exceeded his level of reality. Any man who is as obsessed on the subject of having to know as this, normally is sitting in a tremendous “I don’t know.” So I just used one of the R2s: **“Give me an unknown datum.”** He didn’t interpret the auditing command. He missed on each one of them. Somehow it came out wrong. He couldn’t be audited on whom he wouldn’t mind communicating with. It just didn’t audit. He didn’t have any reality. There was no reality on the process as far as he was concerned. We were just sitting there talking.

Somewhere along the line, when you have to handle such a preclear, you’ve got to find some kind of problem that’s real to him; or something that is real to him; or something that will register if you are trying to get a case entrance on a case of this kind. I get some lulus for some reason or another. This man was really a very able man. There was nothing really wrong with him, nothing specifically upsetting with his life; but his general tone, his general reality was just down—real poor.

I said, **“Give me an unknown datum,”** and he started reeling them off—and he came into present time with the process. He was naming abstractions, abstractions, abstractions, unknown, unknown, “I don’t know when a train leaves,” and so on— things he wasn’t looking at. Then, the next thing you know, he was giving me unknown data about the material in the immediate auditing room, and he gave me a lot of it. So, for my money, that process flattened.

That’s a very covert way of running 8-C on somebody, isn’t it? **“Give me an unknown datum,”** and finally he just came up splendidly and was actually looking at his environment.

Actually, just listening to the preclear and predicting about where he is going to go is quite a game. With this man I got groups, high generalities, terrific classifications; he was giving me back Scientology as he had read it out of a book. There wasn’t any thought in it at all. He wasn’t giving me name and energy, but by not addressing the point particularly, but just drumming it and keeping in two-way communication, we were suddenly getting him so specific that he was naming articles in the room.

We, as auditors, know what’s wrong with somebody. It’s a matter of time and energy to resolve it. The preclear doesn’t know what’s wrong with him, so there’s no real talking to him on the subject. If he knew what was wrong with him it wouldn’t be wrong with him! This man was glibly unaware of being there, and he saw nothing strange or peculiar in his answers to questions: “Anything,” “Everything,” and so on. In a situation like this you have to degrade the question down to actual action. If you had two universes, you would say, **“What are some things you wouldn’t mind saying to your mother?”**—and maybe he would find them. You would go on, and on, and on until that was flat. And then, **“Some things you wouldn’t mind saying to your mother,”** and make him say them. And on, and on, and on, and you would watch those universes go up in smoke. Always find what universe he is stuck in, and then talk him out of it in this fashion—that is, make him talk himself out of it. You really can!

Now it is almost unimaginable not to be able to run this process on a preclear, and yet here was a preclear that could not run it. In such a case, you have to take the action dramatization of the communication. **“What wouldn’t you mind saying to your mother?—Come on, give,”** and **“What wouldn’t you mind your mother saying to you?”** Of course, the first answer you get in this case is the tip-off. It is: “Anything,” “Everything,” “Anywhere,” and then they’ll come up with qualifications. “Well, if we rule out pain, then I wouldn’t mind communicating with bang, and bang, and bang,” and you’d say, “Just a moment. We haven’t ruled out pain.” “Well, then—nothing! I wouldn’t communicate with anything.”

It is interesting in Spotting Spots in Space that this person is very definable. You can test him, and find this case out immediately. You simply say, **“All right, let’s spot a spot in the space of this room,”** and the fellow will say, “Well, it’s there.” You say, **“Now, put your finger on it,”** and he will say, “Oh, I couldn’t do that!” **“Well, go ahead, put your finger on it,”** and he will probably say, “Well—why?” And you get into that! He will not spot a single spot in space. When he does that, he also qualifies everything, he gives everything conditions, and in addition to all that it’s “Anything” and “Everything.”

When you run up against this case, then, he cannot run this process very fast or very easily: **“Things your body wouldn’t mind communicating with,”** and **“Things you wouldn’t mind your body’s communicating with,”** because he is in this “Anything Everything” class.

The thing to run then is obviously just what kind of universe he is stuck in, and to begin splitting it up with an axe!

“What wouldn’t you mind your mother saying?”

They’ll hate this process. They’ll practically, if you insist on it long enough, get down and chew the rug. **“Give me some things you wouldn’t mind saying to your mother.”** It’s just horrible! The thought of having to go through all that communication. But this they can’t dodge. So we can grade the process. We can say this “Anything and Everything” process wouldn’t be the optimum case, and quite possibly wouldn’t run at all **“Things you wouldn’t mind so-and-so communicating with, your body communicating with,”** or anything else. That process is too subjective. They can’t grasp it enough. They can’t play the game. So you make them sit there and you go on down for this other process.

How do you find out whose universe he’s in? Just ask him who he most resembles in his family.

There are two things which will create change. One of them is Postulates, and the other is Communication. A live communication, postulates, will always create change of one kind or another. Now, the point is, how ably can your preclear communicate? If he can’t communicate very ably, then you are going to have to make him dramatize communication. Mechanical two-way communication is one method of dramatizing communication—you have the preclear refusing mass, and at the same time he’s communicating. This will persuade him to communicate. But there is another way of doing this, which is what I used on this preclear successfully. I actually changed his skin tone, and did something to the universes, and there was some change on his psychometry as a result thereof.

I went further and did him a dirty trick. I gave him the same process to run, but thoroughly flat, on all members of his family, and that process was: **“Give me some things you wouldn’t mind _____ saying to you.”** **“Give me some things you wouldn’t mind saying to ____.”**

Now actually, it isn't that the sense of the thing he is saying or has said has anything to do with it. But with this process your preclear is going to do something peculiar. He is going to pick the bank clean. Any time somebody is super-generalizing on "everything's" and "nothings," you can absolutely count on the fact that he is not capable of creating energy. He will be able to create some ideas, but this will be rather slow, and he's lazy. So he will take actual phrases and things that occur to him when his mother really said something—anything—and things he *would* say to his mother.

With this particular process, we picked his bank clean of things he would say to his mother in about three minutes, and he went into a horrible comm lag. Finally he said, "Well, actually, I never say anything to her. I never did say very much to her."

Just as a result of that processing and no other (two hours out of the five I used on that process), he had markedly changed his consideration. But if you think he had improved, you are mistaken. He had gone downhill, and the reason he had gone downhill is that he had given it all up. He had *really* got into "Everything and Nothing" now. He was really willing to let his body communicate with cannon balls. He was willing to let his body communicate with anything destructive. He was not yet covertly hostile to the body; he just didn't mind communicating.

What changed this was separating the two universes.

The interesting thing about any of these cases is that a person who qualifies all statements, who can never be specific, would apparently suffer intense pain if he were to say "oatmeal" when you asked him to **"Give me something you wouldn't mind eating,"** and he never seems to grasp the fact that the auditor wants him to say "oatmeal." You can just keep on telling him that this is what you want him to say. I have actually made this test, too, by the way (not that it was as a good auditor, but as a good research man). I have sat and I have said to a preclear, **"Now, I want you to name a specific kind of food that you wouldn't mind eating. One is all I want you to name, and one is all I will allow you to name. Now, what kind of food wouldn't you mind eating?"**

"Any kind of food."

Now, if you get that kind of conversational manifestation, it is a fellow who disperses away from every spot he tries to look at. You've got the case pegged, postulate-wise and mechanically. He can't locate a single spot. You would say, "Where are you from?" and he would say, "I'm from the New England part of the country." If you ask somebody who can spot a spot "Where are you from?" he is likely to come back with something like this: "I'm from Bramblebury, Vermont. Were you ever there?" He would suspect you had probably been there. You know, anybody could locate that place! Precision. Spotting.

But "Anything and Everything" is an imprecise spotting. It's buttered all over the universe, and it is peculiar to the mystic. And let me assure you that it is very unusual to find a process short of Spotting Spots in Space which relieves this condition—but that process is: Figure out the universe he is in, make him say something to that universe by asking him, **"Things you wouldn't mind saying to your mother"** (or father, or whoever it is). He will hate you like poison before you are through. Halfway through the process he will just as soon cut your throat as look at you. You are making him communicate, and this will break up.

I'm glad we've had a good look at this case. I'm glad we have some inkling of this condition, but you are going to run into it. It's the one that makes an auditor blow his brains out most often. You give the preclear an auditing command. You KNOW this command works. Then this—everything, anything, nothing.

Now let me be very specific to you. This is the thing that drives an auditor away from using good processes. He strikes one of these high generality, unable, on high semantic

sensitivity cases, and uses a process, and the auditing command does not communicate at all. He should be sure that the case is incapable of doing that process, but instead of that he will feel that the auditing command must be bad, or the process must be weak. No. It is simply that the process is above the individual's ability to handle. Now it becomes a study of how far south can human beings go, and how far south can we reach and actually audit them.

Now you will understand that two-way communication simply makes the preclear say something to you, and you say something to him, and he says something to you. We could come up above that a little bit, and we could make him tell us things he would say to people and things people would say to him, and it becomes a "wow" of a process at that level, because you pick the universe and you blow him out of that universe. This universe he is in is probably an "Everything-Nothing" consideration, and you unburden that—and he comes on up. This is an indirect version of Two-Way Communication, and it hits straight at Universe Processing.

There is a solution to that case!

Start That Practice!

L. Ron Hubbard

Here's a new successful way to start a practice !

All over the world auditors are succeeding. However, in some areas we understand there are auditors who can't seem to get going. In one particular area we have heard that some auditors were working at regular jobs. What a waste! In a world without assistance, real honest assistance from anyone but Dianeticists and Scientologists, the waste of ability in these lines is practically criminal!

There's no lack of willingness on the part of these auditors. It's finance. They can't seem to get paying preclears. And to keep on eating they go to work.

Well, we've got the solution to that. We've been running a pilot project right here in Washington and although we haven't gotten it all the way through, the auditor we assigned this project to has now begun to look for an assistant and he has turned over a pc to the Guidance Center.

I have been alert to this problem of starting a practice for a long time and I knew that it was crucial in many quarters. Thus when I got this idea I thought that we had better make a good test of it and see what happened and if it worked out then we had our no-practice auditor right into the swing of it.

We started this a month ago. The auditor selected had no real luck and no intensives for about two weeks and then the dam broke.

Here in essence is the project. On a three-time-a-week basis, place in the personal column of the local paper—in a city of some size—the following advertisement:

PERSONAL RELATIONS: I will talk to anyone for you about anything. Call GR 5-8906 between 4 and 6 p.m. Reverend Charles Gringle, Church of Scientology, 1899 Nevada St.

Putting in the auditor's home phone (getting an answering service also if you want) and his own name we are now ready to go. The ad should run Tuesday, Thursday and Sunday at least or seven a week if you can afford it.

We've already varied the wording around to test the best and the above is the one that pulled calls.

You should expect a lull. For a few days people will read it and do nothing. They'll think it's a code. But when it appears over and over they will see that it's really a service and they'll come out of their comm lag.

Now here's the trick. DON'T charge for their service. That isn't where you make it. You DO talk to anyone about anything FOR the caller. You go out and take trouble with his troubles. You help him patch things up with his boss or landlady or wife or the government. And you don't charge him anything and you don't straight-talk at him about auditing.

You have to hand, however, literature about Scientology. And you have, of course, your pro card (which gives your minister's rating) and this should read, this professional card:

The Rev. Charles Gringle, HCA
Consulting Scientologist

GR 5-8906 452 Fro St.

And you have another card:

CHURCH OF SCIENTOLOGY

The Reverend Charles Gringle
Pastor

Meeting every Sunday Morning at
1899 Nevada Street
at 10 a.m.

Repair the ravages of the week
with Scientology services

And you hold that Church meeting even if you seem to be TOO BUSY helping people to spare that hour Sunday morning. You run the service only until 11. One hour's basic group auditing, the simplest session in the *Group Auditor's Handbook*, Session I—always that. You vary it and they'll leave after five or six sessions. Stay with it and the congregation will stay with you.

NOW you will discover that most of the calls you get are from people in trouble which is best solved by auditing. One or the other of the people concerned will be found to need it badly.

You give them auditing on an hourly basis. You charge \$10.00 per hour and carry none of it "on the cuff." Take it cash in advance. Guarantee nothing. Make sure you stress its spiritual slant and value. Steer clear of promising cures. AND DON'T rush them into auditing. They'll beg for it soon enough.

Actually do this to be of service to Man. Try to give it away. You'll find you can't. Don't use this just because it's a "preclear getter," it's a lot more than that. It will put you in financial condition and get your Church going.

Now if several auditors in an area do this there are ways and means of settling rows amongst them. Given three local papers and three auditors doing this, agree amongst yourselves who should have which paper and run one auditor to the paper. If you are too many for this then run it all through one switchboard or phone and take watches, allot the house calls, pool the auditing and cash resulting. Or do it one group per paper.

Keep that "Church of Scientology" in the ads so there's always a trademark on the stunt and it can't be pushed into by some untrained quack psychologist or Commie psychiatrist.

Actually run that Church!

All right, you'll learn fast when you start it.

You need this to begin. Your ordination must be in good order. With an HCA you can get that from the Founding Church. Its cost is now \$18.00. You had better have one from the Founding Church or the Church of American Science or the Church of Scientology.

Make sure you have a Church Charter. Write in to the Founding Church at 1845 "R" Street, N.W. and make your application.

If you want we'll send you literature. We have a handout piece at the printers into which you stamp your name and address and which advertises nothing else but you.

When you've got these, run your ad and begin. Don't run your ad unless you've got the above straight.

Now the press will contact you. The Code of a Scientologist on the subject of the press is explicit. No interviews.

BUT sooner or later make sure you do all you can to get yourself or your group a TV spot or a radio spot to talk about the calls for help you get and keep it going steadily. Press is a via. Radio and TV are straight communication, relatively speaking. So whatever you do don't, particularly now, fall away from that Code of a Scientologist and always act within the area of *Ability Major 1*, "The Scientologist—A Manual on the Dissemination of Material" which you can get from the HASI for \$1.00.

Now by the time you have all this started I'll have something for you in the way of fast assists if what you've got isn't fast enough for you.

In other words, wherever we can, let's get this show on the road. We don't care how many Churches of Scientology there are in a town. So long as there's a leading Church. So long as they're actually Churches. We don't care how many ministers we have so long as they're good auditors and good people, willing to run Churches and help their fellows.

The cost of starting all this is not high. If you're working keep on working for a little until you get a practice started. Put your interview hours in the right place for you and work harder by putting yourself in two slots at once. If you're not working and broke, get a job doing anything, finance your project and then cut loose from the job when you are rolling.

Well, here goes a main all-out push across the world. We want 5,000 auditors and 5,000 Churches by 1958.

There's not a minister anywhere around that measures up to what the public thinks he should be able to do—except a Scientologist.

There's no remedy for a case like busyness.

There's no remedy for an attack on an outfit like a full-scale offense toward Theta goals.

Okay?

SELLING

It is completely fantastic that we have to *sell* Dianetics and Scientology. Yet we do.

If this is so, then why, and how?

The world does not know that there is any hope for the mind, the spirit, the intelligence level, weariness and disability. If you talk to a group all about the mechanics of the spirit and fail to talk to them about "There is some hope for it," you've overshot, and right there you have "entered the public case" too high. Its data level does NOT include SOMETHING CAN BE DONE ABOUT IT.

The careless driver, the faithless wife, the negligent employee are all severe problems. You could confront an individual beset by such problems and talk for half an hour about engrams and have him walk away without asking for help. Why? Because his entrance level is SOMETHING CAN BE DONE ABOUT IT. You'll have to sell him on that before you can sell him anything else. Does it take selling? It surely does!

The world has been promised and promised and promised for centuries, with a flop every time. Today the magazines of the cheaper variety are full of psychiatric articles about the miracles of new drugs. Even legislation states that psychiatry "cures 75 percent of its cases"; an outright lie. It knows that as soon as you promise cures you're Lying. Even the Busy Business Bureaus state that the public should suspect anyone who promises a cure for anything—by which, we believe, it includes psychiatry. So your glowing statements that you can take care of it entirely are received by the beset person not at all. He's heard it before. He's spent his money on patent medicine, and medicos, and quack psychologists, or he knows somebody who has, and he knows it won't work, that there is NO HOPE.

How do we solve this impasse? We don't over-promise our beset person. We tell him that we have known such things to be helped by Scientology; that if we were persuaded, we might take a crack at it; that the thing isn't ENTIRELY hopeless, since Scientology, a brand-new science, has been handling things that couldn't be handled in the past. And we go on in this vein, a sort of two-way comm, until we bring his tone up to where he thinks maybe there IS something that can be done about it if he is very lucky and if we, fortunately, will make an effort. Show him the Code of a Scientologist. But talk to him not about WHAT you can do or HOW you can do it, but that there IS some hope in the matter these days.

Another point is to de-classify Scientology as medicine, psychology, psychoanalysis or psychiatry. Classification with these will doom your point. Your beset person, or the group you are addressing, possesses experience along these lines. Punch this up everywhere: SCIENTOLOGY IS THE ONLY ANGLO-SAXON-developed science of the mind and spirit. Medicine is Latin in origin. Psychology is German (Prof. Wundt, 1862). Psychoanalysis is

Austrian (Freud, 1894). Psychiatry is Russian (Pavlov and others in the 1890's). Scientology is an Anglo-Saxon exact science of the mind and spirit.

Another point is the goal of Scientology: Ability.

Now, in talking to a group, steer off from Para-Scientology. Lay off the whole track stuff, huh? Lay off the fantastic. And if you have some chap around who insists on telling people about these things, just note him down; he isn't working for us, fellers. The quickest way to lose a beset person or a group is to load him down with phenomena. Talk, instead, about the fact that something can be done. Talk about the fact that there IS a spiritual side to Man. Talk about the fact that Scientology solves social problems. When they are very initiate and it's all in good fun and they've also got their HPA or HCA, do what you like with the whole track. Or use it in private sessions. Don't hand it out to the public raw. It's too strong.

To establish two-way communication (as you MUST do if you are going to communicate at all), you have to talk within the UNDERSTANDING of your audience. Remember that UNDERSTANDING is the peak of ARC. And ARC includes COMMUNICATION. Communication brings about understanding, so communicate a lot. But some understanding must exist to bring about communication, so don't tell the Ladies' Aid Society about your whole track space opera and expect them to begin cheering your speech. If their mouths open at all it will be either to say "Huh?" or to snore. And they won't come back again. This is so much a fact that I want you to write and tell me who and where anytime you hear somebody spout off about whole track to new audiences or to strangers, for by this we find the boys who aren't in our camp.

Our world today, before we're well into it, believes that you live one life and get buried, and that's that; that you don't go to heaven; that mechanical gimmicks work better than men; that religion was "pie in the sky" and nobody got to eat it; that SCIENCE may or may not be beneficial; that you can't really do anything about it anyway. That's a pretty dim and inaccurate view, but that's the view, just the same.

When raising the tone of the pc, do it gently by small gradients. The rises can get spectacular, but not if you try it with rocket ships. And when you do it, you'll do it by raising his UNDERSTANDING, but if you fail it was because you jumped ABOVE his understanding and so you became unreal.

Now, the first step in auditing is not a process as such. It's FIND A PRECLEAR. And the next step is ESTABLISH THE EXISTENCE OF AN AUDITOR. That's why you don't do quite so well with mama. You haven't established the existence of an auditor. To find a preclear, you have to engage what little understanding you are confronting, and then raise it.

Asking a preclear to decide to have processing is silly. You wouldn't ask him to run Part C of SOP 8-C first, would you? No. You tell him, within his framework of understanding, that auditing is necessary to accomplish his goal, and when to report. You don't ask an audience to decide to like Dianetics or Scientology. You tell them to like it, to trust it, to learn to hope again with it. You aren't a scientist, and you don't have to be wishy-washy and indefinite about what you say. Be simple. Be decisive. Be theta.

To find a pc, you have only to establish the fact that there is hope in auditing and the existence of the auditor.

You don't have to struggle to tell people what Scientology is, what it is all about. Scientology applied the exact methods of science to the problem of the human mind and spirit, and won. It means the study of knowingness. Its immediate result in application is the bettering of ability in individuals and groups. It is a practical religion for all denominations, and doesn't require faith in anybody until they have experienced something to have faith about. It helps people who want to be helped, and if they don't want to be helped it doesn't insist on helping

them. It can be used to train and control people. Its goal is freedom. It has more validated cases in its files than any other practice. It is not an authoritarian science, and is of and for the people; it belongs to the little man and woman, not to huge interests.

By using Scientology you can talk better to people, and understand people better, and get things done or keep things from getting done. Scientology caps about ten thousand years of study that began in Asia and wound up with a quarter of a century of work in the Western Hemisphere. Its practitioners are ministers. These are trained for years, in school and out. These ministers abide by a Code that couldn't be applied to the healing sciences at all by all reason of its clauses.

If people want to know a lot about Scientology, they'll have to start from scratch like you did. You do things, you don't just talk about them. When and if somebody starts running you and Scientology down, get amused, get superior, don't close terminals. Scientology is like "good roads and good weather." Everybody is for those. Somebody trying to run it down would be for bad roads and bad weather, and you appeal to that few who like things done right and running right. And so you become amused at opposition.

You don't demonstrate Scientology on somebody before an audience just to PROVE IT WORKS. You handle this problem by insisting, if you process at all, upon processing the entire group, and you use "**three points in the body, three points in the room, find three points in the body**" until somebody pops out. Then you smile and hand them your card, and wonder who is running at Epsom Downs next week. Talking or processing, you are in poised control of the subject and your person or audience.

I wouldn't credit it, if I were on Saturn and somebody told me you had to sell a science which gives the priceless gift of freedom to everyone, that such a stupid planet could exist. But it does, and you are on it.

Good selling,

Ron

PSYCHIATRISTS

Don't be terribly surprised if in the next year or two the psychiatrists start pushing auditors around with even greater antagonism. And DON'T be caught flatfooted when they do.

You know, auditor, we HAVE had a fight on our hands. And we have and WILL have a fight on our hands. The old Book One Black Panther mechanism is all right in its place, but it doesn't do here.

Nearly all the backlash in society against Dianetics and Scientology has a common source-the psychiatrist-psychologist-psychoanalyst clique. Their patter doesn't vary. Behind the bulwark of authority these people, when asked about you, an auditor, or about the subject or about me, usually say that it is a hoax and that you or I are really just out of an institution for the insane.

Wherever some auditor stupidly decides to co-operate with psychiatrists, he has been gobbled up very quickly. One cannot co-operate with them any more than he can "do business with Hitler."

You think maybe I'm just sawing out a tune when I say this. Very few people believe the actual true history of our science in the past five years, the amount of attack and antagonism to which it has been subjected. But let it suffice that about two million have been spent to put Dianetics and Scientology out of the running. Because the people trying to do it are, by and large, pretty stupid, and low-toned, the campaign has not succeeded. But the amount of fast action necessary to combat that much money has been, to say the least, exhausting.

I could tell you a lot more about this: I could tell you about the strange finances of the BDR,* of DIANOTES, of other squirrel publications. I could tell you about three actual murders. I could tell you about long strings of psychotics run in on the Foundation and the Association, sent in to us by psychiatrists who then, using LSD and pain-drug-hypnosis, spun them and told everyone Dianetics and Scientology drove people insane. I could tell you about the strange politics and ambitions of psychiatry, so well covered in the book *Psychopolitics*, and give you a proper riddle as to why we, a small group, the only ANGLO-SAXON DEVELOPMENT IN THE FIELD OF THE MIND AND SPIRIT, have been subjected to so much attack and finance. But I am not telling you stories or being dramatic. I am inviting your co-operation in your own future security. Whether you believe this war exists, or believe the psychiatric rumor that it's all a figment of my mind, it's best to be safe in this battle.

It's best to be safe because it isn't our battle and it isn't our objective to ruin psychiatry or medicine. We don't care about these. Our goals are to make more people more able, to make a rather inefficient society a lot more fun. In order to attain these goals we had better scan the river ahead for shoals and fit our craft so as to survive any, and having done that, lightheartedly

continue on our way. Dianetics and Scientology are not political; they desire to overthrow no government. Each auditor anywhere is expected to continue his long-given allegiance. Dianetics and Scientology exist to serve and assist any given officialdom in a proper way. We have in view no empire of madmen all screaming for some dictator or banner. We have our place in the world of things as they are, and we can do an awful lot right in that place, seeing that we know more about the mind, the spirit and religion and even science than any other group in the world.

Granting this, then, we should act to best fit our niches, and so do our jobs. About the only thing which upsets our forward course is the fact that psychiatry and medicine sit close to the advisers of state, and these officials, on matters of the mind, turn to psychiatrists for their opinion, and the psychiatrist there can be counted upon by his cult headquarters to give the right amount of sneer to the official about Dianetics and Scientology. The public as a whole love Dianetics and Scientology. Our word-of-mouth praise is remarkable. But in the official strata, because the psychiatrist is the authority, we are likely to be mud. Similarly, the newspaper, in wanting an opinion of us, calls the local medical or psychiatric board and again gets this formulated sneer and defamation. That the public responds to us and likes us is remarkable in the face of this authoritative calumny. Reversely, the public utterly LOATHES psychiatry. You waste time if you try to defame psychiatry to the public. The public is already in a spitting frame of mind on THAT subject. Coals to Newcastle, strictly. Psychiatry stands in the public mind for ineffectiveness, lies and inhuman brutality. The public is better informed on this than you suspect. The public only avoids YOU, an auditor, when it believes you are a psychiatrist or a psychologist, so there is no team-up; there never will be. The Busy Business Bureaus, advised by psychiatry, will always give Dianetics and Scientology a bad report no matter how hard you work to get them to give a good report. The answer—ignore them. We are an organization for and of the people.

But don't fail to take the steps to secure yourself an immunity from attack, auditor. Make sure all your papers are in good order. Make sure, no matter where you are in the world (for the last attack upon us was in Central Africa) that your ordination is in good order. Make sure that you are running a good and orderly congregation every Sunday morning. Make sure your Church is registered properly. Make SURE your literature says you make the able more able, and that insanity and illness are no more your problem than they would be the problem of any minister. Stay out of that slough of insanity and severe illness, for you don't belong there and never will. Practically, I don't know any auditor who ever came out unscathed entirely when he attempted to work with the severely ill or the insane. The amount of enturbulence caused by contact with such is fantastic.

Now, not to scare you but to inform you, psychiatry has armed itself with several new drugs. One of these, LSD, has the total goal of driving persons insane for 15 to 25 hours—JUST long enough to convince people that your auditing spun the preclear. When you see a process solve a case, and then the case spins, don't even bother to look for the needle mark on the pc. The APA spent their whole May convention in Atlantic City drooling over the effectiveness of this LSD, WHICH HAS NEVER MADE ANYONE WELL AND IS WELL KNOWN TO HAVE THE TOTAL PURPOSE OF PRODUCING INSANITY. Grim? Fantastic? Ha! Ask the few auditors who've had this done to the pc. For the pc or his family often has a psychiatrist looking in, unknown to the auditor. And it HAS happened. Wild? It's a lot wilder when it's happening to you as an auditor. The answer? Don't process people with psychotic histories. That's simple enough.

Now if it does happen to you, don't just abandon the case. Give the case a few exercises and observe the recurrence of the weird spin. Observe this carefully. And then bluntly inform the family or the authorities, if you are questioned or called in, THAT YOU AS PASTOR OF THE CONGREGATION TO WHICH THIS PERSON BELONGS HAVE A VESTED INTEREST IN THE LIFE AND HEALTH OF THIS PERSON AND THAT YOU BELIEVE THAT UNDUE INFLUENCE WAS USED AND THAT SPECIFICALLY YOU GAVE EXERCISES TO AND OBSERVED THE PERSON IN QUESTION TO DETERMINE WHETHER OR NOT THAT PERSON HAD BEEN GIVEN THE INSANITY DRUG LSD

SO THAT YOU COULD REPORT IT TO THE PROPER AUTHORITIES. And don't testify otherwise. Sounds wild? Well, always do it if involved in such a thing. You'll find the family physician or psychiatrist was called in midway in processing (which consists, remember, entirely of making able people more able). You'll find there is a vested interest somewhere in the insanity of this person. And so testify that you suspect it. We will have to hand lots of literature on LSD, in fact we'll have the APA convention reports on it for you. If this happens to you, you, minister, are the only policeman who would suspect it. If, then, psychiatry "plants" one on you, look it over, report the sudden occurrence of insanity promptly, testify your suspicion of LSD, produce the literature on it and get the sheriff looking around for that medico or psychiatrist as fast as possible. BUT, don't look for trouble in the first place. Leave insane people alone. I know we can do things for them. We can also shed light on how to solve the national debt, too.

DON'T ever promise people you will cure them. If they want to know if Scientology will help their arthritis, tell them it often has been known to do so, but that that isn't an auditor's goal. If a person becomes more able, he'll usually feel well. But DON'T advertise that you cure things. If you HAVE to advertise, I'll give you some tips that work. They don't include curing ills and insanity.

You, as the most educated people on earth on the subject of the human spirit and MAN, certainly deserve a high role in the field of religion. We can reform all of religion and make it vastly better. Why clash with healing quacks?

Scientology is for the people and of the people. It belongs to them. They are receiving it. They like it. Bear with our troubles with the dull official and Authority and go out and make a happier world.

L. RON HUBBARD

5510C03 4LACC-1 The Fundamentals of Scientology. The Rudiments of Auditing (Part One)

While Book One has a place close to the top in Scientology, the most fundamental fundamental was invented later. It appears on page 23 of the Ability issue called The HCA Manual:

The rudiments:

1. Awareness of the auditor, that an auditing room is present, and that a session is in progress.
2. Two way comm on a casual basis.
3. Delivery of the question
4. The comm lag
5. The acknowledgment
6. Duplication of the exact question by the auditor.

In order to make any auditing work, these fundamentals must be observed. If the session is not precisely conducted, the processes can fail to work. This even explains why one might not have a practice: if the public couldn't find the auditor, there would be no practice. This also explains one difficulty in auditing one's parents: you need awareness of an auditor, not a child. To start the session, the PC must first find out he's a PC, and he must find the auditor. In the auditing situation, students must learn to assume the beingness of auditors and PCs, not students. If you exist as an auditor, there will be PC's; this depends upon an ability to be. The relationship between auditor and PC is not so much one of altitude as one of ARC; you must keep the R in. When you are auditing an auditor, for instance, it doesn't inspire confidence to have to stop and look up the process.

(There's a process that makes a PC into a PC: "What are you doing?" run until he cognites he's being audited.)

A PC goes out of comm with an auditor before he observes that there's something wrong with the session, like a code break. An auditor's code break only occurs when the PC thinks the auditor has bad intentions, and where the auditor does not repair the out comm with a little two way comm. The auditor may, if the out ARC is severe, have to use another process on a lower gradient until ARC is restored.

A gradient scale in auditing need not take a long time for each type of processing. For instance, to get the PC to remedy havingness need not take 5 hours; if you stay in two way comm and see what is really happening when the PC throws away mockups so as to really get rid of them, this could take only 6 to 8 minutes, if you've actually got an auditor and a PC.

You must continually be aware of these rudiments, since the PC can stop being a PC at any time. Then two way comm gives out. Whenever two way comm gives out, the session stops, as far as the PC is concerned. What starts this is too little two way comm and too little acknowledgment in the first place. The PC will get stuck on the time track at the point where he has not been acknowledged, and the session at that point is in fact over; it's all now in the past for the PC. When he gets restuck later on in session, he'll blow, or threaten to. Sometimes this can be handled merely by the auditor's starting all over with the session, thus subtly calling the PC's attention to the fact that he's in a session. A PC may blow 28 minutes after failure to ack.

The auditor must learn to differentiate between a PC's dropped willingness and an increased comm lag. Where willingness is not there, no auditing can occur. The only thing there in the

first place is a willingness to play the game. Nations topple if they forget this fact. Willingness to work, if taxed too heavily, can become a willingness to succumb. A whip extracts the last atoms of willingness, but this can easily be turned around.

“The only thing that any nation can tax, that any group can exist on, is the willingness to play the game: to do, to survive, to continue.” If you decrease a PC’s willingness to play the game of auditing, you can hardly expect to increase his willingness to play the game of life. He must always audit better than he can live, or he’ll never live better than he can be audited. In session he should observably be getting brighter and more alert. PC’s always sag a bit when session is over, so don’t be disappointed when life seems harder than the session.

Helpful hints: You must duplicate the question time and time again, without killing the PC’s willingness to answer it. This can be done by adding some dunnage, but don’t vary the question. The dunnage consists of casual two-way communication before and after the question.

“Two-way comm is light, ... airy.... It has life in it and can be terribly casual and fantastically therapeutic.”

“To remedy havingness is to remedy the need to have.”

Regret is running the time track backwards.

5510C03 4LACC-2 The Fundamentals of Scientology -- The Rudiments of Auditing (Part 2)

Here are the reasons why the human mind has not been solved:

1. I don't know.
2. No idea.

To know about something, is necessary to not-know it first. This was an incomprehensibility to philosophers of all ages. To understand the source of ideas, you had to understand "no idea". One has to be able to not-know something in order to know something about it. Dialectical Materialism is a dramatization of "no idea". "No idea" is a workable concept, but as long as the Dialectical Materialists are only dramatizing it and don't know it, it is unworkable. Dialectical Materialism says that all new ideas are the result of two old forces. Hence no idea can be really new. So there is no possibility of getting a new idea. If someone dramatizes something, as with the Dialectical Materialists, it must have existed earlier as a postulate that went solid. Things begin with a consideration and end with a solidity, e.g. a dramatization or a solid reality. So an idea is senior to all matter and conditions. Above that is the thetan in his native state. If a thetan wishes to return to his native state, he often bungles it by assuming that he is in native state, when he is actually in very bad shape. This leads to the idiocy that everything that is true of a thetan's native state is what continues to be dramatized, clear down to the bottom of the barrel, and that every aberration is a reflection of native state and the first and second postulate theory [Axioms 36 and 37].

Native state is having no idea. The thetan knows all about all. He has no ideas, because he has all the ideas there are. Now he says that he will have an idea. Here, we get Axiom 36: the first postulate gives the second postulate power. So the thetan in native state knows all. He then makes a first postulate: that he has no idea. From here, as per Axiom 36, he can make the second postulate: that he can have an idea. This is an harmonic on native state, but it is alter-ised, so it persists and we get time. The force of having an idea is the statement that he didn't have an idea before. An idea is a barrier, a stop on the track. Even a manic idea or a win can be a stop. So we get:

0. Native State: The thetan knows all but has no specific idea.

1. First Postulate: No idea. I don't know.
2. Second postulate: A specific idea. This is an harmonic on Native State: "I know something."
3. Third Postulate: Forget.
4. Fourth Postulate: Remember.

For the first time in the history of mankind it has become safe for man to know something. It was not safe before because you'd stick to it, because every mystery could then pull you into it. The more you knew about it, the more you were enveloped by it. This gives the manifestations of a thetan's blackness, dropped havingness, illness, etc. Things known on a second postulate basis are solid and persist. Studying anything will produce this phenomenon. Scientology has been a safe subject because it has progressed toward simplicity and has never pretended to contain all knowledge. There's a limited amount of knowingness and unknowingness available. What gets scarce is unknowingness. We let "unknow" go on an automatic basis; we don't take responsibility for it [so it gets pulled in on an unknowing basis.] You'd never get into trouble in processing if you kept on supplying lots of no-idea instead of using old no-ideas. When you keep on using old no-ideas to get new ideas, [eventually] the new ideas jam into the existing no-ideas which have become so precious that we interiorize into them. Here, we've ignored the first postulate which provided the power for

the second postulate. One gets stuck in dramatizing no-idea and loses the volitional ability to postulate an idea into existence. People who get stuck in “know about” are in the second postulate. If they exteriorize, it’s into the blackness of the third postulate, which is the harmonic of the first, not-is-ing the knowingness; thus: “I’ve forgotten it. “ The fourth postulate is “remember”: an alter-is-ness of a not-is-ness. This is getting to be very persistent stuff. From this sequence, we get most solidities and spaces, except for directly postulated solids and spaces. [Perhaps the fifth postulate would be “occlude”.]

All you need to get space is lookingness, which is a dramatization of knowing. In lookingness, space is on an automaticity. That’s why space continues to exist. This automatic space, because it’s automatic, tends to fold up on people, producing condensed spaces and figure-figure at lower levels.

The above was discovered by the fact of the relative effectiveness of running “something you wouldn’t mind forgetting” compared with the bogginess of “Something you wouldn’t mind remembering.” Not-knowingness evidently is the only solution to prevent interiorization into bodies of knowledge or solid objects. Per Axiom 36, if you take out the first postulate, you can knock out the second one. For instance, “You realize that over there there’s a bus running.” It doesn’t affect you, does it? Until you knew there was a bus over there, and then you probably got a picture of it or something. Get the trick? Probably a counter-trick would be saying, “I don’t know what’s standing right here,” inventing something to stand here, then remembering you said you didn’t know what was there. So there’s automatic “I don’t know” before the knowingness. Running an “I don’t know” process for two hours gives more gain than 50 hours of “I know”.

The unworkability of “remember” processes shows that psychoanalysis never gave stable gains. It gives solid ridges if you keep remembering. You can as-is it by having him recall all the times he remembered, or better still, use forgetting to dissolve the ridge.

Take any troublesome engram, ask the PC what he doesn’t know about it, and it will blow in minutes. It upsets the PC to have him make a perfect duplicate. But this way only causes fogginess if you don’t acknowledge well and stay in two way comm. This also solves the case with the stuck picture. It’s also safe to use

“What don’t you know about it?” on chronic somatics.

Not-knowingness is not the goal of humanity or scientology; it’s just the barrier that has to be crossed.

5510C08 LPLS-1 The Goals of Dianetics and Scientology

Hubbard concluded that the problem of the mind was soluble in 1938. At this time, the USSR offered him \$100,000 and a lab outside of Moscow, for his manuscripts. [Later, the Russians stole the manuscript for DMSMH.]

Structure can only modify the mind, but the mind monitors structure.

Sometimes one decides to die, then changes his mind without unmaking the first decision. This can produce chronic somatics if the person's decision to die gets restimulated. He won't be conscious of the first decision at this point; he thinks he wants to live, but has to do some irrational thing, like be a professional invalid. [Succumb postulate?] The basic datum is the Q and A of survive/destroy, neither fully decided. When one gets audited and decides to survive, his IQ can go up and he can become happy and able.

It's mathematically impossible that accidents could account for evolution. Darwinian theory suggests that there is reincarnation, although it doesn't state this.

PLAYING THE GAME

The highest activity is playing a game. When one is high toned, he knows that it is a game. As he falls away down the tone scale, he becomes less and less aware of the game, and thereby less and less.

The greatest ability of thought is DIFFERENTIATION. So long as one can differentiate, one is sane. Its opposite is IDENTIFICATION. When one begins to identify, one has "closed terminals" too closely, and believes one terminal is another terminal. The failure to differentiate between two terminals, in an electric motor, would bring about no "moting." In a pc, it brings about no power or ability to handle power.

The legal definition of sanity is "the ability to tell right from wrong," and that is a very sooth statement.

Therefore, the highest ability in playing a game would be the ability to know the rightness and wrongness rules of that particular game. As all rightness and wrongness are considerations, and as the game itself is a consideration, the playing of the game requires a high ability to differentiate; particularly it requires an ability to know the rules and the right-rules and the wrong-rules.

When an individual is prone to identify, he is no longer able to differentiate the right-rules and the wrong-rules, and the right-rules become wrong and the wrong-rules become right, and we have a criminal.

A criminal cannot play the game of society. He plays, then, the "game" called "cops and robbers."

A person who strongly identifies is not necessarily a criminal, but he certainly is having trouble playing the game of society. Instead of playing that game, he "gets tired," "gets sick." He has these things happen because he doesn't want to play the social game. He has a "game" of sorts in "hypochondria."

Now, if you had a culture which was running a no-game game for anybody, a culture which itself had no game for everybody to play, a culture which had in its government a fixation on keeping anyone from playing the game THEY wanted to play, we would have as its manifestation all manner of curious ills such as those described in various ideologies like Capitalism or Communism. The entire government game would be "Stop playing YOUR game." The degree of sanity in government would be the degree it permitted strong and active participation in the game of government, in the game of playing your game.

But if people who can't play the game can't differentiate, similarly a sane person could find himself very confused to be part of a game which wasn't differentiating and where the rightness and wrongness rules were unclearly defined. Thus, a government without exact and accurate codes and jurisprudence would discover in its citizens an inability to play the game no matter how sane they were.

Thus, the game can be crazy and its players sane, or the players can be crazy and the game sane. Either condition would affect the other. When we get crazy players and a crazy game, the end product of either of the two imbalances above, we would get anything except a game. We would get chaos. Into this chaos, then, could be injected a new game, and on this alignment we would be able to have people who could play a game playing a game that could be played.

As a useful example of this, let us take people who cannot see anything wrong with slanderous materials on the subject of Scientology. These people, perhaps, also see nothing wrong with Scientology. They read *The Aberree* or the *Daily Worker* with equal facility with *Ability* and see no difference. We have here people who see no difference. They don't differentiate. They don't differentiate because they see no game. They see no game because they can't play a game. Or, habituated to a social structure which had no rules or rightness or wrongness, they have lost, like so many students of various universities, their criteria.

By Axiom 36: A LIE IS A SECOND POSTULATE, STATEMENT OR CONDITION DESIGNED TO MASK A PRIMARY POSTULATE WHICH IS PERMITTED TO REMAIN.

A basic rule is that to as-is a second postulate, it is necessary to as-is only the first postulate preceding it, for upon that one depends the strength of the second.

To run out all games one would only have to find where there are no old games, spotting these one after the other. He would then hit the various cognitions that a game was in progress, for the game was always preceded by no game and all games are tailored by considerations.

Various effects from games are to become "the only one" on games, to become all apathetic about games, to have the rules of the games in reverse so as to counter games.

The remedy of having no game, or not knowing a game is in progress, would be to as-is the first condition and the current condition by simply spotting here and there absences of games. Then make one.

FIRST POSTULATE

We've got ourselves a little piece of data here that you might be interested in. It will make this first postulate a little clearer to you.

The native state of a thetan would be the first real postulate, wouldn't it? There is an oddity that occurs: He continues to insist on this native state clear down to the bottom of the scale.

Let's take a look at this. Actually, in his native state, he knows everything without looking, or anything, but he doesn't know any particulars of data. These are all invented. So what you would really call this would be a potentiality, or Pan-Knowingness.

Now as we go on down the scale, he insists upon knowingness, all the way downscale, only he puts it into the form of data, and he gets his knowingness inverted so that all he knows is data, and he loses his capability of knowing.

Another thing that occurs as he goes downscale from top to bottom: He is not looking at anything, and we discover that eventually he begins to insist upon this condition. He starts wearing glasses, not seeing, seeing blackness and so forth. All he is doing is insisting that he is not looking at anything.

We take another one of these things: In his native state he didn't have any space, and so he goes all the way down the tone scale, clear to the bottom, insisting on no space. Only, how does he make "no space," finally? He begins to pull in all the energy upon himself, and crowds himself in real tight, and he is making "no space" by getting everything jammed together. But he is still insisting on the native state.

There are a lot of these native states that you can look over, and you will see that you get a whole string of first postulates out of them. Here they are, native states, and they actually are first postulates.

This is peculiar, to note that thetans insist to each other that they be in their native states, and the way they do this is to say "You're stupid," "You don't know about it," "You don't know any data," "You ought to be in jail," "You should have no space at all," "You shouldn't be moving" (cops are always objecting to people for moving, you know). And they insist, one way or the other, that he doesn't have anything. They say, "You can't have anything."

In other words, the whole society will dramatize this native state to some degree, but on what a horrible harmonic! So a thetan, after a while, begins to believe that all these native state postulates are bad. Therefore, he must avoid them, so therefore, he gets entangled, and trapped.

We look this over in processing, and we then move from the locational process up through Two-Way Communication, up into the subjective processes. The subjective processes, therefore, should all be first postulate processes, and the lowest of them would be **“Something you wouldn’t mind forgetting.”** You wouldn’t ever run **“Something you wouldn’t mind remembering.”**

All right, there are two other processes that go along in this subjective band which are intensely interesting. They are quite workable.

Now you understand that you do “Union Station,” or objects on locational processing, on **“What don’t you know about that object?”** and **“What doesn’t that object know about you?”** But now we have other places we can go, and one of the places we go is, of course, up into the subjective process band, which lies above Two-Way Communication.

Some of the subjective processes which are the most interesting are **“Find some no-space,”** **“Tell me some things you are not looking at,”** **“Tell me some things that are not looking at you.”**

You see at once that these are native state situations so these are very, very good subjective processes. They are run on a straight wire basis. So you see what a neat group that makes. But the ones that run fastest are these first postulate processes. **“What aren’t you looking at?”** **“What isn’t looking at you?”** **“Locate some no-space,”** **“What don’t you have to locate?”** **“Something you wouldn’t mind forgetting”**—all these are intensely workable.

We would move up from there into a new oddity, and that would be 8-C. Did you ever hear of 8-C before?

Do you know why 8-C works? 8-C works very interestingly. It is totally on a tolerance of command, and the continuous postulation of feeling or seeing something. 8-C, as a process, assumes the native state in a thetan and then tells him to go to the second postulate.

Here is a thetan. You are processing him. You are evidently assuming that he is in a native state, because you are saying **“Look at the wall.”** So you assumed that he wasn’t looking at the wall before you said, **“Look at the wall.”** You are taking over the automaticity of the second postulate. That’s why it works.

The third part of 8-C is just taking over more second postulates. He says, “I’m not looking at anything. Now I’m going to look at something. Now I look at that thing. Now I see it.”

We could probably dress up 8-C a little more workable just on this basis, but I don’t think it’s necessary, at this time, because it works, just the way it sits. But maybe you should understand it a little better just on the basis that we are assuming, all during 8-C, not that the guy is crazy, but that he is in a native state, and that his attention has to be directed to things.

So we take over all these automaticities, and he comes upscale.

Now let’s apply this native state principle to Opening Procedure by Duplication. We are again telling him to look at one object, and telling him to look at another object.

Natively, he was able to totally duplicate the object. Now he doesn’t know anything about the object, so we could run “don’t know” in here again. We could say, “See that book? Walk over to it. Pick it up.” And now we run a higher first postulate on him: “What don’t you know about it?” “All right. Put it down in exactly the same place. Do you see that bottle? Walk over to it. Pick it up. All right, tell me something you don’t know about it.”

You could run this on this same basis on a first postulate, too, and it would be an intensely workable process.

Of course, when we go up to Remedy of Havingness, we are assuming he doesn't have anything, and we are giving him something. So we are taking over the automaticity of having something, but we are again assuming that he is in a native state. The process assumes this, and then makes him dramatize, knowingly, the second postulate. Have something. He hasn't got anything—now he has something.

As far as Route I is concerned, Route I is a far more native state than being in a body, and just drills on it, all by itself, of course, would accomplish a great deal. But you could take Route I and ask him what he didn't know about these various locations on the Grand Tour and these incidents, all up the track, would blow.

Our assumption, as auditors, that the thetan is in a native state, and that we are then going to make him take over the automaticity of living by doing it himself, is a very valid one, and is evidently the one that produces the greatest result at this time.

So here is just a little change of mind in the way you look at processing. We take the native state of a thetan. We figure out "What is the thetan's native state?" He is not in contact with space, energy, mass. He doesn't have any dimension. We take this as the first condition. He can make a postulate out of this condition, and then he makes a second postulate, and the second postulate is a lie.

You can assume that he is in a native state, and make him make the first postulate, and you will have an intensely workable process. We assume he knows all there is to know about people, and then we say, "All right. Tell me something you don't know about that person." We are running the first postulate, right away.

Now if you assume a thetan is bad off, plowed in, and is not even vaguely in his native state, you will tend to run processes which will spin him in. If you are running him from the attitude that he has to come upscale to feel a wall, this is a bum deal.

The attitude you should run him from is: Here's this poor little thetan, all stupid, and we're going to show him a wall. We will find out that understanding of him, then, proceeds at a much higher rate.

You will get, sooner or later, a very important thing here. It is actually the auditor being there, two-way communication, and the assumption about the native state of the preclear that produces auditing.

When you particularize too solidly on a process, without paying attention to these three things, you don't get any auditing done.

**FROM A LECTURE BY L. RON HUBBARD ON
MEST PROCESSING, JULY 7, 1951**

A person's self-determinism is immediately and directly established in ratio to his handling of MEST.

Self-determinism goes down as a person goes down the tone scale, so what do you finally get? You get a person around 0.5. This person's self-determinism is OUT. They are not self-determined, they are determined by something else—not by themselves.

Furthermore, they can't handle MEST.

The "I" confuses the organism itself with the MEST it cannot handle, and selfdeterminism deteriorates.

It happens something like this: The "I" gets to a point where it obviously can't handle other MEST, so it can't handle itself, either. It can't handle space. Not only is it unable to put somebody else through space, it can't put "self" through space. And so on!

So here you have the tug and pull below 2.0 on the tone scale.

Here is an individual riding at 1.5, and here is another individual riding at 0.5. The 1.5 is trying to make the 0.5 into the 1.5's MEST. Here is an individual confusing an organism with MEST. Here is the 1.5 trying to take this other person and OWN him as MEST.

If you have, also, a 1.1 here, the 1.5 is trying to make the 1.1 into his MEST and the 1.1 is fighting back to the extent of trying to nullify the 1.5 to the point where the 1.5 is a 0.5—and then the 0.5 becomes the 1.1's MEST!

Here is the leading order of the tone scale below 2.0.

Nullification is worked on the 1.5 so that the 1.5 can be owned by the person occupying the lower band on the tone scale. The 1.5 will take a 3.0 and try to move him on down to a 0.5 so that the 1.5 can OWN him.

The organism, below 2.0, is more MEST than theta, actually, and entheta, being confused and chaotic like MEST, behaves to a large degree like MEST.

Here is your battle of the strong and the weak. In other words, the battle of the 1.5's and the 0.5's.

The only way you can possibly get along is up in the bracket of ARC, because these other things don't win.

Nobody ever succeeded in owning another organism. It can't be done.

You can own a horse—with ARC! You can be nice to the horse, and the horse understands you, and you just get along fine. The horse is very glad that you are riding him, and everything is happy—and that horse stays in good shape.

But let's "own" the horse! "Okay, you brute, you beast, you will do exactly what I say!" Before long, you have a 0.5 horse, and that 0.5 horse will develop spavins, spasms, and everything else.

The only way 3.0's can operate is on data, and exchange of ideas, and reaching an agreement with relationship to that data.

This is an added observation which I now realize I have been "adding" for a long time. 2 and 2 make four unless you insist on having spots before your eyes (instead of stripes) when they make either .22 or 2.2—anyway:

Have you ever seen a person (so called) below 2.0 on the tone scale who ever accepted the fact that Scientology was REAL? I have seen them say, "Why sure, it's wonderful," but I have also had the privilege of processing some of these characters, and so far I have yet to see one who had any reality on it. Just an observation, but it continues to explain SO MUCH.

They will sell it, or use somebody else's idea of its reality to make hay for their own stack (below 2.0 a barn is too much MEST to own, and they have already started in on organisms).

But for themselves? Just you try to process one on an advanced technique, and you will see what I mean.

And so, as sweet thought for the day, I give you all those "tough cases."

Please, Sir, will you prescribe a process for the processing of processing toward reality on the subject of Scientology itself.

I have a feeling I will hit it in a tape.

When I do, I will send it to you.

L. RON HUBBARD

ALL AUDITORS, ALL CONTINENTS

SIX LEVELS OF PROCESSING—ISSUE 5

NOTE: Issue 5 of SLP is not a final issue of this operating procedure and is subject to change especially in the matter of command wording. However, the processes here reproduced have been evolved into a workable state and have been run with success with the commands given. Issue 5 of SLP is released at this time because it is better than previous material, not because it is the final form of SLP.

With SLP is introduced a method of auditing and a new auditing atmosphere which articulates the attitude best calculated to maintain continuing stable data in a case. The auditing atmosphere is A-R-C, with gain marked by continuing rises in A-R-C. With SLP a somatic or boil-off means reduced A-R-C and is an indication of an auditing break in A-R-C. With SLP comes the COMMUNICATION BRIDGE, restarting sessions, maintenance of high R, and liberal use of processing outside an auditing room.

All assist type processes are outside SLP except for the present time problem. The emphasis of SLP is on bettering the pc's reality and power of choice.

LEVEL ONE

RUDIMENTS:

These must be established at the beginning of every session. They must be re-established each time the pc tends to go out of session.

The rudiments are:

- (a) Find the auditor.
- (b) Find the pc.
- (c) Find the session environment.
- (d) Establish that a session is in progress.
- (e) Accept every comm the pc originates.
- (f) Acknowledge every command execution by the pc.
- (g) Agree upon the process and the command form before using and do not confuse it.
- (h) Use two-way comm liberally.
- (i) Follow the Auditor's Code.
- (j) Deal with present time problem which may be present at the beginning or arise during or reoccur during a session.
- (k) Use a Communication Bridge at every process or area change.
- (l) Establish goals by two-way comm and the command, "Assign an intention to _____ (auditor indicating object)."
- (m) Run SOP 8-C as given in *Creation of Human Ability* until pc is certainly obeying auditing commands and is under control.

LEVEL TWO

LOCATIONAL AND NOT-KNOW PROCESSES:

Run in populated places, ambulant.

(a) Energy Sources:

Have pc spot acceptable energy sources. Do not permit him to spot statics unless he is ready for it. Run until pc can empower terminals. Command: "Spot an acceptable energy source."

(b) Spotting Objects:

Have pc spot objects in a place with ample space and objects. Command: "Spot an object."

(c) Spotting People:

Have pc spot people in populated places. Command: "Spot a person."

(d) Separateness from Objects:

Have pc spot objects he is separate from, then objects separate from him. Commands:
"Locate an object from which you are separate."
"Locate an object which is separate from you."

(e) Separateness from People:

Have pc spot people he is separate from, then have him spot people separate from him. Commands:
"Locate a person from whom you are separate."
"Locate a person who is separate from you."

(f) Waterloo Station:

Have pc spot people about whom he can Not-Know something and then have him spot people he is willing to have Not-Know things about him. (Auditor selects persons.)
Commands:
"Tell me something you wouldn't mind not-knowing about that person."
"Tell me something you wouldn't mind that person not-knowing about you."

LEVEL THREE

DECISIONAL PROCESSING:

Run in quiet places or auditing rooms.

(a) Think a Placed Thought:

The object is to train the pc to think thoughts exterior to his head and thetan bank to obviate the "cave-in phenomena of Axiom 51".
Command (auditor indicating object or position): "Think a thought in(on) that _____."
Alternate Command: "Do you see that (object)? Think a thought in(on) it. Did the thought appear where it is?"

(b) Choice Rehabilitation:

Using the ability acquired in Level Three (a), have the pc make choices between two objects indicated by auditor. Command: "From (indicated point) make a choice between (indicated positions or objects)."

(c) Directed Decision Rehabilitation:

Using the ability acquired in (a) and (b), exercise the pc on decisions. Command: "Putting the decision on(in) that (indicated object) make a decision about it."

(d) Permissive Decision Rehabilitation:

Using the abilities acquired in (a), (b) and (c), turn pc loose on decisions. Decisions must be outside head and bank. Command: "Decide something."

LEVEL FOUR

OPENING PROCEDURE BY DUPLICATION:

Done in an auditing room with a book and a bottle.

Commands: "Do you see that book?"
"Walk over to it."
"Pick it up."
"Not-know something about its colour."
"Not-know something about its temperature."
"Not-know something about its weight."
"Put it in exactly the same place."
"Do you see that bottle?"
"Walk over to it."
"Pick it up."
"Not-know something about its colour."
"Not-know something about its temperature."
"Not-know something about its weight."
"Put it in exactly the same place."
"Do you see that book? (etc)"

LEVEL FIVE

REMEDY OF COMMUNICATION SCARCITY:

The object of this step is to restore abundance on any and all communication possibilities. Done in an auditing room.

(a) Create Confusion:

Command: "Mock up a confusion."
Alternate Command: "What confusion could you create?"

(b) Creating Terminals:

The pc may have to be coached into mocking up unknown confused black terminals and thus into good terminal mock-ups. Commands:
"Mock up a communication terminal."
"Mock up another communication terminal."

(c) What Wouldn't You Mind Communicating With:

Duplicate the auditing command exactly. Don't red-herring (go chasing after facsimiles).
Command:
"What wouldn't you mind communicating with?"

(d) Creating Family Terminals:

Have pc mock up until he has an abundance of any and all persons he has ever used as anchor points. Commands:

“Mock up your (father, wife, mother, husband).”

“Mock him(her) up again.”

LEVEL SIX

REMEDY OF HAVINGNESS AND SPOTTING SPOTS IN SPACE:

Route One:

An exteriorized step done as given in *The Creation of Human Ability*.

FIRST, SECOND, THIRD AND FOURTH POSTULATES

Identification and differentiation are the two extremes of processes. An auditor really ought to make this experiment, just to show him the way things go. He should sit a preclear down and ask him what things are like things.

Something curious occurs—he plows right on in. It's the second postulate. "What thing is like what thing?" is the second postulate.

Now we turn around and run him on what things are different from what things and he clears right up and gets as bright as a dollar.

So if we ask somebody to look around at all those people and find people he is like, we immediately find out why old Dianetics Straight Wire had such a terrific limitation. It had this limitation simply because we were saying, "**All right, who had that manifestation?**" "**Oh, you have a twitch there?—Well, who had that?**"

It would only run for four or five questions before it would plow in, so it was a hit-and-run process. The reason for this was: we were running identification.

So, if we were to take somebody out to a railroad station and say, "**All right, now pick out some people around here that you are separate from,**" he would get sharp and bright, and he would feel wonderful.

Let's just take a shadow of that now: "**Get a person there that you are the same as.**" "Now get some things you have that are the same as the things you have." The same, the same, the same, and all of a sudden this guy goes "Gug!" He doesn't like it!

So if we ask him "**What do you know about that person? Something else you know about that person; something else you know about that person,**" we don't have the full effect, but we have some little echo of this identification effect.

A very searching look at whether it is better to hit and run—one person, another person—tells us immediately something that is quite interesting: that if we found a lot of things you know about that one chair, for instance, the process would be effective, but it would be only about one-tenth as effective as "**What do you know about that chair?**" "**What do you know about that table?**" "**What do you know about that lamp?**"

We find they fit on a scale as follows:

| | |
|-------------------|-----------|
| First Postulate: | NOT- KNOW |
| Second Postulate: | KNOW. |

So far we have been going with nothing but material objects or spaces.

Now, the third postulate is: FORGET, and the fourth postulate is: REMEMBER.

Forget and Remember stand in relationship to each other as an abstract first postulate, you might say, Forget, and the second postulate is: Remember.

Therefore, Remembering processes and Knowing processes simply make the person able to handle a second postulate. Therefore, they are long.

However, they don't run out very well.

If we wanted to run out Knowingness, we would run Not-Knowingness.

In view of the fact that a lot of people just know things that are horrible, it would be to some advantage to run out some of this Knowingness. It is very false Knowingness, isn't it?

So we have the consideration added to each one of these postulates: Good, Bad, Survive, Succumb, and that is added to Not-Know. Good or Bad, to Not-Know. Taking the second postulate we would have Good or Bad, Survive or Succumb, as Know. Good or Bad, Survive or Succumb, as the third postulate, Forget, and Good or Bad, Survive or Succumb, to the fourth postulate, Remember.

Now let's look at that in conditions of existence, and we discover that an object, or something, must have presented itself, about which the individual didn't know, and he'd have to decide that he didn't know about it, before he would decide that he would have to know about it. So he is not-ising his Not-Knowingness, by knowing.

In order to forget about it, he has to not-is his Knowingness. So he has to not-is Knowingness, in order to forget.

To remember it, he will have to have forgotten it. Therefore, he not-ises Forgettingness.

By this pattern and scale we have all the difficulties a mind can get into. This is all a thetan can do, really.

Now we get the Curiosity, Desire, Enforce, Inhibit Scale. We are familiar with that scale. We call it the DEI Scale. Actually it has Curiosity just above Desire.

So, we find one could be Curious about, Desire, Enforce and Inhibit Not-Knowingness.

We have the consideration, which is Good or Bad, Survive or Succumb, and now we have the volition. The volition of a person about this Not-Knowingness is to be curious about it, desire it, enforce, or inhibit it—or just plain not know it. Take it as its as-iness.

But if he decided not to not-know it, it would disappear. So in order to keep it there, he decides to know something about it.

Everything you get to know anything about becomes more solid, because it is a second postulate.

Now this very tricky set of values is evidently closer to the truth than we have been before, but it has to be worked experimentally, now, to discover how much of this is valid, and how much isn't valid.

I made a test on one preclear who has a black field and made him good and sick. So we take the fourth postulate. Now get how solid things would become if you were using a fourth postulate.

I had him look at pieces of blackness, and instead of looking, remember them. It would have been easier for him to forget them instead of looking at them—and it was.

We didn't carry the experiment any further. We just carried this as far as forget and remember—instead of look, let's remember. It made him good and sick. It didn't run out his occlusion.

We can understand, if we search a little further in this, what this blackness is, then. An individual decides to KNOW what is in that blackness, and immediately that he decides to know what is in the blackness, he will get a solidity to the blackness, won't he? It's a second postulate.

So you see how far this "figure-figure" carried us.

If we run something about that person that you would be willing to not-know and something you would be willing for that person to not-know about you—we will unravel the secrets out of people this way.

The people get better, and we are running closer to the truth than we have been in the past.

I just want to repeat to you, as I often have to do, one of those primary principles that is liable to go astray: This is the principle of Mystery.

The principle of Mystery is, of course, this: The only way anybody gets stuck to anything is by a mystery sandwich. A person cannot be connected to his body, but he can have a mystery between him and his body which will connect him.

Now the oddity is that it is the desire to solve the mystery which does the connection. So, really, the Know to Mystery Scale, on this day, has become the Not-Know to Mystery Scale.

We have pushed our information up just that much further.

You have to understand this thing about the mystery sandwich. It's two pieces of bread, one of which represents the thetan, one of which represents the body, and the two pieces of bread are pulled together by a mystery. They are kept together by a volition to know the mystery.

And then people run the Curiosity, Desire, Enforce, Inhibit Scale on that mystery. That keeps them interiorized, and this is really the secret of Interiorization. The secret is a secret. Q-and-A!

Survive and Succumb are simply a consideration. To a being who cannot possibly succumb, succumb is always a second postulate, but it is a second postulate to an actuality.

To really as-is a thing, you have to make a perfect duplicate of it, don't you? The thing originally appeared, but was not known, so the second postulate came around and altered it into a knowingness. Therefore, in order to get the basic-basic on any chain of actual physical objects, you would simply have to say, "What could I not know about it?"

This is the cycle of alter-ness and not-ness of any perception: The Evolution of Thinkingness.

1. OBJECT (seen) NOT- KNOWN (As-is possible)

- | | | | |
|----|----------|------------|-------------------------------|
| 2. | OBJECT | KNOWN | (Prevented As-is by Alter-is) |
| 3. | ABSTRACT | FORGOTTEN | (Not-isness) |
| 4. | ABSTRACT | REMEMBERED | (An Alter-is of Not-is) |

If you look carefully at number four, you will find that a fixation on remembering produced that tangle which is called a mind. Now, do you see how a mind could be loused up?

Now, added to any of the four above, are the following:

Considerations: Good, Bad, Survive, Succumb.
Volition: Curiosity, Desire, Enforce, Inhibit.

This is really not a scale, it is a time-plot.

Added to all this, of course, would simply be Confidence, and at any portion of that plot you could add this factor of Confidence. But Confidence goes into Conviction. At any point you have these two things taking place: You have Confidence, which then shifts off into Conviction.

Confidence becomes Conviction, so any one of these four conditions can become fixed, and so unalterable. But you tackle anything on this scale, simply by running the first postulate.

Right now "Waterloo Station" is quite stable just the way you are running it. Actually, "Waterloo Station," on Know, or running enough Remember, would do this terrific thing: It would make the person totally competent to handle that second postulate. He would no longer be upset about the second postulate. He could handle it or not handle it, as the case might be, but he is liable to come upscale faster if you run what he would be willing to NOT-KNOW about that person.

HANDLING PRESS

If it is absolutely necessary to admit press or talk to press, the only thing which really convinces them is result, and I would refuse to go on with a long line of speculation concerning press, or about it. If it begins to crowd such an operation as the Washington operation too hard for material on Scientology, I would follow this procedure. I would take them up to the big grey file case at 2315 15th Street, and say that it will do all the talking, and that they can if they wish bring any expert in to look over these records. I would then not go along any further along the line whatsoever, but would simply tell them to look over these case histories which are the case histories of Scientology. In other words I would make the file case do the press talking. We are getting along fairly well right now on our policy of no communication with the press but this sooner or later may trip us up, and I think such means of communication as simply insisting that the only thing that talks around there is this grey file case, might possibly become a press gimmick which would be appreciated and taken up. Permit them to bring in any experts to examine these files.

In other places than Washington, D.C., it would be a very good idea to simply accumulate records of this kind and throw them into a file case and, instead of talking about Scientology and what it does on various fronts, to give people who have to have material about Scientology the run of that file case. One which has fifty or sixty cases in it will do more talking in the long run than anything else.

We are entering a new era with Scientology and we should be prepared to hand out data to authorized persons who want it, but I do not think the data handed out should be speculative. I have this afternoon granted an interview on myself as a personality to the Daily Mail feature editor. He may go away and write a great deal about Scientology instead of about me and I decided to make this little test just to find out how it came out. Now we will see what he does write. Certainly he was corrected in an impression he had of me which he had gained from the rumour line. He had me all mocked up as a wild-eyed crusader, and he was quite astonished and friendly during the interview. We talked mainly about Hubbard as the writer, but he did have an awful lot of questions about Scientology

BRAINWASHING MANUAL

The brainwashing manual which came into our possession so mysteriously is being released, not with any intent to unmock psychiatry, but as a necessary piece of information for auditors who are confronted with the problems of brainwashing. Some of these cases are now turning up, and unless the basic philosophy of the brainwasher is understood, they are more difficult to handle. SLP Issue 6 or 7 will very undoubtedly handle brainwashing—7 by the way is not yet released, but 6 will do until it comes along. Therefore there is no point in writing an additional manual to handle this as a specific problem.

Some of the mystery concerning the manuscript on brainwashing which came into our hands in Phoenix was resolved when it was discovered that a book called *Psychopolitics* (spelled with a K) is in the Library of Congress. It is in German. It was written by a man named Paul Fadkeller, and was published in Berlin in 1947. Although I may be misinformed, and I definitely do not read German, this book is probably the Russian translation.

It is simply our intention to make the book available for 50 cents a copy to people in Dianetics and Scientology so that they can be informed as to the actual character of brainwashing and the mechanics of it. To that degree it is a technical book. There is no intention of handing it around into official quarters since I am sure official quarters must know about it since the book is apparently on file at the Library of Congress, and naturally if it is on file at the Library of Congress, officialdom must know about it. Thus there is no point in beating the drum concerning it.

If I am asked by press or persons in authority concerning our release of this, which I may well be, I will have to reassure them that there is no political significance attached to it. We couldn't be less interested, but brainwashing happens to be a facet of the human mind and it has been necessary to make available to our own people any and all texts which exist on the subject. We probably should get hold of the book at the Library of Congress and translate it in full, but we do not have the money or the time to do this just now. Thus Don has been asked to mail a copy of the manual as printed to our various professional members, and to make other copies of it available through Box 242, Silver Spring, Maryland, for 50 cents a copy. This is certainly reasonable enough. I don't think there is any point of any kind in placing it in official hands, as I have said, since even the U. S. Army and Air Force must be fully cognizant of brainwashing, since, as I have noted, a copy of it is on file at the Library of Congress. It could also be noted at the same time that there is a general movement among psychiatry to correct their own profession and to do something to those psychiatrists in it who are hurting and killing people with electric shock and surgery, and thus this is no concern of ours.

I repeat, our interest in this is professional not political. Brainwashing has become so much of a subject that it is very well for anybody having to do with the field of the human mind to be able to understand the intentions behind it and how it is done. This is the only work we have on the subject. If there are any political repercussions to be expected by us, I would consider that we are being very self-conscious, since obviously if there were any political repercussions to be expected, they would have come before this since, as I say, this book has evidently been in very wide circulation already and is on file at the Library of Congress so far as we know. I think the general reaction of the public is that they couldn't care less.

Out of a letter from Frank Sullivan: . . .
“Randomity. Found an interesting gimmick. Tell someone ‘We have formed a new club. We call it the Society for the Prevention of People—we have found that people cause us all of our troubles—they cause us characters more doggone trouble. Would you like to join?’ If he says ‘yes’ tell him he is in. (Also if you should ask him to be three feet back of his head—he will be.) If he asks just one question, he is out. Doggondest test for a Step One I ever saw. This has been well tested.”

OPERATIONAL BULLETIN NO. 9

19 December 1955

THE TURN OF THE TIDE

The London *Daily Mail* feature editor, John Hall, took it upon himself on December 13, 1955, to personally interview me, and write exactly what he found. He published in the *Daily Mail*, a first run paper published in London, Edinburgh, Manchester and Paris, a very long and friendly story which will probably do us more good in the British Isles and France than anything which has happened for a long time. *Time Magazine* has written eight pages, there have been about 80 columns in U.S. magazines such as *Life*, *Liberty*, *Look*, and there has been untold press released on the subject of Dianetics and Scientology. But aside from one young communist who spent about three minutes talking to me on the stairs, at Elizabeth, and a fellow who wandered in, from *Life* he said, and never wrote anything, in Los Angeles, there has been no press reporter near me since before the publication of *Dianetics: The Modern Science of Mental Health*.

That feature editor, John Hall, did take it upon himself to actually do an interview, and that the results were favourable caused me to make a little investigation concerning how press has been operating before, and on what it has been operating. Evidently the total activity of press has been to pick up slanted and hearsay information. So I was interested to find out how this information came into being. Apparently it works this way: to make some sort of "face", somebody who met me at a cocktail bar then pretends a considerable knowingness on the subject of all of my life and activities, and gives forth at a considerable pace not handicapped in the least by the possession of no data, and this by and large whether done by Scientologists or casual acquaintances has been the total sum of information which has been circulated about myself since the late '30s.

As even John Sanborn can tell you, I have been very chary about releasing any actual information about myself. I had a rather large collection of old-time photographs which I thought we might put into *Ability*, and at the last moment made John put in something else. I have not been anxious, in other words, to put up a big show of myself, thinking that Scientology was enough for its own sake. In this I have apparently made an error. I look over possible available sources of unbiased information concerning my own past, and discover that while it could be traced down on official records in libraries and other places and confirmed, there is no one who even knows enough about it to do that job of coordination. Thus it is necessary that I release some accurate biographical information to supplant some of this rumour and hodge-podge which has been spread around in the name of information. There is plenty of authenticating and documenting material if one cares to look for it.

Now I know that it is extremely bad taste to put out any data concerning oneself, or to talk about oneself, but if people see fit to talk about one and, having nothing to talk about, therefore lie about one, and if this rebounds as widely as it has, through presses, books, plays and motion pictures, certainly one has some responsibility for putting out something like an accurate biographical narrative to say the least, and so we are doing so at this time, and then I can forget about it and go on doing something more important.

For sure, however, the tide has turned on the subject of press, which doesn't mean, however, that we should give the technical materials of Scientology to press. The best way to

talk to press is to sort of two-way comm process them, and show them stacks of case histories, and let the deeds speak.

BRAINWASHING MANUAL HISTORY

In our studies of brainwashing it has been necessary to procure what information existed on the subject. Fortuitously, in Phoenix there came into our hands two manuscripts on the subject; as well as I can recollect, they were left there at the front desk with the request that they be mailed back to their owner. We are not sure exactly from whom these came, but we understand now that this is unimportant since the subject is broadly rather well known in a book on Psychopolitics. It is to be found in the Library of Congress. It is in German, but we suppose it is the same manual. As we needed this material for research, we read it off onto a tape, compiling the two manuals and removing from them some of their very verbose nomenclature, substituting for it more common English terms, and we have had a few copies of this struck off for use in our research.

It is necessary if one is confronted by a case of brainwashing to understand the motives and general procedures of the people who did it. I must say an inspection of this manual does not make for much respect for the motives of people who brainwash other people. In the early pages of this manual, there is a letter from the person who purportedly gave these manuals to the organization, "Charles Stickley", supposed to be a professor at Columbia University in New York City. This letter, included in the manuals as printed, makes it definitely and adequately clear that these manuals were reprinted for study by research workers. However, in handing out a copy of one of these manuals to one of our own people who had not heard of it, he made several wrong estimates of the manual itself. At first he thought it was a piece of communist propaganda. Then he thought it was something the organization had composed. Then on further inspection, he did not know what to think and it had to be pointed out to him very specifically that this was a synthesis of a Russian instruction book on the subject of brainwashing, and it had to be pointed out to him that it was reprinted for the benefit of people working to remedy and heal brainwashing. It had to be pointed out to him additionally that there was a cover letter in it which explained these things. Thus if you have one of these copies and it gets away from you which it might, you may find it necessary to explain exactly what it is.

We certainly have the right to have in our possession materials covering something as intimately connected to mental research as brainwashing. We have the right to know why and where and who. Furthermore, this material is evidently well known to various governments and is not classified, since the subject "Psychopolitics" (which is the technical name for brainwashing) is to be found in the major libraries of the world.

In the original text of this book there was a warning to psychopolitical operatives that they must stamp out Dianetics, Christian Science, and practical psychology, as these alone represented a menace to the brainwashing programmes. This reference in the text to Dianetics (which has been known to the Russians since 1938) makes the matter very much our business, quite aside from research. Yet if most of the vagaries and upsets from which we have been suffering have stemmed from a desire on the part of some political group attempting to accomplish a political coup and in the road of which we have been standing, then we certainly have the right to know why we have been knocked around by press and governments to the degree that we have been. Hardly a word uttered against Dianetics and Scientology has had any truth in it. The prevalent official but not the public opinion regarding Dianetics and Scientology is that they are phony sciences, tricked up to hoodwink people. Contrast this with the fact that in Dianetics and Scientology alone in all the world of mental healing lie the answers to increased intelligence and ability, and not very incidentally, in Dianetics and Scientology and in Dianetics in particular, we have the total antidote for the eradication of brainwashing. In other words we could unbrainwash them with Dianetics as fast as they are being brainwashed, given

enough staff. Furthermore we can put troops and persons in a condition where they cannot be brainwashed. This we can do in Scientology.

Thus if brainwashing is being counted upon heavily to accomplish a great deal inside and outside the nations under attack, there would be only one organization which would be standing thoroughly in the road of that programme, and if that programme inside a country had advanced to a point where officials could be influenced, then you would discover of course this odd official opinion of Dianetics and Scientology, that they are quack sciences.

We are not planning to use this reprinted manual for purposes of propaganda. However, to prevent any misunderstanding from occurring, the highest police in England and America have both received copies and have been told that this is a reprint manual, and that we do not wish to cause them any extra labour in case another one of them falls into their hands. Actually, however, it is my belief that they have had the original, which is to say the communist version of these manuals, in their possession for years, and have simply been unable to credit it or unable to do anything about it. Thus our reprinted version should come as no shock to them.

It has been my experience with Anglo-Saxon governments that where idea propaganda line attacks were concerned they couldn't care less. They do not believe that propaganda is effective. Otherwise they would themselves engage in more propaganda activities. The Anglo-Saxon traditionally depends upon force in order to accomplish his ends.

This is one of the reasons why communism has made such vast progress across the face of the world. It is an idea advancing against arms, and the arms of course will never be able to stop an idea. An idea will be necessary to stop the idea. We may very unfortunately be those persons in possession of the idea that will stop the other idea. Certainly the way things are going, if we don't use our ideas to stop the incoming ideas across the face of earth, we are going to wind up one of these days in the middle of a total communism, living in a totally brainwashed society, the way I look at it.

WASHINGTON CONGRESS

My very best wishes to the Congress and my hopes for a highly successful time by all. I have made several recent tapes on material of some interest and value which have been sent swiftly and rapidly across so that the latest material would be available at the Congress. I have not made, however, a welcoming tape as I ordinarily would, and take this opportunity to thank those people who came, and hope that they go away feeling better, and feeling happier about things. There is no doubt that the Washington operation is on the steep upgrade and my principal communication in Scientology is between myself and the Washington operation where Bill Young, Julia Lewis, Ken Barrett, Don Breeding have things pretty well in hand. The silver ministers' crosses are ready now and are supposed to be a knockout. The *Co-Auditor's Manual* is ready, the "Brainwashing" pamphlet is being released to those who are interested in the subject, and it should be with all a very successful Congress indeed. I wish I were there.

NEWEST PROCESSES

I am tabling up all those processes which have been successful in starting low toned cases. These have amounted to about 24 new processes in the last three or four months. This table will be available in the near future with an analysis on it. However, I wish to call to your attention the singular success of Waterloo Station in handling low-ordered cases. Not-knowingness is time. If a person cannot not-know he becomes the slave of time.

One of the more interesting late developments is a process called "Orrible Fates". You ask the preclear to tell you some 'orrible fates. The theory of this is very simple and will probably become Axiom 55, which will be to the effect that the cycle of action of the physical universe is create, change, destroy. Thus, anyone trying to make things better and in very close

agreement with the physical universe, in reversing this cycle, will bring upon himself some regret. We have a wild example of this in the cycle of action imposed upon us by Christianity in the good works, the hounding and the death of Christ. This mechanism, also handled in Fac One, gives us the oddity that we are trying to put create forward in time, whereas destroy lies forward in time. One then either masters the subject of time, by running not-knowingness processes, or he puts into the future inventions of horrible fates for various persons and himself and this universe, until he runs out the considerable regret which is accumulated every time he has envisioned a good action. Naturally the final solution of this is the solution of agreement with the physical universe. When one breaks this and it is no longer disagreement or agreement, he has really done something, and the keynote of doing this thing is, of course, in “not-knowingness”.

NEW AUDITING STYLE

I have made a direct deliberate test, not of a process but of the auditing style itself as a helpful agent. The keynote of new auditing style is that any boil-off, somatic, anaten, swing of attention or going out of session on the part of the preclear is occasioned by some sort of error or miscomprehension on the part of the auditor, and the preclear. I used a general process not ordinarily very therapeutic, but not destructive, and starting with this process and a preclear, worked only in one direction: to keep the ARC of the preclear advancing continually throughout the session, proceeding from the level of ARC of the preclear just before he came into session—in other words, consistently and consecutively bettered him. I did this by two-way communication, and communication bridges. Every time the preclear tended to go out of session even slightly, every time any slightest sign of dropped awareness occurred, I assumed at once that something had gone wrong with the session. I assumed that something had been said which he didn't understand, or something had been overlooked, or that something had been done in error on the two-way comm formula, and immediately researched this fact to put the session straight again. In other words, during this entire session I did nothing but put the session straight with two-way communication, and run a relatively noncommittal duplicating process on the preclear. The process I knew of old was not going to produce any grand rise in tone. However, this preclear who was usually difficult to audit finished up a half-hour session in much better condition than this preclear had been in in years.

The assumption here on the part of the auditor is that if the preclear goes into a slump, has a somatic, or otherwise drops in ARC, then a difficulty has arisen with the session. We calculate this from the following: that at the top of the tone scale we have knowingness and awareness, in the middle ranges we have ARC, in the lower ranges somatics, and in the far lower ranges, varying degrees of unconsciousness. Thus when we say that the preclear's tone should be promoted throughout the session, we mean of course that he must not be slumping toward unconsciousness. He must be advancing toward higher levels of consciousness.

Therefore today it can be said that good auditing does not result in boil-off and somatic unconsciousness, dope-off, or pain, but results in a constant and consistent advance of the ARC of the preclear from the first moment of the session to the end of the session, when it should be much higher, and that any time there is anything wrong at all with the session, the preclear will reply by getting more unconscious. This was about the most arduous and rigorous test that could be made of new auditing style with a difficult preclear and following very solidly the precept that it would be an auditing error if the preclear dropped off in attention or consciousness. Thus when I have said that in the new auditing style we should always advance ARC, I meant exactly what I said, and have even gone so far as to run an auditing session which was nothing more than an auditing session to demonstrate that an auditing session all by itself with the two-way communication consequent to it would result in increased tone for the preclear. By the way, this type of auditing also results in increased tone for the auditor, so we are winning both ways.

REPORTS FROM WASHINGTON

Washington has recently received a stack of forms from me which they were supposed to fill out weekly and send through as reports on conditions, finances, etc. This is really not so much an effort to fill up my “vacuum of information” as it is to get the Washington operation to pay very close attention to these details themselves. The theory is that if they have to compile these data, they will then know these data, and, knowing them, they will see what the situation actually is.

I believe much of the activity which goes on in an organization is done without any real realization of what the condition of the organization is, and it may very well be that for the last five years, only myself and a few others have been actually conscious of the real condition of Dianetics and Scientology organizations with regard to their business organization and finance. This sort of situation cannot of course continue. Dianeticists and Scientologists working inside of organizations and keeping them running would be as competent as they knew what was going on in the organization, and they would know as well what was going on in the organization as they were acquainted with the problems which the organization actually faced in terms of business and finance.

Probably one of the things which has held us back more than anything else was a good working knowledge of business itself. The basic maxim of business is simplicity itself, and that is first, that there must be an organization there, and second, that it must perform its duties and functions, and third, that it must originate communications as well as receive communications, and fourth, that its income must be slightly greater than its outgo, and fifth, that persons inside the organization should know what was going on generally in the organization.

I instituted this report system when I discovered that the Washington operation could sit there and not notice that the training department itself had never originated a single letter of procurement to prospective students. Mary Sue was originating all these letters, and when she left Washington to come over to London (having stayed behind to square things away), the training department, which had the responsibility for emanating all communication on the subject of procurement of students, wrote not one single letter to anyone anywhere. Thus Washington is involved in a slump. Similar to Australia, where internecine warfare kept people from communicating out to the world at large, Washington was brought into an intensified usual Christmas slump by a failure to originate communications. Another circumstance came to my attention which was very amusing. Over a period of two weeks, I was being asked by the downtown office if Silver Spring had received a cheque for expenses. Downtown Washington was communicating with me to find out a datum about Silver Spring which if a map is inspected will be found to be eight miles away. Silver Spring was not communicating this information to downtown Washington, and downtown Washington evidently never thought of asking Silver Spring. I let it ride until they eventually got together on the subject. Interdepartmental bulletins and meetings to exchange information are absolutely necessary if an organization is going to continue in a healthy state.

It is time that the central organization of Scientology began to circulate bulletins on what it is doing. I know definitely that in each department branch of the entire Washington operation everyone, with very small exception, is doing his all-out level best to keep everything rolling and they are doing a wonderful job of it. I think, however, that from department to department the Washington operation doesn't know this. How about meeting each other, you guys?

FIRST AND SECOND POSTULATE

Here is some very fundamental material that has come up on the first and second postulate.

I have been going over this very carefully, and discover that we can know more about knowing.

We take our first and second postulate Axiom, and we find in this that if you run the first postulate, the second postulate runs out, and difficulties because of the second postulate run out—that there can be, really, no difficulties with the first postulate.

Our first test on this is to have somebody look around and, instead of looking at something, remember it.

He is looking at the wall, so you say, **“Remember that wall.”** So he looks right straight at it, and remembers it.

He looks at chairs, and things like this, and remembers them. Instead of looking, he remembers. Of course, it is right there in present time, but he is remembering, right there in present time.

This will do some interesting things to ridges. It is just an experiment. It's not a process.

Now we have him look at some things and forget them! We just have him look around and forget some things.

“What in this room are you willing to forget? Now, instead of looking at it, just forget it.”

The next experiment would be to have him look around and KNOW about some things in the room.

Do you see how that fits in with R2—46, Other People?

The next experiment would be to have him look around and see if there is anything in the room he can not-know about. He is perfectly willing not to know about these various things.

If we run these in this order, we will discover an oddity. Remember and Know are sticky, and Forget and Not-Know are not sticky, but will run.

Well, this becomes very, very fabulous, doesn't it?

What we have here has already been mentioned in *Self Analysis*, 1951, Fall, and that is the first ascent into the abstract and away from real objects: Forget and Remember. Those are the first abstract actions a person can take, mentally: Forget and Remember.

Now for the first time, with this Axiom about the first and second postulate, Forget and Remember fit into their proper relationship, and we get them in relationship to the conditions of existence.

The only thing that gets wrong with a thetan, you could say, is that his attention gets stuck on something. Then, when you go ahead, as an auditor, and stick his attention on something, you have the other thing.

There is some more data that I think you ought to have. It's a little bit advanced in some respects, but it won't do anybody any harm.

The first is a short note, here, on intentions. We have a process which is: Assign Some Intentions.

This is quite interesting, because it reveals a great deal of automatic machinery. You run a process on a student, such as this: "Now I am supposed to—" and you have him finish the sentence, and acknowledge it, and talk about it. Then you have him say, "**Now I am supposed to—**" and he tells you.

You just have him say this, each time: "**Now I am supposed to—**" and have him finish the sentence.

Of course, it could be run on the basis of: "**Now what are you supposed to do?**"

It is quite interesting that we find a student and a preclear set up in a school, is: "Now I am supposed to learn some processes." Or: "Now I am supposed to have a short comm lag." "Now I am supposed to do this—now I am supposed to do that." "Now I am supposed to resent this breach of the Auditor's Code!"

That process might loosen up a case or two that gets stuck in student auditing— the kind that isn't making much progress.

SIX LEVELS OF PROCESSING
Issue 7

This issue of the Six Levels is dedicated to only one thing—the clearing of any level of case.

A careful analysis of its every part of every step will discover it is a process in itself.

SLP 7 does not include many processes found in earlier SOPs and SLPs. They are omitted not because they are not good but because they are not entirely direct. They will reappear in later issues of SLP, no doubt. In this No. 7 we do not have something which will then become something else. We have a unique process series which while it retains form, enforces simplicity.

The reason for this Issue and its stand-to-the-side of the evolution of processing in Scientology is that Issue 5, and even 6 with its emphasis on creativeness, used without enough selectivity, lose us the Intelligence and Personality gains prominent earlier in the fall of 1955. The processes are still there—they are not being concentrated upon, lost a bit, in the multitude of choices of No. 5 and No. 6. Thus No. 7 is especially made for staff auditors.

In SLP 7 the goal or finite end of any process given is detailed. The actual rationale is delineated and the entirety of the processing is done in accordance with one positively asserted assumption as follows:

When the pc goes more anaten than he is when not being audited, he is in the grip of a real or affected Code Break and is out of session. *Any* drop of alertness is a drop of ARC, first with the auditor, second with the bank, always. Therefore a drop of consciousness denotes a break with the auditor which must be repaired before the session continues.

Done without the above strict rule, I cannot guarantee any success from No. 7. It is too strong a process series, in other words, to omit any precaution.

Two-way comm must be stressed at all times.

LEVEL ONE
This is what gets the case moving

PROBLEMS

Chronic Somatics

The body of your preclear is a quivering hunger for overt acts. On consideration level these are problems. The auditor begins his auditing with this first barrier. He must surmount it by

1. Two-way comm to establish good ARC

2. Directly remedying havingness of problems or
3. Remedy of overt acts by creative processing
4. Alleviating a chronic somatic or problem by remedying their scarcity or
5. Increasing ARC until all problems or somatics seem unnecessary.

- 7 I (a) Find the auditor.
 7 I (b) Find the preclear.
 7 I (c) Find the auditing area (light locational processing).
 7 I (d) Establish that a session is in progress.
 7 I (e) Accept, discuss every comm preclear originates.
 7 I (f) Acknowledge every command execution by preclear.
 7 I (g) Agree on process and command before using it and do not confuse it.
 7 I (h) Use two-way comm liberally.
 7 I (i) Follow the Auditor's Code.
 7 I (j) (changed) Remedy havingness of problems by selecting communication terminals or universes (not conditions) and use command **"Invent a specific problem _____ could be to you."**

Note 1—Can be run with best gain by discovering "weakest universe" by two-way comm about weak people and things and then using this person so discovered as the name in the blank above.

Note 2—"Invent a specific problem _____ could be to you" has a reverse command: **"Invent a specific problem you could be to _____"**; however, this is the overt act side and should be handled with care if used.

Note 3—At SLP 7 I (1) chronic somatics can be alleviated (and should be) by **"Invent a problem your leg (or stomach or liver) (never your lameness, your ulcer, your illness, as these are conditions, not terminals) could be to you."** Using mock-ups of overt acts to body and having pc, when he has created them, even black ones, get how *each* part or fragment of the mock-up is entirely dedicated to destroying the pc's body and so make mock-up vanish. To the body, separation can occur from anything only when it has done enough overt acts to the body to cancel all obligation, obligation being the first bargain or agreement possible to a free being (pledged word).

Note 4—It is distinctively understood that within this or the next step the chronic somatic will be alleviated before the clearing is continued.

Note 5—A very few pcs have lost the ability to invent problems with any reality; these run on **"Tell me some lies about the environment,"** and *then* on problems as above.

7 I (l) Run pc on ORDERS. Two methods: Opening Procedure 8C and direct command, latter preferred. **"Tell me some orders you wouldn't mind receiving."** **"Tell me something that would obey you."**

Note 6—These commands are phrased to be permissive to the pc, commanding from pc to environment.

Note 7—Orders are an "all-the-way route." The wall is an order (postulate) complicated by the order to be solid and endure. The reality of the preclear depends on his ability to receive orders.

Note 8—Don't stick the pc on one subject or object in running orders. If the bank turns up an engram, don't insist he gets part of it he can receive orders from. Also do not insist he take orders from various parts of environment.

Note 9—In Level One don't solve any problems. Increase by various means as above the problems preclear can have.

7 I (m) **"What could change you?"**

“What would leave you unchanged?”

(Run alternately one question, then the other.)

7 I (n) To prevent all the problem and motivator techniques from adversely affecting the thetan (or if the above processes did), run alternately the following questions:

“Tell me something your body doesn’t have to reach.”

“Tell me something you could reach.”

LEVEL TWO

This is what changes the Scientometric Tests

7 II (a) WATERLOO STATION

In a populated area (park, RR station, etc.) have pc tell auditor something he wouldn’t mind not-knowing about persons which auditor spots for him, or the persons not-knowing about him. Commands:

Auditor: **“Do you see that (man, woman, described slightly)?”**

Pc: “Yes.”

Note 10—Make allowances for your pc’s ability to see people clearly. Run if possible with glasses off if he still has them.

Auditor: **“Tell me something you wouldn’t mind not-knowing about that person.”**

Note 11—The pc selects things he already can know to not-know. He does not give things he does not know anyway. This stress is the willingness to not-know things one already knows. Otherwise pc will become confused.

Note 12—If two-way comm won’t keep the pc alert he is on stuck flow. (See *Scientology 8-80.*) Run “other side” as below:

When pc—to spotted person has been run flat or to a dope-off, reverse to:

Auditor: **“Tell me something you wouldn’t mind that person not-knowing about you.”**

Note 13—Run one side for hours, then the other side, in ordinary use.

Note 14—Observe that in SLP 7 we omit all other spottings. These are good, but Waterloo Station is the cream of Level Two SLP 5, and auditors have been too involved in lower steps to run Waterloo Station. For God’s sake don’t neglect it. It’s the most valuable process in Scientology. It handles TIME!

Note 15—The goal of Waterloo Station is not to make the pc make *one* thing vanish. That phenomenon is just the start. Auditors have been quitting when the pc made somebody’s hat disappear. When the pc can make the whole universe wink on and off at his consideration to know or not-know it, you’re getting somewhere—so don’t stop at a hat.

Note 16—Don’t give the pc back what he has just not-known. If he not-knew it, he not-knew it.

Note 17—If an auditor is so hungry for overt acts that he has to provoke the pc into them by breaks and poor compliance with procedure, just ask the pc to hit the auditor a few times. It’ll remedy it.

LEVEL THREE

This is what exteriorizes them

DECISIONAL PROCESSING

Run in quiet places.

Preparatory: **“What contracts could you break?”**

7 III (a) Think a placed thought.

The object is to train the pc to think thoughts exterior to his head and thetan bank to obviate the “cave-in phenomena of Axiom 51.”

Commands (auditor indicating object or position):

“Think a thought in (on) that ____.”

Alternate command: **“Do you see that (object)? Think a thought in (on) it. Did the thought appear where it is?”**

7 III (b) Choice rehabilitation.

Using the ability acquired in Level Three (a), have the pc make choices between two objects indicated by auditor.

Command: **“From (indicated point) make a choice between (indicated positions or objects).”**

7 III (c) Directed Decision Rehabilitation.

Using the ability acquired in (a) and (b), exercise the pc on decisions.

Command: **“Make a decision about that (indicated object) in or on that (indicated object).”**

7 III (d) Permissive Decision Rehabilitation.

Using the abilities acquired in (a), (b), and (c), turn pc loose on decisions. Decisions must be outside head and bank.

Command: **“Decide something.”**

LEVEL FOUR

This builds back their willingness to live

OPENING PROCEDURE BY DUPLICATION

Done in an auditing room with a book and a bottle. Commands:

“Do you see that book?

Walk over to it.

Pick it up.

Not-know something about its color.

Not-know something about its temperature.

Not-know something about its weight.

Put it in exactly the same place.

Do you see that bottle?

Walk over to it.

Pick it up.

Not-know something about its color.

Not-know something about its temperature.

Not-know something about its weight.

Put it in exactly the same place.

Do you see that book? (etc.)”

LEVEL FIVE

This makes them able to play games

REMEDY OF COMMUNICATION SCARCITY

The object of this step is to restore abundance on any and all communication possibilities. Done in an auditing room.

7 V (a) Create Confusion.

Commands: **“Mock up a confusion.”**

Alternate command: **“What confusion could you create?”**

7 V (b) Creating Terminals.

The pc may have to be coached into mocking up unknown confused black terminals and thus into good terminal mock-ups. Commands:

“Mock up a communication terminal.”

“Mock up another communication terminal.”

7 V (c) What wouldn't you mind communicating with? Duplicate the auditing command exactly. Don't red-herring (go chasing after facsimiles). Command:

“What wouldn't you mind communicating with?”

7 V (d) Creating Family Terminals.

Have pc mock up until he has an abundance of any and all persons he has ever used as anchor points. Command:

“Mock up your (father, wife, mother, husband).”

“Mock him (her) up again.”

LEVEL SIX

This exercises their exteriorization and stabilizes

REMEDY OF HAVINGNESS AND SPOTTING SPOTS IN SPACE

Route One

An exteriorized step done as given in *The Creation of Human Ability*.

OPERATIONAL BULLETIN NO. 13

17 January 1956

Distribution: Washington—Dr. W. H. Young; South Africa—Dr. M. Scholtz; Australia—Dr. John Farrell; New Zealand—Dr. Frank Turnbull; West. Australia—Dr. Stanley Richards; Connecticut— Dr. Dick Halpern; Dublin—Dr. Bernie Green; London—Dr. Jack Parkhouse.

OPERATIONAL BULLETINS GROWING UP

This is the thirteenth issue of Operational Bulletins. So far we have been setting an enviable record of getting Operational Bulletins out on time. They are usually composed on Monday and are mimeographed and mailed late Tuesday afternoon. They are done on a special Gestetner machine which uses blue ink to distinguish them from other mimeographed material released for the various organizations. In every week except Christmas week, when nobody worked on Tuesday and when we were a day late, the Operational Bulletin is setting a record for coming out on time, a noteworthy and unusual circumstance in Dianetics and Scientology publications.

The purpose of Operational Bulletins is of course to furnish information of various types to Scientology organizations and personnel and to give them the jump, "the scoop", ahead of the rumour line, individual instructions by letter to various personnel and primarily and principally to keep key staff personnel in Scientology from being embarrassed by the sudden change of direction or the solution or arising of certain incidents, so that they can act in the role of people who are "in the know". This is quite important since we have in the past had many instances whereby things were released to one quarter of the world, were unknown in another quarter of the world and people in the field would ask staff members in some HAS what was going on and these HAS members would not know, much to their embarrassment. The Operational Bulletins give them a chance to have the straight dope and enable them to put people right concerning a great deal of material.

Further, if I started to originate individual letters to each and every key person in Scientology and give him regularly all that was going on we would have in effect merely a repeat of this Operational Bulletin; thus I am enabled to write to persons material which is directly and intimately in their department and to put all generalized information on the communication network covered by the Operational Bulletins.

Operational Bulletins are sent by airmail to every quarter of the globe and although there are not very many copies of them released, they have the effect of a very wide distribution system. However, you should keep definitely in mind the fact that the information which appears in the Operational Bulletins is not generally well known to the field. In fact practically none of this material is intended for direct consumption by auditors and Scientologists at large. It is not that they would not understand it but in these bulletins I do not spend any time being nice or pulling my punches or being artificially poised about everything and anything. From my viewpoint these Operational Bulletins give me a chance to vent what bad temper I have and to indulge what puckish sense of humour I might conceive to be ill placed in wider spheres.

Alert yourselves, however, to the fact that the material in Operational Bulletins 2 reworded where it is of questionable content to non-Scientologists, can be freely used and quoted in Certainty, Ability, Local Newsletters, in lectures such as those given live by instructors and those given to free group people, and indeed it is expected that the material in Operational Bulletins will get a wider release at the direct discretion and good sense of people in Scientology who are in charge of various publications everywhere.

You know how when I'm right there my closest friends sit around in the office or living room and we take the situation apart, well this is not that good, but the Operational Bulletins are at least something of a substitute for the much closer type of communication that we like and which is quite impossible on a wider publication basis wherein the publication might fall into any set of hands.

OH MY GAWD!

The other day a well known figure in British Scientology was standing in my office being asked to undertake an activity and I said to him, more to make conversation than anything else, "Of course you know that if we were to take on a long series of cases suffering from some specific chronic somatic we would at least, even if we used group processing, alleviate the majority of those cases." And this gentleman who has been in Scientology for a very long time and has done a very great deal of auditing said to me, "Oh really? Could you do that now?"

WHERE HAS THIS GUY BEEN? Back in Wichita when Susie and I were combing the whole track trying to plow up the various incidents which eventually became *What to Audit* (in England, *The History of Man*) we took on a series of polio cases by means of newspaper advertisement. The newspaper advertisement said, "Polio sufferers. A research foundation is undertaking an investigation of polio. Any persons so afflicted who would like to participate in this investigation should phone ----- ." The same ad was also run for arthritics. People with arthritis and polio started to call in and we took these people on, the polio sufferers up at my house, the arthritics down at the foundation, and using the oldest known form of overt acts and motivators, and using effort processing, we *alleviated* the *majority* of the cases which presented themselves. The first case that came up immediately, by the way, enrolled in the professional course and other cases took professional auditing afterwards. Don G. Purcell cut the program off without informing us because of course the foundation was supposed to fail. This program alone would have meant the making of Dianetics in that immediate area, and as a matter of fact, is still heard from, although it was only in progress ten days (it happens to be a good gag for any auditor to work). But remember this was 1951, and right there, auditing these people no more than three hours per preclear, we made the majority of these people feel so much better about life that they could get on with it. One girl threw away her crutches immediately. Another one, an old lady, got out of her wheel chair, and what we did in that short program just auditing these few hours using nothing but overt acts, motivators in the manner of effort processing, yet it did so much more for these people than had ever been done for them medically or ever could be done for them medically, that they were astonished beyond gratitude.

And here is this British Scientologist who has been in practice for years standing there in front of my desk and asking me in a surprised tone of voice whether or not we could do anything for polio or other types of illnesses. This man is reputed to have more success with auditing than many others. But if he has not learned that we can alleviate the majority of any illness in any series (as distinct from curing all cases into a state of perfection), then what does this man think we are doing? Does he think that Scientology is a swindle. He must! Either that or he's never applied it even vaguely to people who were ill.

This matter was a considerable shock to me, as you might well suppose, for it told me at once why the progress of Scientology in Great Britain was relatively limited. A further check into this subject with another person, a much better Scientologist, discovered to me that the British Scientologist is not aware of the wild reactions and phenomena obtained from running engrams. The preclear rolling up in a ball on the bed as he goes into a pre-natal or wriggling his

whole body like a fish as he hits a sperm sequence is unknown in Great Britain. Indeed at this late date I suppose that it is more or less unknown in America since it has been two or three years since anybody ran an engram on anybody. But here again was the tremendous drama associated with auditing.

Now if we have forgotten in Great Britain, America, and if we have not established in South Africa or Australia, first that Dianetics or Scientology even in its crudest form could alleviate the majority of man's illnesses, and that a majority of any series of cases of any specific illness would be alleviated, and if we have not established the various highly convincing phenomena obtained in running engrams, we of course are not making anywhere near the progress we should. Indeed if we have let this material lapse in America and are no longer beating the drum for it, no longer demonstrating it, we of course are going to make very slow progress. There is nothing quite as convincing as getting tipped over into a pre-natal and getting it run out. The phenomena of running birth, of operations, accidents, of the loud zip, pop that comes from electronic explosions hot enough to burn holes in the E-Meter electrodes, and particularly the fantastic efficiency of Dianetics and Scientology in alleviating a majority of illnesses, are any one of them capable of giving enough word of mouth to Dianetics and Scientology across a populace to alert the world to what we really have here. However, if we neglect these things utterly, if our auditors do not know they can happen, we are going to make very slow progress of it.

We can as of this moment process a chronic somatic. I know that some months ago and earlier than that it seemed rather fatal to us to continue to fixate the preclear's attention on a chronic somatic. But that is not a problem with us right now. It ceased to be a problem the moment I invented an auditing command exactly as follows: "Invent a problem that (leg, arm, nose, eye, body) could be to you." Running this command which is in itself a sort of a remedy of havingness, and repairing and remedying the havingness of the preclear as we go, we will discover that practically any and all phenomena associated with the service facsimile will come away and clear up and the limb or nose or eye will get well. This can be used as a word of warning, only on actual terminals. Never use this command, and I mean never, on actual conditions. Never ask the individual to invent problems lameness could be to him. Never ask him what problem blindness could be to him. Lameness and blindness are conditions. We want to know what problems *legs* or *eyes* can be to him, since legs and eyes are terminals. In running this command we reduce havingness too rapidly whenever we are stressing conditions. Therefore we run it only on terminals and use only terminals in running it. Handled in this way we do have the answer, as of this moment, to chronic somatics. This is really not news. We have had the answer to chronic somatics for years, and we have actually been able to alleviate the majority of chronic somatics which presented themselves to us.

WHY WE WEREN'T WINNING

The exact reason why our progress through the society was limited might lie in part in the fact that we no longer stressed the alleviation of chronic somatics, but in actuality it is far more important to us that for at least the last year auditors have been auditing in a way which I did not suspect and which does not produce an adequate result upon a preclear.

It is very startling news to me to review Scientology via its psychometric test results and discover that over a period of about four months neither Washington nor London had been getting anything like the rise in ability in its preclears that it had formerly been getting without at once discovering the answer. The answer in this particular case was elusive. If you will examine one of the last Ability's published in Phoenix, Arizona, you will see two sets of graphs. One of them consists of twenty-five hours by staff auditors on a series of preclears and the other graph consists of five hours on a series of very tough preclears by myself; you will see that the gains of the twenty-five hour intensive and the five-hour intensive are quite similar. In fact the five-hour I was giving was a little bit bigger gain than that being gotten in twenty-five hours by the staff auditor. Now I thought it was merely a smoother presence or a better

grip on existence and Dianetics and Scientology that was doing this, but this large generality as a statement of the difficulty was inadequate.

Laterally although my own auditing on preclears was getting better and better, the staff auditing on preclears and the auditing on preclears out in the field was getting worse and worse; less and less gains were being obtained during the last few months. I have spent a very uncomfortable three months researching and looking hard at techniques in Scientology in trying to determine what was happening to preclears who were coming in for auditing and why they were not easily and smoothly progressing as they were being audited. Only at the last did I look hard at something the auditor himself was doing.

You have heard me say dozens and dozens of times I am sure, “When in doubt, remedy havingness.” Well, you ain’t doing it, and you better start right now.

I cannot entirely congratulate my only alertness in discovering this for the matter was presented to me about two weeks ago when I came out with a process known as “body motivators”. I had discovered that a body is very, very hungry for motivators of such a very low level that any and all motivator remedy had in the past escaped it. All you have to do is mock up a mock-up of any kind and have the preclear state an intention into it that it is there to kill the body and instantly it goes into the body. This hunger was so pronounced and widely spread that one auditor suggested that we invent a technique on it called “SOP SLURP”. It was not until three separate auditors asked me how you went about getting a preclear to mock up a mock-up and get it into the body that I awakened to the fact that in our HPA-HCA schools we had not adequately instructed on how to repair and remedy havingness. That was the first inkling. The next was some auditing I myself got in which no havingness was repaired or remedied and even this passed me by; and the next was just a week ago, checking a case to discover with some astonishment that each and every symptom of loss of havingness was missed by the auditor. At that time last week I gave a lecture on the subject of remedying havingness and its necessity, but at the time I gave this lecture, which is available in London and Washington, and which covers the subject fairly adequately, I was not entirely aware of the fact that auditors in general are completely ignorant of the necessity for remedy and repair of havingness.

It is then with considerable shock that I have to report that one of the basic tenets of Scientology invented here in England three years ago and in use for all those three years has been missed and is being overlooked by auditors everywhere and if they are overlooking this, then they are messing up preclears at a most delightful pace.

It may not be that every auditor is obsessed with the idea of making nothing out of preclears, but it certainly looks as if we have overlooked the repair and remedy of havingness, that we have all too many of us been trying to make nothing out of the preclear’s aberrations the wrong way around. The way to make nothing out of those aberrations is to repair and remedy the preclear’s havingness every time it drops.

What are the symptoms of loss of havingness? Running any as-ising technique, the preclear may become anaten, or he may become slightly nervous or agitated or want a cigarette or seem to break out of the session in some fashion. In either case, he is “down in his havingness”. In other words he has burned up, used up or as-ised too much of his physical body energy in the auditing itself. In view of the fact that every subjective technique puts a sort of a hole in the middle of the electronic mass surrounding a preclear, parts of that mass then begin to cave in on the preclear. Thus running an as-ising technique on a preclear beyond the ability of the preclear to sustain the consequent loss of havingness will bring in on the preclear many new engrams which he did not before have, and a technique which as-ises energy if used without a repair or remedy of havingness will bring about a worsening of the case of the preclear.

For instance, there are several auditors I have not directly trained on staff now working in Washington. Just as this has missed me, it has evidently missed Julia and in London has missed Dr. Walker. A careful study of the Washington staff auditor reports reveals that the only advance in graph of the preclear which is significant and worthy of the name of Scientology during the last few weeks occurred when the auditor repaired and remedied havingness or was using a mock-up type of technique along with as-ising types of techniques. As an example, the preclear audited last week by Dick Morley was run very largely on repairs and remedying of havingness. Old time staff auditor Dick Morley evidently wasn't taking his finger off any number. He very carefully repaired and remedied havingness and reported it as such and his case did a remarkable jump.

Now exactly what is happening is very simple. A preclear starts to go anaten and the auditor keeps on running the process. This is to some degree my fault. The auditor has been indoctrinated into running the process regardless of what happens. He hasn't realized that he ought to interrupt any process at any time if the preclear demonstrates a loss of havingness. Anaten is such a demonstration of loss of havingness. All right, another example: the preclear becomes agitated or upset. He reaches for a cigarette. He begins to twitch. His foot begins to wobble. He begins to talk excitedly. He begins to cough while being audited. All of these things demonstrate a loss of havingness. Even the bulk of the somatics which turn on are a demonstration of loss of havingness. These same conditions by the way can result from the preclear believing that the auditor has broken the Auditor's Code in some fashion or has treated cavalierly or has overcome his power of choice. Both a repair and remedy of havingness are immediately indicated on the observation of anaten or agitation on the part of the preclear, and in addition to this the auditor should carefully go over the session itself to find out if anywhere the preclear believed that his power of choice was being overcome or if the Auditor's Code was believed to have been broken by the preclear. You understand that the auditor didn't have to overcome the preclear's power of choice or break the Auditor's Code in order to have the preclear believe that this had happened. However, this could be overlooked entirely if the auditor had been careful enough to repair or remedy the havingness of the preclear.

The slightest drop of alertness on the part of the preclear or the slightest agitation or somatic on the part of the preclear should immediately indicate to the auditor that havingness has dropped and must be immediately repaired or remedied. A great deal of time can be spent on the subject of repair and remedy of havingness, and it is very beneficial time spent. It is better to waste time repairing and remedying havingness than to blunder on through. Now there is another thing I have noticed with regard to this. Auditors are running these days toward cognition. Very well. If they expect the preclear to cognite they should not expect him to pull in a bank on himself. If an auditor runs a very obvious process which should bring the preclear toward cognition and if he runs it several auditing commands and then stops and repairs and remedies the preclear's havingness and then after that asks him the same auditing question two more times, he will discover that he has blown a cognition into view. In other words, you could remedy the havingness of a preclear while his mind was on one particular subject and bring a cognition into existence.

The reason Scientology has been going slowly is in part, as covered above, the fact that we have been neglecting its efficacy in the matter of chronic somatics, but in the main because auditors have not been repairing and remedying the havingness of the preclears and have been running them downhill at a mad rate.

Now boy this is something we have got to jump on in a hurry. We've got to get in there and grab every auditor by the scruff of the neck and say, "Listen, do not run an as-ising command beyond the point of alertness of the preclear. The moment that the ARC of the preclear drops or the preclear becomes agitated even vaguely, you get in there and repair or remedy havingness."

This becomes particularly important today since a few months ago I discovered that you could remedy the havingness of anybody, and I mean just that. You can remedy anybody's havingness and you can turn on mock-ups on anybody. The fact that the preclear who has a

black field or even an invisible field can be caused to mock up blacknesses or invisibilities and shove them into his body brings us into an era of being able to make anybody turn on mock-ups. Getting the preclear to postulate that the blackness is bad for the body will cause that blackness to snap into the body. Getting the preclear to postulate the invisible mass he has mocked up as bad for the body will snap it into the body. Of course after this has been done a few times the consideration of the preclear will change. Then perhaps the blackness or the invisibility will only snap in when the preclear postulates that it is good for the body. He may also have residue left. It is very important to get rid of these repair and remedy havingness residues. By various postulates such as that the residue is a threat to the body, it is good for the body, it is bad for the body, the residue too will snap in.

Let's differentiate at once here the difference between a repair of havingness and a remedy of havingness. We used to call repair of havingness "giving him some havingness". It needs a better technical term. Therefore let us call this repair of havingness. It means having the preclear mock up anything he can mock up and in any way it can be done to get him to shove (never pull) that mock-up into the body, and by similar means to get rid of the residue which went along with the mock-up. That is a repair of havingness. It is a one-way flow. It is an inflow. Now a remedy of havingness is getting him to mock up and shove into the body enough masses or simply mock up and copy enough masses to bring him to a point where he can eventually throw one away. In other words, repair of havingness is simply having him mock up things and have him shove them into the body, and a remedy of havingness is having him mock up and shove in *and* throw away the same type of mock-up. Remedy of havingness is always a superior operation to repair of havingness. Repair of havingness is a very crude stop-gap but can be used at any time. However, a preclear who is working well and on whom havingness can be remedied should at all times have his havingness remedied not repaired. In other words, any mock-up mocked up should both be shoved into the body and mocked up and shoved away, and this should be done in considerable quantity until the preclear is quite relaxed about that particular type of mock-up. One does this, remember, every time the attention of the preclear drops or becomes agitated.

There is one other little point connected with this which is quite important and that is auditors very often audit a preclear into an area of time when the preclear exteriorized. This on a preclear who does not easily exteriorize brings on a considerable grief and sadness. The way to get rid of this is of course to remedy the preclear's havingness or only repair it and to ask the preclear to recall times when he was not exteriorized. This will bring up at once times when he did exteriorize and recalling these and using further remedy and repair of havingness will get him out of those areas on the time track where he did exteriorize and where fear of exteriorization was built up considerably.

I have noticed another special condition regarding this exteriorization phenomena which is quite important. A preclear will occasionally repair and remedy havingness up to a point where the body disappears. He doesn't quite know where to put the mass which he has mocked up since he cannot find the body. This is particularly true of preclears who have a very low threshold on havingness. An auditor would be stupid indeed to simply plow along beyond that point where the preclear has already said that he couldn't find any body to push any havingness into. The moment the preclear does that the auditor should suspect that the preclear has gotten into an exteriorization type incident. It is not, however, necessary that he immediately flounder around and try to find this incident as recommended in the paragraphs just above; he can also repair and remedy havingness in this fashion, and it is very important to know this. Although it is disastrous for a preclear to be asked, "What could your body have?" since he will simply strip the bank of various old facsimiles, it is a very, very good repair of havingness to ask a preclear, "What is there around this room (area) which your body could have?" and then have him pick out specific objects in the environment which he says the body could have. If he does this he will come up the gradient scale of havingness, and his havingness will be repaired or remedied immediately or directly on the Sixth Dynamic. A preclear who cannot get mock-ups and wherein the auditor has either been too clumsy to get the mock-ups turned on or it really was impossible, more or less, the preclear's havingness can be repaired simply by having him

do this process, so this is a very, very important process and one that ought to go down in red letters.

This whole subject of repair and remedy of havingness and its effect upon auditing and the fact that it has not been stressed at all in training, being up there at Level Six in the old Basic Processes, brings us to SLP Issue 8. The entirety of Level One in SLP will be devoted to remedy and repair of havingness.

In SLP Issue 7 we have a great many phenomena associated with the remedy of the body's havingness. The reason for their position is to bring about an adjustment of the condition of the body before one goes on to other and more complicated ways of processing. Now in Issue 8, all of these various things will be retained but they will be paralleled with a complete remedy of havingness as that particular level of SLP will be gone over. In actual experience it is better to remedy the havingness of a preclear no matter where he is on the tone scale and no matter by what process than to run any significant process. Further, if a preclear cannot at least repair his havingness, to run Waterloo Station on him is to invite disaster, because in this particular process of Level Two he is liable to get himself into a down havingness situation and of course will not be able to not-know anything. He may be chewing up too much energy while trying to not-know. Thus we would have the failures which have occasionally occurred in Waterloo Station. They were simply havingness failures, not a failure of Waterloo Station. Furthermore, there has been a new command suggested for Waterloo Station, "What would you be willing to not-know about that person?" This seems to be a better command at least for the British Isles.

You may believe I am being rather militant and accusing everybody of having pulled an overt act against me by doing this, but the truth of the matter is that no time in my auditing have I ever permitted a preclear to drop in his havingness and I have therefore gone through a considerable period of surprise when I find that this particular thing is being neglected elsewhere. This tells at once what has been happening to our psychometric graphs has been happening to our preclears where they didn't advance in a hurry and has been definitely interrupting our goals. Any and all field auditors are undoubtedly sinning like mad in this particular direction. We've got to make a practice to tap these fellows on the shoulder and say, "Here, you've got to repair and remedy havingness, no matter what else you're running on the preclear, every time he goes anaten or gets agitated in any way." We've got to conduct an educational program in an awful hurry throughout the field. Naturally we should start closest to home and we should take our staff auditors and we should be very, very insistent that they repair and remedy havingness on preclears, and we should hold this up as more important in the early parts of a case than any change of mind or significance. The change of mind occurs after repair and remedy of havingness has been accomplished. If our auditors continue to as-is everything in sight in the preclear, the preclear's case is going to hang and that is all there is to it.

I have not yet run the sequence I wish to on cognition. I believe that I will be able to run a few commands of a specific as-ising type command and then repair and remedy the preclear's havingness and finally ask the same as-ising command a couple more times and get an immediate cognition on the part of the preclear. In other words, I believe that you can use repair of havingness or remedy of havingness to get an immediate cognition on almost anything with the preclear.

We also take care of vacuums and separatenesses and everything else with repair or remedy of havingness and running in with it certain other things such as problems, etc. When we discover by two-way communication a weak universe, we could then ask the individual preclear, "Invent a problem that person (weak universe) could be to you," and then watching him very carefully and repairing his havingness on the subject of that person's possessions get a very rapid separation of universes. I have noticed that the weak universe phenomena begins when the person elected by the preclear to be a weak universe first began to put MEST anchor points around the preclear. In other words, valuable presents.

Now although I sound very militant about this you should translate that militance into urgency. I feel rather triumphant. I have put my finger on something here which has been a puzzle to me for a very long time. Why did auditors in general fail to get the results on preclears. We have sorted out a great many points and have straightened out a great many things, but none of them have been the real thing. The actuality is this business about repair or remedy of havingness; I am sure that this is it. An auditor can almost audit carelessly if he repairs and remedies the havingness of the preclear adequately. Of course there is a great deal to know about the repair and remedy of havingness which has never been put down. The gradient scales, methods of turning on sonic and visio, and a host of technologies and techniques relating to the repair and remedy of havingness having yet to be delineated adequately. I am, however, attending to this as fast as I can and you can expect in the very near future a considerable rundown on exactly how you go about repairing and remedying havingness. I am even going so far as attempting to make a training film on an animation principle using a live subject and cut-outs to show what it really looks like when the preclear is repairing havingness and what it looks like when he is remedying havingness.

I am as pleased as can be to get a finger on this point and I know doggone well that if East, West, North and South would begin to repair and remedy havingness and stop specializing in the significances without repair or remedy of havingness, we are going to start shooting people up to the top of these psychometric graphs. We can't help it. This is not going to be a very easy road, I feel, for an auditor recently who was very, very closely coached on the subject of repair and remedy of havingness did go out and manage to lay a considerable egg. The auditor just didn't get the idea of the agility of a preclear's havingness. The auditor could not credit the fact that the agitation and excitement of the preclear was actually a loss of havingness. Another auditor could not credit the fact that the continuousness of a preclear's fear was simply a lack of havingness.

Let me call your attention specifically to the old phenomena of the emotional scale and the engram. We found out that when one engram was keyed in that it fixed the emotional tone of the individual. Then we had him run this and as he converted the havingness of the engram to usable havingness, we found that his tone rose. We discover on these psychometric charts that the "unhappy" section is not moving in recent times. The reason it is not moving is because we aren't changing the mass of the preclear. In order to change his emotional tone we would have to change his body mass. The best way to change his body mass is repair and remedy havingness and get him on the road with regard to mock-ups. We started out a long time ago to change people on the tone scale. Well here is the answer to changing that position on the tone scale, and we sure better use it.

A lot of this I confess must be a lack of observation on my part but I am so happy to have hold of it and to get this point straightened out that I don't much care what the basic cause was in relationship to it.

I want you to look accusatively at any and all auditors you run into and say, "Why haven't you repaired the havingness of preclears you've been running as-is-ing processes on?"

Well, we've got this answer taped. Let's go.

BRAINWASHING BOOK RECALLED

Washington has recalled the brainwashing manual from all those to whom it was issued on request from the government. The manual is not to be issued in general to the public but is to be let out only to our most trusted association members, so that they can aid and understand and further their studies on curing brainwashing. This manual is an exact text on how brainwashing is done. The manual itself had to be written into much more obvious English from the very poor translation which it was originally and thus reads fairly well but is no less deadly for the change.

YOUR PHOTO PLEASE

Any and all persons on the Operational Bulletin distribution list are requested to send as soon as possible either an 8 x 10 studio portrait of self or a very good quality snapshot film, so that an enlargement can be made.

We intend to put up in the various HASs throughout the world the pictures of the various persons intimately connected with Scientology offices. As soon as I have these I will either make the enlargements or have the portraits and will distribute.

Remember now I am waiting for a picture from you, and if you don't send one you will be missing in the halls of the various HASs, and you don't want to be missing amongst this crew.

MOTION PICTURES NEEDED

We are hoping to have a reel of 8 mm film of each HAS in the world and its personnel so that we can have this film copied and copies distributed to these various offices for their view in demonstrating to people what the HAS looks like in other areas. If you are interested in this project let me know.

TRAINING SCHEDULE RELEASED

The whys and wherefores of the four levels of courses taught in Scientology rather than schedules of class hours have been put together recently by myself and are being distributed. This schedule will also appear as a PAB since it contains for the most part a rationale of training; a brand new way of teaching the indoctrination course is included. You will probably be getting your copies of this very shortly. The primary difference is the establishing of an auditing attitude on the part of the student before he is taught any processes. There is a difference, procedures to Scientology techniques. An auditor who does not know Scientology procedures is not likely to be able to handle Scientology techniques. This schedule is to be put into action at once everywhere.

BOSS GOES UNPAID

Evidently the only staff person who is not now receiving his pay cheque regularly is myself. When I left Washington there was a considerable ball-up on pay cheques. For reasons best known to himself the former secretary of the Founding Church was not at all ambitious in getting the personnel paid. Now I have finally gotten everybody straightened out due to the help of Hugh Neals, the new Washington bookkeeper. We have been so intent on getting all the records straight one way or the other, however, that we have neglected to notice that I have gone unpaid here for some months. This is a very easy thing to have happen to one if one happens to be the actual management of an organization. The staff can always strike against the management, but who does the management strike against? If it were not for my handiness with dice I probably would have starved to death by this time.

WASHINGTON GIVES TERRIFIC CONGRESS

Under the management of Dr. Young and ably assisted by Dr. Barrett, Dr. Sanborn, Dr. Breeding and at the last minute Dr. Lewis, as well as the other stout fellows, in the Washington area, a terrific congress is reported to have been had. Naturally the numbers of attendants were not as high as the usual central congress even though the fee was much lower due to my absence, but the public was very happy with it which makes me very happy. I wasn't directly taking the testimony of the Washington staff itself concerning how terrific this congress was. However, people who returned home from the congress then wrote me letters thanking me for

the terrific new processes and the wonderful advance Scientology has had so I guess it is now in order to thank the staff now that it has been proved true.

OPERATIONAL BULLETIN NO. 14

24 January 1956

AFTER THE FLOOD

Operational Bulletin 13 must have appeared to be a flood of material and it was actually. It contained (1) the road block which has been preventing the progress of Scientology and its remedy, and (2) the outline of basic philosophy behind courses. I hope you read all this because it will undoubtedly have a profound influence upon the forward progress we are making.

The indoctrination course outline in particular is to go into effect at once and it may be expedient to take existing HPA and HCA students and feed them back through this regimen.

As far as repair and remedy of havingness are concerned and body motivators I have made several tapes recently for the coaching course given in London which are available from the London HAS. There are six hours of these tapes or three reels and the set is available for £15. They will be sold to anyone. A £ (pound) is worth \$2.80 if you wish to convert this into U.S. dollars. The series includes body motivators, recent materials on exteriorization and a great deal of material which you will probably never see otherwise.

THE ONLY ONES

It is fantastic to have to advertise or *sell* Scientology. It is the only methodology extant today which alleviates or remedies psychosomatic illness, proofs an individual against a host of casualties, improves reaction time, raises intelligence, and improves ability.

That Scientology has throughout the world today only about 1200 practitioners in full practice could be true only if these people did not understand entirely the capabilities which lay under their hands. The discovery that they were not repairing or remedying havingness—and of course my omission in pointing out this fact—is about the only thing which has brought about failed cases and which slows down the general progress of cases everywhere. Now that this is spotted and swept out of the way, I don't see any real bar to our forward progress.

Scientologists are the only ones where healing is concerned or where an improved race or culture is concerned. Scientology and Scientologists are the one hope the human race has today.

Let's not make it a thin one.

COMPARISON OF RESULTS

Do you recall one of the last Abilities issued in Phoenix, Arizona, which contained two graphs. One of the graphs had to do with a composite of all cases audited by staff over a long period of time and the other one had to do with a very long series of preclears I had audited. The staff auditors audited their preclears for 25 hours each. I audited my preclears for five hours each. The results were comparable with perhaps the slightest edge over the staff auditor

in my graph. In other words, the results I was getting in five hours were being obtained almost in 25 hours by the staff auditor.

One of the reasons behind this disparity of time was not just the “insight of the old master”. It was the solid reason that I repaired and remedied havingness on my preclears.

Perhaps another influencing point was that I audited these preclears only one hour per day for five consecutive days. When havingness was cut into, the preclear did not for long have to suffer under that duress, but this is probably a minimal reason. Some of the other reasons were acknowledgement and respecting the origin of communication by the preclear, a condition which was not always met by the staff auditor.

This graph, by the way, will explain to some degree my own continuous state of optimism where Dianetics and Scientology were concerned. I always stated what I had found to be true. This was not necessarily true and practised by the auditor. It has therefore been my contest to find out what I was doing so that I could relay the information on and so make the auditor results comparable. This we have evidently more nearly approached today than ever before, particularly with our new indoctrinations schedule and what we have just discovered about the repair and remedy of havingness.

EARLIEST FINDINGS ON HAVINGNESS

It might be amusing for you to know what the earliest finding was in the field of havingness. I wanted to know exactly what happened in terms of intelligence quotient when engrams were run into restimulation and knocked out of restimulation. I therefore set up a series of tests to be accomplished under a very solid regimen as follows: The preclear under test was given a short form Otis IQ test. This took him about ten minutes. The auditor then immediately threw him down the track into such engrams as birth or accidents and when that engram had been run just enough to get into the full restimulation, the preclear was given Form 2 of the Otis IQ which is comparable to Form 1. This was done in a rather long series. The engrams were then erased or de-intensified and the individual was given Form 1 of Otis IQ again.

I set this up simply as a needful datum. I did not anticipate any particular results and was willing to learn from the experiment. I did. It was found that the IQ of the individual raised from five to eight points by the simple fact of being thrown into birth or a heavy engram. This was such a wild result and so unexpected and yet so constant in the testing itself that I had to accept that the restimulation of an engram increased the intelligence quotient of the individual. The de-intensification of the engram by further erasure did not again lower the IQ of the individual, a fact which is accounted for by the mass in the engram being *converted* by an erasure, not eradicated.

As we understand this today, it was that the preclear was given havingness. The havingness he was given did contain vast significances but the significances were less important than the actual mass itself. Therefore the IQ gain.

This was our first encounter with the relationship between intelligence and mass. What actually occurred in this experiment was not visible to me for years, since the experiment took place in November and December of 1950. The experiment was the only one conducted for me directly on the line of actual research—as distinguished from puttering—by the Hubbard Dianetic Research Foundation of Elizabeth, N.J. That organization spent \$47,000 all told on research. It conducted the above experiment and collected some evidence that in one case of spinal arthritis Dianetic processing had undoubtedly relieved the condition. The research department was at the time conducted by Donald H. Rogers.

Although some might not think otherwise, I feel that in view of the conduct of the above experiment by that department the \$47,000 did buy something after all despite all contrary intent.

It should be noted that when we erased an engram we did not erase the mass connected with it. We erased the significance in the mass. We took perceptics out of it and it then could convert into acceptable mass. What was unacceptable was the perceptics and these restrained the individual from utilizing the mass. Actually I should say the individual's body from utilizing the mass.

We can further learn from this that the figure-figure boy is doing just about this. He is trying to erase out of what mass he can have enough content so that his body can utilize that mass. His figure-figure is actually an effort to erase.

The answer of course is to give him mass he doesn't have to erase the figure-figure out of. The figure-figure boy is way down on ability to have and is going on a sort of a storage battery philosophy that while he can't create anything he can at least utilize blocks of stuff that he has stockpiled in his bank.

UTILIZATION OF OPERATIONAL BULLETINS

It has not leaked through several ridges yet, but these Operational Bulletins are for use in other publications and for use by HAS staffs. Having an extremely limited circulation, being destined only for key Scientologists who themselves are dissemination points, these Operational Bulletins are made to contain much information which should reappear in various publications. When utilized in other publications, of an official nature, one should not say that the material is from an Operational Bulletin. One should simply say the material is from L. Ron Hubbard. One can directly quote it or rewrite it giving credit to its source. By quoting the Operational Bulletin one puts into existence into the field the awareness that there is another communication line running which people then begin to desire thus devaluating the value of the PABs, Certainty and Ability. If material placed in these bulletins is not so utilized a communication line is being cut.

I could sit down every couple of weeks and write long articles especially for Ability magazine. I could do the same thing for the PABs. I could also do the same thing every month for Certainty. Sometimes I even do this. But the material which I am handling is generally vitally needed in one or another part of Scientology and I see no reason to deny the one and a half score people who are the key figures in training and processing throughout the world this data simply to introduce a comm lag on it for the benefit of Ability magazine. Thus a better answer for it is to put whatever articles I may have for these publications into Operational Bulletins and send them on through, and then have this material released. Ability, Certainty and the PABs can duplicate each other. It does not matter a bit if they do. It simply gives some material greater emphasis than others by having it repeated in two publications. Not all of this material will be utilized by such publications of course.

I have various ways of getting communications out to people. One of them of course is by personal letter and this system I use rather extensively, but this has the unhandiness of jamming my own secretarial service since much of the material I handle is equally applicable to many persons. I could of course adopt the sloppy system of taking new materials and suggestions and making carbon copies of them and including this in as appendices on various letters. This is in effect what the Operational Bulletins are.

Just because the Operational Bulletins appear on mimeographed pages is no reason they are a rival publication. They are not a rival publication. They do not go out to the world of Scientology except through the medium of Ability, Certainty and the PABs, as well as of course instructors and auditors immediately concerned in the HASs. For instance, in Operational Bulletin 13 there are exactly four PABs. Appendix 1 of Operational Bulletin 13 is

to be broken in half and printed in two sections as PABs. In the Operational Bulletin itself, if you will glance at it again, there are two more PABs, but it is not known whether or not they will be so utilized. Certainly in the main body of the Operational Bulletin all that material must be repeated to Scientologists everywhere. It is sufficiently important to be utilized in Certainty, the PABs and Ability. If it isn't utilized and disseminated then we are just as far behind as we were last month.

Do you know what a German schema is? It is a graph which shows one source breaking down into two sources which break down into four sources which break down into eight sources and so on. Well, if you fit Scientology publications on such a graph you find out that the Operational Bulletins are feeding several sources. This publication is not a competitive medium to Certainty, Ability, the PABs or *Saturday Evening Post*, the *London Times*, or the *Daily Worker*. The Operational Bulletins are for the aid and assistance of Scientology editors of the various publications and the staff of HASs throughout the world. Outside distribution of Operational Bulletins as such is not only discouraged, it is forbidden. And remember never give credit to the Operational Bulletins. Give credit to L. Ron Hubbard as a by-line at the beginning of the article just as though it were specially written for the publication. In the case of the PABs, by the way, the signature or by-line is always at the end of the article not at the beginning. In Certainty and Ability the by-line is at the beginning of the article.

THREE METHODS OF DISSEMINATION

With the introduction of two new courses in the London operation—the weekend professional auditor's course at HPA level and the dissemination course weekday evenings—we are stressing the fact that there *are* methods of dissemination of Scientology and gaining and holding a practice and group which are certain and adequately productive of results.

In the dissemination course we are incidentally going to teach the indoctrination week first as contained in Operational Bulletin 13, Appendix 1, and then we are going to review the repair and remedy of havingness and then we are going to lay on the line these three methods of dissemination, how they are done, and what to do with what they gain.

The three methods are (1) "I will talk to anyone"; (2) Illness researches; (3) Casualty contact. These are the major proven methods of dissemination. There are other methods such as street contact, industrial contact, and the old time psychoanalytic contact, but they are not well proven in use. Auditors seem too shy to accost people on the street; although industrialists show some interest, they seldom show cash; and although the psychoanalytic contact, where one simply sits in an office with a sign outside the door and waits for the flies to walk into the spider web, is very definitely in use in Scientology as it was in psychoanalysis, it still is not successful. It builds a limited and constricted practice without any third dynamic appeal. It does very little good for Scientology.

The fourth and entirely possible if hopeful method the auditor might use is to sit and wait for the central organization to send him preclears. Several auditors are doing this and it is not a method of dissemination and will never happen for the good reason that the central organizations in each case are depending on the individual auditor to beat up the brush for Scientology. Thus we have a case of mutual waiting. The central organizations do play a large role in the procurement of preclears, but they do this by general dissemination and good will advertising as well as releasing popular publications which go from hand to hand and cause an alertness to the subject and the existence of auditors. The central organization does not directly solicit preclears to be sent on to auditors. It does very occasionally where any one auditor is concerned refer some correspondent in an area to an auditor. It does this at what seems to it to be a very high rate as it refers commonly ten or twenty preclears a week or used to, but this spread out across 1200 auditors is not very many preclears and so the auditor in the field has never believed that the central organization did anything for him. The central organizations do a very great deal for the individual auditor but they count upon him also to build his own practice and thus Scientology. It is a very limited process where the central organization contacts

become the only contacts which were made in the world on the subject of Scientology. If any auditor is trying to pursue the last two methods mentioned which is to say hanging up his sign and waiting for people to walk in the door or if he is simply waiting for the central organization to send him people he better stop waiting.

The methods we must count upon to build groups, practices in Scientology are the first three listed above.

No. 1 "I will talk to anyone" is in very broad and general usage in the United States. It is not yet in general usage in Great Britain or on other continents, even though it has been tested and found extremely successful in London. The entire plan has been covered in one of my articles in an earlier Ability which was written after an actual test I had made in Washington had resulted in success. The gist of this plan is to place in newspapers an ad which says, "Personal counselling. I will talk to anyone for you about anything. Phone Rev. So-and-so between hour and hour." When the people call up which they do—although the ad sometimes has to run for some days before the first call, since people are waiting to first find out whether it is a code and message or is actually an invitation to phone—they desire the minister to talk to someone for them.

Actually in many cases their problems evaporate in the phone call itself. If the minister simply asks them to repeat the problem several times or asks them what they could do about this. If it is the purpose of the minister simply to solve the problem of the preclear thus phoning, he can of course cancel out his clientele with the greatest of ease. This however is not his purpose. His purpose is to get this individual into a weekly group processing unit. This person he will find is not one of the lower strata of the society or one of its neurotics; he is one of the few remaining citizens who still has a conscience and who wants to get something done. Thus he will discover himself talking, strange as it may seem to him at first, to the better people, although of course he will get his proportion of pranks and nuts. He should actually undertake, and importantly free of charge, the actual commission of executing the communication. He should not talk to the person in such a way as to ease the problem. This may be the last problem this person has and it would be a disservice to simply solve it as easily as that. One makes something of the problem, not makes nothing of it. (If auditors have any fault it is a one way flow in making nothing out of things instead of occasionally making something out of them.) The minister receiving the call should then credit the fact that this is a pretty big problem and should undertake the commission of completing the communication. He should be interested and alert. He should require a personal interview from the person calling. If he cannot get the name and address of the person calling he can always get the name and address of the person the caller wishes him to communicate with. He should get one or the other of these addresses on the first phone call. The auditor should keep a log of such calls and should write down all their particulars and any addresses that he may find in these, otherwise he will become swamped. Also he will lose a lot of potential preclears. The fact that the caller is calling at all says that the caller believes things can be better. This is in the minority in today's society. It should be cherished and nourished. Thus at the interview the minister places in the hands of the person material relating to the work of the church group which the minister is actually conducting every Sunday morning.

Of course there are ways to derail this particular project. The first I have already delineated in stating that one can as-is the problem the moment the call is received using Scientology techniques, and the other chief one is for the auditor to get "so busy" completing people's communications that he "doesn't find time to run a Sunday group". His purpose is collecting together a Sunday group. Thus he simply couldn't be busy enough to neglect this point. He has literature to hand which does not insist that the caller who has now come in person attend but which holds out to him the fact that there are other people in his similar circumstances that he might care to meet, and that there are actually methods which make it possible for individuals to solve their own problems, and that these goals are achieved by attending a Sunday morning church which of course is represented to be quite different than what one ordinarily expects by reason of experience with old time congregations. One does not talk about personal auditing unless the subject is forced onto one. After the individual has been

persuaded to come to the church group (his communication in the meanwhile having been executed) he will become aware of the fact that individual auditing is available, he will understand what it is, he will also understand that he can benefit from it. There are many instances of course of people simply turning up, learning about auditing and wanting some at once without going to a group and these of course can be cared for. But the main point is to execute the communication of the individual without charge, fee or donation and to get that individual to come to the Sunday morning church group. There he will of course be given an opportunity to join the church at some small membership fee and will be made a part of the group. Of course it stands to reason that any auditor who has a fairly good sized group which is undergoing free processing will get from the group many candidates for (1) personal auditing, and (2) a basic course in Scientology for which charge can be made. It is actually a mistake to charge for group intensives. It is much better in the long run to do only free group processing, individual auditing for a fee, and to teach basic courses in Scientology, usually on certain evenings in the week. People who do not pay for auditing will pay for the course. Many of the people in the course will demand individual auditing.

This whole plan is working a gradient scale in getting people into Scientology. When regarded otherwise it tends to break down. People call up to get their problems solved, drift away. People get their communications through and then lacking auditing begin to burden the minister with additional communications which in the long run mean nothing to him or Scientology. The chief stumbling block auditors have encountered is the actual placing of the ad. It is found that the ad places very poorly in huge city dailies as compared to small suburban papers. Thus even in large cities the ad should be put into the smaller papers. People taking classified ads want to know if the ad has ever appeared before anywhere else. Naturally it has and copies of its placement are available from Dr. Richard Steves, Founding Church of Scientology of New York, Carnegie Hall, New York City, and from the HASUK in London. But much more germanely there is now in existence a society of consulting ministers. This was organized in Washington, D.C., by the Founding Church. It has available a membership at very low cost which gives to the ordained auditor a card which declares his membership in the society. This membership card is an adequate representation of the society and its antecedents and carries on it for the benefit of people on papers such as reporters or classified advertising managers the following legend, "Any question about the activity, integrity or ethics of the above minister or the wording or precedent of any ad he wishes to place should be referred to the society of consulting ministers, the Founding Church of Scientology, 1812 19th Street, N.W., Washington, D.C., or its British correspondent, the HASUK, 1 Brunswick House, 83 Palace Gardens Terrace, London, W.8." (Organizational note: Dr. Young—better have these cards ready as I think you have the society arranged already for some time past.)

The ad itself has attracted sufficient press to give an adequate background. One does not bring the word Scientology into press interviews. One simply talks about the church, its work, and immediately it converses on actual cases which have already been handled. One does not, I repeat does not, discuss Scientology with the press. He discusses this particular project. If the press wants to know what Scientology is, the minister should shrug and say there are lots of textbooks about that, and that he does not propose to teach a course in an advanced science to the pages of the public press, that it is the church and the church's charitable activities which are behind this, not Scientology. He should also say that today ministers are indoctrinated in many learnings and skills and Scientology happens to be chiefest amongst these.

The tremendous workability of the "I will talk to anyone" ad is attested by the many congregations it has built for auditors and the numerous preclears which they have received from these. The sphere of Scientology is widening markedly because of this particular plan.

Plan No. 2 is rather older and less known. It is still within the confines of ministerial activities but it was originally practised outside those confines. The original ad which was placed to execute the plan "Illness Researches" was placed in Wichita by Mary Sue and myself at the end of 1951. It was tremendously successful and would have continued successful if anyone else had wanted any success in Wichita. The very first person who applied for this ad, immediately after a test audit, enrolled in a professional course. The second person at once

purchased a 75 hour intensive and so it went. If I merely wanted a fortune out of Scientology and did not desire the health of Scientology itself, and the good presence and skill of its auditors, I would long since have abandoned research leaving things just as they were and would have continued to run this ad and run a clinic and school to care for its resultant callers.

The exact wording of the ad was as follows: "Polio victims. A research foundation, investigating polio desires volunteers suffering from the after effects of that illness to call for examination at address." When the people arrived usually with a phone interview first, they were immediately given about three hours of auditing. The techniques in use at that time were effort processing and overt acts and motivators. We alleviated the majority of preclears reporting using only those three hours. We did this for polio victims, arthritics and were about to do it for asthmatics when the surging success of the project frightened various individuals who had other plans for Dianetics. However there was no protest whatever from the newspapers, the public or the preclears. The auditing was given free of charge. It was given under the guise of investigation and was in actuality a research project. Any auditor anywhere can constitute himself as a minister or an auditor, a research worker in the field of any illness. In that he is not offering to treat or cure the illness but is strictly investigating it, the laws concerning medicine do not obtain to him. Anybody even a ditch-digger can look over polio or arthritis or asthma or anything else. It is best that a minister representing himself as a "charitable organization", which is what he is, do the research so that the ad would then read: "Polio victims—a charitable organization investigating polio desires to examine several victims of the after effects of this illness. Phone So-and-so."

The interesting hooker in this ad is that anyone suffering from a lasting illness is suffering from it so as to attract attention and bring about an examination of it. These people will go on being examined endlessly. The technique which would be used today would be with the repair and remedy of havingness, appertaining to the illness or injury itself, "Invent a problem that leg (or arm or lungs or stomach) could be to you". One would use only this process as it is the only safe process to use against a chronic somatic and successfully alleviates such. One would NEVER use "What problem could lameness (a condition) be to you". Always run the process of problems on the subject of terminals, never on conditions. Of course one would repair the havingness of lame legs and eventually get the individual to throw a bad leg away. If the preclear could not at once invent, one would have him lie about legs or stomach or arms, or whatever is affecting him. One would use up at the most about two hours of auditing time on each case. He would not tell the person he was doing other than investigating the cause. He would tell them he was not interested in curing their polio but that educationally he could of course improve their ability to walk or breathe or whatever. As a side comment, one would omit arthritis as one of these quickies as it showed the lowest level of recovery. One would then follow up the same principles of group. He would compose a group of such people and he would find that they would be very happy to gather together. From this group he would tell them they could have free group processing and he would sell them individual auditing and would teach them basic Scientology and a basic course as in Plan 1 above. This plan has the advantage of not unduly exciting the press but if the press were to arrive one would simply tell them, expanded, the subject of the ad.

A minister investigating polio would have many reasons to do so. He would want to know how much of a drain the illness really was on the society around him, what charitable resources were necessary in order to care for it, how much difficulty it was to people in the immediate family. He would want to know whether or not it was a major or minor factor in the society. But basically he would want to get his hands on those preclears and alleviate their condition. In other words, improve their ability to walk or to breathe. He would want to do this and he would carry the project along by having a group and from this group getting basic courses. Remember today it is no fantasy whatsoever that you can alleviate the majority of sufferers of various chronic illnesses. It is a very simple thing really. We have been able to do it for four years and very good auditors have been doing it regularly for five. We are not in the business of healing here. We are in the business of educating people to walk, to talk, to breathe. Incidentally, although it has not been tried, it may be possible to get people from various societies. However, the basic experience on this line is that societies for various illnesses, as

well as other organizations, do not exist by and large to assist the illness and are very hard to do business with. As an example, one auditor in the Pacific northwest did not contact the public or individuals but contacted only various organizations in the city. There has never been quite as great a flop as the general practice of this auditor; contacting the public via ads in the public presses is the reliable tested way to do this. The other, of course, can be touched upon as it is not necessarily true that these societies will not furnish people.

Method number 3 has the advantage of requiring little capital and being highly ambulatory. Plans 1 and 2 above require enough money to have a decent consulting room even if it's only one's living room and to place ads which can come to a considerable amount. Plan 3 "Casualty Contact" is a reverse vector. Every day in the daily papers one discovers people who have been victimized one way or the other by life. It does not much matter whether that victimizing is in the manner of mental or physical injury. It does matter that the newspapers have a full parade of oddities in terms of accident, illness and bereavement occurring at a constant parade before the eyes. The essence of "Casualty Contact" is good filing and good personal appearance. One takes every daily paper he can get his hands on and cuts from it every story whereby he might have a preclear. He either has the address in the story itself or he gets the address as a minister from the newspaper. As speedily as possible he makes a personal call on the bereaved or injured person. It is probable that he will find on the first day that they are overly burdened with calls since they have been a subject of the public press, and he may find that in two or three days interest in the person has cooled off to a point where his own appearance will admit of an actual interview. He should represent himself to the person or the person's family as a minister whose compassion was compelled by the newspaper story concerning the person. He should then enter the presence of the person and give a nominal assist, leave his card which states exactly where church services are held every Sunday and, with the statement that a much fuller recovery is possible by coming to these free services, take his departure. A great many miracles will follow in his wake and he is liable to become a subject of the press himself. However, in handling the press he should simply say that it is a mission of the church to assist those who are in need of assistance. He should avoid any lengthy discussions of Scientology and should talk about the work of ministers and how all too few ministers these days get around to places where they are needed. He should use the opportunity to castigate, not to hold classes on Scientology.

Some small percentage of the persons visited or their families will turn up in his group. Thus he will build a group and naturally from that group he will get a great many individual preclears.

All three of the above plans have the frailty of going through their pioneering period and then dwindling off. The auditor back-logs a great many cases and individual appointments and stops his forward thrust into the society itself. The thing for him to do if he is building a practice too big for him to handle is to write the Academy or the HASUK if he is in England, and have some likely young Scientologist newly graduated sent to him to assist him. He should not cease to fire with his ad or with his calls and should not cease to build his group. This is a question of how much is havingness to an auditor. Auditors seem to get terribly well satisfied on three or four regular preclears. Now my idea of a real congregation would be one which you had to hold in a motion picture theatre on Sunday morning. At least 2000 people. And my idea of a good practice is one which has to be handled by about a dozen auditors and which is complete with receptionist, mailing clerks, and deep rugs in the auditing rooms and in the halls. This is purely a consideration of havingness. In doing any one of the three above plans—and I am doing one of the above (No. 1) right this moment—I would consider my own mission the completing of the communications or the "investigating of the polio victims" and the continuous outward flow of interest of Scientology. And I would stack up the appointments and do them when I could. I would not build up a group and consider that was big enough, stop putting the ad in the paper and then relax for about three months; later I would find out that all interest had dwindled and ceased and that the word of mouth going through the preclears I had had was bringing in only a trickle of new pcs. I wouldn't go at it with fire and thunder for a few weeks and then quit, in other words. I would set it up as a regular routine activity and carry forward.

One of the side plans to Plan 2 was to have another person good at finance go around to all those who had been helped by the investigation and tell them that their investigation which helped them was paid for by another person and ask the present person whether or not he wouldn't like to pay for somebody else's recovery, but this was never put into effect, although it may be very workable.

Out of these three plans above can come large and vital practices. Only remember this. They must be carried out within the framework of the dissemination of materials, otherwise the failure of indiscretion of one may bring about a cancellation of the good efforts of others. The thing to do is to take one of these plans and carry it forward. They are all good. They will all work. They have all been tested. They are listed in order of workability as above, 1, 2 and 3. I can tell you the wrong thing to do about a practice-do nothing. These will work and success is ahead of you.

CHANGES FOR THE PABs

With this, the 72nd PAB, we enter a new format and step up its production to double that which it has been. From now on you will be receiving your PABs weekly instead of every two weeks.

I have gained a great deal of important data during recent weeks and I will be sending this out to you every seven days. There will also be more organizational information in future PABs than there has been in the past and this will keep you informed of the activities of your associations.

THE IMPORTANCE OF HAVINGNESS

A careful study of staff auditors' reports reveals that the only advances worthy of the name of Scientology occur when the auditor repairs or remedies havingness on the preclear. Without the repair and remedy of havingness no real gains become apparent. A preclear will not progress when his havingness is impaired.

What are the symptoms of loss of havingness? Running any as-ising techniques the preclear may become anaten, or he may become slightly nervous or agitated, or want a cigarette, or seem to break out of the session in some fashion. In either case, he is "down on havingness." In other words he has burned up, used up, or as-ised, too much of his physical body energy in the auditing itself. In view of the fact that every subjective technique puts a sort of hole in the middle of the electronic mass surrounding a preclear, parts of that mass then begin to cave in on the preclear. Thus running an as-ising technique on a preclear beyond the ability of the preclear to sustain the consequent loss of havingness will bring on in the preclear many new engrams which he did not have before, and a technique which as-ises energy, if used without a repair or remedy of havingness, will bring about a worsening of the case of a preclear.

Now exactly what is happening is very simple. A preclear starts to go anaten and the auditor keeps on running the process. He hasn't realized that he ought to interrupt a process at any time if the preclear demonstrates a loss of havingness. Anaten is such a demonstration of loss of havingness. All right, another example: the preclear becomes agitated or upset; he reaches for a cigarette; he begins to twitch; his foot begins to wobble; he begins to talk excitedly; he begins to cough while being audited. All of these things demonstrate a loss of havingness. These same conditions, by the way, can result from the preclear believing that the auditor has broken the Auditor's Code in some fashion or has overcome his power of choice. Both a repair and a remedy of havingness are immediately indicated on the observation of anaten or agitation on the part of the preclear. And in addition the auditor should carefully go over the session itself to find out, if anywhere, the preclear believed his power of choice was being overcome, or if the preclear believed the Auditor's Code had been broken. You understand that the auditor didn't necessarily have to overcome the preclear's power of choice or break the Auditor's Code in order that the preclear should believe that this has happened. However, this could be overlooked entirely if the auditor had been careful enough to repair or remedy the havingness of the preclear.

The slightest drop of alertness on the part of the preclear, or the slightest agitation or somatic on the part of the preclear, should immediately indicate to the auditor that havingness has dropped and must be immediately repaired or remedied. A great deal of time can be spent on the subject of repair and remedy of havingness, and it is very beneficial time spent. It is better to “waste” time spent repairing and remedying havingness than to blunder on through. Now there is another thing I have noticed with regard to this. Auditors are running these days toward cognition. Very well, if they expect a preclear to cognite they should not expect him to pull in a bank upon himself. If an auditor runs a very obvious process which should bring the preclear toward cognition, and if he runs it several auditing commands and then stops and repairs and remedies the preclear’s havingness, and then after that asks him the same auditing question two more times, he will discover that he has blown a cognition into view. In other words you could remedy the havingness of a preclear while his mind was on one particular subject and bring a cognition into existence.

This becomes particularly important today, since a few months ago I discovered that you could remedy the havingness of anybody, and I mean just that!! You can remedy anybody’s havingness and you can turn on mock-ups on anybody. The fact that the preclear who has a black field can be caused to mock up blacknesses or invisibilities and shove them into his body brings us into an era of being able to make anybody turn on mock-ups. Getting the preclear to postulate that the mocked up blackness is bad for the body will cause that blackness to snap into the body. By getting the preclear to postulate that the invisible mass he has mocked up is bad for the body it will snap into the body. Of course, after this has been done a few times, the consideration of the preclear will change. Then perhaps the blackness or invisibility will only snap in when the preclear postulates that it is good for the body. He may also have a residue left. It is very important to get rid of these repair and remedy of havingness residues. By various postulates, such as that the residue is a threat to the body, it is good for the body, it is bad for the body, the residue too will snap in.

Let’s differentiate at once here the difference between a repair of havingness and a remedy of havingness. We used to call repair of havingness “giving him some havingness.” It needs a better technical term. Therefore let us call this “Repair of Havingness.” It means having the preclear mock up anything he can mock up, and in any way it can be done get him to shove (never pull) that mock-up into the body, and by similar means to get rid of the residue which went along with the mock-up. That is a repair of havingness. It is a one-way flow; it is an inflow.

Now a remedy of havingness is getting him to mock up and shove into the body enough masses to bring him to a point where he can eventually throw one away. In other words repair of havingness is simply having him mock up things and having him shove them into the body, and a remedy of havingness is having him mock up and shove in *and* throw away the same type of mock-up. Remedy of havingness is always a superior operation to a repair of havingness. Repair of havingness is a very crude stop-gap, but can be used any time. However, a preclear who is working well, and on whom havingness can be remedied, should at all times have his havingness remedied, not repaired. In other words any type of mock-up should be both shoved into the body and mocked up and thrown away, and this should be done in considerable quantity until the preclear is quite relaxed about that particular type of mock-up. One does this, remember, every time the attention of the preclear drops, or he becomes agitated.

There is one other little point connected with this which is quite important, and that is, auditors very often audit a preclear into an area of time when the preclear exteriorized. This, on a preclear who does not exteriorize easily, brings on a considerable grief and sadness. The way to get rid of this is, of course, to remedy the preclear’s havingness or only repair it, and to ask the preclear to **recall times when he was not exteriorized**. This will bring up at once times when he did exteriorize and where fear of exteriorization was built up considerably.

I have noticed another special condition regarding this exteriorization phenomena which is quite important. A preclear will occasionally repair and remedy havingness up to a point

where the body disappears for him. He doesn't quite know where to put the mass he has mocked up since he cannot find the body. This is particularly true of preclears who have a very low threshold on havingness. An auditor would be stupid indeed to simply plow along beyond that point where the preclear has already said that he couldn't find any body to push any havingness into. The moment the preclear does that the auditor should suspect that the preclear has gotten into an exteriorization type incident. It is not, however, necessary that he immediately flounder around and try to find this incident, as recommended in the paragraphs just above; he can also repair and remedy havingness in this fashion, and it is very important to know this.

Although it is disastrous for a preclear to be asked "What could your body have?", since he will simply strip the bank of various old facsimiles, it is a very, very good repair of havingness to ask a preclear "**What is there around this room (area) which your body could have?**" and then have him pick out specific objects in the environment which he says the body could have. If he does this he will come up the gradient scale of havingness, and his havingness will be repaired immediately or directly on the Sixth Dynamic. With a preclear who cannot get mock-ups and where the auditor has either been too clumsy to get the preclear's mock-ups turned on or it really was impossible, more or less, the preclear's havingness can be repaired by having him do this process; so this is a very, very important process, and one that ought to go down in red letters.

This whole subject of repair and remedy of havingness and its effect upon auditing, and the fact that it has not been stressed at all in training, being up there at Level Six in the old Basic Processes, brings us to SLP Issue 8. The entirety of Level One in SLP 8 will be devoted to the repair and remedy of havingness.

In SLP Issue 7 we have a great many phenomena associated with the remedy of the body's havingness. The reason for their position is to bring about an adjustment of the condition of the body before one goes on to other and more complicated ways of processing. Now, in Issue 8, all of these various things will be retained, but they will be paralleled with a complete remedy of havingness and that particular level of SLP will be gone over. In actual experience it is better to remedy the havingness of a preclear, no matter where he is on the tone scale, and no matter by what process, than to run any significant process. Further, if a preclear cannot at least repair his havingness, to run Waterloo Station is to invite disaster, because in this particular process of Level Two he is liable to get himself into a "down havingness" situation and of course will not be able to not-know anything. He may be chewing up too much energy while trying to not-know. Thus we would have the failures which have occasionally occurred in Waterloo Station. They were simply havingness failures, not a failure of Waterloo Station. Further there has been a new command suggested for Waterloo Station: "**What would you be willing to not-know about that person?**" This seems to be a better command, at least for the British Isles.

We also take care of the vacuums and separatenesses and everything else with repair or remedy of havingness and running it in with certain other things, such as problems, etc. When we discover by two-way communication a weak universe, we could then ask the individual preclear, "**Invent a problem that person (weak universe) could be to you.**" Then, watching him very carefully, and repairing his havingness on the subject of that person's possessions, get a very rapid separation of universes. I have noticed that the weak universe first began when the person elected by the preclear to be a weak universe first began to put MEST anchor points around the preclear. In other words, valuable presents.

I am as pleased as can be to get a finger on this point and I know doggone well that if East, West, North and South will begin to repair and remedy havingness and stop specializing in significances without repair or remedy of havingness, we are going to start shooting people up to the top of these psychometric graphs. We can't help it.

Let me call your attention specifically to the old phenomena of the emotional scale and the engram. We found out that when one engram was keyed in, it fixed the emotional tone of the

individual, Then we had him run this and as he converted the engram to usable havingness, we found that his tone rose. We discover on these psychometric charts that the “unhappy” section does not move if we don’t change the mass of the preclear.

SACRIFICES

The latest news from the research front has to do with the fact that the GE demands and requires and has to have, evidently, sacrifices. The GE does not run on an overt act-motivator sequence, which makes one suspect he is not a thetan. A GE runs exclusively on being sacrificed to. If you have the preclear mock up sacrifices to the GE, you will find these become very readily assimilated.

On a lower level the body accepts motivators; as soon as it is through this motivator band, it accepts sacrifices and finally comes up to a point where it will accept live bodies. When one considers that eating is entirely a matter of absorbing death, one sees this death hunger in processing by running Sacrifices. A person who had bad legs should have a sacrifice of legs run on him and so forth. This is astonishing material. It is almost unbelievable that the GE will not be sacrificed to anything, but will only be sacrificed to, and this phenomenon that the GE is thereby demanding death tells us at once that the atomic bomb will be used and that there are people in the world who will actually crave this sacrifice of cities and even nations.

Aside from being a fantastically workable process, more of which anon, this matter of sacrifices tells us at once a great deal about the future. There will be no moral restraint where the atomic bomb is concerned, for about the highest level in some areas of the world, as to case, is “operating GE.” This tells us too why soldiers will go to war. This explains a great deal of conduct.

The GE evidently operates on the postulate that as long as anything else is alive it can’t live. However, it is becoming more and more doubtful that there is any more life in the body than the thetan puts there, and that the body is a single machine operating on some implanted postulates contained in the energy masses which are activated by the thetan somewhat on the order of the old “pole” theta trap. Many of these considerations can be changed around rather easily. Nothing changes them quite so fast as these sacrifice processes.

In mocking up sacrifices the auditor should use all the skills of creative processing and ensure that the preclear is actually mocking up and is not dragging in old facsimiles from the bank and restimulating genetic line incidents. This can be obviated by having the persons in the mock-ups dressed in modern clothing; mocking up the incident as happening tomorrow; altering the mock-up in some manner, such as turning the face green or something of this nature. Any reasonable way in which you can ensure that you are dealing with mock-ups and not past track facsimiles.

This gives auditors another tool with which to handle chronic somatics.

CHRONIC SOMATICS

There is another process which has a great deal of workability with chronic somatics. I know that some months ago and earlier than that it seemed rather fatal to us to continue to fixate the preclear’s attention on the chronic somatic. But that is not a problem with us right now. It ceased to be a problem the moment I invented an auditing command exactly as follows: **“Invent a problem that _____ (leg, arm, nose, eye, body) could be to you.”** Running this command which is in itself a sort of remedy of havingness, and repairing and remedying the havingness of the preclear as we go, we will discover that practically any and all phenomena associated with the service facsimile will come away and clear up, and the limb, nose or eye will get well. This can be used as a word of warning: **ONLY ON ACTUAL TERMINALS.** Never use this command, and I mean NEVER, on actual conditions. Never ask

him to invent problems lameness could be to him. Never ask him what problem blindness could be to him. Lameness and blindness are conditions. We want to know what problems *legs* or *eyes* can be to him, since legs and eyes are terminals. In running this command we reduce havingness too rapidly whenever we are stressing conditions. Therefore we run it only on terminals. In running it use only terminals. Handled in this way we do have the answer as of this moment, to chronic somatics. With these processes in SLP and the adequate repair and remedy of havingness we can push our preclears right up through the top.

Let's get to work.

OFFICE IN IRELAND

Well, hello there. How do you like your PABs coming to you once a week?

What really happened was that I felt that I was getting out of communication with people, and as I was getting out information under a heading called Operational Bulletins it seemed to me to be a good idea to use these as PABs.

If you remember many years ago when the PABs started they were dedicated to setting up auditors and making them a healthy and respected class of professionals, and so with Issue 72 we immediately and abruptly resume this intention through this particular medium. In other words the PABs were dedicated to this in the first place and they go on now doing their best for the auditor.

When the Queen asked me to tip my cap and leave England as an insidious and Communist influence intensely disrupting the very best plans of the Home Secretary, I might have gone straight back to America. However, the Founding Church of Scientology in Washington, D.C. has never been in better shape. With His Nibs as Executive Administrator the situation is under good control. With Ken Barrett running the best academy classes that have been seen in the past year and Julia Lewis doing a bang-up job at the Clinic, with John Sanborn teaching indoctrination, and Dick Steves rolling an HCA class in good shape and keeping the Washington politicians at bay, and with Don Breeding getting an intensive, things could never be better.

I have a habit of turning up where I am needed or turning up data when it is needed, and as England is not yet in perfect shape there at Notting Hill Gate and as enough British brass has interceded on my behalf to permit me on occasion to pop into London, it seemed to me that I had better spend my time setting up an emergency station for Scientology in a country that wasn't likely to get atom bombed. So here I am in Dublin, Eire, ten days and one completed office in operation deep.

The Irish spring shows signs of being late and we were freezing lately with the rest of you, even though we have a pretty and snug home here in the outskirts of Dublin in a fashionable suburb. Susie and the three kiddies are well and happy and the kids after being cooped up in a London apartment most of the winter are staggered and stunned at a huge yard to play in and are exuberant and boisterous along with the Irish wind. Downtown in the most fashionable square and professional address in Dublin we now have two large suites of offices. The address is 69 Merrion Square, South. Just across from one suite and just next door to the other is the American Embassy. In ten days, with the assistance of Bernie Green, we took an old spacious set of offices and painted them, laid in new linoleum, bought the 101 small items necessary to running things and exactly seven days from my landing had a going concern. We have two pretty Irish girls and a smart Irish office boy, and that lovely Canadian, Margaret

Tousaw, and the ubiquitous Dr. Green. During part of last week, Mike Walker, the English shipping department, was over here helping out, and what with American, Irish, Canadian, English and Texan, we are quite international. Eleven days from my landing we have somewhere between fifty and a hundred and fifty applicants for a course, practically none of the applicants having previously heard of Scientology. All this sounds too fast and exaggerated but it is factually and precisely true.

What I am trying to do is this. I am trying to pilot a project in an area not previously noted for Scientology interests which can serve as a model for an auditor in any area of the world just to see how it is done and to pick up pointers. As Ireland has only 3,500,000 people in the total nation you can see that I am working in a relatively small population area which is at the same time noted for its poverty. I am of course taking advantage of the peculiar features of the place, such as the fact that the major export of Ireland is people, and am making all the shots count. However, we have a hurricane of activity going here without previous preparation.

I am having to write all the little brochures, enrollment cards, descriptions and etceteras which are handed out and I am packaging all the course materials and slants of the subject, and all this material is being shaped up so that it can be packaged not only for the public in Ireland, but for the use of auditors elsewhere. Accordingly, as soon as I am satisfied with this material and have the envelopes printed, I shall send one package of it, one of each piece, to every auditor in Scientology.

If the weather is cold the Irish heart is warm. The country and the people could not be improved upon. Unlike Communist-infiltrated England, where Russia has been active with anti-American propaganda in order to rob the crown of its only powerful ally to ready a later banquet for the Russian bear, Ireland is enthusiastically pro American. Lacking things to fight, the Irishman has been shooting up Communism quite enthusiastically and so we don't even find the medical profession here antipathetic to Scientology. It's all good roads and good weather.

Probably the greatest oddity of the Irish adventure is that aside from one year's office rent, some transportation and shipping expenses, and a small loan from London, the entirety of the operation will be supported by Mary Sue's and my salary from the Founding Church in Washington. As these two salaries amount to slightly less than \$200 a week you can see that the Irish operation is not big in terms of staff or offices. However, pay is very low in this area and rent is quite cheap. We can then support this activity for some time but strangely enough, without actually paying any of our bills yet aside from office rent and a couple of other items, we have income in sight adequate to take care of the activity.

It does the old heart good to see people swinging in toward Scientology at this rate. I could always get an operation started and get things wheeling, but we have made so much progress in technology and know-how in the past few years and since I last had to start anything from scratch, that I had not realized the pulling power of Scientology itself. I could be very mean at this point and say that if we have within eleven days of my landing a hundred and fifty people lined up for a course who have never before heard of Scientology, that somebody somewhere in some group or another has been loafing like hell. I might also say that the bulk of the calluses collected in the field must be on a private portion of people's anatomies, not on their palms and thumbs, for this operation has not in any way depended upon my own identity and reputation. It is Scientology itself and what it can do that is creating the stir. Ireland being somewhat out of the way has not heard my name. Furthermore, no public lecture has been given in order to attract people in and no other mechanism or device has been used that would be peculiarly mine, except perhaps the ability to know how to do things and to make words work effectively, so I am sitting here at this moment wondering why there aren't eight to ten thousand member groups under the charge and control of every auditor, since there would certainly be a fifty thousand member group directly under the Dublin office within five months if I continue the experiment in earnest. Perhaps the main difference here is complete security on my own behalf as far as Scientology information and capability is concerned and the fact I will

freely admit that our auditors all too often lack initial financing capital. The Dublin operation duplicated in any large city would cost about \$800.00 done up well, the \$800 including the living expenses of the auditor and his while he got going. However, \$800.00 is not very many preclears, so it seems to me that an auditor could have immediately gotten some preclears and done some auditing—until he had \$800 or \$1000 and then could have launched into a wider operation on this pattern, or he might have talked his friends out of an investment in his venture. This, I say, with perhaps a superiority of know-how and ideas, would be the chief difference in starting up the Dublin operation and somebody starting an operation say in Chicago. Well I could say all these things and it would be very mean of me so I won't say them. I will simply go on shaping this mock-up up until I have gained as much know-how out of it as possible and will let you have a blow-by-blow account of how it happened.

What you should know first is that the Irish adventure is your adventure being conducted on your behalf to help you square away Scientology in your area and put you on easy street, and what is more important to the rest of us, to put mankind in a position of self-defense for the first time on a planet confronted with atomic fission.

THE ATOMIC FIZZLE

Wouldn't it be very funny if the moguls and high mucky-mucks of the higher insane wards of government were to have their favorite threat—atomic fission—turn into an atomic fizzle. This would be the joke of this or any other century.

Because we're all professionals here, well schooled in Scientology, let me talk a little bit about past track. This is not the first time that a planet has been threatened by the development of atomic technologies. It is on the past track many places and times that planets have been scorched and made uninhabitable to all forms of life. This tells us as we read our E-Meter that life is capable of abandoning a planet and going to another planet, setting up the painful process of making lichens and moss to make soil out of the stones and building a gradient scale on up to moving beings.

Atomic energy has always been a tragedy. Atomic radiation burns savagely and furiously, and life so burnt in this age and time then is incapable of procreating. In other words, an atomic burn hits mainly at the second dynamic. The reason it does is the number of times planets have been wiped out in the past. When atomic radiation came all procreation became pointless. The genetic line was over-ended and done. There was no use making new cells or new babies. There was no future into which they could go. Thus the appearance of radioactivity tends to aberrate the second dynamic. Its actual use brings about a total apathy on procreation. Radiation first and foremost when it burns is effective simply because the hemoglobin no longer makes new cells and so a person dies of acute anemia. The blood cells are, it is true, the most cowardly of all the body cells. Blood cells lake into the center of the body in a moment of fear or terror. They give up quickest when struck by atomic radiation.

I have been conducting a series of experiments, one of them almost fatal to myself, on the auditing of radiation burns. I have found that we can make an enormous effect upon radiation burns and can cure them in a milder form. That means we are the only agency, the only people on the face of Earth who can cure the effect of atomic radiation. I expect to make further progress in this direction and the whole answer is not yet gained, for the whole answer would be to actually proof a body against radiation itself.

It is rather foolish to believe that a flash of light which actually goes through and is not stopped by ten feet of concrete can yet do things of hideous magnitude to a body. That is all that alpha and gamma and the rest are—a flash of light. There must then be some cooperation on the part of the body to stop the flash which is not present in concrete. True, a newspaper held before the body interposed between it and an atomic flash can keep the body from being severely burned, but remember the actual destructive rays do actually go on through the newspaper and unless stopped by the body itself would go on through the body. On such

reasoning I began to experiment to discover what the body was doing in connection with atomic radiation and discovered that it was actually stopping it.

I found out further the procreative aspect of atomic radiation came about because atomic radiation on the early track was used as a punishment mechanism. At first it appeared that atomic radiation was the basis of the second dynamic and its various wavelengths, but this is not true. They were so identified because radiation was used in second dynamic punishments and activities. Radiation is the only thing capable of reaching into the mock-up strata of a thetan and on this high wavelength knocking apart his bank. There are many black fives around whose black screens are actually radiation hunger.

On the basis that the only havingness difficulty is under the heading of "not enough" I caused atomic radiation to be wasted (until the thetan could accept it). The difficulty was trying to operate with radiative mock-ups in the vicinity of bodies. Evidently the thetan has to change his mind very thoroughly before the body can be coaxed into letting radiation pass by. The body is apparently anxious for radiation punishment, since it then no longer has to continue a genetic line.

The problem on which I am working is the actual proofing of a body against damage from bomb flash. That is between us auditors. To publication, however, it is actually factual that we are the only people who can do anything to alleviate or cure atomic fission. No serums or other mechanisms have proven effective. The most effective means of cleaning up radiation or radioactive dust in an area is the common water hose. That is the high tide of anti-radiational research. In Scientology, using standard procedures and including in them an address to radioactive masses, we can cure by remedying havingness with its radiation burns. Indeed, it requires a very skilled piece of auditing with a great deal of havingness remedy, but we can do it.

Now I want you, and by that you I mean you, not a general editorial "you," to send me at once any article in whatever publication or any book or pamphlet of whatever simple or complex nature you have, know about and can get, to me here at the Scientology Emergency Station, address "Scientology, 69 Merrion Square S., Dublin, Ireland." Please send me as well any horror material you have. I do not even have a copy of John Hersey's book on Hiroshima or any newspaper accounts on it. You can help by taking upon yourself personally the responsibility of being the only person who is going to send me any material here. As Ireland is well removed from any such threat, the material extant at this point is very poor. I need this material in order to draw upon it for a book. This book will be called "Atomic Burns, Their Danger, Cure and Prevention," and it will be, we hope, in all the major book stores of the world and will be, I assure you, translated into the various languages.

You see, the most frightening aspect of atomic radiation is that it is the very most basic ingredient in insanity, and people close to it, handling it or restimulated by it can be no better than totally insane. You see the threat we are up against? Now it may well be that the U.S. Atomic Energy Commission outlawed psychiatrists from its ranks and precincts simply because these, who do at least know insanity when they see it, might have been urging institutionalization of every leading atomic scientist on grounds of paranoia, megalomania, and other psychotic symptoms. My own experience with these people would confirm it. The atomic scientist in the world today on grounds of security is removed from any skilled mental observation of any kind whatsoever. Nobody knows whether they are sane or not. Researches demonstrate that the stuff they are handling would bring about insanity in them in very short order. A light look at the subject demonstrates that they have a craving for the destruction of all life. They are totally careless and conscienceless when questioned on the subject of destruction of men, women and children in cities. They are equally conscienceless concerning the injury of their fellow workers.

A symptom of this insanity visible to us every month or so from Enid, Oklahoma, is a man who was, for a long while, closely connected with atomic energy, and who between attacks on Scientology has horrible writhings concerning his own sanity and alternates attacks

upon his auditor with grovelling begging to be relieved of the awfulness of his life. Nothing could be done for this man previously in Scientology, as no research had been done on the peculiar aberration from which he was suffering— overdoses of radiation received while an observer at Eniwetok. The screens which covered his vision were radiation hungry. No one auditing him connected his past experience with atomic energy and his case, since it was not known that there was any relationship. So we have had at least one case in our own midst demonstrating various types of insanity simply by reason of having been connected with atomic energy earlier in his career. There may be others. We know now that these surrender as cases if by auditing they are brought to create and destroy radiative masses in mock-ups. It is, however, a very dangerous piece of auditing and must be done very gently. You may, by the way, have wondered why I never really attacked this particular vilifier in Oklahoma. It was only that I was aware of the fact that his case was unsolvable and that Scientology had indeed failed him, and because I felt sorry for him. I am not the sort of a fellow to kick a dog when he is down and I knew what desperate shape that person was in. I am rather relieved now to know exactly what was wrong in his case, and sometime or other an auditor can be sent down there.

But if we have been caused lies and upsets in our own ranks by the side effects of atomic radiation, then imagine what it would do when close up against a government which is being advised on atomic matters by persons who have long since passed the sanity point. Therefore it looks like thee and me have some work to do. Fortunately Scientology is already well entrenched in many atomic energy areas and many atomic scientist connections know of it and the materials which are developed concerning radiation cure can of course be applied to this particular problem with considerable benefit.

Well all entheta aside, please get that material to me fast.

IMMEDIATE CASH FOR AUDITORS

Associate memberships are now available for sale by auditors to their groups.

The associate member is a member without time limit of Scientology. An associate member does not receive publications but does receive a pin and membership card.

An associate membership costs five shillings in the United Kingdom and areas under the London office, and one dollar in the United States.

The auditor can purchase from the organization the pin and application form already assembled in lots of 25 with brooch backs or button backs for two shillings and sixpence in the U.K. and its areas, or fifty cents in the U.S.

The auditor sends in to the U.K. £3.2.6 to Scientology, 69 Merrion Square S., Dublin, Eire. He will receive in return 13 button-back and 12 brooch-back pins mounted on application cards. An auditor in the U.S. can send \$12.50 to Scientology, Washington, or for quicker delivery at this stage to me in Dublin, Eire, and he will receive the same lot.

The auditor then sells these associate memberships to anyone, but we hope to people who are taking or have taken a basic course. He keeps the totality of his receipts. The person to whom he sells the pin and card fills in the application form addressed to the organization provided with the card and has returned to him at once his membership card. The total clerical work on the part of the auditor is sending the order here, receiving and directly selling the card. The associate member newly made by the action is the one who sends in his application. This makes for minimal bookkeeping.

The pin is the lovely little S-and-double-triangle pin designed by Bob Hollanbeck in Phoenix, Arizona. Some of you have already seen them. The design was taken originally from the dust wrapper of *Science of Survival's* earliest editions.

Arrangements will be made at a later date for the sale of subscriptions to our improved publication line for general and special memberships, all of which can assist the auditor in financing his activities in Scientology.

The reason we want this membership to be widespread in existence is that the power of an organization is counted by the number of members it has. We must have a membership class which includes everybody and which permits people to be in no doubt as to whether they are with us or not.

A particular oddity of the associate membership card is that it is not renewable. It has no termination date and does not expire every year. It might be a good thing if some other classes of members also became associate memberships if they have any fear of lapsing, since they would at least be an associate member at all times. This, however, would not bring them publications or services.

You must be aware that at this price we are actually selling the card and pin at the actual cost of production.

As this is announced, the manufacture of the pin and card is already arranged and in the works. Acts of God, perils of the sea or strikes could delay the filling of your order for a few days, but this is only an eventuality, and by the time your order gets here the pins should be ready to ship to you.

As a point of incidental interest, I just happen to have by accident in my jewel box where I keep the keepsakes of value that people often send me from various parts of the world the original solid gold S-double-triangle pin made by Bob Hollanbeck. He sawed this out for me personally as a gift in Phoenix last year. If I owe him anything for copying it for everybody's benefit, I wish he would let me know since I don't have his address here in Dublin.

There was another slightly smaller S-and-double-triangle pin made and issued from Phoenix a year ago, but it was not from this handmade design of Hollanbeck's which he intended for my personal wear. By the way, Bob Hollanbeck will make you a Mexican tie-tie with the S and double triangle in solid silver and very beautiful for I think \$15. When I have his address I will insert it in a PAB.

AUDITOR INCOME FROM BASIC COURSES

All auditors everywhere in good standing with the academy or London are authorized to teach a basic course in Scientology.

In its program of assisting the auditor to finance himself and the advance of Scientology the central organizations will do all possible to assist him in the teaching of this course.

The course should be a minimum of twenty hours, including some eight hours of group processing and some twelve hours of instruction.

The instruction should be precisely cycle of action, the 8 dynamics, ARC and what each element means, the tone scale, something about havingness and its relation to the tone scale, and how to do an assist. The principal stock in course should be the most elementary and should be repeated often so that everyone in the course actually knows these principles. No other material such as past track, past lives, thetans, clears, or any other data should be introduced into the basic course. The essence of teaching a basic course is to make sure that everybody in the unit understands very well these basic elements.

I am at work at this moment on a Basic Course Manual. However, you need not wait for it.

At the end of your basic course you should give an examination to all persons who were in it covering just exactly these points above and their definitions and uses. You should then ship with the address of this person that examination paper to London or Washington, depending whichever is your most immediate area. The central organization in London or Washington will immediately execute, if the exam was passed, a basic course certificate and send it at once either to you to give to your student or to the student directly as you indicate. Warning: These certificates will not be sent unless the examination paper and the student's address are included.

The organizations make no charge for this service.

It is expected that a basic course would cost at least £3.10.0 in the U.K. or \$10.00 in the U.S. It is also expected that this charge will be made and collected by the auditor and that the auditor will keep for his own uses and the financing of Scientology in his area the totality of basic course fees.

The only way you are going to accumulate a group that will stick with you and forward Scientology is by teaching that group a basic course. Group processing without training doesn't work.

We are very shortly going to publish a book as possessing the only effective cure for atomic radiation known to man. You will hear more about this later. The best and first thing to do is to create a large group and to teach it a basic course. Let's get this one out of the way fast. People are talking Scientology and demonstrating its adequacy in their own spheres.

One of the ways of gathering groups for a basic course is to teach for the first week something you will call a free course and which contains perhaps four hours of auditing and six hours of instruction, and give this free course to everybody but don't let anybody take the same free course twice, and then simply continuing the free course on up into another twenty hours or two weeks, covering these essentials much more precisely, teach a course that you charge for. Remember, the organization does not care how much money you charge for this basic course. It would actually be surprised if you did not charge at least five guineas, or \$25.00. There are plenty of ways of accumulating groups. For such basic courses you will learn these as I tell you more about the Irish adventure in later PABs.

TRAINING COST CHANGE

After years of no alteration it may come as a bit of startlement to announce that it will shortly be generally announced and is effective immediately that training costs and charges are changed in the central organization.

For five years the cost of a professional course in the United States has been \$500. In London the same course has cost you formerly £125. It is rather interesting how these two figures were arrived at. The \$500 fee was set by Parker Morgan in Elizabeth, New Jersey at the end of May in 1950. Parker Morgan, besieged by requests of people who wanted to take a closer look at Dianetics, invented a status whereby that person could hang around the office and watch what was going on in the Foundation as an intimate observer for one month for \$500. There were ten in the first professional course. The only chair case there was Ted Ottison, recruited up from St. Mary's College. After a few days I took pity on these ten, since although they were interested they were getting very little know-how, and began to give them a daily lecture, and so started the first professional course in Dianetics and Scientology.

The figure was set in London at £125 because that was the cost of maintaining an instructor and quarters for a minimum class of two students over a period of two months and the general one-month hangover of training. As I could not stand by London forever and had no idea that it would have many students, it was necessary that the school remain solvent. It was also necessary that a central organization continue to exist, and that needed finance.

Actually the £125 charge was not too far in error, since the London office just barely did remain solvent during my long absence in the U.S. Commie critics, which exist in vast profusion, swept Scientology into its group propaganda about American dollars and was long active in pummeling this £125 fee as demonstrating that Scientology was a get-rich-quick scheme.

The actuality is that in both cases the central organization has to be maintained or auditing itself would go all to pieces everywhere and there would be no way of disseminating new processes, and that it takes far longer than a month or two months or three months to train a professional auditor. He has to be trained by experience as well as formal instruction, and the central organization always has the responsibility for this. As an example, in Australia where an inadequate financing was done the HASI office has been in continual difficulty trying to maintain itself, and as it has failed to maintain itself adequately, the professional auditor in the area of Melbourne has had a rather hard time of it. Part of that squirrel cage of course is the activity of squirrels in the area who always reduce the effectiveness of Scientology and blunt its progress, unable to understand evidently that not everybody shares their own enthusiasm for kicking the bucket. Of course a few of these squirrels were on the side of the allies during the late war. They evidently didn't get their fill of death, like the most of us who are more intimately connected with the hostilities. A squirrel has used these fees as a target rather continuously, but this is not the reason they are being changed.

Because we can train an auditor today in the eight weeks allowed without having to pay for a great deal of continued training, thanks to the invention of the indoctrination week and dummy auditing—of which I am quietly proud—we can actually afford to train now for less in the United Kingdom. We are going to extend U.S. training into a later retraining period and we are going to do several additional things for the U.S. auditor than we have done before, so the training cost will remain the same for considerable additional service in Washington. In London the fee is dropped to £75.

In view of the fact that we have the basic course planned for auditors in the field and the shortness of distance in the U.K., no rights to train to the level of HCA or HPA will be issued in the United Kingdom. This is actually a kindness, since the grind of training auditors is not remunerative to the individual auditor and actually inhibits his income, which should be much greater by reason of basic courses than it ever would be from teaching professional courses by our experience. This is heightened by the fact that there has only been one application to train made to us in England, which denotes no field enthusiasm for professional training on its own behalf anyway.

In the United States all those rights to train which have been granted to auditors who have not at this date returned in full their percentages and fees to the central organization can be considered cancelled. The organization will certify persons in training to such persons after this date, but only those persons who are at this instant in training actually. No further persons should be enrolled. As soon as auditors with these rights to train engage upon the basic courses they will understand that the teaching of basic courses is far more remunerative. We have had nothing but complaints from auditors with individual rights to train concerning their difficulties with finance. Students do not pay them. Central organizations can cope with this fact but the individual auditor cannot. It is beyond his means to train on charity or on the receipt of a third or half of the professional course fee. The central organization can struggle along with this or collect.

The chief reason the U.S. fee is not dropped is because the auditor being trained now is going to be sent into specific areas and is going to have placed in his hands any and all literature he will need to start things booming and will be assisted by special mailings to the area concerning him from Washington, all of which takes money and which had better come under the course fee. However, as this service will cost about \$150, the Washington fee is actually reduced to about \$350 to be available for the actual training. We feel it is better in Washington to collect the total fee and use part of it to give the auditor a big push in the area assigned when

he leaves, than to leave it to his initiative to scrape up enough money to get the literature and material and make the mailings.

BOOKS IN PROGRESS

I am writing or have scheduled the following books:

1. The Elements of Scientology—Basic Course Manual.
2. Atomic Burns—Their Danger, Cure and Prevention. (This is the one we mainly need the bookstore list for.)
3. Scientology—The Modern Science of Ability (a rewrite of *Dianetics: The Modern Science of Mental Health*).

Abilities by the half-ton, each one of them defining a word in Scientology or pertinent to life.

ACTUALLY HERE

I am actually and factually in Dublin, Eire. There is a terminal here. There are some mailboxes and desks to receive your communication. My body just now is in rather indifferent shape, thanks to an auditing experiment on radiation, but it nevertheless will sit in a chair and hold your communication in its hands and read it over very carefully. When you stamp on the floor or the street of Dublin, there is solid earth there, and the wind blows and the air circulates and there are live people around, and in short this is really a terminal and your communication will be acknowledged at once if you write. I will see if there is anything else I can think of to reassure you as to the communication formula. The truth of the matter is the swarms of people around here aren't Scientologists and I am a bit lonesome, and you don't look around very good when I tap you on the shoulder, so write me a letter and let me know your reaction to Associate Memberships and teaching a basic course, and in turn every week I will keep you posted on the material from various parts of the world and in particular on the Irish adventure, which may win or lose—see next week's installment—and upon the progress of several other mock-ups in which you have a very tightly vested interest.

ADMINISTRATION

A number of vital lessons were learned in setting up and running the college here in Dublin. But they were not all on the subject of the college itself. Some of them were on the subject of Scientology organization.

For six years now we have been stumbling across one horrible thing: Administration. It has come out here in Dublin that the majority of our troubles have been administrative, not technical.

We Scientologists have a lot to learn about administration. I have coded the following as vital bits of data on the subject:

Administration is a form of communication. Adequate administration consists of keeping certain communication terminals in place and making sure that the proper particles go to and through the proper terminals.

Smooth organization consists of having a terminal for each type of activity in which the organization is engaged. There can be four or five activities to one terminal so long as three things are obeyed: (1) the terminal itself has to know it; (2) nearby terminals have to know it; (3) distant terminals have to know it.

Supervision of an organization consists of keeping the terminals in place and keeping the correct traffic (particles and messages) flowing to the right terminals and planning to adjust the communication flow either from outside in or from inside out.

All particles having to do with the exact business of the organization **MUST** be handled speedily. Particles which are not particularly germane to the organization come in anyway and can be more or less neglected.

Terminals must also originate, not just reply or report.

Command lines must exist in an organization so people know who is boss. But **COMMUNICATION LINES** are not command lines, contrary to the army psychosis. Communications need not flow up to and down from any command post. Terminals can and should operate independent of the command lines **BUT** they **MUST KEEP THE COMMAND** position informed. Terminals can do two things wrong: They can follow command lines with their communications; they can fail to keep command informed.

Filing, invoicing, having the proper forms can be as independently capable of ruining an operation, if they are neglected, as the most flagrant neglect of duty by a terminal.

If orders are filling, if the invoices are right, if the files are kept, if the forms are correct and available, and if everybody knows his job and will do it, an operation will have a hard time failing.

Tight and proper scheduling of classes, appointments, replies and comm origins can forgive a lot of other things. These things are stabilities. If you want an atmosphere of stability, have an atmosphere of precise punctuality.

If you have a system, follow it, hound and harass it into line and keep it there. But if you don't follow it, junk it and find out what system you ARE following and make that then be the administrative system and keep it tightly in hand.

Let me be terribly accusative and personal. If you have no group or a small group, if your income is low, if you are having a hard time, it is probably due to a lack of good administration in your affairs, not due to your knowledge or lack of charm. You could be a poor auditor and a good administrator in your auditing affairs and still win. You could be a wonderful auditor and a poor administrator and flop completely.

If you are "overworked" you are probably being overworked by bad administration. The fault in administrative work is most intimate to the terminals involved in an administration. If these are each one sound and working well, you've won.

One terrible fact stands out in administrative work. If the operation is NOT WELL PLANNED the tendency is to add help. We see this at its worst in governments. These have no equal in adherence to this system. When they see something isn't running properly, they add some more help. When they still fail to run properly they add even more help. At last you have a government. The totality of its activity seems to consist of correcting mistakes by adding rules and terminals to an already unworkable system. The right way to go about this is to PLAN IN ADVANCE, put that plan to work, REFINE THE PLAN, put that refined plan to work, always on the most basic level, saying always, before one begins to build or reform, "What, exactly, is this outfit here supposed to do?" Answer that question and then plan to make it so and then administer to keep it so. AND ALWAYS ASK THE MAN ON THE JOB WHAT THE HELL YOU SHOULD DO TO HELP HIM OUT. Never sit in some ivory tower and dream up reforms for the organization. Always get your hands dirty. A good executive gets his own communication lines running smoothly and then spends his time going around not giving orders but smoothing out people's jobs. Eighty percent of most organizations are involved in handling the boo-hoos and nonsense of bad administration. A person who is a minor terminal in an organization should know this too and should put the pressure on the Big Whiz to make sure the comm lines keep running straight.

Now as to the personalities of personnel, it is very true that there are always certain people in an organization poorly managed that the organization would be better off without. These people always do two things: (1) they shovel entheta and Emergency at their foreman and the boss; (2) they are always out of department with their squawks. They are obsessive change, high-critical cases on the personality analysis. They wouldn't know good news if they had it dropped on them encased in a safe. They can only deal in bad news. If it doesn't exist they obsessively make it up. In the matter of being "out of department" they are incapable of doing things close to home. The entirety of their real activity is fouling up other terminals while their own department goes to the devil. Show me a man's personal department and I will show you if he is in or out of department. If the typing battery is always crying about invoicing, you'll find darned little typing going on. "It's bad over there" is the theme song. The other type of case an organization can't afford is the "can't work," "you're working too hard" case. When somebody starts on this one, shoot him from guns. These people—the entheta monger, the out-of-department weeper, the "you're working too hard"—cannot be afforded by any organization and that's it. They actively damage things sometimes beyond repair. They are NEVER of benefit to an organization or group. I speak from bitter experience, I assure you. Fire them if you can't audit them 75 hours.

In Scientology organizations today, regardless of the work people do (we long since fired all the 1, 2, 3s above including the most prominent U.S. squirrels) we give them 75-hour intensives as fast as we have auditors available. We do this because we can tailor-make executives today. If they slide a bit we audit them a bit more until we've got them up there and swinging hard at the real enemies of man.

Our concentration right now is on administrative smoothness. Only in that way will we get the groups and auditors we need to knock out the enemy.

THE OPEN CHANNEL

Besides having a couple of other things to do in the last eight years, I have been in search of an open channel for Dianetics and Scientology which would not run into large obstacles and which would thereby make it possible for organizations and auditors to outflow what we know to a maximum with a minimum of difficulty.

When you have to qualify and explain what you are doing continually, you have only in that an obstacle. Since there was no immediate forebear to Dianetics and Scientology, there was no cut groove in the society. Thus we have had to keep company with subjects in the public mind as ragtag as anything can get—i.e. psychology, psychiatry. And of all the drooling idiots I would never choose for bedfellows, believe me, the psychologist and psychiatrist would be below my lowest list. Why? Because they're fakes. They come from a long line of hoodwinks including such nobles as the priests of Ra, Cagliostro and Wundt. Why? Because they would take the pennies off a dead man's eyes. Why? Because there are limits where a gentleman stops and the old-time hocus-pocus of the mind just then began.

Naturally, then, we ourselves would get a slap from the same dank brush. One of the principal "everybody knows" is "everybody knows psychology and psychiatry are phoney." Now it is an oddity that if you accuse a man long enough of being a fake or a robber or a bum he tends to believe he might be one. A young auditor once told me that he "couldn't get over feeling he was robbing people" when he processed them. He was just running the counter-effort of his environment in its effort to shut him down on Scientology. He was classed by his environment as a psychologist or psychiatrist. He even wore the beard at last. And he squirreled a bit. Why? Because everybody told him that he was a fake and he at length had to accept it, he thought.

Ninety percent of the few auditors who have quit have all suffered from this association with psychologists and psychiatrists to a point where they themselves thought they were phonies—and that therefore the organization and all connected with it must then be phonies. In other words they were counter-efforted into believing they were guilty even though they'd committed no crime.

The Open Channel for which I have searched has been found. I went over to Dublin, a poor, cross-ridden town, and started up a pilot operation. In the charge of the redoubtable Bernie Green, that operation has even chance of out-incoming both the American and British offices. It is Bernie's and he's got every chance of really pulling a very steep hill. Were the American College duplicated in London and Washington it would start making history fast. Why? Because it exploits an open channel which runs, like good roads and good weather (of which everyone is in favor), without opposition.

Behold: “Scientology is that branch of psychology which treats of human ability. Old-time Wundtian psychology said that people could not change. Now that we can change people we have to call what we are doing something else than psychology.” They “know” what psychology is (familiar word). They immediately grasp this, get a tiny agreement. Then they are told (gradient scale) that old-time psychology couldn’t change people (which they can verify in psychology texts) and that we can. Follow this with a discussion of IQ and Personality Tests and then brush aside any thought of neurosis or psychosis as part of the picture with “Well, I think we can all agree that any of us have room for improvement,” and you’re off into something the person you are talking to can use. **IF YOU CAN SELL ONE PERSON PAINLESSLY ON SCIENTOLOGY YOU CAN SELL GROUPS. IF YOU CAN SELL GROUPS YOU CAN SELL THE WORLD.**

I am often amused when somebody shifts one of my mock-ups around—for they very often do it on the basis of removing the motor. Washington recently published the above definition of Scientology with a subtle change: “Scientology is that branch of *wisdom* which treats of human ability.” They changed the one thing vital in the sentence. The listener is going to classify YOU as a psychologist. He’s read about psychology in the comic strips. He uses the word constantly. It’s an agreement point. You avoid the word entirely as did Washington and you have (1) missed the agreement point and (2) invited him to retain an association not as-is-ed which will condemn you. So changing one of these mock-ups around may make them non-workus-deadus.

No, you say to anybody, “I’m a Scientologist.” “Scientology? It is that branch of psychology which treats of human ability. Old-time psychology believed you couldn’t change anyone’s intelligence or personality, so when we could we had to call it something else.” “Well, I think you’ll agree that anyone could stand some improvement.” “It’s fascinating that even morons can be made smart.” “You know, an average intelligence is about 108. Well, with a little work a Scientologist can shift that to 120 or 130, you know, make it possible for the person to tackle jobs he couldn’t have understood before.” “All we’re interested in is increasing business efficiency. Has a lot to do with income. Fellow with an IQ of 108 makes, let’s say, \$35 a week. He’d be paid more if he was worth it. We raise his IQ to 120 and his pay goes up to \$75.” “You know, we don’t need new business ideas or gimmicks. All we need is some people who can carry on existing business efficiently for a change.” “Take government. I don’t think a lot of people in government are smart enough to understand their business.” “I’d sure like to get my hands on some of these officials”

That’s all agreement chatter. It’s material which keeps your listener coming. HE knows (and you never infer it) that HE could use this stuff Scientology personally. He’d resent being told he needed psychiatry or psychology, for that would infer he was crazy. But when you talk about IQ and rising pay and how stupid people can get businesses in trouble, you’re right in there on the agreement level. Now if you AVOID psychology entirely, you leave it to the listener to infer it and thereafter you’re a psychologist to him.

I wrote the above, not off the cuff, but straight out of experiences other people and myself have had with it. There’s no counter-effort. All’s well. What you say goes home. So without altering this carefully built mock-up, try it out.

Now unless this mock-up got you some action and Scientology some attendance, it would still be no good. So it has to be backed up with an organization such as “Business Study Group” or “Scientology School of Human Efficiency” or “Chicago School of Personnel Efficiency.” Here the form of the mock-up is looser, but not too much so, for that which the study group or school does is not altered. The actual composition of the group may differ. It may be that the auditor runs one in his living room three times a week for an advanced course and three other evenings a free course. It may be that the auditor can afford to really put up a college type mock-up. So the receipt point for the income of bodies may differ. The entering wedge and the final curriculum neither one differ.

Well, we've advertised in help wanted columns and we've got some kind of a mock-up to receive bodies. Then what do we do?

We give a free course six evenings in length. (If you're doing it in a living room, you'll need two weeks for it at three a week, for the other three evenings will have to hold your Advanced Course.) In this course we teach Cycle of Action, 8 Dynamics (saying we go up to the first third of the seventh and leave the remainder of 7 and all of 8 to the church and so sidestep religious arguments), A-R-C two different evenings, and Havingness. WE TEACH THIS COURSE WITH PRECISION, giving our students precise definitions, not generalities or discussions; we come right down on each one of these and define hell out of it for our free course people; we don't shilly-shally around and avoid the subject of the evening. We bowl them over. In this free course we give just a little "look around the room" type group auditing. At two hours an evening for six evenings we have twelve lecture hours in a free course. Only two or three should be processing periods and then gently, gently.

When you've given this free course of six evenings, you will then sell at the price that will gain you the most people and yet support the endeavor (a nice calculation, that) an Advanced Course.

Of what does this Advanced Course consist? Ah, that is again very precise. It is an additional twenty-four hours of instruction broken into two periods of twelve hours each.

We will call the Free Course "Course A" for the obvious reason that the texts soon to be printed will start with Text A. We will call the next twelve hours of instruction "Course B," the third twelve hours "Course C." Thus the texts will be lettered.

The Advanced Course is composed of B-C. The texts for B and C respectively are *Science of Survival* and *Dianetics, 1955!*. These, shortened and rewritten, will be Text B (*Science of Survival*, complete with Tone Scale Chart), Text C (*Dianetics, 1955!*).

Thus for the next twelve evening hours of lecture after the Free Course one lays heavily into the exact text and chart of *Science of Survival*. Then for the remaining twelve hours one teaches with exact precision *Dianetics, 1955!*.

Why this division? Because you don't want to enroll an Advanced Course every other period. Every time you finish a Free Course, you will want to sign them up and continue them with no pause or break. If you pause, let them hang for a week or two before you get them to enroll, you'll lose them. Therefore! You will be able to enroll every Free Course at once. The students will step into a complete twelve hours of instruction on either Text B or Text C. Thus a student starting from scratch goes from Text A to Text B to Text C, OR goes from Text A to Text C to Text B.

If you have two rooms, one for the Free Course and one for the Advanced Course, you will then enroll people into the Free Course and into the Advanced Course every week. You will enroll people into the Advanced Course from the Free Course as fast as they finish the Free Course.

By teaching the basics as basics, by teaching the Tone Scale and Communication just as we learned them, you'll bring people right on upstairs without overwhelming them. If you just process them you worry them because you overwhelm them past their understanding. You'll get BIGGER IQ RISES by teaching this curriculum than you will by processing them in groups the same number of hours. And you'll have Scientologists, not preclears.

Now how about individual auditing? If all these classes are evening classes, then you have a lot of free daylight. Well, strictly on a BUSINESS-EFFICIENCY MOCK-UP you make them more able with individual auditing. You make it known to your classes that individual auditing can be had. You say what it is. You touch on illness only by stressing its absenteeism quality and its function in keeping them from getting better jobs. You stress mainly

the handling of people, self-assurance, ability to work. You sell them small quantities of auditing. You patch up just what they want with old creative processing and havingness. You charge them hourly rates. You also offer medical check-up if you like.

There is something else you can do. You can arrange with a loan company to lend the person enough to pay for a medical check-up by an M.D. with which you've made an arrangement, for their course and for individual auditing. The loan company pays you in cash. The student-pc pays the loan company by the week from his paycheck. This of course has to be carefully greased and made painless. But as the sum is small and as the people who come to you get salaries, you will find a loan company will be very happy to play ball.

The end product we already know is a working person with a higher IQ and with poise the like of which employers haven't seen lately. Teaching, getting the confusion out of them, always can be counted upon to up their confidence and poise. And you'll have Scientologists.

Well, what people should you approach? We've got some chaps amongst us who have bigshot complexes. These fellows can't see themselves talking to people less than executives and would scorn talking to "mere stenos." Let these poor fellows pound their shoes thin trying to sell the BIG COMPANIES all sorts of ideas on improving their help. You, going to and dealing only with stenos, laborers, clerks and the good, solid workaday world with your group, will win. The auditor who still hangs around General Sputters trying to get Mr. Swivelbottom to "buy a course for his help" will be in the anteroom yet while you own two square blocks on the main thoroughfare and have long since trained Mr. Swivelbottom's help without his consent, knowingness or caringness. The big executives these days are about as progressive as last spring's snail and have as much love for their people as Fagin for Oliver. Approach the little guy. With help-wanted-column ads.

As close as you come to companies will be Business Colleges and Tech Schools which you will let hire you to lecture free course level to THEIR students in their premises. From these you will also get Advanced Course students because you can hand out your literature. Play ball with such people. Let them sell THEIR courses in your school. And let them sell their courses to include yours. Be real.

There are certain golden rules which will make your operation, break it if you neglect them. DELIVER WHAT YOU PROMISE. SCHEDULE PRECISELY. THE STUDENT IS A CUSTOMER. USE BUSINESS AS A MOTIVE AND STRESS POINT IN ALL EXAMPLES AND LECTURES.

Now there are additional services you can offer if you can deliver them. You can test for IQ and Personality and write a letter to their boss about their improvement at course end. You will wind up with a huge employment roster. You can work with employment offices. (Don't be an employment office, work WITH all other employment offices. Be an employment wholesaler to employment agencies for a fee, never a retailer, as that's a profession in itself.)

Sell everybody an Associate Membership who comes to your Free Course. Sell everybody all his texts if you can. That's added income and you may need it.

Here's an OPEN CHANNEL in the society. Nobody is really doing it. Not even Carnegie, the closest reach, did this. Nobody balks good roads, good weather or better business efficiency today. And you can let the psychologist and pseudo-psychologist stew in their own rather rancid juices and gibber around their shock machines and mice in their government financed prisons and go straight to hell, whither they are bound, without our knowing or caring.

Are you going to help reach on this OPEN CHANNEL? You know you are.

Problems and other plans were good. But they aren't as good as this one. Try it out.

NEW MATERIALS

I caught a Trafalgar Square sized lion by the tail lately with new material. New data and a new slant. We've gone upstairs further and we understand more. And it doesn't undo what we know.

So you'll soon have SLP ISSUE 8. No real changes in steps 2-3-4-5-6. Most of what you already know in step 1. But boy what an increase !

Hang on to your pro membership. We're just starting this game.

WHAT DO I THINK OF AUDITORS?

(PABs will be sent airmail for \$10 a year extra. That's the commercial for this issue.)

Every now and again somebody tries to get me to say what I think of auditors. They want me to become hypercritical, I guess, so as to match the asker's tone. Well, I better make a public utterance after all this time.

I think of auditors in a rather intense way. As I know more auditors than anybody else and have a better basis for judgment, on this subject I can be for once an authority.

My opinion of auditors in general is fairly well known to several people.

I think of an auditor as a person with enough guts to DO SOMETHING ABOUT IT. This quality is rare and this quality is courageous in the extreme.

It is my opinion and knowledge that auditors are amongst the upper tenth of the upper twentieth of intelligent human beings. Their will to do, their motives, their ability to grasp and to use are superior to that of any other profession.

I think of an auditor as having INITIATIVE. He is able to grasp or make a mock-up and put it into action.

Auditors survive better than other people.

If this world has any faintest chance of surviving it will be not because I write, but because auditors can and will think and do.

I think our auditors came from beings lately arrived on Earth who, seeing where it was going, decided to band together to send it elsewhere.

I consider all auditors my friends. I consider them that even when they squirrel. I believe they have a right to express themselves and their own opinions. I would not for a moment hamper their right to think. I think of auditors and Scientologists as the Free People.

Just as they consider one another their people, so I consider them my people.

I think their errors of the past, when they existed, came about because we are new and we are finding out and I don't think any of their errors were intentional any more than mine were.

I can understand their own reactions because I can understand the counter-effort given them by society, and thus I don't hold auditors guilty even when they fold up but simply assume we'd better make a better effort into the society to overcome or bypass the counter-effort.

I don't expect auditors or Scientologists to instantly agree with or seize upon whatever I say. I would be offended if they did and would feel they weren't a Free People. Since they are intelligent I expect them to think over what's said, try it, and if it's good for them, use it. That old auditors sooner or later come back to and use what I have discovered isn't any testimony to our relationship at all, it's only a testimony to my being right because I meant to be right in the first place.

I sorrow when I see somebody accomplishing less than he should because he thinks I wouldn't approve of it. In organizations and out I count upon initiative and good judgment.

The most decent people I have ever known have been auditors. The best hearted people I know are auditors. They are so decent and good hearted I have to work and argue with them to make enough to keep mock-ups rolling well, a thing they are now beginning to do.

I am very proud of Scientologists. I think they're bright, shiny beautiful people and I'm glad every one of them decided to get born again this time.

I think we're a fine crew. I know we can make it. And I know that if it's a better world in the future it will be because Scientologists are what they are, not what I made them.

Now in case there are any further inquiries or doubts on the matter, I assure you I have spoken on the subject and that I have spoken from the bottom of a very experienced heart.

Scientologists are the best people on each of the five continents and that's all there is to it.

WRITING SCHEDULE

I've got my nose in my typewriter trying to steer clear of organizational work, trying to get to you the books you need for courses and programs. It's kind of rough working without a secretary. But I'll make it somehow, I hope.

I'm in Spain. You can address me care of the HASI, 83 Palace Gardens Terrace, London W.8. They'll packet my mail to me.

H A S U K

Because of many solicitor delays, the HASI in London remains the HASI, not the HASUK, and by advices will continue as the HASI for a very long time to come.

Give Jack Parkhouse there a hand, will you. The HASI needs your help and support. He and Ann and Dennis are able and willing and are doing a fine job—but they need your good will and your help if Scientology is to survive in England.

SCIENTOLOGY'S MOST WORKABLE PROCESS

It is fitting that we give out Scientology's most workable process in Issue 80 of the oldest continuous publication in our sciences of Dianetics and Scientology.

We have been going with Dianetics and Scientology for a very long time now according to our time continuum. Actually we have been going only a tiny fraction of man's scientific time continuum. The progress which we have made in the past few years is apparently greater than any combined progress of the preceding ages. This may be due to our ability to capitalize on what is known. It may be due to having been educated in both the Eastern and Western philosophies. It may be due to being born with a lucky slide rule in the mouth. It may be due to the brightness and interest of everyone connected. It may be due to a lot of things, but to whatever it is due, it is true. From a condition no-science-of-mind to a condition science-of-mind has been achieved.

If you have any doubts about our starting condition, no-science-of-mind, go get a Wundtian pseudo-psychology text, read Darwin, read the horrible confusions of Locke, Hume, Spencer, James. If you care to so research you will find that they were a trifle mixed up. Reading them now, knowing as you do Dianetics and Scientology, you can make some small sense from them in some places. BUT if you delete your understanding of Dianetics and Scientology and THEN study them you'll come up—or, rather, go down—staggering. The test was this: By their tenets could these people make anyone smarter, more sociable, better able? No. The test was also this: By their talk of God and Devil did other men in other fields understand anything of the human soul, the hereafter? No. Well, that's the way things were in the Dark Ages of 1949. Now we can make men smarter, better, more sociable and yes, more controllable. *Now* we do know about the "hereafter" and all the rest of it. So something DID happen in 1950 and something has BEEN happening ever since, and despite all our detractors—for Man detracts that which he doesn't understand—and for all our rocky road, we HAVE attained higher than Man ever attained before and that's the way it is.

Very well, then WHAT is there in this already high mountain of attainment which is the highest gain? Amongst all this gold where is the super-gold?

I don't suppose I'll surprise you very much if I tell you you haven't had the super-super-gold yet. In fact I didn't have it myself until very recently and, having discovered it, I've been waiting smugly to know it a little better and so give it to you ever since.

Empirically, the super-gold you have had is HAVINGNESS.

Since havingness wasn't a super-super-gold (for I could see that it itself was an aberration) I continued to look for higher levels of entrance into the problem and so bypassed

havingness and even forgot about it for a while—with resultant case chaos. When havingness is neglected, cases do not improve, that's all there is to it.

Well, amongst all havingnesses, what is the super-gold process? There is one. It is not very fast, it is terribly certain, it does not fail in our experience and its gains are permanent. It is a process known as the Terrible Trio.

Given that, an auditor can put the question, acknowledge, originate, take care of originated comm and in general perform WELL all the primary auditing procedures (as different than techniques) and given that an auditor isn't simply trying to overwhelm the preclear, the Terrible Trio can then pull up any case if run long enough. You understand, of course, that any TECHNIQUE depends upon the PROCEDURE of auditing. Auditors who have techniques fail on them often are at fault in HOW they audit and no matter how many thousand techniques were given them they'd still fail. Procedures are learned by dummy auditing for scores of hours on end. Then techniques work. (See, we've even cracked that major problem of building "insight" and skill into the auditor, the biggest variable of old-time practices! My, how we've come along.)

The Terrible Trio stole its name from three people in Scientology, United States against whom a famous (infamous) organization recently stacked its combined talents and lost with violence. The first "Terrible Trio" were Sanborn—Barrett—Steves. When I gave the triple havingness process to the staff auditors working under Julia Lewis in the HGC, somebody there, sensing its effectiveness, dubbed it the Terrible Trio.

Now I know all that is very informal, as is this whole article, but "scientific papers" as collected by the Ford Foundation and the Department of Sewage of New York are always supposed to have a historical section to tell where it all came from, and I'm simply being formal, you see.

The commands of the Terrible Trio are "**Look around the room and tell me what you could have.**" "**Look around the room and tell me what you would let remain.**" And, "**Look around the room and tell me what you could dispense with**" (run as "**Look around the room and tell me with what you could dispense**" in Boston and Devon).

These commands are run in ratio. It is not how LONG the process is run, it is how long it requires to finally flatten each command so that any of the three could be run indefinitely without upset to the preclear. The first ratio, to be safe, should be 20 times on the first command, five times on the second and one on the third. This ratio should then be improved gradually, i.e. 10, 8 and 2, then 10, 10 and 4.

At all times the auditor should watch for anaten or agitation (the two A's of auditing) and if these occur, he has gone too fast OR has made, in the preclear's opinion, a code break of some sort. If it isn't the fault of the ratio used, it's a code break and one should say, "**What have I done wrong?**" to the preclear; the pc may fish about for several minutes and finally recall that five minutes ago he felt repressed by the auditor in some way.

By advancing the ratio too fast is meant running the second question too long or the third question too long (too many times) without returning to the first, which is the most innocent question. However, one CAN run the first too long without advancing the ratio.

ONLY when the preclear can run any of these without consequence for many, many times, can one then be sure that the process is flat. ONLY when it is ENTIRELY flat inside a room should one attempt to run it outside a room, for the great space of the outdoors on this process is staggering to a preclear with a chronic somatic. The Terrible Trio run too soon outside can make a preclear VERY ill.

Here we have the most tested and vital process in Scientology. There are more advanced processes but they are not yet tested. The Terrible Trio has ALWAYS given a gain in the auditing room, properly audited. It was the Terrible Trio which saved the day when staff auditors were fighting back to security in handling havingness (for there was a short period in the U.S. when, with havingness abandoned, no real gains were had, a condition which I had to explore, fight and whip fast.)

It must be remembered that the PROCEDURE of the auditor must be good before the techniques used by the auditor work uniformly well. Thus the Terrible Trio must be run with exact attention to the rudiments. A pc out of session even though "being audited" won't improve.

Oddly enough, this process can be self-audited, according to reports, making it about the only self-auditing process possible outside of *Self Analysis* (which still works).

Well, there you are.

BOTTOM RUNG OF DIANETICS FOUND

It will be good news to old dyed-in-the-engram Dianeticists (who are still convinced that I REALLY had something in Dianetics) that I haven't forgotten them or the subject.

Dianetics suddenly revived on a discovery I made lately in an area where one would have thought no further discovery was possible.

The entire subject of games brought to life some new material. The recent brief resume in Operational Bulletin 17 on games is as important to us as it is brief. It tells us that there is a central motif on any dynamic which indicates the difference between self-determinism and pan-determinism. One is a master of any game which he can give non-partisanship, in other words, to play both sides. He is committed to any game (self-determinism) in which he can play but one side. Team play occurs in a game when one is playing one side of it. But total pan-determinism would be the ability to play any side or as part of any team, being capable of playing any and all levels of any dynamic.

But what is important here is that games are "overwhelmings." As a person begins to be unwilling to overwhelm he, of course, begins to be unwilling to win and so loses pan-determinism and sinks into self-determinism. Games are, for our auditing purposes, "contests in overwhelmings." The primary overwhelming is to take space. Even in sedentary chess the goal is to take space and the game ends with a certain space, identified incidentally by the occupying piece, being overwhelmed but not entered. This very wise game of chess, of course, really nails it since no one can REALLY overwhelm a thing without space, a thetan. Chess ends with the space commanded, the opposing king untaken, only "overwhelmed." Thus life can be said to be a contest of "overwhelmings." The use of force, space, pieces, problems, strategy and tactics all resolve into the simple idea of "overwhelmed." A war and a business differ only in overwhelming by the use of force by the former, and of advertising and products by the latter.

A teammate is someone who assists in the overwhelming of the enemy. Aberration is mainly the overwhelming of teammates (wrong target).

When one views life as a complexity of attempts to overwhelm he begins to understand it rather well. Two people may be playing many games, some between them, some with others. They are opponents in some things, teammates in others. They succeed in the ratio that they can define their games AND overwhelm the proper enemy for each game. Marriages fail only because the games get confused between husband and wife.

All right, seeing that, let's now look at Dianetics again. The engram was overwhelming the preclear. By auditing it with Dianetic techniques we let the preclear overwhelm the

engram—PROVIDING we as auditors weren't simply using Dianetics to overwhelm preclears. Read over the things that make auditing possible in 1947's *Original Thesis*. The truth was there, the underlying reasons why were not.

Very well, if we were trying to overwhelm engrams, WHAT were we trying to defeat? The definition of an engram has been "a moment of pain and unconsciousness." This should be more technically expressed as "an energy-spatial picture representing a moment of pain and unconsciousness and containing perceptics."

Well, what is this new discovery? It is an added bit that engrams contained MORE IMPORTANT than pain and unconsciousness. That added bit can be briefly stated as "the moment of shock." "The moment of shock" is that period of realization by body and thetan that an overwhelming has occurred.

As I have said, an overwhelming does not consist of space, energy, pieces et al. It is the IDEA that an overwhelming has occurred. The winner is convinced (sometimes wrongly, as when World War I became World War II) that he has overwhelmed the opposing player. The loser is convinced that he has been overwhelmed.

By the mechanics of the overt act-motivator sequence a person doing a lot of overwhelming sometimes regrets having done so. Sometimes the overwhelmed (very commonly) takes the winning valence, becomes the person or object he has been overwhelmed by. So if one wins he often regrets it (the matched terminal phenomena is at work here) and when he loses he sometimes becomes the winner in person.

Here we have the proposition that one can win too often or lose too often. In Dianetics where does this fit? It fits as the moment of idea of an overwhelming.

Bloody and wreckaged, some battlers yet do not get the idea they are whipped. The engram received is then not effective against them. Almost untouched, some believe they have been overwhelmed and thus a tiny lock assumes the value of a big engram.

Some people playing against another assume too rapidly they have won; they achieve the idea that they have done an overwhelming. Indeed it is an old tactic to make the enemy think he has won and then knock him flat: not Queensbury but effective. When this last has occurred a "winner" becomes suspicious of having overwhelmed and is liable to become too anxious. Indeed he can become so unsettled about overwhelming others that at length he has to prove it to himself with stiff corpses and nothing short will serve. And a "winner" can become more anxious than this, as most people have now become; he can suppose that no evidence of having overwhelmed others is valid and so he shuns the idea of having overwhelmed. To start to win anything sets up an anxiety which brings about a counter-postulate in him. Restimulating locks and engrams of anxiety, he becomes uncertain and indefinite. Shame, blame, regret occur at the very thought of a win. Why? He cannot get the idea of overwhelming another with any positiveness. Thus he may go through life winning on every hand and feel a completely defeated failure; no evidence is valid to him that he has overwhelmed anything; he has to get big, try harder; but the cancer stays with him and he finally concludes all is defeat.

The usual freedom-monger, the agitator, in his unreasoning and damaging insistence on no rules or barriers anywhere, is able to achieve only a no-game condition. He got that way because he cannot feel a win is possible. At the same time he may be complicated by a certainty that he himself is being defeated at every hand, no matter the evidence. Thus he has to assume more and more vicious and convincing roles until at last there's shooting in the streets. Thus the regicides of France could not be free even when they had murdered their king and had killed all their nobility; they were so unconvinced that they had won that they promptly lost by setting up Napoleon as an emperor. Dead, the king and nobility had still won in the minds of the French radicals BECAUSE the radicals could not get the idea of having overwhelmed.

In the field of engrams this becomes important. It means that engrams vanish, erase rapidly WHEN the preclear regains the ability to HAVE THE IDEA that he has won and that he has lost. This explains the mysterious efficacy of Rising Scale Processing as developed in the very last days of Dianetic research. It also explains why many preclears could not run an engram. It also explains why my earliest technique of giving small wins over locks turned on sonic and visio. It also explains why some auditors were not successful: They could not let a pc overwhelm anything and they themselves had to overwhelm the pc and used engrams to do it. The auditors did not know they were doing this—they were the first to be heartbroken about case failures; it was just that a subtle factor was at work, more powerful than the pain and unconsciousness of the engram.

Well, that's stripping it pretty bare. But there's more to the subject and I will be covering it later on.

The research of Dianetics and Scientology still has its exciting moments. At least WE'RE winning.

PURPOSE

All communication lines should have a purpose. The purpose of this communication line is the advising and orienting of auditors and Scientologists everywhere on the subject of Scientology, the formation and the direction of its organizations and the creation of space in which Man can walk upright and free.

There is a great deal of material packed in tight in these recent PABs. There will be in the next few issues data of sufficient importance to clarify Scientology even for those who have not succeeded well in life, processing or finance. I invite your closest attention as to what is happening here because data has appeared to me to overcome the challenge of an apathetic resistive society in its regard to our efforts.

We are the only people and the only organizations on Earth which have the technology and the ambition to attempt a clarification of situations which in other hands are considered entirely out of control, to wit, the atomic bomb and the decay and confusion of central governments.

There are those who would tell us that our ambitions are too high, that no single group, much less a single man, could bring about a change in the dangerous career of Earth. But such people do not know their history. Single men and determined groups have been the only makers of space in which Man could walk free. Left to the multitude, each inverted with his own selfishness and greed, the affairs of Man do not prosper. Left to an anarchy of nations with no international responsibility, Earth and Mankind cannot prosper.

The Anglo-American civilization was the first new civilization since the Roman Empire. All civilizations between the last collapse of Rome in the 4th Century A.D. and the present moment were some fragment of the Roman Empire or its conquerors. Rome possessed certain technologies which conquered the world. In company with these technologies there was a philosophy and a willingness to do. When the philosophy had faded or had been changed for one far less workable, when the technologies of Rome had been scattered before the hordes of barbarians who now from Moscow once more seek to spread confusion, Man was left to drift, to interpret the word "freedom" as he would and in the main for his own purposes. The disciplines that were Rome faded away. Today the European countries are beginning to function once more. Various portions of civilization are alert. For over a century a new technology has been making space. That technology is Anglo-American in its development. Leaders of the new industrial age in the United States and Great Britain have pressed upon the world know-how and machinery and ways of living which have revolutionized almost every society on Earth. In Berlin, in Paris, in Madrid and Tangiers and Cairo and indeed in Moscow itself we see the evidences of this onslaught. Anglo-American mechanization has even driven the Chinese from their background and into European pants and hats. In India and Burma and Buenos Aires we see the cinema, the automobile, the clock, the booklets and the rifle created by

or modelled upon Anglo-American industrial might. Technologically the United States and Great Britain have conquered the world. Philosophically they have failed.

The original impetus of the Anglo-American industrial push was carried along with Protestant Christianity. Somewhere on the way there is one spiritual message which, packaged in with the clock and the cinema and the guns, was lost. Unlike earlier Jesuit successes with native peoples, Protestants' successes have been few for some reason, possibly because the Jesuit incorporated the religion he found with the religion he brought, and Protestantism remained entirely itself. The spiritual philosophy which should have prepared the way for the proper use of the technology did not succeed.

We are left then with a world of confusion, for the tools and the weapons have gone out and no message has gone with them, even to the United States and Great Britain themselves, to use them properly. We are confronted then with the picture of Man's failure to keep pace with his humanities alongside the onslaught of his technology. We have humanities in the Dark Ages and technologies in the next century. We are, therefore, confronted within our own nations with strikes, crimes, upsets, juvenile delinquency and problems beyond count. We are confronted at the same time with rebellious Indians, Burmese, and Sinhalese and Chinese and Arabs. We are confronted then with a United States and Great Britain which, having delivered the weapons of slaughter into the hands of others, seemingly have no will to continue their regulation.

The white man within his own countries and within all the countries of Earth has solved the problem technologically. Guns, furniture, linoleum, weaving machines, harvesters, air conditioning, medical advances have each and every one conquered their environments. Though the machine has penetrated such distance and though the machine has made each and every United States citizen and British citizen more independent and capable, it has not been accompanied by a philosophy of use adequate to its potential for harm. Thus we have a chaotic world condition.

We have uncounted communication devices and have not had until Scientology any formula for communication itself. We have a thousand tongues, the phonograph, the motion picture, the radio, the television to talk about affinity and we do not even know what it is. We have numberless realities being created daily in huge antiseptic factories without any understanding of what *reality* might be, and thus we have created beyond the ability of Man to understand, and unless the understanding of Man can be brought to the level of his own creations Man is doomed as the conquering animal of Earth. So desperate has Man become that he will buy almost any ideology whether it is communism or druidism. He will buy the garbage of Marx and even write it unsuspectingly into the United States Constitution under the heading of "Income Tax." He will seek solutions to his overpowering problems from indigestible sources such as Russian psychiatry or Wundtian German psychology, neither one of which was intended to free Man or to give him understanding and which were intended only to enslave and debase. Counterfeited ideologies and humanities are not good enough in this age of atomic fission and jet planes. These two alone, unless handled sentiently, can bring about the wipe-out of modern Man.

If you have questioned where you were going with Scientology, if you did not know exactly what you intended to do with Scientology, if you had no real understanding of what Scientology was for, read the above again. You will readily recognize that the typist sitting in some office overwhelmed by routine is equipped immediately with the means of writing letters faster than any amanuensis of past ages but has no understandings of why she should be there or what she should be doing beyond the fact that she "has to have a job." What hope is there for this girl? Like the operator of a drill press in a factory, like the pilot of a jet plane or like the man himself who designs atomic missiles, she does not know what she is doing or why she is doing it. Therefore, she cannot hope to understand the motives of those around her, nor can she understand any need for any teamwork in the execution of a better civilization. She is being overpowered and engulfed by the business machinery with which she is surrounded. Work and happiness, or comfort or pride exist in such surroundings. From the highest head of state to the

lowest menial, saving only Scientologists, in the United States, Great Britain or the rest of the world there is no exact understanding of life itself, thus livingness itself has become as automatic as machinery.

Machines do not bleed, they do not suffer. It is only because Man conceives Man to be an incomprehensible machine that makes Man willing to destroy with such weapons as atomic fission. Only men without purpose, without understanding, men who cannot play the game would so attack their fellows.

What craven cowardice is it that requires a weapon as great as an H-bomb to command compliance with one's bad temper? One can only gaze with contempt upon a person who in a relatively peaceful society will over-arm himself and over-threaten his fellows.

If Man cared more, if Man had a better understanding of his own purpose, Man would make a better effort to survive, but lost in the confusions of ideologies which were intended to do nothing but confuse him, what chance does he have?

The chance he has is Scientology. We're giving him that chance and if you do not pass along to him what you know, you yourselves are failing that man, failing yourselves, and failing us. This is Man's one chance. You must give it to him, otherwise he faces other planets, other times, other elsewheres, but no more here. Scientology is not so much Man's first science of understanding as his last call to reason.

If you cannot see this as a necessity, this science and technology to fit in with Man's mission of the machine, then you cannot view Man's further survival, for it will not exist.

Were we to straighten out on its lower and middle strata the thinkingness of Man, he would have a chance to live. You would give that chance to a person dying in an automobile accident. You would give that chance to a dog; you would give the chance to breathe again and look at the sun to your deadliest enemy. Then why not give it to Man at large? Is it because you cannot see him as an entirety, because you cannot see him as units made up in a similar image to those of your immediate family and friends? You must give Man that chance. Given that chance he can live out his destiny. If that chance is withheld from him he will be no more.

Where Earth pursues her gentle way in her orbit about the sun today there will be a black orb seared, scorched and defaced with ruin, its air polluted by radiation, its surface gouged by pocks, the skeletons of its cities standing black and ruined against a sun which was allowed to set upon the Anglo-American civilization. Perhaps there are other planets, perhaps there will be other times, but here we are right now, our urgings and our strivings ought to carry forward the civilization which we have about us. Perhaps it would be better to start all over and make another one. I do not happen to think so. I think that we can and will continue to create this civilization and continue to bring Man through despite his folly in creating industrially far beyond his ability to understand and then borrowing from those who hated him the technologies he hoped would permit him to survive. We know how and we can do. It is up to us. It is up to you and only then we can say with honesty that it is up to Man.

HCA TRAINING RIGHTS

If you read closely you discovered that only those HCA training rights given to DScens which had not been used and only those which although used did not pay for certification to the central organization were cancelled. Those people training to the level of HCA in the United States who have used their training right to train people to that level and who are in good order financially with the central organization are still in force.

Next time don't jump to conclusions!

Any and all professional auditors have the complete right to teach a Basic Course and should be teaching the Basic Course regardless of the type of mock-up they use to get people

running through this Basic Course. You understand that we can see a real Basic Course, one which trains a minimum of twenty-five or thirty people a week. Anything else we call “peanuts.” So let’s get busy on that one.

In the United States toward the end of the year there will be a DScn Course for those who wish to qualify and procure rights to train; otherwise no such rights will be issued.

SCIENTOLOGY
TRANSLATOR'S EDITION

by L. Ron Hubbard, Ph.D., C.E.

For the next few issues of the PAB we are running a preview of the *Translator's Edition of Scientology*. It is presented not because you are in need of a translation, but because you do need at this time a tight resume of the data of Scientology AS IT SHOULD BE PRESENTED TO BASIC COURSE PEOPLE.

In a Basic Course give them this data. Give people definitions. Repeat them many times. Don't talk *about* Scientology in your lectures. *Give* them *Scientology*.

Later these materials will be a Basic Course booklet.

Here, as well, are some startling new principles you have not seen before, for since my discovery of them, there has been no written release of the data.

This information is yours to use. It is a new "shot in the arm" for Scientology. These advances have been called incredible. They are only mildly amazing.

L. RON HUBBARD

NOTE: The *Translator's Edition of SCIENTOLOGY* contains the most fundamental principles of the science in such a form that any further reader in another tongue can understand fully what was intended. The difficulties of translation are most apparent when one is asked to translate Scientology who has not had years of experience with it; a translation not based on experience is then colored by the various misunderstandings of the translator, and when the work passes, translated, into the hands of someone who is to use or study it in that tongue, the person is deprived of much of the precision of Scientology. Indeed, it is possible for even a fair translation to still exclude enough in precision of word usage to deprive the science of workability in a tongue for which it was not written originally. While it is no criticism of the English of the translator, it yet brings up the obvious point that not all translators are expert Scientologists and might omit some of the exact meanings without knowing that they had done so. TO OVERCOME THIS I have written here a *Translator's Edition*. The ENTIRE TEXT which follows and every word therein is scheduled for translation and must, each word, be literally translated into non-English text. In order to secure exact meanings all words and some phrases which are of questionable status in translation have been given in synonym several times.

This TRANSLATOR'S TEXT must then accompany and be included in all other non-English texts of whatever language; otherwise Scientology might not be found in many respects workable and an entire language area would be without it, since it would not be understandable to it, the translator having erred somewhere in his translation.

I speak in this from experience, having seen DIANETICS and SCIENTOLOGY already in non-English tongues whose translators were not trained in the science. In engineering, bridges stand or they fall down. That is because engineering is so precise that an error in the engineering science preceding the bridge could result in calamity. Similarly, Scientology works or it doesn't work. It is not an art. It is the first Science of Humanity to have this engineering precision. Thus literary skill does not count in a translation. Smooth reading does not count. Exact meaning DOES count.

IN TRANSLATING ANYTHING IN SCIENTOLOGY TRANSLATE THIS PAPER FIRST.

Translate also the note above.

WHAT IS SCIENTOLOGY? Scientology is that branch of psychology which treats of human ability. It is an extension of DIANETICS which is in itself an extension of old-time faculty-psychology of 400 years ago. More acceptable and normal psychology, such as that begun by St. Thomas Aquinas and extended by many later authors, was in 1879 interrupted severely by one Professor Wundt, a Marxist at Leipzig University in Germany. This strange man, in agreement with Marx, conceived that Man was an animal without soul and based all of his work on the principle that there was no "psyche" (a Greek word meaning "spirit"). Psychology, the study of the spirit (or mind) then came into the peculiar position of being "a study of the spirit which denied the spirit." For the subsequent decades, whipped on by Marxist economists and dialectic materialists, Wundtian "psychology" was taught broadly through the world. It taught that man was an animal. It taught that man could not be bettered. It taught that intelligence never changed. This slave subject, Wundtian psychology, became the standard, mainly because of the indifference or lack of knowledge of people in charge of things. Scientology is actually a new, very basic psychology in the most exact meaning of the word. It can and does change behavior and intelligence, and it can and does assist people to study life. Unlike Wundtian pseudo-psychology, it has no political axe to grind. Scientology is not teaching dialectic materialism under the heading of "psychology."

The term SCIENTOLOGY is taken from *scio* (knowing in the fullest meaning of the word) and *ology* (to study).

Scientology, used by the trained and relatively untrained person, improves the intelligence, ability, behavior, skill and appearance of people.

It is a precise and exact science.

It is employed by an AUDITOR (a Scientology practitioner) upon individuals or small or large groups of people, in their presence. The Auditor makes these people, at their choice, do various exercises, and these exercises (processes) bring about changes for the better in intelligence, behavior and general competence.

HOW IS SCIENTOLOGY USED? Scientology is employed by an Auditor (one who listens and computes) as a set of drills (exercises, processes) upon the individual, and small or large groups. It is also employed as an educational (teaching) subject. It has been found that persons can be processed (drilled) in Scientology with Scientology exercises and can be made well of many, many illnesses and can become brighter, more alert and more competent. BUT if they are only processed they have a tendency to be overwhelmed or startled, and although they may be brighter and more competent they are still held down by an ignorance of life. Therefore it is far better to teach AND process (audit, drill) a person than only to process him. In other words the best use of Scientology is through processing and education in Scientology. In this way there is no imbalance. It is interesting that people only need to study Scientology to have

some small rise in their own intelligence, behavior and competence. The study itself is therapeutic (good medicine) by actual testing.

IS SCIENTOLOGY VALID? Tens of thousands of case histories (reports on patients, individual records), all sworn to (attested before public officials), are in the possession of the organizations of Scientology. No other subject on earth except physics and chemistry has had such gruelling testing (proofs, exact findings). Scientology in the hands of an expert (Auditor) can cure some 70% of Man's illnesses (sicknesses). Scientology is used by some of the largest companies (business organizations) on earth. It is valid. It has been tested.

WHERE IS THERE MORE INFORMATION ABOUT SCIENTOLOGY? Scientology has two main organizations. One of these is the HUBBARD ASSOCIATION OF SCIENTOLOGISTS, No. 1 Brunswick House, 83 Palace Gardens Terrace, London W.8, United Kingdom. The other is the HUBBARD ASSOCIATION OF SCIENTOLOGISTS INTERNATIONAL, Post Office Box 242, Silver Spring, Maryland, U.S.A. These organizations have offices on every continent of Earth. Scientology practitioners are validated (certified, given diplomas) by these two organizations. Diplomas are given only after very exact training. A person who is skilled in Scientology has a diploma from one of the above two organizations or from the FOUNDING CHURCH OF SCIENTOLOGY in Washington, D.C., U.S.A. These offices and these people can give you more information about Scientology. The above two organizations have many books in English on the subject of Scientology and Dianetics. The company that is publishing the book you are reading may have more books in your language.

WHO INVENTED SCIENTOLOGY? Scientology was discovered (found), not invented (created). It was organized by L. Ron Hubbard, an American, who has many degrees and is very skilled by reason of study. Sometimes Wundtian psychologists defend themselves by saying Hubbard is insane; actually the Chicago Psychological Institute, a Wundtian organization gave Hubbard many tests at his own request in January of 1951 and found him unusually bright and extremely sane. Hubbard was trained in nuclear physics at George Washington University in Washington, D.C. before he started his studies about the mind. This explains the mathematical precision of Scientology. Doctor Hubbard has been given many honors for his work in the field of the mind. He has been assisted by one of the most numerous organizations in the field of the mind on Earth today, the organizations of Dianetics and Scientology. Scientology organizations contain more members than all other mental health organizations combined.

CAN A PERSON WITHOUT MUCH STUDY USE SCIENTOLOGY? Scientology is practiced in daily life by enormous numbers of people who have no formal training beyond a study of textbooks. Scientology was developed to be used by such people as well as by the trained practitioner. A person studying by himself from textbooks can use Scientology both to help and to heal his fellow human beings.

WHAT SPECIAL USE DOES SCIENTOLOGY HAVE? Scientology does things for people where nothing has been done before. It makes them well from illnesses which were once considered hopeless. It increases their intelligence. It changes their competence and betters their behavior. In addition to these it brings them a better understanding of life. One outstanding thing which it does: it alleviates burns received from atomic bombs. Scientology is the only specific (cure) for radiation (atomic bomb) burns. Scientology processing given to persons burned by radiation can alleviate the majority of the difficulty. This is true even when the person so treating (auditor) is not completely trained.

BASIC PRINCIPLES

Like engineering, Scientology has certain basic principles. These are necessary to a full understanding of the subject. It is not enough to know how to process (drill) people in Scientology. To be effective (good) one must also know the basic principles. Scientology is

very exact. The humanities (human studies) of the past were full of opinions. Scientology is full of facts that work.

To study Scientology one should scan (skim) quickly through the basics and find something with which one can agree. Having found ONE THING (one fact) with which he can agree, he should then skim through again and find another fact. He should continue to do this until he feels some friendliness to the subject. When he has achieved this, and only when he has achieved this, he should then study all the basic principles. There is no effort here to be authoritarian (opinionated). No one will try to make the subject difficult except yourself.

You may have been taught that the mind (the spirit, the brain) is a very difficult thing to know about. This is the first principle of Scientology: It is possible to know about the mind.

THE CYCLE OF ACTION

The most fundamental idea in Scientology is called the CYCLE OF ACTION.

CYCLE = a span of time with a beginning and an end; = a section of the totality of time with a beginning and an end; = in beginningless and endless time one can set out periods which do have a beginning and an end insofar as action is concerned.

ACTION = motion or movement; = an act; = a consideration that motion has occurred. In very ancient books it is written that from chaos came a birth, from birth there was growth, when growth was achieved there was then a gradual decay, the decay then ended in death, after death there was chaos.

Scientology expresses this more briefly. THE CYCLE OF ACTION IS AN APPARENCY AS FOLLOWS: CREATE, then SURVIVE, then DESTROY; or Creation, Survival, Destruction. First there is Creation. Then this is followed by Survival. Then this is followed by Destruction.

APPARENCY = appears to be as distinct from actually IS.

This cycle is only an APPARENCY. It is what we see, what we behold, what we believe. We CONSIDER (think, believe, suppose, postulate) that it is so and we then see it so.

A child is born, he grows, he reaches manhood, he grows old, he dies. In Scientology it can be seen that none of these steps are necessary. One considers them so and so they are true. A man can grow old quickly or slowly. He grows old to the degree that he believes he is growing old. Because everyone AGREES that this is the way things are, they go that way. The cycle is not TRUE. It is only APPARENT. It is APPARENT because we believe we see it. It is APPARENT because we AGREE that it should be so.

The test of this principle is as follows: By using the CYCLE OF ACTION can we make anyone well or more intelligent? Thousands of tests have proven that the use of and belief in the CYCLE OF ACTION has made none well or intelligent. Therefore, no matter if we see it, there must be something wrong with it. The woman, growing old, wishing to appear younger, is protesting this CYCLE OF ACTION. She feels there is something wrong with it. There is. We have to find out what the ACTUAL cycle is before we can make people better.

ACTUAL = what is really true; = that which exists despite all apparencies; = that which underlies the way things seem to be; = the way things really are.

THE ACTUAL CYCLE OF ACTION is as follows: CREATE, create-create-create, create-counter-create, no creation, nothingness.

CREATE = make, manufacture, construct, postulate, bring into beingness.

Create-create-create = create again continuously one moment after the next.
Create-counter-create = to create something against a creation; = to create one thing and then create something else against it.
No creation = an absence of any creation; = no creative activity.

An ACTUAL cycle of action, then, consists of various activities but each and every one of them is creative. The cycle of action contains an APPARENCY of SURVIVAL but this is actually only a continuous creation. The APPARENT cycle of action contains DESTRUCTION but the ACTUAL cycle of action tells us what destruction is; DESTRUCTION is one of TWO activities. DESTRUCTION is in terms of action a creation of something against a creation of something else. For example, a wall is seen standing; to be apparent it is necessary that the wall be constantly created; the act of “destruction” is to exert against the wall another creativeness, the action or activity of knocking the wall down; both the wall standing there and the action of knocking it down are “creative” actions. Because we may object to (argue against, dislike) a wall being knocked down we vilify (swear at, scorn) the creativeness involved in knocking it down with the word “destructive.” ACTUALITY tells us that there is no such thing as destruction; there is only creation against a creation. There is another “type of destruction” and this is NO MORE CREATION. By no longer being a party to (a member of) the wall’s creation, the wall, in theory, can cease to exist for one. This is true in ACTUAL PRACTICE in Scientology.

REALITY is the way things appear. REALITY IS APPARENCY. To do anything about reality, one must search into and discover what underlies the APPARENCY. Of what does REALITY consist (what is Reality composed of)? We SEE an APPARENCY which has the CYCLE OF ACTION of CREATE-SURVIVE-DESTROY. More basically (fundamentally, underlying experience) this CYCLE OF ACTION contains nothing but CREATION.

If one stops making something, it no longer exists. If one ceases to create, there is nothingness. When one creates something or beholds something which is created, that thing is still being created. Even if one is creating something with his left hand and has forgotten about it with his right hand, the thing still exists. In other words one can create something without knowing it is still being created. Then he seeks to DESTROY it by a counter-creation (a creation against it). The result is a chaos created by two opposing creations.

LET US BE PRACTICAL. A science is not a science unless it is practical. A theory is no good unless it works. All the fancy and beautiful theory in the world is useless unless it has a use or a workability. Is this CYCLE OF ACTION THEORY USEFUL? It is. So long as we believe that we have to destroy with force in order to destroy at all, as long as we think in terms of destruction, we have chaos.

There is CREATING AND KNOWING ONE IS CREATING. There is CREATING AND NOT KNOWING ONE IS CREATING. When one drives a car or a cart he does many things (performs many acts) which he is not AWARE OF (conscious of, know about) and these we call AUTOMATIC ACTIONS. One is doing something and is not aware that he is doing it. He starts to create something, then places this thought still active beyond his own reach and the creation continues to occur. KNOWINGLY CREATING SOMETHING is always the first condition. One can then purposefully CONTINUE THE CREATION UNKNOWINGLY. Everything he is doing knowingly or unknowingly he is doing here and now, in the present instant, in present time. He KNOWINGLY STARTED THE CREATION in some PAST moment. But the Creation is being done in the present moment. To stop any creation it can be established that one once knew he was creating it, and that thought found and made known again, OR ONE CAN SIMPLY CREATE NEWLY AND CONSCIOUSLY WHAT HE IS ALREADY CREATING UNCONSCIOUSLY (unknowingly). In either case the creation stops. The WRONG WAY is to start a new creation to counter against the old creation; when one does this he gets confusion and chaos.

FOR EXAMPLE a man has a bad leg. He is trying to “get well.” He seeks then to create a good leg. He goes to doctors and wants to be healed. The treatment is difficult and usually

somewhat unsuccessful in the case of a very severely crippled leg. SOMETHING is creating a bad leg. Against this he is creating a good leg. The result is confusion and a bad leg. BUT a THIRD creativeness is present. First something was creating, we hope, a good leg. Then a counter-creation (such as an accident to his leg) counter-created a bad leg. Now he is trying to counter-create again a good leg. The result is to wipe out THE ORIGINAL GOOD LEG since THAT IS THE CREATION HE IS TAKING OVER AND EXPOSING WITH HIS EFFORTS TO GET WELL. He wants a good leg. The trouble with him is the counter-creation of a bad leg. The test is factual. Have him create (by a certain Scientology process) bad legs until the countercreation of bad legs is wiped out and the ORIGINAL CREATION OF A GOOD LEG WILL REAPPEAR. This only fails when there is no original creation of a good leg, when this is gone.

FOR EXAMPLE a man has a job. He works at it. That is to say he create create-creates a job throughout the days, weeks and years. As long as he makes a job, the job exists. One day he DEPENDS upon (takes for granted) this job. He no longer creates it. It ceases to exist. He has no job. The APPARENCY is that he loafed (became lazy) and was discharged. The ACTUALITY is that he no longer created a job and so didn't have one.

FOR EXAMPLE a man depends upon a woman to keep his house for him. One day he no longer has a woman. He can't keep house EVEN THOUGH BEFORE HE MARRIED THE WOMAN HE COULD KEEP HOUSE.

FOR EXAMPLE a man is sane. He gets the idea (creates the idea) that it would be better to be insane. He starts to go insane (having created it) and then does numberless things in order to stay sane. Here he was already creating the state of sanity. He counter-created insanity. He then counter-created sanity against insanity.

CREATION IN THIS WORK may be thought to exclude God. We are here considering only those things which MAN or Man as a spirit can make or manufacture or think. The subject of WHO or WHAT is doing the creation does not invalidate the cycle. This is a work on the subject of the mind, not a work on the subject of the Supreme Being.

There are many tests for these principles in SCIENTOLOGY. Such tests come under the heading of PROCESSING.

SCIENTOLOGY
TRANSLATOR'S EDITION

by L. Ron Hubbard, Ph.D., C.E.

Continued from PAB 82

THE CONDITIONS OF EXISTENCE

There are three conditions (circumstances, qualities) of existence (apparency, reality, livingness).

These three conditions comprise (make up, constitute) life.

They are BE, DO and HAVE.

THE CONDITION OF BEING is defined as the assumption (choosing) of a category of identity. It could be said to be the role in a game and an example of beingness could be one's own name. Another example would be his profession. Another example would be his physical characteristics. Each or all of these things could be called his *beingness*. Beingness is assumed by oneself or given to oneself, or is attained. For example, in the playing of a game each player has his own beingness.

THE SECOND CONDITION OF EXISTENCE IS DOING. By doing we mean action, function, accomplishment, the attainment of goals, the fulfilling of purpose, or any change of position in space.

THE THIRD CONDITION IS HAVINGNESS. By havingness we mean owning, possessing, being capable of commanding, positioning, taking charge of objects, energies or spaces.

The essential definition of having is to be able to touch or permeate or to direct the disposition of.

The game of life demands that one assume a beingness in order to accomplish a doingness in the direction of havingness.

These three conditions are given in an order of seniority (importance) where life is concerned. The ability to be is more important than the ability to do, the ability to do is more important than the ability to have. In most people all three conditions are sufficiently confused (chaotic, baffling) that they are best understood in reverse order.

When one has clarified (brought order into) the idea of possession or havingness, one can then proceed to clarify doingness for general activity, and when this is done one understands beingness or identity.

It is an essential to a successful existence that each of these three conditions be clarified and understood. The ability to assume or to grant (give, allow) beingness is probably the highest of human virtues. It is even more important to be able to permit (allow) other people to have beingness than to be able oneself to assume it.

THE EIGHT DYNAMICS

As one looks out across the confusion which is life or existence to most people, one can discover eight main divisions, to each one of which apply the conditions of existence. Each division contains a cycle of action.

There could be said to be eight urges (drives, impulses) in life. These we call DYNAMICS. These are motives or motivations. We call them THE EIGHT DYNAMICS.

There is no thought or statement here that any one of these eight dynamics is more important than the others. While they are categories (divisions) of the broad game of life they are not necessarily equal to each other. It will be found amongst individuals that each person stresses one of the dynamics more than the others or may stress a combination of dynamics as more important than other combinations.

The purpose in setting forth this division is to increase an understanding of life by placing it in compartments. Having subdivided existence in this fashion each compartment can be inspected as itself and by itself in its relationship to the other compartments of life. In working a puzzle it is necessary to first take pieces of similar color or character and place them in groups. In studying a subject it is necessary to proceed in an orderly fashion. To promote this orderliness it is necessary to assume for our purposes these eight arbitrary compartments of life.

THE FIRST DYNAMIC—is the urge toward existence as one's self. Here we have individuality expressed fully.

THE SECOND DYNAMIC—is the urge toward existence as a sexual or bisexual activity. This dynamic actually has two divisions. Second Dynamic (a) is the sexual act itself and the Second Dynamic (b) is the family unit including the rearing of children.

THE THIRD DYNAMIC—is the urge toward existence in groups of individuals. Any group or part of an entire class could be considered to be a part of the Third Dynamic. The school, the society, the town, the nation are each part of the Third Dynamic and each one is a Third Dynamic.

THE FOURTH DYNAMIC—is the urge toward existence as mankind. Whereas the white race would be considered a Third Dynamic, all the races would be considered the Fourth Dynamic.

THE FIFTH DYNAMIC—is the urge toward existence of the animal kingdom. This includes all living things whether vegetable or animal. The fish in the sea, the beasts of the field, or of the forest, grass, trees, flowers or anything directly and intimately motivated by life.

THE SIXTH DYNAMIC—is the urge toward existence as the physical universe. The physical universe is composed of matter, energy, space and time. In Scientology we take the first letter of each of these words and coin a word MEST.

THE SEVENTH DYNAMIC—is the urge toward existence as or of spirits. Anything spiritual, with or without identity, would come under the heading of the Seventh Dynamic.

THE EIGHTH DYNAMIC—is the urge toward existence as Infinity. This is also identified as the Supreme Being. It is carefully observed here that the *science* of Scientology does not intrude into the Dynamic of the Supreme Being. This is called the Eighth Dynamic because the symbol of infinity stood upright makes the numeral “8.”

The earlier science Dianetics included Dynamics one to four. Scientology embraces Dynamics one through seven as known territory, scientifically demonstrated and classified.

The difficulty of stating the exact definitions of the Dynamics is entirely verbal. Originally the Dynamics read “the urge towards survival as—.” As the science developed it became apparent that survival was only an apperency and only one facet of existence. Both the cycle of action and the three conditions of existence belong in each Dynamic.

A further manifestation of these Dynamics is that they could best be represented as a series of concentric circles wherein the First Dynamic would be the center and each new Dynamic would be successively a circle outside it. The idea of space adjoining enters into these Dynamics.

The basic characteristic of the individual includes his ability to so expand into the other Dynamics, but when the Seventh Dynamic is reached in its entirety one will only then discover the true First Dynamic.

As an example of use of these Dynamics one discovers that a baby at birth is not perceptive beyond the First Dynamic, but as the child grows and interests extend can be seen to embrace other Dynamics. As a further example of use, a person who is incapable of operating on the Third Dynamic is incapable at once of being a part of a team and so might be said to be incapable of a social existence.

As a further comment upon the Eight Dynamics, no one of these Dynamics from One to Seven is more important than any other one of them in terms of orienting the individual. While the Dynamics are not of equal importance, one to the next, the ability of an individual to assume the beingness, doingness and havingness of each Dynamic is an index to his ability to live.

The Eight Dynamics are used in Scientology communication and should be perfectly learned as part of the language of Scientology. The abilities and shortcomings of individuals can be understood by viewing their participation in the various Dynamics.

THE A-R-C TRIANGLE

There is a triangle of considerable importance in Scientology and understanding of it gives a much greater understanding of life, and an ability to use it.

The A-R-C triangle is the keystone of living associations. This triangle is the common denominator to all of life’s activities. The first corner of the triangle is called Affinity. The basic definition of affinity is the consideration of distance, whether good or bad. The most basic function of complete affinity would be the ability to occupy the same space as something else. The word “affinity” is here used to mean love, liking or any other emotional attitude. Affinity is conceived in Scientology to be something of many facets. Affinity is a variable quality. Affinity is here used as a word with the context “degree of liking.” Under affinity we have the various emotional tones ranged from the highest to the lowest and these are, in part, serenity (the highest level), enthusiasm (as we proceed downward towards the baser affinities), conservatism, boredom, antagonism, anger, covert hostility, fear, grief, apathy. Below apathy affinity proceeds into solidities such as matter. Affinity is conceived to be comprised first of thought, then of emotion which contains energy particles, and then as a solid.

The second corner of the triangle is Reality. Reality could be defined as “that which appears to be.” Reality is fundamentally agreement. What we agree to be real is real.

The third corner of the triangle is Communication. In human relationships this is more important than the other two corners of the triangle in understanding the composition of human relations in this universe. Communication is the solvent for all things. It dissolves all things.

The interrelationship of the triangle becomes apparent at once, when one asks, “Have you ever tried to talk to an angry man?” Without a high degree of liking and without some basis of agreement there is no communication. Without communication and some basis of emotional response there can be no reality. Without some basis for agreement and communication there can be no affinity. Thus we call these three things a triangle. Unless we have two corners of a triangle, there cannot be a third corner. Desiring any corner of the triangle, one must include the other two.

The triangle is conceived to be very spacious at the level of serenity and completely condensed at the level of matter. Thus to represent a scale for use one would draw a large triangle with a high part of the scale and succeeding small triangles down to a dot at the bottom of the scale.

Affinity, reality and communication are the basis of the Scientology Tone Scale which gives a prediction of human behavior as contained in the book *Science of Survival*, obtainable from the HASI.

As has already been noted, the triangle is not an equilateral triangle. Affinity and Reality are very much less important than Communication. It might be said that the triangle begins with Communication which brings into existence Affinity and Reality.

The most primitive Scientology definition of Communication is “Cause-Distance Effect.” The fundamental manual of Communication is *Dianetics, 1955!*, obtainable from the HASI.

If you would continue a strong and able communication with someone there must be some basis for agreement. There must be some liking for the person and then communication can exist. We can see, then, that simple talking and writing randomly without knowledge of this would not necessarily be communication. Communication is essentially something which is sent and which is received. The intention to send and the intention to receive must both be present in some degree before an actual communication can take place. Therefore one could have conditions which appear to be communications which were not.

Original with Scientology, as are all these concepts, the A-R-C triangle understood is an extremely useful tool or weapon in human relationships. For instance, amongst the A-R-C triangle laws a communication to be received must approximate the affinity level of the person to whom it is directed.

As people descend the tone scale they become more and more difficult to communicate with, and things with which they will agree become more and more solid; thus we have friendly discourses high on the scale and war at the bottom. Where the affinity level is hate the agreement is solid matter and the communication . . . bullets.

SOME IMPORTANT AUDITING DON'TS

It is important for all auditors to know a few don'ts in conjunction with the do's recently discovered. Havingness has been isolated as the entering wedge for any and all cases. It has been discovered that when havingness was concentrated upon, in various processes, intelligence quotient gained and personality bettered. The “Terrible Trio” as described in a recent PAB is easily the best opening wedge in a case at this time. There are, of course, some

additional havingness processes under test but none of them have to date been thoroughly validated as has the “Terrible Trio.”

Primary auditing “Don’ts” whether for staff auditor or for the professional auditing room all concern themselves with a conservation of havingness in the preclear in the early stages of auditing as well as the later ones. Some very astonishing things have been discovered. This follows:

1. Taking an inventory or prolonged two-way communication in opening a case have been discovered to reduce havingness sufficiently to worsen an occasional case. If immediately after the inventory two-way comm a scientometric battery was given, it would be found that the case had reduced in IQ and personality qualities. Therefore, we can assume that in some cases prolonged two-way comm and inventory at case beginning have dropped the case level, and although the case was then run many hours on havingness processes, all that happened was that the case regained the lost ground and so the final scientometric result showed “no change in case,” although the case had reduced and had come back. Therefore the rudiments should be established rapidly without too much talking delay and a direct havingness process should be entered upon at once. In the case of a very pressing present time problem it is, of course, a benefit to reduce the problem thoroughly by getting problems of comparable magnitude. This, in itself, in a way is a havingness process.
2. The “Terrible Trio” run outside rather than in the auditing room has been found, in five separate cases, to produce a collapse of case. The introduction of so much space into havingness reduces havingness faster than it is built up. Therefore, the “Terrible Trio” should be run in the auditing room. Not-Knowingness about people and separateness processes, oddly enough, seem to be runnable exteriorly without involving this factor.
3. Lying processes such as **“Tell me a lie about that wall”** are not always havingness processes. It is left to accident which side of the counter-creation is being run by the preclear so that at times the process gets gains and sometimes does not get gains. Running **“Problem of comparable magnitude”** assures that one is running the creation which is countering the survival of the preclear. This is in no way dangerous. But creative processes in general are not necessarily havingness processes unless they are run “against the preclear,” which is to say unless they are run as counter-creations to the creations of the preclear. **“Invent something to restrict you”** would be superior to **“Tell me a lie about that wall.”**
4. The auditor should be particularly careful to inquire into how or what the preclear is doing. The “Terrible Trio” has failed on occasion, but when the case has been looked into by another auditor, it has been discovered that the process was not understood by the preclear and was not “the least” by the auditor. An example of this was a case which was permitted to run the “Terrible Trio” for many hours without gain which, on investigation, demonstrated that the preclear was assuming that she could have objects similar to the objects she was looking at if she bought them and on this via she was continuing the process. The auditor did not talk with the preclear enough to understand what the preclear was actually doing with the process. One must not forget that golden maxim “Find out what the preclear is doing with the command.”

CAN’T HAVE PROCESSES

Remembering the old dichotomies, it becomes obvious that if havingness is so important in auditing, negative havingness would also have its role somewhere in processes.

It could be said to be true that withheld communication is the single and sole reason for the accumulation of ridges and barriers. However, who withholds this communication? For the principle for withheld communication to exist, it must have been initiated originally by the

preclear himself. If we run communications being withheld from a preclear we hit a reduction in havingness or draw a blank. If we run the preclear withholding communication from another, we tend to profit. It is not necessarily true that havingness will gain immediately and automatically by running out the communications the preclear has withheld, for a good deal depends on how the preclear is doing the process.

Havingness could be said to be the result of withheld communication. Just as too much communication will as-is any havingness, so withholding communication will accumulate havingness. This is a sort of an automatic accumulation mechanism. It is true that a thetan can simply mock up masses—there is no reason why there should be a *modus operandi* accumulation of masses beyond the fact that there is one: withheld communication.

When a person has too little havingness he tends to conserve what havingness he has by withholding communication. You will discover that only low-havingness persons fail to acknowledge or engage in good communication. Should a low-havingness person acknowledge or originate too frequently his havingness would be reduced accordingly. He is restrained from communicating, then, by the sensations consequent to a reduction of his havingness.

Well below the level of communication as such, we have restrained havingness. This is a sub-order of withheld communication. An individual who refuses to let other individuals have things is himself apt to reduce his own havingness accordingly. The mechanism whereby this takes place is a very interesting one. We recall the “winning valence” aspect of cases. We find in Book I that the individual losing is apt to assume the valence of the person who won.

The “winning valence” is a synthetic valence. It is not actually the personality of the person who won. It is the individual’s mock-up of that person which is diminished or augmented by other people’s opinions and by one’s own postulates.

Let us conceive the following circumstance: A little baby with a habitually angry father has many times on the approach of the father stated more or less to himself, “He can’t have this body.” Yet father in the final analysis wins. The baby grows to assume, at length, the valence of father. This is a synthetic valence. It is not father’s actual personality. It is the personality the baby has observed the father to have. This synthetic valence is salted with the baby’s “can’t have” postulates. In other words, this winning valence of father is corrupted by many can’t-have postulates which were not father’s. In view of the fact that these postulates consist of forbidding the father to have the baby, the assumption of the “winning valence” of father results in the assumption of postulates that the person cannot have himself back. He is trapped by “can’t have” of his own manufacture.

Just as the baby was the cause of his own effect and just as he suffered from this, so do all winning valences forbid the return to identity, since somewhere in the anatomy of the winning valence is the individual’s own postulate that the winning valence cannot have the individual. Thus we have the continuous struggle on the part of people to “be themselves” which trouble is of little avail.

On the basis of this rationale, some tests have already been conducted, but the matter is in no wise completed. This is then given as an advanced look-in on some forward research.

Selecting categories, which is the Eight Dynamics, and selecting them as they seem to be put forward by the preclear—introducing as little arbitrary selection by the auditor as possible and leaving it up to the preclear—one asks what these categories can’t have. One does not stress “from you” but he certainly doesn’t stress what the individual himself “can’t have” for to do so would be to make the individual postulate against himself.

Let us suppose that the preclear’s a man and that the category “women” has been chosen. The auditing question would then be **“Tell me something that women can’t have.”** On

the male preclear, of course, **“Tell me something that men can’t have”** would also be runnable, since the truth of the matter is the preclear is not a male but has a male body.

On early tests it does not seem to be reductive of havingness to run this process. If this were so I would guess that the process would have to be alternated with such a process as the “Terrible Trio,” but this has not yet been necessary.

If we are trying to return the preclear to himself it would seem that “can’t have” would best assist the reassumption of one’s own identity by the above rationale.

Let me know how you progress with this.

TEACHING THE BASIC COURSE

All qualified auditors should now be running a Basic Course in Scientology. It has been found on test that these courses, through supplying stable data to a student, align many of his confusions and so give rise to an increase in IQ (Intelligence Quotient) and an improvement in the personality traits. *This is the way to get a better world* and also would give rise to a great deal of interest in your area in the subject. If you have not started your Basic Course you should get moving on this right away.

THE REASON WHY

Life can best be understood by likening it to a game. Since we are exterior to a great number of games we can regard them with a detached eye. If we were exterior to life instead of being involved and immersed in the living of it, it would look to us much like games look to us from our present vantage point.

Despite the amount of suffering, pain, misery, sorrow and travail which can exist in life, the reason for existence is the same reason as one has to play a game—interest, contest, activity and possession. The truth of this assertion is established by an observation of the elements of games and then applying these elements to life itself. When we do this we find nothing left wanting in the panorama of life.

By game we mean contest of person against person, or team against team. When we say games we mean such games as baseball, polo, chess or any other such pastime. It may at one time have struck you as peculiar that men would risk bodily injury in the field of play just for the sake of “amusement.” So it might strike you as peculiar that people would go on living or would enter into the “game of life” at the risk of all the sorrow, travail, and pain just to have something to do. Evidently there is no greater curse than total idleness. Of course there is that condition where a person continues to play a game in which he is no longer interested.

If you will but look about the room and check off items in which you are not interested, you will discover something remarkable. In a short time you will find that there is nothing in the room in which you are not interested. You are interested in everything. However, disinterest itself is one of the mechanisms of play. In order to hide something it is only necessary to make everyone disinterested in the place where the item is hidden. Disinterest is not an immediate result of interest which has worn out. Disinterest is a commodity in itself. It is palpable, it exists.

By studying the elements (factors) of games (contests) we find ourselves in possession of the elements of life.

Life is a game. A game consists of *freedom, barriers and purposes*. This is a scientific fact, not merely an observation.

Freedom exists amongst barriers. A totality of barriers and a totality of freedom alike are no-game conditions. Each is similarly cruel. Each is similarly purposeless.

Great revolutionary movements fail. They promise unlimited freedom. That is the road to failure. Only stupid visionaries chant of endless freedom. Only the afraid and ignorant speak of and insist upon unlimited barriers.

When the relation between freedom and barriers becomes too unbalanced, an unhappiness results.

“Freedom from” is alright only so long as there is a place to be free to. An endless *freedom from* is a perfect trap, a fear of all things.

Barriers are composed of inhibiting (limiting) ideas, space, energy, masses and time. Freedom in its entirety would be a total absence of these things—but it would also be a freedom without thought or action, an unhappy condition of total nothingness.

Fixed on too many barriers, man yearns to be free. But launched into total freedom he is purposeless and miserable.

There is *freedom amongst* barriers. If the barriers are known and the freedoms are known there can be life, living, happiness, a game.

The restrictions of a government, or a job, give an employee his freedom. Without known restrictions, an employee is a slave, doomed to the fears of uncertainty in all his actions.

Executives in business and government can fail in three ways and thus bring about a chaos in their department. They can:

1. Seem to give endless freedom.
2. Seem to give endless barriers.
3. Make neither freedom nor barriers certain.

Executive confidence, therefore, consists of imposing and enforcing an adequate balance between their people's freedom and the unit's barriers and in being precise and consistent about those freedoms and barriers. Such an executive, adding only in himself initiative and purpose, can have a department with initiative and purpose.

An employee buying and/or insisting upon *freedom only* will become a slave. Knowing the above facts he must insist upon a workable balance between freedom and barriers.

An examination of the dynamics above will demonstrate the possibility of a combination of teams. Two third dynamics can engage one another as teams. The first dynamic can ally itself with the fifth dynamic against, let us say, the sixth dynamic and so have a game. In other words, the dynamics are an outline of possible teams and interplays. As everyone is engaged in several games an examination of the dynamics will plot for him and clarify for him the various teams he is playing upon. If an individual can discover that he is only playing on the first dynamic and that he belongs to no other team, it is certain that this individual will lose, for he has before him seven remaining dynamics. And the first dynamic is seldom capable of besting by itself all the remaining dynamics. In Scientology we call this condition the “only one.” Here is self-determinism in the guise of selfish determinism and here is an individual who will most certainly be overwhelmed. To enjoy life one must be some part of life.

There is the principle in Scientology called pan-determinism. This could be loosely defined as determining the activities of two or more sides in a game simultaneously. For instance, a person playing chess is being self-determined and is playing chess against an opponent. A person who is pan-determined on the subject of chess could play both sides of the board. One is pan-determined about any game to which he is senior. He is self-determined only in any game to which he is junior. For instance, a general of an army is pan-determined concerning an

argument between two privates or even two companies of his command. He is pan-determined in this case, but when he confronts another army led by another general, he becomes self-determined. The game in this wise could be said to be larger than himself. The game becomes even larger than this when the general seeks to play the parts of all the political heads which should be above him. This is the main reason why dictatorship doesn't work. It is all but impossible for one man to be pan-determined about the entire system of games which comprise a nation. He starts taking sides and then to that degree becomes much less than the government which he is seeking to run.

It has been stylish in past ages to insist only upon freedom. The French Revolution furnishes an excellent example for this. In the late part of the 18th century, the nobles of France became so self-determined against the remainder of the country and were so incapable of taking the parts of the populace that the nobles were destroyed. Immediately the populace itself sought to take over the government and, being trained and being intensely antipathetic to any and all restraints, their war cry became "Freedom." They had no further restrictions or barriers. The rules of government were thrown aside. Theft and brigandage took the place of economics. The populace, therefore, found itself in a deeper trap and discovered itself to be involved with a dictatorship which was far more restrictive than anything they had experienced before the Revolution.

Although man continually uses "Freedom" for his war cry he only succeeds in establishing further entrapment for himself. The reason for this is a very simple one. A game consists of freedom and barriers and purposes. When man drops the idea of restrictions or barriers he loses at once control over barriers. He becomes self-determined about barriers and not pan-determined, thus he cannot control the barriers. The barriers left uncontrolled then and there trap him.

The dwindling spiral of the apparency create-survive-destroy comes about directly that man shuns barriers. If he considers all restrictions and barriers his enemies he is of course refusing to control them in any way and thus he starts his own dwindling spiral. A race which is educated to think in terms of freedom only is very easily entrapped. No one in the nation will take responsibility for restrictions, therefore restrictions apparently become less and less. As these restrictions lessen so lessens the freedom of the individual. One cannot be free from a wall unless there is a wall. Lacking any restrictions life becomes purposeless, random, chaotic.

A good manager must be capable of taking responsibility for restrictions, in that freedom, to exist, must have barriers. A failure to take initiative on the subject of restrictions or barriers causes these things to arise all by themselves and exist without consent or direction.

There are various states of mind which bring about happiness. That state of mind which insists only upon freedom can bring about nothing but unhappiness. It would be better to develop a thought pattern which looked for new ways to be entrapped and things to be trapped in than to suffer the eventual total entrapment of dwelling upon freedom only. A man who is willing to accept restrictions and barriers and is not afraid of them is free. A man who fights restrictions and barriers will always be trapped.

As it can be seen in any game, purposes become counter-posed. There is the matter of purpose-counter-purpose in almost any game played in a field with two teams. One team has the idea of reaching the goal of the other, and the other has the idea of reaching the goal of the first. Their purposes are at war and this warring of purposes makes a game.

The war of purposes gives us what we call problems. A problem has the anatomy of purposes. A problem consists of two or more purposes opposed. It does not matter what problem you face or have faced, the basic anatomy of that problem is purpose-counter-purpose.

In actual testing in Scientology it has been discovered that a person begins to suffer from problems when he does not have enough of them. There is the old saw (maxim) that if you

want a thing done give it to a busy man to do. Similarly, if you want a happy associate make sure that he is a man who can have lots of problems.

From this we get the oddity of a high incidence of neurosis in the families of the rich. These people have very little to do and have very few problems. The basic problems of food, clothing and shelter are already solved for them. We would suppose, then, if it were true that an individual's happiness depended only upon his freedom, these people would be happy. However, they are not happy. What brings about their unhappiness? It is the lack of problems. Although successful processing in Scientology would depend upon taking all three elements of games into consideration—and indeed that is the secret of bettering people: taking freedom, barriers and purposes into consideration and balancing them—it could be said that you could make a man well simply by sitting down with him and asking him to invent problems, one after the other. The invention of synthetic problems would be found to free his mind and make him more able. Of course, there is another factor involved in this in that it is he who is inventing the problems and therefore he is becoming pan-determined about problems rather than being in one place with all problems opposed to him.

An unhappy man is one who is considering continually how to become free. One sees this in the clerk who is continually trying to avoid work. Although he has a great deal of leisure time he is not enjoying any part of it. He is trying to avoid contact with masses and energies and spaces. He eventually becomes trapped in some sort of a lethargy. If this man could merely change his mind and start “worrying” about how he could get more work to do, his happiness level would increase markedly. One who is plotting continually how to get out of things will be miserable. One who is plotting how to get into things has a much better chance of becoming happy.

There is, of course, the matter of being forced to play games in which one has no interest—a war into which one is drafted is an excellent example of this. One is not interested in the purposes of the war and yet one finds himself fighting it. Thus there must be an additional element and this element is “the power of choice.”

One could say, then, that life is a game and that the ability to play a game consists of tolerance for freedom and barriers and an insight into purposes, with the power of choice over participation.

These four elements—freedom, barriers, purposes and power of choice—are the guiding elements of life. There are only two factors above these and both of them are related to these. The first is the ability to create with of course its negative, the ability to uncreate, and the second is the ability to make a postulate (to consider, to say a thing and have it be true). This, then, is the broad picture of life, and in bringing life into focus and in making it less confusing these elements are used for the analysis.

THE PARTS OF MAN

The individual man is divisible (separable) into three parts (divisions).

The first of these is the *spirit*, called in Scientology the *thetan*.

The second of these parts is the *mind*.

The third of these parts is the *body*.

Probably the greatest discovery of Scientology and its most forceful contribution to the knowledge of mankind has been the isolation, description and handling of the human spirit. Accomplished in 1951 in the month of July, in Phoenix, Arizona, it was established along scientific rather than religious or humanitarian lines that that thing which is the person, the personality, is separable from the body and the mind at will and without causing bodily death or mental derangement.

In ages past there has been considerable controversy concerning the human spirit or soul, and various attempts to control man have been effective in view of his almost complete ignorance of his own identity. Latterly, spiritualists isolated from the person what they called the astral body and with this they were able to work for various purposes of their own. In Scientology the spirit itself was separated from what the spiritualists called the astral body and there should be no confusion between these two things. As you know that you are where you are at this moment, so you would know if you, a spirit, were detached from your mind and body. Man has not discovered this before because, lacking the technologies of Scientology, he had very little reality upon his detachment from his mind and body, therefore he conceived himself to be at least in part a mind and a body. The entire cult of communism is based upon the fact that one lives only one life, that there is no hereafter and that the individual has no religious significance. Man at large has been close to this state for at least the last century. The state (condition) is of a very low order, excluding as it does all self-recognition.

The thetan (spirit) is described in Scientology as having no mass, no wavelength, no energy and no time or location in space except by consideration or postulate. The spirit then is not a thing. It is the creator of things.

The residence of the thetan is in the skull or near the body. A thetan can be in one of four conditions. The first would be entirely separate from a body or bodies, or even from this universe. The second would be near a body and knowingly controlling the body. The third would be in the body (the skull) and the fourth would be an inverted condition whereby he was compulsively away from the body and could not approach it. There are degrees (subdivisions) of each one of these four states (conditions). The most optimum of these conditions from the standpoint of man is the second.

A thetan is subject to deterioration. This is at first difficult to understand since the entirety of his activity consists of considering or postulating. He uses, through his postulates, various methods of controlling a body. That he does deteriorate is manifest, but that he can at any moment return to an entirety of his ability is also factual. In that he associates beingness with mass and action, he does not consider himself as having an individual identity or name, unless he is connected with one or more of the games of life.

The processes of Scientology can establish this for the individual with greater or lesser rapidity and one of the many goals of processing in Scientology is to “exteriorize” the individual and place him in the second condition above, since it has been discovered that he is happier and more capable when so situated.

The *mind* is a network of communications and pictures, energies and masses, which are brought into being by the activities of the thetan versus the physical universe or other thetans. A thetan establishes various systems of control so that he can continue to operate a body and through the body operate things in the physical universe, as well as other bodies. The most obvious portion of the mind is recognizable by anyone not in serious condition. This is the “mental image picture.” In Scientology we call this mental image picture *a facsimile* when it is a “photograph” of the physical universe sometime in the past. We call this mental image picture a *mock-up* when it is created by the thetan or for the thetan and does not consist of a photograph of the physical universe.

Various phenomena connect themselves with this entity called the mind. Some people closing their eyes see only blackness, some people see pictures. Some people see pictures made by body reactions. Some people see only black screens; others see golden lines; others see spaces; but the keynote of the entirety of the system called the mind is postulate and perception.

The thetan receives, by the communication system called the mind, various impressions including direct views of the physical universe. In addition to this he receives impressions from past activities, and most important, he himself, being close to a total knowingness, conceives things about the past and future which are independent of immediately present stimuli. The mind is not in its entirety a stimulus-response mechanism as old Marxist psychology would have one believe. The mind has three main divisions. The first of these could be called the analytical mind. The second, the reactive mind, and the third, the somatic mind.

The analytical mind combines perceptions of the immediate environment, of the past (via pictures) and estimations of the future into conclusions which are based upon the realities of situations. The analytical mind combines the potential knowingness of the thetan with the conditions of his surroundings and brings him to independent conclusions. This mind could be said to consist of visual pictures, either of the past or of the physical universe, monitored by and presided over by the knowingness of a thetan. The keynote of the analytical mind is awareness: one knows what one is concluding and knows what he is doing.

The reactive mind is a stimulus-response mechanism, ruggedly built, and operable in trying circumstances. The reactive mind never stops operating. Pictures, of a very low order, are taken by this mind of the environment even in deep states of unconsciousness. The reactive mind acts below the level of consciousness. It is a literal stimulus-response mind. Given a certain stimulus, it gives a certain response.

While it is an order of thinkingness, its ability to conclude rationally is so poor that we find in the reactive mind those various aberrated impulses which are gazed upon as oddities of personality, eccentricities, neuroses and psychoses. It is this mind which stores up all the bad things that have happened to one and throws them back to him again in moments of emergency or danger so as to dictate his actions along lines which have been considered "safe" before. As there is little thinkingness involved in this, the courses of action dictated by the reactive mind are often not safe, but highly dangerous.

The reactive mind is entirely literal in its interpretation of words. As it takes pictures and receives impressions during moments of unconsciousness, a phrase uttered when a blow is struck is likely to be literally interpreted by the reactive mind and become active upon the individual at later times. The mildest stage of this would be arduous training, wherein a pattern is laid into the mind for later use under certain given stimuli.

A harsh and less workable level is the hypnotic trance condition to which the mind is susceptible. Made impressionable by fixed attention, words can be immediately implanted into the reactive mind which become operable without further reason at later times.

An even lower level in the reactive mind is that one associated with blows, drugs, illness, pain and other conditions of unconsciousness. Phrases spoken over an anaesthetized person can have a later effect upon that person. It is not necessarily true that each and every portion of an operation is painstakingly "photographed" by the reactive mind of the unconscious patient, but it is true that a great many of these stimuli are registered. Complete silence in the vicinity of a person under anaesthetic or a person who is unconscious or in deep pain is mandatory if one would preserve the mental health of that person or patient afterwards.

Probably the most therapeutic action which could occur to an individual would be, under Scientology processing, the separation of the thetan from the mind so that the thetan, under no duress and with total knowingness, could view himself and his mind and act accordingly. However, there is a type of exteriorization which is the most aberrative of all traumatic (mentally injurious) actions. This is the condition when an individual is brought, through injury or surgery or shock, very close to death so that he exteriorizes from body and mind. This exteriorization under duress is sudden, inexplicable, and is in itself very shocking, and when this has occurred to an individual it is certain that he will suffer mentally from the experience afterwards.

It could be said that when the reactive mind contains these sudden shocks of exteriorization under duress, attempts to exteriorize the individual later by Scientology are more difficult. However, modern processing has overcome this. The phenomenon of exteriorization under duress is accompanied at times by energy explosions in the various facsimiles of the mind and these cross-associate in the reactive mind; therefore, people become afraid of exteriorization, and at times people are made ill simply by discussing the phenomena, due to the fact that they have exteriorized under duress during some operation or accident.

Exteriorization under duress is the characteristic of death itself; therefore, exteriorization or the departure of the soul is generally associated with death in the minds of most people. It is not necessarily true that one is dead because he exteriorizes, and it is definitely not true that exteriorization not accompanied by a shock, pain or duress is at all painful; indeed it is quite therapeutic.

The third portion of the mind is the somatic mind. This is an even heavier type of mind than the reactive mind since it contains no thinkingness and contains only actingness. The impulses placed against the body by the thetan through various mental machinery arrive at the voluntary, and involuntary, and glandular levels. These have set methods of analysis for any given situation and so respond directly to commands given.

Unfortunately, the somatic mind is subject to each of the minds higher in scale above it and to the thetan. In other words the thetan can independently affect the somatic mind. The

analytical mind can affect the somatic mind. The reactive mind can affect the somatic mind. Thus we see that the neurons, the glandular system, the muscles and masses of the body are subject to various impulses, each one of a lower order than the next. Thus it is not odd to discover what we call “psychosomatic” illness. A condition exists here where the thetan does not have an awareness of burdening the somatic mind with various commands or derangements. Neither does the thetan have an awareness of his own participation in the analytical mind causing this action against the body.

In that the thetan is seldom aware of the reactive mind, it is possible then for the reactive mind, with its stimulus-response content, to impinge itself directly, and without further recourse or advice, upon the neurons, muscles and glandular system of the body. In that the reactive mind can hold a fixed command in place, causing a derangement in the somatic mind, it is possible then for illness to exist, for bizarre pains to be felt, for actual physical twists and aberrations to occur, without any conscious knowledge on the part of the thetan. This we call physical illness caused by the mind. In brief, such illness is caused by perceptions received in the reactive mind during moments of pain and unconsciousness.

Whether the facsimile in the mind is received while the thetan is awake or unconscious, the resulting mass of the energy picture is energy just as you see energy in an electric light bulb or from the flames of a fire. At one time it was considered that mental energy was different than physical energy. In Scientology it has been discovered that mental energy is simply a finer, higher level physical energy. The test of this is conclusive in that a thetan “mocking up” (creating) mental image pictures and thrusting them into the body can increase the body mass and by casting them away again can decrease the body mass. This test has actually been made and an increase of as much as thirty pounds, actually measured on scales, has been added to, and subtracted from, a body by creating “mental energy.” Energy is energy. It has different wavelengths and different characteristics. The mental image pictures are capable of reacting upon the physical environment, and the physical environment is capable of reacting upon mental image pictures. Thus the mind actually consists of spaces, energies and masses of the same order as the physical universe, if lighter and different in size and wavelength. For a much more comprehensive picture of the mind one should read *The Original Thesis* by L. Ron Hubbard and *Dianetics: The Modern Science of Mental Health* by the same author. These were written before the discovery of the upper levels of beingness were made and are a very complete picture of the mind itself, its structure and what can be done to it and with it.

The third part of man is the physical body. This can best be studied in such things as *Gray's Anatomy* and other anatomical texts. This is the province of the medical doctor. The body is a purely structural study, and the actions and reactions amongst its various structures are complex and intensely interesting.

When Scientology founded Bio-physics, it did so because of the various discoveries which had accumulated concerning mental energy in its reaction against physical energy, and the activities which took place in the body because of these interactions. Bio-physics only became feasible when it was discovered in Scientology that a fixed electrical field existed surrounding a body entirely independent of, but influenceable by, the human mind. The body exists in its own space. That space is created by “anchor points” (points which are anchored in a space different to the physical universe space around a body). The complexity of these anchor points can cause an independent series of electronic flows which can occasion much discomfort to the individual. The balance structure of the body and even its joint action and physical characteristics can be changed by changing this electrical field which exists at a distance from, or within, the body.

The electrical field is paramount and monitors the actual physical structure of the body. Thus the body is not only influenced by the three minds, it is influenced as well by its own electrical field. An expert Scientologist can discover for the average person this field, and can bring about its adjustment, although this is very far from the primary purpose of the Scientologist.

The use of electrical shocks upon a body for any purpose is therefore very dangerous and is not to be condoned by sensible men. Of course, the use of electrical shock was never intended to be therapeutic, but was intended only to bring about obedience by duress and, as far as it can be discovered, to make the entirety of insanity a horror. Electrical shock deranges the electronic field in the vicinity of the body and is almost always succeeded by bad health or physical difficulties and never does otherwise than hasten the death of the person. It has been stated by people using electric shock that if they were denied euthanasia (the right to kill people who were considered to be a burden on a society) they would at least use partial euthanasia in the form of electric shock, brain surgery and drugs. These treatments in some large percentage of cases, however, effect euthanasia.

A knowledge of the mental and physical structure of the body would be absolutely necessary in order to treat the body, and this knowledge has not existed prior to Scientology. The medical doctor achieved many results by working purely with structure and biochemical products, and in the field of emergency surgery and obstetrics and orthopaedics he is indispensable in the society. Medicine, however, does not contain a definition for "mind" and is not expected to invade the field which belongs properly to Scientology.

These three parts of man—the thetan, the mind and the body—are each one different studies, but they influence each other markedly and continually. Of the three, the senior entity is the thetan, for without the thetan there would be no mind or animation in the body. Many speculations in the field of Para-Scientology have been made. Para-Scientology includes all of the uncertainties and unknown territories of life which have not been completely explored and explained. However, as studies have gone forward, it has become more and more apparent that the senior activity of life is that of the thetan, and that in the absence of the spirit no further life exists. In the insect kingdom it is not established whether or not each insect is ordered by a spirit or whether one spirit orders enormous numbers of insects. It is not established how mutation and evolution occur (if they do) and the general Authorship of the physical universe is only speculated upon, since Scientology does not invade the 8th dynamic.

Some facts, however, are completely known. The first of these is that the individual himself is a spirit controlling a body via a mind. The second of these is that the thetan is capable of making space, energy, mass and time. The third of these is that the thetan is separable from the body without the phenomena of death, and can handle and control a body from well outside it. The fourth of these is that the thetan does not care to remember the life which he has just lived, after he has parted from the body and the mind. The fifth of these is that a person dying always exteriorizes. The sixth of these is that a person having exteriorized then returns to a planet and procures, usually, another body of the same type of race as before.

In Para-Scientology there is much discussion about "between lives areas" and other phenomena which might have passed at one time or another for heaven or hell, but it is established completely that a thetan is immortal and that he himself cannot actually experience death and counterfeits it by forgetting. It is adequately manifest that a thetan lives again and that he is very anxious to put something on the "time track" (something for the future) in order to have something to come back to, thus we have the anxieties of sex. There must be additional bodies for the next life.

It is obvious that what we create in our societies during this lifetime affects us during our next lifetime. This is quite different than the "belief" or an idea that this occurs. In Scientology we have very little to do with forcing people to make conclusions. An individual can experience these things for himself and unless he can do so no one expects him to accept them.

The manifestation that our hereafter is our next life entirely alters the general concept of spiritual destiny. There is no argument whatever with the tenets of faith since it is not precisely stated, uniformly, by religions that one immediately goes to a heaven or hell. It is certain that an individual experiences the effect of the civilization which he has had part in creating, in his next lifetime. In other words the individual comes back. He has a responsibility for what goes on today since he will experience it tomorrow.

Sex has been overweighted in importance in old psychotherapy, a practice more or less disgraced at this time. Sex is only one of numerous creative impulses. An anxiety about sex, however, occurs when an individual begins to believe that there will not be a body for him to have during the next lifetime. The common denominator of all aberration (mental derangement) is cessation of creation; as sex is only one kind of creation and a rather low order of it, it will be seen that unhappiness could stem from various cessations of creation. Death itself is a cessation of creation. One stops creating the identity John Jones and the environment and things of John Jones. He stops because he believes he cannot, himself, continue this creation without the assistance of a body, having become dependent upon a mind and a body, the first to do his thinking for him and the second to do his acting. An individual becomes sufficiently morose on the ideas of creation that he can actually bring about the condition.

It will be seen that the three parts of man are intimately associated with *control*. The anatomy of control is start, change and stop. The loss of control takes place with the loss of pan-determinism. When one becomes too partisan, embraces himself too solidly against the remainder of the environment, he no longer controls the environment to the degree that he might and so is unable to start, change and stop the environment.

It is a scientific definition in Scientology that control consists of start, change and stop. These three manifestations can be graphed alongside of the apparent cycle of action: create, survive, destroy. Any person is somewhere along this curve. An individual who is bent mainly upon survival is intent, usually, upon changing things. An individual who is close to being destroyed is bent mainly upon stopping things. An individual who has a free heart and mind about life is bent upon creating things.

There could be three things wrong with any person, and these would be the inability to start, the inability to change, the inability to stop. Insanity, for the most part, is an inability to stop. A neurosis is a habit which, worsening, flies entirely out of control. One is stopped so often in life that he becomes an enemy of stopping and dislikes stopping so intensely that he himself will not stop things.

In the matter of the parts of man we discover that all things are initiated by the thetan so far as action, activity and behavior are concerned. After such an initiation he can be blunted or warped from course and acted upon in such a way that he becomes too fixed along one line or another and begins to suffer from these three incapacities. However, each one of the parts of man is subject to the anatomy of control.

An individual begins first by being unable himself, and without help, to start, to change, to stop. Then the mind may become prone to these disabilities and is unable to start, change, or stop at will. Then the body itself can become subject to these three disabilities and is unable to start, to change, to stop. The oddity is that an environment can so work upon an individual, however, that a thetan's body becomes disabled through no choice of his own. Similarly, the reactive mind can become disabled through no choice of either the body or the thetan, but the thetan himself, beyond observing the effect of various causes and having initiated the first thought to be there in the first place, can only become disabled by becoming too partisan, by becoming too little pan-determined, and so bringing himself into difficulties. These difficulties, however, are entirely the difficulties of consideration. As the thetan considers, so he is. In the final analysis the thetan has no problems of his own. The problems are always "other people's problems" and must exist in the mind or the body or in other people or his surroundings for him to have problems. Thus his difficulties are, in the main, difficulties of staying in the game and keeping the game going.

If a thetan can suffer from anything, it is being out-created (created against too thoroughly). The manifestations of being out-created would be the destruction of his own creations and the overpowering presence of other creations. Thus a thetan can be brought to believe that he is trapped if he is out-created.

In past dissertations on the subject of the mind and philosophies of life there was a great deal of speculation and very little actual proof. Therefore, these philosophies were creations and one philosopher was at work out-creating another philosopher. In Scientology we have this single difference: we are dealing with discoveries. The only thing created about Scientology is the actual books and works in which Scientology is presented. The phenomena of Scientology are discovered and are held in common by all men and all life forms. There is no effort in Scientology to out-create each and every thetan that comes along. It is, of course, possible to conceive Scientology as a creation, and to conceive that it is overwhelming. It should be viewed otherwise, for it is intended as an assistance to life at large, to enable life to make a better civilization and a better game. There are no tenets in Scientology which cannot be demonstrated with entirely scientific procedures.

CAUSATION AND KNOWLEDGE

Scientology as a science is composed of many axioms (self-evident truths as in geometry). There are some fifty-six of these axioms in addition to the two hundred more axioms of Dianetics which preceded the Scientology axioms.

The first axiom in Scientology is: Life is basically a static. (Definition: A static has no mass, no motion, no wavelength, no location in space or in time. It has the ability to postulate and to perceive.)

Definition: In Scientology, the word "postulate" means to cause a thinkingness or consideration. It is a specially applied word and is defined as causative thinkingness.

Axiom 2. The static is capable of considerations, postulates, and opinions.

Axiom 3. Space, energy, objects, form, and time are the result of considerations made and/or agreed upon or not by the static, and are perceived solely because the static considers that it can perceive them.

Axiom 4. Space is a viewpoint of dimension. (Space is caused by looking out from a point. The only actuality of space is the agreed upon consideration that one perceives through something and this we call space.)

Axiom 5. Energy consists of postulated particles in space. (One considers that energy exists and that he can perceive energy. He also considers that energy behaves according to certain agreed upon laws. These assumptions or considerations are the totality of energy.)

Axiom 6. Objects consist of grouped particles.

Axiom 7. Time is basically a postulate that space and particles will persist. (The rate of their Persistence is *what we measure* with clocks and the motion of heavenly bodies.)

Axiom 8. The apparency of time is the change of position of particles in space.

Axiom 9. Change is the primary manifestation of time.

Axiom 10. The highest purpose in the universe is the creation of an effect.

These first ten axioms of Scientology are the most fundamental “truths” (by which we mean commonly held considerations). Here we have thought and life and the physical universe in their relation one to the other. Regardless of further considerations, ideas, assumptions and conditions there lie beneath them these first ten truths.

It is as though one had entered into an honorable bargain with fellow beings to hold these things in common. Once this is done, or once such a “contract” or agreement exists, one has the fundamentals of a universe. Specialized considerations based on the above make one or another kind of universe.

The physical universe which we see around us and in which we live was created on these fundamentals without regard to Who created it. Its creation was agreed upon. In order to perceive it one must agree that it exists.

There are three classes of universes. There is first, foremost and most evident, the physical universe of spaces, stars, suns, land, sea, air and living forms. Then there is the other fellow’s universe which may or may not be agreed upon by his associates. This he holds to himself. The phenomenon of this universe is included in the field of the “mind” as described earlier. Then listed last here, but first perceived, is one’s own universe.

The phenomenon of universes is an interesting one since one’s own universe can be overwhelmed by the universes of others. These in Scientology we call valences (extra personalities, cells, apparent beingnesses). Valences and universes are the same thing, essentially.

For example, one while living in the physical universe can be overpowered by the universe of, let us say, father. While one still retains his own valence or identity one is yet acting or thinking or suffering or feeling somewhat like father. Even though one is by oneself there is this additional apparent beingness. Although father is absent his commands are still present, thus we get such things as “duty,” “obedience,” “training” and even “education.” Each one of these is caused by some part of another universe to a greater or lesser degree.

Regardless of how one reacts to universes, he still remains in some degree himself. It is the effort of many to struggle “to mind themselves.” The totality of this impulse is the effort to separate one’s own self as a thetan from the various universes with which he feels himself too intimately associated. One is only oppressed by the universe when he feels he can have nothing of that universe. One is only victimized by “father’s universe” when he is in protest against father. One protests against the physical universe only when he feels that he can have no part of it or does not belong in it or, as in religion, is not looked upon kindly by what he conceives to be the Creator of the physical universe.

Universes, as considered in games earlier, could be considered the playing fields of life. One plays willingly or one plays unwillingly. When one begins to play unwillingly he is apt to discover himself victimized and interiorized into the universe of some game. It is against this phenomenon that a person protests. Consider the matter of a jail. On the surface of it, as Voltaire discovered, a jail provides food and shelter and leisure time. This would seem to be the ambition of many people, but the jail provides, as well, a restriction without one’s consent. The only difference between being in jail and being the king in a castle so far as liberty is concerned is one’s own desires in the matter and one’s own ability to command one’s environment. As a king in a castle one would be causative. His will, statement, thinkingness would have an effect upon others. Being in jail one is an effect in that the thinkingness of others finds him its target. Here we have in terms of universes the most rudimentary example of cause and effect.

We must, however, assume, because it is so evident, that an individual only gets into traps and circumstances he intends to get into. Certain it is, that having gotten into such a position, he may be unwilling to remain in it, but a trap is always preceded by one's own choice of entrance. We must assume a very wide freedom of choice on the part of a thetan since it is almost impossible to conceive how a thetan could get himself trapped even though he consented to it. By actual demonstration a thetan goes through walls, barriers, vanishes space, appears anywhere at will and does other remarkable things. It must be, then, that an individual can be trapped only when he considers that he is trapped, and in view of the fact that the totality of existence is based upon his own considerations, we find that the limitations he has must have been invited to himself, otherwise they could not be eradicated by the individual under processing, since the only one that is present with the preclear is the auditor. The preclear, by processing, can resolve all of his difficulties without going and finding other persons or consulting other universes. Thus the totality of entrapment, aberration—even injury, torture, insanity and other distasteful items—is basically considerations a thetan is making and holding right now in present time. This must be the case since time itself is a postulate or consideration on his own part.

The greatest philosophical clamor or quarrel has been waged around the subject of “knowledge” and there is nothing preposterous on the subject of knowledge that cannot be found in philosophical text. The superiority and ascendancy of Scientology depends upon the fact that it has transcended this philosophical quarrel on the subject of knowingness, and Scientology contains in itself the basics of knowledge.

By knowledge we mean assured belief, that which is known, information, instruction; enlightenment, learning; practical skill. By knowledge we mean data, factors and whatever can be thought about or perceived.

The reason why knowledge has been misunderstood in philosophy is that it is only half the answer. There is no allness to knowledge. By definition, knowledge is that which is perceived or learned or taken from another source. This patently, then, means that when one learns, he is being an effect.

We see in Axiom 10 that “the highest purpose in the universe is the creation of an effect.” This is in direct contradiction to knowledge although one of course can know how to create an effect.

Opposed to knowledge we have the neglected half of existence, which is the creation of knowledge, the creation of data, the creation of thought, the causative consideration, self-evolved ideas as opposed to ideas otherwise evolved. The reason Scientology is such a fascinating study is that it takes apart the other fellow's ideas and permits one to create some of his own. Scientology gives us the common denominators of objects, energies, spaces, universes, livingness and thought itself.

There is cause and effect. Cause could be defined as emanation. It could be defined also, for purposes of communication, as source-point. If you consider a river flowing to the sea, the place where it began would be the source-point or cause and the place where it went into the sea would be the effect-point, and the sea would be the effect of the river. The man firing the gun is cause; the man receiving the bullet is effect. The one making a statement is causing a communication, the one receiving the statement is the effect of the communication.

Almost all anxieties and upsets in human relations come about through an imbalance of cause and effect.

One must be willing at once to cause new data, statements, assumptions, considerations and to receive ideas, assumptions, considerations.

So great is the anxiety of a thetan to be an effect that he closely approaches those things which can cause an effect upon him, thus a thetan becomes trapped. On the face of it so few

thetans make causative data and so many receive data that it would seem, in view of the fact that a thetan can be touched only by his own consideration, that thetans are more anxious for effects than to be cause.

It is learned under close experiment that there is nothing a thetan actually disdains on an effect level. He pretends not to like or enjoy certain effects and protests against them, but he knows very well that the mechanism of protest causes the effect to approach more closely as a general rule.

The prevailing anxiety, then, is to be an effect, not to be a cause. The entire subject of responsibility is a study of cause and effect in that a person who wants no responsibility is anxious to be an effect only and a person who can assume responsibility must also be willing to be causative.

A thetan can be swung into a "state of consideration" by observing that it is commonly held by others. This keeps him in the universe and this keeps him being effect.

Study, investigation, receiving education and similar activity are all effect activities and result in the assumption of less responsibility. Thus, while it is true that a thetan cannot actually get into trouble, he can, by agreeing with the current agreed upon thought in the universe where he finds himself, take a pattern of thinkingness which makes him less effective because he wishes to be an effect. If he feels he must gather all of his data from elsewhere, he is then the effect of knowledge, the effect of universes and postulates, and he tends to reduce his own ability to form or make knowledge.

In Scientology we can communicate in full these circumstances since we are only calling to attention the pattern which an individual already himself holds, thus we are not actually teaching him anything. We are only pointing out things he has already agreed with or himself caused.

It is not true that an individual is responsible for everything that happens to him. When an individual, wishing many interesting effects, chooses to go into many universes or traps, he can become confused about what he is doing, where he is or what it is all about. Scientology points out what can be seen or changed from a person's own viewpoint to bring about a change in his own condition.

As an example, a thetan has come to "believe" that the right way to get along in life is to do just as father did. This is an invitation to being in father's universe. Later on he changes his mind about this but he finds himself still in father's universe and doesn't like it. He would be more effective, more capable if he were not now in father's universe. Customarily in these unenlightened times he waits for death to separate himself from the environment in which he finds himself and puts up with it until then. It is not necessary to do this now that we have Scientology. He can at any moment, given the proper steerage, vacate any trap in which he finds himself and begin again on a new series of considerations.

We cannot, then, talk about knowledge as a totality. It is a single datum. The thirst for knowledge would be the thirst for other thetans' postulates and would lead one to forget that he himself has been a party to the making of these postulates and that he himself had to follow a certain course in order to put himself in reach of other thetans' postulates. (Translator's note: Lacking a proper English word for "causative thinking," the word "postulate" has been used in slight difference to its English definition. If there is a word in your language which means "self-impulsion" or "creation of a thought" use that instead of a "postulate.") Because one is the effect of knowledge, causing data, considerations or "facts" to come into being separates one in distance from being an effect. If one is very anxious to be an effect and if this is his basic consideration, he will not take well to causing information to come into existence, but in order to get him out of the traps in which he finds himself it is necessary to some degree that he do so.

Causing few barriers or traps, the individual then loses control over barriers or traps; wishing to be an effect, of course he must lose control of barriers and traps, otherwise he cannot be entrapped by them. The thing to do to free him from a trap is to find what parts of the trap he himself is willing to own, or have, or possess. This places the barriers (which can be spaces, energy movements or obstacles) under his control, and his postulating that he can have or possess this or that causes him to be willing to be or occupy the trap and the moment this occurs he is no longer in the trap, or even if he is still in it to some degree he does not object to it and can leave it when he wishes.

The way to paralyze a nation entirely and to make it completely ungovernable would be to forbid education of any kind within its borders and to inculcate into every person within it the feeling that he must not receive any information from anybody about anything. To make a nation governable it is necessary to hold a kindly view of education and to honor educative persons and measures. To conquer a land it is not necessarily efficient to overwhelm them with guns. Once this is done it is necessary to apply educative measures in order to bring about some sort of agreement amongst the people themselves as well as between the conqueror and the subdued. Only in this way could one have a society, a civilization, or as we say in Scientology, a smoothly running game.

In other words two extremes could be reached. Neither one of which is desirable by the individual. The first extreme could be reached by emphasis only upon self created data or information. This would bring about not only a lack of interpersonal relations, but would also bring about an anxiety to have an effect which would, as it does in barbaric peoples, result in social cruelty unimaginable in a civilized nation. The other extreme would be to forbid in its entirety any self-created information and to condone only data or considerations generated by others than self. Here we would create an individual with no responsibility, so easily handled that he would be only a puppet.

Self-created data is then not a bad thing, neither is education, but one without the other to hold it in some balance will bring about a no-game condition or a no-civilization. Just as individuals can be seen by observing nations so we see the African tribesman, with his complete contempt for truth and his emphasis on brutality and savagery for others but not himself, is a no-civilization, and we see at the other extreme China, slavishly dedicated to ancient scholars, incapable of generating within herself sufficient rulers to continue, without bloodshed, a nation.

We have noted the individual who must be the only one who can make a postulate or command, whose authority is dearer to him than the comfort or state of millions, and have suffered from such men (Napoleon, Hitler, Kaiser Wilhelm, Frederick of Prussia, Genghis Khan, Attila). We have known, too, the scholar who has studied himself blind and is the world's greatest authority on Government or some such thing, who yet cannot himself manage his bank account or a dog with any certainty. Here we have in either case, a total imbalance. The world-shaker is himself unwilling to be any effect of any kind (and all the men named here were arrant personal cowards) and we have the opposite, a man who would not know what you were talking about if you told him to get an idea of his own.

We see another example of this in the fundamental laws of warfare. A body of troops, to be effective, must be able to attack and to defend. Its implements must be divided 50% for attack and 50% for defense. In other words, even in a crude activity such as warfare, we find that no successful outcome is possible unless the troops can devote half of their energies to attack and half of them to defense.

In the much broader view of life we discover on any dynamic that success depends, or a game depends, or activity depends, or life itself depends upon being willing to be cause equally in ratio to being willing to be an effect. He who would give must be willing to receive. He who would receive must be willing to give. When these tenets are violated the most fundamental principle of human relationships is violated and the result is a no-game condition such as aberration, insanity, antisocialness, criminality, inactivity, laziness, tiredness, mania,

fanaticism and all the other things against which men protest. But imbalances between cause and effect also enter randomities into the game of life and cannot be neglected in their potential for creating a game.

Any information is valuable to the degree that you can use it. In other words any information is valuable to the degree that you can make it yours. Scientology, of all the sciences, does not teach you, it only reminds you, for the information was yours in the first place. It is not only the science of life, but it is an account of what you were doing before you forgot what you were doing.

KNOW AND NOT-KNOW

It is the basic mechanism of thinkingness, whether one is postulating or receiving information, that one retain one's ability to know. It is equally important that one retain one's ability to not-know.

You will discover that most people are trying not to remember. In other words they are trying to not-know. Education can only become burdensome when one is unable to not-know it. It is necessary that one be able to create, to receive, to know, and to not-know information, data and thoughts. Lacking any one of these skills, for they are skills, no matter how native they are to the individual, one is apt to get into a chaos of thinkingness or creatingness or livingness.

You can look at any eccentric or aberrated person and discover rapidly, by an inspection of him, which one of these four factors he is violating. He either is unable to know or not-know his own created thoughts, or he is unable to know or not-know the thoughts of others. Somewhere, for some reason best known to him, in his anxiety to be part of the game, he has shelved, lost, one of these abilities.

Time is a process of knowing in the present and not-knowing in the future or the past. Remembering is the process of knowing the past; predicting, of knowing the future. Forgetting is the process of not-knowing the past, and being without goals is the process of not-knowing the future.

Exercises in these various items rehabilitate not only the sanity or ability of the individual, but his general capability in living and playing the game.

THE GOAL OF SCIENTOLOGY

The end object of Scientology is not the making into nothing of all of existence or the freeing of the individual of any and all traps everywhere. The goal of Scientology is making the individual capable of living a better life in his own estimation and with his fellows and the playing of a better game.

SCIENTOLOGY PROCESSING

Scientology is applied in many ways to many fields. One particular and specialized method of application of Scientology is its use on individuals and groups of people in the eradication of physical illnesses deriving from mental states and the improvement of their abilities and intelligence. By processing is meant the verbal exercising of a patient (preclear) in exact Scientology processes. There is a great deal of terminology and precision in these processes and their use and they are not combinable with older mental activities such as psychiatry, psychology, psychoanalysis, yoga, massage, etc. However, these processes are capable of addressing or treating the same ills of the mind as are delineated by older methodology, with the addition that Scientology is alone in its ability to successfully eradicate those psychosomatic ills to which it is addressed and is the only science or study known which is capable of uniformly producing marked and significant increases in intelligence and general ability.

Scientology processing, amongst other things, can increase the intelligence quotient of an individual, his ability or desire to communicate, his social attitudes, his capability and domestic harmony, his fertility, his artistic creativity, his reaction time and his health.

An additional sphere of activity allied to processing is Preventive Scientology. In this branch of processing an individual is inhibited or restrained from assuming states lower than he has already suffered from. In other words the progress of tendencies, neuroses, habits and deteriorating activities can be halted by Scientology or their occurrence can be prevented. This is done by processing the individual on standard Scientology processes without particular attention to the disability involved.

Scientology processing is called "auditing" by which the auditor (practitioner) "listens and commands." The auditor and the preclear (patient) are together out-of-doors or in a quiet place where they will not be disturbed or where they are not being subjected to interrupting influences. The purpose of the auditor is to give the preclear certain and exact commands which the preclear can follow and perform. The purpose of the auditor is to increase the ability of the preclear. The Auditor's Code is the governing set of rules for the general activity of auditing. The Code follows:

THE AUDITOR'S CODE

1. Do not evaluate for the preclear.
2. Do not invalidate or correct the preclear's data.
3. Use the processes which improve the preclear's case.
4. Keep all appointments once made.
5. Do not process a preclear after 10 p.m.
6. Do not process a preclear who is improperly fed.
7. Do not permit a frequent change of auditors.
8. Do not sympathize with the preclear.
9. Never permit the preclear to end the session on his own independent decision.
10. Never walk off from a preclear during a session.
11. Never get angry with a preclear.
12. Always reduce every communication lag encountered by continued use of the same question or process.
13. Always continue a process as long as it produces change and no longer.
14. Be willing to grant beingness to the preclear.
15. Never mix the processes of Scientology with those of various other practices.
16. Always remain in good two-way communication with the preclear during sessions.

The Auditor's Code governs the activity of the auditor during sessions. The activity of the Scientologist in general is governed by another broader code.

THE CODE OF A SCIENTOLOGIST

As a Scientologist, I pledge myself to the Code of Scientology for the good of all:

1. To hear or speak no word of disparagement to the press, public or preclears concerning any of my fellow Scientologists, our professional organization or those whose names are closely connected to this Science.
2. To use the best I know of Scientology to the best of my ability to better my preclears, groups and the world.
3. To refuse to accept for processing and to refuse to accept money from any preclear or group I feel I cannot honestly help.
4. To punish to the fullest extent of my power anyone misusing or degrading Scientology to harmful ends.
5. To prevent the use of Scientology in advertisements of other products.
6. To discourage the abuse of Scientology in the press.
7. To employ Scientology to the greatest good of the greatest number of dynamics.
8. To render good processing, sound training and good discipline to those students or peoples entrusted to my care.
9. To refuse to impart the personal secrets of my preclears.
10. To engage in no unseemly disputes with the uninformed on the subject of my profession.

As it can be seen, both of these codes are designed to protect the preclear as well as Scientology and the auditor in general. As these codes evolve from many years of observation and experience by a great number of people, it can be said that they are intensely important and are probably complete. Failure to observe them has resulted in a failure of Scientology. Scientology can do what it can do only when it is used within the limits of these two codes. Thus it can be seen that the interjection of peculiarities or practices by the auditor into

Scientology processing can actually nullify and eradicate the benefits of that processing. Any hope or promise in Scientology is conditional upon its good use by the individual and its use in particular within the limits of these two codes.

THE CONDITIONS OF AUDITING

Certain definite conditions must prevail and a certain methodology must be followed in order that processing may be beneficial to its fullest extent.

Probably the first condition is a good grasp of Scientology as a Science and its mission in the world.

The second condition would be a relaxed state of mind on the part of the auditor and the confidence that his use of Scientology upon the preclear will not produce a harmful result.

The third requisite should be finding a preclear. By this it is literally meant that one should discover somebody willing to be processed and having discovered one so willing should then make sure that he is aware that he is there being processed.

The fourth requisite would be a quiet place in which to audit with every precaution taken that the preclear will not be interrupted or burst in upon or unduly startled during processing.

All requisites for auditing from here on are entirely concerned with procedures and processes. By auditing procedure is meant the general model of how one goes about addressing a preclear. This includes an ability to place one question, worded exactly the same way, over and over again to the preclear no matter how many times the preclear has answered the question. It should include the ability to acknowledge with a "good" and "all right" every time a preclear executes or completes the execution of a command. It should include the ability to accept a communication from the preclear. When the preclear has something to say the auditor should acknowledge the fact that he has received the preclear's communication and should pay some attention to the communication. Procedure also includes the ability to sense when the preclear is being over-strained by processing or is being unduly annoyed and to handle such crises in the session to prevent the preclear from leaving. An auditor should also have the ability of handling startling remarks or occurrences by the preclear. An auditor should also have the knack of preventing the preclear from talking obsessively since prolonged conversation markedly reduces the havingness of the preclear and the sooner long dissertations by the preclear are cut off the better for the session in general. Processes, as distinct from procedures, consist of utilizing the principle of the gradient scale to the end of placing the preclear in better control of himself, his mind, the people and the universe around him. By gradient scale is meant a proceeding from simplicity toward greater difficulty, giving the preclear always no more than he can do, but giving him as much as he can do until he can handle a great deal. The idea here is to give the preclear nothing but wins and to refrain from giving the preclear loses in the game of processing. Thus it can be seen that processing is a team activity and is not itself a game whereby the auditor opposes and seeks to defeat the preclear and the preclear seeks to defeat the auditor, for when this condition exists there are little results in processing.

The earliest stage of auditing consists in taking over control of the preclear so as to restore to the preclear more control of himself than he has had. The most fundamental step is then location, whereby the preclear is made to be aware of the fact that he is in an auditing room, that an auditor is present and that the preclear is being a preclear. Those conditions will become quite apparent if one realizes that it would be very difficult for a son to process a father. A father is not likely to recognize anything else than the boy he raised in his auditor. Therefore the father would have to be made aware of the fact that the son was a competent practitioner before the father could be placed under control in processing. One of the most elementary commands in Scientology is "**Look at me, who am I?**" After a preclear has been asked to do this many times until he can do so quickly and accurately and without protest, it can be said that the preclear will have "found" the auditor.

The preclear is asked by the auditor to control, which is to say, start, change and stop (the anatomy of control) anything he is capable of controlling. In a very bad case this might be a very small object being pushed around on a table, being started and changed and stopped each time specifically and only at the auditor's command until the preclear himself realizes that he himself can start, change and stop the object. Sometimes four or five hours spent in this exercise are very well spent on a very difficult preclear.

The preclear is then asked to start, change and stop his own body under the auditor's specific and precise direction. In all of his commands the auditor must be careful never to give a second command before the first one has been fully obeyed. A preclear in this procedure is walked around the room and is made to start, change the direction of and stop his body, one of these at a time, in emphasis, until he realizes that he can do so with ease. Only now could it be said that a session is well in progress or that a preclear is securely under the auditor's command. It should be noted especially that the goal of Scientology is better self-determinism for the preclear. This rules out at once hypnotism, drugs, alcohol or other control mechanisms used by other and older therapies. It will be found that such things are not only not necessary but they are in direct opposition to the goals of greater ability for the preclear.

The principal points of concentration for the auditor now become the ability of the preclear to have, the ability of the preclear to not-know and the ability of the preclear to play a game.

An additional factor is the ability of the preclear to be himself and not a number of other people such as his father, his mother, his marital partner or his children.

The ability of the preclear is increased by addressing to him the process known as the Trio. These are three questions, or rather commands.

1. **“Look around here and tell me what you could have.”**
2. **“Look around here and tell me what you would permit to remain in place.”**
3. **“Now look around and tell me with what you could dispense.”**

No. 1 above is used usually about ten times, then No. 2 is used five times, and No. 3 is used once. This ratio of ten, five and one would be an ordinary or routine approach to havingness. The end in view is to bring the preclear into a condition whereby he can possess or own or have whatever he sees, without further conditions, ramifications or restrictions. This is the most therapeutic of all processes, as elementary as it might seem. It is done without too much two-way communication or discussion with the preclear and it is done until the preclear can answer question one, two and three equally well. It should be noted at once that twenty-five hours of use of this process by an auditor upon a preclear brings about a very high rise in tone. By saying twenty-five hours it is intended to give the idea of the length of time the process should be used. As it is a strain on the usual person to repeat the same question over and over, it will be seen that an auditor should be well disciplined or very well trained before he audits.

In the case of a preclear who is very unable, “can't have” is substituted for “have” in each of the above questions for a few hours until the preclear is ready for the Trio in its “have” form. This can-can't is the plus and minus aspect of all thought and in Scientology is called by a specialized word, “dichotomy.”

The rehabilitation of the ability of the preclear to not-know is also rehabilitation of the preclear in the time stream, since the process of time consists of knowing the moment and not-knowing the past and not-knowing the future simultaneously. This process, like all other Scientology processes, is repetitive. The process is run, ordinarily, only after the preclear is in very good condition and is generally run in an exterior well-inhabited place. Here the auditor, without exciting public comment, indicates a person and asks the preclear, **“Can you not-know something about that person?”** The auditor does not permit the preclear to “not-know” things which the preclear already doesn't know. The preclear “not-knows” only those

things which are visible and apparent about the person. This is also run on other objects in the environment such as walls, floors, chairs and other things. The auditor should not be startled when for the preclear large chunks of the environment start to disappear. This is ordinary routine and in effect the preclear should make the entirety of the environment disappear at his own command. The environment does not disappear for the auditor. The end goal of this “not-know” process is the disappearance of the entire universe, under the preclear’s control, but only for the preclear. It will be discovered while running this that the preclear’s “havingness” may deteriorate. If this happens he was not run enough on the Trio before he was run on this process. It is only necessary in such a case to intersperse **“Look around here now and tell me what you could have”** with the “not know” command to keep the preclear in good condition. Drop of havingness is manifested by nervous agitation, obsessive talk or semi-unconsciousness or “dopiness” on the part of the preclear. These manifestations indicate only reduction of havingness.

The reverse of the question here is **“Tell me something that you would be willing to have that person (indicated by the auditor) not-know about you.”** Both sides of the question have to be run (audited). This process can be continued for twenty-five hours or even fifty or seventy-five hours of auditing with considerable benefit so long as it does not react too violently upon the preclear in terms of loss of havingness.

It should be noted that, in running either havingness or “not-know” on a preclear, the preclear may exteriorize. In other words it may become apparent, either by his observation or because the preclear informs him, that the auditor has “exteriorized” a preclear. Under “The Parts of Man” section there is an explanation of this phenomenon. In modern auditing the auditor does not do anything odd about this beyond receive and be interested in the preclear’s statement of the fact. The preclear should not be permitted to become alarmed since it is a usual manifestation. A preclear is in better condition and will audit better exteriorized than “in his head.” Understanding that an actual ability to “not-know” is an ability to erase by self-command the past without suppressing it with energy or going into any other method is necessary to help the preclear. It is the primary rehabilitation in terms of knowingness. Forgetting is a lower manifestation than “not-knowingness.”

THE CONDITIONS OF AUDITING
Concluded

The third ability to be addressed by the auditor is the ability of the preclear to play a game. First and foremost in the requisites to play a game is the ability to control. One must be able to control something in order to participate in a game. Therefore the general rehabilitation of control by starting, changing and stopping things is a rehabilitation in the ability to play a game. When a preclear refuses to recover, it is because the preclear is using his state as a game, and does not believe that there is any better game for him to play than the state he is in. He may protest if this is called a game. Nevertheless any condition will surrender if the auditor has the preclear invent similar conditions or even tell lies about the existing condition. Inventing games or inventing conditions or inventing problems alike rehabilitate the ability to play a game. Chief amongst these various rehabilitation factors are control (start, change and stop), problems and the willingness to overwhelm or be overwhelmed. One ceases to be able to have games when one loses control over various things, when one becomes short of problems and when one is unwilling to be overwhelmed (in other words, to lose) or to overwhelm (to win). It will be found while running havingness as in the Trio above that one may run down the ability to play a game, since havingness is the reward of a game in part.

In the matter of problems it will be seen that these are completely necessary to the playing of a game. The anatomy of a problem is intention versus intention. This is, of course, in essence the purpose of all games, to have two sides, each one with an opposed intention. Technically a problem is two or more purposes in conflict. It is very simple to detect whether or not the preclear is suffering from a scarcity of games. The preclear who needs more games clutches to himself various present time problems. If an auditor is confronted with a preclear who is being obsessed by a problem in present time he knows two things: (1) that the preclear's ability to play a game is low, and (2) that he must run an exact process at once to rehabilitate the preclear in session.

It often happens at the beginning of an auditing session that the preclear has encountered a heavy present time problem between sessions. The preclear must always be consulted before the session is actually in progress as to whether or not he has "anything worrying" him. To a preclear who is worried about some present time situation or problem no other process has any greater effectiveness than the following one. The auditor with a very *brief* discussion of the

problem asks the preclear to invent a problem of comparable magnitude. He may have to reword this request to make the preclear understand it completely, but the auditor wants in essence the preclear to invent or create a problem he considers similar to the problem he has. If the preclear is unable to do this, it is necessary then to have him lie about the problem which he has. Lying is the lowest order of creativeness. After he has lied about the problem for a short time, it will be found that he will be able to invent problems. He should be made to invent problem after problem until he is no longer concerned with his present time problem.

The auditor should understand that a preclear who is “now willing to do something about the problem” has not been run long enough on the invention of problems of comparable magnitude. As long as the preclear is attempting to *do* something about the problem, the problem is still of obsessive importance to him. No session can be continued successfully until such a present time problem is entirely flat, and it has been the experience that when a present time problem was not completely eradicated by this process that the remainder of the session or indeed the entire course of auditing may be interrupted.

When a preclear does not seem to be advancing under auditing, a thing which he does markedly and observedly, it must then be supposed that the preclear has a present time problem which has not been eradicated and which must be handled in auditing. Although the auditor gives the preclear to understand that he too believes this present time problem is extremely important, the auditor should not believe that this process will not handle *any* present time problem, since it will. This process should be done on some preclears in company with the Trio.

If the preclear is asked to “lie about” or “invent a problem of comparable magnitude,” and while doing so becomes agitated or unconscious or begins to talk wildly or obsessively, it must be assumed that he will have to have some havingness run on him until the agitation or manifestation ceases so that the problem of comparable magnitude process can be resumed.

Another aspect of the ability to play a game is the willingness to win and the willingness to lose. An individual has to be willing to be cause or willing to be an effect. As far as games are concerned this is reduced to a willingness to win and a willingness to lose. People become afraid of defeat and afraid of failure. The entire anatomy of failure is only that one’s postulates or intentions are reversed in action. For instance, one intends to strike a wall and strikes it. That is a win. One intends not to strike a wall and doesn’t strike it. That is again a win. One intends not to strike a wall and strikes it. That is a lose. One intends to strike a wall and can’t strike it. This is again a lose. It will be seen in this as well as other things that the most significant therapy there is is changing the mind. All things are as one considers they are and in no other way. If it is sufficiently simple to give the definition of winning and losing, so it is simple to process the matter.

This condition is best expressed, it appears, in processing by a process known as “overwhelming.” An elementary way of running this is to take the preclear outside where there are numbers of people to observe and, indicating a person, to ask the preclear, “**What could overwhelm that person?**” When the preclear answers this, he is asked about the same person, “**What could that person overwhelm?**” He is then asked as the third question, “**Look around here and tell me what you could have.**” These three questions are run one after the other. Then another person is chosen and then the three questions are asked again. This process can be varied in its wording but the central idea must remain as above. The preclear can be asked “**What would you permit to overwhelm that person?**” and “**What would you permit that person to overwhelm?**” and of course “**Look around here and tell me what you could have.**” This is only one of a number of possible processes on the subject of overwhelming, but it should be noted that asking the preclear to think of things which would overwhelm *him* could be fatal to the case. Where overwhelming is handled, the preclear should be given a detached view.

A counter-position to havingness processes, but one which is less therapeutic is “separateness.” One asks the preclear to look round and discover things which are separate

from things. This is repeated over and over. It is, however, destructive of havingness even though it will occasionally prove beneficial.

It will be seen that havingness (barriers), “not-knowingness” (being in present time and not in the past or the future), purposes (problems, antagonists, or intention-counter-intention), and separateness (freedom) will cover the anatomy of games. It is not to be thought, however, that havingness addresses itself only to games. Many other factors enter into it. In amongst all of these, it is of the greatest single importance.

One addresses in these days of Scientology the subjective self, the mind, as little as possible. One keeps the preclear alert to the broad environment around him. An address to the various energy patterns of the mind is less beneficial than exercises which directly approach other people or the physical universe. Therefore, asking a preclear to sit still and answer the question “What could you have?” when it is answered by the preclear from his experience or on the score of things which are not present, is found to be non-therapeutic and is found instead to decrease the ability and intelligence of the preclear. This is what is known as a *subjective* (inside the mind only) process.

These are the principal processes which produce marked gains. There are other processes and there are combinations of processes but these given here are the most important. A Scientologist knowing the mind completely can of course do many “tricks” with the conditions of people to improve them. One of these is the ability to address a psychosomatic illness such as a crippled leg which, having nothing physically wrong with it, yet is not usable. The auditor could ask the preclear “Tell me a lie about your leg” with a possible relief of the pain or symptom. Asking the preclear repeatedly “Look around here and tell me something your leg could have” would undoubtedly release the somatic. Asking the preclear with the bad leg “What problem could your leg be to you?” or desiring him to “Invent a problem of comparable magnitude to your leg” would produce a distinct change in the condition of the leg. This would apply to any other body part or organ. It would also apply, strangely enough, to the preclear’s possessions. If a preclear had a vehicle or cart which was out of repair or troublesome to him one could ask him “What problem could a cart be to you?” and thus, requesting him to invent many such problems, one would discover that he had solved his problems with the cart. There is the phenomenon in existence that the preclear already has many set games. When one asks him to give the auditor problems, he already has the manifestations of as-ising or erasing taking place. Thought erases, therefore the number of problems or games the preclear would have would be reduced by asking him to recount those which he already has. Asking the preclear to describe his symptoms is far less than therapeutic and may result in a worsening of those symptoms, contrary to what some schools of thought have believed in the past but which accounts for their failures.

There are specific things which one must avoid in auditing. These follow:

1. *Significances.* The easiest thing a thetan does is change his mind. The most difficult thing he does is handle the environment in which he finds himself situated. Therefore, asking a thetan to run out various ideas is a fallacy. It is a mistake. Asking the preclear to think over something can also be an error. Asking a preclear to do exercises which concern his mind alone can be entirely fatal. A preclear is processed between himself and his environment. If he is processed between himself and his mind, he is processed up too short a view and his condition will worsen.

2. *Two-way communication.* There can be far too much two-way communication or far too much communication in an auditing session. Communication involves the reduction of havingness. Letting a preclear talk on and on or obsessively is to let a preclear reduce his havingness. The preclear who is permitted to go on talking will talk himself down the tone scale and into a bad condition. It is better for the auditor simply and discourteously to tell a preclear to “shut up” than to have the preclear run himself “out of the bottom” on havingness. You can observe this for yourself if you permit a person who is not too able to talk about his troubles. He will begin to talk more and more hectically. He is reducing his havingness.

He will eventually talk himself down the tone scale into apathy, at which time he will be willing to tell you (as you insist upon it) that he “feels better” when, as a matter of fact, he is actually worse. Asking a preclear “How do you feel now?” can reduce his havingness since he looks over his present time condition and as-ises some mass.

3. *Too many processes.* It is possible to run a preclear on too many processes in too short a time with a reduction of the preclear’s recovery. This is handled by observing the communication lag of the preclear. It will be discovered that the preclear will space his answers to a repeated question differently with each answer. When a long period ensues between the question and his answer to the question a second time, he is said to have a “communication lag.” The “communication lag” is the length of time between the placing of the question by the auditor and the answering of that *exact* question by the preclear. It is not the length of time between the placing of the question by the auditor and some statement by the preclear. It will be found that the communication lag lengthens and shortens on a repeated question. The question on the tenth time it has been asked may detect no significant lag. This is the time to stop asking that question since it now has no appreciable communication lag. One can leave any process when the communication lag for three successive questions is the same.

In order to get from one process to another one employs a communication bridge which to a marked degree reduces the liability of too many processes. A communication bridge is always used. Before a question is asked, the preclear should have the question discussed with him and the wording of the question agreed upon as though he were making a contract with the auditor. The auditor says that he is going to have the preclear do certain things and finds out if it’s all right with the preclear if the auditor asks him to do these things. This is the first part of a communication bridge. It precedes all questions, but when one is changing from one process to another the bridge becomes a bridge indeed. One levels out the old process by asking the preclear whether or not he doesn’t think it is safe to leave that process now. One discusses the possible benefit received from the process and then tells the preclear that he is no longer going to use that process. Now he tells the preclear he is going to use a new process, describes the process and gets an agreement on it. When the agreement is achieved, then he uses this process. The communication bridge is used at all times. The last half of it, the agreement on a new process, is used always before any process is begun.

4. *Failure to handle the present time problem.* Probably more cases are stalled or found unable to benefit in processing because of the neglect of the present time problem as covered above than any other single item.

5. *Unconsciousness, “dopiness” or agitation on the part of the preclear* is not a mark of good condition. It is a loss of havingness. The preclear must never be processed into unconsciousness or “dopiness.” He should always be kept alert. The basic phenomenon of unconsciousness is “a flow which has flowed too long in one direction.” If one talks too long at somebody he will render him unconscious. In order to wake up the target of all that talk, it is necessary to get the unconscious person to do some talking. It is simply necessary to reverse any flow to make unconsciousness disappear, but this is normally cared for in modern Scientology by running the Trio above.

Books on auditing are available from the Hubbard Association of Scientologists International, Brunswick House, 83 Palace Gardens Terrace, London W.8, and from the Distribution Center Incorporated, Box 242, Silver Spring, Maryland, U.S.A., as well as from the local groups and other Scientology Offices throughout the world. Magnetic lecture tapes with lectures on Scientology for groups and auditors are also available. Individual processing by the staff auditors of Clinics is available from the above addresses and also at the Hubbard Guidance Center, 2315 15th Street Northwest, Washington, D.C. Training as an auditor is obtainable. An auditor should be trained in the very fine schools of the HASI London or the Founding Church in Washington, D.C. the same. These are the only official sources for diplomas in auditing and in professional Scientology.

THE FUTURE OF SCIENTOLOGY

With man now equipped with weapons sufficient to destroy all mankind on Earth, the emergence of a new science capable of handling man is vital. Scientology is such a science. It was born in the same crucible as the atomic bomb. The basic intelligence of Scientology came from nuclear physics, higher mathematics and the understanding of the ancients in the East. Scientology can and does do exactly what it says it can do. In Washington, D.C. there is an enormous file cabinet filled with thousands of case histories, fully validated and sworn to, which attest the scientific thoroughness of Scientology. With Scientology man can prevent insanity, criminality and war. It is for man to use. It is for the betterment of man. The primary race of Earth is not between one nation and another today. The only race that matters at this moment is the one being run between Scientology and the Atomic Bomb. The history of man, as has been said by well-known authorities, may well depend upon which one wins.

SCIENTOLOGY
REVISION OF TRANSLATOR'S EDITION

Well, we have finally come to the end of the *Translator's Edition of Scientology*.

This book running for so many PABs undoubtedly brought to you many new aspects of Scientology. The reason for this lies in the fact that there has not been a new book for some time and the research material has been piling up here undergoing re-codification and so was included all in a rush in the *Translator's Edition*.

Now, for me, begins the job of rewriting the *Translator's Edition* for book form, since I believe you have noticed, as I did, many typographical errors. The *Translator's Edition* must also include on its rewrite considerable additional information on processing, although I think you will agree with me that it was a real triumph to get the entirety of processing crammed into two PABs, Nos. 87 and 88, but of course as always happens even those two PABs could stand some re-codification, and two or three very important processes and tips must be included in them. It should be apparent to all of us that as this *Translator's Edition* will go and is going into very many languages it may just happen that Scientology will be represented entirely textbook wise by the *Translator's Edition* and it may occur that in several of these rarer languages no further text will be available. This is very probably the case with one translation that is now in progress which is going to a country of several hundred million people who, of course, could afford the few pence necessary for the booklet, but who will probably be left without any further information of any kind.

As a tip to translators here and there who are undertaking these translations, the refurbished edition which is coming out in booklet form in English in a few weeks should be consulted before your translation leaves your hand and goes to a printer in your language. One reason for this is the fact that the therapy section is not entirely complete and another reason for it is that some of the typographical errors unavoidable in getting out something quickly in the PABs will be entirely eradicated in the booklet. Thus, if you are translating this you should begin at once from the PABs to hand and order immediately from the HASI, No. 1 Brunswick House, 83 Palace Gardens Terrace, London W.8, a copy of the *Translator's Edition* at the special PAB price of 5/-d. As the shilling is worth 14 American cents, this is a price of 70 cents. However, it will take forever to get to you unless you include two-and-a-half shillings or an additional 35 cents for airmail postage, so thus a fast copy of the *Translator's Edition* will come to you for 7/6d airmail or 1 dollar and 5 cents American wherever you are throughout the world.

Do not for a moment bother your translators with the matter of royalties. All that I ask of you is that the *Translator's Edition* text made up here in full without any cutting or editing has my "by-line" on it and that it includes the addresses of the HASI in London and the United

States. So, you translators, there is no difficulty here of royalties. I am not asking for any. If you can get royalties for translating it, they are yours.

Furthermore, translators, I would not worry about somebody else translating it into the same language as you are translating it into. That two editions might appear in the same language is of interest only to authors who are attempting to acquire royalties. As you have herein the author's permission and need no other special permission, there is then no possibility of legal conflict because you are publishing a book somebody else is publishing in your language.

I suggest that the published title in your language is something like the "Fundamentals of Thinking" or "Scientology: The Fundamentals of Thinking" or, if it translates better in your language, the "Fundamentals of Life" or the "Fundamentals of Mental Science." The word "Scientology" should appear on the cover, as it is already becoming known very broadly throughout the world.

The reason I make my "by-line" a condition is so that there can be no royalty conflicts of any kind whatsoever. If the book were published without a "by-line" or with some other authorship there could be royalty claims, thus such release would be outside the grant made herein and so could be contested if such a "wildcat" edition appeared.

I realize that the book is a necessity to any person whose study of Scientology is hampered by a current life childhood spent with another language, therefore the *Translator's Edition* should be of considerable help.

Do not for a moment suppose that the HASI or myself have any grip on editors or publishers in other languages than English. We cannot assist you on getting the book printed in, for instance, Greece, but with the manuscript translated and with your information that the textbooks on Scientology are the most advanced material on the mind in the United States of America you should have no difficulty in getting this book published. It is up to you to place it. Therefore, I call upon the initiative of anyone who has contacts in any country, no matter how small, or in any language to translate the book and display all necessary initiative in getting into print in that country.

To give you some sort of an idea what these exact materials can do, there is one small country right now which has had Scientology addressed to it on the working man's level. There is every obstacle in this country against the dissemination of material on thought or the mind. All this country seems to have absorbed in the past was revolutionary materials. Any material offered to it that was constructive and told it to support its own government and told it to get civilized has hitherto been ignored by that country. Scientology in the form contained in the *Translator's Edition* was disseminated into the teeth of an economic revolution. In a few short months thousands of people of the working class have not only absorbed Scientology but are using Scientology in their everyday work. Several members of their government have studied Scientology in this cursory fashion and, coincidentally or not, a new stability has come to that country which is amazing even to itself. Scientology has power. To display that power it must be disseminated.

We have a certain mission of civilizing the peoples of Earth. The first step to take in getting shoes on them is to translate the *Translator's Edition* and release it in a very cheap booklet form and make sure that it becomes disseminated in that area.

The *Translator's Edition* does not, of course, contain all there is to know in Scientology, but it contains the essentials. There is even material considerably in advance of that contained in the *Translator's Edition* which the auditor, the most practiced auditor, will be happy to get his hands on. So ending the *Translator's Edition* did not end the trail of research and did not end the PABs.

CURRENT PROCESSES

The following processes are released to Staff, HGC for their use and comments.

Please be very specific concerning the action of the process reported upon.

We are codifying processes for general release. Be very sure you add into your reports any *other* process you found necessary in running a case.

Report on usual forms.

L R H

* * * * *

1. Establish Rudiments by control of pc—
Have him start-change-stop small objects, then body like 8c.
Emphasize starting, then stopping, then changing until rudiments are established.
2. Run “Look around this room and tell me what your body (theta body in black case) can’t have.”
Etc on Trio.
3. If pc cannot make anything happen with thought run Axiom 10 processes “Look around room and tell me what is having no effect on that (object).” Then “What could you cause?” “Lie about an effect that wall (object) is having on you.”

Run also “What effect could you have” on valences. Also continuing effects, locate some. Also “What could you expect from (valence)” you are having trouble with in pc.
4. Run can’t have, have, on body parts Vs Mest Universe “Look around and tell me what your (leg) can’t (can) have.”

Separate valences with “Look around and tell me what your (valence) can’t (can) have. “
5. If confusion or boil-off sets in, pc has stripped out too many stable data. Have him mock up confusions.
“What confusion could you cause?” Also minus randomness.
6. If he is stuck in pictures have him make portions, then all of them, solid. Stress injured parts—make solid.
Don’t leave in restimulation.
7. If antipathetic to people, or secretive, have pc spot people or parts of people outside that he, his body, theta body, can’t (can) have.
8. Run Waterloo Station on “What can you not-know about that person?” Intersperse with “Look around and tell me what you could have.”
9. On special phobias, fixed ideas, run “Look around and tell me what that idea could have.” “Mock up a confusion for which that idea could be a stable datum.” “Tell me an idea of *incomparable* magnitude.”

10. Problems—run out with problems of comparable magnitude.
11. Have him decide to get a mock-up (unmock something) and then stop it because it would spoil the game.
12. Lie about, invent games he could *really* play.
13. Invent problems he could *really* have.
14. Exteriorize by havingness on body or theta body, thinking placed thought, Route One.
15. Attempt to run engrams on willing pcs using standard old time return to the moment, and new “Make it more solid”. Example: Straight wire question— “What part of your past wouldn’t you mind re-experiencing with total solidity?” He says one. Return him to it. Have him make it solid on a gradient scale. Return him to pt. Ask question again. Return him to new moment, etc. Be careful not to tangle track. Make note of your variations of process. Stress making solid any parts of body injured in any incident. Don’t leave pc bounced off walls etc.
16. Invent an identity. “Invent a father (valence).” “Invent a (reverse relationship such as son).”

* * * * *

DON'TS

Don’t run significances—they’re stable data. Use two-way comm sparingly. If a compulsive outflow case must talk, shut him up.

Don’t run too many processes. Flatten them, then use a comm bridge.

Don’t fail to handle pt problem adequately.

Don’t tolerate dopiness or anaten. Have him mock up confusions or reverse flow.

THE ORGANIZATIONS OF DIANETICS AND SCIENTOLOGY

Anyone engaging upon a delineation of the histories of Dianetics and Scientology organizations is apt to go in for organizational names, organizational places, numbers of members, the general legal upsets attendant to any new type of organization on Earth and other matters which are not even important.

The history of organizations in Dianetics and Scientology is a history of people. It is the history of a number of people finding their feet, finding their initiative and finding their way of life. It could be said that the history of these organizations parallels the history of case levels. The more we know the better we get. The better we get, the better we organize.

In 1950 I said that the subject would go as well as it worked. I have no reason to alter that view. I have concentrated, therefore, on the skills and methods of training better auditors rather than upon stacks of legal papers. Many people in the field would have us believe that the legal papers were important. They would have us believe that the levels of service offered by the organizations were important, even more important than the progress of the science itself. These people may have their opinion; however, my belief uttered in 1950 is the one which has won.

For today I am announcing to you that we have won organizationally.

The organizational structure of Dianetics and Scientology today is a simple one. There are three main central organizations. These are the Founding Church at 1812 19th Street, N.W. of Washington, D.C.; the HASI in the United States and in London at Brunswick House, 83 Palace Gardens Terrace, London W.8; and the HDRF which can be contacted through Box 242 in Silver Spring, Maryland, U.S.A. To all intents and purposes these break down to be the HASI in LONDON and the FOUNDING CHURCH in WASHINGTON, D.C. These train auditors, audit preclears, and sell books, as well as do research and control the worldwide network of Dianetics and Scientology. Autonomous but dependent upon these organizations, there are several HASI offices throughout the world and there are several Churches of Scientology directly connected to the Founding Church. Then there are a large number of organizations, autonomous in operation but dependent upon the central organizations for their authority, such as the Churches in California run by John McCormick (San Diego) and others, all of them grouped under the Church of Scientology of California operated by Dr. Farber in Los Angeles. This Church, in turn, is chartered and franchised by the Church in Washington. There are operations and organizations autonomous but dependent upon the central organization on every continent of Earth. Offices such as that maintained by Margaret Scholtz in South Africa are halfway between an independent organization and a HASI office. It would not be possible here to list all the organizations such as McCormick's for it would require a considerable amount of space.

Another type of organization is the group. Official groups of the HASI and official congregations of the various churches exist in very large numbers in the United States and Great Britain and elsewhere through the world. To charter a group one only needs to write the HASI. Exactly how many groups there are and exactly how many people are contained in these groups is not at this time a matter of complete record, but the number of groups and people is enormous. There were people scattered around the world of whom the organization would never have heard had it not invented and released the Associate Membership. We are hard put at this moment to get manufactured enough “‘S’-and-Double-Triangle” Badges to supply the avalanche of requests for them. Evidently many of the people in these groups, while sharing the expenses of the group, had never before communicated with the central organization. It is doubtful if there was any restraint in their doing so but they conceived that their communication line through their local auditor and group secretary and president was completely adequate, and so it very probably has been.

There are now more auditors in active practice throughout the world than there are psychoanalysts, a dying breed. These auditors have more preclears than the psychoanalysts have patients, but the comparison is not entirely possible since psychoanalytic patients are normally in need of mental “therapy” and are patients in fact whereas the clientele of auditors is for the most part composed of people interested in becoming more intelligent and more able.

Now you may believe that all has been told about organizations when the existing state and numerousness of them has been reviewed. Nothing could be further from the fact.

For the survival of the subject itself it is vitally necessary to carry forward and maintain central organizations not only in Washington and London, but wherever auditors are trained to be auditors. We have proven this over and over and over again. The further the subjects Dianetics and Scientology go from source, the less workable they become. In the libraries and files of the central organizations of Washington, D.C. and London are thousands of reels of tape, tens of thousands of case records, millions of words of careful notes, all of the books on the subject and all the results of 25 years of work. More important than these in Washington, D.C. and London there are people who have been in continuous contact with these organizations, so that no point of their evolution is overlooked or missed and nothing learned about training or practice has been forgotten. No single auditor practicing somewhere away from this vast library and this enormous collection of records could hope to keep an equivalent technology. Yet that technology is available to him and must continue to be available from the central organizations.

Now let me give you some sort of an idea what these organizations do and why they exist. In developing Dianetics and Scientology over the last 25 years a great deal of the basic work was lost because there was no central depository for its materials. There is one whole textbook written in 1938 entirely missing now. There are several hundred case records of the earliest work done that are missing. Because we have organization this no longer occurs. More important than this the central organizations are testing ground and repository of collected opinions of auditors. For example, in December I noticed that the Clinical gains in the Hubbard Guidance Centers in London and in Washington, all of which are carefully recorded and tabulated (so carefully recorded and tabulated that the activity would be the envy of any vast university psychology department any place in the world), showed a lessening improvement in preclears for the same number of hours of auditing. It took me from December until late February to reach at and discover what we had suddenly dropped. With the assistance of Dr. Julia Lewis in Washington and her staff auditors and Dr. Ann Walker in London and her staff auditors, I was able at length to isolate from the continually submitted records the one factor which had been omitted and which made a lessening of case gains occur. This factor was havingness. Once located we immediately applied ourselves to every possible means of handling havingness. I at length isolated MEST universe havingness as being the single advancing factor in these cases, and this was borne out by these staffs. Now I have gone further than that, but that is a story of research not of organization.

It has been discovered that we are developing technologies of training and codifying material at a continually rapid rate, but we can now completely guarantee to any student or old auditor coming in to either of the central organizations that (1) his case failures will thereafter cease to occur and that (2) his own case will come under his control. Every time we take an auditor in from the field and put him on staff we have to work him over, no matter how good he was in the first place. Within the central organizations at this time Scientology is a subject so workable and so well understood by staff that a manner of confidence exists never before known. Now it is the job of the central organizations to push this know-how out into the field and extend it as far as the last auditor and preclear that we contact through this chain.

THE HISTORY OF ORGANIZATIONS

The early history of organizations may be of interest.

At first, to keep an organization running, starting with the first organization, the Hubbard Dianetic Research Foundation in New Jersey, one LRH had to work himself half to death at the rate of about twenty hours a day, even buying desks and hiring typists. That was not because one LRH was the senior member of the Board of Directors. He was not, which added to his burdens. Not in actual control of the organization, putting out nearly all of the energy to keep them running, I discovered that we didn't have an organization. We had some chaps signed up under a legal directive from the government specifying who was supposed to occupy certain positions and carry forward certain responsibilities. We even had a general (ha!) manager, the best that we could procure from the business world. Later on we even had all the talent of Kansas Oil. We had hot and cold running secretaries, accountants so confused as to be in great demand by Internal Revenue, and the very finest of printers and editors that money could buy, but we didn't have an organization. Why? Because the entire concentration on advance was unfortunately heavy in my own hands. I have had these people say that we ought to forget any new materials of any kind, that we should not advance at all, we should simply (as a millionaire once involved in these organizations once put it) "make the money." These people did not compose an organization. They did not have truth or sincerity in them. They were "Man, Issue 1950," a thing which, by and large, wasn't so hot as a mechanical contraption.

On the staffs of these organizations there were some sincere and very worthwhile people. These people tried hard. These people worked hard. These people tried to carry out the goals of Dianetics and, later, Scientology. We owe these people a very great deal. They were operating in the main as individuals, trying to wear half-a-dozen hats each and trying to help me get a show on the road, and gradually I stopped working twenty hours a day and only worked sixteen hours a day and a great deal of my activity passed into the hands of these very worthwhile people on staff. But we were not yet an organization. We were a group with a common goal and there are great differences between organizations and groups with common goals. Because we had a legal name which could be bandied, harassed and raised the devil with in courts, everyone believed that we had an organization. We didn't. We had me working hard and a few guys, God bless them, working like mad, and we had a lot of "business" people riding the gravy train and banking needed funds to their own names in Florida. We were swamped!

To give you some idea of the enormity of the task we confronted, we had, for the first time in the history of man, sailed out and along a completely new line of approach in the field of life and religion without any background and with darned little support. We were learning as we went. No other organization on the face of the earth has the shape which the organizations of Dianetics and Scientology were to attain eventually. Therefore, we had to learn the know-how of organization before we could have one.

Naturally it was very easy to upset such an "organization" by simply upsetting the man whose name was on everything. Therefore all sorts of crazy things happened. I was sued for divorce by women I wasn't married to; my sanity was pronounced upon by people who had never seen me or read my works. Some people in the "organization" (the "business" people)

were very loud on the subject of me, but those who were loudest will have been found to have been most interested in their own personal remunerations. We didn't have an organization. Organizationally we had a chaos. Why? Because we had to invent an organization before we could have one. We actually had to create people before we had people who could run organizations, and this, I believe, is one of the most difficult feats ever attempted in any field, but we did it.

The first person to give me any really active help in the field of research was a girl trained in science at the university, and that was Mary Sue Hubbard. We covered and reviewed the entirety of whole track phenomena and exteriorization phenomena between 1952 and 1954. In the fall of 1952 more actual assistance in England was given me. From there on it became more obvious that we had more and more able people on every hand. My own work hours were lessening. There were more people pitching in and actually doing the job they were supposed to do. We were beginning to have something that looked like an organization.

Now you understand that it doesn't matter what is written in the legal records of a city, state or country; an organization is not something settled by a sheaf of papers. Organizations are composed of people. Even governments forget this one and so drift down into chaos. *An organization is something which has its own spirit. It is composed of people or living beings who are governed by certain rules and purposes and who know how to do their jobs. That is an organization and when any of those factors are neglected it becomes a "thing" even though it still has a name and legal standing.*

Thus the years wore on. The evolution was a simple one. I knew what I was doing and where I was going, but I was just one guy. Then one by one others stepped up and put their shoulders against the wheel and began to shove effectively. At first their efforts were scattered and sometimes even opposing, but the efforts were sincere. These few were then joined by others and these others gradually worked themselves out of their enturbulence and ceased to oppose and began to give effective assistance, and all the while what we today call our organization was learning its own rules, codes and know-hows. It was gathering under itself a group spirit. At first it began to appear that any time a person left his post, the post was unfillable, but little by little, the organization itself began to recover the ability to create people who could fill its posts, thus freeing key personnel for higher jobs.

Then there was another aspect to organization. This was the aspect of finance. First only my own encouragement and letters and writings brought any real finance into what we were calling organization, and even up to 1955 this state continued. To be solvent organizations had to stage various stunts and special offers. There was never a moment when one could relax on the financial state of Dianetics and Scientology. Much had to be done. There was very little with which to do it and very early in the game there were those who took its funds for themselves. But this condition would not continue forever.

Now I will tell you about another organization, so-called, and call it directly by name, the Ford Foundation. This group was founded and formed in the same year that the first book *Dianetics* was issued, 1950. In the six years following, this group, having had at its disposal in any single year more funds than have been available to all the people in Dianetics and Scientology combined from any source whatsoever, has yet not advanced any real distance in a realization of its goals. This organization was supposed to study and find a scientific understanding of Man. Its goal was almost identical with the goal of the first Foundation in Dianetics. Six years later we find that this organization has spent hundreds of times as much money as the central organizations of Dianetics and Scientology and has yet to discover any single slightest advance in Man's knowledge of Man. Evidently a collection of desks involved in shuffling research papers which didn't mean anything in the first place, the Ford Foundation apparently has squandered the money needed so desperately by those of us who were actually sincere about where we were going and what we were doing.

The Ford Foundation, after six years of shuffling, has only one valuable paper in its entire files of which I have any knowledge. That paper is a report given by one of its own men

who officially attended an HAS Hubbard Certified Auditor Course in Phoenix, Arizona, and who said on paper and officially to the Ford Foundation that in Scientology now existed all that they ever hoped to accomplish in the Ford Foundation. Yet here are these millions of dollars avalanching out in the expenditures from the Ford Foundation without any hope or promise of any kind for a betterment of Man.

This is not really a criticism of the Ford Foundation—it is only a statement of how such foundations operate. Wonderfully financed, beautifully sponsored, perfectly connected with all the powers that be, yet they are not organizations. Probably the type of organization which is handsomely endowed to study certain things is robbed at the outset of its purposes, since the man who wanted the thing done was the man who gave some money to some others. These others wanted the money. Is that enough comment? In other words one of these tenets of organizational cohesion was violated before ink was dried upon the endowment. For example, there is an organization in California (where else?) which was endowed by some millionaire who wanted all possible evidence corroborating spiritual phenomena. The man to whom these funds were entrusted has used them from that day forward to actively disprove the activities and findings of Rhine and has attacked all investigators as charlatans and has not added one single thing to the knowledge of spiritual phenomena, but has balked all those who would. So maybe we were fortunate in not being a superlatively well-endowed group. We have had to fight our way and that fightingness has given us the independence which we now discover in our midst. We owe no man anything.

Far-flung members of our organization often ask themselves (if they think about it at all) what they are buying with their book purchases or their courses or their processing. For one thing they are buying the least costly and most important job of research which has ever been done on this planet. The real reason that central organizations process people for a fee and train people for a fee is to disseminate the capabilities and abilities of Scientology, but the secondary reason which becomes primary in the central organizations is to buy organization itself and to advance the science. The reason that we object to “squirrels,” people like the Communist Association of Dianetic Auditors in California, is because they do not pay their way. We find their papers full of the materials which were hard won by myself and the central organizations and yet we have nothing but debits on our records to show that they passed our way. These people have as their major fault no cognizance of effort. These people also have given us ample experience of financial irresponsibility. People such as our best known “squirrels” are perfectly willing to snatch our hard won materials and misuse them, but they are not willing to support the effort which brought these materials into being. In other words, their existence is parasitic. Completely aside from the perversion of materials, this is what we have against them. Fortunately they number one in thousands; their lies, stupidities, vilifications are all a statement that they are unwilling to pay for what they use. They are cheap. The rest of us paid our way and we have won.

What *have* your dollars bought? What *have* your pounds bought? In Washington, D.C., in London, in Australia, in New Zealand and in South Africa and in South America, they have bought the know-how of organization and the know-how of the mind. They have bought knowledge which Man never before possessed and which Man therefore considers priceless. There is no way one could put a financial value on the information which we hold in our hands today. Yet that information has been purchased for less money than is spent on secretarial help in any given year by the Ford Foundation. By all calculations this information should have cost billions of dollars. It has not cost that because some of us were willing to work as hard as we worked in order to achieve it and are selfless enough to give it not at its market value, but only at the desire of men to know and to be helped.

Organizationally we have won.

What have we won? We have won independence and initiative as organizations

Let me tell you what has just happened. This is important in Scientology. It is more important than a few of us getting clearer than we are. For six months the HASI in London and

the Founding Church in Washington, D.C. have existed on their own efforts, have accumulated their own finance without any especial help or stunt. For the heads of the 1956 organizations are assisted and helped by many, but they are no longer helped on an individual basis. They are helped on an organizational basis. This is a very important thing.

For six months the HASI in London and the Founding Church in Washington, D.C. have been self-supporting, with little or no assistance from stunts. They are doing this because they themselves are giving service. They are training better auditors than anyone before thought possible. They are getting more results in their intensives than anyone could have found real two or three years ago. What these two organizations are doing, if done in a department of a major university in the United Kingdom or the United States, would cause headlines. You would find people streaming from every other university of the world to find out just exactly how they were doing this incredible thing of raising intelligence and changing and increasing the abilities of Man. But this could never have happened in a university since it required independent thought and action with no compromise with vested interest.

These organizations are, then, today, organizations. They are organizations because they are giving service. They are giving service to the people. They are giving service to their membership. They are giving service to themselves and they are financially responsible as themselves without any special stunts or actions rather than routine activities.

I hope you realize that this is the news that it is.

So this is the history of the organizations of Dianetics and Scientology. It is a history of a bunch of people working like the devil with the work of one man and then increasing that knowledge and information and then finally beginning to pull together as a team and at last existing as organizations, powerful, strong and calm. I am proud of them and their people.

3 July 1956

THE ANATOMY OF FAILURE

Two things are of paramount importance in Scientology. They are WIN and LOSE.

Occupying the original Chart of Attitudes composed by myself in the autumn of 1951, Win and Lose have occupied ever since a predominant place in processing. A preclear can be stuck in either Wins or Loses. This might come as a surprise that a preclear could be stuck in a win, but the facts of a case are that a preclear is stuck in any reversal between intention or expectance. One knows of the man who lives forever after his having won the race and one knows as well the man who lives forever after the failure of his business.

Primarily, the person who is living forever after in some sort of incident is living the survival of something which overwhelmed him rather than his own survival.

The anatomy of winning or losing, either one, is the anatomy of postulate and reverse-postulate. One intends to do something by making a postulate that it will take place, yet something else takes place. This is a reversal of postulate.

Now let us consider exactly what a failure is. It is only a failure of postulate. It is the failure of an intention. The intention is one thing, the result of the intention is a reverse. This is a failure.

One would say, offhand, that a person who ran a car into a stone wall would have a failure. However, this is simply a social belief that one should not run cars into the wall. There are four conditions which could be involved with running a car into the wall. Running a car into the wall is not a failure without the addition of postulates.

One does not intend to run the car into the wall and yet runs it into the wall. This is a failure.

One intends to run the car into the wall and runs the car into the wall. This is a win.

One intends not to run the car into the wall and doesn't run it into the wall. This is a win.

One intends to run the car into the wall and doesn't run a car into a wall. This is a failure.

Thus we can see that running the car into the wall, or not running the car into the wall, do not themselves establish, except by public agreement as to the conditions of failure, an actual failure. The failure derives from failing to do what one intended to do. When one does what one intends to do one has a win. When one intends to do one thing and accomplishes something else one has a lose.

A person is stuck in "Wins" only when he intended to lose and won. A runner never expected to win. He was simply part of the field most of his career and then spectacularly, and

almost by accident, he won. It is certain that he will be stuck in that win. Therefore the only wins that a person gets stuck in are those which were not intentional.

Regret itself is entirely the study of the reversed postulate. One intended to do something good and one did something bad. Similarly it could also happen that one intends to do something bad and accidentally did something good. Either incident would be regretted. Examples of the first condition are easy to conceive. In the second category I once knew a man who intended to “get the best of” a woman of somewhat Herculean proportions. Somewhere in this contest the woman fell ill and he healed her and did it to such an excellent degree that the woman, to whom mercy was unknown, thereafter promptly overwhelmed him entirely. Here we have the public belief that to heal is good but in this particular case it was regretted by the individual and would have been regretted even though he did not experience a later loss.

It is an interesting commentary upon the mental anatomy of man that he seldom intends to do something good without actually accomplishing something good. One can always go upstairs into doing well. Failures are the most marked when one intends to do something bad and doesn't accomplish it. For instance, a gunman misses his enemy. He generally lives to regret it because his intention basically was not for the greatest good for the greatest number of dynamics—the definition of good.

It must be understood by the auditor that the preclear is not stuck in failures or wins. The preclear is stuck in reversed postulates. He intended to do one thing and another thing happened. This is only aberrative when the other thing that happened was a direct reverse.

There are several methods of running this particular phenomenon and it is a very important one in the repertoire of the auditor.

The first and oldest method was Rising Scale Processing. In this process, an individual was asked to get one of the lower postulates on the Chart of Attitudes and then carry it “upward” until he could get the higher idea. In this particular case one would ask the preclear to get the idea of losing and would then ask him to change that as nearly as he could to the idea of winning. This process might be improved by asking the preclear to get the idea of losing and then get the idea of being engaged in a game and have him do this over and over until he could hold the idea of being engaged in a game. One would then have him get the idea of winning and would thereafter have him get the idea of being engaged in a game. You see, both winning and losing are no-game conditions. One can be as afraid of winning as of losing, because one always loses when one wins or loses, the difference being that one loses the game.

A more modern idea of running this would be to get the preclear to make one postulate and then conceive that its reverse occurred, then to have him say, **“That defeats me.”**

An example of this would be the classical example of telling the preclear, **“Command that wall to fall down.”** **“Now, observe that it did not.”** **“Now decide to do it yourself.”** This will demonstrate to him primarily the mechanism of how he comes to do everything himself, because he knows that if he tells something else to do something it will disobey him and he will get a lose.

An even more advanced method of running this would be to get the preclear to hold two ideas at the same time and have him place out in front of him a person with the idea of living and a person opposite him with the idea of dying. When he can do this, have him make the first person say to the second person, “Die,” and have the second person live as a result. Use various types of postulates until the person takes much less personally the idea of a postulate becoming reversed. In other words, this and other mechanisms can be used to habituate the person to the idea that postulates can turn around and do something else. As soon as he relaxes on this subject he will become much easier and less apprehensive about losing.

Failure consists exactly of something else happening rather than the intention.

An example of this: We are taught that “all men are nice to everyone, that there is no murder or insanity or upset anywhere in life,” and so gradually we intend that a smooth, uneventful and fruitful life will result. Then we discover that people do bad things to people, that people nag us so that they impede us. That our goals, ambitions and accomplishments are not worthwhile in other people’s opinions, and so we have a failure. Here the failure is actually the failure of having a right intention toward life. What is the right intention toward life? To be very, very safe, it is the intention to have what happens what will happen. If one knows that life is going to be tricky, cruel, arduous and vicious at times, then one is not surprised by it. One does not hope so sanguinely, or one does not intend so ferociously that all will be “sweetness and light” and one is not so dismayed when “sweetness and light” does not occur.

Romantic novels teach us that the hero always wins and that good always triumphs. Now, it so happens that the hero doesn’t always win and that good does not always triumph. On a shorter view we can see villainy triumphing all about us. The truth of the matter is that the villainy is sooner or later going to lose in an entirely different way than the villain expects. One cannot go through life victimizing one’s fellow beings and wind up in anything but a trap—the victim himself. However, one doesn’t observe this in the common course of life. One sees the villains succeeding everywhere, evidently amassing money, cutting their brother’s throat, receiving the fruits of the courts and coming to rule over men. Without looking at the final consequence of this, which is there just as certainly as the sun rises and sets, one begins to believe that evil triumphs whereas one has been taught that only good triumphs. This causes the person himself to have a failure and actually causes his downfall. The *safe* way to intend life to go on happening is the way life goes on happening. A much healthier attitude is to change life where one can change it and not be heartbroken because one has not changed it further. In other words one can intend to change life for the better and can succeed. With Dianetics and Scientology, particularly, he can accomplish this. Before Dianetics and Scientology he probably couldn’t, so it would not have been safe or healthy to expect to change life in any way. But now he can at least change life in the sphere where he exists, and thus that things can become better becomes an actuality.

It would be a certain way to produce a failed attitude of mind in a person to indoctrinate him in one direction and have him experience the reverse.

In Dianetics and Scientology the auditor has maintained an optimistic attitude towards what is going to happen to his cases. By and large this is justified, but occasionally he intends to make somebody well and the person, even though he became a bit better, continues to complain about his bad state of health. This was much commoner four years ago than it is today when we understand more, but unfortunately has resulted in a series of failures for some auditors. If an auditor who has experienced this will get the idea that he is going to make the patient well and then have the patient in mock-up collapse and then get the idea that he is going to make the patient well and get the patient to collapse again, and carry this out by old Creative Processing, all of his past auditing failures will drop away as having no importance.

The first and foremost lesson taught by failure is that one’s postulate didn’t stick. There are several methods and processes of running postulates to practice their “sticking,” but the foremost of these would be to run out the idea that one should be dismayed simply because a something else happens. Actually if everything happened which you intended to happen there would be no randomness or interest in life whatsoever. People shudder back from the idea that their postulates and orders will always be obeyed. They will not always be obeyed and that is what makes the game of life a game; otherwise it would be one long continuous win, which is a no-game condition.

A CRITIQUE OF PSYCHOANALYSIS

(Definition: Psychoanalysis is a system of mental therapy developed by Sigmund Freud in Austria in 1894 and which depends upon the following practices for its effects: the patient is made to discourse [free associate] on and recall his childhood for years while the practitioner effects a transfer of the patient's personality to his own and searches for hidden sexual incidents believed by Freud to be the only cause of aberration; the practitioner reads sexual significance into all discourse and evaluates it for the patient along sexual lines; the entirety of the cases of psychoanalysis have never been tabulated and little or no testing has been done to establish the validity of the system.

—Markham, *The Way of the Mind*, page 32)

It is the unkind fate of subjects which fail, to be overhauled and criticized by later understandings. Such, perhaps, cheerfully may be the fate of Dianetics and Scientology—and I say cheerfully—if their improvement in later centuries leads to an even greater freedom and understanding for mankind. But now and then it becomes necessary to eradicate from a new subject things which it has inherited from an old. And only because this has become necessary am I persuaded to tread upon the toes of the “grandfather” to Dianetics and Scientology.

It is necessary to understand first that we are actually indebted to psychoanalysis and its originator, the debarred doctor, Sigmund Freud. My basic, if unappreciated, education in the field of the mind came from Commander Thompson of the Medical Corps of the U.S. Navy, who was Freud's personal student. Better than others, then, some sixty-two years after Freud's original declarations, I could be considered qualified to criticize the failure of not only the basic work of Freud but the later offshoots which, while following his original tenets, yet sought to expand information on psychoanalysis. Very few living analysts today have as direct a connection with the subject as I do and there are few who can boast of the successes with the subject which I can. For I have used psychoanalysis as a practitioner and have achieved some certain successes with it, were one to call a success the sporadic eradication of the severe neurosis in a known mental patient. Further, there is my own enfranchisement by the Freudians when they were all but obliterated in Europe by Russia.

Having established then my possible qualifications to criticize and having compounded such right by having bettered the results of Freud, I feel it is necessary to overhaul rapidly the points of failure of psychoanalysis as we understand the mind today.

In the earliest beginnings of Dianetics it is possible to trace a considerable psychoanalytic influence. There was the matter of ransacking the past, the matter of believing with Freud that if one could talk over his difficulties they would alleviate, and there was the matter of concentrating on early childhood. Our first improvements on psychoanalysis itself consisted of the abandonment of talk alone and the direct address to the incident in its own area of time as a mental image picture susceptible to erasure. But many of the things which Freud thought might exist, such as “life in the womb,” “birth trauma,” we in Dianetics and Scientology confirmed and for them provided an adequate alleviation. The discovery of the engram is entirely the

property of Dianetics. Methods of its erasure are also owned entirely by Dianetics, but both of these were pointed to by early Freudian analysis and hypnotism.

It was in Scientology and the anatomy of Life that one departed entirely from the tenets and teachings and fundamentals of psychoanalysis and sprang forward into the actual causes of things, for Scientology, unlike Dianetics, is not a psychotherapy. It is therefore from the dominance of Scientology rather than from the viewpoint of Dianetics that one can understand the failings of psychoanalysis, its dangers and the reasons why it did not produce what it should have produced. This is not to enter Scientology as a mental therapy, but Scientology is a broad understanding of Life and is certainly capable of looking at a mental therapy AND delineating its errors.

LACK OF GENERAL ADVANCE

The first solid criticism of psychoanalysis is inherent in its failure to advance. Sciences are living things. When they are based upon truths they advance and evolve. Psychoanalysis did not advance or did not evolve. There is little, if any, difference between the writings of Freud in 1894 and the declarations of analysts today unless it is a deteriorated difference; the writings of Freud in the late nineteenth century were clearer and more precise than those which are published today. The earlier writings of Freud had in them the saving ingredient of humanity, which is woefully lacking in later workers in the field of psychoanalysis.

The failure of psychoanalysis to expand, to improve and to embrace other fields of livingness, despite its ambitions, is the clearest observation that can be made detrimental to psychoanalysis. Successful things expand, disseminate and invade. Psychoanalysis has not, and today is almost a lost subject. There are fewer analysts in the world today than there were fifteen years ago despite the enormous wages which could have been earned by them. The complete structure of modern psychoanalysis is the same today as in 1894.

In the face of a successful subject one seldom finds newer and more brutal subjects arising and flourishing. That psychoanalysis could be discarded in favor of Russian Psychiatry as practiced today in Europe and the United States is a terrible condemnation of psychoanalysis itself. It must have failed to have made men this desperate. The treatment of the insane today is far worse than it was two centuries ago and the brutality practiced under the name of "mental healing" cannot be regarded with equanimity by any civilized man.

We discover psychoanalysis to have been superseded by tyrannous sadism, practiced by unprincipled men, themselves evidently in the last stages of dementia. This, then, is the end of the trail for psychoanalysis—a world of failure and brutality. Today men who call themselves analysts are merrily sawing out patients' brains, shocking them with murderous drugs, striking them with high voltages, burying them underneath mounds of ice, placing them in restraints, "sterilizing" them sexually and generally conducting themselves much as their patients would were they given the chance. It is up to us to realize, then, that psychoanalysis in its pure practice is dead the moment the spirit of humanity in which Freud developed the work is betrayed by the handing over of a patient to the merciless misconduct which passes today for treatment.

But completely aside from this general lack of advance, there were certain definite flaws in psychoanalysis which we Dianeticists and Scientologists must inspect, lest we fall into these errors and go the way of the analyst. We have learned certain things in Dianetics and Scientology, and we have learned several Not-Dos which psychoanalysis considered Must-Dos. This article, then, is a list and description of these.

OVER-COMMUNICATION

Communication has the power of eradicating spaces and masses. Communication can create spaces as well as eradicate space, but it cannot create mass. If any mass is created it is created by the command that it be created, and is not created by the communication itself.

We have learned that possession of or contact with mass and the ability to tolerate mass are the bases of good therapy. To use indiscriminately something which erases and vanquishes any and all masses is in direct argument with the very well measured results we are obtaining today using mass acquisition techniques.

If you wish to make this test, you have only to take a person who is somewhat disturbed and make him talk about his disturbance. While there is a point when he seems less agitated concerning the disturbance itself, there is no point when he, as a whole person, is bettered beyond his initial state. If this person is permitted or forced to talk, he will bring himself lower and lower in tone. All one needs to do is watch the emotional content of his communication to realize that he is going down in tone.

A practical application is that a person in a disturbed state, permitted to talk, will not cease to be disturbed. Told to be quiet and given, no matter how, a remedy of his mass, it will be discovered that he rapidly regains his equilibrium. In practice it is far better to tell a patient who is compulsively recounting his difficulties to shut up than to permit him to go on speaking.

In psychoanalysis it was pretended that a patient only needed to talk about his difficulties to have them disappear. Naturally, so long as his mass was not entirely unbalanced a person not in bad condition would be able to talk away some minor difficulty without suffering badly from the result of the drop in mass. Freud has said that a great many people were not to be saved or healed by psychoanalysis. It is interesting that this entire category of people is included in the statement that they are very low on havingness or masses. In other words, when a person was so low on masses that he could not afford to eradicate a mass, he could not then be healed by psychoanalysis, but the strange part of it is that people who were fairly well off in mass at the end of a two- or five-year psychoanalytic sprint had been found to be so deficient in mass as to be almost impossible to deal with.

Free association and all other communication means detailed by Freud are only superficially therapeutic. A remedy of the tolerance of mass *is* therapeutic on all levels of case. You may or may not be aware that a psychoanalytic patient is supposed to talk hour in and hour out for years to his analyst before any recovery is experienced; that no recovery is thereafter experienced in most cases is a very plain case, to the Scientologist, of induced mass starvation.

Two-way communication must be used sparingly and must be accompanied by a replacement of those masses eradicated in the process. Otherwise communication is not therapeutic.

RECALLING

A second tenet of psychoanalysis was that all one had to do was to recall hidden incidents to have them disappear. An analyst expected his patient to go on recalling endlessly, and expected sooner or later that the patient would turn up some interesting bric-a-brac which was the basic difficulty in his case.

Had the analyst known the character of the entire genetic line, had he known of the countless billions of incidents which were hidden from his patient over and above minor secrets of present-life childhood, he would have abandoned this idea that the exposure of a few hidden incidents would bring about a recovery of the patient. Actually, it is true that a patient can be made a little happier by recovering some lost moment he has forgotten, but the condition is not stable and does not continue.

The analyst used to excess the idea of remembering. We in Scientology know the principle of knowingness and not-knowingness, and know that it is as important to be able to

not-know things as to know them. The fixation on endless remembering as found in psychoanalysis would be very destructive to the patient and indeed in practice proved so, even under the eyes of the more critical analyst.

It would have been far better had the analyst asked the person time and time again, **“Tell me something you wouldn’t mind forgetting.”** However, a test of this on a patient who is already deficient in havingness, demonstrated the same phenomenon observed in over-communication. The patient under the impact of this command went down in tone, but did satisfactorily remove several overt acts.

It can be considered, with our experience in testing, an impossibility to eradicate the difficulties of the past in an individual by making him endlessly recall his past. We have the case histories and the tests and the careful observation necessary to establish this point beyond any contest.

TRANSFERENCE

We find another error in psychoanalysis under the heading of “transference.” The actual definition of “transference” in psychoanalysis is sufficiently unstable to bring about considerable argument as to what is meant by transference. In fact, in Dianetics we had to re-establish an entirely different condition which we called “valences” to denote the shift from one’s own personality into that of another.

Transference in psychoanalysis was used to denote the transference of the patient into the valence of the practitioner. This was the way which Commander Thompson described the phenomenon to me and nothing has been learnt from later analysts to disprove this basic definition of Freud’s.

We know in Dianetics and Scientology that the acquisition of additional valences means no more and no less than a scarcity of identities. One wonders a little at a practitioner who would be so certain of his own high quality that he would demand that every patient assume the analyst’s identity. This presents us with a very amusing picture of an entire world full of analysts.

However, there were other connotations to this thing called transference. But their significance was never plumbed or solved in the field of psychoanalysis. A valence, the assumption of the identity of another, can be quite destructive to the personality of any person, but such an action means only a scarcity of identities. Requiring a person to invent identities brings about a drop in the number of personalities obsessively held or dramatized by that person.

However, transference accidentally was not a totally bad step, but a step actually in the right direction. The analyst made the person aware of the fact that he could assume at least one more identity and this, we suppose, was the basis of all therapeutic results obtained by the use of transference. But the loss of one’s own personality to the extent of assuming yet another identity—that of the analyst—could not have proved other than destructive to the personality of the patient, and thus we must assume that the entire sphere of transference was an error.

As we increase this list you may find it questionable that psychoanalysis ever intended at any time to improve anyone if they used only those methods and mechanisms calculated to depress and enslave the patient. However, there was the saving grace of giving to the patients’ difficulties the attention of the analyst, and this mixed with the ingredient of humanity, mercy and kindness must have produced what results were produced by psychoanalysis.

CONCENTRATION ON SEX

Those in Dianetics and Scientology are aware of the existence of eight separate spheres of beingness—the eight dynamics—and know that the second dynamic is only one of these eight. They are also aware of the fact that a concentration on one dynamic to the exclusion of the others cuts back the ability to live to just that degree that the concentration takes place. In other words, one who is concentrated on only one dynamic could be said to be only one-eighth alive.

As Freud worked in a very sexually inhibited era it is natural that he would pick upon something which was intensely aberrative to the people in his immediate vicinity. Furthermore, he had a racial fixation on sex, a fixation sufficiently pronounced to cause it to infect contagiously all modern European stock.

However, to one who has adventured amongst barbarian peoples and who has inspected aberration in its many guises, the concentration on sex as the sole offender as pretended in the “libido theory” of Sigmund Freud becomes unreal. Races which have no sexual inhibitions of any kind are yet aberrated. In fact I know of several savage races which find so little meaning in sex that they do not even bother to trace ancestry seriously, and when they do wish to connect themselves with a family connect themselves on the mother’s side, as one can be fairly certain what woman bore him when one is uncertain as to who influenced the birth from the masculine side. Yet these races, free as the wind on the second dynamic, are yet intensely aberrated in other quarters. Some are aberrated on the eighth dynamic of God, some on the first of self. The American Indian, for instance, is enormously aberrated in the field of animals, but not much inhibited in the field of sex.

It must have required a considerable mental gymnasticism to have combed everything down to sex, and when Freud did so he did no more therapeutically than to give a stable datum to the confusion of the mind which other people living in a sexually inhibited time could accept. Therefore, the advancement of sex, just as the advancement of lanterns or the advancement of chewing tobacco, as the single source of human aberration could have brought a tiny amount of stability to the confusions surrounding the problems of the mind.

But the concentration on sex is not a true one and has led the psychoanalyst down many a blind alley and has inhibited him from observing rationally and truthfully what is going on in his patients, which is a pity, since if he had done this observation properly he would have discovered a great deal more than he has discovered in the sixty-two years of his existence.

Later analysts sought to expand the second dynamic ideas of Sigmund Freud into “social” activities. In other words they tried to go up to the third dynamic of groups, but their search forward was not successful.

You see, there is a considerable amount of attention concentrated on sex, but to say that everything stems from sex is to invalidate the ability of people to create themselves. Sex is simply a low order massive level of creation. True, it is a powerful one, but people in the grip of the inspiration of work, group activities, religion, very often experience far greater emotional or ecstatic impact than from sex, which, all things said, is fun, but not entire. Sex could have been tossed aside with Ovid’s works and yet have left a full mental science.

SIGNIFICANCES

The reading of sexual significances into each and every action of a person could not but continue to expand the grip sex already had upon the person. Thus it could be said that the Freudian concentration on significances themselves was extremely detrimental to patients in general. The more such significances added to a case, the less chance the case has to recover.

There is a process in Scientology known as “assigning the reason why.” It is a rather old process and is not particularly useful since it considerably reduces the mass tolerance of the individual. One has the air about one give various reasons why. The result of this is to add up an adequate number of significances to the individual, and to desensitize his fixation on having

to know the reasons back of certain motions, combinations and beingnesses. Today one could assign reasons why to the walls with considerable recovery.

As the total significance to existence is the significance that the being puts there, the adding of significance to his life without adding as well games, spirit, havingness and other things, could be a considerable detriment to his happiness, and has proven so in psychoanalysis.

To be concluded ...

FIVE TYPES OF VALENCES

A rule has showed up. Never process a no-game condition, only a game condition.

No-Game conditions: know, opponent has, arrivals, solutions, namelessness, pan determinism, friendship, win, lose, effect on self, no effect others.

Game conditions—to be processed: problems, not-know, attention, can't have (opponent), have (self), self-determinism, survival, no effect on self, effect on others, identities.

Example: thoughts that would have no effect on you, thoughts that would have effect on (father). No reverse.

This accounts for randomness in process application.

I felt clever last week and worked this out. And it works!

Valences are:

1. Own valence (identity)
2. Body valence (human identity)
3. Exchanged valence (direct assumption of another valence)
4. Attention valence (valence assumed to get attention from another)
5. Synthetic valence (valence described to pc and assumed)

On 1—no change desired. On 2 body run as opponent. On 3 exact valence run as problem and can't have. On 4 valence of B assumed to get attention from A, remedy have and problem on A. On 5 run can't have and problems on person (or book or film) who told pc.

Them's how we've missed on some profiles which *are* valence pictures. He's in Mother's valence but separation on Mother didn't work. Why? Maybe he was in an attention valence requiring separation from father or in a synthetic as described by grandma. Voila—

How to really split a valence (after much testing):

1. Get pc under control with Start-Change-Stop—lots of it.
2. Unjam track with Solids. “What do you see? Make it solid.”
(Anything jamming track can be run as a valence below.)
3. Choose valence or valences, weakest universe preferred.
4. “What would interest _____?”
5. “What would get the attention of _____?”
6. “What _____ can’t have.” (objectively on room)
7. “What could you protect _____ from?”
8. “What communication could you prevent _____ from originating?”
9. Problems of Comparable Magnitude to _____ (not necessarily to be run at this point but anywhere in formula).
10. “Invent a game you could play with _____.”

Then 4 to 10 again to check.

Run Havingness as needed.

Keep pc under control with S-C-S on body.

The above formula is a killer on valences. I took 100 hours of testing to check it out.

Best,

LRH

RUSH
1956

July 22nd,

To U.S. ONLY Julia Lewis, Dick Steves, L. Ron Hubbard, Jr.

To England ONLY Association Secretary (Jack Parkhouse)
Director of Processing (Ann Walker)
Director of Training (Dennis Stephens)

Staff Auditors, Instructors and Auditors close to Operation only.

TECHNICAL BULLETIN OF 22 JULY 1956

I feel the urge to communicate to you the best news since 1950.

I have whipped the problems of the whole track and memory of the past and can resolve the worst cases we have ever had. That is a huge statement *but* I have solved and can untangle in an intensive the problems of the vacuum and havingness plus memory and health and have just done so. Hence the exuberance.

Also, other auditors can solve these in a case as well. NIBS has just cracked two six-year-standing Black Fives using some of this material and Herbie Parkhouse has had considerable luck with solids.

We are now capable of solving Book One style cases to the extreme level of clear.

No wild burst of enthusiasm is here intended. I have to put the finishing touches on a lot of things and the process is still slow—25 to 75 hours. But I've now done it and seen it done to worse cases than any you've had. And that's fact!

Okay. It's not simple. It requires a minute understanding of Book One. It would take me 50 pages to explain all I've lately found about vacuums. You haven't seen the last of me or of study, but you will have seen the last of unsuccessful cases providing only that we have time and environment in which to audit them.

We can make homo novis. (AND give a grin to those who kept standing around bleating, "Where are the clears?")

We know more about life now than life does—for a fact, since *it* was reaching, we can communicate about the reactions.

The process is concerned with "making it solid" combined with effects. It isn't easy. It is wonderfully complex and delicate. But it *has* been done. And it is being done.

Our cases gained but sometimes slumped. Why? Because an electronic vacuum restimulated on the track after sessions, and robbed the case's havingness.

A vacuum isn't a hole. It's a collapsed bank. Every lifetime bank is collapsed into a vacuum.

The formula is—

1. Run pc on start-change and stop for *hours* until he is under auditor's control, in session and (often) exteriorized.

2. Then run him with commands “What are you looking at?” “Good.” “Make it solid.”

He will eventually hit a vacuum. (He’d hit it faster on “Recall a can’t have” but it’s too fast.) Here’s the tangle. The vacuum is a super-cold mass or an electric shock. This “drank up” bank electronically (brainwashed him). The energy drunk turned black. Hence black cases. (Does not apply only to black cases however.)

3. Run, interspersed with solids and “objective can’t have” on the room, “Tell me an effect object (that drank bank) could *not* have on you,” and “Tell me an effect you could have on object.” Object may be electrodes or supercold plate or even a supercold glass.

Caution, handle one vacuum at a time. These vacuums go back for 76 Trillion years. They were the original brainwash thetans did to one another, then psychiatrists (on the whole track) did expertly (modern psychiatrists are *punks*, modern shock too feeble to do more than restimulate old vacuums).

Take the vacuum that comes up running solids, or even “Recall a can’t have”, whatever it is and solve it as above.

This is delicate auditing. If you restimulate a vacuum too hard, the whole track groups on it.

Read Book One. Add vacuums instead of word groupers, use above and you’ll probably get through to success. Nibs did and I had given him less than you have here. Of course, he’s one of the best auditors in the business, so go easy. And Herbie Parkhouse is no slouch.

CAUTIONARY

This is true—

1. We have created the *permanent* stable clear.
2. In creating him we have a homo novis in the full sense, not just an Operating Thetan.
3. We now know more than life. An oddity indeed!
4. We now know more about psychiatry than psychiatrists. We can brainwash faster than the Russians (20 secs to total amnesia against three years to slightly confused loyalty).
5. We can undo whatever psychiatrists do, even the tougher grade from away back. We can therefore undo a brainwash in 25 to 75 hours.
6. We can create something better than that outlined and promised in Book One.

B U T

1. We need to know more and be more accurate than ever before about the time track and auditing. I have not given a thousandth of what I know about this.
2. We have a new game but also new responsibilities amongst men.
3. This data in the wrong hands before we are fully prepared could raise the Devil literally.
4. Because we know more than the Insanity Gang, we’re not fighting them.

5. Because we can undo what we do, we must retain a fine moral sense, tougher by far than any of the past.
6. We can create better than in Book One now *only* if we know Book One and know our full subject.

AND WE DO NOT YET KNOW ALL THE SAFETY PRECAUTION TO BE USED.

I will be giving this data in full at the Games Congress, Shoreham Hotel, WASHINGTON, D.C., August 31st, to September 3rd, 1956.

The exact regimen of this will be SLP 8 and will include the total picture of separating valences from bodies (which must still be done by the auditor, a formula I now have).

I have given you this data in this bulletin at this time because now I know I know and I want you to share in seeing the surge of vision which will be our future.

L. RON HUBBARD

P.S. (Actually, contrary to rumor, it *hasn't* all been done before. If it had been, the guy who is saying it has would be clear!)

A CRITIQUE OF PSYCHOANALYSIS
Continued

Any auditor knows that the self-determinism of the preclear is reduced markedly and alarmingly by evaluating for the preclear on the subject of his own case; in fact, one can make a test of this with the end product near insanity. One has a person tell him what the person is worried about in life and then one informs that person the reason why this is so and informs him with sufficient force and logic to bring about an utter conviction on the part of that person that this is the case. What happens here is that one adds confusion to the case rather than otherwise.

All a practitioner can hope to do is steer the person in certain directions where that person will then make certain discoveries and where that person will be able to reconsider and cognite to the end of having a more proper view of things.

The real thing wrong with evaluation is that data or significances have a tendency to eradicate masses when they are intimately applied. It is quite one thing to say what all life is about and to give an individual the basis for a better and wider look at life as we do in Dianetics and Scientology, and it is quite another thing to find that the person is in his mother's valence, and then begin to evaluate for him concerning his mother.

The most harmful example of this is to find someone upset, for instance, about his father, and then to explain to him, as the analyst does, that his father is probably a very good man and meant all for the best. To do this is to throw the patient into an apathy. As apathy is at least quiet, it has in later years been considered a desirable state for people who might have some socially destructive impulses. Apathy became, then, the end goal of later analysts, and is, of course, the only goal of the psychiatrist. That is why these people evaluate for their patients in the manner given.

When a patient in an asylum has told her "doctor" that she was recalling incidents from the mother's womb, the "doctor" is prone to tell her that is all nonsense, she has to face reality, and so forth, which evaluates for her.

The real crime of evaluation is to tell the patient he is wrong. Evaluation itself as a broad subject is not particularly harmful so long as it does not completely invalidate the person to whom the remarks are addressed. Thus you could give a person a general framework of life so long as you are not crowding it against an entirely different framework of life. As an example, a Scientologist tells some religionist whose life is entirely oriented on religious principles of some archaic and antiquated creed that his beliefs are all wrong and that the truth lies otherwise. As the Scientologist is going straight up against a life entirely oriented by these ancient creeds, he is apt to produce in his action a considerable apathy on the part of the religionist. He is not

apt to get in truth a convert to Scientology. He is apt to get a candidate for a mental hospital instead.

A person can be led out of any serious fixed beliefs by getting him to agree that there are wider beliefs to assume, but this must be done in full observance of ARC, and is not done by direct evaluation. This is, by the way, why we sometimes fail to convert people in older “healing” methods to Dianetics and Scientology. We simply fly into the teeth of their stable data and leave them all confused. We, knowing life, are far too convincing. “They” cannot but partially agree.

Evaluation for a person could be defined as the action of shaking his stable data without giving him further stable data with which he can agree or in which he can believe.

The analyst from Freud’s time onward has been supremely guilty of this. That it must be called guilt is observable in the fact that evaluation—reversal of the patient’s beliefs and data directly to the patient—has placed many psychoanalytic patients in hospitals.

INVALIDATION

The subjects of significances, evaluation and invalidation have become interdependent in Scientology.

In invalidation we have more fully than in evaluation a capital crime.

With significances we are simply discussing reasons why. With evaluation we are only giving new stable data, but with invalidation we are overtly and consciously knocking whatever props the patient may have out from under him.

The greatest invalidation, of course, is to be struck when one does not expect to be struck, to be criticized when one does not think he merits criticism. Essentially it is the act of telling a person that although he thinks he should be there, he is really not supposed to be there and the use of thoughts or force in order to accomplish his not-thereness. Reversely, it is also making a person sorry for his absence. In essence it is saying that a person has no validity, therefore that a person’s thoughts and postulates have no validity.

The commonest conduct by analysts in hospitals is to invalidate. Actually the entire activity of psychiatry, with its drugs and shocks and restraints, is invalidation.

In actuality evaluation belongs more properly to the field of psychoanalysis than does invalidation. Invalidation belongs to the modern psychiatrist, since it can have considerable brutality connected with it.

FAILURE TO OBSERVE

Another reason why psychoanalysis has failed lies in its failure to observe.

It would be thought that if many thousands of men financed by many, many millions of dollars were to look for a long period of time at insane people, they would sooner or later codify certain definite theories of observations, which when added up would bring about certain conclusions. In fact, one could not expect less than this from the most mechanical computer arranged.

Analysis must have been based upon erroneous premises. It must have been, because it led to no additional observation. A Dianeticist or a Scientologist setting out to observe phenomena will cover the track of Dianetics and Scientology. This is fairly certain, because it has been done now for many years by many, many people. The observations of Dianetics and Scientology have been productive of a considerable number of new observations. This is not

the case with psychoanalysis. Only those few examples which seemed to validate the basic principles of psychoanalysis were observed by the analyst and where data fell outside this sphere it was not observed and codified.

A true and proper scientific method as given in Book One, *Dianetics: The Modern Science of Mental Health*, is as follows:

1. Make a series of careful observations.
 - a. These observations must be repeated, and are acceptable as observations only if many people following the prescribed techniques can duplicate the results.
 - b. Variations of the prescribed techniques must be tried to eliminate the possibility that the observed results might be due to a factor other than that intended. As a gross example, suppose it is reported that a magnet will attract objects. Demonstration shows it does attract and lift iron balls; that is Step (a) above. Now variations of the experiment show that the magnet attracts *iron* but not copper, silver, etc. The observed effect—attraction—is real. Variation of the original experiment is needed to show the actual limits of the effect.
2. Combining all relevant data, from all relevant experiments, formulate a hypothesis.
 - a. The hypothesis must explain all observed data.
 - b. It must not demand as a consequence of its logical development, the existence of phenomena that do not, in fact, exist.
 - c. But it should indicate the existence of real, hitherto unobserved facts.
3. Using the hypothesis, predict new facts.
 - a. A logical structure broad enough to explain all observed, relevant phenomena will necessarily imply further phenomena that have not yet been observed. Use this mechanism to predict the existence of something which, under previous theories, would not exist.
4. Perform an experiment and make observations on these predictions.
5. As a result of the experiment, discard the hypothesis, or advance it now to the status of "Theory."
6. Make further predictions, further experiments, and collect more observational evidence until a contradictory relevant fact is found.
7. Discard the old theory, take the new total of observational data, and form a new hypothesis.
8. See Step Three.

It is as though the psychoanalyst from Freud forward was looking for confirmation of his own beliefs.

The most serious defect which a researcher can have is a fondness for his own beliefs so great that he looks only for confirmation of these. A researcher must possess the ability to discard and reassume theories at will. He must not nurse to his bosom one theory and then try to align all data to that theory. He must align data to a theory, it is true, but when that data does not add up to that theory, that theory must be discarded and a new one must be assumed. Only in this way is progress made. That the basic tenets of psychoanalysis were never abandoned or

reformed shows a certain fondness for them which was not borne out in actual practice or observation.

The dramatization of the mental image picture (the engram), the demonstration of overt act-motivator sequences and a hundred thousand other Dianetic and Scientology phenomena, went entirely unobserved by psychoanalysts. They even looked at them and saw them not. In that healing consists of getting at what is wrong and making it right, the approach of the Dianeticist was intensely successful. In that what was wrong with the patient was not a psychoanalytic theory was enough to cause the analyst to invalidate the patient and remain secure in his theoretical assumptions, the analyst actually did not make people well; and this is the primary reason why: He failed utterly to observe the data of the patients.

HYPNOTISM

Probably the most fundamental error of psychoanalysis was its early dependence upon hypnotism. Breuer, as Freud's co-worker, actually exhumed the original data on which Freud based his libido theory in 1894. Breuer used hypnotism.

The use of hypnotism denotes an anxiety to produce an effect beyond the power of the individual to produce an effect by normal knowledge and means. It is the belief that the patient must be in a comatose state before something can be done to him. The medical doctor and the analyst and psychiatrist alike have held this tenet.

Basically, a good therapy would wake people up, make them more alert, make them more able, happier, more competent. Hypnotism is the exact reverse to this. We have here another failure to observe. Anyone observing hypnotic patients would see that after they have been hypnotized they are less able.

Narcosynthesis and other nonsense has had to be run out of more Dianetic preclears than I would care to count before their cases could advance. The continual use of hypnotism (and an inexpert use it was, to one versed in Eastern hypnotism!) and the use of hypnotic drugs to "diagnose" or "plumb the depths" of some patient is a confession that one does not know the general rules of life. If one does not know these general rules, of course, he is apt to look almost anywhere, even into the wastebasket, for an answer.

Hypnotic command or hypnotic diagnosis does not lead to well patients. It leads to slaves, and if you will observe any people who have been continually hypnotized you will find that it has been detrimental to them. This does not even require very much close observation.

There is nothing essentially wrong with hypnotism so long as one can undo hypnotism. We can undo hypnotism, therefore it is not very important whether we hypnotize people or not; but the analyst could not unhypnotize people. He did not even know what the mechanism of hypnotism was, and as a result he was not thereby entitled to use it. Only that person who is able to produce both the kill and the cure should be permitted to kill. If you could bring a dead man to life at once without any bodily harm to him, it would be all right for you then to kill men—providing you brought them back to life. It is perfectly all right for you to hypnotize people so long as you can unhypnotize them. Psychoanalysts and psychiatrists cannot do this. Therefore this particular phenomena in the mind should be well beyond their reach.

ABANDONMENT OF CASES

We think very poorly of the auditor who abandons cases without doing much for them. It must be harshly said, on ample evidence, that the analyst does very little else but abandon cases.

The first hours in analysis are usually spent, according to a survey made back in Dianetic days, finding how much the patient can pay. After that, the patient is persuaded to believe that it will require about a year of four separate sessions of one hour each per week to establish whether or not analysis can do anything for him. At the end of a year, of course, he is so habituated to coming to the analyst and handing over almost the entirety of his pay check that he does not stop doing so, and forgets that the analyst has ever said that it would require a year just to find out. Nothing is being done for the patient but he does not notice this. When the patient runs out of money, he is abandoned. This is our unfortunate finding in the case of psychoanalysis.

It is quite one thing to leave a case when one has bettered it of its current worries, and it is quite another to leave it when one has worsened it. The Dianeticist does the former quite often. The patient expects to be a Dianetic clear and does not reach that goal-only recovers from a couple of psychosomatic illnesses and two or three deep neuroses, and yet wants more auditing. The auditor is then entitled to tell him no. But in the case of the person who is worsened by the therapist, the abandonment of that case becomes inevitable, if the therapist ever could have done anything for the case in the first place.

Naturally we are walking on rather thin ground here since there are many people around who believe that Dianetics did not do all for them that it should, and I am the first to agree with this, since we had too few skilled practitioners and we ourselves were too pressed for time which was being consumed by long and arduous processes to pay attention to every complaint which came our way. But our intention in Dianetics was never otherwise than to do all we possibly, humanly could for the preclear. I am afraid that the analytic approach does not fall within this category. The analyst must have known when he first enlisted the patient that the patient would worsen, since the analyst rarely experienced anything else in his practice. Therefore we have a basic intention which is entirely at variance with our ideas of the way the world ought to run.

It is interesting to note that our attempt to survey psychoanalytical suicide met with many savage rebuffs. Yet we were able to discover that some 35% of the people "in" psychoanalysis committed suicide either during an analysis or within three months after the analysis. In our efforts to discover the why of this we received only one answer common to all of the analysts interviewed, and that was, "He came to me too late."

It can be seen that this is a rather shallow way to look at things, for any of us today in Scientology could say, "Well, the human race came to us too late," and we could then throw up our hands and not do anything about it, whereas, as a matter of fact, the remark is almost correct. Yet we are still doing something about it and in Dianetics and Scientology we have gotten no great number of suicides. As a matter of fact, I know of but one actual suicide in all the hundreds of thousands of cases which we have had our hands on and that one was political, not therapy.

FAILURE TO VALIDATE BY TESTING

It might be asked in this modern age why psychoanalysis never permitted itself to be before and after tested. This is probably the greatest condemnation of the entire subject of psychoanalysis.

One looks in vain for actual authentic records of improvement of cases because of psychoanalytic sessions. While the psychoanalyst is very anxious to have us in Dianetics validate our science, he himself has never validated his. Had he done so, we would have to hand an accurate record of cases tested before analysis and after analysis.

The whole idea of testing does not belong to either the psychoanalyst or the psychologist. Testing goes clear back to the dimmest days of Greece. Man has always been testing man to discover his existing state or changes in it.

The oldest precursor of testing known to us is probably graphology, but on the other hand it may be phrenology. The ancient witch was in essence doing a psychometric test on her visitor. Tests of guilt and innocence by responses was a subject for medieval courts. So at no time could the psychoanalyst have said that he was not familiar with the whole project and idea of testing.

In modern times testing (erroneously within the framework of "psychology") has been excessively available to the analyst, and yet he has never produced to my knowledge any booklet or pamphlet concerning the various differences of patients before and after an analysis and has certainly never codified his subject.

Why has he not done this? Is it because he could not? I am afraid that is the reason why. I am afraid that psychoanalysts have tested their patients before and afterwards and have found them worse afterwards and so have never released the results. It would be nearly impossible for a practitioner not to attempt this sometime during his career. Therefore we find all the results of psychoanalysis based upon the opinion of the analysts themselves. If one has ever sat in a coffee house talking to auditors about the wonders which have been produced in cases which one knows are still spinning, one will see that it is a human error to assume a greater result than has been achieved. Now, however, in fairness to these auditors most of their results are factual and they have every right to brag about them. But in the case of the analyst, one never hears about recoveries. One hears only about symptoms. If one has ever had the painful experience of spending an evening with analysts, one would realize that the dramatization of the patient's symptoms was the entirety of the conversational fare. If one can talk only about symptoms and never about the release of symptoms, one then assumes that the release of symptoms has not been accomplished.

SUMMARY

Well, how does all this affect us? Are we in any way affected by the fate and failures of psychoanalysis?

Yes. In two ways.

In the first way, we are able to sort out of psychoanalysis various don'ts, and, as these crept into early Dianetics from psychoanalysis, it is necessary for us at this time to reassess and evaluate what we are doing. One can summarize these rather rapidly. One does not force a person to communicate who is low on havingness. One does not specialize entirely in recalls. One does not occasion or force a transference into another personality. One does not concentrate on the second dynamic. One does not specialize in significances. One does not evaluate for or invalidate the patient. One observes what he is doing from the patient and not from the textbook, making sure that one is actually observing the patient. One does not use hypnotism. One does not abandon cases when they have been worsened. One does not fail to validate by testing, and one sees security in the general expansion and advance of a subject itself. We can learn these don'ts because we see a corpse lying there very dead because they did not know these don'ts, so we should not repeat them.

Is there any other way we are affected by the psychoanalyst? Yes. The psychoanalyst and various mental practitioners have not conducted themselves ethically in this society. The psychoanalyst, the psychologist, and the psychiatrist have been guilty of not delivering. Whatever may be said about Dianetics and Scientology, whatever may be said about me or my enthusiasm, I can assure you that we and I have delivered. We mean what we say when we write down in a summary of case histories that we cured so many cases of so-and-so, and we alleviated so many cases of such-and-such; we are not guilty of anything but what we actually did. We are guilty occasionally in misinterpreting exactly how we achieved these alleviations. A case in point is in 1947 when I was using a recall method which rehabilitated the confidence of the person to face his pictures. This brought about a cessation of his stimulus-response mechanisms in their entirety, and so created a clear. Even by the time Book One had come

along some of this technology (because it wasn't properly understood) had been forgotten or overlooked. But later on it was rehabilitated and brought to the fore, and it is in full use at this time. We have said we would deliver so-and-so and we are delivering so-and-so, and those things which we have intended to deliver and have not yet delivered we still intend to deliver and will continue to strive down to the last thought wave to accomplish. Our efforts and activities are sincere. There has never been a more sincere group on the face of Earth than those who are in the ranks of Dianetics and Scientology. These people can be trusted. You can go to almost any person practicing Dianetics and Scientology and receive some part of the benefit inherent in these subjects. He will try, he will try decently and he will make the best changes he can accomplish take place in your case. This is more true than ever today with our new programs of indoctrination and training, and I would say that in a relatively short time the totality of result to be obtained from Dianetics and Scientology will be obtainable from each and every properly certified practitioner throughout the world.

We have here an intensely sincere group. We have a fine ethical background. We are trying, we are honest, we are decent.

How does this make psychoanalysis in any way affect us? Well, I am very sorry to have to say this, but the psychoanalyst has not been honest, he has victimized the public. A psychoanalysis costs better than \$9000 (£3219) and yet does not attain as much result as one opening of session by one auditor (£2). In fact this \$9000 "cure" is apt to deteriorate the case entirely. The psychoanalyst has made specious and large statements concerning his abilities to act, and has never even tried to press forward and bring those conditions into existence. He has joined hand and glove with the psychiatrist, and is murdering and butchering his patients. It is the least safe thing that one could do to place himself in the hands of an old-time practitioner today.

The public is entirely and intensely aware of this. The public is aware of the fact that the last person you want to see is a psychoanalyst or a psychologist or a psychiatrist. The public is forced to go to these people by the law, and the only reason they go near them is because they were at one time the faint hope that existed, but their faint hope no longer has to have recourse to them. These practitioners have had to enforce their position by law, lacking results.

Psychoanalysis, psychology, and psychiatry have influenced the Christian ministry today to place even members of congregations into their hands (based on an actual poll of 1,700 ministers). The psychiatrist, the psychoanalyst and the psychologist may have a fight one with another amongst themselves, but they hold this in common: They have given into the public the rightful opinion that the mental practitioners prior to the year 1950 were entirely valueless and were not earning their salt. They have given rise to a public atmosphere of disdain and contempt for anyone practicing in the field of the mind. Therefore they do to some slight degree affect us. Therefore we should make very very clear to the entire public that we are not psychologists, psychoanalysts, or psychiatrists, and any of us who fall from grace and attempt to use these old cloaks to further our own pocketbook should be despised by their fellow auditors. The one chain of logic we must break is that "people who work in the field of the mind are all crazy; they can do nothing for us, therefore we must not go to them."

My own attitude, whether I am known to be me or not, when I am confronted with the idea that I am connected with old-time mental healing, is to become enormously amused and to make it completely clear that Scientology and Dianetics had to come about and had to be called by different names because they did something that the old-time fields of mental activity never did do.

You are to some slight degree affected by the repute of the psychoanalyst and he has not helped us out. He has attacked his patients sexually under drugs. He has lied about his cases. He has worked himself up in a legal position before the courts so that he is listened to by the judges, and yet only opinion is used by him to declare people insane and sane.

This is an empire which we are today inheriting. It is an empire we must clean up. It is an empire which has not been clean. Therefore it is up to us to do the very best we can to make this new empire of the mind a good solid ethical thing in which people can believe, and to make that empire something which serves man, rather than victimizes him.

SCIENTOLOGY PROCESS CHART

The following processes on the Know—Mystery Scale are in current use, having been tested and found effective.

The most effective single processes are solids, problems and start-change-stop.

The list is used starting with the Mystery band.

The list is done with complete attention to running Games Condition only.

**K N O W
NOT KNOW**

Objective, outside, persons, objects.

Auditor indicates object

and “Tell me something you could not-know about _____,”
 “Look around, tell me something you could have.”

L O O K (PERCEIVE)

Put unknown perceptions in walls and exterior objects.

(Sight, sounds, smells, tactiles.)

E M O T I O N

Objective, outside or in Auditing Room.

Put _____ (emotion bottom to top of Tone Scale) into that (indicated object).

E F F O R T

Solids—Introverted-(facsimiles) “What are you looking at?” “Make it Solid.”
(Don’t forget invisible particles.)

Extroverted—”Look around the room and find something you wouldn’t mind making
Solid.” “Make it Solid.”

Fight the wall (body or mock-ups).

T H I N K

Put postulate “Want to know” in walls. Make it know.

S Y M B O L S

Mock up somebody inventing something for others to know about.

Mock up Mest being curious.

“What is it?” objective.

Mock up people obj with postulates in them “How do I get rid of all of it?”

Lie about (invent) Individualities. (An identity that could cope with it.)

Lie about (invent) opponents.

E A T

List some inedibles.

Look around room, find something your body can't have.

S E X

What would interest (valences).

An effect you wouldn't mind causing on opposite sex.

M Y S T E R Y

Mock up a confusion.

Confusions you wouldn't mind creating.

Invent a stable datum for “that” confusion.

Mock up a confusion for which practice) would be a stable datum.

Put interest, disinterest in objects. (Find something uninteresting in this room.)

Waste Cases.

(postulate, valence, some old healing

Problems of Comparable Magnitude (to anything).

Start-Change-Stop preclear's body or small objects.

Flip-flopping (by mock-up).

Processes run upwards from this point as a gradient scale of difficultness.

THE ANATOMY OF TRAPS

What is is not necessarily what *should* be.

The way a thetan lives is not and never will be the way thetans should live.

The basic reason for this is the desire for randomness, summed up in the desire of the thetan for a game. Infinite wellness is undesirable if it means that the thetan is to be in a state of total knowingness, total serenity, nameless, without ARC or contact with any environment. Evidently a thetan would rather be intelligent in relation to his environment, identified and identifiable, capable of emotion and experience and in ARC of whatever kind, with whatever type of playing field he may fancy. In other words, a thetan believes that he should be involved in a game. The deepest and most basic rationale is understood by the fact that a thetan must be part of the game. If he is not he is unhappy, no matter how purely and beautifully knowing and serene he may become.

However, there is a difference in games which is marked and obvious. There is the matter of playing a game and knowing one is playing a game, and not knowing one is playing a game. Between these two things is a world of difference. A thetan who is engaged in games he does not know he is playing is unhappy, since he does not believe he is playing a game and finds himself nevertheless in motion. This is what the preclear objects to when he comes to the auditor to be audited. The preclear suspects that he is playing a game and does not know what game he is playing. He simply wants to find out. He does not want to stop playing all games. If the auditor proceeds in the direction of making him stop all of his games, if the auditor erases all of the preclear's games, why, the preclear is resultantly unhappy. The preclear wants to know what game he is playing and that is all there is to it.

In the matter of traps we have in essence a similar condition to the state of mind regarding games. Traps are part of games. That is all they are. To believe that a thetan could not get out of any trap he has gotten into is folly, since it is very difficult for a thetan to maintain and not go through every barrier which presents itself.

Here we have the difference between the ideal and the actual. The thetan who is in a trap could get out of one with ease if it did not violate his condition of games. Were games not a fact and a rationale of life, traps would be non-existent. If games were no object whatever, getting out of a trap would be simplicity itself.

One is trapped by those things to which he will not grant havingness. A game condition demands that one denies havingness. Therefore games trap.

To maintain a games condition in a preclear it is best to run can't have on objects, valences and people. For example: **"Tell me something in this room your mother**

can't have" is a highly effective process, particularly if one has first run **"What effect could you have on mother?"** The "can't have" on mother is a games condition and runs out the games one has played with mother. Therefore the process is workable. The process runs out exactly what one has done in order to be trapped in the mother's valence. One has, in playing games with mother, said that mother could not have this and could not have that, since to permit mother to have something is to violate a games condition. Let us be very sharply clear here. Permitting things to have things is to make allies or teammates of those things, and when these do not prove by their conduct to be teammates, one is then guilty of permitting an opponent to have something, which is a no-game condition.

The rule is: Whatever one has denied havingness to has to some degree become a trap.

When one runs "can't have" on the object, he runs out the original denial of havingness to the object.

Here is where processing meets its biggest obstacle: Running havingness such as **"Look around the room and tell me what your mother could have"** conflicts with the fact that one has already postulated numerously on the track that mother cannot have things. Running the permission of mother to have things untraps the thetan from mother only so long as it does not cause him to fail in his games condition with mother.

In practice one has to settle the whole question of mother as an opponent before one can have a mother. **"Invent an opponent of comparable magnitude to mother," "Mock up mother in violent motion," "Look around the room and tell me something mother can't have"** settles this opponent-mother condition. One does not run "can have" on mother, only on self. That one audits out a game condition to obtain a higher tone is a major discovery in auditing and is all that is used today.

It is an easy thing to say "One is trapped by those things to which he has denied havingness," but the truth of the matter is that if he did not and had not denied havingness, he would not have had a game. It is necessary, then, to settle the games condition on each and every object from which you would untrap a thetan before you then run the havingness process necessary to permit him to grant havingness to the trap. In the first place he and the trap are actually playing a game, and it may be that he has not enough games in order to surrender the game of the trap. If he had enough games in order to surrender the game of the trap, he would theoretically come out of it, and he would certainly come out of it if he was put into a condition whereby he could actually grant havingness to the trap.

Jails, theta traps, pole traps, bodies, each and every thing, large or small, including the MEST universe, which could operate as a trap, follow this same rule.

The basic havingness of course, that the thetan is denying the trap, is denying the trap a thetan—and this, properly worded, works quite well in processing. But unless a thetan denied things himself he would be in a no-game condition—a thing which he cannot and does not tolerate.

L. RON HUBBARD

THE GOAL OF AUDITORS

To penetrate a case at its level of certainty of motionlessness and by processes, run by good procedure, to improve that certainty and the level and to improve certainty on each level, the preclear always at cause until the preclear, through objective and creative processes, is brought to an ability, theoretical, to mock up in its entirety, a body and a universe visible to all.

We introduce games condition by having preclear at cause, even though the common denominator is motionlessness, a no game condition.

HCO BULLETIN OF 20 AUGUST 1956

After a study of processing in general and much testing by HGCs London and Washington and in particular by my own and HCO auditing, the following scale of processes can be considered optimum at this time in the light of what we know. Until further extensive testing is available we can consider the following to be the most productive processes and these should be used by staff on outside pcs and taught in classes.

HGC PROCEDURE OF AUG. 20

1. Make pc at ease in session, build some A-R-C without too much 2-way comm. Get pc's viewpoint. Make him feel auditor regards goals seriously. Run comp mag on pt problem.
2. Run S-C-S on objects stressing each of them more or less equally, running each until fairly flat. This could take from a half-hour to 25 hours depending on pc. Away and to pc on stop is highly effective.
3. 8c part (a) on body if pc in poor shape. Get it flat if so. (At least until he has no somatics.)
4. S-C-S on body.
5. Locational processing as extroversion process for S-C-S on 4 (run with 4 as an alternating process if needed).
6. S-C-S on body specializing on stop.
7. Connection processes. (Look around and find something you wouldn't mind connecting with you.)
8. Before and After Solids.

Select an engram from mid life which pc has mentioned or an age and have him find a picture before it. If picture isn't an engram have him make it solid. Then one after the selected time. Keep him out of engrams and painful incidents by having him get earlier or later ones that aren't painful before you let him make it "more solid". Don't change your engram target or selected age no matter what other incident comes up.

Quit only when pc has been getting them close to pt. Close by telling him "come to present time", an operation which requires a few seconds or a minute.

Before and After Solids brings up the case computation, the service facsimile and vacuums and discharges them.

9. Run, Look around here and find something you wouldn't mind making solid, as the objective version of 8.

* * * * *

Havingness processes, optional as indicated.

Run problems, Trio on self (what you can have in room), can't have on others or body, creative process havingness, and putting things into walls, ceiling and floor and not know plus Trio on people outside.

And mock up confusions for stable data, name, etc. Also Axiom 10 processes.

By creative processing pc can be required to mock up a motionless object and “hold it still”. If it can be made still for an instant have him let it go and mock up another. Use general, heavy objects at first. Then selected objects to run out inabilities of pc (such as typewriters, palettes, books, etc).

Fight the wall can be used but only with great care.

Have pc run motionlessness by having him “Find an object” “Tell it to be still”. “Is it?”

There are a great many ways to strip obsessive motion from a pc. Any workable one can be run. Remember that emphasis on all control processes is on STOP. Run stillness, not motion.

Observe the following:

Havingness drops when compulsive game cond. comes in. Repair havingness rather than run out agitation.

Pcs, I discover, go from minus tone scale up to being able to have problems or tone or solids. Any case has some point that goes from no-effect or unreal or don't care up to apathy. Cases go north to apathy. There are no-tone cases. These are compulsive G.C.

Thinkingness processes reduce havingness no matter what button they hit. Solids, effort, emotion, perceive are all above think.

The pc's cognitions *are* valuable. But don't run thought out faster than havingness and solids in general run in. Never shoot for phrases. Ignore them. Before and After Solids, calmly run, bring up vast numbers of computations. Don't knock out havingness with too much 2-way. Don't go out of A-R-C with pc with too little 2-way. How much 2-way or think is answered by “how can we get solids into this case”.

Always run on a game condition basis. Enemy *can* have is deadly on pc. Can't have on enemy okay. Effect *on* pc is fatal. Pc's Effect on others okay. What pc could change is fine. What could change pc terrible.

The path to truth lies through solids, effort, emotion, perception and Not Know; it is not to be found amongst thinking.

On Control, it is the first step toward solids. Pc won't start until he is sure he can stop.

To have pc insist on light is to bring him to tolerate and handle the dark.

Profiles and IQ gain when pc regains ability in solids in bank and universe and can plank emotion into walls wholesale. Intolerance of solids made him think. Failure to control solids made him intolerant of them. Thus *havingness* is the first goal.

Havingness is reduced by bad A-R-C, inaccurate or clumsy auditing, running thinking processes and ignoring real pt problems.

Reality begins with good A-R-C with auditor and becomes tolerable with regained control of Mest and gets real with solids. That's the best track for high gains in the light of what we know now.

Havingness

L. Ron Hubbard

*Prepared from a lecture to the London Auditors' Meeting,
31 January 1956, entitled "Basic Lecture on Havingness."*

We have talked and written a great deal on the subject of havingness ever since the days of the research in 1952 and 1953 which led up to the codification of SCIENTOLOGY: 8-8008, which was the anatomy of universes. It would seem that this point could be overstressed. Perhaps we could say more than needs to be said about havingness. Yet no matter how many reams we have written and how many hours we have talked about this thing, we probably haven't even scratched, not even scratched the subject of havingness.

Everything that has ever been said about Creative Processing and about problems and solutions and about perception and spacation and about the "Black Five" has been on this subject.

First and foremost, HAVINGNESS IS THE POSTULATE THAT ONE MUST COMMUNICATE versus THE POSTULATE THAT ONE MUST COMMUNICATE TO SOMETHING.

You can see at once that this poses a cross-postulate. These two musts are not the same must. They are cross-purposes.

If one has nothing to communicate TO, all he can do is communicate THROUGH. He would have the condition of endless space with nothing stopping the communication all the way.

Now I want to call your attention to a little sport that is carried on in one part of the world. It used to be a Greek sport, then was transferred to Spain and Mexico. They got a bull, who was crazy enough to pick up a mock-up in that general neighborhood, and they get him in there and have him run at a cape. He runs at the cape, he goes through the cape and he runs at the cape and he goes through the cape. And you just watch this bull's MORALE deteriorate!

Then they take some old horse that is padded with blankets (the padding is never thick enough—Spanish thirst for blood) and they let the bull finally charge and push at the horse. Usually the bull gets the horse and the picador over between the fence and himself. The fence is nice and solid. The bull starts to really go to town.

You can see his morale go up, up, up, up, up, up.

In fact he would practically be a well bull if he could find that horse and that fence solid enough. Well, as gory as the spectacle may or may not be, the point of the matter is that while the bull is working on this the picador leans on him very heavily into the hump with a big fork and discourages him from finding something solid and from pushing that hard. And by the time they get him out there again charging at this cape (never a man—he never hits a man, he never hits a horse—he just hits this red cape) and he finds again nothing there, he's done. Without being really hurt (he's just sore and he's lost a small amount of blood) he just loses his nerve. He finally stands there in terror, and then he sinks into apathy, and he gets to such a point that the matador can walk over and fixate him. A good matador (once in a blue moon you see a good matador) will simply fix the bull into any position. He could probably stand him up in the air if he wanted to, because the bull is in a state of shock. He is hypnotized. He believes that there is nothing solid anywhere, and that no matter how hard he charges he will hit nothing. He's gone. If they simply kept him pushing at the red cape a little longer he would probably fall over dead anyhow. They wouldn't have to use a sword.

Now, the physical aspect of a bullfight and the aspect of a thetan in the physical universe are not too wide apart, not too different, since the trick in both is to get them to charge at nothing: To get a bull to charge at a cape where he thinks there is something and to have him find out that there is nothing behind the red of the cape; to get a thetan, a living being, to move toward or put out a communication toward something and to then convince him that there is nothing there after all.

And then the trick is to convince them that there is nothing they can charge, until at last they do not believe that they can touch or lean on anything. A thetan then has a feeling that if he did utter a communication he would only spend what mass he had, because the communication would just go on out there forever and endlessly.

No longer to be able to touch anything, no longer anything real.

Now, these two counter-postulates. If an individual supposes that he should communicate and if his joy and game and desire is communication (and it has to have that game postulate) and if at the same time there is nothing with which he can communicate—no terminal—he has the vista of endless space.

HIS COMMUNICATION ITSELF IS MAKING THE SPACE AND THEN THERE IS NOTHING TO STOP HIS COMMUNICATION, so there is no end to it, and it makes him feel very weak indeed. He just shoots the roll, you might say, any time he says anything, because it never arrives anywhere. No termination and no terminal.

So he eventually does this interesting thing—he says something into a mass which **HE HIMSELF PUTS THERE** in order to have something to say something to.

Now—however we want to classify this—whatever conditions or significances we wish to place upon this action—it nevertheless follows that this aspect of man fighting himself is man merely trying to reassure himself that there will be something there to hit with his communication.

Whenever you could say to someone that the only trouble he is having with himself is his fighting himself and putting up barriers to himself, you can also understand that this is what he is doing and why he is doing it. You don't have to classify any further.

An individual goes along putting up barriers and masses and pictures, so that, in case there is nothing there to receive his communication, he can reassure himself that there is something there after all, because he put it there and then found it. He runs into his own barriers, his own terminals.

A thetan doesn't like the idea (and this not liking is again only a consideration) of speaking into a vast and endless nothingness, so what he does is to accumulate his own terminals.

And so we get the phenomenon here of an individual constructing a universe perform because he cannot have the universe in which he finds himself—the physical universe.

Now a thetan IS capable of constructing totally a universe himself. The cycle is something like this: He builds a universe of one kind or another himself. Then he by agreement finds himself involved in a larger universe. To a marked degree he simply invests the universe, which he has himself created, into this larger universe. Sometimes he doesn't like it, sometimes he does. But he then finds himself cojoining and existing with and in the physical universe.

And now, the physical universe does not offer him a sufficient number of terminals, terminals sufficient in number and magnitude to the potential volume of communication of which he is capable.

He then begins to manufacture his private universe all over again.

Now, it is very important for you to understand that the “universes” that people are packing around with them when they come in to you as a preclear are usually SECONDARY UNIVERSES. They have come into being because the individual has found an insufficiency of universe in the physical universe.

It IS quite interesting that anybody could find an insufficiency of universe in a universe that is so capable of solidity as the physical universe. That is one of the madder things that do happen.

It is done by disenfranchising the individual. He is told and persuaded that he cannot address, cannot touch, cannot reach (and we interpret it as cannot have) a terminal. Reach, touch, address, have, whatever you want to call it. The terminal cannot exist for him. That's all it means.

And so he stops talking to it, because it doesn't exist. An interesting opinion that someone could get into—that the wall doesn't exist—because it happens to be the truth of the matter. It's very easy, then, for him to fall into that one, because the wall is considered.

The wall exists and is there only because someone considered it was there. When one no longer considers a wall to be there it is not there. Thus if one is FORCED into having no wall (or disenfranchised of the wall), he can nevertheless have the opinion that there is no wall, and it will be true.

We find him forced into truth. I've said before that the probable summary of aberration all up and down the track is that an individual is forced into truth and AWAY from a game. As long as one can ably create EVEN AS LOW A LEVEL AS LIE, or slightly less low level, a problem, he can still have a game.

But when he's no longer able to create, no longer able to put anything there, there isn't anything there.

He comes upon the truth of the matter.

There are at least several routes for coming upon the truth of something, and of these routes the least practicable for the individual is through subjection by force to a truth. Nevertheless, the truth of something, even when arrived at by the route of subjection and force, will as-is the something and cause its vanishment, and thus it is no longer had. This is called by auditors the depletion of havingness. One is made to admit that what he conceives to be there is what is there and it vanishes for him. This is not such a great oddity, since the individual never

intended himself to be the receipt point for what he has caused, and when his intention is overthrown in this matter, and he does become receipt point, or termination point, for this, the thing is terminated, and so, of course, it vanishes.

And so you get a destruction of the terminals which you normally would have or utilize or a destruction of the spaces which you would utilize.

Mothers work on this rather hard—fathers, schoolteachers and so forth. “You must tell the truth.” And then, they wonder whether there is anything anywhere around that will explain the fact that a child ceases to be creative and imaginative after he’s been around for a while.

They must conceive that there is something dreadfully, dreadfully destructive in this child’s lying. A person who would conceive the imaginative impulses of a child to be lies and therefore bad is in an interesting condition himself. He is in the interesting state of conviction that there isn’t anything there anyhow, and there had better not be anything there anyway.

Let me call to your attention again the manifestation of a child who goes to his parent and asks for a nickel. He goes through the various levels of the tone scale and he slides on down and finally tells his Pa, when he hits bottom, even if his Pa holds out the nickel to him that he doesn’t want the nickel and he just wanders off in apathy.

That child could get into the position where he HAS TO make nothing of every nickel that he comes across. Take a rich father denying a child pennies. It’s an interesting and well-known fact that the rich man’s son is usually more aberrated on the subject of havingness than the other kids. He is continually told that he can have everything, and all kinds of things are actually forced on him in some fashion. But his power of choice, especially where money is concerned, is overthrown and overridden, and he finally comes into the conviction that there isn’t any money anyway. And the old man’s fortune falls finally into his hands and SWISH—it’s gone.

You take just about any rich man’s son and audit him and you will normally discover that he cannot have money. Money is something that if it came into his vision he’d have to make nothing of it at once. The various enforcements that have been put upon him because of the importance of the amount of money in his family have at last turned him around into an inhibition of having money. This is a fascinating thing.

Now let us leave such a relatively interesting subject as money for the relatively uninteresting subject of a wall, and we find that the same thing applies to a wall. A wall or an object or anything that is solid. A child says, “I just shot a giraffe out in the yard, Mama.” His mother is in pretty good condition, and she says, “You did? Well now you make sure you bury it.”

Or, Mama’s not in so very good shape, and is pretty well done in on the subject of havingness, and she knows there’s no giraffe in the backyard, of course not. “Johnny,” she says, “you really didn’t see a giraffe in the backyard now did you. Now tell me. You realize you break my heart with these lies.”

This is a standard happenstance to mock-ups in children.

I have had as a writer some of the damedest things told to me about purely imaginative sequences in stories of mine. I have had people turn around to me and tell me from time to time, about something in a story, “That didn’t really happen, you know.” Well, of course it didn’t. There wasn’t a word of truth in the whole sequence. They get very upset about it. They cannot differentiate quickly and accurately enough between the creative and the truth of the matter. And so they are on such an interestingly unbalanced pivot with regards to walls, etc., that if you started to create a new wall, you see, with a lie or something of the sort, they would know not only that THIS wall doesn’t really exist (it would be a pretty thin thing to them) but they know also that YOUR wall had better NOT exist! And you’re trying to give them a wall!

I wrote a story one time called "Beyond The Black Nebula." Well, I don't know whether there's anything on the other side of the black nebula—I never looked—but WOW! People got upset about that story. I posed the fact that there is in Orion a tremendous barrier—a black barrier across this particular galaxy. And I made people look at this fact and then dreamed up some causations behind it and so forth.

Probably this barrier, as they read the story, was threatening to get actual and thick. And they were saying, "Well, maybe there is this barrier."

"You shouldn't do this to us, Ron." That kind of a reaction.

Well here is a point. The person who COULD have a wall didn't care how many black barriers were manufactured. The person who could have something accepted a new manufactured wall in the spirit in which it was given. The spirit of game. But when a person could no longer have, he could no longer accept anything offered to him. A very interesting thing. I imagine there are a great many girls who, if you walked up to them and handed them a pearl necklace, would have to assure themselves that it was a phoney or something of the sort, or that it was worthless for some reason. They'd probably take it down at once to have it assayed just to be sure, and if they were told that it was a real pearl necklace they'd be quite upset about it. You could probably spin them in and ruin their whole lives by giving them a pearl necklace.

One of the ways people make nothing of things is to misintend them. So that, you could come back the next week, perhaps, and find that she's using the necklace to decorate a cake.

You find this among savage tribes particularly. On a high-toned basis people would be doing this to make something persist. On a low-toned basis they would be simply trying to get rid of it by saying it doesn't exist or isn't the way it is. So you get one manifestation meaning two different things, relative to where the person is situated as to havingness. Can have and can't have.

This whole subject of havingness, while it embraces all of existence and all of experience, boils down to two things: communication and terminals.

And there is a great oddity about the whole thing. Any time you as an auditor had difficulty with the problem of havingness with a preclear, or had any difficulty with the problem of the preclear, that's because you departed from this rather strange maxim: THERE CAN'T BE ENOUGH HAVINGNESS.

You see? You never get a superabundance of terminals. The other day I saw Helen of Troy (the movie!). You hear the Greeks outside the walls. Now, you'd say they would be resenting those walls badly. In other words, they were trying to NOT HAVE those walls, so that they COULD have the spoils of Troy. Fine. There's a certain greed there. They want the spoils inside the walls. They can't have those. The walls say they can't have the spoils.

The funny part of the whole thing is that the reason they couldn't have them is: they couldn't have the walls!

You can develop almost any situation in life and resolve it on that basis.

If you're trying to get over a barrier to gain something else, then it's a cinch you can't have the barrier.

If you can come into possession of the barrier you come into possession also of what it is a barrier to.

The only reason a person can get trapped is that he can't have traps. And the only reason he goes out and GETS himself trapped is because he CANNOT BE TRAPPED. It's really quite interesting.

Now, if you really have all the walls and barriers of the physical universe, they pose no problem to you. Here is the situation in which we get the total vanishment of things—you start owning something properly (addressing the truth of the ownership) and it doesn't exist any more. There is a difference here between the two kinds of operations you can undertake about having and owning. You find that HAVE is maybe a MISOWNERSHIP. So here are two systems: own and have, or own and misown.

In order to have a problem, in order to have a game, we have to select out some of the walls and barriers as unhavable. And then you can have a problem in connection with some OTHER havingness.

METHODS

If you do not have methods of acquisition, there is really no acquisition possible. There would be a total acquisition. If you had a total acquisition you would own everything there is. The way to own everything there is is simply to own everything there is without any system of owning everything there is.

The trouble with owning everything without using any system for owning everything is that it is much too true, and being true, does not make a persistence, so that, by owning everything there is you end up having nothing.

The two postulates which when counterposed bring about havingness are: communicate and communicate to something. This brings about some problems which are very odd: "I must communicate and there must be a barrier to communicate to, but of course a barrier is antipathetic to communication. No, a barrier is necessary to communication, no, a barrier is antipathetic to communication. No, a barrier is necessary to communication because a communication must stop somewhere."

Well, therefore, life well played would be a game of commenting in the proper direction toward the right barriers, and not trying to go through the wrong ones. But you could get into some interesting problems if you tried to leave this room through that wall and take your body with you. That would be an interesting problem. That would throw someone into apathy.

But the funny part of it is that it wouldn't throw him into apathy anywhere as fast as simply being able to go through that wall and take his body with him. That would upset him. I guarantee you, that would upset him.

No barriers. Nothing stops anything anywhere.

STOPS

Now, let us have a look at the remedy of havingness in the light of STOPS.

In Dianetics we have the "command phrase." Command phrases come down to just three things: start, change or stop.

But the whole subject of the engram is the subject of "can't have." A moment of pain or unconsciousness is a moment of can't have. If, at a certain moment, an individual couldn't have the environment, couldn't have the circumstances he was undergoing, violently couldn't have these things, then it is a certainty that he'll pile up an engram right at that spot in time. That's what he'll have—an engram.

Let's see how that would be. He resists the environment to such a degree and considers it so foreign, so solid and so dangerous, that he makes something very much like a plaster cast of that moment, a kind of energy plaster cast of the environment. Thus a facsimile. This thing is far more durable than any cast of stone or plaster.

This tells us something very important. The VISIBLE engrams were those of LOSS. Those things in the environment that the individual couldn't have, he resisted.

There is a very peculiar thing about these facsimiles, these can't-have pictures. They're backwards. They are usually black backed. The energy pushed upon these things is black energy. It's just as if one had a lot of pictures turned face to the wall. That's the blackness of lots of cases, and the reason why blackness succeeds a lot of pictures.

Handling the environment with energy and then with heavy energy goes down a certain road. There is a thing called a tensor beam. A thetan can do something that a physicist has not yet learned to do with energy. He can make a beam grab something. That's a tractor beam.

Have you been talked to lately by someone who didn't really have anything to say, but kept on talking? It seems sometimes as though he had a tensor beam around your neck and he's holding you there, and you can't leave.

The electronic structure of a pretty girl who's just walked down the street is a very interesting thing to behold. Every guy she's passed has put a tensor beam over her head.

Well, that's "MUSTN'T LET THAT TERMINAL GO ANY FURTHER AWAY." That's the motto of that beam.

So the individual can have and then he can lose. He decides he can lose, and if he feels he is going to lose any part of his environment, he will hook a beam over it and he'll hold it there in front of him. If you take a facsimile apart very carefully, aside from simply mocked-up or copied facsimiles, you'll see that it is cross-sectionalized as a tractor beam. He's trying to hold something from leaving him.

He is unable to retain to him the actual object. He makes a picture of the object that he can look at straight. He'll say, "Oh, I don't like these pictures. They bother me. Take a few away from me," etc.

Below that level he goes into blackness, which is simply pressing on things to push them away. He's in that frame of mind about things. Anyone's got some blackness. It isn't true that some cases are black and some are not.

When it turns up on a preclear you are auditing on remedy of havingness, you can have him mock up some blackness and shove it in.

So we get engrams of resistance and the engrams of resistance are black.

And we get engrams of Mustn't Go Away, and they're pictures.

And an individual who can't have the physical universe can't have anything leaving him because he can't have anything else, you see. He at least retains a picture. And there is how he builds up his secondary universe. It isn't really his universe. It's pictures of the physical universe which he retains in lieu of.

Now, an individual only gets into a frantic frame of mind about things leaving him if he can't have anything else.

He's talking to his friend, and they have been very good friends for a long time, and his friend says, "I'm going to Galway now, and I'll be up there for a couple of years." And he

feels terrible about it. He tries to persuade him not to go. He can't tolerate all that distance between himself and his friend. Friends are scarce.

Another fellow has lots of friends. One of them says, "I'm going to Galway." He says, "O.K., fine. I'll be up to see you sometime pretty soon."

That says he can tolerate that distance and this Galway business doesn't much reduce his havingness. He'd be in good shape—easy to get along with.

It's not so easy to get along with someone that you are the only one to.

All right now, as we look over the general situation in regard to havingness, we find that the scale declines from having one's own universe exclusively, to: cooperating with a universe, which is the physical universe, and then we run out of havingness of the physical universe and we get into a point of a little anxiety. We might lose parts of it. And from that we pass into: we're liable to acquire some of it. We get a flip from must have to resist parts of the physical universe and from there we go on to: total not have.

That is a disenfranchisement of the individual. The story of processing in Scientology is the story of the reversal of that disenfranchisement.

If all the people in the world were suddenly to have no use for any pay, goods or commodities, there would not be the game. They would not be regulatable in any way. If they decided that everything was theirs anyway, and that they didn't need anything, there would not be this game. That would be too high a level of game for a game to be in progress.

Now, nobody pretends that anybody is going to get up to that level of game. The funny part of it is, however, that as they get up toward that level of game, they go back toward not-action on the game, only they play the game now efficiently and they play it as a game, not as a dead-serious horror that they have to face somehow. That's the difference.

All right, now—you ask this question—are you enjoying life? In other words—is life a game to you? You would ask at the same time, "By any chance, are you in the band of havingness below owning everything there is, and above having to make nothing of everything there is?" Are you by any chance in that band? Or, are you enjoying life? These are the same questions. No difference, except that one fellow wouldn't be in the universe. He wouldn't be there so hypothetically to ask. But the guy who can't have anything is there to get. He is certainly there. He's stuck.

STUCK

Now, let's look at this thing called stuck. The old engram. We used to have holders, groupers, denyers, etc. These are embryonic barriers. These are barriers aborning, you might say. The statement or postulate to stop. And the individual who gets an anxiety about havingness begins to accumulate out of his manufactured bank all of the stops and begins to hold them near him so that he will have barriers that can receive something and he won't get into the condition of the bull. Almost unknowingly he does this. So that there will be something there with which a game can be played. And thereby and therefore he forms a false wall in a secondary universe.

The primary universe is the physical universe, as far as he's concerned in the state he is in. There is an earlier universe, which is his own universe, and which has walls and barriers, too. But, for our processing purposes, we're talking about this primary universe, the physical universe. We're talking of the reactive mind, the facsimiles, engrams, energy pictures, as a secondary universe which is formed by reason of not being able to have the physical universe. And that's how the reactive mind gets born and where it comes from.

AUDITING THE HAVINGNESS SCALE

Very often you have to get the preclear over the hump on the subject of havingness on his reactive mind. These secondary universes could just as well be called reactive universes. With creative processes, mock-up processes, we can handle this reactive bank havingness. You understand that this is not the preclear's Own Universe.

These extend at once to a higher echelon—the physical universe. So then, you remedy his havingness totally on the physical universe and get him to have everything in the physical universe—no longer with mock-ups. You just have him look around at things and find out what he can have. When you have him totally remedy this subject, he is then in a position to create a home universe—a universe of his own.

There you have the graduated scale—it goes from REACTIVE to PHYSICAL to HOME UNIVERSE.

How far can you go with havingness? You could separate somebody out of this universe simply on havingness alone.

First, he'd have to be able to have his reactive bank. Then he'd have to be able to have the physical universe. Then he'd have to know that he could create something else.

This game of havingness is absolutely necessary to auditing.

Apparently, to many people, havingness means barriers and barriers mean lack of freedom. But to you, an auditor, barriers should mean a game. And you should know that an absence of barriers is the trouble with a preclear when a preclear is having trouble. HE JUST DOESN'T HAVE ENOUGH BARRIERS.

Now, when a preclear's got a cold, that doesn't mean that you are going to tell him he hasn't got enough colds. It somehow wouldn't communicate. But there it is—the preclear HASN'T got enough colds. Preclear has migraine headaches—hasn't got enough migraine headaches. Whatever it is, whatever the condition is, something has gotten scarce, and the next step after getting scarce is, for it to get valuable. The mechanism of something getting valuable—it first must get scarce.

After becoming scarce a thing becomes very, very valuable; and then it becomes so valuable, it's rare. How many women have you seen with Kohinoor diamonds walking down the street in the last few minutes? None. Well, you might even wonder if a Kohinoor diamond even existed. Now, I'm sure there's many a girl who is very good-looking who has reached this point about Kohinoor diamonds. She'd kind of doubt if they exist. They're probably all cut glass. "I don't see what's so good about them—even if they do exist."

She's in apathy on the subject, and that's very dangerous. If women got that way about diamonds, fur coats, Rolls Royces, bank accounts—do you know what would happen? The whole game with the society would just be gone.

AUDITING HAVINGNESS

As an auditor looking over this material on havingness you may also be looking at the points where processing hasn't measured up for you on yourself.

So let's not, in trying to do something with the preclear, ourselves fall across this one. You've got the situation well in hand if you have this, that barriers are not necessarily bad, that barriers are, to the contrary, necessary, and that what has happened to the preclear is that he has run out of barriers, and thus has run out of games, and has come to the place of detesting barriers. Therefore we will simply figure out some way of giving the preclear some barriers.

There are two interesting little processes that come up on these lines.

One, a process for the auditor who has gotten into a flinching position regarding preclears—can't have preclears—is a little game that you can play.

Do you ever find yourself flinching from a preclear, just flinching a little bit and backing away from the session? If you were to take a look at your own immediate vicinity you would discover that your own space was collapsed to about there at the end of your nose. The preclear's got all the rest of the space of the room. But you're being uncomfortable. What happens? You can't have the preclear, so you put a barrier up there that you can have and talk to anyhow. This is a completely standard practice with people, but for an auditor it is not standard and not practical at all.

To a degree you have gone out of communication with the preclear. Here's a little stunt. You just find something about the preclear that you can have.

What has happened is that you have run out of havingness of the preclear. That's all that has happened. And then you go out of session as an auditor. The beginning of it is when you at some time had too few preclears. You have too few preclears, and then you begin to believe that there aren't any, and you don't reach for anybody or process anybody. Because they don't exist.

Well, that's the beginning of it. One preclear's rattling on at a grueling rate of horror, horrible fates, and so forth, and you start backing up a little bit. You know, it's all for the preclear, and your space finally collapses to about the tip of your nose, and you've run out of havingness of one preclear.

You're liable to lose another one, then another one and then it gets to be a habit. Then, "Well, I haven't audited anybody for weeks. There isn't anybody to audit." Very hard to find preclears.

But the same law applies. If there is anything wrong on the subject of havingness or the subject of terminals, it is that there are not enough. There cannot be a superabundance of terminals.

This street could not be stacked full enough of preclears really to satisfy your idea of a few preclears, if you were really rolling.

It would be, "Well, I've got 8,000 preclears to audit between now and next month." That's the frame of mind you'd be in, if you could really have them all. "Audit one on the phone, one in front of me." And the couple of preclears in the waiting room—put them in the antechamber and have them co-audit. (I've done that, by the way. Somehow don't like to have people wait.)

If you find yourself backing off from the preclear, you can build your havingness of the preclear back up again. As you're auditing him, you can quietly and privately pick it up. You'd think I was joking if I told you the things you can do with a preclear when you are really able to have a preclear.

But there is this little stunt. You just quietly look the situation over, and start adding up, **SOMETHING YOU CAN HAVE ABOUT THE PRECLEAR**. Just one thing after another. Add them up and repair your havingness of preclears.

WALLS

Now, here is another little process that you can use on the other side of this thing. You are faced with a great many preclears in this world who can't have a wall or anything else. And you want to have some way of giving them some barriers.

Just have the preclear start mocking up walls, flat against his nose.

It doesn't matter what kind of walls. It's one of these processes that can just go on and on with continuing cognition. He'll get better and better walls. He'll start protesting at once about these walls. He'll say, "Up against my nose! Isn't that awfully close for a wall?"

So we just get walls, walls, walls, and more walls. Don't do anything with them. Let them evaporate or stay there or do anything else. Just keep mocking up walls.

In doing this you are capitalizing on some information that the preclear might not have, but that you do have. A wall actually is a very specialized kind of a barrier. He often won't recognize a person as a communication terminal or something which will act as a backstop. He can't see that. But he knows, more or less, that if he did run against a wall and hit his head on it, there would be an impact. He knows this. So you have him mock up walls, and you capitalize on this amount of information.

There are some fancier things you could do with this, but having the preclear mock up walls flat against his nose is what you want at this point to get him up to the game of having a session.

SCARCE

Now, if you will just check over this datum that there can't be enough terminals and that when the preclear complains of having something it's something he doesn't have and can't have and can't get enough of, then you will be in a very good position regarding the auditing of a preclear.

Suppose it's the very tough preclear. He's in real bad shape. He's going to come in to you and he knows exactly what he's doing—he's going to make nothing out of everything. Nothing out of this, nothing out of that, nothing out of something else, and nothing out of that and nothing out of you and he goes away and makes nothing out of your bill!

And if you let him get away with this he's going to stay in processing forever, but what's the point?

So, the preclear's got a ridge. Conclusion: he hasn't got enough ridges. Preclear's got a cold: he hasn't got enough colds. Preclear's got a bum leg: not enough bum legs. Bad lungs: not enough bad lungs.

When we were studying havingness three years ago I rather supposed it was an interchange of energy which discharged the bad and left the good. I always stated that a little cautiously to myself; it just didn't seem quite right. It wasn't quite workable.

We can see now that the mystery of this thing had to do with these counterpostulates that comprise havingness. We find that we didn't have him mock up enough colds and bad enough colds. Not enough.

When we do this, the preclear discovers that there are more colds in the world than just this one; there is not this great scarcity of colds. And he'll let go of it. It becomes less valuable.

Now there is one other point here. Since the condition is only a condition, as, for instance, a cold is a cold, or a headache is a headache, and is NOT a terminal, your rule in auditing is to address the TERMINAL involved, rather than the condition. Thus you would run a process, "What problem could that arm be to you?" and not, "What problem could that burn be to you?" The terminal is the arm, not the burn. Actually you would be bringing up the preclear's reality on his arm to the point where it could be a terminal to him without the burn.

OBJECTIVE

Now, as we look over this general situation, we discover that we must bring our preclear into possession of a great deal more of the physical universe than he has.

Regardless of the subjective remedies, we've got to get him into a physical universe remedy too. And the way we do that is this. We ask him to "Look around here, what could you have?" You don't let him do this subjectively. You make him open his eyes wide open. "Look around here, what will you have?" And you, if you're retreating from him, look at the preclear and find out what you could have about him.

This is, in essence, auditing—where she is going, and how she is done.

I hope these principles about havingness can assist you a great deal. There are too many preclears around still making nothing out of everything. It's easy to get them over this. Just boot them up to where they can have something. If they're making nothing out of everything they can't have anything. Those two statements go together.

If they've got something and are holding on to it, they haven't got enough of it. If they haven't got anything at all, they haven't got enough of that either.

Abundance of terminal is the answer.

BRIEFING BULLETIN

STAFF AND SEMINAR LEADERS

GAMES CONGRESS, SHOREHAM HOTEL*31 August—3 September 1956*

THEORY: The most adequate answer to life's puzzle is Games. The ordinary concept of games or play is comprehensible to anyone.

Games have many factors. Some work well in processing, some don't, all explain life.

The basic game of a thetan is evidently nothing versus something as in the process "make it solid". He can never really be something, thus can never really duplicate in himself a solid—yet he makes solids across spaces out of game impulse.

PRACTICE: Always process toward a games condition. Never process toward a no-game-condition. Always process games conditions. Never process no-game conditions. This is more complicated than you think.

All games are aberrative. All games are continuing by definition since an unstarted game isn't a game and a finished game isn't a game.

In the following list we have most processable games conditions and the most to be avoided no-game-conditions.

Each item on both lists could be "knowing games condition" or "unknowing games condition", "knowing no-games-condition", "unknowing no-games-condition".

Using both lists at a knowing games level, we have sanity. At an unknowing games level we have aberration, neurosis or psychosis.

| GAMES CONDITION KNOWING OR UNKNOWING | NO-GAMES-CONDITION KNOWING OR UNKNOWING |
|--|--|
| Not know forget | Know remember |
| Interest Disinterest | |
| Attention | No Attention |
| Self-Determinism | Pan-Determinism |
| Identity | Namelessness |
| Individuality | |
| Problems | Solutions |
| Can't Have (games have some havingness) | Have |
| Alive | Neither alive nor dead |
| Opponents | Friends—alone |
| Facsimiles | No pictures or Universes |
| Continued Solidity | No spaces or solids |
| Continued Adherence Loyalty, disloyalty betrayal, help | No friends or enemies |
| Motion | No Motion |
| Emotion | Serenity |
| Continued Action | Motionless |

| | |
|---|---------------------|
| Hot | No temperature |
| Cold | |
| Thinking | Knowing |
| Hate | |
| (some love) | |
| Continued Doubt of Result (Expecting a Revelation) | Win—Lose |
| No Effect on Self | Effect on Self |
| Effect on others | No Effect on others |
| Stop Communication | No A R C |
| Change Communication | No No-A R C |
| Into It | Out of It |
| Agitation | Calm |
| Noise | Silence |
| (some silence) | |
| Control | No Control |
| Start—Change—Stop | |
| Change Most Imp | |
| Responsibility | No Responsibility |

Inspecting these two lists we find all unlimited and highly workable processes under Games Conditions. We find all limited and unworkable processes under No-Game-Conditions. We then avoid No-Game-Conditions in processing. We process the pc playing as a game in all phases.

It is true that the Game Condition List contains a regimen unworkable in life. It isn't supposed to be. It's aberrative and we process it.

The *only* certain processes which can be run on No-Game-Conditions are Consequences (the penalty resulting from) and "Mock up a confusion to which (no-game-cond) could be a stable datum."

Now behold that the list of No-Game-Conditions is a summary of the native state of a thetan. That means that the native state not only doesn't process but winds the pc up in difficulties if processed. To establish native state you run out the Unknowing Games Condition of the preclear.

BEST PROCESSES

Control Processing—Start—Change and Stop on objects or pc's body, emphasis on change.

Fight the Wall—Have pc with actual body or mock-ups fight the walls of room or objects in outside environment.

Opponents—Lie about, invent, opponents. This goes all the way south.

Individuality—Lie about, invent, an individuality that would impress people (8 dynamics).

Escape Processing—Mock up a mock-up and say bodies, Mest U, can't have it.

Effect Processing—Lie about an effect you're having. (I'm not having any effect from my tooth.)

Lie about an effect you are having on _____.

Problems—Lie about, invent, problem of comp mag to _____. How could that be a problem to you? Also consequences of solutions.

Solids—What are you looking at? Make it solid.

VACUUMS

A vacuum is a super-cold object which if brought in contact with bank, drinks bank. Objects at 25°F or less have high electrical capacitance, low resistance. This was psychiatry billions of years ago. Shocks, ether, can act similarly. This is how one mechanically forgets past. He depends on pictures, loses pictures to a vacuum incident. Vacuums restimulate and drink up pc's havingness. They are just incidents. This is brainwashing. You encounter these running solids. Opponents, individualities, more solids, problems, undo them.

RESTIMULATION

When one violates a game-condition, intends to have an effect on something and doesn't, he often puts the effect on his body. He thus gets a no-effect on opponent, makes an effect on self.

This is restimulation. It is also stimulus-response.

"Effect you could have on _____(people, pcs, etc)" remedies this.

Self audit while auditing same thing. Same process resolves.

* * * * *

TO SEPARATE VALENCES

The separation of valences is done by the following steps:

1. Get pc under control with start-change-stop. Lots of it.
2. Unjam track with "What are you looking at—make it solid."—(anything jamming track can be run as a valence below.)
3. Choose valence or valences, weakest universe preferred.
4. "What would interest ___(universe so chosen)?"
5. "Invent an opponent of comparable magnitude to_____."
6. "What would get the attention of _____?"
7. "What____can't have. (objectively only on room)"
8. "What could you protect ___from?"
9. "What communication could you prevent _____ from originating?"
10. Problems of comparable magnitude to_____
11. "Invent a game you could play with_____."
12. "Make___fight the wall."

Then run 4 to 12 again to check

VALENCES

"What would interest_____?"

"What could get the attention of_____?"

"What_____can't have?"

"What could you protect_____from?"

"What could you protect your body from_____?"

“What would disinterest you?”

“What communication could you prevent _____ from originating?”

VALENCES

Amongst the several types of valences the least suspected and most interesting in terms of processing is the "synthetic valence."

By synthetic valence we mean those valences which have never actually confronted the preclear in the flesh. The first valence is of course the preclear's "own valence," which is his own concept of himself. The next is the valence additive to him by the characteristics of his body. The next is the "direct valence" by which he has transferred identity with someone who has directly confronted him, and following this there is the "attention valence," the valence one has assumed because it got attention from another valence. And at the end of this list there is the synthetic valence, and of all of them it is the most baffling.

The greatest historical example of this is probably Charles XII of Sweden who read the "romance of Alexander" by pseudo-Callisthenes and became so much an Alexander that he spent the remainder of his days attacking Russia in an effort to emulate his hero. Charles XII had never confronted Alexander—he had only been told about Alexander—but he had nevertheless assumed the valence of Alexander in most of his activities.

The little boy who looks at television and sees the cowboy in the white hat triumphing over all, or who sees Superman in the comic books, and then assumes these identities, is actually doing more or less a direct transfer. Where he is simply told about these and has never been confronted with any form of any kind to corroborate the telling, he would have a case of synthetic valence. He has been read to about Tom Sawyer and becomes Tom Sawyer without ever seeing Tom Sawyer or looking at Tom Sawyer. This would be a case of synthetic valence.

We get the synthetic valence in many amusing and non-aberrative games conditions and here it does us little problem making. But the synthetic valence can become an evil genius in a case when it has been carefully and expressly tailored as an alteration from the direct valence which might have occurred. As an example of this we have the case of the father who, in the mother's absence or even when she is sporadically present, tells the children consistently and continually what a bad mother they have. Father continually describes mother as a certain type of character and the children are then adjured not to transfer into this type of character. Naturally, resisting it, they do not actually transfer into mother's valence, but transfer into a synthetic valence of mother. In the case where mother, let us say, ran away or was lost to the family early in the child's life, he may have no real recollection of mother, but may have a synthetic valence of mother. This becomes very difficult to run because it is run mainly on a sonic level.

As another example, one is told consistently and continually that all men of force or all conquerors are bad, and one is warned never to become a conqueror. This is of course an excellent way to make nothing out of an individual, but here we have a false valence—a

personality which never existed—and we discover in the lives of the conquerors that they actually were not totally possessed of bad characteristics. In order to dominate his fellow beings to the marked extent necessary in a conqueror, one could not possess totally bad characteristics, and the actual character of most conquerors is quite different than the assigned character given them by the society—a fact which does not make a conqueror any less liable for the crimes he commits, but which gives us an insight into the tailor-making of characters who never lived.

The keynote of all synthetic valences is that a character has been developed or created more or less out of whole cloth, possibly with some small foundation, but certainly with exaggeration, which puts into existence a being who never breathed or coughed or spat. The police and newspapers are continually doing this. You actually don't know whether the criminals who have been arrested by the police and tried in the newspapers were the people who were arrested or not, since they are assigned a synthetic valence and are condemned as very bad people indeed. Of course some of these criminals were or are bad, but the chances are that amongst this legion of people arrested and tried in the newspapers there were some who were quite deserving men and whose actual character and behavior did not even vaguely compare with the represented character.

We have a flagrant case of synthetic valences when newspapers and other public media, and even word of mouth gossip, begin to take to pieces anyone's character and put in its place some synthetic understanding which was never a real person. In this way we begin to believe there are many more bad people in the world than there are.

In my own experience with bad men—and I have met several of various nationalities—I have seen some men who could put up a rather ferocious front, but I have never found one of them totally lacking in human warmth. Yet were I to read the newspapers and popular books on such people I would begin to believe it would be possible for a complete demon to exist who would never respond to any decent impulse. Yet I have argued bandits into a more amenable state of mind and have even taken a gun away from a Federal Marshal and showed him how to use it and told him not to be nervous and put it back in his holster, when he was bound and determined to take me into custody. In other words, you can actually create an effect on almost anybody. The synthetic valence is an effort to tell you and people that beings can exist who are so bad that no effect can be produced on them. Of course this makes everybody subservient to them.

The greatest historical example of this was the invention of the Devil by the Persian priests who were called together to synthesize a new religion for Persia. The Devil they invented there was borrowed later on by the Christians and was set up as something so evil that nothing could affect it. The Devil, of course, is the championship synthetic valence of all time. There are no devils upon whom one cannot produce an effect.

The way to run out any synthetic valence, of course, is to run out the valence of the person or book which told one about the synthetic valence.

JUSTICE

What is justice?

“The quality of mercy is not strained—it droppeth as the gentle rain from heaven . . .” may be poetic but it is not definitive. It does, however, demonstrate that even in Shakespeare’s time men were adrift on the subject of justice, injustice, severity and mercy.

People speak of an action as unjust, or an action as just. What do they mean? ‘ii et unless we can understand exactly what is meant by these terms, we certainly cannot undertake to evaluate the actions of individuals, communities and nations. For the lack of an ability to evaluate, misunderstandings come about, which have in the past led to combative personal relationships and on the international scene to war. An individual or a nation fails or refuses to understand the measures taken by another or fails to fall within the agreement of the pattern to which others are accustomed and chaos results.

In Scientology the following definitions now exist:

JUSTICE—The impartial administration of the laws of the land in accordance with the extant level of the severity-mercy ratio of the people.

LAWS—The codified agreements of the people crystallizing their customs and representing their believed-in necessities of conduct.

MERCY—A lessening away from the public’s acceptance of discipline necessary to guarantee their mutual security.

SEVERITY—An increase in that discipline believed necessary by the people to guarantee their security.

INJUSTICE—Failure to administer existing law.

EQUITY—Any civil procedure holding citizens responsible to citizens which delivers decision to persons in accordance with the general expectancy in such cases.

RIGHTS—The franchises of citizenship according to existing codes.

When laws are not derived from custom or when a new law contravenes an uncanceled old law, exact law becomes confused and injustice is then inevitable.

Basic justice can occur only when codified law or a majority-held custom exists.

Observing these definitions, jurisprudence only then becomes possible. Law courts, legislatures and legislation become confused, as nothing is possible in the absence of an understanding of such principles.

Laws which do not derive from agreement amongst the society which we call custom, are unenforceable unless there is then a widespread agreement that this is customary in the society. No matter how many police are hired, no matter the purity of prose with which the legislation is written, no matter the signatures occurring on the enforcing document, the public will not obey that law. Similarly, when a government acts to ignore certain basic customs amongst the people and refuses to enforce them, that government then finds itself in a state of civil turmoil with its people on that subject. We can look at any public-government battle and discover that it stems exactly from a violation of these principles.

An understanding on the part of a nation of the difficulties of another is necessary to a continued peace. When one nation begins to misunderstand the motives and justices conceived necessary by another nation, stress sets up which eventually leads to war, all too often. For example, there is an existing upset in the world whereby the people of the United States and Great Britain are highly critical of the Government of the Union of South Africa for their "treatment of native peoples." It is considered in England and the United States that the Government of South Africa is altogether too harsh with its native peoples. It is sadly humorous to notice that the native in South Africa, however, holds an exactly reverse opinion and the fault he finds with the South African Government is that it is far too lenient in its administration of laws throughout the native populace. As an example, an African guilty of cattle theft according to tribal law would probably be beaten over a considerable period in time and then buried in an anthill. The South African Government gives such a crime a punishment of a short period in jail, which is not at all adequate to guarantee the security of the remaining natives who own cattle. The most flagrant example is the white nurse, Quilan, who was torn to pieces and eaten by three men and a woman during recent riots in South Africa. The African tribal punishment would have decreed that these people themselves be killed and eaten. The South African Government incurred a great deal of censure from its native population by giving these people only six months in jail. In other words, what is severe to an African and what is severe to an Englishman or an American are entirely different matters. What is merciful to an African, what is merciful to an Anglo-American is quite different. Thus what is justice to an African is quite different than what is justice to an Anglo-American.

Whenever there is an excessive commotion amongst a people against its government, the government is then invited to act as an opponent to the people. If a government is acting towards its people as though it were an opponent of the people and not a member of the team, it becomes obvious that many of these points which violate the customs of the people must exist in the law codes of the country. Wherever such a point exists turbulence results.

And that is justice.

L. RON HUBBARD

HUBBARD COMMUNICATIONS OFFICE
20 Buckingham Street, London W.C.2

HCO PROCESSING SHEET OF 20 SEPTEMBER 1956

The following are useful and advantageous processes.

Comment: In running motionlessness on a preclear it will be discovered that the preclear must have an intention to have the thing still and must have some cognition that it got still and must have been able to have put the idea that it be still in the object. Unless the auditor is sufficiently inquisitive to have this occur you're not going to get any upgrading results on your profile. The old saw "find out what the preclear is doing and how he is doing it" never worked more advantageously than when running holding things, keeping them still, or letting them be totally uncontrolled.

Comment: Self-determinism in the field of motion consists of by own power of choice permitting a thing to be still or not to be still, permitting a thing to be changed or not to be changed, permitting a thing to be started or not to be started, must be rehabilitated in the preclear. In other words, self-determinism consists here of returning his power of choice over controlling or not controlling at will. The preclear who is obsessively controlling will sooner or later fail to control and then will be controlled by something. The obsession to control, to start, to change, to stop, will be found to enter into the ARC triangle and is what depresses the preclear down scale on the tone scale.

Comment: The entirety of Games processing from an auditing standpoint summates into the necessity that all auditing be done with the preclear at cause; that is to say the preclear must do it to something else. Do not run things which are done to the preclear. In other words, have the preclear do things to the walls, do things to people, do things to his own body and do not run his own body, people, or the walls doing things to the preclear; that works out in the general activity.

Havingness: The Trio run "Look around the room and find something you wouldn't mind having" or "Look around the room and find something you could have" "could permit to remain" or "dispense with", is completely legitimate as a process and will be found to be as advantageous as ever and should be run whenever the preclear becomes unduly agitated. Games processes demand that all can't have be run on something else than the preclear. In any situation where another terminal than the preclear is involved can't have is run on that terminal. Have is not ever run on any terminal other than the preclear. Have is only run on the preclear himself. Can't have is run on all other subjects, objects, valences and activities. In addition to this be very certain that you use terminals, not conditions; in other words, to run can't have on "your asthma" is extremely foolish and will reduce the preclear's havingness. Asthma is a condition of the respiratory organs—the proper auditing command is "Look around the room and find something that your respiratory organs cannot have" or "Look around the room and find something you would not permit your respiratory organs to have".

Solids: It will be discovered that holding things still, keeping things there and making things solid are all a gradient scale and if the auditing command is run on a book "Look at that book. Keep it there" or "Look at that book. Keep it from going away" that stillness and solids will follow as a condition. The fundamental command then is "Keep it there" from which stills, or stillness, or motionlessness and then solids ensue. However running motionlessness directly or solids directly is permissible.

Observation of objects: Objective processes can be run by having the preclear locate objects and "Keep it from going away" followed by the alternate command "Permit it to be totally uncontrolled".

Alternate commands: The idea of alternate commands has not been properly understood by auditors. We have A and B commands. One is A: Look at it, two is B: Look away from it. The way an alternate command is run is to run: Look at it, Look away from it, Look at it, Look away from it, Look at it, Look away from it; not to run Look at it fifty times and then Look away from it fifty times. This is an alternate command basis. The Change-Unchange commands are extremely valuable when run on an alternate basis. One does not, however, flatten Change and then turn around and flatten Unchange. One runs Change, Unchange; Change, Unchange; one command for each. This has become important in our methods of running stillness.

Stop processes: Stop processes can be run either of two ways. One can simply run Stop as itself and continue to run Stop, on various things such as the body, or he can run Stop, totally uncontrol, Stop, totally uncontrol, Stop, totally uncontrol; or Stop, in total motion, Stop, in total motion, on an alternate basis. It has not been tested or ascertained which of these methods, flattening Stop itself or running Stop and then “totally uncontrolled”, produces the highest gain; however it is known that Stop processes produce gain particularly on low-toned preclears.

Connectedness: Have the preclear look around and find what he could be connected with. This is run in this fashion: “What in this room would you connect with yourself?” It is *not* run in this fashion: “What could you connect with in this room?” since the latter is a No-Games condition.

Stop-C-S: After a preclear has been run on Start-C-S (one would simply and calmly flatten to some degree each one of the points of control, start, change and stop, in order to get a session going) there is a process known as Stop-C-S. This is a distinctly different process. Once one has plain S-C-S in operation then one has the commands of Stop-C-S. These are the same, but one specialises in Stopping the body. One has the preclear stop the body over and over and as the preclear becomes more accustomed to doing this one then changes the process on him to this extent—the auditor asks the preclear in running Stop-C-S, to “stop the body absolutely still”. This imposes a new discipline on the preclear and makes the process extremely difficult for him. It is only done when S-C-S and ordinary Stop-C-S have been to some slight degree flattened. Following up this “stop the body absolutely still” one can introduce Change into the process for a few commands in order to unflatten the Stop-C-S that has flattened. In other words when the Stop of Stop-C-S on an object or the body seems to be flat, one can run a few Change the body or Change the object and unflatten the Stop once more with a resultant alteration in the preclear’s ability to perform. When Stop-C-S seems flat then it should be unflattened at first by running Change-S-S with emphasis on Change and then when Change no longer upsets his ability to stop it, Starting it should be run as an alternate to Stop-C-S in order to unflatten it again.

It will be noted that higher toned preclears do not make very rapid gains on Stop-C-S, S-C-S, and “Hold it still” or “Keep it there” or “Keep it from going away”. It will be found that on preclears that have profiles already above the make-break line, middle line, of a profile sheet, that it is usually necessary to run subjective processes so as to separate valences to run over and under on the bank and in general to sort things out faster than on the more blunt processes. In other words, we have found the processes now which operate on relatively low scale cases and in order to improve a case above the level of solids when he has things fairly well under control it is necessary to do other things. This does not however excuse the running of figure-figure processes on preclears who can’t do anything with them. If you think that Stop-C-S and associated processes are flat then you should run subjective processes on valences or solids on the bank in order to recover the entirety of life span for the preclear. In other words, we go about the business of digging up unknowns. We flatten his reactions to such things as light, sound and other material. We separate out valences by having him mock them up and “Keep them there”, by making them still, by making them solid. We go in for the higher level of changes.

When a preclear seems to be all the way up to the top on all these processes it is then only necessary to run him on the re-establishment of abilities. One re-establishes his ability to speak Arabic, for instance, by having him mock up a mosque and keep it there (gradient scale from largest down to more significant objects in terms of the Arab world) and other things until these can be admitted by him to be totally solid. One then has him Stop an Arab from speaking Arabic by having him mock up an Arab and keep him from speaking Arabic and then eventually run Change and Start on this Arab. One also must run Arabs of different ages and run groups of Arabs and Arabs of different professions whose ability to speak Arabic is being controlled by the preclear. Any other skill can be sorted out and rehabilitated in the preclear from his back track in this fashion.

Remember that the key-note of all processing is to recover unknowns, therefore Not-know processes should be run on higher level preclears so as to get them into a command of the idea of Not-know.

In order to establish exactly where your preclear is you only need to ascertain his reaction to various solids and speeds of impact. Once you have done this you have established exactly where the preclear is on the tone scale. This reaction to solids is far more reliable than profile tests from the auditor's standpoint. Preclears who cannot tolerate solids will have to be worked for a very, very long time on Keeping things from going away and Holding them still and finally Making things solid, no matter where the preclear registered on the profile sheets.

We have apparently undercut cases now to the point where we are getting fairly rapid gains on very low scale cases. It is time for us now to think of what we are going to do with cases who are upstairs, but you must always be sure that your case isn't one of these cases that is simply dubbing in a high tone. This is very easy to establish. The skill with which a person can run Stop-C-S in its most arduous forms, his ability to handle light by "Keeping it there" and motion in general is the establishing factor on where a case sits on the tone scale as far as an auditor is concerned. There are no other tests which are better than this so an auditor had better not take either the profile or the preclear's say-so concerning the state of case. The auditor has a far better test himself in either of these.

In order to rehabilitate a preclear it is necessary then to restore his ability to start, to change and to stop his body, objects, subjective mock-ups, engrams, the solid environment around him and to increase in the main his ability to control solids. This then goes up to his ability to control black objects and blackness, his ability to control invisible particles, his ability to control space. Working in this fashion it is then possible to raise the preclear consistently up the tone scale. It will be noted that solids *are* reality, whereas reality is basically agreement on a thought level, it actually happens that a preclear can mock up things which are solid. A preclear who is very, very far down scale is unable to do this and is unable to tolerate solids. So, if you want to raise a preclear's reality, you'd better raise his ability to tolerate solids. This is done first by "Keeping things from going away", next by "Holding things still" and finally by "Making it solid". In solids we have located the R of the A-R-C triangle and communication as-is solids but solids must be creatable by the preclear. Thus we have an upward advance of A-R-C monitored by his ability to tolerate solids.

The current program of Scientology is to place its organizational staff personnel and auditors in such a condition that they are capable of reaching, handling and controlling people and groups. If we do this we will shortly be the most advanced organization on the face of Earth, whether we have propaganda, good word of mouth or anything else. This is the road which we're taking in advancing Scientology and its organizations. Thus you see the necessity of establishing objective and subjective Start, Change and Stop on individuals. You are reminded that S-C-S also runs on communication and runs as well on affinity (such as "conceive the wall to be embarrassed" "stop it from being embarrassed").

More is being learned about these processes as I work with preclears and the science itself, but the first thing that I have learned is that an auditor in order to run Stop-C-S has to be himself capable of tolerating easily all up and down the band, otherwise he fails to understand

the process and fails to make it work. It is as therapeutic today for an auditor to audit a preclear on S-C-S and Stop-C-S on the body, for the auditor, as it is for the preclear—if not more so.

CHAPTER ONE

THE VITAL STATISTICS OF SCIENTOLOGY

What is Scientology?

Scientology is that branch of psychology which treats of (embraces) human ability. It is an extension of DIANETICS which is in itself an extension of old-time faculty-psychology of 400 years ago. More acceptable and normal psychology such as that begun by St. Thomas Aquinas and extended by many later authors was, in 1879, interrupted severely by one Professor Wundt, a Marxist at Leipzig University in Germany. This man conceived that man was an animal without soul and based all of his work on the principle that there was no “psyche” (a Greek word meaning “spirit”).

Psychology, the study of the spirit (or mind) then came into the peculiar position of being “a study of the spirit which denied the spirit”. For the subsequent decades, Wundtian “psychology” was taught broadly throughout the world. It taught that man was an animal. It taught that man could not be bettered. It taught that intelligence never changed. This subject, Wundtian psychology, became standard, mainly because of the indifference or lack of knowledge of people in charge of universities.

Scientology is actually a new but very basic psychology in the most exact meaning of the word. It can and does change behavior and intelligence, and it can and does assist people to study life. Unlike Wundtianpseudo-psychology, it has no political aspiration. Scientology is not teaching dialectical materialism under the heading of “psychology”.

The term SCIENTOLOGY is taken from the Latin word SCIO (knowing in the fullest meaning of the word) and the Greekword LOGOS (study).

Scientology, used by the trained and untrained person, improves the health, intelligence, ability, behavior, skill and appearance of people.

It is a precise and exact science, designed for an age of exact sciences.

It is employed by an AUDITOR (a Scientology practitioner) upon individuals or small or large groups of people in their presence. The Auditor makes these people, at their choice, do various exercises, and these exercises (processes) bring about changes for the better in intelligence, behavior and general competence. It is employed as well by persons in business and government to solve problems and to establish better organization.

It is also employed by the average person to bring better order into life.

How is Scientology Used ?

Scientology is employed by an Auditor (one who listens and commands) as a set of drills (exercises, processes) upon the individual, and small or large groups. It is also employed as an educational (teaching) subject. It has been found that persons can be processed (drilled) in Scientology with Scientology exercises and can be freed from their major anxieties and can become brighter, more alert and more competent. BUT if they are *only* processed they have a tendency to be overwhelmed or startled, and although they may be brighter and more competent they are still held down by an ignorance of life. Therefore it is far better to teach AND process (audit, drill) a person than only to process him. In other words, the best use of Scientology is through processing and education in Scientology. In this way there is no imbalance. It is interesting that people only need to study Scientology to have some small rise in their own intelligence, behavior and competence. The study itself is therapeutic (goodmedicine) by actual testing.

It is also used by business and government leaders to establish or improve organization. It is used as well by the individual at home or at his work to make a better life.

Is Scientology Valid ?

Tens of thousands of case histories (reports on persons who have been processed, individual records) all sworn to (attested before public officials), are in the possession of the organizations of Scientology. No other subject on earth except physics and chemistry has had such gruelling testing (proofs, exact findings). Scientology in the hands of an expert (Auditor) can restore man's ability to handle any and all of his problems. Scientology is used by some of the largest companies (business organizations) on Earth. It is valid. It has been tested. It is the only thoroughly tested system of improving human relations, intelligence and character, and is the only one which does.

Where is there more information about Scientology?

The world headquarters for Scientology is the Hubbard College of Scientology, Saint Hill Manor, East Grinstead, Sussex, England. In addition, there are major Scientology organizations on practically every continent on earth. Scientology practitioners are validated (certified, given diplomas) by these organizations. Diplomas are given only after very exact training. A person who is skilled in Scientology procedures has a diploma from one of these organizations. A list of these organizations is provided at the back of this book. These offices and these people can give you more information about Scientology. There have also been many books published in English, as well as other languages, on the subject of Dianetics and Scientology. The publisher of the book you are reading may have more books in your language.

Can a Person without much Study use Scientology?

Scientology is practiced in daily life by enormous numbers of people who have no formal training in the humanities beyond a study of textbooks. Scientology was developed to be used by such people as well as by the trained practitioner. A person studying by himself from textbooks can use Scientology to help his fellow human beings.

What Special Use Does Scientology Have?

Scientology does things for people where nothing has been done before. It restores people's ability to handle conditions which were once considered hopeless. It increases their intelligence. It changes their competence and betters their behavior. In addition to these it brings them a better understanding of life.

Who Invented Scientology ?

Scientology was discovered (found), not invented (created). It was organized by L. Ron Hubbard, an American, who has many degrees and is very skilled by reason of study. Hubbard was trained in nuclear physics at George Washington University in Washington, D. C., before he started his studies about the mind. This explains the mathematical precision of Scientology. L. Ron Hubbard has been given many honors for his work in the field of the mind. He has been assisted by one of the largest organizations, numerically speaking, in the field of the mind on Earth today, the organizations of Dianetics and Scientology.

EDITOR'S NOTE

CHAPTER TWO

BASIC PRINCIPLES

Like engineering, Scientology has certain basic principles. These are necessary to a full understanding of the subject. It is not enough to know how to process (drill) people in Scientology. To be effective (good) one must also know the basic principles. Scientology is very exact. The humanities (human studies) of the past were full of opinions. Scientology is full of facts that work.

To study Scientology one should scan (skim) quickly through the basics and find something with which one can agree. Having found ONE THING (one fact) with which he can agree, one should then skim through again and find another fact. One should continue to do this until he feels some friendliness to the subject. When one has achieved this, and *only* when one has achieved this, he should then study all the basic principles. There is no effort here to be authoritarian (opinionated). No one will try to make the subject difficult.

You may have been taught that the mind (thought, the brain) is a very difficult thing to know about. This is the first principle of Scientology: It is possible to know about the mind, the spirit and Life.

The Cycle of Action

The most fundamental idea in Scientology is called the CYCLE OF ACTION. CYCLE = a span of time with a beginning and an end = a section of the totality of time with a beginning and an end = in beginningless and endless time one can set out periods which do have a beginning and an end insofar as action is concerned. ACTION = motion or movement = an act = a consideration that motion has occurred.

In very ancient books it is written that from chaos came birth, from birth there was growth, when growth was achieved there was then a gradual decay, the decay then ended in death. After death there was chaos.

Scientology expresses this more briefly. THE CYCLE OF ACTION IS AN APPARENCY AS FOLLOWS: CREATE, then SURVIVE, then DESTROY; or Creation, Survival, Destruction. First there is Creation. Then this is followed by Survival. Then this is followed by Destruction.

APPARENCY = appears to be, as distinct from what actually IS.

This cycle is only an APPARENCY. It is what we see, what we behold, what we believe. We CONSIDER (think, believe, suppose, postulate) that it is so and then we see it so.

A child is born, he grows, he reaches manhood, he grows old, he dies. In Scientology it can be seen that none of these steps are necessary. One considers them so, and so they are "true". A man can grow old quickly or slowly. He grows old to the degree that he believes he is growing old. Because everyone AGREES that this is the way things are, they go that way. The cycle is not TRUE. It is only APPARENT. It is APPARENT because we believe we see it. It is APPARENT because we AGREE that it should be so.

The test of this principle is as follows: By using the CYCLE OF ACTION can we make anyone well or more intelligent? Thousands of tests have proven that the use of and belief in the CYCLE OF ACTION has made none well or intelligent. Therefore, no matter if we see it, there must be something wrong with it. The woman, growing old, wishing to appear younger, is protesting this CYCLE OF ACTION. She feels there is something wrong with it. There is. We have to find out what the ACTUAL cycle is before we can make people better.

ACTUAL = what is really true = that which exists despite all appearances = that which-underlies the way things seem to be = the way things really are.

THE ACTUAL CYCLE OF ACTION is as follows: CREATE, create-create-create, create-counter-create, no creation, nothingness.

CREATE = make, manufacture, construct, postulate, bring into beingness = CREATE.

Create-create-create = create again continuously one moment after the next = SURVIVAL.

Create-counter-create = to create something against a creation = to create one thing and then create some thing else against it = DESTROY.

No creation = an absence of any creation = no creative activity.

AN ACTUAL cycle of action then consists of various activities, but each and every one of them is creative. The cycle of action contains an APPARENCY of SURVIVAL, but this is actually only a continuous creation. The APPARENT cycle of action contains DESTRUCTION, but the ACTUAL cycle of action tells us what destruction is. DESTRUCTION is one of TWO activities. DESTRUCTION is (in terms of action) a creation of something against a creation of something else. For example, a wall is seen standing. To be apparent it is necessary that the wall be constantly created. The act of "destruction" is to exert against the wall another creativeness, that of the action or activity of knocking the wall down. Both the wall standing there and the action of knocking it down are "creative" actions. Because we may object to (argue against, dislike) a wall being knocked down, we vilify (swear at, scorn) the creativeness involved in knocking it down with the word "destructive". ACTUALITY tells us that there is no such thing as destruction. There is only creation against a creation. There is another "type of destruction" and this is NO MORE CREATION. By no longer being a party to (a member of) the wall's creation, the wall, in theory, can cease to exist for one. This is true in ACTUAL PRACTICE in Scientology.

REALITY is the way things appear. REALITY IS APPARENCY. To do anything about reality, one must search into and discover what underlies the APPARENCY. Of what does REALITY consist (what is Reality composed of)? We SEE an APPARENCY which has the CYCLE OF ACTION OF CREATE-SURVIVEDESTROY. More basically (fundamentally) this CYCLE OF ACTION contains nothing but CREATION.

If one stops making something completely and ceases to be a party to its manufacture, it no longer exists for one. If one ceases to create, there is nothingness. When one creates something or beholds something which is created, that thing is still being created. Even if one is creating something with his left hand and has forgotten about it with his right hand, the thing still exists. In other words, one can create something without knowing it is still being created. Then one seeks to DESTROY it by a counter-creation (a creation against it). The result is a chaos created by two opposing creations.

LET US BE PRACTICAL. A science is not a science unless it is practical. A theory is no good unless it works. All the fancy and beautiful theory in the world is useless unless it has a use or a workability. Is this CYCLE OF ACTION THEORY USEFUL? It is. So long as we believe that we have to destroy with force in order to destroy at all, as long as we think in terms of destruction, we have chaos.

There is CREATING AND KNOWING ONE IS CREATING. There is CREATING AND NOT KNOWING ONE IS CREATING. When one drives a car or a cart he does many things (performs many acts) which he is not AWARE OF (conscious of, knows about), and these we call AUTOMATIC ACTIONS. One is doing something and is not aware that he is doing it. One starts to create something, then places this thought still active beyond his own reach and the creation continues to occur.

KNOWINGLY CREATING SOMETHING is always the first condition. One can then purposefully CONTINUE THE CREATION UNKNOWINGLY. Everything one is doing knowingly or unknowingly one is doing here and now, in the present instant, in present time. ONE KNOWINGLY STARTED ANY CREATION in some PAST moment. But the Creation is being done in the present moment.

To stop any creation it can be established that one once knew one was creating it—finding that thought and making it known again—OR ONE CAN SIMPLY CREATE NEWLY AND CONSCIOUSLY WHAT ONE IS ALREADY CREATING UNCONSCIOUSLY (unknowingly). In either case the creation stops. The WRONG WAY is to start a new creation to counter against the old creation; when one does this he gets confusion and chaos.

FOR EXAMPLE, a man has a bad leg. He is trying to “get well”. He seeks then to create a good leg. He goes to doctors and wants to be healed. The treatment is difficult and usually somewhat unsuccessful in the case of a very severely crippled leg. SOMETHING is creating a bad leg. Against this he is creating a good leg. The result is confusion and a bad leg. BUT a THIRD creativeness is present. First something was creating, we hope, a good leg. Then a counter-creation (such as an accident to his leg) counter-created a bad leg. Now he is trying to counter-create again a good leg. The result is to wipe out the ORIGINAL GOOD LEG since THAT IS THE CREATION HE IS TAKING OVER AND EXPOSING WITH HIS EFFORTS TO GET WELL. He wants a good leg. The trouble with him is the countercreation of a bad leg. The test is factual. Have him create (by a certain Scientology process) bad legs until the counter-creation of bad legs is wiped out and the ORIGINAL CREATION OF A GOOD LEG WILL REAPPEAR. This only fails when there is no original creation of a good leg, when the original creation of a good leg is gone.

FOR EXAMPLE, a man has a job. He works at it. That is to say he create-create-creates a job throughout the days, weeks and years. As long as he makes a job, the job exists. One day he DEPENDS upon (takes for granted) this job. He no longer creates it. It ceases to exist. He has no job. The APPARENCY is that he loafed (became lazy) and was discharged. The ACTUALITY is that he no longer created a job and so didn't have one.

FOR EXAMPLE, a man depends upon a woman to keep his house for him. One day he no longer has a woman. He can't keep house EVEN THOUGH BEFORE HE MARRIED THE WOMAN HE COULD KEEP HOUSE .

FOR EXAMPLE, a man is sane. He gets the idea (creates the idea) that it would be better to be insane. He starts to go insane (having created it) and then does numberless things in order to stay sane. Here he was already creating the state of sanity. He counter-created insanity. He then counter-created sanity against insanity.

CREATION IN THIS WORK may be thought to exclude God. We are here considering only those things which man or man as a spirit can make or manufacture or think. The subject of WHO or WHAT is doing the creation does not invalidate the cycle. This is a work on the subject of the mind, not a work on the subject of the Supreme Being.

LYING is the lowest order of creativity.

There are many tests for these principles in SCIENTOLOGY. Such tests come under the heading of PROCESSING .

CHAPTER THREE

THE CONDITIONS OF EXISTENCE

There are three conditions (circumstances, qualities) of existence (apparency, reality, livingness).

These three conditions comprise (make up, constitute) life.

They are BE, DO and HAVE.

THE CONDITION OF BEING IS defined as the assumption (choosing) of a category of identity. It could be said to be the role in a game and an example of beingness could be one's own name. Another example would be one's profession. Another example would be one's physical characteristics. Each or all of these things could be called one's *beingness*. Beingness is assumed by oneself or given to one's self, or is attained. For example, in the playing of a game each player has his own beingness.

THE SECOND CONDITION OF EXISTENCE IS DOING. By doing we mean action, function, accomplishment, the attainment of goals, the fulfilling of purpose, or any change of position in space.

THE THIRD CONDITION IS HAVINGNESS. By havingness we mean owning, possessing, being capable of commanding, positioning, taking charge of objects, energies or spaces.

The essential definition of *having is* to be able to touch or permeate or to direct the disposition of.

The game of life demands that one assume a beingness in order to accomplish a doingness in the direction of havingness.

These three conditions are given in an order of seniority (importance) where life is concerned. The ability to be is more important than the ability to do. The ability to do is more important than the ability to have. In most people all three conditions are sufficiently confused (chaotic, baffling) that they are best understood in reverse order. When one has clarified (brought order into) the idea of possession or havingness, one can then proceed to clarify doingness for general activity, and when this is done one understands beingness or identity.

It is an essential to a successful existence that each of these three conditions be clarified and understood. The ability to assume or to grant (give, allow) beingness is probably the highest of human virtues. It is even more important to be able to permit (allow) other people to have beingness than to be able oneself to assume it.

Beingness = Identity

If you ask an Auditor how these work in processing, he will tell you that there is a specialized form of each of these conditions. The Auditing form of Beingness is Identity. To achieve a betterment of beingness and the granting of beingness, the Auditor remedies with processing the scarcity of identities of the preclear. The preclear is often found in valences (other identities): his father's or mother's or marital partner's or any or all of thousands of possible people. He is unable to achieve or obtain (he thinks) enough identity or an identity of his own. He decries or criticizes the identities of others (fails to grant beingness to them) .

He himself cannot obtain enough identity to feel he has an identity. Identity is so scarce that it's too valuable. Nobody must have one. To be with such a person is therefore an uncomfortable experience since he does not credit our identity—does not grant us beingness.

The “cure” for this is elementary. Let us say he is obviously in father's valence (identity). He got into father's valence when he found he could get no attention from mother. Observing that father got some of her attention, he took father's identity. However, let us say he didn't like father. The Auditor finds him hating “himself”. “Himself” is really father.

A clever Auditor (see section under Processing) would see that while he was in father's valence, it was really mother's attention that was sought.

The Auditor does not inform his preclear of such a finding. He asks the preclear to lie about (lowest form of creativity) identities which would attract mother's attention. Then, when the preclear can do this, the Auditor would have him invent identities which would attract mother's attention.

Suddenly the preclear would be no longer in father's valence. However, he would have been not only in father's but also in mother's valence so the same process would have to be done on father. “Lie about,” the Auditor would say, “identities which would attract father's attention,” then “invent one,” until the preclear had many and would no longer be in mother's valence.

Solving father and mother valences is fundamental, since most people are somewhat “in them” or revolted from them. But people can be “stuck” in all sorts of identities, even bedposts when humans are too valuable to be used.

The rule is that the more a person is “stuck” in a valence or identity, the fewer he conceives to exist. And the harder he thinks it is to get attention. Thus he can become exhibitionistic (displaying himself too thoroughly, being too much *there* at all times) or he can become dispersed (hiding himself, being vague, *not there* most of the time).

People err, in identity, in being too apparent or too little apparent. The remedy of either is the remedy of their scarcity of identity.

Identity and Attention

One “needs” an identity to play the game, as covered later, but mainly to “get attention”.

A being looks at things. To balance the flow of his attention, he feels he must also be looked at. Thus he becomes attention-hungry.

Unlike yellow and brown people, the white does not usually believe he can get attention from matter or objects. The yellow and brown believe for the most part (and it is all a matter of consideration) that rocks, trees, walls, etc., can give them attention. The white man seldom believes this and so is likely to become anxious about people. Thus the white saves people, prevents famine, flood, disease and revolution *for people* as the *only* purveyors of attention are scarce. The white goes further. He often believes he can get attention only from whites and that yellow and brown peoples' attention is worthless. Thus the yellow and brown races are not very progressive, but, by and large, saner. And the white race is progressive but more frantic. The yellow and brown races do not understand white concern for “bad conditions” since what are a few million dead men? There are *plenty* of identities and there is plenty of attention, they think. The white can't understand them. Nor can they understand the white.

Attention and Identity form a group of two. Attention makes space. Identity closes space.

Attention is a method of knowing. Inattention is a method of not-knowing.

Identity is a method of making known. Lack of identity is a method of making unknown.

Valences

The whole study of valences is a fascinating one. A valence is defined as “a false identity assumed unwittingly”. An identity is modified by valences. People who can be nobody may try to be everybody. People who are seeking a way out of scarcity of identity may become fixed in false valences. Nations can become fixed in valences of countries they have conquered in war, etc., etc.

A rule is that a person assumes the identity of that which gets attention. Another rule is that the person assumes the identity of that which makes him fail (for he gave it *his* attention, didn't he?)

There is a basic personality, a person's *own* identity. He colors or drowns this with valences as he loses or wins in life. He can be dug up.

Do =Effect

Doing can be defined as the action of creating an effect. An effect in creation is action.

An Auditor, processing a preclear, would always use “effect processes” to increase doingness.

“What effect could you create on father?” would be a typical Auditor question.

If a preclear is fixated by books, a machine, a tool or a person, the Auditor asks him to lie about, then invent effects he could create upon it. At first the preclear may be able to think of none. Then as the process is continued he may become wildly imaginative or even cruel. Further running will bring the preclear into a more comfortable frame of mind. Criminals or maniacs are people who are frantically attempting to create an effect long after they know they cannot. They cannot then create decent effects, only violent effects. Neither can they work (do).

Despair of creating an effect brings about aberration and irrational conduct. It also brings about laziness and carelessness.

Command of attention is necessary to creating an effect. Therefore when one conceives he cannot easily get attention, he seeks to create stronger effects. He creates effects to get attention. He gets attention to create effects.

As in Axiom 10 (given later), the creation of an effect is the highest purpose in this universe. Thus when one cannot create effects, he has no purpose. And thus it works out in Life. It may be all right to be a stern and unrelenting superior or parent, but such create laziness and criminals. If one cannot have an effect created upon one. (and one is known to another), very definitely harmful results will ensue.

As one believes he creates the *least* effect upon unconscious or dead people, these, as in hospitals or China, become the subject of much aberrated activity. “What effect could you create on an unconscious person (or a dead person)?” asked over and over by an Auditor obtains some astonishing results.

An artist stops his work when he believes he can no longer create an effect.

A person actually dies for lack of being able to create an effect.

BUT security often depends on being able to create *no* effect.

The whole subject of survival is bound up in no-effect. Obviously those things on which no-effect can be made, survive.

If one is anxious about survival (a foolish thing, for he can't do anything else) he becomes anxious to have about him things which resist all effects. But as his only anxiety is about the survival of a *valence* or identity, remedy of the scarcity of these can resolve the matter.

Another cycle of action, containing also the classes of effects, is START-CHANGE-and-STOP. This is the definition of control.

Havingness

As there must be a playing field (see Chapter Twelve) for a game to be held, so there must be havingness. One must be able to possess.

There are millions of methods of possession in life. The obvious one becomes overlooked. If one can see a thing he can have it—if he thinks he can.

The degree to which one can live is the degree to which one can own. To own is not to label or cart away. To own is to be able to see or touch or occupy.

One loses to the degree he is forbidden to have. But to play a game one must be able to believe he can't have.

Effect and Have

Effect and Have form a pair like Attention and Identity. An effect should be on or against something. Thus havingness. If one's attention never meets anything he doesn't always like it. Thus he wants objects.

Effect makes distance. Have shortens distance.

Problems

Man or any life form in this universe seems to love problems. A problem is more important than freedom. Problems keep up interest. When a man *has* a problem very thoroughly and can't solve it, he really has too few problems. He needs more.

The insanity among the idle is a matter of problem scarcity.

A problem is defined as two or more purposes in opposition. Or Intention versus Intention.

Out of the conditions of existence above can come many complex problems.

If a man had *all* the attention in the world he would be unhappy. If he had all the identities possible, he would still be unhappy. If he could blow up Earth or create any other huge effect he wanted without limit, he would be miserable (or insane). If he could own *everything* everywhere he would be dulled to apathy. Or so it seems. For these conditions of

existence are all subordinate to the need of problems, by current Scientology reasoning and results.

Thus to have a person lie about problems or invent problems of the same size as the ones he has, or the valences he is in, or to invent data of the same or different size as the one he is fixed upon is to make a well man.

Probably the problem is the antidote to unconsciousness. It is certainly the antidote for boredom. But in making up the problems of life he consults the conditions of existence: Be, Do, Have and their necessary partner in every case, Attention.

CHAPTER FOUR

THE EIGHT DYNAMICS

As one looks out across the confusion which is life or existence to most people, one can discover eight main divisions, to each of which apply the conditions of existence. Each division contains a cycle of action.

There could be said to be eight urges (drives, impulses) in life. These we call DYNAMICS. These are motives or motivations. We call them THE EIGHT DYNAMICS.

There is no thought or statement here that any one of these eight dynamics is more important than the others. While they are categories (divisions) of the broad game of life they are not necessarily equal to each other. It will be found amongst individuals that each person stresses one of the dynamics more than the others, or may stress a combination of dynamics as more important-than other combinations.

The purpose in setting forth this division is to increase an understanding of life by placing it in compartments. Having subdivided existence in this fashion, each compartment can be inspected as itself and by itself in its relationship to the other compartments of life. In working a puzzle it is necessary to first take pieces of similar color or character and place them in groups. In studying a subject it is necessary to proceed in an orderly fashion. To promote this orderliness it is necessary to assume for our purposes these eight arbitrary compartments of life.

THE FIRST DYNAMIC—is the urge toward existence as one's self. Here we have individuality expressed fully. This can be called the SELF DYNAMIC.

THE SECOND DYNAMIC—is the urge toward existence as a sexual or bisexual activity. This dynamic actually has two divisions. Second Dynamic (a) is the sexual act itself and the Second Dynamic (b) is the family unit, including the rearing of children. This can be called the SEX DYNAMIC.

THE THIRD DYNAMIC—is the urge toward existence in groups of individuals. Any group or part of an entire class could be considered to be a part of the Third Dynamic. The school, the society, the town, the nation are each part of the Third Dynamic, and each one is a Third Dynamic. This can be called the GROUP DYNAMIC.

THE FOURTH DYNAMIC—is the urge toward existence as mankind. Whereas the white race would be considered a Third Dynamic, all the races would be considered the Fourth Dynamic. This can be called the MANKIND DYNAMIC.

THE FIFTH DYNAMIC—is the urge toward existence of the animal kingdom. This includes all living things whether vegetable or animal. The fish in the sea, the beasts of the field, or of the forest, grass, trees, flowers or anything directly and intimately motivated by life. This can be called the ANIMAL DYNAMIC.

THE SIXTH DYNAMIC—is the urge toward existence as the physical universe. The physical universe is composed of matter, energy, space and time. In Scientology we take the first letter of each of these words and coin a word, MESS. This can be called the UNIVERSE DYNAMIC.

THE SEVENTH DYNAMIC—is the urge toward existence as or of spirits. Anything spiritual, with or without identity, would come under the heading of the Seventh Dynamic. This can be called the SPIRITUAL DYNAMIC.

THE EIGHTH DYNAMIC—is the urge toward existence as Infinity. This is also identified as the Supreme Being. It is carefully observed here that the *science of* Scientology does not intrude into the Dynamic of the Supreme Being. This is called the Eighth Dynamic because the symbol of infinity stood upright makes the numeral “8”. This can be called the INFINITY or GOD DYNAMIC.

Scientologists usually call these by number.

The earlier science Dianetics included Dynamics One to Four. Scientology embraces Dynamics One through Seven as known territory, scientifically demonstrated and classified.

The difficulty of stating the exact definitions of the dynamics is entirely verbal. Originally the dynamics read “the urge toward survival as—”. As the science developed it became apparent that survival was only an apparency and only one facet of existence. Both the cycle of action and the three conditions of existence belong in each dynamic.

A further manifestation of these dynamics is that they could best be represented as a series of concentric circles wherein the First Dynamic would be the center and each new Dynamic would be successively a circle outside it. The idea of space adjoining enters into these Dynamics.

The basic characteristic of the individual includes his ability to so expand into the other dynamics, but when the Seventh Dynamic is reached in its entirety one will only then discover the true First Dynamic.

As an example of use of these Dynamics one discovers that a baby at birth is not perceptive beyond the First Dynamic, but as the child grows and interests extend can be seen to embrace other dynamics. As a further example of use, a person who is incapable of operating on the Third Dynamic is incapable at once of being a part of a team and so might be said to be incapable of a social existence.

As a further comment upon the Eight Dynamics, no one of these Dynamics from One to Seven is more important than any other one of them in terms of orienting the individual. While the dynamics are not of equal importance, one to the next, the ability of an individual to assume the beingness, doingness and havingness of each dynamic is an index of his ability to live.

The Eight Dynamics are used in Scientology communication and should be perfectly learned as part of the language of Scientology. The abilities and shortcomings of individuals can be understood by viewing their participation in the various dynamics.

CHAPTER FIVE

THE A-R-C TRIANGLE

There is a triangle of considerable importance in Scientology, and understanding of it gives a much greater understanding of life and an ability to use it.

The A-R-C triangle is the keystone of living associations. This triangle is the common denominator of all of life's activities. The first corner of the triangle is called Affinity. The basic definition of affinity is the consideration of distance, whether good or bad. The most basic function of complete affinity would be the ability to occupy the same space as something else.

The word "affinity" is here used to mean love, liking or any other emotional attitude. Affinity is conceived in Scientology to be something of many facets. Affinity is a variable quality. Affinity is here used as a word with the context "degree of liking". Under affinity we have the various emotional tones ranged from the highest to the lowest, and these are, in part, serenity (the highest level), enthusiasm (as we proceed downward toward the baser affinities), conservatism, boredom, antagonism, anger, covert hostility, fear, grief, apathy. This, in Scientology, is called the Tone Scale. Below apathy, affinity proceeds into solidities such as matter. Affinity is conceived to be comprised first of thought, then of emotion which contains energy particles, and then as a solid.

The second corner of the triangle is Reality. Reality could be defined as "that which appears to be". Reality is fundamentally agreement. What we agree to be real is real.

The third corner of the triangle is Communication. In human relationships this is more important than the other two corners of the triangle in understanding the composition of human relations in this universe. Communication is the solvent for all things. It dissolves all things.

The inter-relationship of the triangle becomes apparent at once when one asks, "Have you ever tried to talk to an angry man?" Without a high degree of liking and without some basis of agreement there is no communication. Without communication and some basis of emotional response there can be no reality. Without some basis for agreement and communication there can be no affinity. Thus we call these three things a triangle. Unless we have two corners of a triangle, there cannot be a third corner. Desiring any corner of the triangle, one must include the other two.

The triangle is conceived to be very spacious at the level of serenity and completely condensed at the level of matter. Thus to represent a scale for use one would draw a large triangle with a high part of the scale and succeeding small triangles down to a dot at the bottom of the scale.

Affinity, reality and communication are the basis of the Scientology Tone Scale, which gives a prediction of human behavior as contained in *Science of Survival*.

As has already been noted, the triangle is not an equilateral triangle. Affinity and Reality are very much less important than Communication. It might be said that the triangle begins with Communication, which brings into existence Affinity and Reality.

The most primitive Scientology definition of Communication is "Cause-Distance-Effect". The fundamental manual of Communication is the book, *Dianetics 55!*

A-R-C are understanding.

If you would continue a strong and able communication with someone there must be some basis for agreement. There must be some liking for the person and then communication

can exist. We can see then that simple talking and writing randomly without knowledge of this would not necessarily be communication. Communication is essentially something which is sent and which is received. The intention to send and the intention to receive must both be present in some degree before an actual communication can take place. Therefore one could have conditions which appeared to be communications which were not.

Original with Scientology, as are all these concepts, the A-R-C triangle understood is an extremely useful tool or weapon in human relationships. For instance, among the A-R-C triangle laws, a communication to be received must approximate the affinity level of the person to whom it is directed .

As people descend the tone scale they become more and more difficult to communicate with, and things with which they will agree become more and more solid. Thus we have friendly discourse high on the scale and war at the bottom. Where the affinity level is hate, the agreement is solid matter, and the communications . . . bullets.

CHAPTER SIX

THE REASON WHY

Life can best be understood by likening it to a game. Since we are exterior to a great number of games we can regard them with a detached eye. If we were exterior to Life instead of being involved and immersed in the living of it, it would look to us much like games look to us from our present vantage point.

Despite the amount of suffering, pain, misery, sorrow and travail which can exist in life, the reason for existence is the same reason as one has to play a game—interest, contest, activity and possession. The truth of this assertion is established by an observation of the elements of games and then applying these elements to life itself. When we do this we find nothing left wanting in the panorama of life.

By game we mean contest of person against person, or team against team. When we say games we mean such games as baseball, polo, chess or any other such pastime. It may at one time have struck you as peculiar that men would risk bodily injury in the field of play just for the sake of “amusement”. So it might strike you as peculiar that people would go on living or would enter into the “game of life” at the risk of all the sorrow, travail and pain just to have something to do. Evidently there is no greater curse than total idleness. Of course there is that condition where a person continues to play a game in which he is no longer interested.

If you will but look about the room and check off items in which you are not interested, you will discover something remarkable. In a short time you will find that there is nothing in the room in which you are not interested. You are interested in everything. However, disinterest itself is one of the mechanisms of play. In order to hide something it is only necessary to make everyone disinterested in the place where the item is hidden. Disinterest is not an immediate result of interest which has worn out. Disinterest is a commodity in itself. It is palpable, it exists.

By studying the elements (factors) of games (contests) we find ourselves in possession of the elements of life.

Life is a game. A game consists of *freedom, barriers* and *purposes*. This is a scientific fact, not merely an observation.

Freedom exists amongst barriers. A totality of barriers and a totality of freedom alike are no-game conditions. Each is similarly cruel. Each is similarly purposeless.

Great revolutionary movements fail. They promise unlimited freedom. That is the road to failure. Only stupid visionaries chant of endless freedom. Only the afraid and the ignorant speak of and insist upon unlimited barriers.

When the relation between freedom and barriers becomes too unbalanced, an unhappiness results.

“Freedom from” is all right only so long as there is a place to be free to. An endless desire for *freedom from* is a perfect trap, a fear of all things.

Barriers are composed of inhibiting (limiting) ideas, space, energy, masses and time. Freedom in its entirety would be a total absence of these things—but it would also be a freedom without thought or action, an unhappy condition of total nothingness.

Fixed on too many barriers, man yearns to be free. But launched into total freedom he is purposeless and miserable.

There is *freedom amongst* barriers. If the barriers are known and the freedoms are known there can be life, living, happiness, a game.

The restrictions of a government, or a job, give an employee his freedom. Without known restrictions, an employee is a slave, doomed to the fears of uncertainty in all his actions.

Executives in business and government can fail in three ways and thus bring about a chaos in their department. They can:

- (1) seem to give endless freedom;
- (2) seem to give endless barriers;
- (3) make neither freedom nor barriers certain.

Executive competence, therefore, consists of imposing and enforcing an adequate balance between their people's freedom and the unit's barriers and in being precise and consistent about those freedoms and barriers. Such an executive adding only in himself initiative and purpose can have a department with initiative and purpose.

An employee, buying and/or insisting upon freedom only, will become a slave. Knowing the above facts he must insist upon a workable balance between freedom and barriers.

An examination of the dynamics above will demonstrate the possibility of a combination of teams. Two group dynamics can engage one another as teams. The self dynamic can ally itself with the animal dynamic against, let us say, the universe dynamic and so have a game. In other words, the dynamics are an outline of possible teams and interplays. As everyone is engaged in several games, an examination of the dynamics will plot and clarify for him the various teams he is playing on and those he is playing against. If an individual can discover that he is only playing on the self dynamic and that he belongs to no other team it is certain that this individual will lose, for he has before him seven remaining dynamics. And the self dynamic is seldom capable of besting by itself all the remaining dynamics. In Scientology we call this condition the "only one". Here is selfish determinism in the guise of self-determinism and here is an individual who will most certainly be overwhelmed. To enjoy life one must be willing to be some part of life.

There is the principle in Scientology called pandeterminism. This could be loosely defined as determining the activities of two or more sides in a game simultaneously. For instance, a person playing chess is being selfdetermined and is playing chess against an opponent. A person who is pan-determined on the subject of chess could play both sides of the board.

A being is pan-determined about any game to which he is senior. He is self-determined only in a game to which he is junior. For instance, a general of an army is pan-determined concerning an argument between two privates or even two companies of his command. He is pan-determined in this case; but when he confronts another army, led by another general, he becomes self-determined. The game in this wise could be said to be larger than himself. The game becomes even larger than this when the general seeks to play the parts of all the political heads which should be above him. This is the main reason why dictatorship doesn't work. It is all but impossible for one man to be pan-determined about the entire system of games which comprise a nation. He starts taking sides and then to that degree becomes much less than the government which he is seeking to run.

It has been stylish in past ages to insist upon only freedom. The French Revolution furnishes an excellent example for this. In the late part of the 18th century, the nobles of France became so self-determined against the remainder of the country and were so incapable of taking the parts of the populace that the nobles were destroyed. Immediately the populace itself sought to take over the government, and, being trained and being intensely antipathetic to any and all restraints, their war cry became "Freedom". They had no further restrictions of barriers. The

rules of government were thrown aside. Theft and brigandage took the place of economics. The populace, therefore, found itself in a deeper trap and discovered itself to be involved with a dictatorship which was far more restrictive than anything it had experienced before the Revolution.

Although man continually uses “Freedom” for his war cry he only succeeds in establishing further entrapment for himself. The reason for this is a very simple one. A game consists of freedom *and* barriers *and* purposes. When man drops the idea of restrictions or barriers he loses at once control over barriers. He becomes self-determined about barriers and not pan-determined, thus he cannot control the barriers. The barriers left uncontrolled trap him then and there.

The dwindling spiral of the apparency Create-Survive-Destroy comes about directly when man shuns barriers. If he considers all restrictions and barriers his enemies, he is of course refusing to control them in any way and thus he starts his own dwindling spiral. A race which is educated to think in terms of freedom only is very easily entrapped. No one in the nation will take responsibility for restrictions, therefore restrictions apparently become less and less. Actually they become more and more. As these restrictions lessen, so lessens the freedom of the individual. One cannot be free from a wall unless there is a wall. Lacking any restrictions life becomes purposeless, random, chaotic.

A good manager must be capable of taking responsibility for restrictions in that freedom, to exist, must have barriers. A failure to take initiative on the subject of restrictions or barriers causes them to arise all by themselves and exist without consent or direction.

There are various states of mind which bring about happiness. That state of mind which insists only upon freedom can bring about nothing but unhappiness. It would be better to develop a thought pattern which looked for new ways to be entrapped, and things to be trapped in, than to suffer the eventual total entrapment of dwelling upon freedom only. A man who is willing to accept restrictions and barriers, and is not afraid of them, is free. A man who does nothing but fight restrictions and barriers will usually be trapped. The way to have endless war is “abandon” all war.

As it can be seen in any game, purposes become counter-posed. There is a matter of purpose-counterpurpose in almost any game played in a field with two teams. One team has the idea of reaching the goal of the other, and the other has the idea of reaching the goal of the first. Their purposes are at war, and this warring of purposes makes a game.

The war of purposes gives us what we call problems. A problem consists of two or more purposes opposed. It does not matter what problem you face or have faced, the basic anatomy of that problem is purpose-counter-purpose.

In actual testing in Scientology it has been discovered that a person begins to suffer from problems when he does not have enough of them. There is the old saw (maxim) that if you want a thing done, give it to a busy man to do. Similarly if you want a happy associate, make sure that he is a man who can have lots of problems.

From this we get the oddity of a high incidence of neurosis in the families of the rich. These people have very

little to do and have very few problems. The basic problems of food, clothing and shelter are already solved for them. We would suppose, then, if it were true that an individual's happiness depended only upon his freedom, that these people would be happy. However, they are not happy. What brings about their unhappiness? It is the lack of problems.

SELF-DETERMINISM is a condition of determining the actions of self. It is a First (Self) Dynamic action and leaves the remaining seven undetermined or, in actuality, in opposition to the self. Thus if one wants to take on the rest of life in a free-for-all fight, one

could be entirely insistent upon total self-determinism. As the remainder of the dynamics must have a say in one's self to function, they fight at once any attempt at total self-determinism.

PAN-DETERMINISM means determining the action of self and others. It means wider determinism than self. In an aberrated fashion we see this in an effort to control all others to aggrandize (make important) self. Pandeterminism is *across* determinism or determinism of two sides. If one controls (monitors) both sides of a chess game one is "above" the game.

One is self-determined, then, in any situation in which he is fighting. He is pan-determined in any situation which he is controlling.

To become pan-determined rather than only selfdetermined, it is necessary to view both sides.

A problem is an intention-counter-intention. It is then something that has two opposing sides. By creating problems one tends to view both sides in opposition and so becomes pan-determined.

Thus a problem only *appears* to be necessary to man. The problem is the closest reality man has to pandeterminism. In processing, the invention of problems then shows a wider view and so exteriorizes one from difficulty.

Although successful processing in Scientology would depend upon taking all three elements of games into consideration—and indeed that is the secret of bettering people: taking freedom, barriers and purposes into consideration and balancing them—it is true that you could make a man well simply by sitting down with him and asking him to invent problems one after the other. The invention of synthetic problems would be found to free his mind and make him more able. Of course, there is another factor involved in this in that it is he who is inventing the problems and therefore he is becoming pan-determined about problems rather than being in one place with all problems opposed to him.

An unhappy man is one who is considering continually how to become free. One sees this in the clerk who is continually trying to avoid work. Although he has a great deal of leisure time he is not enjoying any part of it. He is trying to avoid contact with people, objects, energies and spaces. He eventually becomes trapped in a sort of lethargy. If this man could merely change his mind and start "worrying" about how he could get more work to do, his happiness level would increase markedly. One who is plotting continually how to get out of things will be miserable. One who is plotting how to get into things has a much better chance of becoming happy.

There is, of course, the matter of being forced to play games in which one has no interest—a war into which one is drafted is an excellent example of this. One is not interested in the purposes of the war and yet one finds himself fighting it. Thus there must be an additional element, and this element is "the power of choice".

One could say, then, that life is a game and that the ability to play a game consists of tolerance for freedom and barriers and an insight into purposes, with the power of choice over participation.

These four elements, freedom, barriers, purposes and power of choice, are the guiding elements of life. There are only two factors above these, and both of them are related to these. The first is the ability to create, with, of course, its negative, the ability to uncreate; and the second is the ability to make a postulate (to consider, to say a thing and have it be true). This, then, is the broad picture of life, and these elements are used in its understanding, in bringing life into focus and in making it less confusing.

CHAPTER SEVEN

THE PARTS OF MAN

The individual man is divisible (separable) into three parts (divisions) .

The first of these is the spirit, called in Scientology the *Thetan*. The second of these parts is the *Mind* . The third of these parts is the *Body*.

Probably the greatest discovery of Scientology and its most forceful contribution to the knowledge of mankind has been the isolation, description and handling of the human spirit, accomplished in July, 1951, in Phoenix, Arizona. I established along scientific rather than religious or humanitarian lines that that thing which is the person, the personality, is separable from the body and the mind at will and without causing bodily death or mental derangement.

In ages past there has been considerable controversy concerning the human spirit or soul, and various attempts to control man have been effective in view of his almost complete ignorance of his own identity. Latterly spiritualists isolated from the person what they called the astral body, and with this they were able to work for various purposes of their own. In Scientology the spirit itself was separated from what the spiritualists called the astral body and there should be no confusion between these two things. As you know that you are where you are at this moment, so you would know if you, a spirit, were detached from your mind and body. Man had not discovered this before because, lacking the technologies of Scientology, he had very little reality upon his detachment from his mind and body and therefore conceived himself to be at least in part a mind and a body. The entire cult of communism is based upon the fact that one lives only one life, that there is no hereafter and that the individual has no religious significance. Man at large has been close to this state for at least the last century. The state (condition) is of a very low order, excluding as it does all self-recognition.

The Spirit

The thetan (spirit) is described in Scientology as having no mass, no wave-length, no energy and no time or location in space except by consideration or postulate. The spirit, then, is not a *thing*. It is the *creator* of things.

The usual residence of the thetan is in the skull or near the body. A thetan can be in one of four conditions. The first would be entirely separate from a body or bodies, or even from this universe. The second would be near a body and knowingly controlling the body. The third would be in the body (the skull) and the fourth would be an inverted condition whereby he was compulsively away from the body and could not approach it. There are degrees (subdivisions) of each one of these four states (conditions). The most optimum of these conditions, from the standpoint of man, is the second.

A thetan is subject to deterioration. This is at first difficult to understand since the entirety of his activity consists of considering or postulating. He uses, through his postulates, various methods of controlling a body. That he does deteriorate is manifest, but that he can at any moment return to an entirety of his ability is also factual. In that he associates beingness with mass and action, he does not consider himself as having an individual identity or name unless he is connected with one or more of the games of life.

The processes of Scientology can establish this for the individual with greater or lesser rapidity, and one of the many goals of processing in Scientology is to “exteriorize” the individual and place him in the second condition above, since it has been discovered that he is happier and more capable when so situated.

The Mind

The *mind* is a communication and control system between the thetan and his environment. The mind is a network of communications and pictures, energies and masses, which are brought into being by the activities of the thetan versus the physical universe or other thetans. A thetan establishes various systems of control so that he can continue to operate a body and through the body operate things in the physical universe, as well as other bodies. The most obvious portion of the mind is recognizable by anyone not in serious condition. This is the “mental image picture”. In Scientology we call this mental image picture a *facsimile* when it is a “photograph” of the physical universe sometime in the past. We call this mental image picture a *mock-up* when it is created by the thetan or for the thetan and does not consist of a photograph of the physical universe. We call a mental image picture a “hallucination”, or more properly an automaticity (something uncontrolled) when it is created by another and seen by self.

Various phenomena connect themselves with this entity called the mind. Some people closing their eyes see only blackness, some people see pictures. Some people see pictures made by body reactions. Some people see only black screens. Others see golden lines. Others see spaces. But the keynote of the entirety of the system called the mind is postulate and perception. Easily ten thousand new, separate mental phenomena, not hitherto seen by earlier observers, have been classified in Scientology and Dianetics.

The thetan receives, by the communication system called the mind, various impressions, including direct views of the physical universe. In addition to this he receives impressions from past activities and, most important, he himself, being close to a total knowingness, conceives things about the past and future which are independent of immediately present stimuli. The mind is not in its entirety a stimulus-response mechanism as old Marxist psychology, as once taught in universities, would have one believe. The mind has three main divisions. The first of these could be called the *analytical mind*, the second the *reactive mind*, and the third the *somatic mind*.

The Analytical Mind

The *analytical mind* combines perceptions of the immediate environment, of the past (via pictures) and estimations of the future into conclusions which are based upon the realities of situations. The analytical mind combines the potential knowingness of the thetan with the conditions of his surroundings and brings him to independent conclusions. This mind could be said to consist of visual pictures either of the past or of the physical universe, monitored by, and presided over by, the knowingness of a thetan. The keynote of the analytical mind is awareness. One knows what one is concluding and knows what one is doing.

The Reactive Mind

The *reactive mind* is a stimulus-response mechanism, ruggedly built, and operable in trying circumstances. The reactive mind never stops operating. Pictures of the environment, of a very low order, are taken by this mind even in deep states of unconsciousness. The reactive mind acts below the level of consciousness. It is the literal stimulus-response mind. Given a certain stimulus it gives a certain response. Dianetics concerned itself mainly with this one mind.

While it is an order of thinkingness, the ability of the reactive mind to conclude rationally is so poor that we find in the reactive mind those various aberrated impulses which are gazed upon as oddities of personality, eccentricities, neuroses and psychoses. It is this mind which stores up all the bad things that have happened to one and throws them back to him again in moments of emergency or danger so as to dictate his actions along lines which have

been considered “safe” before. As there is little thinkingness involved in this, the courses of action dictated by the reactive mind are often not safe, but highly dangerous.

The reactive mind is entirely literal in its interpretation of words and actions. As it takes pictures and receives impressions during moments of unconsciousness, a phrase uttered when a blow is struck is likely to be literally interpreted by the reactive mind and becomes active upon the body and analytical mind at later times. The mildest stage of this would be arduous training, wherein a pattern is laid into the mind for later use under certain given stimuli.

A harsh and less workable level is the hypnotic trance condition to which the mind is susceptible. Made impressionable by fixed attention, words can be immediately implanted into the reactive mind which become operable under restimulation at later times.

An even lower level in the reactive mind is that one associated with blows, drugs, illness, pain and other conditions of unconsciousness. Phrases spoken over an anaesthetized person can have a later effect upon that person. It is not necessarily true that each and every portion of an operation is painstakingly “photographed” by the reactive mind of the unconscious patient, but it is true that a great many of these stimuli are registered. Complete silence, in the vicinity of a person under anaesthetic or a person who is unconscious or in deep pain, is mandatory if one would preserve the mental health of that person or patient afterwards.

Probably the most therapeutic action which could occur to an individual would be, under Scientology processing, the separation of the thetan from the mind so that the thetan, under no duress and with total knowingness, could view himself and his mind and act accordingly. However, there is a type of exteriorization which is the most aberrative of all traumatic (mentally injurious) actions. This is the condition when an individual is brought, through injury or surgery or shock, very close to death so that he exteriorizes from body and mind. This exteriorization under duress is sudden, and to the patient inexplicable, and is in itself very shocking. When this has occurred to an individual, it is certain that he will suffer mentally from the experience afterwards.

It could be said that when the reactive mind contains these sudden shocks of exteriorization under duress, attempts to exteriorize the individual later by Scientology are more difficult. However, modern processing has overcome this. The phenomenon of exteriorization under duress is accompanied at times by energy explosions in the various facsimiles of the mind, and these cross-associate in the reactive mind. Therefore, people become afraid of exteriorization, and at times people are made ill simply by discussing the phenomenon, due to the fact that they have exteriorized under duress, during some operation, or during some accident.

Exteriorization under duress is the characteristic of death itself. Therefore, exteriorization or the departure of the soul is generally associated with death in the minds of most people. It is not necessarily true that one is dead because he exteriorizes, and it is definitely not true that exteriorization not accompanied by a shock, pain or duress is at all painful. Indeed, it is quite therapeutic.

The Somatic Mind

The third portion of the mind is the *somatic mind*. This is an even heavier type of mind than the reactive mind since it contains no thinkingness and contains only actingness. The impulses placed against the body by the thetan through various mental machinery arrive at the voluntary, involuntary and glandular levels. These have set methods of analysis for any given situation and so respond directly to commands given.

Unfortunately the somatic mind is subject to each of the minds higher in scale above it and to the thetan. In other words, the thetan can independently affect the somatic mind. The analytical mind can affect the somatic mind. The reactive mind can affect the somatic mind.

Thus we see that the neurons, the glandular system, the muscles and masses of the body are subject to various impulses, each one of a lower order than the next. Thus it is not odd to discover what we call “psychosomatic” illness. A condition exists here where the thetan does not have an awareness of burdening the somatic mind with various commands or derangements. Neither does the thetan have an awareness of his own participation in the analytical mind causing this action against the body.

In that the thetan is seldom aware of the reactive mind, it is possible then for the reactive mind, with its stimulus-response content, to impinge itself directly, and without further recourse or advice, upon the neurons, muscles and glandular system of the body. In that the reactive mind can hold a fixed command in place, causing a derangement in the somatic mind, it is possible then for illness to exist, for bizarre pains to be felt, for actual physical twists and aberrations to occur, without any conscious knowledge on the part of the thetan. This we call physical illness caused by the mind. In brief, such illness is caused by perceptions received in the reactive mind during moments of pain and unconsciousness.

Whether the facsimile in the mind is received while the thetan is awake or unconscious, the resulting mass of the energy picture is energy just as you see energy in an electric light bulb or from the flames of a fire. At one time it was considered that mental energy was different from physical energy. In Scientology it has been discovered that mental energy is simply a finer, higher level physical energy. The test of this is conclusive in that a thetan “mocking up” (creating) mental image pictures and thrusting them into the body can increase the body mass and, by casting them away again, can decrease the body mass. This test has actually been made and an increase of as much as 30 pounds, actually measured on scales, has been added to, and subtracted from, a body by creating “mental energy”. Energy is energy. It has different wave-lengths and different characteristics. The mental image pictures are capable of reacting upon the physical environment, and the physical environment is capable of reacting on mental image pictures. Thus the mind actually consists of spaces, energies and masses of the same order as the physical universe, if lighter and different in size and wave-length. For a much more comprehensive picture of the mind one should read *Dianetics: The Original Thesis* and *Dianetics: The Modern Science of Mental Health*. These were written before the discoveries of the upper levels of beingness were made and are a very complete picture of the mind itself, its structure and what can be done to it and with it.

The Body

The third part of man is the physical *body*. This can best be studied in such books as *Grey's Anatomy* and other anatomical texts. This is the province of the medical doctor and, usually, the old-time psychiatrist or psychologist who were involved in the main in body worship. The body is a purely structural study, and the actions and reactions amongst its various structures are complex and intensely interesting.

When Scientology established bio-physics, it did so because of the various discoveries which had accumulated concerning mental energy in its reaction against physical energy, and the activities which took place in the body because of these interactions. Bio-physics only became feasible when it was discovered in Scientology that a fixed electrical field existed surrounding a body entirely independent of, but influenceable by, the human mind. The body exists in its own space. That space is created by “anchor points” (points which are anchored in a space different to the physical universe space around a body). The complexity of these anchor points can cause an independent series of electronic flows which can occasion much discomfort to the individual. The balance structure of the body and even its joint action and physical characteristics can be changed by changing this electrical field which exists at a distance from, or within, the body.

The electrical field is paramount and monitors the actual physical structure of the body. Thus the body is not only influenced by the three minds, it is influenced as well by its own electrical field. An expert Scientologist can discover for the average person this field, and can

bring about its adjustment, although this is very far from the primary purpose of the Scientologist.

The use of electrical shocks upon a body for any purpose is therefore very dangerous and is not condoned by sensible men. Of course, the use of electrical shock was never intended to be therapeutic, but was intended only to bring about obedience by duress, and, as far as it can be discovered, to make the entirety of insanity a horror. Electrical shock deranges the electronic field in the vicinity of the body and is always succeeded by bad health or physical difficulties and never does otherwise than hasten the death of the person. It has been stated by people using electric shock that if they were denied euthanasia (the right to kill people who were considered to be a burden on a society) they would at least use partial euthanasia in the form of electric shock, brain surgery and drugs. These treatments in some large percentage of cases, however, effected euthanasia as they were expected to do.

A knowledge of both the mental and physical structure of the body would be necessary in order to treat the body, and this knowledge has not existed prior to Scientology. The medical doctor has achieved many results by working purely with structure and bio-chemical products, and in the field of emergency surgery and obstetrics and orthopaedics, he is indispensable in the society. Medicine, however, has not previously even contained a definition for "mind" and is not expected to invade the field which belongs properly to Scientology.

These three parts of man, the thetan, the mind and the body, are each one different studies, but they influence each other markedly and continually. Of the three, the senior entity is the thetan, for without the thetan there would be no mind or animation in the body, while without a body or a mind there is still animation and life in the thetan. The thetan is the person. You are you *in* a body.

Many speculations in the field of para-Scientology have been made. Para-Scientology includes all of the uncertainties and unknown territories of life which have not been completely explored and explained. However, as studies have gone forward, it has become more and more apparent that the senior activity of life is that of the thetan, and that in the absence of the spirit no further life exists. In the insect kingdom it is not established whether or not each insect is ordered by a spirit or whether one spirit orders enormous numbers of insects. It is not established how mutation and evolution occur (if they do), and the general Authorship of the physical universe is only speculated upon, since Scientology does not invade the Eighth Dynamic.

Some facts, however, are completely known. The first of these is that the individual himself is a spirit controlling a body via a mind. The second of these is that the thetan is capable of making space, energy, mass and time. The third of these is that the thetan is separable from the body without the phenomenon of death, and can handle and control a body from well outside it. The fourth of these is that the thetan does not care to remember the life which he has just lived, after he has parted from the body and the mind. The fifth of these is that a person dying always exteriorizes. The sixth of these is that the person, having exteriorized, usually returns to a planet and procures, usually, another body of the same type of race as before.

In para-Scientology there is much discussion about "between lives areas" and other phenomena which might have passed at one time or another for heaven or hell, but it is established completely that a thetan is immortal and that he himself cannot actually experience death and counterfeits it by forgetting. It is adequately manifest that a thetan lives again and that he is very anxious to put something on the "time track" (something for the future) in order to have something to come back to, thus we have the anxieties of sex. There must be additional bodies for the next life.

It is obvious that what we create in our societies during this lifetime affects us during our next lifetime. This is quite different from the "belief", or the idea, that this occurs. In Scientology we have very little to do with forcing people to make conclusions. An individual

can experience these things for himself and unless he can do so no one expects him to accept them.

The manifestation that our hereafter is our next life entirely alters the general concept of spiritual destiny. There is no argument whatsoever with the tenets of faith since it is not precisely stated, uniformly, by religions that one immediately goes to a heaven or hell. It is certain that an individual experiences the effect of the civilization which he has had part in creating, in his next lifetime. In other words, the individual comes back. He has a responsibility for what goes on today since he will experience it tomorrow.

Sex has been overweighted in importance in old psychotherapy, an importance more or less disgraced at this time. Sex is only one of numerous creative impulses. An anxiety about sex, however, occurs when an individual begins to believe that there will not be a body for him to have during the next lifetime.

The common denominator of all aberration (mental derangement) is cessation of creation. As sex is only one kind of creation and a rather low order of it, it will be seen that unhappiness could stem from various cessations of creation. Death itself is a cessation of creation. One stops creating the identity John Jones and the environment and things of John Jones. He stops because he believes he cannot, himself, continue this creation without the assistance of a body, having become dependent upon a mind and a body, the first to do his thinking for him and the second to do his acting. An individual becoming sufficiently morose on the ideas of creation can actually bring about the condition of an inability to create.

Control

It will be seen that the three parts of man are intimately associated with *control*. The anatomy of control is start, change and stop. The loss of control takes place with the loss of pan-determinism. When one becomes too partisan, braces himself too solidly against the remainder of the environment, he no longer controls the environment to the degree that he might and so is unable to start, change and stop the environment.

It is a scientific definition in Scientology that control consists of start, change and stop. These three manifestations can be graphed alongside the apparent cycle of action: create, survive, destroy. Any person is somewhere along this curve. An individual who is bent mainly upon survival is intent, usually, upon changing things. An individual who is close to being destroyed is bent mainly upon stopping things. An individual who has a free heart and mind about life is bent upon creating things.

There could be three things wrong with any person, and these would be the inability to start, the inability to change, the inability to stop. Insanity, for the most part, is an inability to stop. A neurosis is a habit which, worsening, flies entirely out of control. One is stopped so often in life that he becomes an enemy of stopping and dislikes stopping so intensely that he himself will not stop things. Neurosis and psychosis of all classes are entirely inability to start, to change or to stop.

In the matter of the parts of man we discover that all things are initiated by the thetan so far as action, activity and behavior are concerned. After such an initiation he can be blunted or warped from course and acted upon in such a way that his attention becomes too fixed along one line or another and begins to suffer from these three inability. However, each one of the parts of man is subject to the anatomy of control.

An individual begins first by being unable himself, without help, to start, to change and to stop. Then the mind may become prone to these disabilities and is unable to start, change or to stop at will. Then the body itself can become subject to these three disabilities and is unable to start, to change and to stop. The oddity is, however, that an environment can so work upon a thetan that his body becomes disabled through no choice of his own. Similarly the reactive

mind can become disabled through no choice of either the body or the thetan. But the thetan himself, beyond observing the effect of various causes and having initiated the thought to be there, can only become disabled by becoming too partisan, by becoming too little pan-determined, and so bringing himself into difficulties. These difficulties, however, are entirely the difficulties of consideration. As the thetan considers, so he is. In the final analysis the thetan has no problems of his own. The problems are always "other people's problems" and must exist in the mind or the body or in other people or his surroundings for him to have problems. Thus his difficulties are, in the main, difficulties of staying in the game and keeping the game going.

If a thetan can suffer from anything, it is being out-created (created against too thoroughly). The manifestations of being out-created would be the destruction of his own creations and the overpowering presence of other creations. Thus a thetan can be brought to believe that he is trapped if he is out-created.

In past dissertations on the subject of the mind and philosophies of life there was a great deal of speculation and very little actual proof. Therefore, these philosophies were creations, and one philosopher was at work outcreating another philosopher. In Scientology we have this single difference. We are dealing with discoveries. The only things created about Scientology are the actual books and works in which Scientology is presented. The phenomena of Scientology are discovered and are held in common by all men and all life forms. There is no effort in Scientology to out-create each and every thetan that comes along. It is, of course, possible to conceive Scientology as a creation, and to conceive that it is overwhelming. It should be viewed otherwise, for it is intended as an assistance to life at large, to enable life to make a better civilization and a better game. There are no tenets in Scientology which cannot be demonstrated with entirely scientific procedures.

CHAPTER EIGHT

CAUSATION OF KNOWLEDGE

Scientology as a science is composed of many axioms (self-evident truths, as in geometry). There are some fifty-eight of these axioms in addition to the two hundred more axioms of Dianetics which preceded the Scientology axioms.

The first axioms in Scientology are:

Axiom 1. Life is basically a static. (Definition: A life static has no mass, no motion, no wave-length, no location in space or in time. It has the ability to postulate and to perceive.)

Definition: In Scientology, the word “postulate” means to cause a thinkingness or consideration. It is a specially applied word and is defined as causative thinkingness.

Axiom 2. The static is capable of considerations, postulates and opinions.

Axiom 3. Space, energy, objects, form and time are the result of considerations made and/or agreed upon or not by the static, and are perceived solely because the static considers that it can perceive them.

Axiom 4. Space is a viewpoint of dimension. (Space is caused by looking out from a point. The only actuality of space is the agreed-upon consideration that one perceives through something, and this we call space.)

Axiom 5. Energy consists of postulated particles in space. (One considers that energy exists and that he can perceive energy. One also considers that energy behaves according to certain agreed-upon laws. These assumptions or considerations are the totality of energy.)

Axiom 6. Objects consist of grouped particles and solids.

Axiom 7. Time is basically a postulate that space and particles will persist. (The rate of their persistence is what we measure with clocks and the motion of heavenly bodies.)

Axiom 8. The apparency of time is the change of position of particles in space.

Axiom 9. Change is the primary manifestation of time.

Axiom 10. The highest purpose in the universe is the creation of an effect.

These first ten axioms of Scientology are the most fundamental “truths” (by which we mean commonly held considerations). Here we have thought and life and the physical universe in their relation, one to the other. Regardless of further considerations, ideas, assumptions and conditions there lies beneath them these first ten truths.

It is as though one had entered into an honorable bargain with fellow beings to hold these things in common. Once this is done, or once such a “contract” or agreement exists, one has the fundamentals of a universe. Specialized considerations based on the above make one or another kind of universe.

The physical universe which we see around us and in which we live was created on these fundamentals without regard to Who created it. Its creation was agreed upon. In order to perceive it, one must agree that it exists.

There are three classes of universes. There is first, foremost and most evident, the physical universe of spaces, stars, suns, land, sea, air and living forms. Then there is the other fellow’s universe which may or may not be agreed upon by his associates. This he holds to

himself. The phenomenon of this universe is included in the field of the “mind” as described earlier. Then, listed last here, but first perceived, is one’s own universe.

The phenomenon of universes is an interesting one, since one’s own universe can be overwhelmed by the universes of others. These in Scientology we call valences (extra personalities, cells, apparent beingnesses). Valences and universes are the same thing, essentially.

For example, one while living in the physical universe can be overpowered by the universe of, let us say, father. While one still retains his own valence or identity, one is yet acting or thinking or suffering or feeling somewhat like father. Even though one is by oneself, there is this additional apparent beingness. Although father is absent, his commands are still present. Thus we get such things as “duty”, “obedience”, “training” and even “education”. Each one of these is caused by some part of another universe to a greater or lesser degree.

Regardless of how one reacts to universes, he still remains in some degree himself. It is the effort of many to struggle against universes or valences. In fact, this is a game and the essence of games. The totality of the impulse of aberrated people is the effort to separate one’s own self as a thetan from the various universes with which he feels himself too intimately associated. One is only oppressed by a universe when he feels he can have nothing of that universe. One is only victimized by “Father’s universe” when one is in protest against father. One protests against the physical universe only when he feels that he can have no part of it or does not belong in it or, as in religion, is not looked upon kindly by what he conceives to be the Creator of the physical universe. There is a basic law about universes: the postulates of the creator of any universe are the postulates which “work” in that universe. Thus one may feel uncomfortable in the universe of another.

Universes, as considered in games earlier, could be considered the playing fields of life. One plays willingly or one plays unwillingly. When one begins to play unwillingly he is apt to discover himself victimized by and interiorized into the universe of some game. It is against this phenomenon that a person protests. Consider the matter of a jail. On the surface of it, as Voltaire discovered, a jail provides food and shelter and leisure time. This would seem to be the ambition of many people, but the jail provides as well a restriction without one’s consent. The only difference between being in jail and being the king in a castle, so far as liberty is concerned, is one’s own desires in the matter and one’s own ability to command one’s environment. As a king in a castle one would be causative. His will, statement, thinkingness would have an effect upon others. Being in jail, one is an effect in that the thinkingness of others finds him its target. Here we have in terms of universes the most rudimentary example of cause and effect.

We must, however, assume, because it is so evident, that an individual only gets into traps and circumstances he intends to get into. Certain it is that, having gotten into such a position, he may be unwilling to remain in it, but a trap is always preceded by one’s own choice of entrance. We must assume a very wide freedom of choice on the part of a thetan, since it is almost impossible to conceive how a thetan could get himself trapped even though he consented to it. By actual demonstration a thetan goes through walls, barriers, vanishes space, appears anywhere at will and does other remarkable things. It must be, then, that an individual can be trapped only when he considers that he is trapped. In view of the fact that the totality of existence is based upon his own considerations, we find that the limitations he has must have been invited by himself— otherwise they could not be eradicated by the individual under processing, since the only one who is present with the preclear is the Auditor, and past associates of the preclear, while not present, do desensitize, under auditing, in the preclear’s mind. Therefore it must have been the preclear who kept them there. The preclear by processing can resolve all of his difficulties without going and finding other persons or consulting other universes. Thus the totality of entrapment, aberration, even injury, torture, insanity and other distasteful items are basically considerations a thetan is making and holding right now in present time. This must be the case since time itself is a postulate or consideration on his own part.

The greatest philosophical clamor or quarrel has been waged around the subject of “knowledge”, and there is nothing preposterous on the subject of knowledge that cannot be found in the philosophical texts. The superiority and ascendancy of Scientology depends upon the fact that it has transcended this philosophical quarrel on the subject of knowingness, and Scientology contains in itself the basics of knowledge.

By knowledge we mean assured belief, that which is known, information, instruction, enlightenment, learning, practical skill. By knowledge we mean data, factors and whatever can be thought about or perceived.

The reason why knowledge has been misunderstood in philosophy is that it is only half the answer. There is no allness to knowledge. By definition, knowledge is that which is perceived or learned or taken from another source. This patently then means that when one learns he is being an effect.

We see in Axiom 10 that “the highest purpose in the universe is the creation of an effect.” This is in direct contradiction to knowledge, although one of course can know how to create an effect.

Opposed to knowledge we have the neglected half of existence, which is the *creation* of knowledge, the creation of data, the creation of thought, the causative consideration, self-evolved ideas as opposed to ideas otherwise evolved. The reason Scientology is such a fascinating study is that it takes apart the other fellow’s ideas and permits one to create some of his own. Scientology gives us the common denominators of objects, energies, spaces, universes, livingness and thought itself.

There is *cause* and *effect*. Cause could be defined as emanation. It could be defined also, for purposes of communication, as source-point. If you consider a river flowing to the sea, the place where it began would be the source-point or cause, and the place where it went into the sea would be the effect-point, and the sea would be the effect of the river. The man firing the gun is cause; the man receiving the bullet is effect. The one making a statement is causing a communication, the one receiving the statement is the effect of the communication. A basic definition of communication is cause-distance-effect.

Almost all anxieties and upsets in human relations come about through an imbalance of cause and effect.

One must be willing at once to cause new data, statements, assumptions, considerations, and to receive ideas, assumptions, considerations.

So great is the anxiety of a thetan to be an effect that he closely approaches those things which can cause an effect upon him. Thus a thetan becomes trapped. On the face of it so few thetans make causative data and so many receive data that it would seem, in view of the fact that a thetan can be touched only by his own consideration, that thetans are more anxious for effects than to be cause.

It is learned under close experiments that there is nothing a thetan actually disdains on an effect level. He pretends not to like or enjoy certain effects and protests against them, but he knows very well that the mechanism of protest causes the effect to approach more closely as a general rule. This came about by his repeated failure to cause an effect and to receive no-effect in games. Insisting on no-effect for himself, he lost. Then he had to say he liked the effect.

The prevailing anxiety, then, is to be an effect, not to be a cause. The entire subject of responsibility is a study of cause and effect in that a person who wants no responsibility is anxious to be an effect only, and a person who can assume responsibility must also be willing to be causative.

A thetan can be swung into a “state of consideration” by observing that it is commonly held by others. This keeps him in the universe and this keeps him being effect.

Study, investigation, receiving education and similar activity are all effect activities and result in the assumption of less responsibility. Thus, while it is true that a thetan cannot actually get into trouble, he can, by agreeing with the current agreed-upon thought in the universe where he finds himself, take a pattern of thinkingness which makes him less effective because he wishes to be an effect. If he feels he must gather all of his data from elsewhere, he is then the effect of knowledge, the effect of universes and postulates, and he tends to reduce his own ability to form or make knowledge thirst for other thetans’ postulates and would lead one to forget that he himself has been a party to the making of these postulates and that he himself had to follow a certain course in order to put himself in reach of other thetans’ postulates.

(Note to Translators: Lacking a proper English word for “causative thinking”, the word “postulate” has been used in slight difference to its English definition. If there is a word in your language which means “self-impulsion” or “creation of a thought”, use that instead of “postulate”.)

Because one is the effect of knowledge, causing data, considerations or “facts” to come into being separates one in distance from being an effect. If one is very anxious to be an effect and if this is his basic consideration, he will not take well to causing information to come into existence, but in order to get him out of the traps in which he finds himself, it is necessary to some degree that he do so.

Causing few barriers or traps, the individual then loses control over barriers or traps; wishing to be an effect, of course he must lose control of barriers and traps, otherwise he cannot be entrapped by them. The thing to do to free him from a trap is to have him find what parts of the trap he himself is willing to create, own, have or possess. This places the barriers (which can be spaces, energy movements or obstacles) under his control, and his postulating that he can have or possess this or that causes him to be willing to be or occupy the trap. The moment this occurs he is no longer in the trap, or even if he is still in it to some degree he does not object to it and can leave it when he wishes.

Civilization and Savagery

The way to paralyze a nation entirely and to make it completely ungovernable would be to forbid education of any kind within its borders and to inculcate into every person within it the feeling that he must not receive any information from anybody about anything. To make a nation governable it is necessary to hold a kindly view of education and to honor educative persons and measures. To conquer a land it is not necessarily efficient to overwhelm it with guns. Once this is done it is necessary to apply educative measures in order to bring about some sort of agreement amongst the people themselves, as well as between the conqueror and the subdued. Only in this way could one have a society, a civilization or, as we say in Scientology, a smoothly running game.

In other words, two extremes could be reached, neither one of which is desirable for the individual. The first extreme could be reached by emphasis only upon self-created data or information. This would bring about not only a lack of interpersonal relations, but also an anxiety to have an effect which would, as it does in barbaric peoples, result in social cruelty unimaginable in a civilized nation. The other extreme would be to forbid in its entirety any self-created information and to condone only data or considerations generated by others than self. Here we would create an individual with no responsibility, so easily handled that he would be only a puppet.

Self-created data is then not a bad thing, neither is education, but one without the other to hold it in some balance will bring about a no-game condition or a nocivilization. Just as individuals can be seen by observing nations, so we see the African tribesman, with his

complete contempt for truth and his emphasis on brutality and savagery for others but not himself, is a no-civilization. And we see at the other extreme China, slavishly dedicated to ancient scholars, incapable of generating within herself sufficient rulers to continue, without bloodshed, a nation.

We have noted the individual who must be the only one who can make a postulate or command, whose authority is dearer to him than the comfort or state of millions, and we have suffered from such men (Napoleon, Hitler, Kaiser Wilhelm, Frederick of Prussia, Genghis Khan, Attila). We have known, too, the scholar who has studied himself into blindness and is the world's greatest authority on government or some such thing, who yet cannot himself manage his bank account or a dog with any certainty. Here we have, in either case, a total imbalance. The world shaker is himself unwilling to be any effect of any kind (and all the men named here were arrant personal cowards) and we have the opposite, a man who would not know what you were talking about if you told him to get an idea of his own.

We see another example of this in the fundamental laws of warfare. A body of troops, to be effective, must be able to attack and to defend. Its implements must be divided 50% for attack and 50% for defense. In other words, even in a crude activity such as warfare, we find that no successful outcome is possible unless the troops can devote half of their energies to attack and half of them to defense.

In the much broader view of life we discover on any dynamic that success or a game or activity or life itself depends upon being willing to be cause as well as willing to be an effect. He who would give must be willing to receive. He who would receive must be willing to give. When these tenets are violated, the most fundamental principle of human relationships is violated, and the result is a no-game condition such as aberration, insanity, anti-socialness, criminality, inactivity, laziness, tiredness, mania, fanaticism and all the other things against which men protest. But imbalances between cause and effect also enter randomities (unpredicted motions) into the game of life and cannot be neglected in their potential for creating a game.

Any information is valuable to the degree that you can use it. In other words, any information is valuable to the degree that you can make it yours. Scientology, of all the sciences, does not teach you—it only reminds you, for the information was yours in the first place. It is not only the science of life, but it is an account of what you were doing before you forgot what you were doing.

CHAPTER NINE

KNOW AND NOT-KNOW

It is a mechanism of thinkingness, whether one is postulating or receiving information, that one retain one's ability to know. It is equally important that one retain one's ability to not-know. Thought consists entirely of knowing and not-knowing and the shades of gray between.

You will discover that most people are trying not to remember. In other words, they are trying to not-know. Education can only become burdensome when one is unable to not-know it. It is necessary that one be able to create, to receive, to know, and to not-know information, data and thoughts. Lacking any one of these skills, for they are skills, no matter how native they are to the individual, one is apt to get into a chaos of thinkingness or creatingness or livingness.

You can look at any eccentric or aberrated person and discover rapidly, by an inspection of him, which one of these four factors he is violating. He either is unable to know or not-know his own created thoughts, or he is unable to know or not-know the thoughts of others. Somewhere, for some reason best known to him, in his anxiety to be part of the game, he has shelved or lost one of these abilities.

Time is a process of knowing in the present and not-knowing in the future or the past. Remembering is the process of knowing the past; prediction is the process of knowing the future. Forgetting is the process of notknowing the past, and living "only for today" is the process of not-knowing the future.

Exercises in these various items rehabilitate not only the sanity or ability of the individual, but his general capability in living and playing the game.

CHAPTER TEN

THE GOAL OF SCIENTOLOGY

The end object of Scientology is not the making into nothing of all of existence or the freeing of the individual of any and all traps everywhere.

The goal of Scientology is the making of the individual capable of living a better life in his own estimation and with his fellows, and the playing of a better game.

CHAPTER ELEVEN

SCIENTOLOGY PROCESSING

Scientology is applied in many ways to many fields. One particular and specialized method of application of Scientology is its use on individuals and groups of people in the eradication of physical problems deriving from mental states and the improvement of their abilities and intelligence. By processing is meant the verbal exercising of an individual (preclear) in exact Scientology processes. There is a great deal of terminology and precision in these processes and their use, and they are not combinable with older mental activities such as psychiatry, psychology, psychoanalysis, yoga, massage, etc. However, these processes are capable of addressing or treating the same ills of the mind as are delineated by older methodology, with the addition that Scientology is alone in its ability to successfully eradicate those psychosomatic problems to which it is addressed. It is the only science or study known which is capable of uniformly producing marked and significant increases in intelligence and general ability.

Scientology processing amongst other things can improve the intelligence quotient of an individual, his ability or desire to communicate, his social attitudes, his capability and domestic harmony, his fertility, his artistic creativity, his reaction time and his health.

An additional sphere of activity allied to processing is preventive Scientology. In this branch of processing, an individual is freed from assuming states lower than those he has already suffered from. In other words, the progress of tendencies, neuroses, habits and deteriorating activities can be halted by Scientology or their occurrence can be prevented. This is done by processing the individual on standard Scientology processes without particular attention to the aberration involved.

Scientology processing is called “auditing”, by which the auditor (practitioner) “listens, computes and commands”. The auditor and preclear (person receiving auditing) are together out-of-doors or in a quiet place where they will not be disturbed or where they are not being subjected to interrupting influences. The purpose of the auditor is to give the preclear certain and exact commands which the preclear can follow and perform. The purpose of the auditor is to increase the ability of the preclear. The Auditor’s Code is the governing set of rules for the general activity of auditing. The Code follows:

The Auditor’s Code

1. Do not evaluate for the preclear.
2. Do not invalidate or correct the preclear’s data.
3. Use the processes which improve the preclear’s case.
4. Keep all appointments once made.
5. Donotprocessapreclearafter 10p.m.
6. Do not process a preclear who is improperly fed or who has not received enough rest.
7. Do not permit a frequent change of auditors.
8. Do not sympathize with the preclear.
9. Never permit the preclear to end the session on his own independent decision.
10. Never walk off from a preclear during a session.
11. Never get angry with a preclear.
12. Always reduce every communication lag encountered by continued use of the same question or process.
13. Always continue a process as long as it produces change and no longer.
14. Be willing to grant beingness to the preclear.
15. Never mix the processes of Scientology with those of various other practices.
16. Maintain two-way communication with the preclear.

17. Never use Scientology to obtain personal and unusual favors or unusual compliance from the preclear for the auditor's own personal profit.
18. Estimate the current case of your preclear with reality and do not audit another imagined case.
19. Do not explain, justify, or make excuses for any auditor mistakes whether real or imagined.

The Auditor's Code governs the activity of the auditor during sessions. The activity of the Scientologist in general is governed by another broader code.

The Code of a Scientologist

As a Scientologist, I pledge myself to the code of Scientology for the good of all:

1. To hear or speak no word of disparagement to the press, public or preclears concerning any of my fellow Scientologists, our professional organization or those whose names are closely connected to this Science, nor to place in danger any such person.
2. To use the best I know of Scientology to the best of my ability to better my preclears, groups and the world.
3. To refuse to accept for processing and to refuse to accept money from any preclear or group I feel I cannot honestly help.
4. To deter to the fullest extent of my power anyone misusing or degrading Scientology to harmful ends.
5. To prevent the use of Scientology in advertisements of other products.
6. To discourage the abuse of Scientology in the press.
7. To employ Scientology to the greatest good of the greatest number of dynamics.
8. To render good processing, sound training and good discipline to those students or peoples entrusted to my care.
9. To refuse to impart the personal secrets of my preclears.
10. To engage in no unseemly disputes with the uninformed on the subject of my profession.
11. To completely refrain from discussing the case of another auditor's preclear with that preclear or within his hearing.

As it can be seen, both of these codes are designed to protect the preclear as well as Scientology and the auditor in general. As these codes evolve from many years of observation and experience by a great number of people, it can be said that they are intensely important and are probably complete. Failure to observe them has resulted in a failure of Scientology. Scientology can do what it can do only when it is used within the limits of these two codes. Thus it can be seen that the interjection of peculiarities or practices by the auditor into Scientology processing can actually nullify and eradicate the benefits of that processing. Any hope or promise in Scientology is conditional upon its good use by the individual and its use in particular within the limits of these two codes.

The Conditions of Auditing

Certain definite conditions must prevail and a certain methodology must be followed in order that processing may be beneficial to its fullest extent. Probably the first condition is a good grasp of Scientology as a science and its mission in the world. The second condition would be a relaxed state of mind on the part of the auditor and the confidence that his use of Scientology upon the preclear will not produce a harmful result. The third requisite should be finding a preclear. By this it is literally meant that one should discover somebody willing to be processed, and, having discovered one so willing, should then make sure that he is aware that he is there being processed. The fourth requisite would be a quiet place in which to audit, with every precaution taken that the preclear will not be interrupted or burst in upon or unduly startled during processing.

CHAPTER TWELVE

EXACT PROCESSES

Auditing

Game and No-Game Conditions

In Scientology, the most important single elements to the auditor are *Game Conditions and No-Game Conditions*. Reason—all games are aberrative.

All processing is directed toward game conditions. Little or no processing is directed toward no-game conditions. Therefore, it is of the utmost importance to know exactly what these are, for one could be superficial about it and lose.

Rule—all Games are aberrative, some are fun.

The Elements of Games to auditors are:

A game consists of freedoms, barriers and purposes.

In a game one's own team or self must receive no-effect and must deliver an effect upon the other team or opponent.

A game should have space and, preferably, a playing field.

A game is played in the same time continuum for both sides (all players).

A game must have something which one does not have in order for it to be won.

Some part of the dynamics must be excluded for a game condition to exist. The amount of the dynamics excluded represents the tone of the game.

Games occur only when there is intention opposing intention, purpose opposing purpose.

A scarcity of games forces the preclear to accept less desirable games.

Participation in any game (whether it be the game of sick-man, jealous-wife or polio) is preferable to being in a no-game condition.

The type of game entered by a person is determined by his consideration as to how much and what kind of an effect he may receive while trying to deliver an effect.

Games are the basic mechanism for continuing attention.

To play a game one must be able to not-know his past and future and not-know his opponent's complete intentions.

Game Conditions are:

Attention

Identity

Effect on Opponents

No-effect on Self

Can't Have on opponents and goals and their areas

Have on tools of play, own goals and field

Purpose

Problems of play

Self-determinism
Opponents
The possibility of loss
The possibility of winning
Communication
Non-arrival

No-Game Conditions are:

Knowing All
Not-Knowing Everything
Serenity
Namelessness
No-effect on opponent
Effect on self or team
Have everything
Can't Have nothing
Solutions
Pan-Determinism
Friendship with All
Understanding
Total Communication
No Communication
Win
Lose
No Universe
No Playing Field
Arrival
Death

Process only with those conditions listed as Game Conditions. Do not process directly toward those conditions listed as No-Game Conditions. So doing, the auditor will run out (erase) the aberrative effect of games and restore an ability to play a game.

Identities—Valences

There are four identities or valences.

When one is in his “own” valence he is said to be “himself “.

As he departs from his own identity he comes in to the following:

Exchanged Valence: One has directly superimposed the identity of another on his own. Example—Daughter becomes own mother to some degree. Remedy—One directly runs out mother.

Attention Valence: One has become the valence B because one wants attention from C. Example—One becomes mother because mother received attention from father while self did not. Remedy—Run out father even though preclear appears in valence of mother.

Synthetic Valence: One takes a valence about which he has been told. Example—Mother tells child false things about father, accuses child of being like father, with result that child is forced into father's valence. Remedy—Run out mother even though preclear does not seem to be near mother's valence.

All requisites for auditing from here on are entirely concerned with procedures and processes. By auditing procedure is meant the general model of how one goes about addressing a preclear. This includes an ability to place one question worded exactly the same way over and

over again to the preclear no matter how many times the preclear has answered the question. It should include the ability to acknowledge with a “good” and “all right” every time a preclear executes or completes the execution of a command. It should include the ability to accept a communication from the preclear. When the preclear has something to say, the auditor should acknowledge the fact that he has received the preclear's communication and should pay some attention to the communication.

Procedure also includes the ability to sense when the preclear is being over-strained by processing or is being unduly annoyed and to handle such crises in the session to prevent the preclear from leaving. An auditor should also have the ability of handling startling remarks or occurrences by the preclear. An auditor should also have the knack of preventing the preclear from talking obsessively since prolonged conversation markedly reduces the havingness of the preclear, and the sooner long dissertations by the preclear are cut off the better for the session in general.

Processes as distinct from procedures consist of utilizing the principle of the gradient scale to the end of placing the preclear in better control of himself, his mind, the people and the universe around him.

By gradient scale is meant a proceeding from simplicity toward greater difficulty, giving the preclear always no more than he can do, but giving him as much as he can do until he can handle a great deal. The idea here is to give the preclear nothing but wins and to refrain from giving the preclear losses in the game of processing. Thus it can be seen that processing is a team activity and is not itself a game whereby the auditor opposes and seeks to defeat the preclear and the preclear seeks to defeat the auditor, for when this condition exists little results in processing.

The earliest stage of auditing consists in taking over control of the preclear so as to restore to the preclear more control of himself than he has had. The most fundamental step is then location, whereby the preclear is made to be aware of the fact that he is in an auditing room, that an auditor is present and that the preclear is being a preclear.

Those conditions will become quite apparent if one realizes that it would be very difficult for a son to process a father. A father is not likely to recognize anything else than the boy he raised in his auditor. Therefore the father would have to be made aware of the fact that the son was a competent practitioner before the father could be placed under control in processing. One of the most elementary commands in Scientology is “Look at me, who am I?” After a preclear has been asked to do this many times until he can do so quickly and accurately and without protest, it can be said that the preclear will have “found” the auditor.

The preclear is asked by the auditor to control, which is to say, start, change and stop (the anatomy of control) anything he is capable of controlling. In a very bad case this might be a very small object being pushed around on a table, being started and changed and stopped each time specifically and only at the auditor's command until the preclear himself realizes that he himself can start, change and stop the object. Sometimes four or five hours spent in this exercise are very well spent on a very difficult preclear.

The preclear is then asked to start, change and stop his own body under the auditor's specific and precise direction. In all of his commands the auditor must be careful never to give a second command before the first one has been fully obeyed. A preclear in this procedure is walked around the room and is made to start, change the direction of and stop his body, emphasizing one of these at a time, until he realizes that he can do so with ease. Only now could it be said that a session is well in progress or that a preclear is securely under the auditor's command.

It should be noted especially that the goal of Scientology is better self-determinism for the preclear. This rules out at once hypnotism, drugs, alcohol or other control mechanisms

used by other and older therapies. It will be found that such things are not only not necessary, but they are in direct opposition to the goals of greater ability for the preclear.

The principal points of concentration for the auditor now become the ability of the preclear to have, the ability of the preclear to not-know, and the ability of the preclear to play a game.

An additional factor is the ability of the preclear to be himself and not a number of other people, such as his father, his mother, his marital partner or his children.

The ability of the preclear is increased by addressing to him the process known as the Trio. These are three questions, or rather commands.

1. "Look around here and tell me what you could have."
2. "Look around here and tell me what you would permit to remain in place."
3. "Look around here and tell me with what you could dispense."

No. 1 above is used usually about ten times, then No. 2 is used five times, and No. 3 is used once. This ratio of ten, five and one would be an ordinary or routine approach to havingness. The end in view is to bring the preclear into a condition whereby he can possess or own or have whatever he sees, without further conditions, ramifications or restrictions. This is the most therapeutic of all processes, elementary as it might seem. It is done without too much two-way communication or discussion with the preclear, and it is done until the preclear can answer questions one, two and three equally well. It should be noted at once that twenty-five hours of use of this process by an auditor upon a preclear brings about a very high rise in tone. By saying twenty-five hours it is intended to give the idea of the length of time the process should be used. As it is a strain on the usual person to repeat the same question over and over, it will be seen that an auditor should be well disciplined or very well trained before he audits.

In the case of a preclear who is very unable, "Can't have" is substituted for "have", etc., in each of the above questions for a few hours, until the preclear is ready for the Trio in its "have" form. This can-can't is the plus and minus aspect of all thought and in Scientology is called by a specialized word *dichotomy*.

The rehabilitation of the ability of the preclear to not-know is also rehabilitation of the preclear in the time stream since the process of time consists of knowing the moment and not-knowing the past and not-knowing the future simultaneously. This process, like all other Scientology processes, is repetitive. The process is run, ordinarily, only after the preclear is in very good condition and is generally run in an exterior well inhabited place. Here the auditor, without exciting public comment, indicates a person and asks the preclear "Can you not-know something about that person?" The auditor does not permit the preclear to "not-know" things which the preclear already doesn't know. The preclear "not-knows" only those things which are visible and apparent about the person. This is also run on objects in the environment such as walls, floors, chairs and other things. The auditor should not be startled when for the preclear large chunks of the environment start to disappear. This is ordinary routine and in effect the preclear should make the entirety of the environment disappear at his own command. The environment does not disappear for the auditor. The end goal of this "not-know" process is the disappearance of the entire universe, under the preclear's control, but only for the preclear.

It will be discovered while running this that the preclear's "havingness" may deteriorate. If this happens, he was not run enough on the Trio before he was run on this process. It is only necessary in such a case to intersperse

"Look around here and tell me what you could have" with the "not-know" command to keep the preclear in good condition. Drop of havingness is manifested by nervous agitation, obsessive talk or semi-unconsciousness or "dopiness" on the part of the preclear. These manifestations indicate only reduction of havingness.

The reverse of the question here is “Tell me something that you would be willing to have that person (indicated by the auditor) not-know about you.” Both sides of the question have to be run (audited). This process can be continued for twenty-five hours or even fifty or seventyfive hours of auditing with considerable benefit so long as it does not react too violently upon the preclear in terms of loss of havingness.

It should be noted that, in running either havingness or “not-know” on a preclear, the preclear may “exteriorize”. In other words, it may become apparent, either by his observation or because the preclear informs him, that the auditor has “exteriorized” a preclear. Under “The Parts of Man” section there is an explanation of this phenomenon. In modern auditing the auditor does not do anything odd about this beyond receive and be interested in the preclear’s statement of the fact. The preclear should not be permitted to become alarmed since it is a usual manifestation. A preclear is in better condition and will audit better exteriorized than “in his head”. Understanding that an actual ability to “not-know” is an ability to erase the past by self-command without suppressing it with energy or going into any other method is necessary to help the preclear. It is the primary rehabilitation in terms of knowingness. Forgetting is a lower manifestation than “not-knowingness”.

The third ability to be addressed by the auditor is the ability of the preclear to play a game. First and foremost in the requisites to playing a game is the ability to control. One must be able to control something in order to participate in a game. Therefore the general rehabilitation of control by starting, changing and stopping things is a rehabilitation of the ability to play a game. When a preclear refuses to recover, it is because the preclear is using his state as a game, and does not believe that there is any better game for him to play than the state he is in. He may protest if this is called a game. Nevertheless, any condition will surrender if the auditor has the preclear invent similar conditions or even tell lies about the existing condition. Inventing games or inventing conditions or inventing problems alike rehabilitates the ability to play a game. Chief amongst these various rehabilitation factors are control (start, change and stop), problems, and the willingness to overwhelm or be overwhelmed. One ceases to be able to have games when one loses control over various things, when one becomes short of problems and when one is unwilling to be overwhelmed (in other words, to lose) or to overwhelm (to win). It will be found while running havingness as in the Trio above that one may run down the ability to play a game, since havingness is the reward of a game in part.

In the matter of problems it will be seen that these are completely necessary to the playing of a game. The anatomy of a problem is intention versus intention. This is, of course, in essence the purpose of all games, to have two sides, each one with an opposed intention. Technically a problem is two or more purposes in conflict. It is very simple to detect whether or not the preclear is suffering from a scarcity of games. The preclear who needs more games clutches to himself various present-time problems. If an auditor is confronted with a preclear who is being obsessed by a problem in present-time he knows two things: (1) that the preclear’s ability to play a game is low, and (2) that he must run an exact process at once to rehabilitate the preclear in session.

It often happens at the beginning of an auditing session that the preclear has encountered a heavy present-time problem between sessions. The preclear must always be consulted before the session is actually in progress as to whether or not he has “anything worrying” him. To a preclear who is worried about some present-time situation or problem no other process has any greater effectiveness than the following one. The auditor after a very *brief* discussion of the problem asks the preclear “to invent” a problem of comparable magnitude. He may have to re-word this request to make the preclear understand it completely, but the auditor wants in essence the preclear to invent or create a problem he considers similar to the problem he has. If the preclear is unable to do this, it is necessary then to have him lie about the problem which he has. Lying is the lowest order of creativeness. After he has lied about the problem for a short time, it will be found that he will be able to invent problems. He should be made to invent problem after problem until he is no longer concerned with his present-time problem.

The auditor should understand that a preclear who is “now willing to do something about the problem” has not been run long enough on the invention of problems of comparable magnitude. As long as the preclear is attempting to *do* something about the problem, the problem is still of obsessive importance to him. No session can be continued successfully until such a present-time problem is entirely flat, and it has been the experience, when a present-time problem was not completely eradicated by this process, that the remainder of the session or indeed the entire course of auditing may be interrupted.

When a preclear does not seem to be advancing under auditing, a thing which he does markedly and observedly, it must then be supposed that the preclear has a present-time problem which has not been eradicated and which must be handled in auditing. Although the auditor gives the preclear to understand that he too believes this present-time problem is extremely important, the auditor should not believe that this process will not handle *any* present-time problem, since it will. This process should be done on some preclears in company with the Trio.

If the preclear is asked to “lie about” or “invent a problem of comparable magnitude,” and while doing so becomes agitated or unconscious or begins to talk wildly or obsessively, it must be assumed that he will have to have some havingness run on him until the agitation or manifestation ceases so that the problem of comparable magnitude process can be resumed.

Another aspect of the ability to play a game is the willingness to win and the willingness to lose. An individual has to be willing to be cause or willing to be an effect. As far as games are concerned, this is reduced to a willingness to win and a willingness to lose. People become afraid of defeat and afraid of failure. The entire anatomy of failure is only that one’s postulates or intentions are reversed in action. For instance, one intends to strike a wall and strikes it. That is a win. One intends not to strike a wall and doesn’t strike it. That is again a win. One intends not to strike a wall and strikes it. That is a lose. One intends to strike a wall and can’t strike it. This is again a lose. It will be seen in this as well as other things that the most significant therapy there is is changing one’s mind. All things are as one considers they are and no other way. If it is sufficiently simple to give the definition of winning and losing, so it is simple to process the matter.

This condition is best expressed, it appears, in processing by a process known as “overwhelming”. An elementary way of running this is to take the preclear outside where there are numbers of people to observe and, indicating a person, to ask the preclear “What could overwhelm that person?” When the preclear answers this, he is asked about the same person, “What could that person overwhelm?” He is then asked as the third question, “Look around here and tell me what you could have.” These three questions are run one after the other. Then another person is chosen and then the three questions are asked again.

This process can be varied in its wording, but the central idea must remain as above. The preclear can be asked, “What would you permit to overwhelm that person?” and “What would you permit that person to overwhelm?” and of course “Look around here and tell me what you could have.” This is only one of a number of possible processes on the subject of overwhelming, but it should be noted that asking the preclear to think of things which would overwhelm him could be fatal to the case. Where overwhelming is handled, the preclear should be given a detached view.

A counter-position to havingness processes, but one which is less therapeutic, is “separateness”. One asks the preclear to look around and discover things which are separate from things. This is repeated over and over. It is, however, destructive of havingness even though it will occasionally prove beneficial.

It will be seen that havingness (barriers), “notknowingness” (being in present time and not in the past or the future), purposes (problems, antagonists, or intentioncounter-intention), and separateness (freedom) will cover the anatomy of games. It is not to be thought, however,

that havingness addresses itself only to games. Many other factors enter into it. In amongst all of these, it is of the greatest single importance.

One addresses in these days of Scientology the subjective self, the mind, as little as possible. One keeps the preclear alert to the broad environment around him. An address to the various energy patterns of the mind is less beneficial than exercises which directly approach other people or the physical universe. Therefore, asking a preclear to sit still and answer the question "What could you have?", when it is answered by the preclear from his experience or on the score of things which are not present, is found to be non-therapeutic and is found instead to decrease the ability and intelligence of the preclear. This is what is known as a subjective (inside the mind only) process.

These are the principal processes which produce marked gains. There are other processes and there are combinations of processes, but these given here are the most important. A Scientologist knowing the mind completely can of course do many "tricks" with the conditions of people to improve them. One of these is the ability to address a psychosomatic illness such as a crippled leg which, having nothing physically wrong with it, yet is not usable. The auditor could ask the preclear "Tell me a lie about your leg" with a possible relief of the pain or symptoms. Asking the preclear repeatedly "Look around here and tell me something your leg could have" would undoubtedly release the somatic. Asking the preclear with the bad leg "What problem could your leg be to you?" or desiring him to "Invent a problem of comparable magnitude to your leg" would produce a distinct change in the condition of the leg. This would apply to any other body part or organ. It would also apply, strangely enough, to the preclear's possessions. If a preclear had a vehicle or cart which was out of repair or troublesome to him, one could ask him "What problem could a cart be to you?" and thus requesting him to invent many such problems one would discover that he had solved his problems with the cart. There is a phenomenon in existence that the preclear already has many set games, and when the auditor asks him to give some problems, he already has the manifestations of as-ising or erasing taking place. Thought erases; therefore the number of problems or games the preclear would have would be reduced by asking him to recount those which he already has. Asking the preclear to describe his symptoms is far less therapeutic and may result in a worsening of those symptoms, contrary to what some schools of thought have believed in the past but which accounts for their failures.

There are specific things which one must avoid in auditing. These follow:

1. *Significances.* The easiest thing a thetan does is change his mind. The most difficult thing he does is handle the environment in which he finds himself situated. Therefore, asking a thetan to run out various ideas is a fallacy. It is a mistake. Asking the preclear to think over something can also be an error. Asking a preclear to do exercises which concern his mind alone can be entirely fatal. A preclear is processed between himself and his environment. If he is processed between himself and his mind, he is processed up too short a view and his condition will worsen.

2. *Two-way communication.* There can be far too much two-way communication or far too much communication in an auditing session. Communication involves the reduction of havingness. Letting a preclear talk on and on or obsessively is to let a preclear reduce his havingness. The preclear who is permitted to go on talking will talk himself down the tone scale and into a bad condition. It is better for the auditor simply and discourteously to tell a preclear to "shut up" than to have the preclear run himself "out of the bottom" on havingness. You can observe this for yourself if you permit a person who is not too able to talk about his troubles to keep on talking. He will begin to talk more and more hectically. He is reducing his havingness. He will eventually talk himself down the tone scale into apathy at which time he will be willing to tell you (as you insist upon it) that he "feels better" when, as a matter of fact, he is actually worse. Asking a preclear "How do you feel now?" can reduce his havingness since he looks over his present-time condition and as-ises some mass.

3. *Too many processes.* It is possible to run a preclear on too many processes in too short a time with a reduction of the preclear's recovery. This is handled by observing the communication lag of the preclear. It will be discovered that the preclear will space his answers to a repeated question differently with each answer. When a long period ensues between the question and his answer to the question a second time, he is said to have a "communication lag". The "communication lag" is the length of time between the placing of the question by the auditor and the answering of that exact question by the preclear. It is not the length of time between the placing of the question by the auditor and some statement by the preclear.

It will be found that the communication lag lengthens and shortens on a repeated question. The question on the tenth time it has been asked may detect no significant lag. This is the time to stop asking that question since it now has no appreciable communication lag. One can leave any process when the communication lag for three successive questions is the same. In order to get from one process to another, one employs a communication bridge which to a marked degree reduces the liability of too many processes. A communication bridge is always used.

Before a question is asked, the preclear should have the question discussed with him and the wording of the question agreed upon, as though he were making a contract with the auditor. The auditor says that he is going to have the preclear do certain things and finds out if it's all right with the preclear if the auditor asks him to do these things. This is the first part of a communication bridge. It precedes all questions, but when one is changing from one process to another the bridge becomes a bridge indeed. One levels out the old process by asking the preclear whether or not he doesn't think it is safe to leave that process now. One discusses with the preclear the possible benefit received from the process and then tells the preclear that he is no longer going to use that process. Now he tells the preclear he is going to use a new process, describes the process and gets an agreement on it. When the agreement is achieved, then he uses this process. The communication bridge is used at all times. The last half of it, the agreement on a new process, is used always before any process is begun.

4. *Failure to handle the present-time problem.* Probably more cases are stalled or found unable to benefit in processing because of the neglect of the present-time problem, as covered above, than any other single item.

5. *Unconsciousness, "dopiness" or agitation on the part of the preclear* is not a mark of good condition. It is a loss of havingness. The preclear must never be processed into unconsciousness or "dopiness". He should always be kept alert. The basic phenomenon of unconsciousness is "a flow which has flowed too long in one direction." If one talks too long at somebody he will render him unconscious. In order to wake up the target of all that talk, it is necessary to get the person to do some talking. It is simply necessary to reverse any flow to make unconsciousness disappear, but this is normally cared for in modern Scientology by running the Trio above.

The Future of Scientology

With man now equipped with weapons sufficient to destroy all mankind on Earth, the emergence of a new science capable of handling man is vital. Scientology is such a science. It was born in the same crucible as the atomic bomb. The basic intelligence of Scientology came from nuclear physics, higher mathematics and the understanding of the ancients in the East. Scientology can and does do exactly what it says it can do. In Washington, D, there is an enormous file cabinet filled with thousands of case histories, fully validated and sworn to, which attest the scientific thoroughness of Scientology. With Scientology man can prevent insanity, criminality and war. It is for man to use. It is for the betterment of man. The primary race of Earth is not between one nation and another today. The only race that matters at this moment is the one being run between Scientology and the atomic bomb. The history of man, as has been said by well-known authorities, may well depend upon which one wins.

START- CHANGE- STOP

Edited from L. Ron Hubbard's August 1956 HPA/HPC tape lectures

This is the entrance to rough cases nowadays. The lowest entrance to a case which we have today is the same for a low case as it is for a high case. This process does not criticize the preclear's case.

It is below the establishing of the rudiments, but should still be audited in the modern manner of Communication Bridges, Acknowledgments, etc.

Only one procedure that would be lower than this process would be a highly specialized procedure having to do with an individual who has lost the use of his voice, sight, hearing or his capability of moving his hands.

It becomes necessary for the auditor to become inventive in order to establish communication, but he should stick as nearly as possible to these procedures. The lowest processes which would be addressed to any case would simply be the first process of SLP 8, which is not, as we were saying before, "**Find the auditor,**" "**Find the preclear**" etc., but the process which leads up to that. This is an interesting process since it is in itself capable of producing a full result and is an extremely simple one.

Start, change, and stop is the anatomy of control. This is a cycle of action. There is continue (persist) on the middle of the curve and other cycles within cycles of action, but the important factors are Start, Change, and Stop.

These three parts of control are run flat individually. Then pick up the other part of the cycle and run that flat in this order: We run *Change* flat, and then run *Start* very flat and then we run *STOP* flat.

It would be a mistake at this point to say this process is finished, for the excellent reason that if you ran Change again you would find further considerations shifting in the preclear, and then if you ran Start you would find it unflattened, so you would run it again and then run and flatten Stop.

It would not be possible to say how long you would have to run the process altogether. On somebody who was total machinery and who never had been in session, this would be a rough process. On a case that is in good condition, this would run easier. The preclear would consider it interesting and would exteriorize much better.

The end result of this process is exteriorization. For someone who is compulsively exteriorized this would be excellent, as he would slide into his head and eventually come out of it again, but not on a compulsive level this time.

One meets with three conditions in auditing: the preclear who is compulsively interiorized, the preclear who is compulsively exteriorized, and the preclear who is buttered all over the universe. This case run on S-C-S would greatly accumulate the ability to collect himself—this might not occur until you have run him for five or more hours on it.

If this process is continued long enough the preclear will be moving his body by postulate—i.e. from the outside—not by beams, stimulus-response, etc.

This process does not go all the way up because of the preclear's attention span. Most preclears can't stay on a process for more than a few moments, so you would vary the process a little to keep him interested. His actual response, however, is not important as long as he does it.

There is no such thing as bad control, only non-positive control. Good control is positive control and positive control is not bad control. We get a lower level there than moving the body. This is S-C-S on objects. It is always safest to run this on someone you are trying out. Somebody to whom a body is not real should be run using an object instead of his body.

To run this process the auditor and preclear should both stand up. This gives reality, and the auditor duplicating (mimicry) the preclear will bring about greater ARC. The session always fails when the auditor sits down while running S-C-S.

It runs this way:

The auditor points out a spot on the floor to the preclear and says, **“Do you see that spot? Good, well, we'll call that Spot A. Now you stand there. Okay.”** The auditor now indicates another spot and says, **“Now do you see that other spot? Good, we'll call that Spot B. All right, now when I tell you to change the body's position I want you to move it from Spot A to Spot B. All right? Good. Change the body's position. Fine.”** Then you say, **“Do you see that spot? Well, we'll call that Spot C (we use three spots so that we don't run a duplication process on him). Now when I tell you to change the body's position I want you to move the body from Spot B to Spot C. Do you understand that? All right, change the body's position.”**

You can ask him **“Did you change the body's position?”** if his case isn't too low, but it's not advisable on a low case at first.

Then go back to Spot A. It does not have to be the same Spot A each time, as it makes the process too much like duplication, brings the preclear to predict the process too easily and do it machinewise.

Each time you make a contract with the preclear. You don't depend on any former understanding with this process. Each moment in time is new. We make each move in time a new move. He doesn't have to depend on his memory so you repeat again each time as above—the whole wording as given.

On Start we emphasize START. You say, **“Do you see that wall over there? Good. Now when I give you this command I want you to move the body in that direction. When I say START I want you to start the body. All right. Start. Fine.”** He may protest that he had to stop the body and change it as well—what is happening is that the word “control” is starting to ungroup and as you get start, change and stop apart and distinct from each other, the individual's ability to control the body increases and he gains more confidence in being able to control it from a greater and greater distance.

The next command would be: **“All right, when I tell you to start the body you start the body. Okay. Start the body.”**

The third command is for STOP. **“I am going to ask you to get the body moving over there toward that wall and somewhere along the line I am going to tell you to stop and I want you to stop the body. Is that all right?”** He agrees and you say, **“Get the body moving.”** You don’t say start. He does, and you say “Stop” and “Did you stop the body?”

Stop is the most important part of S-C-S. The preclear has been told all along the line to stop. He was made effect all the time. Now you bring him to do just this under his own control and self-determinism and he takes over the automaticity.

Eventually the preclear will flatten each one of these in turn. You may have to do Stop one more time than the others.

You should walk around with him so that he can feel the mimicry context of this. If you sit down he will soon go out of ARC and leave the session.

HIGH SCHOOL INDOCTRINATION

The conduct of High School Indoctrination is, of necessity, an extremely precise activity.

High School Indoctrination is given to Staff Auditors and very advanced students after these have long since satisfactorily passed routine Indoctrination.

High School Indoctrination, at the moment, consists only of teaching an auditor not to let a preclear stop him.

The failure of most sessions is the action of the preclear in going out of session. The preclear goes out of session at any moment when the preclear starts to control the session. When the preclear controls the session he is out of session. Therefore, it is necessary for the preclear not to stop or alter the course of action of an auditor. The moment that a preclear can satisfactorily, to himself, stop the auditor that preclear is out of session and the probability of doing him much good while he is out of session is very remote.

In High School Indoctrination the technique 8C, simply having a fellow walk over to the wall and touch it and let go, is followed. The person being indoctrinated or the "auditor" starts to use this 8C upon his "preclear" who is actually the one doing the High School Indoctrination. The "preclear" does everything in his power to stop, divert, change or alter the intention of the auditor. It will be found that such simple things as "Just a moment, my shoe is untied" are the best in effecting this stopping. The auditor can be thrown aside into running some other process by announcing to him that a facsimile has just appeared or that one should really use his left hand since one is left-handed.

The "auditor" in High School Indoctrination loses at any moment when he is made to pause. If he is made to pause or interrupt his session in any way then the session has to be started over again. He has "lost".

Because High School Indoctrination is rather hard on the Instructor, it is run for only 45 minutes and an exact moment of stopping the session, in actuality, is agreed upon. "We are going to stop this session now at five o'clock exactly, it now being four-fifteen." Then the session is entered and is run for these 45 minutes. To run one longer is sometimes almost fatal on the High School Indoctrinator.

Then, for the ensuing hour, the High School Indoctrinator runs the person being indoctrinated with Stop-C-S. This is to reverse the positions which have been occupied.

Therefore, to use High School Indoctrination, it is necessary that a two hour period be free and that the first 45 minutes of it be devoted to High School Indoctrination, a short break be taken, and then auditing of the person being indoctrinated who was, in the first 45 minutes, acting as the "auditor" (to be given Stop-C-S by the former "preclear").

High School Indoctrination depends for its effectiveness mainly upon the cleverness of the person doing the Indoctrination. He has to be very smooth, very often his most casual efforts are the greatest and will be found to be the most effective.

The final goal of High School Indoctrination is to have a Staff Auditor or Advanced Auditor who is not capable of being halted by a preclear under any circumstances. Because the person doing the High School Indoctrination always has higher altitude, being higher on Staff or in Scientology, it will be found that the person being indoctrinated is much more likely to become confused during the Indoctrination than he would be in the average session. However,

it has been learned that those people who become confused in any way during High School Indoctrination have, in the course of their auditing career, “blown” several preclears. It will also be found that they have not achieved very high results in auditing. They were too willing to be stopped, too easily rattled, too easily thrown aside and did not know their subject well enough.

Some of the effects which can be made on people undergoing High School Indoctrination are quite startling. They can be made to swear or even cry after being stopped as arduously and viciously as they can be stopped by a person doing the Indoctrination.

There is no reason to list the number of commands or dodges or attempted stops which the person doing the Indoctrination can use. It is only necessary to synthesise these if only out of one’s own experience with very difficult preclears who would rather have done anything than be audited. It is better to think these up on the spur of the moment than otherwise. Planned dodges can be used where one goes very smoothly through the thing for eight or nine commands without offering the least difficulty or resistance and then suddenly hauls back on the next one and says “I won’t”. This occasionally completely stops a person being indoctrinated.

High School Indoctrination must be given to every Staff Auditor regardless of any former training and it must be given by a person with considerable altitude over that auditor, such as the Director of Processing or the Technical Director of an operation.

**CREATIVE PROCESSES, MOTIONS,
STOPS and PERCEPTIONS**

Edited from L. Ron Hubbard's August 1956 HPA/HPC tape lectures

You will find in auditing a preclear that certain of his mock-ups still exist on his time track. So when a preclear makes a facsimile or dub-in it is still in a certain time-space spot.

Some facsimiles are so signally a failure that they float. They go skidding along the track. That is survival (no-effect). They weren't nailed down.

One could say that he is stuck in that moment of time.

You could do this to a person and say "**When I snap my fingers an age will flash**" and snap your fingers, and he may say "Six." What does that mean? It means that the preclear is stuck in that age.

A man of 55 years with the face of a body of 5 years has certain speech, sexual and other mannerisms which have "floated" up with him to the age of 55. In other words, he is in a reaction pattern of the age of 5.

The age of a facsimile will flash. With an E-Meter you will see where he is stuck. Where there is charge (motion) the needle is in motion, and where he is stuck the needle will freeze right down to motionlessness when you are on the moment of stuckness.

A person is hit on his head with a sledgehammer at the age of 5, and at 55 he is still there. He still has that facsimile floating about.

It isn't perception that bounces, sticks, groups one on the track. Perceptions such as sight, sound, etc., in a facsimile are discovered to be a simple key-in of motions and solids.

A person is stuck when he wishes to escape motion.

An individual in a high games condition is in motion. The game gets too high, and he drops out. So he goes into a no-games condition. You can call this a *rest point* on the track.

He was in high motion, didn't like it after a while, found a stop point and he stopped. For example, a man is playing the game of "Fighting the Wars of India."

After a while he gets tired of it, and one day, in a battle, when everything is in violent motion, he considers that this isn't worth it any more and somebody spears him through the chest. This is a stop point on the game.

Whenever he is reminded of the high motion he remembers that there was a stop point on the track; i.e., lifetimes later he walks in London and sees an Indian being run over by a car, and suddenly all this unexpected motion reminds him of the old game of the Indian Wars and he remembers the stop point on the track, how he got out of the game. This preclear comes to you complaining of his chest—he's either got TB, chest trouble or something, and this blows when you audit solids.

There is an exact stop point in the middle of the facsimile where a game has ended, and your preclear wants to get into this stop point to escape a high-motion games condition because that stop point was the solution to all that danger and motion.

The solution to danger and motion, reactively, is a stop point.

An engram is a moment of pain and/or unconsciousness in an exact moment of time (or a mental image picture containing moments of pain and/or unconsciousness).

So a person who is in the middle of some painful incident which happened centuries ago is in this rest point, escaping from imagined danger and motion.

This is an exact mechanism which you must know and with which you must work.

You may ask how somebody gets out of a stuck point from which he cannot escape.

He is on the stuck point because there was too much motion on either side of it. So if he comes out of it he runs into the rest of the motion which he desired to escape. So the stuck point, as far as he is concerned, is okay.

In order to run this, you make *him* (the preclear) take over the automaticity of the motion that happened before and after the incident.

Have him *mock up* the motion that happened before the incident. (DON'T HAVE HIM RUN THE FACSIMILES BECAUSE HE WILL EAT THEM ALL UP AND BE VERY MAD WITH YOU AFTERWARDS.) Have him put *new* motion into the incident by mock-ups. (DON'T RUN THE OLD MOTION OUT!)

By throwing new motion in you are showing him that he can get the motion under control.

Do the same for after the incident occurred and he will shake loose from that point. You don't erase the stuck point. You improve his tolerance of motion.

DON'T RUN THE STUCK POINT. It runs for 165 hours without release. IT IS SERIOUS AND CONTAINS A VACUUM IN THE MIDDLE OF IT. You handle vacuums and stop (games conditions) by handling the motion.

A fellow with no stuck points is the "agitation case," spastics and any condition which is obsessed with high compulsive, obsessed motion.

High obsessed motion is lower on the scale than somebody who sleeps all the while. This gives us caution. If somebody runs out of stop points he is in trouble.

So handle all motion in a period that turns up, otherwise we leave him stuck in the middle of the incident. *Move him right out of the incident. Handle all the motion by putting in new motion.*

An individual can be audited too briefly on any type of given motion. *So move him right out*, for he will rather have the stop point than be stuck in the middle of an incident.

A vacuum confuses all this.

A vacuum is a super-cold object that attracts electronically into it the *whole* track.

Just preceding a vacuum is the most violent motion of facsimiles you have ever observed because it may have a million years of facsimiles, places, faces, stop points, etc., in it.

So where are the stuck points? It is in the vacuum among all the scramble of facsimiles.

This is common in space opera. An object out in space which is -273 degrees has infinite capacitance and zero resistance, and it is hungry. It picks up that electrical energy at a fantastic rate. It pulls a person's whole track in when, out in space, he touches it.

(That's all there is to brainwashing.)

Handle this by having facsimiles fly around in mock-ups. Do this on gradient scales. (A gradient scale is a scale of conditions ranging from zero to infinity.) Next thing he has avalanches that he can start, stop and change, mock up, etc., and he doesn't care about vacuums any longer.

After this have him invent some games and individualities to get the game sorted

A game doesn't only consist of motion, but of enemies and individualities to fight those enemies with.

So all these factors **MUST** be taken into account or else you will be processing your preclear towards succumb.

Randomity and Automaticity

L. Ron Hubbard

*Prepared from a lecture to the 4th London ACC,
2 November 1955, entitled "Randomity and Automaticities."*

THE VOCABULARIES OF SCIENCE

In all scientific systems you have a number of code words which operate as communication carriers, and when a person does not know these words well, he's having difficulty with the science itself. I've seen a senior in science falling down in his comprehension of a later part of the science because he had never gotten the nomenclature of the science straight to begin with. He did not know exactly what a British Thermal Unit was, or something like that—therefore later on when he's solving some vast and involved problem there's a datum rambling around in his head and it's not stable at all—it's getting confused—it's mixed up with all other data. And that is only because he didn't understand what the term was in the first place.

So just as you learn semaphore signals, just as you learn Morse Code, just as you learn baby talk, so, when you become conversant with any particular specialized subject, you must become conversant with its terminology. Your understanding of it then increases. Otherwise understanding is impeded by these words rattling around and not joining themselves to anything. If you know vaguely that such and such a word exists and yet have no definite understanding of what it means, it does not align. Thus a misunderstanding of a word can cause a misalignment of a subject and this really is the basis of the primary confusion in Man's understanding of the mind.

There have been so many words assigned to various parts of the mind that one would be staggered if he merely catalogued all of these things. Take for instance the tremendous background and technology of psychoanalysis. Overpoweringly complicated material, most of it merely descriptive, some of it action terminology, such as the censor, the id, the ego, the alter-ego, and what not. Most of these things lined up, each one meaning a specific thing. But the practitioners who began to study this science did not have a good founding in the exact sciences—in other words they didn't have a model of the exact sciences. And in the humanities they could be as careless as they liked with their words, because the humanities were not expected to be precise or exact—not a criticism of them—it just means that you could have a looser command of the language.

When they got into the study of Freud they got into this interesting thing—to one person an id was one thing and to another person it was something else. And alter-ego was this and it was that. The confusion of terms, there, practically all by itself, became the totality of confusion of psychoanalysis.

Actually psychoanalysis is as easy to understand certainly as Japanese. Japanese is a baby talk—very, very hard to read, very, very easy to talk. If you can imagine a language which tells you which is the subject, which is the verb, which is the object, every time it speaks, you can imagine this baby-talk kind of a language. One that doesn't have various classes or conjugations of verbs. A very faint kind of a language. Nevertheless, it merely consists, in order to communicate with a Japanese, of knowing the meanings of certain words, and if you know the meanings of those words precisely, then when a Japanese comes up to you and says, "Do you want a cup of tea?" you don't immediately get up because you thought he said, "Wet paint." You have a communication possibility.

Well, similarly, with the language of psychoanalysis, the great difficulties inherent in understanding such a thing as psychoanalysis became much less difficult when one viewed psychoanalysis as a code system to relay certain meanings. It did not then become a problem of whether or not these phenomena existed or didn't exist. It simply became a problem of words meaning a certain precise thing. And if they meant that thing to everybody, then everybody was talking psychoanalysis, and if it didn't mean this thing to everybody, then people weren't talking psychoanalysis. Who knows *what* they were talking. The next thing you know they were talking Jungianism—the next thing you know they were talking Adlerianism—and the amount of difference between these various items is minute to say the least. But the language difficulties then made many practitioners in that field at odds with the theory, which they did not at any rate understand.

You find out in Scientology that a rather arduous background in mathematics and in what is at least laughingly called the exact sciences nevertheless made for a very arduously firm choice of word definition. There are certain phenomena named, and these phenomena are specific. They are not random, they are very, very precise. For instance, an engram is an engram. It is a mental picture of a moment of pain and unconsciousness. That is an engram, and if you know that you can find an engram.

But we have had, in the case of the word engram, something of a cross-up, since there was an early use of the word in biology, although it seemed to have gone out of usage, so that a biologist will come along now and then and look at the word engram and say, yes I know what an engram is.

Well, they know what they MEAN by the word engram, but they have never seen one. The engrams we are talking about in Dianetics and Scientology we can see, but they wouldn't ever quite know what we were talking about if they thought it was an energy trace on a cell. This was not discoverable with microscopes or anything of the sort, so I considered it a lost word and quite accidentally crossed up this word with the earlier biological use.

I remember one time learning Igoroti in a single night. I sat up by kerosene lantern and took a list of words that had been made by an old missionary in the hills in Luzon—the Igorot had a very simple language. This missionary had phoneticized their language and he had made a list of their main words and their usage and grammar. And I remember sitting up under a mosquito net with the mosquitos hungrily chomping their beaks just outside the net, and learning this language—three hundred words just memorizing these words and what they meant. And the next day I started to get them in line and align them with *people*, and was speaking Igoroti in a very short time.

The point here is, that it is not difficult to learn a language if you understand that you are learning a language. The first way to learn the language of Scientology is to understand clearly that you ARE learning a LANGUAGE and that it has in it perhaps fifty, sixty or seventy words, and that each of these words has a PRECISE DEFINITION.

As far as nomenclature is concerned in Scientology, what we usually did was to take a verb and make a noun of it so that there wouldn't be any cross-up of definition. It's an interesting system that has been employed. We try to minimize the number of words introduced. That might sound strange, but we have tried to minimize it. In giving a special

terminology, we have only named those things which were really important to the auditor, phenomena which an auditor really had to understand. Therefore a knowledge of the exact definition of a word brought exact understanding of the phenomenon. It's that simple.

A knowledge of Scientology first and foremost, then, is a vocabulary knowledge. There are probably not more than sixty words in Scientology of special meaning.

We have not named to any extent invisible phenomena. An engram is a very viewable phenomenon. If you've ever run one on a preclear you know how visible it is, to the preclear and to you.

The first word we have, however, in the entire language of Scientology, is, unfortunately, a NON-viewable thing—the Static. It is non-viewable but it is experienceable, so it isn't completely removed into the never-never land. But from there on we do have almost all of our terminology in VIEWABLE form. It's examinable. It can be measured.

A fellow by the name of Wundt, in 1879 in Leipzig, Germany, invented a thing called psychology, which was mainly—his main interest seems to have been—the study of mental behavior *through physiology*. The subject which has come down to us from there called psychology has not been defined much differently since Wundt, and that is the way the mind has been studied—through physiology. Well, the man's hunch wasn't too far wrong, in that practically everything in the mind is viewable and does have some mass and does exist in space and is something that you could put your hands on very easily and say “that is THAT.”

We don't know whether Wundt knew this or not. The psychologists don't know it even vaguely today, and they think that what they are dealing with is a totally abstract, theoretical, never-never land subject, and that's why they choose it.

But if YOU don't know this then you're apt to go adrift on the terminology of Scientology and on Scientology itself. You're apt to go very badly adrift and believe that we're dealing with abstracts and intangibles. This may be an overlooked supposition on your part. Psychology studies abstracts and intangibles. We're not studying, however, psychology.

We're studying hearable, measurable, weighable, meterable phenomena—right below the level of Static. From the Static you go immediately into experienceable, viewable phenomena. And even the Static is experienceable.

So we're not outside the realm of experience anywhere in Scientology. Everything we deal with is something that can have concrete form or example. This is an interesting thing.

I've given you this fast summary on terminology itself so that you could see that if this word *randomity* and if the word *automaticity* cannot be clearly understood it must be being viewed then as some abstract thing, and it's not an abstract thing.

RANDOMITY

We find the earliest introduction of the subject *randomity* in the Dianetic Axioms in the fall of 1951.

The word RANDOMITY was needed as a further expression of MOTION. I've been talking to you recently of “things that were too motionless”—tolerance of things which were too motionless and tolerance of things which had too much motion. We find that we have to increase people's tolerance of these. It shows us that if people had difficulties with the tolerance of things that were too motionless and too motionful, we had with this word *randomity* a rather upset circumstance people didn't like to grasp this word. Well, we have a further explanation of it today, and as a result of that further explanation we have a better chance of gripping this and using it.

Randomity means in essence COMPARABLE MOTION. Comparable to what? Comparable to the consideration of motion. So we have PLUS randomity and we have MINUS randomity. In other words we can have, from the individual's consideration, too much or too little motion, or enough motion. What's ENOUGH motion measured by? The consideration of the individual. Take, for example, a man eating a meal in the presence of two friends. He thought he was eating about right. The fellow next to him thought he was eating too fast and the fellow across from him thought he was eating too slow.

So, it's a consideration of motion. A traffic cop views the field of automobile traffic with a consideration of minus randomity compared to the motorist's idea of motion of cars. The motorist's consideration of optimum randomity is plus randomity compared to the cop's consideration.

If you've ever driven down a deserted highway you may remember having a little, vague suspicion that there was something not quite right about going down that road all by yourself. No other traffic to view. This tells you at once that it may or may not be a road. You know that you consider it a road—but do other people? An eight-lane highway could give you this idea that the road was closed, under repair, or that it wasn't considered by everyone else to be a road at all, if there were no traffic in sight for very many miles.

There is a certain amount of traffic randomity that a motorist is used to and is comfortable about. A New York cabbie, if you put him in a cab out in the middle of Arizona, would be outside his area of optimum randomity. He'd want at least a hundred and fifty cars stacked up at the next intersection, and here he has to drive a hundred miles to get any intersection at all. It's his consideration of motion.

Well, he has a certain tolerance for the random particles which in the case of traffic follow certain channels, but which nevertheless are pretty random on those channels. So he has the idea of randomity in traffic.

Randomity also contains the aspect of UNEXPECTEDNESS. Unexpectedness is inherent to the idea of randomness. In other words you have to have ENOUGH unexpectedness. You have your idea of how much unexpectedness there should be in life. Well, so does the New York taxi driver have his idea of how much unexpectedness there should be in traffic, and if he were to drive in a totally orderly community where the unexpectedness was zero this man would probably go to sleep or go unconscious or do something—he would eventually run off the road. But maybe after he was at it for many, many weeks he would "get used to it."

So then this word *randomity* contains the idea of CONDITIONING. It is the only place where we find the subject of conditioning in Dianetics and Scientology.

The reason I'm talking about randomity here is that it is one of the wider concepts, and a little harder perhaps to grasp than any other. Yet you can set it up and view it very easily.

We could set up something like this: a table that a person could sit in front of which would have all kinds of holes and runways in it for marbles. We could have these marbles popping up through the holes and taking different paths and bumping around at different levels and rates of speed and abundance.

In other words, we could have a table set up that would present a person with a certain level of randomity and we could include a controlled unexpectedness factor.

We could find out from this actually what the person's idea of optimum motion was. We could find out what amount of unexpectedness and rapidness of motion he would be comfortable about.

After a while the person starts to get nervous if you pop too many marbles out of those holes. They're coming out of the holes, and there are lots of them, and they're disappearing and appearing completely unexpectedly, smashing and cracking together and so forth, and he's likely to sit there and say, "There's just too damned many marbles!" He doesn't like it.

Just below that level of motion he'll say, "That's interesting."

And just below that level he sits there and says, "... marbles" One pops up and runs across the table, another one pops up, the first disappears, another one pops up and runs across the table, etc., and he says, "Ho-hum . . . marbles." That is MINUS RANDOMITY.

When he was interested, that was HIS randomness; that was optimum randomness. Where you had too many marbles moving too fast you had PLUS RANDOMITY. With relationship to what, though? With relationship to this person, this thinkingness, this mind. His idea of randomness was what it was.

You see that it has to be this way when you test a youngster who likes action on something like this. His reaction to the test would be that you would have to have the marbles popping up and shooting across there with such a suddenness and such a blur and such a whirr and such a snap that you yourself would probably stand there and watch and feel slightly uncomfortable. And this kid says, "My, how interesting." But you drop it down to the number of marbles that was optimum for this other fellow and the kid will say, "Oh, let's go out and play ball."

Now we have to have this thing called randomness. It's an unfortunate thing if it is incomprehensible at times. We have to have these things—plus randomness, minus randomness and optimum randomness.

What is his idea of unexpected motion necessary to the living of a life? How much randomness does he have to have to live? Which at the same time would say—stay interested in life. How much would he have to have?

A guy in space opera? WOW! Well, you have to have a fight between fleets at least once a week. You didn't have a good liberty at all unless five men were killed. That time was no fun at all—after they shot all the women there was just nothing left to do.

Idea of the amount of motion, unexpectedness, sudden event, the twist and turn to life is very, very high there. Therefore you have space opera engrams very easily in suspense on the track. They look like confusion. A fellow has been in space opera, and now he looks at the engram, and he says, "No-sir, that's confusion."

Now the only reason we're resurrecting this word and dusting it off and using it more frequently is that it is a better statement of confusion than the word *confusion*. The word *confusion* means at once PLUS RANDOMITY, and it's therefore a specialized kind of randomness. It means: motion unexpected above the tolerance level of the person viewing it. And that is the definition of the word *confusion*.

So if a STABLE DATUM is necessary to the alignment of data, and if a stable datum can be pulled out of an area of aligned data with the result of confusion, we have to have a better understanding of what we mean by confusion. If we're going to process it we certainly had better understand it. It better be a nice, clear thing to us, because we are likely to look at a preclear and consider that he is under a confusion. When as a matter of fact, he might be in a MINUS RANDOMITY.

A good statement of a minus randomness would be: things are too slow. Things are certainly slow around here. Life is dull. There is nothing happening.

A consideration of how much motion and unexpectedness of motion there is in the environment—how much unexpected happenstance, how much pattern of action—and this would be minus when there was too little for the tolerance of the individual.

So we need to have a word to match *confusion*. It looks like there is a hole in the English language. Thus once more we have this word *randomity*. It's describing something which has been viewed which is not adequately described in English. And that we are viewing it and describing it and naming it somewhere within the bounds of comprehensibility is quite remarkable.

MINUS RANDOMITY is the opposite of CONFUSION. "Things are too stable." "Do you know that little Benny has not fallen out of the window for three days!" "Do you realize I have not burned myself all morning!" "Do you realize there hasn't been a single accident out there on the highway all afternoon!" "How dull—everything is travelling only at rocket speed!" That could be one fellow's idea of minus randomity, or opposite of confusion. Things are not sufficiently confusing, random, unexpected, in motion, so he's saying, "How dull."

This other chap looks at one horse walking down one street and says to himself, "Horse!!! Things are going too fast around here for me!"

Unless you understand that there can be a difference of consideration about this you would have a hard time trying to grasp the preclear's idea of how much stable data he needs. Now how much stable data do you think this fellow needs? One horse going down one street. He needs ONE STABLE DATUM PER PARTICLE. Therefore, he needs an ENORMOUS amount of information to keep the world from falling in on him and turning upside down and spilling in his lap. He just needs a tremendous quantity. He needs dictionaries full, he needs encyclopedias full, he needs libraries full, he needs scribes working on every side continually to catalogue, catalogue, catalogue, catalogue. And each word to him is not only a stable datum, it's a Sacred Datum. If we moved just one word out of line in a cataloguing of a hundred million words this fellow would become extremely uncomfortable.

We have whole sciences which are cataloguing sciences. If Francis Bacon hadn't wanted to give an example of what science was, we would probably never, even today, have had a science of botany. But Bacon used once, as an illustration of what a science would be, a science of botany. He used the classification of flowers as his illustration and instantly it became a science and from there on it is catalogued. For a fellow to be willing to study botany he has to be willing to tolerate a tremendous lack of motion, from most of our viewpoints. But from his own viewpoint his ability to tolerate motion or no motion never comes in question. He's perfectly happy going along with one-stable-datum-per-item.

To most of us this would be unthinkable arduous. So you can see that we have an intolerance for that little randomity.

The bottom line of this gradient scale would appear to be one-stable-datum-per particle. That should be the bottom of the randomity scale—but it isn't. The bottom would be no particle, no space. And we would be back to a static. And out of this you at once recognize why a static wants havingness and particles: you have a game.

Below minus randomity is NO RANDOMITY. Of any kind. People do not usually like this at all. Starting up scale we get—a few particles. One could be at this point for two reasons: because he is shuddering away from confusion and therefore is getting a stable-datum-per-particle, or he could be at that point because he has a tremendous tolerance for confusion AND for motionlessness.

Now if he is cataloguing one stable datum per particle at the minus randomity end of the scale, then he is doing this interesting thing: This fellow is shuddering away from all confusion and particles because he's trying to USE UP all existing particles and stable data. He's trying to match these two things. So he's trying to use up all possible confusion.

If this same fellow had a high tolerance of confusion in the first place and had used up all these particles in this fashion, matching particle for stable datum, with everything catalogued, everything in order, he would run out of confusions. And he would have a SCARCITY OF confusion. So, taking another look at this randomness scale: we could have a scarcity of confusion, or a scarcity of motionlessness. A scarcity at either end. We could have either condition or both conditions, and NOT depending upon which end we were viewing it from.

Then we ask this: What is plus randomness and what is minus randomness?

FROM THE VIEWPOINT OF THE INDIVIDUAL, SOMETHING WHICH HAS IN IT TOO MUCH MOTION OR UNEXPECTEDNESS FOR HIS TOLERANCE is plus randomness, and THAT THING WHICH HAS TOO LITTLE MOTION IN IT FOR HIS TOLERANCE is minus randomness.

Now, how he gets into these states is the entire subject of scarcity.

For example: the fellow who falls into a plus randomness with great speed. His tolerance of motion is so slight that almost any motion is a plus randomness to him. A second horse gets into the street and he practically has a nervous breakdown. That fellow will have a tendency to do this: instead of matching a stable datum for a particle, he will take all particles and stop them (he starts to apply force) and then bring all of these particles into a mass so that they are each taken care of. He can look at this whole group of particles and say, "That's a table." "That's a rock." Now he's got ALL of the particles named. He's named it a rock. He's not going to do anything about these particles. He's going to just mass them. That is the state of mind which gets you mass.

Unless you simply mock it up to *have* a mass—there's always that going on—mock up a universe to have a universe, etc., or you can evolve them or have reasons for them. But this is usually the case: that an individual who is obsessively making mass has an intolerance of motion to the degree that a second horse on the street would give him a nervous breakdown. So he takes any particles that are in motion and he is actually ill about this until he can take the particles and push them together and say, "Ah, a rock. Whew! Now we can have some peace around here."

At the other end, the fellow in space opera: There's been a riot that morning, there's been a fire in Bunker 4, three prisoners have escaped and were shot in the courtyard, and so forth, and this fellow is saying, "Gee, things have slowed down around here! Let's create some confusion and get some motion started. Let's drop a false message into the message center: WE ARE ABOUT TO BE ATTACKED BY THE PRUVIANS or something. Let's get something GOING around here."

Well now, that individual will DISPERSE things. He'll disperse things preferably with an unknown. And then he has an enormous amount of data, none of which has any identification at all. His level of expectedness and unexpectedness is way up. He'll have a wonderful time wondering if he can possibly make head or tail of any of this: "Gosh, look at that! The president shot, and I'm plugged, and gee, you know, I can't make any sense out of it at all!?!?!?!?"

You get the idea, then, how people vary unexpectedness and motion to fit their own considerations. There is, however, such a thing as a state of good health in connection with this. That sounds odd, but there is one, and that is: for an individual to act in either capacity by changing his consideration on the subject of randomness itself. In other words, retain or attain liberty of increasing or decreasing tolerance on motion at will. You can look at two horses on the street and say, "That's too many," or look at a morning in space opera and say, "That's too slow," with no difficulty whatsoever. Or you can say that the morning in space opera was too fast and the two horses on the street were not enough. You could do anything you wanted on it. That would be a state of health regarding tolerance level of randomness. But where an individual has lost his ability to vary his considerations of confusion and motionlessness,

which is to say, his plus and minus randomness, he has lost his ability to have a game, and will then find himself being put out of games which do not fit his fixed opinion. Therefore he has limited himself in the number of games into which he can enter. As an individual can shift his consideration of randomness, so he can play large numbers of games. And as his consideration on the subject of randomness becomes more and more fixed, so that there is just a certain amount of motion he can tolerate, just a certain amount of motion that he can't tolerate, when he's fixed right there somewhere on the scale between total confusion and total motionlessness, and that's IT, he has to find a game which fits that idea of a game, his idea of an optimum randomness. What, then, is a game? A game is an optimum randomness. That is a satisfactory game—optimum randomness. What is an end-of-game? Un-optimum randomness—without regard to whether it is plus or minus, too fast for him or too slow for him. That's just both sides of a fixed consideration.

An individual's ability to LIVE, then, will to a marked degree depend upon his ability to shift his consideration of what is confusion, what is motionlessness. And if he can't shift this opinion—he is sunk.

The organization or the person which tells the individual to conform to the environment, tells him to FIX his opinion of randomness to that environment, has asked that individual to die the moment the randomness factor alters in the environment. It's asked him to run out of games.

Another factor enters into this which is the saving grace, and that is, the emergency factor or the NECESSITY LEVEL. A necessity level is a sudden increase of randomness to a sufficiency that the individual makes a momentary adjustment to it—in other words, momentarily increases his tolerance for unexpected motion. The unexpected motion there is so great that it puts him into a higher level of motion and he takes care of it. That is necessity level—it is the randomness itself driving the person. When the randomness kicks the person, he knows he must move.

But necessity level only occurs where the individual is in a total stimulus-response condition with the randomness itself. And it is nothing to count upon at all. Give them that much more motion and people are just as likely to stay fixed as to go faster.

Create TOO MUCH randomness TOO FAST, and people WILL stay fixed. They will not react on a necessity level at all.

Unfortunately there is no such thing as a “non-necessity level” or a “non emergency level,” where things suddenly move too slow for the individual. We don't have any mechanism to take care of that.

So people try to build up their tolerance for speed by going faster and faster and faster, and they think they then can go faster and faster and faster, and they never drop back toward tolerance of motionlessness. It's actually more important in this time and place to adjust people's ideas of motionlessness and the tolerance of motionlessness than the tolerance for speed. There are very many ways you could do this—you could have a person SIT motionless for a very long time, but he usually can't tolerate that. It exceeds his tolerances instead of building his tolerances on a gradient scale. Certain processes have done this to some extent for quite a while now, to considerable benefit.

One way you could do this is have the preclar say things are going fast when they are practically standing still, and then he tolerates them easily, but actually he's gotten around it, hasn't tolerated any motionlessness, he has simply tolerated his new consideration.

The auditor has a great deal to do with this today. He can actually produce plus and minus randomness in the individual at will. He can stuff the individual full, one way or the other, of stable data. And that produces for the individual to some degree, minus randomness. He can pull some stable data out of the reactive banks, and he will at once produce plus randomness. He

can thus alter his reaction to motion, his randomness, by handling DATA. But remember, this is a low order of thing compared to changing the CONSIDERATION of a person.

Now, as an auditor, you have to know that you can add to or subtract from the data of an individual, and thereby give him plus or minus randomness. Remember, though, that he would only get a plus or minus randomness if he had a fixed consideration on the situation. But you have to know this business about putting in and pulling out stable data and producing randomness because it explains THE VARIOUS REACTIONS OF THE PRECLEAR TO AUDITING. He's learning more, the world's getting more and more even, more and more stable to him, more real, and all of a sudden he adjusts by giving up a stable datum (which you very often misname a consideration). Here he is, getting more data, and his attitude, his consideration of randomness is FIXED. So as you give him more data and he spots more things and he gets more stable data all around, why, he simply gives up some of his old data; you haven't actually changed his randomness. If you're doing a smooth job of A-R-C, you're gradually upgrading him to a higher tolerance of everything. One of the ways he will adjust it is to suddenly spit out some old, aberrated datum. That is a stable datum. You have simply moved in one stable datum and moved out one stable datum. The point of this is, you have to change his consideration of speed, that's all. You have to change his ABILITY to change his consideration of speed.

AUTOMATICITY

All right, what, then, is this thing called AUTOMATICITY? If automaticity is related to randomness, which it is, then IT would have a lot to do with consideration, too, wouldn't it? Automaticity means: non self-determined action which ought to be determined by the individual. The individual ought to be determining an action and he is not determining it. That's a pretty broad consideration. It's something not under the control of the individual. But if we said, something not under the control of the individual, as a total, unqualified definition of automaticity, we would have this, then: That car that just went down the street would be an automaticity to you. You didn't have control of it. So this is not a precision definition. The precision definition has "which ought to be under the control of the individual."

An individual will tolerate within himself so much random action of the materials which he ought to be controlling. For instance, you, if you are a fairly good driver, would have no difficulty, when you were starting your car in the morning, in tolerating the fact that it killed a couple of times before you got it going. So the sudden stopping of the motor was not really an automaticity to you. There is an expectedness in it. Or let's take an unexpectedness—you shifted the gears and didn't quite get it in gear—if your tolerance of randomness was good, if your ability to change considerations was good, you'd flip the gear in, and then it didn't quite go in again and you had to make a second pass at it. That's an UNexpected motion. It's still not really an automaticity, except in the severest definition of the word. Something has occurred which you should have controlled but didn't.

Now, we see automaticity and use the word mainly in connection with just this: motion in the bank—facsimiles in motion around one—under the control or not under the control of the individual.

Many an individual will get all kinds of fast motions in the bank—pictures, action, machinery, etc., and not even consider it vaguely random "That's all right," he says. But they should be controlling it—it ought to be doing what they say. Well, from their opinion, it IS.

This other fellow, a fellow with a different consideration of randomness, gets one picture shifting an inch to the right unexpectedly—"There's an automaticity going on here," he says.

Another fellow has a machine; he tells it to mock up dogs, so it mocks up blue dogs, pink dogs, and then moves over to the other side and mocks up green dogs, purple dogs, and then mocks up from the back dogs with hats on, dogs with canes, dogs with heavy fur, dogs with light fur, dogs with five feet, dogs with two feet—"Ho hum—life's running as usual"

When the preclear says to you that there's an awful lot of action in the bank, that means that he considers that the action in the bank which he is confronting is an awful lot. It doesn't tell you how much action YOU would say there is in the bank. So it's the PRECLEAR'S consideration and opinion that makes an automaticity. Not yours. It's the amount of randomness which he ought to be controlling but which he isn't controlling, and that depends upon the amount of randomness which he can tolerate. And if he can tolerate a tremendous amount of randomness, plus or minus, then nothing looks random to him at all. And the funny part of it is—he can control it, too. And where these two things join at the crossroads you've got control of phenomena in the bank. If an individual can tolerate it he can control it.

If he can't tolerate it, he can't control it and that's all there is to it.

I hope you have some better understanding of these two words and what we are doing today in auditing. The relation of Stable Datum to confusion is actually the relation of the stable datum to randomness. You have to have a clear understanding of randomness before you enter in upon that in teaching Scientology, auditing preclears and in developing your own understanding of the material of Scientology.

HUBBARD COMMUNICATIONS OFFICE

HCO BULLETIN OF 26 OCTOBER 1956

HPA-HCA TRAINING PROCESSES

The following training processes are recommended as necessary to the education of an HPA or HCA student, from the moment of his enrollment until his graduation. It does not particularly matter whether the HPA or HCA has been indoctrinated in the “very latest techniques”, but it does matter that he is able to run the following. If he can do this, then he can carry on with almost any other technique.

1. **CONFRONT A PRECLEAR.** This is done by the Indoctrination Course. The student is taught how to handle communication with the preclear by dummy sessions and demonstrations by the instructor. Confirm and grind in auditor-preclear relationship and Rudiments—“Look at me. Who am I?” and the reality scale.

2. **ARC STRAIGHTWIRE.** This is run as the first process audited by the student on a fellow student, after leaving the Indoctrination Course. The barest elements of ARC straightwire are used, and then the therapeutic technique is undertaken, on the basis of “Tell me something you wouldn’t mind forgetting”. The basis of this process is to give the student subjective reality on the time track of human beings, and to demonstrate that people slide back into the past and up toward present time as they remember various items, which phenomena should be pointed out and observed by the student.

3. **SUBJECTIVE HAVINGNESS.** This should be run both to give the student reality on the bank of the human being, and upon havingness itself. If the case being audited on subjective havingness is a black case, then the student is required to have the preclear mock up a blackness or black objects in the blackness and remedy the havingness with those, regardless of any dope-off, until the individual has a clear field or can go on to some other process.

4. **8-C (a), (b), (c),** with emphasis on (a) and instruction with regard to the preclear’s ability to handle decisions. This is the first walk-about process, and is vital in the training of a Scientologist.

5. **OPENING PROCEDURE BY DUPLICATION,** old style. The “not-know” version could be run, but is a little complicated.

6. **OVER AND UNDER ON THE BANK** in making things solid.

7. **KEEPING THINGS FROM GOING AWAY,** in terms of small alternate objects, with concentration on the fact that this is a havingness process, and also holds things still.

8. **TERRIBLE TRIO.** Both sides, the “can have” for the preclear, the “can’t have” for the preclear’s enemies.

Training should be completed with a very fast review of the more recent processes, and giving these into the student’s hands, not as something in which he has been trained but as something that he can use as fast as he attains reality upon them.

Of the above list, the first six are the most important, from the standpoint of training.

Throughout training, the student should be carefully monitored as to his ability to communicate with his preclear. Auditing procedure should not be neglected, from the moment of entrance into Indoctrination until graduation, since it is style of auditing we wish to achieve rather than teaching of processes.

When the student is taught data, he should be given a high power of choice over the data in which he is instructed, but he should be instructed in such a way that he can achieve the reality of the data, since it is true and factual.

FACSIMILES & SOLIDS

Edited from L. Ron Hubbard's August 1956 HPA/HPC tape lectures

For material about facsimiles, the best is in *Dianetics: The Modern Science of Mental Health*, American edition.

More recent processes turn up all the phenomena of facsimiles, engrams, locks, secondaries, etc., so it is vitally necessary that this material is well known.

A facsimile is an energy picture made by a thetan or the body's machinery of the physical universe environment. It is like a photograph. It is made of mental energy. *It means copy of the physical universe.*

On the track facsimiles have been corrupted. It became a picture which may be a facsimile but isn't. It would run and look like a facsimile, but is a picture of something which didn't really happen. Automatic mock-up is a better description. It is changed from the physical universe.

For example: A man walks down the street and sees a girl. He has a picture of the girl. As he walks down the street his machinery gets to work and he then has a picture of a bedroom. He never saw her in the bedroom, but on a delusory basis he puts her into one.

If he is totally sane there is no liability to this. Those pictures are not aberrative unless the preclear is way down scale, when he will start mourning over this girl he only saw once in the street. He has failed to differentiate between his facsimile and mock-

Delusion and hallucination come under the heading of this alteration of the physical universe facsimile.

This delusory picture is called "dub-in"—a term taken from the movie world.

Next is the plain mock-up, which you know is only a mock-up and not a facsimile or a dub-in.

The auditor's error in the past was failing to recognize facsimiles as facsimiles and too often calling them dub-ins.

A source of dub-in is "Somebody told you," and if a person is in a wrong valence he gets pictures of things this valence has told him—e.g., preclear is in mother's universe, and she has

told him all about how horrible father is. One day he looks through his bank and finds pictures of father beating mother, a thing which never really happened.

Mother said so and this contains mother's mock-ups which are dub-ins.

The only worrisome source of dub-ins is, being in the wrong valence.

One makes them up out of remarks which are dub-ins, and these we call SYNTHETICS.

Split universes and the preclear finds his own facsimiles, which are sometimes quite startling to him.

Don't make the mistake of calling a real facsimile a dub-in and refusing to process it. No matter where it comes from, whether dub-in or facsimile, this is handled by mock-ups and you don't have to differentiate.

Remember not to ignore the whole track phenomena—which are facts. Don't assault facts of this nature unless you want to make a game out of it, and when you do so, be aware that you are doing it.

In modern living the foremost reason of the failure of modern psychotherapy is that they never believed what the patient was saying and never understood what was happening. The preclear told them about prenatals, etc., and was invalidated when he wasn't believed.

In the genetic entity's bank are such things as the *sperm sequence*, *ovum sequence* and the *sperm-ovum sequence*, and they are three separate lines of engrams.

Furthermore, on the sperm sequence we can move back on the GE line to father and often find the wrong father.

As we come forward we find the development of the preclear's body in the womb (gestation) with pictures along the line. These pictures have black visio or they have a dub-in which was made out of pictures which were heard by the child and then the child dubbed in the environment but the actual visio is black. It is dark and noisy in the womb.

You may run into a vacuum which compares to a super-cold piece of metal, which when contacted by the thetan pulls in the entirety of his bank.

Afterwards, when trying to remedy his havingness, you have him sitting in the middle of the vacuum. Of course, this *picture* of a super-cold object is still behaving like a super-cold object. This accounts for the way people get stuck in space opera. They were in space suits out in space and got shot. As long as they were warm they were okay, but the moment they touched a super-cold object, their bank rushed in and they were brainwashed.

The prenatal area is black and a vacuum is so confusing that the blackness is the total answer a thetan can give to it. He covers all that up with blackness.

So one has two types of blackness here.

A third type of blackness is when a man walks in the dark, stumbles over something and gets an engram—which is totally black. One gets accustomed to these various kinds of facsimiles. It is not necessary to go into them. The main point is that they ARE there and must be handled.

The heart of some of all consequences in living, guilt, conscience, various conflicts are contained in the electronic phenomena of the bank—facsimiles, dub-ins and mockups.

This bank is the apparently unalterable pattern of behavior.

In order to change about the behavior of body and facsimiles, it is necessary to change the thetan. It is necessary to change the bank.

There are three types of bank:

1. The Somatic Bank,
2. The Analytical Bank, and
3. The Reactive Bank.

You know the analytical bank is there but not that the reactive bank is there. It sneaks up on you and one day the sperm sequence restimulates you and you start to wiggle—that a small picture like that will make a whole body wiggle is but a matter of consideration.

Remember all these are considerations.

A facsimile could influence the whole body or just one part of it.

The preclear accepts the analytical bank but is surprised to find reactive pictures, such as prenatales, past lives, etc., turning up while he is being audited.

These pictures were primarily created to have an effect on somebody else. When they ceased to have an effect on somebody else, they began to have an effect on the preclear's body. Therefore they survive. The definition of survival is "no-effect." A game will continue as long as there is no absolute effect occurring. An action will occur until the end of the action cycle, which is start-change-stop.

The thetan uses pictures to handle and control the body. The "facsimiles under the preclear's control" is a wonderful piece of machinery, and out of his control, a nightmare. He gets aberrated.

A facsimile contains all perceptions (about 54 or more; I stopped counting at 54), e.g., joint positions, body motion, perception of heat, small motion, photons (visio). Touch, smell, sight and sound actually have to be handled sooner or later if you are handling any facsimiles.

Facsimiles were first designed to have an effect upon somebody else. To a thetan his body is somebody else, so while he is having an effect on the body, he is still having a win.

Because there have been other facsimiles on the GE line, his stimulus does very often not get the exact response on the body. It gets some other response and introduces an unknown element.

The thetan thinks he is just handling one bank—he is actually handling thousands of banks that have been there before him. There are not other thetans in the body. The facsimiles are just the residue of other thetans in the bank. These are the facsimiles and reactions made by other thetans in the bank and this is often a very spooky thing.

When a thetan runs into this amount of unknownness—he wants the body to jump and it lies down to sleep—he is apt to get puzzled.

Life is a contest of trying to get a body or other bodies to do the various stimulus-response mechanisms.

We need sound to handle the bank. We say something and something restimulates. All kinds of meanings and significances creep into this bank and people can get stuck on certain phrases in these banks, and it is wonderful how a certain phrase can aberrate a single life. (Refer to: *Dianetics: The Modern Science of Mental Health*.)

There is no doubt about this bank being powerful and formidable, but so is our ability today to handle it.

THE AUDITING OF SOLIDS

Edited from L. Ron Hubbard's August 1956 HPA/HPC tape lectures

Auditing could boil down to one process—that is, if the preclear is capable of doing it. Also, most importantly, if the auditor, if he has been recently indoctrinated, has established the rudiments, has the preclear well in the session and can handle any randomities that occur. In other words, this process takes the whole of Scientology into account.

That process is called SOLIDS.

The way to run Solids is:

Find the principal stop point on the track, the principal vacuum or something you think might have been. Failing that you just arbitrarily pick an age somewhere in the middle—an incident after which the preclear says he became different to what he was before.

Before giving the command, explain to him the proper meaning of the word “facsimile.” Don't use the words “incident” or “pictures.”

Then you say, “**Can you find a facsimile later than the incident?**”—you mean the vacuum.

He finds one later and when he does you tell him, “**Make it solid.**” If the preclear is being pedantic give this command: “**Make it more solid than you first perceived it.**”

Making it a little more solid than it was is sufficient. The preclear will at first be using effort, but after a while he will be working by postulate.

Keep running this until the facsimile flicker-flacks and changes, and then take the preclear off it. Don't let the preclear communicate too much.

(Incidentally, don't have the preclear forget to make the invisible particles in the facsimile more solid as well, otherwise they will eventually build up a ridge to which the other facsimiles, as he finds them, will stick. Making the invisible particles solid will obviate that.

If the preclear doesn't understand what you mean by making the invisible particles more solid, ask him to open his eyes and look at the wall. Then ask him to make the particles between him and the wall more solid. He will then understand what you mean by invisible particles.)

Then you say, **“Can you find a facsimile earlier than the incident?”**

He finds one earlier than the incident and you say, **“Make it solid.”** After a while the automaticity of the facsimile disappearing or changing will wear off.

The preclear will not only make the picture more solid, he will stop it dead in its tracks. It won't blow unless you introduce this other command: **“All right, dispose of that.”**

“Now can you find one later than (the age)?” “All right, make it solid.” “Okay, dispose of that.”

Keep him out of engrams because we are not running anything out. We are increasing and improving his ability. **WE ARE RUNNING SOMETHING IN.**

You are having your preclear, who has no mass, motion or space, confront something which has, and he cannot duplicate it, nor it him. And you are coaxing him into the understanding that he can.

You are trying to make the preclear capable of making things more solid.

You are *not* trying to undo vacuums, engrams or operations.

You are trying to show him that he can handle a facsimile and make it solid.

See that the preclear does not directly address an engram or vacuum or a difficulty. Also don't upset his power of choice by telling him not to do it. Steer his attention off it. Tell him he can find a facsimile earlier or later than that.

Don't get sloppy as an auditor. It's a tough process. Use and maintain good 8-C to make sure that the preclear is always following directions. Make sure he does. Keep him at it and see that he executes the commands as given, for if he makes things solid before you ask him to, he may take the road which contains a lot of dynamite, such as touching a vacuum.

The preclear is not bright while he is being audited because his bank is too fascinating to him.

Keep him running the process and your preclear will suddenly realize what his conflicts with the environment are. These conflicts with the environment with which he is engaged are the real conflicts of life. Gradually his perceptics will turn on, **BUT ONLY WHEN SOME EMOTION HAS TURNED ON.** It's because you are running the band above solids.

It isn't an end-all process because there are other things above solids and effort.

It has an extroverted side which is better than the old Trio—i.e.:

“Look around the room and find something you can have,” “Look around the room and find something you can permit to remain,” and “Look around the room and find something you can dispense with.”

This process runs this way: **“Look around the room and find something you wouldn't mind being solid.”**

He finds something and you say, **“Good. Make it *more* solid.”** If you said, **“Make it solid”** you would be invalidating him.

The preclear will say that the walls are getting very solid, too solid, for his comfort, because he has probably been taught in physics class that walls are composed of small particles

with holes in them—which isn't true. Solids shed small particles, but that does not mean that a solid is made up of small particles.

Making something solid later or earlier in this lifetime only, is the limitation of this process.

After this his track starts coming in. As he makes things solid, the havingness starts filling the vacuum areas.

Don't run vacuum areas by making them solid or you'll sit in that auditing chair for a pretty long time.

The preclear will start picking up losses. Everything he picks up and makes solid is a loss, which is the first and foremost reason why he made facsimiles in the first place. They are substitutions for loss and that is the explanation of the phenomenon of sublimation.

He will keep on talking about the loss of possessions, marital partners and familial connections. This does not violate game conditions because he is running losses of things and times he lost and because you are not auditing the losses, you are auditing the pictures. As long as you are auditing the pictures you have got the primary game still going.

Don't have the preclear make incidents solid. Only have him make facsimiles of the incident solid, otherwise he will be feeling terrible. The thetan's game is to make nothing out of a facsimile, which is a no-game condition. He is going toward the truth, and by making the facsimile solid, you are going towards making a game.

When running solids subjectively, the preclear will start getting things way up the track when you ask him to find a facsimile earlier than the incident. You don't care about the incident. You want to know where the incident is so you don't run into it.

The values of running before and after facsimiles by making them solid, and auditing directly towards the reduction of a vacuum, are not comparable. If you try to take something out of the bank, you will lose.

If you try to ADD something to the bank you will win.

Why don't we just run S-C-S and blow the preclear out of his head and stabilize him through some exteriorization drills? Because we want to get the preclear to make things in his head more solid. Otherwise for the rest of his career in this universe, he will be leary on heads. The only thing that is wrong with any preclear who is stuck in the head is that he cannot handle the stuff that is there.

This process is the best to date and it takes a long time to run, but for the amount of ability it regains in the case it is the fastest process we have.

This process belongs to "EFFORT" on the Know-to-Mystery Scale.

L. RON HUBBARD

HCO TRAINING BULLETIN

30 November, 1956

SLP 8

1. Getting into communication with your preclear.
 - A. Mimicry (psycho rushes around in the middle of the room and jumps up and screams; and you rush around in the middle of the room and jump up and scream).
 - B. Touching the preclear (on locational or any other process where you walk the preclear around, you are in communication with him to the degree that you touch him). Gradient scale, touching him on the elbow, taking hold of his elbow, and eventually making his body turn this way and that.

Commands: "Look at me. Who am I?" "Who does this hand belong to?" (Auditor indicating own hand, or various parts of his body, being sure to maintain some physical contact with preclears below 2. 0 on tone scale, where communication is solid).

2. Havingness, subjective. (This is just a patch-up of havingness so that if the preclear caves in you have something to fish him out with, which he has been conditioned to.) "Mock up a" "Push it into the body."
3. Part A of 8-C. "Do you see that" (auditor indicates wall or object), "Walk over to it." "Touch it." "Let go of it."
4. Control Process, tactile 8-Cb. "Look around the room and find something you wouldn't mind having," or ".....could have." "Walk over to it and feel it."
5. Start-C-S. (Don't run any part of it very long.) "When I say start, you start the body," or ".....the (object)." "Start." "When I say change, you change the (body or object) from.....to....." (locations designated by auditor). "Change." "When I say stop, you stop the (body or object)." "Stop."
6. Keep it from Going Away. "Find some objects in the room you don't dislike." (Have him spot quite a few, maybe 20. You select out of these three you are sure are non-significant to this preclear. Have him go and get them and place them some distance apart—at least three feet between object 1 and object 3—and not directly in front of him; two objects on one side, one way off side, the other slightly off side, and one way off the other side.)
 - A. "Look at" " (auditor mentions object 1).
"Pick it up."
"Keep it from going away" ("Now you keep it from going away" is the insistent version and he must be doing it. Check to see that he is doing it.)
"Put it back in exactly the same place." (Command agreed upon beforehand so that he isn't surprised by this.)
"Look at(object 2)," then repeat above commands.
"Look at(object 3)," then repeat above commands.
 - B. "Look at(object 1)."
"Pick it up."
"Keep it from going away."
"Put it back in exactly the same place."
"Leave it totally uncontrolled."
"Look at(object 2)," then repeat above commands.
"Look at(object 3)," then repeat above commands.

Part A is run several times before running part B.

7. Keep it from going away on the body. (Everything you run on the right foot you run on the left foot, everything you run on the right ear you run on the left ear, everything you run on the head you run on the feet, etc.)
 “Keep your hand from going away.”
 “Now make it flip-flop.”
 “Keep it from going away.” “Now make it flip-flop.”
8. Keep it from going away, by sight.
9. Connectedness.
 “Look around and find something you wouldn’t mind making connect with you.” “On how many vias could you make it connect?”
10. Handling of confusion. “Make the wall say to (preclear, his body, part of his body, etc), ‘This means go to ..’ “ (Preclear furnishes the name, a different name each time, for each of the six sides of the room.) Then, “Make the wall say to (as above), ‘This means don’t go to ..’ “ (As above.) Alternate, once around the six sides of the room on “This means go to ..”, then on “ don’t go to ..” until fairly flat.

 Then, “This means stay in.....”, “This means don’t stay in.....” (run as above).
11. “Confuse that wall.”
12. Causing confusions.
 “A confusion which you could cause.” “Mock up a confusion.”
13. Stop-C-S.
 - A. “Now, I’m going to give you a little process—a little drill that we have here in Scientology. First, I want you to get your body moving toward that wall over there and somewhere along the line I’ll say ‘stop’, and I want you to stop your body. Got that? All right.” “Now get it moving.” “Stop.” “That’s fine. “
 “All right, now turn around here” (taking him by the elbow). “Now, we’re going to run a little process. I’m going to ask you to get your body moving toward that wall and somewhere along the line I’m going to say ‘stop’, and when I say stop, I want you to stop your body.”
 Repeat above commands.
 “.....stop your body absolutely still.”
 “.....stop your body absolutely still and do it as quickly after I say ‘stop’ as you possibly can.”
 - B. “When I ask you to change your body, I want you to change the body’s position from a to b.” (Locations designated by auditor.) “Let’s see how rapidly you can change the body’s position.”
 - C. “When I say ‘start’, I want you to start the body moving.” “Start.”
14. Tolerance of motion and stillness. Preclear sitting at a window, or ambulatory.
 “Look at the street.” “Now find something still.” “Now find something in motion.” “Find something still.” “Find something in motion.”
15. “With what could you ally your control,” or “Invent a way to control people,” or “Look around and find something that would assist you in controlling people.”
16. Over and Under solids. Have him pick the centre of his life, an engram in the middle of his life; the commands are before and after this point.
 “Get a facsimile of something after that.”
 “Keep it from going away.”
 “Leave it totally uncontrolled.”

“Get a facsimile of something before that.”
“Keep it from going away.”
“Leave it totally uncontrolled.”

or “Make it solid,” “Let go of it.”
or “Make it solid,” “Skip it.”

17. Time Process. Select command wording to communicate to the preclear. “Invent a way to (best, overcome, overwhelm, beat, whip, make subservient, put in the background, make know it’s been licked) time.”
18. Valences.
“Mock up a woman,” then, “Mock up.....” (first significant woman in this lifetime, then a later one, etc).
“Mock up a man,” then as above.
“Mock up a .. .” (robot, or any other valence spotted).
19. “Invent an individuality to cope with it,” alternate with “Invent a worse situation.”
20. “Invent an enemy.” Get the valence to fight the wall will strip valences.
21. Keep it from going away on the body. “Keep your body from going away,” alternate with “Leave it totally uncontrolled” (safest in mock-up form), or, “Now make it flip-flop.”
22. Mock-up Start-C-S. Start-C-S on mocked up body.
23. Mock-up Stop-C-S. Stop-C-S on mocked up body. Change run as, “Mock up the body.”
“Make it flip-flop.”
24. Rehabilitation of abilities. For any ability the preclear always wanted to have and couldn’t do. For example, for speaking Arabic:

“Mock up” (Arabic objects), “Keep it from going away,” then “Mock up (Arab men, women and children),” “Keep (him, her) from going away,” then “Mock up (Arab men, women, children),” “Stop (him, her) from talking,” “Start (him, her) talking.”

GAMES CONDITIONS THEORY

Prepared from the research papers of L. Ron Hubbard

THEORY: The most adequate answer to life's puzzle is GAMES. The ordinary concept of games or play is comprehensible to anyone.

Games have many factors. Some work well in processing, some don't, all explain life.

The basic game of a thetan is evidently *nothing versus something* as in the process "Make it solid." He can never really be something, thus can never really duplicate himself a solid—yet he makes solids across spaces out of game impulse.

PRACTICE: Always process toward a games condition. Never process toward a no-games condition. Always process games conditions. Never process no-games conditions. This is more complicated than you think.

All games are aberrative. All games are continuing by definition, since an unstarted game isn't a game and a finished game isn't a game.

In the following list we have the most processable games conditions and the most-to-be-avoided no-games conditions.

Each column of the list could be KNOWING or UNKNOWING—"knowing games condition" or "unknowing games condition," "knowing no-games condition" or "unknowing no-games condition."

Using both lists at a knowing games level, we have sanity. At an unknowing games level we have aberration, neurosis or psychosis.

GAMES CONDITION
(Knowing or Unknowing)

NO-GAMES CONDITION
(Knowing or Unknowing)

Not-know

Know

Forget

Remember

Interest

Disinterest

Attention

No attention

Self-Determinism

Pan-Determinism

| | |
|------------------------------|--------------------------|
| Identity | Namelessness |
| Individuality | |
| Problems | Solutions |
| Can't Have | Have |
| (games have some havingness) | |
| Alive | Neither alive nor dead |
| Opponents | Friends alone |
| Facsimiles | No pictures or universes |
| Continued Solidity | No spaces or solids |
| Continued adherence | No friends or enemies |
| Loyalty, Disloyalty | |
| Betrayal, Help | |
| Motion | No motion |
| Emotion | Serenity |
| Continued action | Motionless |
| Hot, cold | No temperature |
| Thinking | Knowing |
| Hate | |
| (some Love) | |
| Continued doubt of result | Win-Lose |
| (Expecting a Revelation) | |
| No effect on self | Effect on self |
| Effect on others | No effect on others |
| Stop communication | No ARC |
| Change communication | No no-ARC |
| Into it | Out of it |
| Agitation | Calm |
| Noise | Silence |
| (some Silence) | |
| Control | No control |
| Start-Change-Stop | |
| (Change the most important) | |
| Responsibility | No responsibility |

Inspecting these two lists we find all unlimited and highly workable processes under GAMES CONDITIONS. We find all *limited* and unworkable processes under No-Games Conditions.

We process the preclear playing as a game in all phases. We then avoid No-Games Conditions in processing.

It is true that the Games Condition List contains a regimen unworkable in life. It isn't supposed to be. It's aberrative and we process it.

The ONLY certain processes which can be run on No-Games Conditions are **Consequences (the penalty resulting from) and "Mock up a confusion to which (the no-games condition) could be a stable datum."**

Now behold that the list of No-Games Conditions is a summary of the NATIVE STATE of a thetan. That means that the Native State not only does not process but winds the preclear up in difficulties if processed.

To establish the native state run out the UNKNOWING GAMES CONDITIONS of the preclear.

From native state a thetan apparently descends thusly:

| | | |
|---------------------|---------------------|-------------------------------------|
| NATIVE STATE | SERENITY | KNOWING, NO-GAMES |
| TO | TO | TO |
| OPERATING THETAN | TONE SCALE | KNOWING GAMES CONDITIONS |
| TO | TO | TO |
| BODIES | ANTAGONISM | UNKNOWING GAMES CONDITIONS |
| TO | TO | TO |
| REACTIVE BANKS | MINUS TONE SCALE | UNKNOWING NO-GAMES CONDITIONS |

Processing, however, does not take the exact reverse route. Operating at a level of knowing games conditions, auditing converts the unknowing games and no-games conditions of the preclear into knowing games conditions and into further knowing games conditions. A further goal of auditing may very well be the attainment of no-game. It would be a knowing no-game, however, not an unknowing, and it would not be actually a condition.

Bad condition of case would be unknowing condition concerning games. Good condition is knowing games condition. No condition would be native state.

HCO BULLETIN OF 3 DECEMBER 1956

Training, London—Washington

B.SCN.—H.A.A. TECHNIQUES

Procedure emphasis:

Communication (Mimicry, Learning)
Control (Absolute versions)

Commands:

All commands used in actual session are to be Havingness Scale commands, used with the above procedures.

The Havingness Scale is as follows:

Create
Contribute to
Confront
Have
Substitute
Waste
Substituted
Had
Confronted
Contributed to
Created

The rule of the Havingness Scale is that the auditor clears the preclear at any level by running the level just above it.

The techniques are objective with such form as “Look around - - -”.

The techniques consist of any command which gives one objective and one subjective target, or two objective targets.

Pay full attention to game condition.

A CASE REPORT

**COMMENTS AND INFORMATION ON BACK OF
APA SHEET**

Auditor: L. Ron Hubbard, Jr.

| FIRST TEST | | AFTER 25 HOURS | |
|-------------------|-----|-----------------------|-----|
| Non-Lang. | 99 | Non-Lang. | 96 |
| Lang. | 117 | Lang. | 153 |
| Total IQ | 110 | Total IQ | 124 |

Pc happy—wishes he'd had Nibs for the 3 weeks. Looks alive now.
(Dr. Julia Lewis, Director of Processing)

This is very smart, clever auditing. Auditor sees case, sets goal, diagnoses and resolves!
We've got a real auditor here! On (pc), too! Wow! (LRH)

AUDITOR'S DAILY REPORT

Monday.

Pc has had about 800 hours of processing with very little results. He has given auditors a hard time in the past. He won't give me one.

I ran, today, all day, Rudiments by Control. Pc started to come off a lot of machines and started to follow my orders happily.

I am only going to try to fix up his present time problems and get him into present time.
He seems to be badly stuck in some whopper of an engram.

(Vacuum *full* of engrams. LRH)

Tuesday.

Ran pc on 8-C, part A, this morning, and, as I'd done yesterday, established the session with Rudiments by Control. Pc will now follow my directions and is in session. He stopped altering the commands. He is a pc now.

Ran him today using Dianetics, Book One, techniques with the new added command, "**Make it more solid**" using a gradient scale. The engram I ran him through is an electrocution deal where he stepped on a third rail when he was a young boy. His track is caved in on it and there he is. Stuck. It started to unwind.

(That's it ! The grouper. LRH)

Pull him out of this and he will be steamboating. Terrible Trio and other processes have no effect on him. Like water on a duck. Or like trying to destroy a pillbox with a beanshooter.

In this engram his body died and he went to a report station. He goes around in Serenity of Death.

(Right! LRH)

Wednesday.

Holiday.

Thursday.

Ran pc all day today on the same engram in the same manner as on Tuesday. This is slowly unraveling and, as it is running out his tone comes up.

He almost dropped his accent at one time during the session (he didn't learn English until he was seven years old). He popped in and out of the engram several times. And because of this engram he has had no reality on his body with his eyes closed since he was twelve years old. He is now aware of his body with his eyes closed.

Pc is coming up the line. Lots of cognitions. If I have time, I want to run universes.

(So true! Effect you could have on steel, rails, would have helped here maybe. Things rails can't have. LRH)

Friday.

Ran pc on same engram again today in the same manner as yesterday. It is all out except the one moment of jolt he received as he stepped on the third rail. The tremendous impact and electrical charge is frozen in space and time. Ran it a bit more in the afternoon session and found that his havingness was too low to let go of all this energy. So I ran Terrible Trio and it worked very well. He found that he was having the facsimile of the object instead of the object itself. Now he is having the object. At least now he can remedy his havingness.

(Excellent ! LRH)

Saturday.

Ran pc on Terrible Trio and Service Facsimile using the commands "**What could it get you into?**" "**What could it get you out of?**"

Pc cognited on Service Facsimile and it broke away and moved out. Pc ran Terrible Trio very, very well. Pc felt much better at the end of his intensive. He was satisfied. So was I.

Pc is now ready to run Terrible Trio and Mother's and Father's universes with good reality and benefit. Before, it wouldn't have worked as well. So, next auditor, run them !

GENERAL COMMENTS: Pc had never really been in session before and had never been in present time. Pc is a long way from being in good shape and could use a lot of work on havingness and universes.

Chapter One

ON WHAT DOES HOLDING A JOB DEPEND?

On what does holding a job depend?

Familial connections? Who you know? Personal charm? Luck? Education? Industry? Interest? Intelligence? Personal ability?

To one grown old and even somewhat cynical in the world of work, the first several seem to have dominance. Only the young appear to be left with the illusion or delusion that Personal Ability, Intelligence, Interest, Education and Industry have anything to do with it; and the very, very cynical would have us believe that indeed these are only the symptoms of being very young.

We have too often seen the son become the foreman, the new son-in-law, yesterday the shipping clerk, soar to board membership, and we all too often have known that the son and son-in-law not only had no aptitude in the first place but that with no fear of discipline they act more carelessly of the firm than the worst employee present. Familial connection is something dependent upon the accident of birth.

But, leaving familial connection until some other day, what have we left? There is Who You Know. Personal connection plays a dominant part in obtaining, keeping and improving a position, there can be no doubt of this. One has a friend who works for the Jim-Jambo Company; the friend knows of an opening; the friend has other friends and these still other friends and so into the Jim Jambo Company one can settle down and work with some security and hope of rise.

And then there is the matter of personal charm. How often have we seen the young stenographer who couldn't spell "cat" suddenly soar, with her typing fingers still all thumbs, to the post of the executive secretary to the boss, wherein, while she can't spell "cat" any better, she can certainly spell raise and raise again and perhaps even "supper club" or diamond necklace. And we have also seen the young man with a good "front" soar above his elders because he could perhaps tell the right joke or play a slightly worse game of golf.

We have seen, too, the factor of Education all gone awry in firms and governments and the trained man, at how much cost of eyesight become learned beyond credit, yet passed over for some chap who didn't have a degree to his name beyond a certain degree of push. We have seen the untutored madly ordering the millions and the wise advising a score.

Industry as well seems to have scant place to those cynical few of us who have seen it all. The eagerness of the young to slave is all too often braked by the older head who says, "Why get in a sweat about it, young'un? It'll all come out the same." And perhaps we've stayed after hours and daubed ourselves with ink, or lingered at our post beyond all demand of duty, only to watch in times to come the lazy one we scorned draw the better pay. And we've said it isn't justice -- something less than that.

And Interest, too, we've seen come all to naught. When our absorption in the deadly game of firm or unit with its rivals made us lay aside neglected our own wife, or life, and when we've burned the night and leisure time to work out solutions gauged to save our firm, and have sent them in, and have had them come back, neglected, and soon have beheld our fellow worker, whose total interest was a man or stamps and not the firm at all, go up to higher posts, we had some cause to be less interested, we thought. And Interest in our work became condemned by those around us who, not understanding it, became tired of hearing it in our mouths.

Intelligence, against this hard beaten parade of broken illusions, would seem to have no bearing whatever upon our fates. When we see the stupid rule the many, when we see the plans and decisions passed which would have been condemned even by the children of the workers, we wonder what Intelligence could have to do with it. Better to be dumb, we might come to think, than have our own wits continually outraged by the stupidities which pass for company planning.

Personal ability, against this torrent, this confusing chaos of random causes for promotion and better pay, would seem a wasted item. We have seen our own wasted. We have seen the abilities of others scorned. We have seen the unable rise while the able remained neglected or even unemployed. So personal ability would not seem the factor it might once have been to us, small cogwheels in the clashing gears of business fate. It must then certainly be luck and nothing but luck the whole way down.

And so it seems to appear even to an "experienced" eye that the obtaining, the holding, and the improving of a job are all dependent upon a chaos of causes, all of them out of our control. We accept, instead of orderly expectancy, a tumbling mass of accidentals as our fate.

We try a little. We dress well and cleanly in order to apply for a position, we take ourselves to the place of work daily, we shuffle the papers or the boxes or the machinery parts in a fashion we hope will pass, we leave by crowded transport to our homes and expect another day's dull toil.

Occasionally we start up a correspondence course to give us a small edge on our fellows -- and often drop it before it is done: it seems that we cannot even do this little to help us on our way against this flood of accidentals.

We become ill. We run out of sick leave. Still but hardly recovered we now have no job. We become the victims of an accidental cabal or slander and we have no job. We are thrust up against jobs we cannot do and then again we have no job. We grow too old, our time is spent in remembering how fast we once were, and one day we have no job.

The lot of the man in the work-a-day world is Uncertainty. His goal is Security. But only few attain this goal. The rest of us worry from day to day, from year to year, about our ability to get work, hold work, improve our lots. And all too often our worst fears take place. Once we had the rich to look toward and envy, but now the taxes which we bear have reduced, despite their clever accountants, even their number. States and governments rise and promise us all Security and then give us restrictions which make that seem shaky too.

From day to day new threats impose themselves on our consciousness. A world where the machine is king makes Man a cog, and we are told of new developments which do the work of thousands of us and so we starve.

The advertisements thrust at us in our transports, newspapers, streets, radios and TV all manner of things to own. And no matter how delightful they are to own, WE the men who make them can't own them -- not on our pay. And Christmases leave us a little ashamed at how little we can buy and we make the coat do just another year. And the years advance and we grow no younger. And each hour confronts us with the accidents which might make or break our futures. No wonder we believe in luck alone.

Well, there is the problem.

To eat we must have a job. To live we must continue to be acceptable on our jobs. To better ourselves we must hope for the breaks. And it all appears a huge, disheartening confusion composed of accidents, good luck and bad luck, or drudgery with nothing to win at the end of it.

What would you give for something to lift you out of such ruts? Perhaps you are not in them but if not you're one of the lucky ones. Men, to escape these ruts, have perpetrated the bloodiest wars and revolutions of history. Whole dynasties have been cut to the dust in an overpowering convulsion born from despair. Jobs get few. Holding them becomes more and more accidental. At last none can longer stand the strain of insecurity and the answer is raw, red revolution. And does this come to anything? No. Revolution is that act of displacing a tyranny with a tyranny ten times more despotic than the old. Changing governments, not even changing firms can change basic security.

The quest for security is a quest for constancy and peace. A worker deserves these things. He creates the goods. He should have the wherewithal to live. Instead, he has a chaos.

But where is this chaos? Is it in the worker's family? Some say so. Is it in the character of capital? Some say so. Is this chaos born of bad government? Many have said so. Is it in the worker himself? Some would like him to think that.

No, it is not in any of these things. The chaos of insecurity exists in the chaos of data about work and about people. If you have no compasses by which to steer through life, you get lost. So many recent elements -- of the Industrial Age -- have entered into life that life itself needs to be better understood.

Work and security are parts of life. If life is not understood then neither will these parts of life be understood. If all life seems chaotic, a matter of guess and chance, then certainly work will seem chaotic.

But the role of work in existence is a greater role than any other. Some say we spend a third of our lives in bed and therefore beds are important. But we spend more than a third of our lives at work and if we don't work we don't have a bed, so it seems that work is more important by far. If you add up the various parts of life, love or sports or entertainment, you will find that the majority of concentration is not on any of these but upon WORK. Work is the major role of our existences whether we like it or not. If we don't like it we don't like life.

If we find a man a bit insane, old time "ologies" would have had us look up his love-life or his childhood. A newer idea and a better one is to look up his security and conditions of work. As Security goes bad in a nation, insanity rises. If we were to attack national insanity problems and conquer them we wouldn't build better insane asylums -- we would better the conditions of work.

Life is seven-tenths work, one-tenth familial, one-tenth political and one-tenth relaxation. Economics -- the paycheck, struggle for -- is seven-tenths of existence. Lose a man his income or his job and you find him in bad mental condition, usually. If we're going to find proofs of this anywhere, we'll find them everywhere. Worry over security, worry over worth, worries about being able to do things in life for others, are the principal worries of existence. Let's be very simple. People with nothing to do, people without purpose most easily become neurotic or mad. Work, basically, is not a drudgery, it is something to do. The pay-check tells us we are worth something. And of course it buys us what we have to have to live. Or almost does.

All right. Work-security, then, is important. But security itself is an understanding. Insecurity is UNKNOWNNESS. When one is Insecure, he simply doesn't know. He is not sure. Men who KNOW are secure. Men who don't know believe in luck. One is made insecure by not knowing whether or not he is going to be sacked. Thus he worries. And so it is with all insecurity. INSECURITY EXISTS IN THE ABSENCE OF KNOWLEDGE. All security derives from knowledge.

One KNOWS he will be cared for no matter what happens. That is a security. In the absence of certain knowledge it could also be a fallacy. Luck is chance. To depend upon luck is to depend upon not-knowingness.

But in truth how could one have knowledge about life when life itself had not been brought, as knowledge, into order. When the subject of life itself was a chaos, how could work, as a part of life, be anything but a chaos?

If LIVINGNESS is an unknown subject, then WORKINGNESS and all pertaining to work must be an unknown subject, exposed to cynicism, hopelessness and guesses.

To obtain, hold and improve a job, one would have to know the exact, precision rules of life if one were to have a complete security. It would not be enough to know, fairly well, one's job. That would not be a security, for as time went on we would see, as we have listed, too many chances entering into it.

Knowledge of the general underlying rules of life would bring about a security of life. Knowledge of the underlying rules of life would also bring about a security in a job.

Scientology is a science of life. It is the first entirely Western effort to understand life. All earlier efforts came from Asia or Eastern Europe. And they failed. None of them gave greater security. None of them could change human behavior for the better. None of them -- and they bragged about it -- could change human intelligence. Scientology is something new under the sun, but young as it is, it is still the only completely and thoroughly tested and validated science of existence. It doesn't demand twenty years of sitting on spikes to find out one is mortal. It doesn't demand a vast study of rats to know that Man is confused.

Scientology can and does change human behavior for the better. It puts the individual under the control of himself -- where he belongs. Scientology can and does increase human intelligence. By the most exact tests known it has been proven that Scientology can greatly increase intelligence in an individual. And Scientology can do other things. It can reduce reaction time and it can pull the years off one's appearance. But there is no intention here to give a list of all it can do. It is a science of life and it works. It adequately handles the basic rules of life and it brings order into chaos.

A science of life would be, actually, a science of good order. Such things as accidents and luck would, if you could but understand their underlying principles, be under your control.

As we have seen here, even those who aren't cynical can see that many chances enter into obtaining, holding and improving one's job. Some of these chances seem so wide and out of control that nothing at all could be done about them. If we could but reduce the chanciness of a job. If we could make the right friends and be sure that our education would count and have some slight security that our interest and intelligence and native ability would not go all to waste, why then, things would be better, wouldn't they?

Well, we'll see what Scientology can do to reduce the chanciness of the work-a-day world -- for you and for those you know. What's life all about anyway?

Chapter Two

HANDLING THE CONFUSIONS OF THE WORK-A-DAY WORLD

We have seen how one might be led to believe there was something confusing about navigating one's career in the world of work. And confusion there is to one who is not equipped with guides and maps.

Basically, it all seemed very simple, this thing called work, getting a job. One was educated into some skill and one read an ad, or was sent by a friend and was interviewed for a job. And one got it and then reported every day and did the things assigned and as time went on, hoped for a raise in pay. And time going even further on brought one to hope for a pension or a governmental regime that would pay old age benefits. And that was the simple pattern of it.

But times change and simple patterns have a habit of being deranged. The various incidents and accidents of fate entered into the picture. Completely aside from personal factors, larger views alter things. The government in sweeping economy fails to grant adequate pension. The business for which one works is shattered by a time of depression. Or one's health fails inexplicably and one is left on charity.

The worker in his work-a-day world is no towering giant amongst his many foes. The tinsel path sketched so happily by rabble-rousers, the great affection held for the worker by this or that ideology or political figure, do not reflect fact. A man working at a job is faced by difficulties large enough to him, no matter how small they might seem to a successful industrialist. A few percent rise in taxes may mean that he thereafter goes without tobacco. An entrance upon bad times for the business may result in lessened pay, and there may go any and all luxuries and even some necessities, or the job.

The effect of international currents, governments, business trends and markets all usually beyond his concern, the worker is perfectly entitled to believe that his fate is not quite entirely predictable. Indeed, he might even be entitled to be confused.

A man can starve to death in a few days. Few workers have many days of margin in their pockets if the currents change. Thus many things which would be no vast problem to the very secure are watched as menaces by the worker. And these things can become so many that all life seems too confused to be borne and one sinks into an apathy of day-to-day grind, without much hope, trusting that the next storm, by luck, will pass over him.

As one looks at the many factors which might derange his life and undermine his security, the impression is, confusion seems well founded and it can be said with truth that all difficulties are fundamentally confusions. Given enough menace, enough unknown, a man ducks his head and tries to swing through it blindly. He has been overcome by confusions.

Enough unsolved problems add up to a huge confusion. Every now and then, on his job, enough conflicting orders bring the worker into a state of confusion. A modern plant can be so poorly managed that the entire thing appears to be a vast confusion to which no answer is possible.

Luck is the usual answer one resorts to in a confusion. If the forces about one seem too great, one can always "rely on his luck". By luck we mean "destiny not personally guided". When one turns loose of an automobile wheel and hopes the car will stay on the road, by luck, he is often disappointed. And so it is in life. Those things left to chance become less likely to work themselves out. One has seen a friend shutting his eyes to the bill collectors and gritting his teeth while he hopes that he will win at the races and solve all his problems. One has known people who handled their lives this way for years. Indeed, one of Dickens' great characters had the entire philosophy of "waiting for something to turn up". But luck, while we grant that it IS a potent element is only necessary amid a strong current of confusing factors. If one has to

have LUCK to see him through then it follows that one isn't any longer at his own automobile wheel and it follows, too, that one is dealing with a confusion.

A confusion can be defined as any set of factors or circumstances which do not seem to have any immediate solution. More broadly, a confusion in this universe is RANDOM MOTION.

If you were to stand in heavy traffic you would be likely to feel confused by all the motion whizzing around you. If you were to stand in a heavy storm, with leaves and papers flying by, you would be likely to be confused.

Is it possible to actually understand a confusion? Is there any such thing as an "anatomy of confusion"? Yes, there is.

If, as a switchboard operator, you had ten calls hitting your board at once, you might feel confused. But is there any answer to the situation? If as a shop foreman you have three emergencies and an accident all at the same time, you might feel confused. But is there any answer to that?

A confusion is only a confusion so long as ALL particles are in motion. A confusion is only a confusion so long as no factor is clearly defined or understood.

Confusion is the basic cause of stupidity. To the stupid all things except the very simple ones are confused. Thus if one knew the anatomy of confusion, no matter how bright one might be, he would be brighter.

If you have ever had to teach some young aspirant who was not too bright, you will understand this well. You attempt to explain how such-and-so works. You go over it and over it and then you turn him loose and he promptly makes a complete botch of it. He "didn't understand", he "didn't grasp it". You can simplify your understanding of his misunderstanding by saying, very rightly, "he was confused".

Ninety-nine percent of all education fails, when it fails, on the grounds that the student was confused.

And not only in the realm of the job, but in life itself, when failure approaches, it is born, one way or another, from confusion. To learn of machinery or to live life, one has to be able either to stand up to confusion or to take it apart.

We have in Scientology a certain doctrine about confusion. It is called the Doctrine of the Stable Datum.

If you saw a great many pieces of paper whirling about a room they would look confused until you picked out one piece of paper to be the piece of paper by which everything else was in motion. In other words, a confusing motion can be understood by conceiving one thing to be motionless.

In a stream of traffic all would be confusion unless you were to conceive one car to be motionless in relation to the other cars and so to see others in relation to the one.

The switchboard operator receiving ten calls at once solves the confusion by labelling, correctly or incorrectly, one call as the first call to receive her attention. The confusion of ten calls all at once becomes less confusing the moment she singles out one call to be answered. The shop foreman confronted by three emergencies and an accident needs only to elect his FIRST target of attention to start the cycle of bringing about order again.

Until one selects ONE datum, ONE factor, ONE particular in a confusion of particles, the confusion continues. The ONE thing selected and used becomes the STABLE DATUM for the remainder.

Any body of knowledge, more particularly and exactly, is built from ONE DATUM. That is its STABLE DATUM. Invalidate it and the entire body of knowledge falls apart. A stable datum does not have to be the correct one. It is simply the one that keeps things from being in a confusion and on which others are aligned.

Now, in teaching a young aspirant to use a machine, he failed to grasp your directions, if he did, because he lacked a stable datum. ONE FACT had to be brought home to him first. Grasping that, he could grasp others. One is stupid, then, or confused in any confusing situation until he has fully grasped ONE FACT or one item.

Confusions, no matter how big and formidable they may seem, are composed of data or factors or particles. They have pieces. Grasp one piece and locate it thoroughly. Then see how the others function in relation to it and you have steadied the confusion and, relating other things to what you have grasped, you will soon have mastered the confusion in its entirety.

In teaching a boy to run a machine, don't throw a torrent of data at him and then point out his errors; that's confusion to him, that makes him respond stupidly. Find some entrance point to his confusion, ONE DATUM. Tell him, "This is a machine." It may be that all the directions were flung at someone who had no real certainty, no real order of existence. "This is a machine," you say. Then make him sure of it. Make him feel it, fiddle with it, push at it. "This is a machine," tell him. And you'd be surprised how long it may take but you'd be surprised as well how his certainty increases.

Out of all the complexities he must learn to operate it, he must know ONE DATUM first. It is not even important WHICH datum he first learns well beyond that it is better to teach him a SIMPLE BASIC DATUM. You can show him what it does, you can explain to him the final product, you can tell him why HE has been selected to run this machine. BUT you MUST make one basic datum clear to him or else he will be lost in confusion.

Confusion is uncertainty. Confusion is stupidity. Confusion is insecurity. When you think of uncertainty, stupidity and insecurity, think of confusion and you'll have it down pat.

What, then, is Certainty? Lack of confusion. What then is Intelligence? Ability to handle confusion. What then is Security? The ability to go through or around or to bring order to confusion. Certainty, Intelligence and Security are lack of or ability to handle confusion.

How does luck fit into confusion? Luck is the hope that some uncontrolled chance will get one through. Counting on luck is an abandonment of control. That's apathy.

There is GOOD control and BAD control. The difference between them is Certainty and Uncertainty. Good control is certain, positive, predictable. Bad control is uncertain, variable and unpredictable. With good control one can be certain, with bad control one is never certain. A foreman who makes a rule effective today but not tomorrow, who makes George obey but not James, is exercising bad control; in that foreman's wake will come uncertainty and insecurity, no matter what his personal attributes may be.

Because there can be so much uncertain, stupid control, some of us begin to believe that all control is bad. But this is very far from true. Control is necessary if one would bring any order into confusions. One must be able to control things, his body, his thoughts at least to some degree, to do anything whatever.

A confusion could be called an UNCONTROLLED RANDOMNESS. Only those who can exert some control over that randomness can handle confusions. Those who cannot exert control actually breed confusions.

The difference between good and bad control then becomes more obvious. The difference between good and bad here is DEGREE. A thorough positive control can be predicted by others. Therefore it is good control. A non-positive, sloppy control cannot be predicted; therefore it is a bad control. Intention also has something to do with control. Control can be used for constructive purposes or destructive purposes; but you will discover that when destructive purposes are INTENDED, bad control is used.

Thus there is a great deal to this entire subject of CONFUSION. You may find it rather odd for confusion itself to be used here as a target. But you will find that it is an excellent common denominator to all that we consider evil in life. And if one can become master of confusions, his attention is freed for constructive activity. So long as one is being confused by confusions, all he can think about are destructive things -- what he wants to do most is to destroy the confusion.

So let us then learn first how to destroy confusions. And this, we find, is a rather simple thing. When ALL particles seem to be in motion, halt one and see how the others move according to it and then you will find less confusion present. With one adopted as a STABLE DATUM others can be made to fall in line. Thus an emergency, a machine, a job or life itself can be viewed and understood and one can be free.

Let us take a glance at how this works. In the first chapter we listed a number of things which might influence obtaining, holding and improving a job. One can handle this entire problem, as people most often do, by entering into the problem the single datum, "I can get and hold a job." By clutching to this as a single belief, the confusions and insecurities of life become less effective, less confusing.

But suppose one has done this: suppose that without further investigating the problem, one, when young, gritted his teeth and shut his eyes and said, "I can get and hold a job, come what may. Therefore I am not going to worry about the economics of existence any more." Well, that was fine.

Later on, without warning, one got fired. One was out of work for ten weeks. He felt then, even when he did get a new job, less secure, less confident. And let us say that some accident occurred and one was out of a job again.

When once more unemployed, he was once more even less confident, less secure. Why? Let us take a look at the opposite side of this Doctrine of the Stable Datum. If we do, we learn that confusions are held ineffective by stable data and that, when the stable datum is shaken, the confusion comes into being again.

Let us envision a confusion as stopped. It is still scattered but it is stopped. What stopped it? The adoption of a stable datum. Let us say that one was bothered badly in the home by a mother-in-law. One day, after a quarrel, one stalked out and by inspiration, said to himself, "All mothers-in-law are evil." That was a decision. That, rightly or wrongly, was a stable datum adopted in a confusion. At once one felt better. He could deal with or live with the problem now. He knew that "all mothers-in-law" were evil. It wasn't true, but it was a stable datum. Then one day, when he was in trouble, his mother-in-law stepped forward, true-blue, and paid not only the rent but the other debt too. At once he felt very confused. This act of kindness should not have been a thing to bring in confusion. After all, hadn't she solved the problem? Then why does one feel upset about it? BECAUSE THE STABLE DATUM HAS BEEN SHAKEN. The entire confusion of the past problem came into action again by reason of the demonstrated falsity of the stable datum.

To make anyone confused, all you have to do is locate their stable data and invalidate them. By criticism or proof it is only necessary to shake these few stable data to get all a person's confusions back into action.

You see, stable data do not have to be true. They are simply adopted. When adopted, then one looks at other data in relation to them. Thus the adoption of ANY stable datum will tend to nullify the confusion addressed. BUT if that stable datum is shaken, invalidated, disproven, then one is left again with the confusion. Of course, all one has to do is adopt a new stable datum or put the old stable datum back in place, but he'd have to know Scientology in order to accomplish this smoothly.

Let us say one has no fears of national economy because of an heroic political figure who is trying his best. That man is the stable datum to all one's confusions about national economy. Thus one "isn't worried". But one day circumstances or his political enemies shake him as a datum. They "prove" he was really dishonest. One then becomes worried all over again about national economy. Maybe you adopted some philosophy because the speaker seemed such a pleasant chap. Then some person carefully proves to you that the speaker was actually a thief or worse. One adopted the philosophy because one needed some peace from his thoughts. Invalidating the speaker would then at once bring back the confusion one faced originally.

All right. We looked at the confusion of the work-a-day world when we were young and we held it all back by stating grimly, "I can get and keep a job." That was the stable datum. We did get a job. But we got fired. The confusion of the work-a-day world then became very confusing. If we have only the one stable datum, "I can get and keep a job," as our total answer to all the various problems listed in the first chapter, then, assuredly, one is going to spend some confusing periods in his working life. A far, far better stable datum would be, "I understand about life and jobs. Therefore I can get, hold and improve them." And that's where we are going in this book.

Chapter Three

IS WORK NECESSARY?

An understanding of life is necessary to the living of it. Otherwise life becomes a trap. To so many of us in the work-a-day world this trap takes the form of WORK. If only we didn't have to work, how many delightful things could we do! If only we had some other way of getting money... Travel, vacations, new clothes... what a host of things would be ours if only we didn't have to work!

It is almost an educational factor of our society that work, duress of, is the root of our unhappiness. We hear unions and welfare states as well as individuals basing all their plea upon a reduction of work. Getting rid of work by virtue of reduced hours and the introduction of automatic machinery has become the by-word of the mid-twentieth century.

Yet the most disheartening thing which could happen to most of us would be the loss of all future jobs. To be denied the right to work is to be denied any part of the society in which we live.

The rich man's son, the moneyed dowager, neither of them works. Neither is sane. When we look for neurosis and folly in our society we look toward those who do not or cannot work. When we look over the background of a criminal we look at "inability to work". Somehow the right to work seems to be bound up in happiness and the zest of living. And demonstrably the denial of work is bound up with madness and insanity.

As the amount of automatic machinery increases in our society, so increases the percentile of our people who are insane. Child labor laws, injunctions against overtime, demands for many papers and skills and conditions of being alike combine to reduce the amount of work that can be done by an individual.

Have you ever seen a retired man who pined for his desk? Today "the doctrine of limited work" educates us to believe that at such and such an age we must stop work. Why is this so popular when we can see for ourselves that the end of work is the end of life in most cases?

Speaking politically for a moment, from the standpoint of sanity. Man more dearly needs the Right to Work than he does an endless number of pretended freedoms. Yet we carefully discourage in our children and in our society those people who MAKE work. Unless work is made there will be no work to do. Work is not something which springs ready-made into our sight. Work is something that is created. New inventions, new markets, new systems of distribution must be created and brought into existence as times change and old methods, old markets, old systems become inadequate and wear out. Somebody created the jobs we do. When we work we either do a job created by ourselves or by another.

It is not enough to coast along in a job. The job, day by day, has to be made by us, no matter who created it in the first place.

To work is to participate in the activities of our society. To be refused a part in the activities of our society is to be cast out by it.

Somebody invented the difference between work and play. Play was seen to be something that was interesting and work was seen to be something that was arduous and necessary and therefore not interesting. But when we have our vacations and go and "play" we are usually very glad to get back to the "daily grind". Play is almost purposeless. Work has a purpose.

In truth, only the constant refusal on the part of the society to give us work results in our distaste of work when it exists. The man who cannot work was forbidden the right to work. When we go back in the history of the notoriously unable-to-work criminal, we find that he was first and foremost convinced that he must not work -- he was forbidden to work whether by his father or mother or school or early life. Part of his education was that he must not work. What was left? Revenge upon the society which refused to let him take part in its activities.

Let us re-define work and play. Play should be called "work without a purpose". It could also be called "activity without purpose". That would make work be defined as "activity with purpose". Where we have fault to find with working, it grows out of our own fear that we will not be permitted to continue work.

There is nothing wrong with automation, with all this installation of machines to do our work, so long as the powers-that-be remember to create **ADDITIONAL WORK** for us. Automation could be a blessing to the whole world, **PROVIDING** as many new jobs are invented as were disposed of by machinery. **THEN** we'd have production. And if the powers-that-be didn't fumble their basic economics and created enough money for us to buy all the new products, **THERE** would be prosperity indeed. So it isn't automation that is at fault; if automation leaves people unemployed, **SOMEBODY** wasn't permitted to invent new jobs for us. Of course, if every new business is flattened by restriction and if every man who would invent work was prohibited from doing so, then and only then would automatic machinery bring about our down, fall.

Despite the much-advertised joys of vacations and endless play, such things have never been other than a curse for Man. The earliest mention of it was by Homer in the Lotus Isles. And didn't that crew go to pieces.

No, definitely there is more to work and working than having to have a pay-check. Of course there are jobs more interesting than other jobs. Of course there are positions which are more remunerative than other positions. But when one contrasts the right to have a position with **NO** right to have one, then one will choose even the less interesting and poorer paid tasks.

Did you know that a mad person could be made well simply by getting him convinced that he has some purpose in life? Well, that can happen. It doesn't matter how thin or artificial that purpose may be, mad people can be made sane with it. One instance comes to mind of a crazy girl for whom nothing could be done. That was the point in her case -- nothing could be done for her. But one night near the asylum an auto accident occurred and an overworked doctor, seeing her near, ordered her to do some things for the victims. She became well. She became a staff nurse. She was never insane thereafter.

Now, no-one pretends that we are all mad if we don't work. But it is an astonishing thing that we drift in that direction when we are forbidden to labor.

Great revolutions occur out of a mass inability to work. The crowds rebel not because they are angry over privileges, which they always say, but because they have gone mad, having no work. It is truth that revolutions cannot occur when people are all employed. And it doesn't matter how arduously they are employed either. Revolutions occur when people have been too often forbidden to work. They go up in madness and the state often comes down in ruins. **NO** revolution ever won anything. Life evolves into a better condition by means of hard work, not by threats.

If automatic machinery threw enough people out of work -- even though the machines were producing a plenty -- there would be a revolution. Why? Because by robbing them of work, people have been robbed of a purpose in life. When that goes, all goes. A good purpose, a bad purpose, it does not matter, so long as a purpose exists. **WHY?**

Now, do not think we have strayed very far from the last chapter. We haven't. Here is an understanding of life. Life has certain stable data that ARE the stable data of livingness. Once grasped, then life -- and that part of it called work -- can be understood.

Life is basically a created thing. But it has many elements in it creating against many other elements in it. A confusion occurs whenever two or more things start creating against each other. Thus life, viewed impartially, can seem to be a confusion.

If one were to sit amongst all this livingness, all this creatingness, all this warfare, without any purpose -- such an existence in its entirety would be fatal. To be part of a universe, a civilization, and yet to have no purpose, is the route to madness.

The exertion of energy, the exercise, the time spent, the things done are all of a lower order of importance. Just to have Something To Do and a Reason To Do It exerts a control over life itself. If you have no purpose, you have no purchase on the small first particle necessary to make the whole understandable. Thus life can become a terrible burden.

In the United States a quarter of a century ago, and in other lands as well, there was something called a depression. It came out of a lack of understanding of economics during a period of transition into a machine age. During it a great president saw that work had been denied to his people. He created work. He thought he did it to get money into circulation to buy all the things the country could now make. Therefore he did not really rescue the bulk of his people from despair. For the work he gave them was to be carelessly done, poorly done. All that was being demanded was time spent on the job. He had a wonderful opportunity to turn a country into a beautiful thing. But the work given had no purpose.

Men who detest one job or another detest it because they can't see where it is going or can't believe they are doing any important thing. They are "working", that is to say, they report and go through motions and draw a pay-check. But they aren't truly a part of the scheme of things. They don't feel they have anything to win.

In our civilization the Stable Datum to the confusion of existence is WORK. And the Stable Datum of work is Purpose. Even if the purpose is just getting a pay-check, it is still purpose.

Any of us, probably, could do more important things than we are doing. Any of us could use some changes in our tasks. But none of us, and still stay alive and sane, could do without something to do.

When we grow timid in the face of circumstance it is because our Purpose, our Stable Data, have been invalidated.

It is, as we have shown, rather easy to knock a person into a state of confusion. All you have to do is locate his Stable Datum on any subject and shake it. This is a trick we all use. For instance, we are arguing about economics with a friend: we don't agree with him. We ask him where he got such an idea. He says somebody wrote it in such-and-so. We attack the writer or the paper and discredit it. In other words, we win our argument by shaking his Stable Datum as nearly as we can find it.

Life is competitive. Many of us forget we are part of a team called Man, in contest with who knows what else to Survive. We attack Man and attack our friends. In the course of holding a job, it seems only natural that here and there in the organization would be people who were so insecure in their own tasks that they seek to spread insecurity around them.

Having drunk of confusion too deeply, having too few Stable Data, a person can begin to dramatize confusion, to spread it, to consciously try to make everything and everybody confused. One of the favorite targets of such people is the Stable Datum of Work. Although

usually such people cannot even do their own jobs they are very anxious to make others tired of theirs. They “cut down the competition” by carving up the Stable Data of others.

Beware these people who come around and inquire “sympathetically” about your health because you look “overworked”. It is almost easier to get “overloafed” than overworked. Beware these people who want you to sign a petition to shorten the hours to be spent on the job. The end product of that is no job. And beware, too, the fellow who is always taking it “out of the firm” because the firm can afford it. Remember, that firm is part yours, no matter if they fire you tomorrow. Such people are trying to pull out from under you the Stable Datum of Work.

If you are afraid of losing your job, it is because you suffer already from too many forbiddings to work. The only way to hold a job is to make it every day, to create it and keep it created. If you have no wish to create and continue that job then there must be something at cross-purposes with purpose. There is something wrong between what you think would be a good purpose and what purpose your job has.

Government jobs are an interesting example because, so often, nobody seems to care really whether the job has purpose or not. Too often the purpose of having a government job is just to have a government job. Here in particular one has to understand about life and work itself, for a government job has to be created continually to continue. And if it seems to have no purpose then one should look over government itself and get at its purpose, for the purpose of the government as a whole, in some part, would be the purpose of the job held, no matter how small.

Anyone suffering from a distaste for work must basically have a feeling that he isn't really allowed to work. Thus work is not a stable datum in life. And he must have, as well, some cross-purpose about the purposes of his job. And, too, he usually is associated with people in his job who are trying to make work into something less than tasteful. But he is to be pitied because he is unhappy. He is Unhappy because he is confused. Why is he confused? Because he has no Stable Datum for his life. And a Stable Datum for life itself is the basis of good living as well as good job orientation.

Chapter Four

THE SECRET OF EFFICIENCY

What is control?

Whether one handles a machine of the size of a car or as small as a typewriter or even an accounting pen, one is faced with the problems of control. An object is of no use to anyone if it cannot be controlled. Just as a dancer must be able to control his body, so must a worker in an office or a factory be able to control his body, the machines of his work and to some degree the environment around him.

The primary difference between “the worker” in an office or a factory and an executive is that the executive controls minds, bodies and placement of communications, raw materials and products, and the worker controls in the main his immediate tools. However, it is far too easy for those anxious to agitate labor into measures not necessarily good for it, and for executives who themselves are anxious for control and anxious about it, to forget that the worker who does not control his materials of work and who is himself a controlled factor only, is practically useless to the plant itself. Both management and labor must be able to control their immediate environment. The most apparent difference between an executive and a “worker” is that the executive controls more environment than the “worker”. To that degree, then, the executive must be more capable than the “worker” or the plant or business is doomed to difficulty if not failure.

What is a good workman? He is one who can positively control his equipment or tools of trade or who can control the communication lines with which he is intimately connected.

What is a bad worker? A bad worker is one who is unable to control the equipment he is supposed to control or the communication lines he is supposed to handle.

People who wish to control others, but who do not wish others to control anything bring us into a difficulty by establishing a fallacy. That fallacy is that there is such a thing as “bad” control. Control is either well done or not done. If a person is controlling something he is controlling it. If he is controlling it poorly he is not controlling it. A machine which is being run well is controlled. A machine which is not being run well is not being controlled. Therefore we see that bad control is actually a not-control. People who tell you that control is bad are trying to tell you that automobile accidents and industrial accidents are good.

Attempted control for bad or covert purposes is harmful and it carries with it the ingredient of unknowingness. The person who is attempting control is actually not controlling. He is simply seeking to control and his efforts are in the main indefinite and unpositive, which of course are characteristics which control does not countenance. When unknowingness is entered into control, control can become antipathetic, but it does not become a fact. If you have ever covertly controlled your car you will understand what is meant. If you handled your steering wheel in such a way that the car would not “know” which way it was then supposed to go you would soon be involved in difficulties. You must handle the steering wheel of a car in such a way that the car then turns the proper turns and remains on a straight course on a straight road. There is nothing hidden about your intention of controlling the car and there is nothing unknown about the response of the car. When a car fails to respond to your handling of the steering wheel control has ceased to exist.

In other words, one either controls something or he does not. If he does not we have developed a misnomer. We have developed the idea that there is such a thing as bad control.

People who have been “badly controlled”, which is to say, who have been merely shaken up and have not been controlled at all, begin to believe that there is something bad about control but they would really not know what control is since they have not been controlled in

actuality. To understand this further one would have to know one of the very basic principles of Scientology which is the anatomy of control. In part this principle consists as follows: Control may be subdivided into three separate parts. These parts are START, CHANGE and STOP.

Start, change and stop also comprise a cycle of action. The CYCLE OF ACTION is seen in the turning of a simple wheel. The wheel starts and then any given spot on it changes position and then the wheel is stopped. It does not matter how long the wheel is in motion, it still follows this cycle of action. A man walking a short distance starts, changes the position of his body and stops his body. He has, if he does this, completed a cycle of action. On a longer span a company starts, continues and at some date, early or late, ceases to exist. In change we get change of position in space or change of existence in time. In start we have simple start and in stop we have simply stop.

Things may start slowly or rapidly, things may stop slowly or rapidly, things may change very rapidly while they are going. Thus the rate of start, the rate of change and the rate of stop have little to do with the fact that a cycle of action does consist of start, change and stop.

The ancients referred to this cycle of action in a much more detailed fashion. We find the Vedic Hymns talking about a cycle of action in this wise: First there is chaos, then from the chaos something emerges and can be said to have been born, it grows, it persists, it decays and dies and chaos ensues. Although this in essence is an inaccurate statement it is the earliest example of a cycle of action.

A modern Scientology example of a cycle of action is much more simply stated and is much more accurate. A cycle of action is start, change and stop. This parallels another cycle of action which is that of life itself. The cycle of action of life is CREATION, SURVIVAL and DESTRUCTION. Survival could be said to be any change, whether in size or in age or in position in space. The essence of survival is change. Creation is of course starting, destruction is of course stopping. Thus we have in Scientology two very useful cycles of action, the first of them being start, change and stop and the more detailed one being create, survive, destroy.

Start, change and stop imply the conditions of a being or an object. Create, survive, destroy imply the intention of life toward objects.

Control consists entirely of starting, changing and stopping. There are no other factors in positive control. If one can start something, change its position in space or existence in time and stop it, all at will, he can be said to control it, whatever it may be. If one can barely manage to start something, can only with difficulty continue its change of position or existence in time, and if one can only doubtfully stop something, he cannot be said to control it well, and for our purposes he would be said to be able to control it poorly or dangerously. If he cannot start something, if he cannot change its position in space, if he cannot stop something, then he is definitely not in control of it. If he is trying to start, change and stop something or somebody without positively doing so he has entered unknowingness into the activity and the result will be questionable to say the least.

Thus there is such a thing as good control. Good control would consist of knowingness and positiveness. A girl who can start a typewriter, continue its motion and then stop it could be said to be in control of the typewriter. If she had difficulties in starting it, in continuing its action and in stopping it she would not only be in "bad control" of the typewriter, she would be a bad stenographer.

Where "bad control" enters in, so enter incompetence, accidents, difficulties, inefficiency and, not the least, considerable misery and unhappiness. As we define bad control as not-control, or as an unknowing attempt at control without actually effecting control, it can be said that unpositiveness results in a great many difficulties.

To give you some idea of how far this might go in life, you might get the idea of being moved around in a room by somebody. This somebody would tell you to go to the desk, then would tell you to go to a chair, then would tell you to go to the door. Each time he tells you to go somewhere, you of course have to start yourself, change your body's position and stop yourself. Now oddly enough you would not mind this if you knew that somebody was telling you to do it and you were capable of performing the action and you were not receiving orders in such a wise as to interrupt your obedience of the command before you completed it.

Let us say, for instance, that somebody told you to go to the desk, but before you arrived at the desk he told you to go to a chair, but before you arrived at the chair told you to go to the door and then claimed you were wrong in not having gone to the desk. You would be, at that time, confused. This would be "bad control" since it does not permit you to finish any cycle of action before another cycle of action is demanded of you. Thus your cycles of action become involved and a confusion results.

But this in essence would not be control since control must involve an understandable or knowing positiveness. Good control would not change the order before you had a chance to arrive at the desk. It would let you arrive at the desk before you were asked to start again for the chair. It would let you arrive at the chair before you were asked to start again for the door. Now you would not mind the positive control but it is certain that you would be quite upset by the broken series of orders which did not permit you to finish any cycle of action. Now, to give you some idea of how this could influence one's life -- which would you rather have give you a series of orders such as above, to move around a room: your father or your mother? It is certain that you had the most trouble with the parent you would not have chosen to have given you those orders.

Control is so far from being bad that a person who is sane and in very good condition does not resent good, positive control and is himself able to administer good, positive control to people and objects. A person who is not in very good condition resents even the most casual directions and is actually not capable of controlling people or objects. The latter person is also inefficient and has many difficulties with work and with life.

When a person cannot control things or when he resists things controlling him he involves himself with difficulties not only with people but with objects. It is also apparent that people with control difficulties more readily become ill and fail in other ways.

When a person is incapable of controlling a piece of machinery it often occurs that the machinery reverses the matter and begins to control him. As an example, a driver who cannot exert positive control on a car is quite likely eventually to be controlled by that car. Instead of a driver driving a car down the street we have a car taking a "driver" down the street and sooner or later the car, not being very expert at control, winds its driver up in a ditch.

Even mechanical failures are attributable to a lack of control. It will be discovered that an individual who cannot easily control a machine is quite likely to have considerable difficulties with that machine. The machine itself suffers sometimes in nearly inexplicable ways.

Motors run for some men and do not run for others. Some machinery will go on for years in the hands of a mechanic, but when the mechanic leaves it and another takes his place who is not adept, the machine may be found to break down and experience difficulties never before noticed in it. It is stretching things a little bit to infer that a person who cannot control things needs only to look at a piece of machinery to have something go wrong with it, and yet there are cases on record where this has happened. The factor involved is more easily understood in, for instance, an accounting department. A person who cannot control figures of course sooner or later involves the books he is keeping in complexities and intricacies which not even an expert accountant can straighten out.

The cycle of action of this universe is start, change and stop. This is also the anatomy of control. Almost the entire subject of control is summed up in the ability to start, change and stop one's activities, body and one's environment.

A habit is simply something one cannot stop. Here we have an example of no control whatever and we have the step beyond the last extremity of entirely lost control. Control begins to dwindle when one is able to change things and stop things but is not still capable of starting them. Once a thing is started, such a person can change and stop it. A further dwindling of control, if one can now call it such, would be the loss of an ability to change something or continue its existence in time. This would leave one simply with the ability to stop things. When one finally loses the ability to stop something, that thing has to some degree become his master.

In the stop of start, change and stop we see in essence the entirety of the stable datum. If one can stop just one particle or datum in a confusion of particles or data one has begun a control of that confusion. In the matter of a mass of calls coming into a switchboard simultaneously, each call insistently demanding the attention of an operator, control is asserted on the switchboard by the operator's stopping just one demand. It does not particularly matter which demand is stopped. Handling just one call permits one then to handle another call and so forth until one has changed the condition of the switchboard from a total confusion to a handled situation. One feels confused when there is nothing in a situation which he can stop. When he can at least stop one thing in a situation he will then find it is possible to stop others and finally will recover the ability to change certain factors in the situation. From this he graduates into an ability to change anything in the situation and finally is capable of starting some line of action.

Control is then found to be very intimate to confusion. A worker who is easily confused is a worker who cannot control things. An executive who is frantic in the face of an emergency is an executive who even in good times does not feel that he has any ability to actually start, change and stop situations in which he is involved as an executive.

Franticness, helplessness, incompetence, inefficiency and other undesirable factors in a job are all traceable to inability to start, change and stop things.

Let us say that a plant has a good manager. The manager can start, change and stop the various activities in which the plant is involved; can start, change and stop the various machinery of the plant; can start, change and stop the raw materials and the products of the plant; and can start, change and stop various labor activities or difficulties. But let us say that this plant is unfortunate enough to have only one person in it who can start, change and stop things. Now unless the executive is going to handle all the incoming raw materials, turn on and off all the machinery, process every piece of material in the place and ship the finished products himself, he will be unable to run the plant. Similarly an office manager who himself can start, change and stop any of the activities of an office or handle them, if he were the only one in the office who could, would be powerless actually to run a very large office.

In a plant or in an office it is then necessary for an executive, no matter how good he may be, to be supported by subordinates who themselves are not unwilling to be started, changed and stopped by him, but who can themselves start, change and stop the activities or personnel in their own immediate environment in the plant.

Now given a good executive in a plant or office and given good subordinates (defining as good, their ability to start, change and stop things), we would yet have difficulty if we reached lower down on the command chart and discovered that we did not have any working people who themselves were capable of starting, changing and stopping their own particular jobs. We would have a condition here where the executive and the foreman would then be forced to do everything that was really being done in the plant. To actually have a good plant we would have to have an executive, foreman and workers, all of whom in their own environment were capable of starting, changing and stopping things and who were at the same

time (including the executives) not unwilling to be started, changed and stopped in their duties, providing positive and understandable orders were used.

As we look this over we see less and less the picture we have been uniformly presented with in plants and offices of the “management” and “laborers”. As soon as we discover one worker in a plant who does not have to start, change or stop himself or anything else we would then have somebody who would justify this title of “laborer”. It is apparent that from the topmost member of the board down to the lowest worker on the payroll, each and every one of them is involved with starting, changing and stopping people, materials, machinery, products and pieces of the environment. In other words, each and every one of them present in a plant or an office is actually managing something. As soon as an executive realizes this he is then capable of running a far more efficient business since he is capable then of selecting out from amongst them, people who are best at starting, changing and stopping things, and these by example can bring others into a state of mind where they too are willing to positively start, change and stop things.

We have people in the work-a-day world, whether managers or janitors, who are for instance fixated (stuck) on starting. These people can start all day and all night but they never get going. Such people talk about big schemes and big deals; such people talk a lot of enthusiasm about getting going but never themselves seem to move.

Others, no matter what their class or classification, get fixated on change. These manifest this usually by insisting that everything “keep running”. They talk all the time about “keeping things going” but they will not listen to any new ideas or will not receive any new machinery, since that would necessitate stopping some old machinery and starting some new machinery. Thus we get antiquated plants and systems continued on forever, long past their usefulness or economic value. A subdivision of this is the person who must change everything all the time. This is actually another manifestation of trying to keep things running, but instead of keeping things running, these people shift everything there is to be shifted all the time. If an order is issued they change the order. If they receive the word to go they change it to stay. But this, it will be seen, is an unbalanced condition where these people are actually unwilling to keep anything running anywhere and are in reality on an obsessive stop.

Plants, businesses, factories, ships and even the government are victimized particularly by people who can only stop things. No matter how well some unit may be running, some order is issued that stops whatever it is doing. It is enough for such people to discover that something is going to do something to cause it to stop. Usually one gets around this by failing to inform such people that something is running.

Thus we can see that there are people who abuse the cycle of action of start, change and stop and who are themselves fixated upon one or another factor in the cycle of action or who are incapable of withstanding any factor in it, which means, of course, that they are in a continuous and arduous confusion.

It is noteworthy that those people who can only start things are normally creative. The artist, the writer, the designer is looked upon to start things. He actually might also be capable of continuing them or stopping them but his purest function is creation.

There are amongst very rational and good men those whose greatest ability is continuing things. They can also start things and stop things if they can really continue things. It is upon these men that we depend for the survival of a business or an operation.

Then there is the class that is used by the society to stop things. Such people have normally a police function. Certain things are declared to be bad and these things so designated are then turned over to people to stop them. Imperfect production is stopped by inspectors. Bribery, corruption or crime is stopped by police. Other nationally aggressive persons are stopped by the military. And it should occasion no surprise that these specialists in stop are of course specializing in destroy. It should occasion no further surprise that when one looks at the

element in the society most likely to decay the society, one looks for those whose job it is to specialize in stops. These people in the main, while serving a very good function for the society at large, if they became fully in charge, as in a police state, would only destroy the state and its people, as has been noted since the days of Napoleon. The most recent nation which turned over the entire function of the state to police was Germany and Germany was stopped very thoroughly. Germany also effected nothing but destruction.

When we have a society which is very good at starting we have a creative society. When we have a society which is very good at keeping things running we have a society that endures. When we have a society that is only capable of stopping things we have a society which is destructive or which is itself destroyed. Therefore we must realize that a balance amongst these three factors of start, change and stop is necessary, not only in an individual, but in a business, and not only in a business but in a nation. When one can only do one of these one is considerably limited in his usefulness. The optimum condition would be for everyone from manager down to janitor to be capable of starting, changing and stopping and to be able to endure being started, changed and stopped. Thus we would have a balanced and relatively unconfused business activity.

No business can succeed unless it has been properly started, unless it is progressing through time or changing position in space and unless it is capable of stopping harmful practices and even competitors.

As it is with a nation or a business so it would be with an individual holding down a single job. He should be able to start, change and stop anything under his immediate control. If he is running a machine he should be able to start the machine, to keep it turning (changing) and to stop it, and this should be under his own determinism. His machine should not be started by some engineer and stopped at some period of the day without any attention from himself. Furthermore, if he felt the machine should be shut down and oiled he should have the authority to do so and should not have to withstand the pummeling of some machine foreman who, without understanding the situation, simply observed that a machine was stopped which according to his lights ought to be running.

Even a janitor, to have any efficiency at his job and thus to have a clean set of offices or a plant, would have to be able to start, change and stop the various objects having to do with his particular job. He should not have to keep on sweeping after the floor is clean and he should not have to stop sweeping before he has cleaned the floor and he should be able to start sweeping the floor when he believes it ought to be swept. Naturally if he is able to do these things he is also able to co-operate with his fellow workers, and himself be stopped or started or altered in his activity, so as to execute his job while making it possible for them to do their jobs.

Here, however, we envision a nation or a plant or an office or a small section or department running without any supervision at all, whereas there would be executives and foremen and workers. It is doubtful if supervision of others would occupy much of anyone's time. As the ability of the worker and foreman and executive to start, change and stop those things which they should handle and control declines, it will be discovered that supervision enters it. The less capable people are of starting, changing and stopping the people or objects under their immediate control, the more supervision they require. When supervision gets up to 80 percent of the plant's activities it is certain that the confusion will be so great that inefficiency will result in such magnitude as to ruin the activity.

Supervision then is actually a criticism of the junior. It implies that a junior does not know or is not able in the field of control.

Co-operation and alignment of activity is different than supervision. Where one has a chain of command one does not necessarily have supervision. One does have, however, co-ordinated planning for an entire operation which is then relayed to others in the operation so that coordination can take place. If everybody is agreed on the worthwhileness of any activity

and if everybody in that activity were capable of actually controlling those items or persons which were in his immediate sphere of action, it would be found that planning would not have to engage in much supervision in order to effect the execution of the ideas involved. This is a very high order of dream. Only where Scientology has been thoroughly at work could such a thing occur -- that an organization could run in agreement with itself without supervision or punitive action.

One is able to gauge those workers around him by the amount of confusion in which they are involved. That confusion tells one at once the degree of inability to control things. That inability to control things may not be entirely the fault of the worker. There are two things which can be psychotic: one is the surroundings and the other is the person. A sane man has difficulty in insane surroundings. An insane man has difficulty in even the sanest and most orderly surroundings. Thus there are two factors involved in any operation: the person and the surroundings. It could also be said there are two factors involved in any business: the surroundings of the business itself and the business. One sane business trying to operate in a world of madmen would have a very great difficulty getting along. One way or another the inability of the madmen to start, change and stop things would infect the business and deteriorate its efficiency.

Thus it is not enough that an individual himself be capable of controlling his job. He must also be able to tolerate the confusion of those around him who cannot control their jobs, or he must be able to tolerate sane and steady control from those around him.

Insanity is contagious. Confusion is contagious. Have you ever talked to a confused man without yourself, at the end of the conversation, feeling a little confused? Thus it is in work. If one is working with a great many men who are incapable, one begins, himself, to feel incapable. It is not enough to live alone. It is impossible to work alone. Realizing this one also understands that his ability to control the immediate machinery or work tools with which he is involved would also include an ability to assist others in his vicinity to control those things with which they are involved.

Many a good worker has been lost to a factory because the good worker could not make his own work good enough to satisfy himself, being faced in his job with so many confused elements and orders that he at last rebelled. Thus good workers can be spoiled. In any department it is possible to spot the people who spoil good workers. They are the people who cannot start, change and stop such things as communication or machinery and who are themselves most liable to franticness and confusion. These are the people who would rather have solutions thrown in the waste-basket and problems posted on the bulletin board.

What could one do if he were surrounded by people who were confused and incapable of starting, changing and stopping their various activities? He could himself become sufficiently capable at his own job that he would set a fine example for others and thus himself be a stable datum in the confusion of that area. He could do even more than this. He could understand how to handle them and, so understanding, could bring orderliness into the minds and activities of those men so as to balk their inabilities as they might affect him. But in order to do the latter he would have to know a great deal about Scientology and its various principles, and that is somewhat beyond the scope of this particular volume.

For the individual worker who wishes to do a good job and to go on having a job and to rise in his position it is almost enough that he understand his job thoroughly so that no part of it confuses him and so that he can start, change or stop anything with which he is connected in that job and that he himself can tolerate being started, changed and stopped by his superiors without himself becoming unsettled. In other words, the greatest asset and greatest job insurance a worker could have would be a calmness of mind concerning what he was doing. A calmness of mind is derived from the ability to start, change and stop the objects and activities with which he is involved and to be able to be started, changed and stopped by others without himself being as confused as they are.

Thus the secret of doing a good job is the secret of control itself. One not only continues to create a job, day by day, week by week, month by month, he also continues the job by permitting it to progress, and he is also capable of stopping or ending any cycle of work and letting it remain finished.

Workers are most often victimized by bosses, juniors, or marital partners who are not themselves capable of controlling anything, yet who will not be controlled and who in some peculiar way are obsessed on the idea of control. A worker who is thus intimately connected with something that he himself cannot control and which is incapable of actually or really controlling him, performs his work in a confused state which can only lead to difficulties and distaste for work itself.

It can be said that the only thing bad about working is that it is so very often associated with inabilities to control. When these are present then the work itself seems tiresome, arduous and uninteresting, and one would rather do anything else than continue that particular work. There are many solutions to this. First amongst them is to regain control of the items or functions which one is most intimately connected with in doing his job.

However, control in itself is not an entire answer to everything, for if it were one would have to be able to control everything, not only in his own job, but in an office or on earth, before he could be happy. We discover in examining control that the limits of control should be extended only across one's actual sphere of operation. When an individual attempts to extend control far beyond his active interest in a job or in life he encounters difficulty. Thus there is a limit to the "area of control" which, if violated, violates many things. There is almost a maxim that if an individual consistently seeks to operate outside his own department he will not take care of his own department. As a matter of fact, in Scientology organizations it has been discovered that a person who is consistently involving himself with things far beyond his actual scope of interest is not covering his actual scope of interest. Thus there is obviously another factor involved than control. This factor is willingness not to control and is fully as important as control itself.

Chapter Five

LIFE AS A GAME

It is quite obvious that if anyone controlled everything he would have no game. There would be no unpredictable factors, no surprises in life. This might be said to be a Hell of considerable magnitude.

If one could control everything absolutely he would of course be able to predict everything absolutely. If he could predict the course and action of every motion in the entirety of existence he would of course have no real interest in it.

We have already looked at the necessity of controlling the immediate objects of work, but remember it is necessary, if one controls these immediate objects, to have other objects or environments which one does not absolutely control. Why is this?

It is because life is a game.

The word “game” is used here advisedly. When one is mired down in the sometimes titanic struggle of existence he is apt to discount the fact that there is joy in living. He is apt to disbelieve that such a thing as fun can exist. Indeed people, when they reach into their thirties, begin to wonder what happened to their childhood when they actually could enjoy things. One begins to wonder if pleasure of living isn't itself some sort of trap, and one begins to believe that it is not a good thing to become too interested in new people and new things, since these will only lead to heartbreak. There are men who have decided that in view of the fact that loss brings so much pain, they had better not acquire at all. It is far superior according to these to live a life of only medium privation than to live a life of considerable luxury, since then if they lost what they had the pain would be much less.

Life, however, is a game. It is very easy to see a game in terms of cricket or football. It is not so easy to see life as a game when one is forced to rise before the sun and reach his home only after it sets, after a day of arduous and relatively unthanked toil. One is likely to dispute that such an activity could be a game at all. Nevertheless it is obvious in various experiments which have been made in Scientology that life, no matter what its emotional tone or lack of it, is in essence a game and that the elements of life itself are the elements of games.

Any job is a game.

A game consists of freedoms, barriers and purposes. There are many more complicated factors involved in games, but these are all listed in Scientology.

Primary amongst these is the necessity in a game to have an opponent or an enemy. Also a necessity is to have problems. Another necessity is to have sufficient individuality to cope with a situation. To live life fully, then, one must have, in addition to “something to do”, a higher purpose, and this purpose, to be a purpose at all, must have counter-purposes or purposes which prevent it from occurring. One must have individualities which oppose the purpose or activities of one, and if one lacks these things it is certain that he will invent them.

This last is very important. If a person lacks problems, opponents and counter-purposes to his own, he will invent them. Here we have in essence the totality of aberration. But more intimately to our purposes we have the difficulties which arise from work.

If we had a foreman who capably controlled everything in his area and did nothing else, and if that foreman were not entirely mentally balanced in all ways (which is to say if he were human), we would find that foreman inventing personalities for the workers under him and reasons why they were opposing him and actual oppositions. We would find him selecting out one or more of his workmen to chastise, with, according to the foreman, very good reason, but

in actuality without any further reason than that the foreman obsessively needed opponents. Now very many involved classifications can be read into this by ancient mental analyzes but none of these need to be examined. The truth of the matter is that a man must have a game and if he does not have one he will make one. If that man is aberrated and not entirely competent he will make an intensely aberrated game.

Where an executive finds all running far too smoothly in his immediate vicinity he is likely to cause some trouble just to have something to do -unless that executive is in very good mental condition indeed. Thus we have management pretending, often without any actual basis in fact, that labor is against it. Similarly, we occasionally have labor certain that management, which is in fact quite competent, is against labor. Here we have invented a game where no game can actually exist.

When men become very shortsighted they cannot look actually beyond their own environment. There is in any office, plant, or activity the game of the office, plant or activity itself versus its competitors and versus its outer environment. If that office, plant or activity and all the personnel within it are conducting themselves on a wholly rational and effective basis they choose the outside world and other rival concerns for their game. If they are not up to par and are incapable of seeing the real game they will make up a game and the game will begin to be played inside the office and inside the plant.

In playing games one has individuals and teams. Teams play against teams; individuals play against individuals. When an individual is not permitted to be fully a part of the team he is apt to choose other members of the team as his opponents for, remember, man must have a game.

Out of all these complexities come the various complexities of work and the problems of production and communication.

If everybody in a plant were able to control his own sphere of interest in that plant and if everybody in the plant were doing his own job, there would actually be no lack of game, for there are other plants, other activities in the outside world and these always furnish game enough for any rational organization. But supposing the people in an organization cannot control their own sphere, cannot control their own activities, and are obsessively attempting to create aberrated games all about them. Then we would have a condition whereby the plant, office or concern would not be able to effectively fight its environment and would produce poorly, if not collapse.

Aberrated or not aberrated, competent or not competent, remember, life is a game and the motto of any individual or team alive is, "There must be a game." If individuals are in good mental and physical condition they actually play the game which is obvious and in plain sight. If they are not in good condition and if they are themselves incapable of controlling their own immediate environment, they will begin to play games with their tools. Here the machinist will find his machine suddenly incapable of producing. One would not go so far as to say that he will actually break the machine so that he can have a game with it, but he will be in a mild state of fury regarding that machinery continually. The bookkeeper, unable to control his immediate tools of trade and not well-fitted into his concern, will begin to play a game with his own figures and will fail to get balances. His adding machine will break down, his papers will get lost and other things will occur under his immediate nose which never should happen, and if he were in good shape and could play the actual game of keeping other people in the plant straight so far as their accounts and figures are concerned, he would be efficient.

Efficiency, then, could be defined as the ability to play the game to hand. Inefficiency could be defined as an inability to play the game to hand, with a necessity to invent games with things which one should actually be able to control with ease.

This sounds almost too simple, but unfortunately for the professors that try to make things complicated, it is just that simple. Of course there are a number of ways men can become too aberrated. That is not the subject of this book. The subject of this book is work.

Now realizing that life must be a game, one should realize that there is a limit to the area one would control and still retain an interest in life. Interest is mainly kindled by the unpredictable. Control is important. Uncontrol is, if anything, even more important. To actually handle a machine perfectly one must be willing to control it or not to control it. When control itself becomes obsessive we begin to find things wrong with it. The individual who absolutely has to control everything in sight is upsetting to all of us and this individual is why we have begun to find things wrong with control. It sounds very strange to say that uncontrol must also be under control, but this is, in essence, true. One must be willing to leave certain parts of the world uncontrolled. If he cannot, he rapidly drops downscale and gets into a situation where he is obsessively attempting to control things which he never will be able to control and thus renders himself unhappy, begins to doubt his ability to control those things which he actually should be able to control and so at length loses his ability to control anything. And this, in essence, is what in Scientology we call the dwindling spiral of control.

There are mental factors which we will not discuss here, which tend to accumulate the failure to control to a point where one is no longer confident of his ability to control.

The truth of the matter is an individual actually desires to have some part of life uncontrolled. When this part of life hurts him sufficiently he then resigns himself to the necessity of controlling it and so makes himself relatively unhappy if he never will be able to do so. A game consists of freedom, barriers and purposes. It also consists of control and uncontrol.

An opponent in a game must be an uncontrolled factor. Otherwise one would know exactly where the game was going and how it would end and it would not be a game at all.

Where one football team would be totally capable of controlling the other football team, we have no football game. This is a matter of no contest. There would be no joy or sport in playing that game of football. Now if a football player has been seriously injured playing football, a new unknowing factor enters into football for him. This injury lodges in what we call the "reactive mind". It is a mind which is unseen and which works all the time. One normally works on what we call the "analytical mind" and this we know all about. Anything that we have forgotten or moments of unconsciousness and pain become locked away in the reactive mind and are then capable of reacting upon the individual in such a way as to make him refrain from doing something which was once dangerous. While this is a rather technical subject it is nevertheless necessary to understand that one's past has a tendency to accumulate and victimize one in the future.

Thus, in the case of the football player, while he plays football he is apt to be restimulated or react from the old injury received in football and so feels less than a spirit of fun while playing football. He becomes anxious. He becomes very grim on the subject of football and this is expressed by an effort to actively control the players on another team so that they will not injure him again.

In a motorcycle race a famous motorcycle rider was injured. Two weeks later in another race we find this motorcycle rider falling out on the fifth lap without injury or incident but simply pulling over into the pits. He did this immediately after a motorcycle swerved close to him. He recognized at once that he was unable to control that motorcycle. He felt then incapable of controlling his own motorcycle and so knew one thing -- he had to get out of that race. And just as this motorcycle rider abandoned that race, so all of us at one time or another have abandoned sections of life.

Now, up to the time he had that accident the motorcycle rider was perfectly willing to not control any other motorcycle on the track save his own. He did not worry about these other

motorcycles since they had never injured him and the motorcycle racing game was still a game to him. However, during the accident there was a moment when he sought to control another motorcycle than his own and another rider. He failed in that effort. Thus in his "reactive mind" there is an actual mental image picture of his failing to control a motorcycle. Thus in future racing he is less competent. He is afraid of his own machine. He has identified his own machine with somebody else's machine. This is a failure of control.

Now, in order to become a good motorcycle racer again this man would have to resume his attitude of carelessness regarding the control of the other machines and riders on the track and reassume his own ability to control his own machine. If he were able to do this he would become once more a daring, efficient and winning motorcycle rider demonstrating great competence. Only a Scientology practitioner could put him back into this condition -- and a Scientology practitioner would be able to do this probably in a very few hours. This, however, is not a textbook on how to eradicate former ills, but an explanation of why men become incompetent in the handling of their immediate tools of trade. These men have attempted to leave uncontrolled all the world around them up to the moment when the world around them hurt them. They then conceived the idea that they should control more than their own jobs. They failed to control more than their own jobs and were instantly convinced that they were incapable of controlling something. This is quite different than leaving things uncontrolled. To be capable of controlling things and to be capable of leaving things uncontrolled are both necessary to a good life and doing a good job. To become convinced that one cannot control something is an entirely different thing.

The whole feeling of self-confidence and competence actually derives from one's ability to control or leave uncontrolled the various items and people in his surroundings. When he becomes obsessed with a necessity to control something rather beyond his sphere of control, he is disabused of his ability to control those things close to him. A person eventually gets into a state of mind where he cannot pay any attention at all to his own job but can only reach out into the outer environment and seek, effectively or otherwise, to stop, start or change things which have in reality very little to do with his own job. Here we have the agitator, the inefficient worker, the individual who is going to fail. He is going to fail because he has failed at some time in the past.

This is not quite as hopeless as it looks because it takes actual physical injury and very heavy duress to make an individual feel that he is incapable of controlling things. The day-to-day handling of machinery is not what deteriorates one's ability to work or handle life. It is not true that one gets old and tired and his ability to do things wears out. It is true that one becomes injured in sudden, short moments and thereafter carries that injury into his future work and the injury is what causes him to deteriorate. The eradication of the injury brings him back to an ability to control his own environment.

The entire subject of work, then, brings us to the value of uncontrol. A machinist doing a good job should be able to relax as far as his machine is concerned. He should be able to let it run or not let it run, to start it or not to start it, to stop it or not to stop it. If he can do these things, all with confidence and a calm state of mind, he can then handle that machine and it will be discovered that the machine will run well for him

Now let us say the machine bites him, he hurts his hand in it, some other worker jostles against him at the wrong moment, some tool given to him is defective and shatters. An actual physical pain enters into the situation. He tends to fall away from the machine. He tends then to concentrate much more heavily on the machine than he should. He is no longer willing to leave it uncontrolled. When he is working with that machine he must control it. Now as he has entered duress into this situation and as he is already anxious about it, it is fairly certain that the machine will hurt him again. This gives him a second injury and with this injury he feels an even stronger urge to control the machine. You see, during the moments of injury the machine was out of control. Now while out-of-control is a game condition, it is not desired or welcome to this particular machinist. Eventually, it is certain he will look upon this machine as some sort of a demon. He will, you might say, run the machine all day and at night while asleep run it

too. He will spend his week-ends and his holidays still running that machine. Eventually he will not be able to stand the sight of that machine and will flinch at the idea of working it a moment longer.

This picture becomes slightly complicated by the fact that it is not always the injury delivered to him by his own particular machine which causes him to feel anxious about machinery. A man who has been in an automobile accident may return to the working of a machine with considerable qualms about machines in general. He begins to identify his own machine with other machines and all machines become the same machine and that is the machine that hurt him.

There are other conditions which enter into lighter phases of work. In the matter of a clerk we may have a circumstance where he is ill from some other area than his area of work and yet, because he has little time off, is forced to work, sick or not. The tools of his own work, his filing cabinets or his pens or his books or the very room, become identified with his feeling of sickness and he feels that these, too, have bitten him. Thus he becomes obsessed in his control of them and actually degenerates in his ability to control them just as the machinist does. Even though these tools have not actually injured him he associates them with being injured. In other words, he identifies his own sickness with the work he is doing. Thus even a clerk whose tools of trade are not particularly dangerous can become upset about his tools of trade and can first exert enormous control over them on an obsessed basis and at length abandon any control of them and feel he would rather be beaten than do an instant's more work in his particular sphere.

One of the ways of getting over such a condition is simply to touch or handle one's various tools of trade and the surroundings in which he works. If a man were to go all the way around an office in which he had worked for years and touch the walls and window ledges and the equipment of tables and desks and chairs, ascertaining carefully the feel of each one, carefully locating each one with regard to the walls and other items in the room, he would feel much better about the entire room. He would be, in essence, moving himself from a moment of time where he was sick or injured, up to present time. The maxim here is that one must do one's work in present time. One must not continue to work in old moments of injury.

If acquaintance with one's tools, or touching one's tools of the trade and discovering exactly where and how they are, is so beneficial, then what would be the mechanism behind this? We will leave until later in this book some drills and exercises calculated to rehabilitate one's ability to work, and look for a moment at this new factor.

Chapter Six

AFFINITY, REALITY AND COMMUNICATION

There are three factors in Scientology which are of the utmost importance in handling life. These three factors answer the questions, How should I talk to people?-How can I sell people things?-How can I give new ideas to people?-How can I find what people are thinking about?-How can I handle my work better?

We call these three factors in Scientology the A-R-C triangle. It is called a triangle because it has three related points. The first of these points is Affinity. The second of these points is Reality. The third of these points and the most important is Communication.

By Affinity we mean emotional response. We mean the feeling of affection or lack of it, of emotion or misemotion connected with life. By Reality we mean the solid objects, the real things of life. By Communication we mean an interchange of ideas between two terminals.

Without affinity there is no reality or communication. Without reality there is no affinity or communication. Without communication there is neither affinity nor reality. Now these are sweeping statements but are nevertheless very valuable and are true.

Have you ever tried to talk to an angry man? An angry man's communication is at a level of misemotion which repels all terminals from him. Therefore his communication factor is very low, even though very loud. He is attempting to destroy something or some other terminal, therefore his reality is very poor. Very likely what he is being angry about apparently is not what has made him mad. An angry man is not truthful. Thus it could be said that his reality, even on the subject he is attempting to voice, is poor.

There must be good affinity (which is to say affection) between two people before they are very real to each other (and reality must here be used as a gradient, with things being more real than other things). There must be good affinity between two people before they can talk together with any truth or confidence. Before two people can be real to each other there must be some communication between them. They must at least see each other, which is in itself a form of communication. Before two people can feel any affinity for each other they must, to some degree, be real.

These three terms are interdependent one upon the other, and when one drops the other two drop also. When one rises the other two rise also. It is only necessary to improve one corner of this very valuable triangle in Scientology in order to improve the remaining two corners. It is only necessary to improve two corners of the triangle to improve the third.

To give you some idea of a practical application of this, there is the case of the young girl who had run away from home and whose parents would no longer talk to her. The girl, as a clerk in an office, was quite despondent and was doing very bad work. A Scientologist whose attention had been directed to her by the office manager, gave her an interview and discovered that her parents were intensely angry with her and would no longer communicate with her at all. They had been so upset at her refusal (actually her inability) to follow a career as a concert pianist for which they had her studying at great expense that they had "washed their hands of her", and the unpleasantness had forced her to run away to a distant point. Since that time they had not communicated with her but had spoken to people she had known in her home neighborhood in very bitter terms concerning her. In such a state of mind, since she was intimately involved with her parents and wished to be on the best possible terms with them, she could not work. Her failure to perform her work was jamming communication lines in her own office. In other words, her affinity was very low and her reality on things was quite low since she might be said to have been elsewhere most of the time, and thus the communication lines which passed through her hands were equally low and successfully jammed other communication lines in the office, at which time this matter became of intense interest to the

office manager. Now ordinarily in the work-a-day world the office manager would have dismissed her and found another girl. But employment was critical at the time and this office manager knew the modern thing to do. He sent for a Scientologist.

The Scientologist knowing well this A-R-C triangle did a very ordinary thing -- to a Scientologist -- which apparently worked magic as far as the girl was concerned. He told the girl that she must write to her parents -regardless of whether they replied or not she must write -- and she did so. Naturally there was no reply. Why was there no reply from the parents? Well, the girl, having disobeyed them and having moved out from underneath their control, was apparently no longer in contact with them. These parents did not consider her as real. She did not actually exist as far as they were concerned. They had actually said this to themselves. They had actually tried to wipe her out of their lives since she was such a disappointment. Therefore they had no emotion about her whatsoever except perhaps a sort of apathy. They had been unable to control her and so they were apathetic about her since they had failed to control her. At this stage the parents were glumly apathetic about the girl and she was not very real to them at all. As a matter of fact, as they had started her on a career she could not complete, the girl could not have been very real to them in the first place since the career was undoubtedly beyond the girl's capabilities. So the Scientologist had her write a letter. This letter was, as we say in Scientology, entirely "good roads and good weather". The girl said that she was working in this other city, that the weather was good, that she was getting along well, and hoped that they were both well and sent them her love. The letter carefully did not take up any of the problems or activities immediately behind her leaving home. The A of the letter, the affinity, was quite high; the C was present. What the Scientologist was trying to do was establish R, reality: the reality of the situation of the girl's being in another city and the actual reality of her existence in the world. He knew that she was sufficiently involved with her parents that if they did not consider her real, she was not even real to herself. Of course the parents did not answer this first letter but the Scientologist had the girl write again.

After four letters, all of which said more or less the same things and entirely ignored the idea that there had been no reply, there was a sudden letter from the mother to the girl which was angry, not with the girl but with one of her old playmates. The girl, coached, was held in line by the Scientologist and was not permitted to explode back through the communication line but was coaxed into writing a surprised, pleasant letter expressing her happiness at having heard from her mother. After this two letters came, one from the father and one from the mother, both of them were very affectionate and hoped the girl was doing well. The girl of course replied to these very joyously but would have been completely propitiative if the Scientologist had permitted her to do so. Instead, a happy letter went back to each of them, and in return two more letters came, both of them very congratulatory to the girl at having found a job and found something that she was interested in doing in life, with requests as to where her clothes should be sent and actually a small draft of money to help her along in the city. The parents had already begun to plan the new career of the girl which was in exact line with what the girl could do in life -- stenographic work.

Of course the Scientologist knew exactly what was going to happen. He knew that their affinity and reality would come up and the girl's reality, affinity and communication in the office itself would rise as soon as this situation was remedied. He remedied with communication, expressing affinity from the girl and this of course, as it always does, produced reaction. The girl's work came up to par, the girl began to progress and now that her feeling of reality was sufficiently high actually became a very valuable office worker.

Probably the reason why the A-R-C triangle went so long undiscovered was the fact that a person in apathy rises through various tones. These tones are quite uniform; one follows the next and people always come up through these tones one after the other. These are the tones of affinity, and the Tone Scale of Dianetics and Scientology is probably the best possible way of predicting what is going to happen next or what a person actually will do.

The Tone Scale starts well below apathy. In other words, a person is feeling no emotion about a subject at all. An example of this was the American attitude concerning the

atomic bomb; something about which they should have been very concerned was so far beyond their ability to control and so likely to end their existence that they were below apathy about it. They actually did not even feel that it was very much of a problem. Americans processed on this particular subject had to be worked with for some little time until they began to feel apathetic about the atomic bomb. This was really an advance over the feeling of no emotion whatsoever on a subject which should have intimately concerned them. In other words, on many subjects and problems people are actually well below apathy. There the Tone Scale starts, on utter, dead null far below death itself. Going up into improved tones one encounters the level of body death, apathy, grief, fear, anger, antagonism, boredom, enthusiasm and serenity, in that order. There are many small stops between these tones, but one knowing anything about human beings should definitely know these particular emotions.

A person who is in apathy, when his tone is improved, feels grief.

A person in grief, when his tone improves, feels fear.

A person in fear, when his tone improves feels anger.

A person in anger, when his tone improves feels antagonism.

A person in antagonism, when his tone improves feels boredom.

When a person in boredom improves his tone, he is enthusiastic.

When an enthusiastic person improves his tone, he feels serenity.

Actually the below apathy level is so low as to constitute a no-affinity, no-emotion, no-problem, no-consequence state of mind on things which are actually tremendously important.

The area below apathy is an area without pain, interest, beingness or anything else that matters to anyone, but it is an area of great danger since one is below the level of being able to respond to anything and may accordingly lose everything without apparently noticing it. A workman who is in very bad condition and who is actually a liability to the organization may not be capable of experiencing pain or any emotion on any subject. He is below apathy. We have seen workmen who would hurt their hand and think nothing of it and go right on working even though their hand was very badly injured. People in dispensaries working in industrial areas are quite amazed sometimes to discover how little attention some workmen pay to their own injuries. It is an ugly fact that people who pay no attention to their own injuries and who are not even feeling pain from those injuries are not and never will be, without some attention from a Scientologist, efficient people. They are liabilities to have around. They do not respond properly. If such a person is working a crane and the crane suddenly goes out of control to dump its load on a group of men, that sub-apathy crane operator will simply let the crane drop its load. In other words, he is a potential murderer. He cannot stop anything, he cannot change anything and he cannot start anything and yet, on some automatic response basis, he manages some of the time to hold down a job, but the moment a real emergency confronts him he is not likely to respond properly and accidents result. Where there are accidents in industry they stem from these people in the sub-apathy tone range. Where bad mistakes are made in offices which cost firms a great deal of money, lost time and cause other personnel difficulties, such mistakes are found rather uniformly to stem from these sub-apathy people.

So do not think that one of these states of being unable to feel anything, of being dumb, of being incapable of pain or joy is any use to anyone. It is not. A person who is in this condition cannot control things and in actuality is not there sufficiently to be controlled by anyone else and does strange and unpredictable things.

Just as a person can be chronically in sub-apathy, so a person can be in apathy. This is dangerous enough but is at least expressed. Only when we get up into apathy itself do we have the A-R-C triangle beginning to manifest itself and become visible. Communication from the

person himself, not from some circuit or training pattern is to be expected. People can be chronically in grief, chronically in fear, chronically in anger, or in antagonism, or boredom, or actually can be “stuck in enthusiasm”. A person who is truly able is normally fairly serene about things. He can, however, express other emotions. It is a mistake to believe that a total serenity is of any real value.

When a situation which demands tears cannot be cried about one is not in serenity as a chronic tone. This sub-apathy can be mistaken rather easily for serenity, but of course only by a very untrained observer. One glance at the physical condition of the person is enough to differentiate. People who are in sub-apathy are normally quite ill.

Just as we have a range of the Tone Scale thus covering the subject of affinity, so do we have one for communication. On the level of each of the emotions we have a communication factor. In sub-apathy an individual is not really communicating at all. Some social response or training pattern or, as we say, “circuit” is communicating. The person himself does not seem to be there and isn’t really talking. Therefore his communications are sometimes strange to say the least. He does the wrong things at the wrong time. He says the wrong things at the wrong time. Naturally when a person is stuck on any of the bands of the Tone Scale, sub-apathy, apathy, grief, fear, anger, antagonism, boredom, enthusiasm, or serenity, he voices communications with that emotional tone. A person who is always angry about something is stuck in anger. Such a person is not as bad off as somebody in sub-apathy, but he is still rather dangerous to have around since he will make trouble, and a person who is angry does not control things well. The communication characteristics of people at these various levels on the Tone Scale are quite fascinating. They say things and handle communication each in a distinct characteristic fashion for each level of the Tone Scale.

Just as in affinity and communication, there is a level of reality for each of the affinity levels. Reality is an intensely interesting subject since it has to do in the main with relative solids. In other words, the solidity of things and the emotional tone of people have a definite connection. People low on the Tone Scale cannot tolerate solids. They cannot tolerate a solid object. The thing is not real to them; it is thin or lacking weight. As they come upscale, the same object becomes more and more solid and they can finally see it in its true level of solidity. In other words, these people have a definite reaction to mass at various points on the scale. Things are bright to them or very, very dull. If you could look through the eyes of the person in sub-apathy you would see a very watery, thin, dreamy, misty, unreal world indeed. If you looked through the eyes of an angry man you would see a world which was menacingly solid, where all the solids posed a brutality toward him, but they still would not be sufficiently solid or sufficiently real or visible for a person in good condition. A person in serenity can see solids as they are, as bright as they are, and can tolerate an enormous heaviness or solidity without reacting to it. In other words, as we go up the Tone Scale from the lowest to the highest, things can get more and more solid and more and more real.

Affinity is most closely related to space. In fact affinity could be defined as the “consideration of distance” since terminals which are far apart or close together have different affinity reactions one to another. Reality, as we have seen, is most intimately connected with solids. Communication consists of the flow of ideas or particles across space between solids.

While these definitions may seem very elementary and would not at all satisfy an M.I.T. professor, they actually outreach and encompass an M.I.T. professor’s whole field of activity. Truths do not have to be complicated.

There are, as described at considerable length and studied with considerable depth in Scientology, many interrelations of spaces and solids, and ideas or particles, since these are the most intimate things to livingness itself and comprise the universe around us. But the most basic thing we should know about A-R-C is simply emotional tone which is affinity, the actuality of things which is reality, and the relative communication ability concerning them.

Men who can do things are very high on affinity, very high in terms of reality and are very capable in terms of communication. If you wish to measure their various capabilities you should study the subject much further. A whole book has been written about this triangle called Science of Survival.

Then how would you talk to a man? You cannot talk adequately to a man if you are in a sub-apathy condition. In fact you would not talk to him at all. You would have to have a little higher affinity than that to discuss things with anyone. Your ability to talk to any given man has to do with your emotional response to any given man.

Anyone has different emotional responses to different people around him. In view of the fact that two terminals, or, that is to say, two people, are always involved in communication, one could see that someone else would have to be somewhat real. If one does not care about other people at all one will have a great deal of difficulty talking to them, that is certain. The way to talk to a man then would be to find something to like about him and to discuss something with which he can agree. This is the downfall of most new ideas. One does not discuss subjects with which the other person has any point of agreement at all and we come to a final factor with regard to reality.

That with which we agree tends to be more real than that with which we do not agree. There is a definite co-ordination between agreement and reality. Those things are real which we agree are real. Those things are not real which we agree are not real. On those things upon which we disagree we have very little reality. An experiment based on this would be an even jocular discussion between two men of a third man who is present. The two men agree on something with which the third man cannot agree. The third man will drop in emotional tone and will actually become less real to the two who are discussing him.

How do you talk to a man then? You establish reality by finding something with which you both agree. Then you attempt to maintain as high an affinity level as possible by knowing there is something you can like about him. And you are then able to talk with him. If you do not have the first two conditions it is fairly certain that the third condition will not be present, which is to say, you will not be able to talk to him easily.

You should realize in using the A-R-C triangle that, once more, the emotional tones are progressed through as one begins to develop communication. In other words, somewhere up the line somebody who has been totally apathetic about us is liable to become angry at us. If one can simply persevere up through this anger, he reaches only antagonism, then boredom and finally enthusiasm and a perfect communication level of understanding.

Marriages fall apart simply because of a failure of communication, because of a failure of reality and affinity. When communication starts failing the affinity starts dropping. People have secrets from each other and the affinity starts out the bottom.

Similarly, in an office or a business it is perfectly easy to establish those people who are doing things which are not to the best interests of the firm, since these people go gradually and sometimes not so gradually out of communication with the firm. Their emotional tone towards their superiors and those around them starts dropping and finally goes out the bottom.

As can be seen the A-R-C triangle is intimately bound up with an ability to control and an ability to leave uncontrolled. When an individual attempts to control something and fails to do so he then experiences an antipathy toward that thing. In other words, he has not been right, he has been wrong. His intention has failed. His intention has, you might say, backfired upon him. Thus as one attempts to control things and then fails to control them he is likely to drop down Tone Scale about those things. Thus an individual who has been betrayed by the tools of his own trade is apt to treat them with a lowering affinity level. He becomes bored with them, he becomes antagonistic toward them, he becomes angry with them (and at this stage the machinery begins to break up) and finally he becomes afraid of them, he becomes sad about them, he becomes apathetic about them and no longer cares about them at all. At this stage he

certainly cannot use them at all. Actually from the level of boredom down the ability to use one's tools of the trade is consistently lowered.

Now, how could one knowing this raise his ability to control the tools of the trade without even going to a Scientologist? Naturally if a Scientologist took over in this situation the entirety of control of tools or an area or of life could be regained, but, lacking this, how could one simply handle the exact articles with which he is right now and immediately associated?

By using A-R-C he could regain in some measure both his control of the tools and his enthusiasm for work. He would do this by communicating and discovering his willingness for these and the people around him to be real or solid. An individual could regain his ability over his immediate tools simply by touching them and letting them go. This might seem rather pointless and he is apt to reach the level of boredom and become bored with the process. Just above this level is the pay of becoming enthusiastic. It sounds very strange that if one simply touched his automobile and let go and touched it and let go and touched it and let go and touched it and let go, possibly for some hours, he would regain not only his enthusiasm for the automobile but a tremendous ability to control the car which he had never suspected in himself at all. Similarly with people, since these often object to being touched, one can communicate. If one really communicates and communicates well to these people, listens to what they have to say and acknowledges what they say and says what he has to say to them gently enough and often enough so that it is actually received by them, he will regain to a very marked degree his ability to associate and co-ordinate the actions of those people with whom he is immediately surrounded. Here we have A-R-C immediately adjusted to work. It sounds strange that if we made a bookkeeper pick up and lay down his pencil or pen for a couple of hours he would regain his ability to handle it and would improve in his ability to make figures; and that if we got him to touch and let go of his ledger for a considerable length of time he would be more capable of handling that ledger and would make far fewer mistakes with it. This sounds like magic. It is magic. It is Scientology.

Chapter Seven

EXHAUSTION

To work or not to work, that is the question. The answer to that question in most men's minds is exhaustion.

One begins to feel, after he has been long on a job and has been considerably abused on that job, that to work any more would be quite beyond his endurance.

He is tired. The thought of doing certain things makes him tired. He thinks of raising his energy or of being able to force his way along a little bit further, and if he does so he is thinking in the wrong channels since the answer to exhaustion has little if anything to do with energy.

Exhaustion is a very important subject, not only to an individual involved in earning his own living but to the state as well.

Scientology has rather completely established the fact that the downfall of the individual begins when he is no longer able to work. All it is necessary to do to degrade or upset an individual is to prevent him from working. Even the police have now come to recognize the basic Scientology principle that the primary thing wrong with a criminal is that he cannot work, and police have begun to look for this factor in an individual in establishing his criminality.

The basic difficulty with all juvenile delinquency is the one-time apparently humane program of forbidding children to labor in any way. Doubtless it was once a fact that child labor was abused, that children were worked too hard, that their growths were stunted and that they were, in general, used. It is highly doubtful if the infamous Mr. Marx ever saw in America young boys being pulled off machines dead from work and thrown onto dump heaps. Where there was an abuse of this matter, there was a public outcry against it, and legislation was enacted to prevent children from working. This legislation with all the good intention of the world is, however, directly responsible for juvenile delinquency.

Forbidding children to work, and particularly forbidding teenagers to make their own way in the world and earn their own money, creates a family difficulty, so that it becomes almost impossible to raise a family, and creates as well, and particularly, a state of mind in the teenager that the world does not want him and he has already lost his game before he has begun it. Then with something like universal military training staring him in the face so that he dare not start a career, he is of course thrust into a deep sub-apathy on the subject of work, and, when he at length is faced with the necessity of making his own way in the world, he rises into an apathy and does nothing about it at all. It is highly supportive of this fact that our greatest citizens worked, usually when they were quite young.

In the Anglo-American civilization the highest level of endeavor was achieved by boys who, from the age of 12, on farms, had their own duties and had a definite place in the world. Children in the main are quite willing to work. A two, three, four year old child is usually to be found haunting his father or her mother trying to help out either with tools or dust rags, and the kind parent who is really fond of the children responds in the reasonable, and long ago normal, manner of being patient enough to let the child actually assist.

A child so permitted then develops the idea that his presence and activity is desired and he quite calmly sets about a career of accomplishment. The child who is warped or pressed into some career, but is not permitted to assist in those early years, is convinced that he is not wanted, that the world has no part of him.

And later on he will come into very definite difficulties regarding work. However, the child who at three or four wants to work in this modern society is discouraged and is actually

prevented from working, and after he is made to be idle until seven, eight or nine, is suddenly saddled with certain chores. Now this child is already educated into the fact that he must not work and so the idea of work is a sphere where he “knows he does not belong”, and so he always feels uncomfortable in performing various activities.

Later on in his teens he is actively prevented from getting the sort of a job which will permit him to buy the clothes and treats for his friends which he feels are demanded of him and so he begins to feel he is not a part of the society. Not being part of the society, he is then against the society and desires nothing but destructive activities.

The subject of exhaustion is also the subject of prevented work. In the case of soldiers and sailors hospitalized during any one of these recent wars, it is found that a few months in the hospital tends to break the morale of the soldier or sailor to such a point that he may become a questionable asset when returned to his service.

This is not necessarily the result of his lowered abilities. It is the result of injury compounded by inactivity. A soldier who is wounded and cared for in a field hospital close to the front and is returned to duty the moment he can possibly support such duties will be found to retain, in a large measure, his morale. Of course the injury received has a tendency to repel him from the level of action which he once thought best but, even so, he is in better shape than a soldier who is sent to a hospital in the rear. The soldier who is sent to the hospital in the rear is being told, according to his viewpoint, that he is not particularly necessary to the war.

Without actually adding up these principles, the word “exhaustion” began a general use coupled with neurosis. This was based on the fact that people with a neurosis simply looked exhausted. There was no more co-ordination to it than that. Actually a person who has been denied the right to work, particularly one who has been injured and then denied the right to work, will eventually encounter exhaustion.

Technically in Scientology it is discovered that there is no such thing as gradual diminishing by continuing contact of the energy of the individual. One does not become exhausted simply because one has worked too long or too hard. One becomes exhausted when he has worked sufficiently long to restimulate some old injury. One of the characteristics of this injury will be exhaustion. Chronic exhaustion, then, is not the product of long hours and arduous application. It is the product of the accumulation of the shocks and injuries incident to life, each of them perhaps only a few seconds or a few hours long and adding up perhaps to a totality of only fifty or seventy-five hours. But this accumulation -- the accumulation of injury, repulsion and shock -- eventually mounts up to a complete inability to do anything.

Exhaustion can then be trained into a person by refusing to allow him as a child to have any part in the society, or it can be beaten into a person by the various injuries or shocks he may receive incident to his particular activities. Clear up either of these two points and you have cleared up exhaustion. Exhaustion, then, is actually the subject of a Scientology practitioner since only a Scientologist can adequately handle it.

There is a point, however, which is below exhaustion. This is the point of not knowing when one is tired. An individual can become a sort of hectic puppet that goes on working and working without even realizing that he is working at all, and suddenly collapses from a tiredness he was not experiencing. This is our sub-zero or sub-apathy Tone Scale again.

And again we have the subject of control. Here the individual has failed to control things, has tried and then gone down Tone Scale about them into the sub-zero band. Eventually he is incapable of handling anything even resembling tools of the trade or an environment of work and so is unable to inhabit such an environment or handle such tools. The individual can then have many hard words cast in his direction. He can be called lazy, he can be called a bum, he can be called criminal. But the truth of the matter is he is no more capable of righting his own condition without expert help than he is capable of diving to the center of the earth.

There are some means of recovering one's verve and enthusiasm for work short of close work with a Scientology practitioner. These are relatively simple and very easy to understand. We have in Scientology something we call Introversion and something else we call Extroversion.

Introversion is a simple thing. It means looking in too closely. And Extroversion is also a simple thing. It means nothing more than being able to look outward. It could be said that there are introverted personalities and extroverted personalities. An extroverted personality is one who is capable of looking around the environment. An introverted personality is only capable of looking inward at himself.

When we examine the A-R-C Tone Scale we see at once that an introverted personality is shying away from solids. In other words he is not confronting reality. Reality is agreement in the mental plane and is solids in the physical plane.

A person who is capable of looking at the world around him and seeing it quite real and quite bright is of course in a state of extroversion. He can look out, in other words. He can also work. He can also see situations and handle and control those things which he has to handle and control, and can stand by and watch those things which he does not have to control and be interested in them therefore.

The person who is introverted is a person who has probably passed exhaustion some way back. He has had his attention focused closer and closer to him (basically by old injuries which are still capable of exerting their influence upon him) until he is actually looking inward and not outward. He is shying away from solid objects. He does not see a reality in other people and things around him.

Now let us take the actual subject of work. Work is the application of attention and action to people or objects located in space.

When one is no longer able to confront people or objects or the space in which they are located, he begins to have a lost feeling. He begins to move in a mistiness. Things are not real to him and he is relatively incapable of controlling those things around him. He has accidents. He has bad luck. He has things turn against him simply because he is not handling them or controlling them or even observing them correctly. The future to him seems very bad, so bad sometimes that he cannot face it. This person could be said to be severely introverted.

In work his attention is riveted on objects which are usually at the most only a few feet from him. He pays his closest attention to articles which are within the reach of his hands. This puts his attention away from extroversion at least to some spot in focus in front of his face. His attention fixes there. If this is coincident with some old injury incident or operation, he is likely to fix his attention as well on some spot in former times and become restimulated, so that he gets the pains and ills and the feeling of tiredness or apathy or sub-apathy which he had during that moment of injury. As his attention is continuously riveted there he of course has a tendency to look only there, even when he is not working.

Let us take an accountant. An accountant's eyes are on books at fixed distances from his eyes. At length he becomes "short-sighted". Actually he doesn't become short-sighted, he becomes book-sighted. His eyes most easily fix on a certain point in distance. Now as he fixes his attention there he tends to withdraw even from that point until at length he does not quite reach even his own books. Then he is fitted with glasses so that he can see the books more clearly. His vision and his attention are much the same thing.

A person who has a machine or books or objects continually at a fixed distance from him leaves his work and tends to keep his attention fixed exactly where his work was. In other words, his attention never really leaves his work at all. Although he goes home he is still really sitting in the office. His attention is still fixed on the environment of his work. If this

environment is coincident with some injury or accident (and who does not have one of these at least) he begins to feel weariness or tiredness.

Is there a cure for this? Of course only a Scientology practitioner could clear up this difficulty entirely. But the worker does have something which he can do.

Now here is the wrong thing to do regardless of whether one is a bookkeeper, an accountant, a clerk, an executive or a machinist. The wrong thing to do is to leave work, go home, sit down and fix attention on an object more or less at the same distance from one as one confronts continually at work. In the case of a foreman, for instance, who is continually talking to men at a certain distance away from him, the wrong thing for him to do is to go home and talk to his wife at the same distance. The next thing she knows, she will be getting orders just as though she were a member of the shop. Definitely the wrong thing to do is to go home and sit down and read a paper, eat some dinner and go to bed. If a man practiced the routine of working all day and then sitting down "to rest" with a book or a newspaper in the evening, it is certain that sooner or later he would start to feel quite exhausted and then after a while would fall even below that and would not even wonder at his unwillingness to perform tasks which were once very easy to him.

Is there a right thing to do? Yes there is. An individual who is continually fixed upon some object of work should fix his attention otherwise after working hours.

Now here is a process known as "Take a Walk". This process is very easy to perform. When one feels tired on finishing his work, no matter if the thought of doing so is almost all that he can tolerate without falling through the floor, he should go out and walk around the block until he feels rested. In short, he should walk around the block and look at things until he sees the things he is walking near. It does not matter how many times he walked around the block, he should walk around the block until he feels better.

In doing this it will be found that one will become a little brighter at first and then will become very much more tired. He will become sufficiently tired that he knows now that he should go to bed and have a good night's sleep. This is not the time to stop walking since he is walking through exhausted. He is walking out his exhausted. He is not handling the exhaustion by physical exercise. The physical exercise has always appeared to be the more important factor to people but the exercise is relatively unimportant. The factor that is important is the unfixing of his attention from his work to the material world in which he is living.

Masses are reality. To increase one's affinity and communication it is actually necessary to be able to confront and tolerate masses. Therefore walking around the block and looking at buildings will be found to bring one upscale. When one is so tired that he can barely drag himself around, or is so tired that he is hectically unable to rest at all, it is actually necessary that he confront masses. He is simply low on the Tone Scale. It is even doubtful if there is such a thing as a "fall of physical energy". Naturally there is a limit to this process. One cannot work all day and walk around the block all night and go to work the next day again and still expect to feel relieved. But one should certainly spend some time extroverting after having introverted all day.

"Take a Walk" is, within reason, a near cure-all. If one feels antagonistic towards one's wife, the wrong thing to do is to beat her. The right thing to do is to go out and take a walk around the block until one feels better, and make her walk around the block in the opposite direction until an extroversion from the situation is achieved. It will be discovered that all domestic quarrels, particularly amongst working people, stem from the fact that, having been overfixed (rather than overstrained) on one's work and the situations connected with it, one has failed to control certain things in his working environment. He then comes home and seeks to find something he can control. This is usually the marital partner or the children, and when one fails even there he is apt to drop down scale with a vengeance.

The extroversion of attention is as necessary as the work itself. There is nothing really wrong with introverting attention or with work. If one didn't have something to be interested in he would go to pieces entirely. But if one works it will be found that an unnatural tiredness is apt to set in. When this is found to be the case then the answer to this is not a drop into unconsciousness for a few hours as in sleep, but in actually extroverting the attention and then getting a really relaxing sleep.

These principles of extroversion and introversion have many ramifications and, although "Take a Walk" is almost laughable in its simplicity, there are many more complicated processes in case one wished to get more complicated. However, in the main "Take a Walk" will take care of an enormous number of difficulties attendant to work. Remember that when doing it one will get more tired at first and will then get fresher. This phenomenon has been noted by athletes. It is called the second wind.

The second wind is really getting enough environment and enough mass in order to run out the exhausted of the last race. There is no such thing as a second wind. There is such a thing as a return to extroversion on the physical world in which one lives.

Similar to "Take a Walk" is another process known as "Look Them Over". If one has been talking to people all day, has been selling people all day or has been handling people who are difficult to handle all day, the wrong thing to do is to run away from all the people there are in the world. You see, the person who gets over-strained when handling people has had large difficulties with people. He has perhaps been operated upon by doctors, and the half-seen vision of them standing around the operating table identifies all people with doctors, that is to say, all people who stand still. This, by the way, is one of the reasons why doctors become so thoroughly hated in a society since they do insist on practices known as surgery and anaesthesia and such incidents become interlocked with everyday incidents.

Exhaustion because of contact with people actually necessitates that the "havingness" (another Scientology term for reality) of people has been reduced. One's attention has been fixated upon certain people while his attention, he felt, ought to be on other people, and this straining of attention has actually cut down the number of people that he was observing. Fixed attention, then, upon a few people can actually limit the number of people one can "have", which is to say, limits one's reality on people in general.

The cure for this is a very simple one. One should go to a place that is very well populated such as a railroad station or a main street and should simply walk along the street noting people. Simply look at people -- that is all. It will be found after a while that one feels people aren't so bad and one has a much kinder attitude towards them and, more importantly, the job condition of becoming overstrained with people tends to go away if one makes a practice of doing this every late afternoon for a few weeks.

This is one of the smartest things that a salesman can do, since a salesman, above and beyond others, has a vested interest in being able to handle people and get them to do exactly what he wants them to do, that is, buy what he has to sell. As he fixes his attention on just one too many customers, he gets tired of the whole idea of talking to people or selling and goes down Tone Scale in all of his activities and operations and begins to consider himself all kinds of a swindler and at length doesn't consider himself anything at all. He, like the others, should simply find populated places and walk along looking at people. He will find after a while that people really do exist and that they aren't so bad. One of the things that happens to people in high government is that they are being continually "protected from" the people and they at length become quite disgusted with the whole subject and are apt to do all manner of strange things. (See the lives of Hitler and Napoleon.)

This principle of extroversion and introversion could go much further in a society than it does. There is something that could be done by the government and by businesses in general which would probably eradicate the idea of strikes and would increase production quite markedly. Workers on strike are usually discontented not so much with the conditions of work,

but with work itself. They feel they are being victimized, they are being pressed into working at times when they do not want to work, and a strike comes as an actual relief. They can fight something. They can do something else than stand there and fiddle with a piece of machinery or account books.

Dissatisfied workers are striking workers. If people become exhausted at work, if people are not content with work, if people are upset with work, they can be counted upon to find a sufficient number of grievances to strike. And, if management is given enough trouble and lack of co-operation on the part of the people on the lower chains of command, it can be certain that management sooner or later will create situations which cause workers to strike. In other words, bad conditions of work are actually not the reason for labor troubles and disputes. Weariness of work itself or an inability to control the area and environments of work are the actual cause of labor difficulties.

Any management given sufficient income to do so, if that management is not terribly aberrated, will pay a decent working wage. And any workman given half a chance will perform his duties cheerfully. But once the environment itself becomes overstrained, once the company itself has become introverted by overt acts on the part of the government, once the workers have been shown that they have no control over management, there can be after that labor disputes. Underlying all these obvious principles, however, are the principles of introversion and extroversion. Workers become so introverted at their tasks that they no longer are capable of affinity for their leaders and are no longer capable actually of viewing the environment in which they work. Therefore someone can come along and tell them that all the executives are ogres, which is obviously not true, and on the executive level someone can come along and tell the executives that all the workers are ogres, which is obviously, on that side, not true either.

In the absence of broad treatment on individuals, which is a gargantuan task, a full program could be worked out that would handle the principle of introversion. It is certain that if workers or managers get introverted enough they will then find ways and means of inventing aberrated games such as strikes, and so disrupt production and decent relationships and living conditions within the factory, the office, or the concern.

The cure would be to extrovert workers on a very broad scale. This could be done as one solution by making it possible for all workers to have two jobs. It would be necessary for the company, or related interests such as the government, to make available a sufficient number of public works projects to provide work for workers outside the sphere of exact application. In other words, a man who is made to work continually inside and at a very fixed task would find a considerable relief at being able to go outside and work, particularly at some disrelated task. As an example, it would be a considerable relief to an accountant to be able to dig ditches for a while. A machinist running a stationary machine would actually find it a very joyful experience to push around a bulldozer.

Such a plan then would actually take introversion and extroversion with a large hand and bring it about. Workers who are working in fixed positions with their attention very close to them would then be permitted to look more widely and to handle things which tended to extrovert them. Such a program would be very ambitious but it would be found, it is certain, to result in better labor-management relations, better production and a considerable lessening of working and public tension on the subjects of jobs and pay.

In short, there are many things that could be done with the basic principle of extroversion-introversion. The principle is very simple: when an individual is made too introverted things become less real in his surroundings and he has less affinity for them and cannot communicate with them well. Furthermore, what does communicate is apt to communicate at his lowered Tone Scale so that even good news will be poorly received by him. In such a condition he becomes tired easily. Introversion results in weariness, exhaustion and then an inability to work. The remedy for it is extroversion, a good look at and communication with the wider environment, and unless this is practiced, then, in view of the fact that any worker is subject to injuries or illnesses of one kind or another, a dwindling spiral will ensue

which makes work less and less palatable until at length it cannot be performed at all and we have the basis of not only a non-productive, but a criminal society.

Chapter Eight

THE MAN WHO SUCCEEDS

The conditions of success are few and easily stated.

Jobs are not held consistently and in actuality by flukes of fate or fortune. Those who depend upon luck generally experience bad luck. The ability to hold a job depends in the main upon ability. One must be able to control his work and must be able to be controlled in doing his work. One must be able, as well, to leave certain areas uncontrolled. One's intelligence is directly related to his ability. There is no such thing as being too smart. But there is such a thing as being too stupid.

But one may be both able and intelligent without succeeding. A vital part of success is the ability to handle and control, not only one's tools of the trade, but the people with whom one is surrounded. In order to do this one must be capable of a very high level of affinity, he must be able to tolerate massive realities and he must also be able to give and receive communication.

The ingredients of success are then: First an ability to confront work with joy and not honor; a wish to do work for its own sake, not because one "has to have a pay-check". One must be able to work without driving oneself or experiencing deep depths of exhausted. If one experiences these things there is something wrong with him. There is some element in his environment that he should be controlling that he isn't controlling, or his accumulated injuries are such as to make him shy away from all people and masses with whom he should be in intimate contact.

The ingredients of successful work are: training and experience in the subject being addressed, good general intelligence and ability, a capability of high affinity, a tolerance of reality, and the ability to communicate and receive ideas. Given these things there is left only a slim chance of failure. Given these things a man can ignore all of the accidents of birth, marriage or fortune, for birth, marriage and fortune are not capable of placing these necessary ingredients in one's hands. One could have all the money in the world and yet be unable to perform an hour's honest labor. Such a man would be a miserably unhappy one.

The person who studiously avoids work usually works far longer and far harder than the man who pleasantly confronts it and does it. Men who cannot work are not happy men.

Work is the stable datum of this society. Without something to do there is nothing for which to live. A man who cannot work is as good as dead and usually prefers death and works to achieve it.

The mysteries of life are not today, with Scientology, very mysterious. Mystery is not a needful ingredient. Only the very aberrated man desires to have vast secrets held away from him. Scientology has slashed through many of the complexities which have been erected for men and has bared the core of these problems. Scientology for the first time in Man's history can predictably raise intelligence, increase ability, bring about a return of the ability to play a game, and permits Man to escape from the dwindling spiral of his own disabilities. Therefore work itself can become a game, a pleasant and happy thing.

There is one thing which has been learned in Scientology which is very important to the state of mind of the workman. One very often feels in his society that he is working for the immediate pay-check and that he does not gain for the whole society anything of any importance. He does not know several things. One of these is how few good workmen are. On the level of executives, it is interesting to note how precious any large company finds a man who can handle and control jobs and men really is. Such people are rare. All the empty space in the structure of this work-a-day world is at the top.

And there is another thing which is quite important, and that is the fact that the world today has been led to believe, by mental philosophies calculated to betray them, that when one is dead it is all over and done with and that one has no further responsibility for anything. It is highly doubtful if this is true. One inherits tomorrow what he died out of yesterday.

Another thing we know is that men are not dispensable. It is a mechanism of old philosophies to tell men that if they think they are indispensable they should go down to the graveyard and take a look -- those men were indispensable too. This is the surest foolishness. If you really looked carefully in the graveyard you would find the machinist who set the models going in yesteryear and without whom there would be no industry today. It is doubtful if such a feat is being performed just now. A workman is not just a workman. A laborer is not just a laborer. An office worker is not just an office worker. They are living, breathing, important pillars on which the entire structure of our civilization is erected. They are not cogs in a mighty machine. They are the machine itself.

We have come to a low level of the ability to work. Offices depend very often on no more than one or two men, and the additional staffs seem to add only complexity to the activities of the scene. Countries move forward on the production of just a few factories. It is as though the world were being held together by a handful of desperate men who by working themselves to death may keep the rest of the world going, but again they may not. It is to them that this book is dedicated.

FIRST AID

If somebody is injured, you can assist in many ways. Recovery from a burn or bruise or even sprains or breaks is much swifter with SCIENTOLOGY assists.

The most elementary assist is easily done. For ages Man has known that “laying on of hands” or Mother’s kiss was effective therapy. Even gripping, in pain, an injured member, seems to help. But Man neglected the most important part of “laying on of hands”. This follows.

Do this exactly and do it with a minimum of talk.

Place your index finger or fingers or palm on the injured member, very lightly, and say to the person, “Put your attention on my hand”. Now change the position of your finger or palm and have the person do it again.

It is best to touch the individual on spots which are further from his head than the injury.

Do not talk excessively. But coax him, as you touch, briefly, spot after spot, to put his attention on your finger or fingers or palm.

Change the spot every moment or two. Be calm. Be reassuring.

If the person experiences pain or trembling as a result, keep on, for the assist is working.

Continue in this fashion for many minutes or half an hour if necessary, until pain or upset is gone.

During this assist the person has his eyes closed.

It is not power from your finger which is aiding him. It is power he generates by “looking” at your finger down through his body. You are putting him into communication with the injury. His communication with it brings about the recovery.

Ordinarily injuries, sprains, burns, scalds, broken bones, headaches and colds heal slowly because the individual is avoiding this area with his own energy.

1 January 1957

So we're cause again. Here is the Code of a Scientologist being used as a pattern for the medicos in the United States.

“The Code of a Scientologist”

As a Scientologist, I pledge myself to the Code of Scientology for the good of all:

1. To hear or speak no word of disparagement to the press, public or preclears concerning any of my fellow Scientologists, our professional organization or those whose names are closely connected to this science.
2. To use the best I know of Scientology, to the best of my ability, to better my preclears, groups and the world.
3. To refuse to accept for processing, and to refuse to accept money from, any preclear or group I feel I cannot honestly help.
4. To punish to the fullest extent of my power anyone misusing or degrading Scientology to harmful ends.
5. To prevent the use of Scientology in advertisements of other products.
6. To discourage the abuse of Scientology in the press.
7. To employ Scientology to the greatest good of the greatest number of dynamics.
8. To render good processing, sound training and good discipline to those students or peoples entrusted to my care.
9. To refuse to impart the personal secrets of my preclears.
10. To engage in no unseemly disputes with the uninformed on the subject of my profession.”

Using it, the A.M.A. has now proposed the following code for all medicos as given in “The Doctor’s New Conscience” in *Look* Magazine, December 11, 1956. You see, they aren’t completely brave:

“The A.M.A.’s Proposed Principles of Medical Ethics”

These principles are intended to serve physicians, individually or collectively, as a guide to ethical conduct. They are not laws; rather they are standards by which a physician may determine the propriety of his own conduct. They are intended to aid physicians in their relationship with patients, with colleagues, with members of allied professions and with the public, to maintain, under God, as they have through the ages, the highest moral standards.

1. The prime objective of the medical profession is to render service to humanity with full respect for both the dignity of man and the rights of patients. Physicians must merit the confidence of those entrusted to their care, rendering to each a full measure of service and devotion.
2. Physicians should strive continuously to improve their medical knowledge and skill and should make available the benefits of their professional attainments.
3. A physician should not base his practice on an exclusive dogma or a sectarian system, nor should he associate voluntarily with those who indulge in such practices,
4. The medical profession must be safeguarded against members deficient in moral character and professional competence. Physicians should observe all laws, uphold the dignity and honor of the profession and accept its self-imposed disciplines. They should expose, without hesitation, illegal or unethical conduct of fellow members of the profession.
5. Except in emergencies, a physician may choose whom he will serve. Having undertaken the care of a patient, the physician may not neglect him. Unless he has been discharged, he may discontinue his services only after having given adequate notice. He should not solicit patients.
6. A physician should not dispose of his services under terms or conditions which will interfere with or impair the free and complete exercise of his independent medical judgment and skill or cause deterioration of the quality of medical care.
7. In the practice of medicine, a physician should limit the source of his professional income to medical services actually rendered by him to his patient.
8. A physician should seek consultation in doubtful or difficult cases, upon request or when it appears that the quality of medical service may be enhanced thereby.
9. Confidence entrusted to physicians or deficiencies observed in the disposition or character of patients, during the course of medical attendance, should not be revealed except as required by law or unless it becomes necessary in order to protect the health and welfare of the individual or the community.
10. The responsibilities of the physician extend not only to the individual but also to society and demand his cooperation and participation in activities which have as their objective the improvement of the health and welfare of the individual and the community.”

We are advising them to use our Number 3. You see how they recoiled from it.

THE STORY OF A STATIC

Once upon a time there was a thetan, and he was a happy little thetan and the world was a simple thing. It was all very, very simple.

And then one day somebody told him he was simple.

And ever since that time he has been trying to prove that he is not.

And that is the history of the Universe, the Human Race, the Fifth Invaders, the Fourth Invaders, the 31/2 Invaders, the people on Mars, Saturn, Jupiter, Arcturus, the Markab Galaxy, the Markab System, the Psi Galaxy, Galaxy 82—

I don't care where you look—that's the story.

Only it's too simple a story, much too simple a story, because a thetan would have to admit he was simple if he understood it.

L R H

HUBBARD COMMUNICATIONS OFFICE

HCO TRAINING BULLETIN OF 6 FEBRUARY 1957

The following procedure is not for general release to the field, and is to be released only to organizational staff. The reason it is not being generally released to the field is that very few auditors have the skill necessary to run these techniques. The entirety of this will be released, somewhat modified, and much more expanded, some time in the future, and forms the backbone of a book. Therefore, I will appreciate your courtesy in not releasing these techniques to anyone, but keeping them in the Clinic until the book can be written, since you will scoop me if you do not, and the book will have that much less meaningfulness and appeal. The reason I am releasing these at this moment is that we need them, and we have every right to use them, but I do not wish them to be generally released, since they are actually so powerful that an auditor who is badly schooled would not be able to handle them at all on preclears. He is better off using that in which he has been trained. It will take a book to get him totally oriented on this subject.

PROCEDURE CCH

This procedure has two forms, it has the long form and the short form. The long form is omitted here since it is not necessary in any broad number of cases, and the short form is entirely right out through the top.

The name, "CCH", is taken from Communication-Control-Havingness. These are the immediate exercise targets of this procedure.

The goal of this procedure is to take the preclear from as far south as preclears can be reached, straight on through as far north as a preclear can be pushed. Therefore, the breadth of Procedure CCH is much greater than any other auditing procedure ever released.

This procedure is covered rather adequately in the long series of lectures of the 16th ACC which specifically cover technique. This does not mean the entirety of the 16th ACC lectures, it means that section of the 16th ACC lectures which was immediately addressed to technique. A study of these lectures is recommended before extensive use of Procedure CCH is engaged upon in the Clinics. Copies of these lectures are being made available to Washington and London.

The goal of the Auditor is to discover an ability in the preclear and improve it.

The first discoverable ability of a preclear is communication in one form or another. This even applies to a person in a comatose state. Such a person quite ordinarily responds to tactile if you do not expect him to acknowledge. He is not able to acknowledge our communication to him by tactile since he at first cannot sufficiently or adequately control the body in order to make the reply.

HPA/HCA PROCESSES

Group 1: Communication Processes, taught in Indoctrination:

* *Parts of Communication*

*A. "Look at me. Who am I?"

*B. *Hand contact mimicry.* Commands: "Put your hands against mine," then "mimic and contribute to the motion of my hands." Acknowledge when the preclear has

completed the command. Then say "Put your hands in your lap." Then the auditor does the same. Repeat this process.

- *C. *Hand Mimicry (gradient scale of spaces)*. Hand mimicry is run the same as hand contact mimicry, with the following changes in the commands: "Put your hands up facing mine, with about one inch distance between your hands and mine." Then, "Mimic and contribute to the motions of my hands, while maintaining the same distance between our hands." Acknowledge. Then, "Put your hands in your lap." Auditor then puts his hands in his lap. When this level of the process is flat, the auditor then puts more space between himself and the preclear, on a gradient scale, and changes the distance part of the command accordingly. Use a gradient scale to a limit of 3 feet.
- *D. *Mirror image hand mimicry*. The commands are "Put your hands up facing mine." "Mimic my commands mirror-wise; that is, when I move my hand back, you move your hand back on the same side of the body, and when I move my hands forward, you move your hands forward correspondingly." "Good. Put your hands in your lap."
- E. *Full body mimicry*. The auditor picks two spaces in the auditing room, marking them out with chairs or other objects, or using the rug. One space is for the preclear, and the other for the auditor. The auditor explains to the preclear as follows: "I am going to step into my space and deliver a command to you which will consist of a series of body positions. When I have finished executing this command I will step out of the space. You are then, without any further command on my part, to step into your space and mimic the command I have given. When you have finished doing that, then you step out of that space and that will be the end of that command." The process is then repeated. If the preclear is not doing a good job of mimicking the auditor or is thrown into inordinately long communication lags, the process may be run with the auditor stepping into his space and giving the command while at the same time, the preclear steps into his space and mimics the command. That is to say, the command is executed simultaneously by the auditor and the preclear instead of the auditor first executing it and then the preclear following it, with a mimic.

Group II. Location-Control Processes:

Parts of Control

- A. *Locational*. "Locate the ___." The auditor has the preclear locate the floor, the ceiling, the walls, the furniture in the room, and other objects and bodies.
- *B. *Connectedness*. "Look around here and find something you wouldn't mind making connect with you." Make sure while running this process that the preclear is making (causing) things to connect with him rather than he connecting with the things. If he connects with the things, it is a no-games condition. It is important that this be stressed in the session.
- *C. *8-C Solids*. "Do you see that ___ over there?" "Good." "Walk over to it." "Good." "Touch it." "Good." "Now, make it a little more solid." "Good." "Let go of ___." "Good." The process is then repeated, with the auditor selecting the object each time.
- D. *S-C-S*. "I am going to tell you to start the body. Then I want you to start the body." "All right." "Start the body." If the preclear has started the body, he acknowledges the execution of the command. The auditor then repeats this process. Note: These commands must be used exactly, and be duplicated by the auditor. You should also get the preclear's agreement to do it each time. The change portion of S-C-S is run

as follows: The auditor picks and arranges with the preclear the location of three spots in the room. The auditor then designates these spots as Spot A, Spot B, and Spot C, and has the preclear stand in one of them. The command, duplicated each time, is as follows: "I'm going to tell you to change the body from Spot ___ to Spot___. Then you change the body from___to___. Okay?" When the preclear indicates that he has heard this and understood, the auditor then gives the command, "Change the body from___to___." Spots A, B and C may be chosen by the auditor in any order. The Stop portion of S-C-S is run as follows: "I'm going to tell you to get the body moving in that direction." The auditor indicates a direction across the room. "I then want you to get the body moving, and somewhere along the line I'll tell you to stop. I then want you to stop the body." When the preclear has stopped his body, the auditor then acknowledges and repeats the process and commands. As in the previous two, the auditor always duplicates the commands and gets the agreement of the preclear to make sure that he has started, changed and stopped the body himself, while running the above three processes.

Group III. Duplication Processes:

- A. *Opening Procedure by Duplication.* "Go over to the___." "Look at it." "Pick it up." "What is its colour?" "What is its temperature?" "What is its weight?" "Put it down in exactly the same place." The preclear obeys each command and answers each question in turn. The auditor then says, indicating the other object, "Go over to the___." "Look at it." "Pick it up." "What is its colour?" "What is its temperature?" "What is its weight?" "Put it down in exactly the same place." The auditor using the same words, same objects, and the same formula over and over again. This process must be run with good ARC at all times, and with a good duplication of the commands, and with good control.
- *B. *Keep it from going away.* The auditor asks the preclear to select a number of objects in the room which appear real to the preclear. The auditor then selects two of these objects. These objects should be of a size that is easy to handle with the hands, and of a significance as non-restimulative as possible to the preclear. The auditor then selects two of these objects and places them either on a table in front of the preclear within easy reach and with some distance between them, or else on the arms of the preclear's chair, one object on each arm. The commands of the process are: "Pick up the___." "Good." "Keep it from going away." "Good." When the preclear has kept it from going away for at least an instant and with certainty, the auditor then says, "Put it back exactly where you found it." "Good." The auditor then says, indicating the other object, "Pick up the___." "Good." "Keep it from going away." "Good." "Put it back exactly where you found it." "Good." The process is repeated.
- *C. *Hold it still.* The commands for this process and the execution of it are the same as the process "Keep it from going away", with the following exceptions: the command "Hold it still" is used in place of the command "Keep it from going away".

Group IV. Havingness Processes:

Objective Havingness

- A. *Terrible Trio* "Look around here and find something you would be willing to have." "Look around here and find something you would be willing to permit to remain where it is." "Look around here and find something you would be willing to dispense with."

- B. *Trio on Valences*. “Look around here and find something___can’t have.” Run this command until flat then run “Look around here and find something you can have.” (NOTE: should be a person, such as mother, father, sister, etc.)
- C. *Objective Solids*. “Look around here and find something.” “Okay.” “Make it a little more solid.”

Group V. Subjective Havingness:

- A. *Subjective Havingness*. “Mock up___.” “Make it a little more solid.” “Do what you like with the mock-up.” 1. Confusions; 2. Wasting havingness.
- B. *Straight Wire*. “Tell me something you would be willing to forget.” Preclear answers, auditor acknowledges. Repeat until flat.
- *C. *Then and Now Solids*. “Get a facsimile.” “Make it a little more solid.” “Look at the environment.” “Make it a little more solid.” Repeat this process.

Group VI. Thought Processes:

- A. *Rising Scale*. This run on emotion and/or attitude charts, by running from the lowest to the top of the respective scale. “Put ___ into the wall.” Preclear answers, auditor acknowledges. (Example, “Put apathy into the wall,” etc.)
- *B. *Present-time problem*. “Invent a problem of Comparable Magnitude to ___.” “How could that be a problem to you?” The blank in this case being a terminal; best to use a single terminal with a minimum of condition.
- C. *Find a spot*. “Look around here and find a place you could light.” Preclear answers, auditor acknowledges. “Invent a consequence of your having lighted.” Preclear answers, auditor acknowledges.
- *D. *Thoughts in Walls*.
 - (1) “Have the front wall say to you, ‘This means go to___.’” Preclear supplies the blank, the blank being a location. This is run on front, back, right, left, ceiling and floor—use same order throughout. After one round, you alternate “Have the front wall say to you, ‘This means don’t go to ___.’” When these alternates are flat, run:
 - (2) “Have the front wall say to you, ‘This means stay in___,’” which is alternated with “Have the front wall say to you, ‘This means don’t stay in___”
 Run pairs (1) and (2) comparatively flat—this is the only process for terror stomach.
- E. *Objective Not Know*. “Look around here and find something you wouldn’t mind not knowing.”

GOOD PROCESSES

Prepared from the research papers of L. Ron Hubbard

The material in recent PABs, much of it, has come from an LRH research paper that still contains material, not covered, on some modern processes and general theory of primary value. In the research paper it is given in extremely staccato fashion, as the paper was the basis for conferences where the material could be expanded. Here is some more of the material.

The best processes are those which fastest convert unknowing games conditions to knowing games conditions. This does not disregard the fact that one's goal of processing might be, at a very far reach, the static. No-games conditions do describe the static and various harmonics of the static. The no-games conditions list does not anywhere describe workable processing tools. Games conditions, and games conditions only, do that.

Here are some of those fastest processes:

CONTROL. Start, Change and Stop on objects or preclear's body, emphasis on stop. Why emphasis on stop? It has long been known in Scientology (see *Scientology 8-80*) that the ability to hold points, locations, masses and objects, including bodies, in space at one's own direction and choice is the essence of control. Without the ability to fix locations in space there is no self-determinism. Where one is concerned with the physical universe he collapses if he cannot hold space.

The exact commands and procedure of control processes are contained in recent PABs as well as in early Bulletins to be released.

The effectiveness of any processing is as great as the extreme of good control is exercised by the auditor. A corollary to this is that how well one lives life is measured by the extent of his good control of the things within his actual boundaries of interest.

FIGHT THE WALL. This is a very fascinating process. The auditor makes (he has to *make him*) the preclear fight the wall bodily. Since there is no accepted social behavior in man on this subject, the way that a preclear will DO this process varies somewhat wildly. What his running of the process does is to bring him up to a confrontingness of walls and environment. It does this through exercising a games condition (fighting) and causing the preclear to exercise this games condition knowingly. It is not designed to 7 nor does it, run out the preclear's ability to fight.

The total command is, having directed the preclear's attention to a wall, "**Fight the wall.**" You don't tell them how to fight it, you tell them to fight it. The amount of bruised knuckles and holes in plaster can be cut down by providing the preclear with a mattress or other protector and it works just as well. The purpose of the process is not damage, although preclears are known to go into fighting walls with a peculiar enthusiasm.

This can also be run by mock-ups but not as a substitute for making the preclear use his body. Do not make a thinkingness process of this, it is a doingness and a confrontingness process. It can be run outdoors on trees, etc., as well as in the auditing room.

OPPONENTS. The main thing about opponents is that there are not enough of them. An opponent is a games condition. Have the preclear tell lies about the subject of opponents. That is a good process. Have the preclear invent opponents. Of these two, Invent is best, but Lie is a lower harmonic of Invent and can be run all the way south.

When opponents become scarce to an individual they become so precious and valuable that he will neither confront, have, nor let go of anything he considers to be one. He will fight himself and do all sorts of things but he will not do *these* things. He becomes extremely aberrated on this point and will attempt to “discover” enemies or “find out” or some such thing. This is a compulsive games condition, with unknowness. Havingness is extremely poor on such an individual.

The exact commands are **“Tell me a lie about an opponent,” “Tell me a lie about opponents,” “Invent an opponent.”**

INDIVIDUALITY. A lot is said about individuality. Indeed it is a highly important subject. Either individuality is a very bad thing and causes human troubles, is a very good thing, or it is a games condition. The truth is that individuality is an aberration and a games condition. It therefore, good or bad, processes, whereas namelessness (unidentifiedness) does not. An extreme or exaggerated view on the subject of individuality is a havingness upset and contains unknowingness. Knowingness about identity includes awareness of game. A good process is **“Invent an individuality that would impress people.”** Run it for all eight dynamics. Examples: **“Invent an individuality that would impress animals,” “Invent an individuality that would impress God.”**

CAN'T HAVE. An interesting little creative processing process is **“Mock up a mockup”** and then **“Say that bodies can't have it”** or **“Say that your body can't have it.”** A further use of this is to say that the MEST universe can't have it. Auditors call this “Escape Processing.”

EFFECT. Lie about an effect you are having. Examples: **“I'm not having any effect from my tooth,” “I'm not having any effect from that wall”** or **“That wall is giving me some money.”** Lie about an effect you are having on (any dynamic).

PROBLEMS. Problems must be handled in auditing. Never leave the present time problem unhandled. This does not mean that the problem is flat when the preclear says he now knows what to do about it or can solve it, etc. The problem is not flat until he can tolerate it solved or not solved. If he **MUST** solve it then he is not able to tolerate the problem and it is not flat. People think that all problems or some problems **MUST** be solved. They think this because they cannot tolerate or confront the problems.

Problems are processed by **“Invent a problem of comparable magnitude to (the problem).”** Until preclear can have the problem.

Undercutting the above, is, having the preclear tell lies about the problem.

Inventing problems of comparable magnitude must each time be questioned as to **“How could that be a problem to you?”**

Another process related to problems is “Consequences of Solutions.” Since a problem not confronted persists and confronted does not persist, then preclears can discover that they have been not solving problems because they were scarce.

SOLIDS. “What are you looking at?”, “Make it solid,” “What are you looking at?”, etc.

VACUUMS. A vacuum is a super-cold object which, if brought into contact with bank, drinks bank. Objects at 25°F or less have high electrical capacitance, low resistance. This was psychiatry before Earth. Shocks, ether, can act similarly. This is how one mechanically forgets the past. He depends on pictures, loses pictures to a vacuum incident. Vacuums drink up the preclear’s havingness. They are just incidents and they are brainwashing. You encounter these running solids. Opponents, individualities, more solids, problems, undo them.

RESTIMULATION. When one violates a games condition, intends to have an effect on something and doesn’t, one often puts the effect on the body. One thus gets “no-effect” on opponent, makes an effect on self. This is restimulation. It is also stimulus-response.

“**Effect you could have on (people, preclears, any dynamic)**” remedies this. The condition of self-auditing while auditing is the above restimulation. The same process resolves it.

TO SPLIT VALENCES

A term that really makes a psychiatrist feel like somebody is “schizo,” their nickname for the schizophrenic. It is an odd misnomer in that it means split personality and the trouble with a schizo is that he needs splitting, not that he’s split. He’s in another’s valence, and what is required is to remove or split the preclear out of that other’s valence.

STEPS. A series of steps rather than a single process or command worked best by test at the Hubbard Guidance Center and the London HASI Clinic.

1. Get the preclear under control with Start-Change-Stop. Lots of it. This can’t be slid over or brushed through carelessly. The total reason for getting the preclear under good control is that he is under bad control or he wouldn’t be a preclear, even though the bad control is his own. Though it is his own it is not *knowing*. The auditor’s job is to make the preclear CAUSATIVE throughout. The preclear must be CAUSE toward all things in the session. The control by the auditor is necessary because, left to his own devices, as he has been for aeons, the preclear will be EFFECT of his reactive bank, pictures, circuits and figure-figure. The one thing, of course, that the preclear is effect of in session and not causative toward is the auditing. The auditor pan-determines the whole thing.
2. Unjam the track with “**What are you looking at? Make it solid.**” Anything jamming (sticking, holding) the track (time) can be run AS A VALENCE in the following steps. Examples could be: Mother, dog, book, machine, town, house, gun, etc. You can readily see in this command “**Make it solid**” that the preclear is being CAUSE toward the thing or person. It is of considerable relief to the preclear.
3. Choose valence or valences, weakest universe preferred. At this point skill comes into great demand. The OBVIOUS here would be usually the correct valence to run. Obvious to the AUDITOR. It won’t be obvious to the preclear. For example, the weakest universe would be to the preclear the one that gives no trouble. He never gets bothered or upset about that person. He never even thinks about that person or when he does it is only with the mildest feelings. Why? Because he’s “wearing the head” of that person! He’s looking FROM, not AT. If you find you have picked the wrong valence to run, go back to (1) and choose again at (3).
4. “**What would interest (universe so chosen)?**” Run this flat.
5. “**Invent an opponent of comparable magnitude to _____.**” You are getting a games condition here. Scarcity of opponents is the stickiest condition there is in human relations. Run this until preclear does it well and comm lag is flat.
6. “**What would get the attention of _____?**” Here the preclear will name or invent things that would get the attention of the universe being run. What you know about the SERVICE FACSIMILE will apply here. Run it out this way. “**What would get the attention of _____?**”

7. **“Look around here and find something that ___ can’t have.”** Answers must be things physically observable in the auditing environment. This must be run very, very flat. A key process.
8. **“What could you protect ___ from?”** This actually could be run as above, having the preclear look around the room and find what he could protect ___ from. However, if (7) has been run flat as a pancake it can be run as a subjective process as given.
9. **“What communication could you prevent ___ from originating?”** You will see that this gives the preclear a games condition and an opponent. It isn’t flat when the preclear is still giving answers from the bank. He should make some.
10. **Problems of Comparable Magnitude.** The command is: **“Invent a problem of comparable magnitude to ___.”** This is an important process. Note that it has to be flattened well and that it is not flat when the preclear says he feels better about it or will handle it. It is flat when the preclear can HAVE the problem, does not HAVE TO solve it. Could have it, permit it to remain, or dispense with it. Problems: games condition. Solutions: no-game condition.
11. **“Invent a game you could play with ___.”** This light-hearted little process is dynamite. Don’t neglect it. Run it on the preclear and you’ll see what a high-level process looks like when it really bites. (It will bite if you have properly run the preceding ten steps.)
12. **“Make ___ fight the wall.”** This is done, of course, with mock-ups, until the preclear does them extremely well and with full control of the mock-ups and comm lag is flat.
13. Run (4) to (12) again to check.

This procedure cleans up universes and valences. When running this, keep the preclear at it and do not lapse into discussion or excessive two-way comm aside from the processes themselves. Use two-way communication in delivering the process to the preclear, not in getting the preclear to deliver the bank to the auditor.

This is a lot of processes for one bulletin, but we can include more detailed material on these in future PABs.

5410C20 8ACC-14 The Parts of Man

This is a discussion of the parts of Man as understood through R2-61 and R2-62. The parts of Man are related to overts and motivators. [This is because a thetan as such cannot be harmed and therefore cannot receive a motivator. So he would have to have a confusion of identity to receive a motivator.]

Man consists of four distinct, separate, though related, parts:

1. Thetan
2. Body
3. Thetan machinery
4. Reactive/somatic mind.

Dianetics covers the first four dynamics. Even the first dynamic can be split into these four parts. When you thought you were treating the first dynamic, you were actually treating the third. The absolute Book 1 clear would be the awareness of awareness unit.

Around the end of 1951, LRH mentions that erasure of all facsimiles would result in demolition of the body (See Advanced Procedures and Axioms). In Book 1, we were talking about engrams of this lifetime. Erasing these would give a relative clear. The only trouble was that the awareness of awareness unit, after a few years of this research, kept insisting on exteriorizing, and it turned out to be the person himself. If he felt bad when he was out -- sort of with no character -- he is not stabilized.

So the first dynamic is the awareness of awareness unit, as modified by various things. Pieces of thetan machinery are his creations, hidden and forgotten by him. All the energy used by the machines really comes from the thetan, though, for randomness, he may consider that he needs to eat to keep on going. He can also understand something from someone else, add it to his own machinery, and blame someone for giving him a machine.

The thetan invests the body with characteristics, then he is afraid of losing these characteristics. But this is really no problem. He can invest himself with these characteristics.

The thetan can also duplicate himself. He can create a new, different life unit with full determinism, power, personality, etc. It could have more power than he if it is set up that way. Sex is the super-condensed, many-times-via'd activity of creating other life forms. It is only more complex because it is considered to be. The Thetan actually needs no system to create a living being.

Thetan machinery is not intended to have a life of its own, but sometimes the thetan endows machinery with life. In DMSMH, LRH talks of the possibility of setting the mind alongside the body. This was misinterpreted worst in E-therapy. One can do this and get himself haunted by living beings. He can create them, then go off and leave them. This is basic life multiplication -- a 1D creating a 3D through a 2D. So mankind could have one common ancestor. It would not make that one superior, however, since the offspring could just as well be the superior ones. Furthermore, an individual could just repostulate himself back into his creative unit and thus disappear, especially since, in reality, there is no time. All one could lose would be the knowingness that he had done it. One would have to shut that off for oneself. Now do you think you understand valence a little better?

Having multiplied himself often, an individual had laid aside this ability, begun to hang on to the "only one" computation, and is holding his ability to be himself closely to himself. He tries hard to maintain an identity as a 1D. He becomes too involved in his own agreements and

thinks he needs sex to create a being, but even that creates only a body, which is the granted beingness of many individualities, based upon one individuality that started that genetic line. The thetan got so complex, with all his machinery, and so interlocked with so many other individualities; he granted so much beingness in all directions that he forgot who and what he was and just knew he was supposed to be this identity and repeat the manufactured creation of this identity. This would make him solid, and his machinery would have composited. At this point, he would be a body, and his machinery would become the reactive/somatic mind. The thetan gets so solid as a body that he can be taken over and controlled by another thetan and his machines. The reactive mind that goes along with a body cannot be controlled unless another thetan comes along and takes over the body. However, the body can control the reactive mind. There is no difference between the reactive and the somatic mind.

A thetan can create another thetan. From this, we can get a species, which implies other species, hence a 5th dynamic. Thetans are generally not as anxious to control animal bodies as human bodies, since men's affairs are complex enough to be interesting to control. So animals are generally body + reactive mind: a condensed thetan + machinery.

By addressing the alter-ised complexity, as in psychotherapy, we would never get an as-is-ness, but just more mass. The auditor thus must address the right part: the thetan. Otherwise he might as well try to process a rock as a body: the rock is more complex, being denser (therefore it has more vias on the comm lines). The distance from cause to effect in a rock has so many vias and complexities in it that it loses both cause and effect for the rock. The impulse towards religion in most people is to discover basic cause; however, it leads them to go through vias, which gets them lost. The way to find cause is to find the highest level of freedom, assume it, and then know, because you will be cause and will therefore be capable of being an effect.

As processing improves, we find that the better we understand something, the better we can control it, and the less need to process it so that it can be controlled. So, in modern scientology and dianetics, it is only necessary to knock out the factors you don't want to process because you understand them well enough to control them. The first of these is the reactive mind. There is no sense in processing it since we know how to control it. Also, there's no use in processing the body -- medicine will take care of that. Machinery is interesting, but it's not necessary. So we're left with only the thetan to process, and we process the thetan just enough so that he can take control of his other parts, having recognized them. "Right thought", as in Christian Science, would work fine if you had a clear to begin with. The Christian Scientists have limits on what "right thought" is. But actually, right thought is optimum survival on all dynamics.

So, in processing, we can start with "Be three feet back of your head." For those who don't respond to that, the overt-motivator sequence is a good place to start; it's the mechanical process by which a thetan becomes solid enough to be a body, surrounded by his machinery, which has become the bank. Behind the overt-motivator sequence lies the consideration that matches the overt and motivator. You must be downstairs from pan-determinism to self-determinism for this to happen.

A justifier is the mockup or overt act demanded by a person guilty of an unmotivated act. It is something nonexistent, as an effort to justify the unmotivated act. It's a false motivator. There's nothing really wrong with the motivator-overt sequence; it balances out; no one gets insane or even hurt by it. But the unmotivated act - justifier sequence is the villain! thus the thetan is doomed, because he can never really receive a motivator. That's the whole reason for the dwindling spiral. A thetan can never be harmed, but he can consider he's been harmed, act harmed, and dwindle. Everything the PC tells you is a search for a justifier. His search through his bank quickly as-is-es his few true motivators. So he has too many overts and must get himself sick, downtrodden and betrayed [motivator hunger]. He gives justifiers and pretends they're motivators.

The way you could get him into this dwindling spiral is to define harm for him. This gets into good and evil: R2-61 and R2-62. It only requires the consideration that harm can take place to set off the unmotivated act/justifier sequence. You just get this consideration from yourself. A person must have intended harmful destruction and succeeded to define the concept, "harmful" for himself. Only when someone destroys something he's created does he define harm for the other fellow. He had to do it first himself, because he had to communicate first to be communicated to, since otherwise he couldn't have been located.

Any solidity or departure from the static is a lie. The way we depart from the absolute truth of static is via the lies of justifiers. This is the source of all inability's and deficiencies.

The thetan also has an anxiety about creating an effect. Another thetan can never get a motivator; a thetan knows he can never receive an effect except as he considers it and agrees, so he knows he can never create an effect on another thetan. So he must consider life units as solids. He gets upset when he considers them thetans. Hence people turn away from Scientology because they are afraid of exterior beings. The thetan wants to create an effect but can't without being guilty of an unmotivated act. All he had to do to get messed up was to discover he could harm others; he then tried to justify his unmotivated acts and got solid, and his whole past track would be nearly all hallucination. The insane pack along an enormous number of mocked up facsimiles = justifiers = pictures of things that never occurred.

A good violent fast way to handle this state of affairs is to have the PC mock up things that anything on the seventh dynamic could do to him. This remedies his havingness [motivator hunger]. You can actually use all dynamics. Another process: the PC spots all the spots where he or anyone considered that harm could be or had been done. [R2-61 and R2-62, in Creation of Human Ability].

SPECIFIC FOR TERROR STOMACH

There is a specific process which goes this way. You ask the preclear to put into the six sides of the room, the four walls, the ceiling and the floor, in *regular order*, the statement to him or to some part of his body **“This means go to _____”** and the preclear furnishes the location. He does this with each wall, the floor and the ceiling, in rotation. Now you had better let him have the walls, etc., first of all say it to *him*, then after a while say it to his body. Now the next time round you get him to put into the walls, etc. **“This means don't go to _____.”** Then the next time we go around to **“This means go to _____,”** and finally we get this thing flat. These commands are run in alternation until it seems fairly flat.

Now the reason why you ask him to supply the name of the location each time is simply to see how his communication lag is coming along. If you didn't ask him to add the name you would not see his comm lag. When you ask him to originate a location this puts a little stopper on the line. Now when we have that pair of commands fairly flat we go on into the next pair. **“This means stay in _____”** is completed with all the six sides of the room, and the alternation command in this case is **“This means don't stay in _____,”** and we run these alternately covering the six sides of the room each time.

Now, of course, this is essentially the anatomy of the confusion—the confusion basically of a person doing, or trying to do, two things at once. So we get him to sort out the stable data. This is a technique which has been with us for some time. It is what we call one of our specifics, and it is a specific for a terror stomach.

Now this is something for you to have because these terror stomachs can cause you some difficulty. For instance, one of the commonest things that you find in prison work or in people who are under pressure from the police in one way or another is the terror stomach. With some people just the thought of possibly being arrested would turn one on. Now just why the police are the commonest restimulator of the terror stomach lies, of course, on the back track.

The stomach is guilty of the overt act of eating, it is continuously guilty of this act and becomes quite frantic on the whole subject of being incarcerated. This is rather funny, because the stomach is already incarcerated and is continually incarcerating—it puts food into jail three times a day; and so we get police putting somebody away as being the commonest restimulator of the terror stomach. A terror stomach is simply a confusion in a high degree of restimulation in the vicinity of the vagus nerve. This is one of the larger nerves and it goes into agitation under this restimulation. Now medical science has already solved this, already knows how to take care of it: they simply cut the vagus nerve—that it brings on a fairly early death and completely disrupts the entirety of the gastric system is, of course, not considered. It is comparable with electric shock, which, incidentally, is almost uniformly followed by an early stroke.

Now here we have a specific and this somatic has not had any alleviation from any other process prior to Spring, 1956. At that time some other processes came in which are, to some degree, faster. But they have not yet been tested on a terror stomach with any thoroughness. They are more powerful, but they have not been thoroughly tested against this specific somatic.

With good auditing and good communication we can, apparently at any tone level, seem to be able to use this process successfully. This is quite remarkable. The terror stomach flattens out and if it does recur, it will be quite minor. But the preclear should be warned about this so that if it does recur he can come in again to see the auditor, who can continue the process and flatten it further.

It is a specific and for a long time I figured out the confusion of where to go and where to stay, and figured out the disenfranchisement of the game somewhat. Disenfranchisement brought about a condition of confusion which was best expressed in the stomach evidently. We can handle that today. I can tell you with some confidence that the only thing that would interrupt your ability to handle this would, of course, be your communication with the preclear. This would have to be pretty good before you could use this process. To establish communication with a preclear suffering from the terror stomach is, of course, one of the more interesting things to do because the preclear is quite frantic. He leaps around, goes in and out of session, etc. Nevertheless, in spite of this, the process does level out the terror stomach which is just a bundle of confusion.

With this process one would apparently be dealing with a no-games condition, because something is talking to the preclear. But remember that the preclear is *making* something talk to him for the first time. The walls are always telling people something, and when walls become warnings and when the various items of the physical universe become associated all under the headings of warnings, then you have a terror stomach. Well the common denominator of a warning is not conditional actually, it is a warning about change of position. What has deteriorated in the preclear is the ability to differentiate messages so that all messages mean **“Go to ____, don’t go to ____’ stay in ____, and don’t stay in ____.”** The process runs out, in essence, the bad 8-C of the universe and you just turn it into good 8-C.

When running the process, ask the preclear if he is putting the postulate behind the wall, in the wall, just ahead of the wall, ask him how it is going now, what is the progress of the various points, how much space is the postulate occupying now, has he any inclination to put the postulate into the whole building, or compulsion to do this or that, and so on. You just go on policing it you see, but don’t slow it down with too much policing because this process is a quantity process—unlike almost any other process we have—it’s very low scale and so is quantitative, i.e. how many times he gets it into the wall. So you want him to do as many of these commands as possible.

Now the reason I bring up this process is to acquaint you with it and also because it is so wonderfully illustrative of the relationship between aberration and learning rate, a subject which I will be continuing in another PAB.

LEARNING RATE
(Part 1)

This is one of the more important things with which we have to do. Scientology has always been the science of knowing how to know. With some diffidence I tell you it is also the basic science of education. Education happens to be just one part of a large whole. Education is seldom creative and is, therefore, just a middle ground of activity. Getting people to know something rather than getting people to invent something to know, you will see are quite different. In Scientology itself, however, we engage in a great number of educational activities and just for that reason alone you should understand education.

Education really takes off from a series of basics which we have a good grip on, and nobody ever *knew* where education took off from before. Well, it takes off from Scientology. This is factually true: nobody ever before had these basics. It is quite amazing. If you asked an educator about these things—on how you taught people and so forth—he would be flabbergasted. Some of his ideas are interesting and complicated enough to be fascinating, but they are not sufficiently effective. In order to educate somebody you had to know what the mind was all about, and unless you knew the nearly total anatomy of the mind you could not hope then to do much educating, and the educational world did not know the anatomy of the mind and so they didn't do much educating. That is the simple background of the situation. But the funny part of it is, that if you tell an educator some of the basics of education he will agree with you all the time. He knew these things all the time, he will tell you, but a little conversation will show you that these things are not aligned properly and are tied up with all sorts of extraneous data and that he has no idea of relative importance of the various data, both pertinent and extraneous. He could not evaluate for you the data you have fed him, but would be in such total agreement with the basics that you feel that he would be rather apt to go anaten, stagger, yawn, etc., but he would know for sure that he had met someone who could tell him about his business.

If you know about the mind you can educate a mind. This is certain and quite true. Now here is the coordination: You have a wall say to yourself, "**This means go to _____.**" What are you actually doing? You are really running out the total significance of a wall. You are evidently doing about half a hundred different things while doing this process. If you listed the things which make this process work you would be likely to have a couple of sheets of foolscap. But let us take one of them here and let us see how walls are always teaching you something, how fire plugs are always teaching you something, and how grass is always teaching you something, etc. The least that a wall teaches you is that it is a wall. Now when you ask a preclear to walk over and touch that wall as in Step A of 8-C, he finally finds out that there is a wall there, which is the goal of the process. Now what is this but learning that he has a wall there?

Now process lag and learning lag would be the same thing for these purposes. It takes him this long to find out there is a wall. You will understand that the wall gets more solid to the

preclear and a lot of other parts of Scientology immediately accrue that are off the subject of learning rate, but we are just taking up this one thing. We call this thing a learning lag. A learning lag is how long it takes the wall to get the message through to the preclear. Well, it takes as long as the preclear is in a high unknowing games condition. High unknown games condition is “no effect on self and effect on other things,” and yet his ability in the universe depends upon his differentiation amongst objects. For the wall says to him “This is a wall,” but because there can be no effect on self in a very obsessive way, the wall saying to him “This is a wall” means of course “This is a hospital spittoon.” No differentiation in perception. This is sometimes quite evident in a sudden exteriorization because of a loss of havingness which occurs at that time.

It is not that his MEST body is what gives him perception—this is not true—but the havingness of the MEST body makes his perception possible. You reduce his havingness by exteriorizing him suddenly and his perception goes by the board and of course he goes downscale, and LOOK is way up there at the top of the Know to Mystery Scale just below KNOW and you drop him down the scale to NO-LOOK, and sometimes in a sudden exteriorization you may drop him down to a delusory look. They not only don’t see what is there, they see something that is not there. Well what is this in essence but an inability to perceive, which is an inability to learn?

Suddenly exteriorized, with havingness dropped, they look at the ceiling and it is the same ceiling they were looking at a moment before with their MEST body’s eyes. But it is now a hospital ceiling. Well some via is occurring between themselves and the lesson the ceiling is trying to give them, and that lesson is “This is a ceiling.” They don’t perceive that, they perceive a “better” lesson. What do we mean by a “better” lesson? We mean a more convincing one. The hospital ceiling was a far better lesson, it was *much* more convincing. It was saying “This is a ceiling” to somebody who was so anaten and fogged out that he just could not resist learning that lesson or differentiate, and so the hospital ceiling kept saying to a person in this condition “This is a ceiling” until it became all possible ceilings. The moment you reduce his havingness he drops in tone and picks up the most dominant lessons.

As we go downscale, then, with a preclear, he can be expected to pick up more and more dominant lessons. And what is aberration? Aberration would simply be a pattern of convictions, and we could say for the purposes of education that aberration is really a series of lessons that were learned too well. For example, a fellow was raised in a tough neighborhood and was taught that the thing to do to get on in life was to bash everybody over the head, and he learnt this lesson very very well. But he never learnt another lesson which was presented to him later in life that the way to get on in life was to be able to live with the people. Therefore, we find that what is wrong with him is a lesson learned too well—a wrong lesson. The schoolboy who studies his lessons very often reads something which is not in the book and learns it much better than what is in the book. This is because we get into alteration and change of location at once. Now a wrong location and a wrong datum are more or less the same thing. When we move data into solids we get the most dominant thing they perceive—location. First we have postulates and then we have *located* postulates. That is a lower order of postulate, but is still higher than most people’s heads.

We find out, then, that aberration consists of a number of lessons which a person has learned too well. That would be an interesting way to talk about it and would certainly grip the imagination of an educator. But there is something else riding alongside of it which wipes it out as a total explanation, and that is his willingness to learn a wrong lesson and that is his *learning lag*. Now why is he willing to learn these wrong lessons? He just is. He has decided some time or other without any prompting that this was the way things were. Now many people, simply by getting into the band of agreement are way up tone scale from where they were before, but remember people can go downscale into agreement too. So the datum is confirmed, he generated it himself, and then it was agreed.

Now and only now do we enter the field we could call learning rate or learning lag, or education. Just for no reason at all, he assumed, for instance, that his mother was a bad

woman. He had no reason, he just assumed it—no prenatal in other words. One day he decided she was a beast and went along playing the game that he was a sad little orphan, just out of “thin air,” and then one day (he had been postulating this all the time) she blows up which she never did before and does something dreadful to him like sending him to bed without supper, or issuing threats, etc., and this confirms his assumed belief. Now take the reversal that he has postulated his mother as an angel and all of a sudden she turns and becomes a drunkard, etc. He is then always trying to convince people that she is a good woman and yet he knows that she is a bad one. Then one day he gives up entirely and he now has another conviction, only he didn’t generate this conviction, it was exterior to him.

Now one of the fondest things that your preclear thinks is that he caused everything everywhere but he covers this up and advertises to one and all, including himself, that he is not responsible for anything that ever happened to him. Now this is quite remarkable, because it is a complete reversal. In advertising that he is totally irresponsible he yet really believes that he basically caused everything. Now you know from old-time Ownership Processing that if you misown something it gets very real and solid—so at least 50% of the things that happened to him have been from exterior sources. If they are in restimulation they are the things that didn’t happen to him, you see, and the things that did happen to him are misowned the other way. He is misowning both ways. He says he caused something but this was really caused by someone else if it is in heavy restimulation. In other words, there are other things that work in the universe besides the preclear. He not only has to discover that he exists but that other things exist too.

The random factors in a case lead us, then, to conclude that the premises of education and conviction only go for a short distance. They go up to self-generated data, and that’s quite a way, but it doesn’t take us the whole distance. Therefore, handle this thing as far as it goes—handle the premise of learning rate and lag and other material of this character just as far as it goes. It is terribly effective as far as it goes—it is so effective that you are likely to go completely overboard and then wonder what happened—but what happened is that you moved out of that range into the range of self-generated non-caused attitudes. Non-caused attitudes are undone by communication, so we find communication vastly superior to education. Communication will always undo education, but it has to be terrible communication to do nothing but fix ideas.

What do we have in terms of processes here? Well, we have a lot of processes. I am not trying to give you anything but a decent resume here of the exact place something occupies before I tell you about it, because this is so good you will possibly try to supplant communication with education. You must not do that because self-generated data can supplant education. Now where do we go, then, with this thing called education, learning rate, learning lag and so forth? Well, let us become glib—not me, but all of us—with regard to such a thing as industry and learning rate. We will take that up in the next PAB.

LEARNING RATE
(Part 2)

To continue with how we use this factor of learning rate and learning lag and so forth. You can interest an industrialist by telling him that it is *learning rate* that is impeding his own operation. How many instructions has he put out that have not been followed? You can say that these people really do want to cooperate with him but that the learning rate is so poor that these people cannot absorb the instructions. This is the stable datum—something he will understand—a better stable datum than anyone else will ever give him. “Labor is all bad” is the usual stable datum given to him. You will explain to him the trouble with his executives and foremen, etc., the reason why his production curve is down, or his machinery busted up, etc., is entirely because the learning rate varies from person to person. You can remind him of the stupid child and the bright child in the same classroom—one child doesn't learn as much as the other simply because it takes one child too long to learn what the other child learns rapidly. But it is *learning rate*; it isn't *learning quantity*. Now you get very technical at this point and explain the difference between these two children is the learning rate.

Do not go into quantity—but he will assume at once that the length of time it takes somebody to learn something establishes then how much he knows. That is not quite true, but it is awfully convincing. You can say to him, “Now actually there are not thirty people, Mr. Industrialist, in the thousands in your plant, who are really the cause of your labor difficulties. Certainly not more than thirty. These people are against you because they don't know you.” Immediately he will say, “That is so true.” You continue, “They don't know you because their learning rate is so poor that they have no idea what you are *trying* to do or what you *want* them to do. They are merely in revolt and they don't know against what.” This will make sense to the industrialist. You tell him, “Now, I could pick these people out with the greatest of ease.” You could do this through the use of Personality Analysis tests which should make it quite clear to you, and he could check these against their service records, and you can be quite sure that the records would agree with your analysis. He will wonder how you could establish their learning rate so rapidly when you didn't even talk to these people. Just use “learning rate” as a substitute conversationally for aberration, comm lag, etc., and it translates. So we are in communication with him even if it is a bit of a stretch. We are in communication.

I'll give you an example. A stupid judge is one who can't learn the rights and wrongs, the in's and out's, from the witnesses, and all the attorneys will tell you at once that this man is a stupid judge because his decisions are incorrect. But sometimes they take a person who is simply a stupid judge and they say he is a vicious judge, but actually you could say his difficulty in learning is so great that he becomes emotionally disturbed at the thought of learning and therefore exerts punishment in revenge on the people who have brought this torture upon him. His learning faculties are so poor that it becomes painful for him to learn.

You see how you could just talk to somebody and without accusing anybody of being insane or aberrated, etc., you could probably sell him processing for the whole of his executive

and foremen levels of his staff to increase their learning rate. And the reason for this? So that *his* postulates will stick; that is, what he can see will happen. But this is not what you do.

At this point, you have a point of agreement and you as a Scientologist take departure from it. You have made a point of agreement that it is learning rate and learning lag that causes randomness on his communication lines. You can tell him this and convince him because it is almost true, and it is certainly true within the realm of his experience. But you, in actually processing people, depart from it. You're not interested exclusively in the employer's postulates sticking. You're not interested at all in this. You are interested in giving the person determinism over data. You're not interested in a person's learning rate really, but in his power of choice to establish or review the importance of data. This is what you re-establish with the person. You don't teach him, then, to get into a state of hypnotic impulse; you teach him power of choice over data, and only then will the data become of use to him, and then only can he become social in his behavior.

The answer to the question is in total disagreement with the industrialist's *modus operandi*. It is not in agreement at all. I have talked to some of these boys within the last year, and it is quite interesting that the moment I started to establish the fluidity and the right to think for labor, the right to live, and the right to be for labor, we were talking on different planets, and this is the secret of their failure. If their system of money control was a successful system there would be more of it today than there is, and it would be an increasing system, and it is not. It is a decreasing system. They must have a short glance at something, but you're not going to involve *yourself* with this short glance. Management will buy learning rate completely. They will buy this whole thing because they themselves cannot face communication, but they can face learning. Communication is too high for them, and we have tried to sell them this for several years. It is too high for them because you are trying to make them face a Static. They will not do this, but they will, however, face learning rate.

So what do you tell them, knowing this full well? You say you are going to increase the learning rate of their staff members. You don't discuss technically how you do it. You just give him wonderful examples, e.g., ask how long it takes a person to learn to use one of his machines well. He may say it needs an apprenticeship of five years. Then you can reply, what a long time, obviously due to the very slow learning rate. Then ask him, how does he know the man can really run the machine—ask him about his repair and maintenance bill. You can tell him that certainly, he, personally, knows about these machines, but that is why he is sitting at the top in an administrative post. But what about these other people? How does he know that they know?

Take the junior executive who is not very effective, doesn't get things done. His learning rate is so poor that he doesn't understand what his employer wants done. It could be that he is very willing to do anything for him, but he never finds out what. Now let's have a conference with this employee and see if this is the case. And sure enough, it always is the case. If you're dealing with somebody who can't get things done, you are for sure dealing with someone who cannot absorb data. And you just prove it by getting into communication without mentioning communication. You will talk about learning rate and learning lag. I've tried this out and found that you can do wonders with it in ordinary conversation.

The definition of you, as a Scientologist, in such a circumstance would be someone who decreases the learning lag of people—increases their speed of assimilation of data. This is how you could describe your job. You can talk about reaction time and the vast amount of data that the environment demands of people, etc. Take a professional football team; one of the most difficult things here is that they have to learn new plays all the time. What if they have a good player who cannot learn new plays and always uses the old ones? That is where they lose their games. Well, what do we do? We speed up the ability of learning new plays. Now you can really start to get technical. You have some agreement here, your listener has not yet begun to suspect that you can do something for him, but that will be a matter of just a short time.

Learning rate is important to the truck driver. He has to learn that there is a truck in front of him on the road before he can put his brakes on. Now, suppose it takes him a long time to learn this—he has a wreck. So people with low learning rates are accident prone. Your job as a Scientologist is to make sure that people have fast reaction time by increasing their learning rate. But do not forget that this is purely a method of obtaining agreement and introducing your subject—it is not an end in itself.

This occupies a fairly interesting section in Scientology, but its accomplishment is not effected by direct drill. This is never done. Why did it take people nine months to learn to recognize an aircraft in 1/1 25th of a second on the aircraft recognition courses? Because it was done by drill and the recognition officer very, very often was not so good at recognizing planes. But increasing learning rate by drill, etc., usually only increases familiarity and automaticity.

Learning rate governs reading time. There are many systems which speed up your reading time, but the practice of reading or the practice of acting simply increases the familiarity with what you are doing to a point where you can neglect it, and that is never the goal of a Scientologist. His goal is not to get something more automatic, his goal is to establish or re-establish power of choice over data.

A totally fixed datum is in the past. Where would a person have to go to recover it? In the past, of course. A person, to stay in present time, has to have all his data in a relatively fluid condition, so the re-establishment of the power of choice over data—to be able to accept it or reject it at will—comes first, and the whole process of increasing learning rate, which is a secondary thing, is the process of recovering power of choice over data.

All education is trying to do is *fix* data and all Scientology is trying to do is fix or unfix it at *will*. This is what a Scientologist is doing and that is the goal of the processes used, and incidentally, they are the only things that will increase learning rate and cut down learning lag and increase reaction time, etc.

But the final product in the framework of the society itself is actually coming from something else than the society believes it is coming from. Now anybody will happily let you come in and teach or process a person as much as you please about his job if they think this is the drill to increase his learning rate, and so you have freedom to process people. But what you are doing, is re-establishing his power of choice over the data he has. He always then winds up knowing more about it, and his learning rate depends upon that power of choice to fix or unfix data at will, and some processes which I will be giving you in future PABs will be aimed at doing this very precisely.

HCO BULLETIN OF 8 APRIL 1957

GROUP AUDITING

Group Auditing is as effective as we can continue control over the group. As therapeutic as the control can be bettered.

Control can be of attention, person (body) and thinkingness. Should any of these break down, auditing value stops.

Attention is easiest—thinkingness is hardest.

Order of control factors available to the auditor, group or individual auditor, are:

1. ATTENTION
2. PERSON
3. THINKINGNESS.

Thus the group auditor has only available to him in any group which contains new or unclear people

1. ATTENTION
2. PERSON.

Thus we see at once that a significance process or any process aimed at thinkingness in a new or rugged group or one which contains any rough case must NOT BE run.

Let's audit the WHOLE group always, not just the disciplined ones. So we must delete all thinkingness processes from group auditing—and that is quite a trick.

Model Processes in order.

1. "Look at (indicated wall, etc)."
2. "Take your right hand and touch your head (chair, right foot, left hand, etc)."
3. "Feel your chair," "Look at the front wall." Run one command then the other one time each (alternating).
4. Put up two objects, right and left sides of room in view of group. "Look at object one." "Look at object two."
5. Hand mimicry mirror image from Group Auditor.
6. Hand each of group an object. Auditor also takes one. Then group is made to do a simple mimicked motion of his object by the auditor. Auditor repeats his motion with the object until WHOLE group has done it right.
7. Group standing mimicking auditor.
8. Verbal mimicry—beware of repeater techniques.

As each one of these could be itself a total of group auditing, the length of time it is to be run is long. You would be surprised how a group's interest stays up. (The reason Group Auditors vary commands is they're afraid interest will flag.)

The institution of the Assistant Group Auditor must here come into its own. Group chairs are widely spaced so the Assistant Group Auditor can walk through. Anyone not doing the command is manually guided into doing it (not verbally) by the Assistant Group Auditor.

The auditor asks only "Did he do the command?" not "Did the command have an effect upon his health?" If the former persists, the latter follows.

The use of significance in a command puts thinkingness beyond the auditor's control. Hence "See that wall, put it there" is wrong with the "put it there". The pc has to THINK that. The auditor cannot be sure he did and cannot enforce it easily.

All group auditing is done from tone 40.0.

NOTE: I have never written a book about group auditing. Now that we've found that from control proceeds communication ability, I can.

HCO LONDON BULLETIN OF 9 APRIL 1957

LIST OF "PURPOSES"

as posted on Org Board

Purpose of Organization. To disseminate Scientology. To advance and protect its membership. To hold the lines and data of Scientology clean and clear. To educate and process people toward the goal of a civilized age on Earth second to none. To Survive on all Dynamics.

L. Ron Hubbard. To develop and disseminate Scientology. To support and assist Scientologists. To write better books. To act as a court of appeals in all organizational disputes. To form and to make official policies and orders affecting the FC.

Org Secty. To execute policies and orders. To coordinate organizational activities. To care for legal and public concerns of the organization.

Mary Sue Hubbard. To carry on Scientology. To be certain the organization remains solvent.

Accounting Unit. To expedite, handle and police the financial items from the moment they enter the organizational comm lines to the moment they depart.

HCO. To be the office of LRH. To handle and expedite the comm lines of LRH. To prepare or handle the preparation of all manuscripts and other to-be-published material of Scientology. To keep, use and care for LRH's office equipment. To assist the organizations of Scientology and their people. To set a good example of efficiency to organizations.

Advisory Council. To advise the executives of the organization as to needed changes and policies. To act as a meeting ground of department heads. To assemble and report the statistics of finance and action to the Exec Dir. To advance ideas for promotion and improvement.

Staff Mtg. To gather agreement and permit staff origination upon matters relating to personnel and duties. To report on performance of duties. To suggest promotional, maintenance and organizational changes to FC executives.

Technical Division: To insure good training and processing, good service and ARC inside and outside the organization.

Administrative Division. To insure good and accurate communication inside the organization. To handle business and administrative affairs. To insure good working quarters and conditions for and good work from organizational personnel.

Academy of Scientology: To train the best auditors in the world.

HGC. To do more for people's health and ability than has ever before been possible and to give the best auditing possible. To help people.

PE Unit. To make a better worker of the worker, a better executive of the executive, a better Homo Sapiens on all dynamics.

Dept. of Registrar. To communicate what we have to offer to those who care to be better and to help and to respond effectively when they reply.

Secretarial Unit. To expedite the communications of the organization.

Shipping Unit. To swiftly and competently furnish the public with the materials of Scientology.

Maintenance Unit. To maintain suitable quarters, clean and in repair, for the organization.

Indoc Instructor. To give people a reality on Scientology and to teach the communication formula by Dummy Auditing.

HPA Course. To create a competent auditor with a good grasp of theory and practice of Scientology. All 5 levels of indoc.

EDUCATION

Education—point of agreement.

The learning processes are all of them extremely interesting to the auditor because they bring to his attention at once that the common denominator of communication and aberration is at once “telling somebody something.” You say to somebody “hello”—you mean in essence “I am here, you are there and I recognize it.” It’s the relay of an idea. Well, now, learning itself has been, for I don’t know how long, very compartmented, it’s been very carefully grooved, so that learning as we speak of it then prior to 1956 meant what they meant in school—and that was “the inflow of ideas.”

Now when you speak to somebody out in the public about learning he thinks you’re talking about inflow of ideas, from some source or another either from a book or a teacher. That is a very narrow look, and when I talked to you about this before I was using learning in that definition—an inflow of ideas.

It is not true that learning rate or the rate one will permit ideas to inflow is the common denominator of aberration or anything else, but it *looks* like it. The truth of the matter is, if you only considered inflow it would be like considering the motivator without the overt act. Now you know as an auditor how important it is to look at the overt act rather than the motivator. Don’t look at these inflows all the time. If you continue to look at these inflows and nothing but these inflows you will make as many mistakes as have been made in the past umpteen thousands of years in the field of education; and let’s not make these mistakes all over again.

Education could have been defined this way: “Education is the process of placing data in the recalls of another.” Do you see that? That’s what education thought it was doing. It thought it was placing ideas in the recalls of another and making a recall possible by somebody else of data related to him. Now that’s not very complicated, and that is the trouble with it: it is not complicated enough for educators. Now we deal with simplicities and this is the first time we really find fault on the line of simplicity—it’s an idiot’s definition—and that’s the process that is being carried on at this moment at Yale, Princeton, Harvard and Columbia; down here at George Washington, at Oxford, Cambridge and the Sorbonne—any place across the world at which they consider themselves tops in education—they are placing ideas in the recall of others.

A few schools departed from this from time to time, almost by accident, and usually under duress from their student bodies. Heidelberg is an example of this. Heidelberg never considered the relay of ideas important; it considered having been to Heidelberg important, and that was quite different.

As long as we maintain this idea of “inflow only” we are in trouble. Education does not happen. If education means inflowing ideas then you are also talking about hypnotism. You see, there’s no differentiation there; we are talking about beating somebody up and laying in an

engram. This too would be education, wouldn't it? So we have education and aberration very, very closely associated.

In fact, education WAS aberration. Life was busy teaching somebody a lesson and the lesson it succeeded in teaching him was not to do any more living. And that little lesson, then, was always at the base of education and it was done so that education itself could be considered aberration. In other words educational systems did the lazy thing, they did the easy thing: they simply paralleled the game of the MEST universe in teaching somebody not to live, and living paralleled it. Why, they then thought they were doing a good job. But let's look at education as it was done. You taught somebody something by saying "Pigs have snouts." They're not supposed to say "Yes," the classroom is supposed to be quiet. Later on you put an examination in front of them and it says: "What do ___ have?" and they're supposed to immediately answer and write: "___ have snouts." You're supposed to be able to associate this completely. So it's just a test of recall.

Now as you know, therapeutically, recalls—and by the way, if you don't know this try it some time: just sit and ask somebody to recall something about some person and do nothing but that and notice that you get a decline of case. That's an interesting thing. You had to use the whole of the ARC formula, something really real, some time you were in communication with, and the reverse side of it too—in other words, the entirety of the straight-wire formula, inflow and outflow—to get away with it. But if you just asked somebody to remember something about George, remember something else about George, remember something else about George—if you asked him what he was doing, he's picking up every moment he ever saw George motionless. This erases, you see, all the rest points of George and leaves nothing but the confusions and the halfway feeling that George is there, so we sort of move George as a disembodied entity into present time and confirm the valence. Now this is quite a trick, but you just knock these rest points out and George becomes a confusion. Therefore, nothing but recall used therapeutically and educationally would wind somebody up in rather a confused state. He would be sort of half hypnotized, just nothing but recalls. So if you give people data like "Pigs have snouts" and then ask them "What ___ has a snout?" or "What ___ has a ___?" you have given them a stable datum and now you're taking it away from them.

You might look up some time a university record as to suicide and nervous breakdown; such a record is honestly kept, I know. I did this once and I had a lot of trouble. I wanted to know how many students had committed suicide in that university and they wouldn't own up to it, but I found out there had been quite a few and there'd been a great many nervous breakdowns, all at examination time. They spend the whole semester giving somebody some stable data and then at examination time they take that all away suddenly. In other words, simply implanting the recall and then pulling it back out again has been defined as education; but it is nothing but a black operation—nothing but. To do this to little kids is to do away with their initiative; therefore a time for revolution in the field of education is definitely at hand.

Education would have to be defined much more broadly. But remember in the old logics about action definitions. Well, you'd have to give it an action definition; it would have to be a real definition that gave its use and a purpose for it, to be of any kind of a game itself. The reason why teachers go into a no-game condition is because teaching itself is not really a game. It is putting a bunch of other people in a no-game condition, and of course that's only part of a game. To teach a subject it would be necessary for the person being taught to be able to receive a non-significant, disrelated idea from another person. You see, that would be a necessity in order to teach somebody something.

The next condition that we would have to meet would be making certain that person could maintain his power of choice over the data given to him. So we would give him some data which were incorrect, and giving him these incorrect data we would find out if he could remember them and if he could reject them. The idea of being able to reject a datum and still remember it, to know that it's untrue and non-factual and still be able to recall it, is of course bettered by a further action: being able to wipe it out completely or not even recall it; and that is a skill.

The next thing would be to feed him a datum, have him give objective examples and active examples of this datum so that it's not then just a string of words, and then ascertain whether or not he could still reject it or accept it and then ask him to rephrase it, and eventually he will form something which will to him be an agreeable stable datum, and having done this we would then have accomplished power of choice over a datum. To get him to remember or repeat a non-significant datum would be the longest haul at first, and you may find people who have a terribly long haul on the subject of incorrect data. You give him an incorrect datum and he can't reject it, but when you have made that possible you can then give him a datum, have him give objective examples of the datum, have him rephrase it, give objective examples of his datum, accept it, reject it, handle it, throw it around, and the next thing you know he has something which will buff the entirety of confusion surrounding that subject. You have created there something which is armor plate as far as he is concerned. He KNOWS a datum. Now he doesn't KNOW it as recall; that's the trick, you see. This is entirely different.

Now it's hard to describe how he knows it, because there's nothing there to describe except the datum itself, so to write long chapters on this new type of knowingness would be an impossibility—it's something that is experienced, it easily goes on beyond the field of description.

All right, let's take a look then at education and find out why you would do this that way—rather than to just place something in somebody's recalls, to have him really know it as a datum. Why would you do this? Would there be any sense in this at all? Well, yes, there certainly would be. The individual would be able to USE that datum. He would be able to evaluate its importance, he would be able to handle it and handle with it many other things. In other words you have given him something for his utilization.

Now I want to tell you a little difference in the field of education itself. The stress of "teaching" in a modern school today is this: "How to occupy the child's time." That's right—that's what they teach in modern training schools. Great stress is put on this; you have a child just so long, he has to be taken out of his home for that length of time, you have to keep him occupied in school and that's just about it, and you wonder why a child of twelve or thirteen doesn't really know how to spell, his penmanship is poor, his reading is worse, and so on—that's because a different thing has come into view. Now this is not the tradition of the little red schoolhouse of song and storybook through the generations. There was another tradition in this country, and I don't know where the tradition I have just described came from, but this other tradition was the American tradition and it went like this: You had to get 'em and put some shoes on 'em in a hurry and teach 'em readin', writin' and 'rithmetic as fast as you could because they weren't going to be in school very long, and the teacher who was put through normal school, so called, a hundred years ago was taught that. You have got to be fast, you never know when papa's going to take him out and put him behind the plough. Give him some education before it happens to him. You probably will get them in the winter months when there's not much work to do, but in the summer you're never going to get them. Hence the summer vacation.

Of course, the child loves this idea; he doesn't have too much sympathy with education in the most part, as it is performed; but if school really educated him I'm afraid you'd have an entirely different attitude on the part of the child. Now I have been very fortunate to know in my life quite a few real geniuses—fellows that really wrote their name fairly large in the world of literature and science—and I consider myself very fortunate to have known them because they are so rare. Why are they so rare? I found something peculiar about these fellows—they were for the most part taught in peculiar schools! They were taught in some YMCA school or they were taught by some Englishman who ran a little college for difficult children in the street; they were all taught—it seems—in some kind of off-breed school. Now this is peculiar, because the school existed to a large measure to take care of people who were slopovers from the usual educational system—there wasn't very much education involved. The fellow would come in and he'd be interested in something and therefore they had the master give him his head. One chap by the way, who gave us solid fuel, rockets and assist take-offs for airplanes too heavily loaded on aircraft carriers, and all the rest of this rocketry panorama, and who

formed Aerojet in California and so on. The late Jack Parsons, by the way, was not a chemist the way we think of chemists. He was not taught in the field of chemistry beyond this fact: There was a little professor who opened up a school. Nobody could do anything with Jack so they sent him over to this school and the professor found out he was interested in chemical experiments and turned him loose in the laboratory and gave him a lot of encouragement. He eventually became quite a man. It is interesting that this completely sloppy type of education is apparently quite workable.

Here are some LEARNING PROCESSES. Try them out and see the difference between KNOWING a datum and knowing it as a recall.

1. Learning Process No. 1:

(Flatten each part thoroughly before going to next.)

- (a) Give pc 3 numbers. Have him repeat. See if he remembered. Repeat this process.
- (b) Give him incorrect datum. Have him repeat it. Discover if he could remember it. Discover if he could reject it. Repeat this process.
- (c) Give him vital datum (concerning rudiments of auditing in the case of a Scientologist, for example). See if he can repeat it. See if he can rephrase it. Have him give objective examples. See if he can reject it. Repeat this process.

2. Learning Process No. 2:

- (a) Discover things Auditor and pc can agree on in vicinity.
- (b) Feed pc vital data (Scientology and rudiments, for example). Get him to give objective examples, rephrase and reject and accept.

3. Learning Process No. 3:

Have pc discover unimportant data in environment.

4. Assigning Identity:

This is a Walkabout, inside and outside.

Commands: **“Look around here and find something you could have,” “For what is it used?” (or “What is it called?”), “Could you invent another use (name) for it?”**

5. Objective Forgettingness:

This is a Not-Know Process. It is another Walkabout.

Commands: **“Look around here and find something it would be all right to forget (or not-know).”**

If these five processes are flattened early in the week, note the changes, repeat, and effect further changes.

EYESIGHT AND GLASSES

Compiled from ACC tape material of L. Ron Hubbard

It is interesting to know that a thetan doesn't look through his eyeballs. He has two little gold discs, one in front of each eye lens. These are not the lenses of the eyes, but, as you might say, mocked-up energy. They are little gold discs that are superimposed over the eye and he looks through these. The eyeballs merely serve to locate these discs.

An eyeball isn't even a good camera. Some people, dissecting eyeballs to find out how people looked with them, have been totally baffled since the first time this was done because it is about the worst camera that anybody ever had anything to do with.

What the ophthalmologist doesn't know is that the individual looks through these little discs—the ones in front of each eye—and when things begin to deteriorate, or when the anchor points of the body deteriorate, they are liable to follow suit. They become distorted one way or another.

They begin to Q-and-A with the distortions of the eye themselves—the eye reacts to light, so these little golden shields react to light. After a while the little gold shield becomes black or corrodes in some fashion which makes it very difficult to look through.

Of course, we don't know why he is looking through them in the first place. When they do deteriorate the individual starts wearing glasses. The person thinks this is necessary. The next thing he does is to make the lenses of the glasses stronger.

He puts on a pair of glasses. This is a big shield—a big disc. This disc also goes in front of the eyeball and he knows this and he cannot see things unless he looks through one. The reason why glasses become very difficult in an auditing problem is that one is not auditing glasses.

I have audited glasses, just as an experiment, for a long time. Havingness in terms of glasses, or in terms of eyeballs, does produce some sort of change, but *havingness in terms of little golden discs produces an awful alteration in terms of eyesight*, sometimes faster than is comfortable.

You can take this old-time effort processing and produce a change of vision with everybody with no permanence, but a fantastic alteration of vision can occur, making somebody very uncomfortable.

Have the preclear get the effort to see, followed by the effort not to see, followed by the effort to see, one after the other. The next thing you know is that all the little muscles in the

eyes will start to Q-and-A with the little golden lenses in front of the eyeballs, which are changing under all this processing, and the next thing you know is that he is seeing double, cross-eyed, or something like that.

Things will turn on with tremendous brilliance as though somebody swung a rheostat-and he will turn it down quickly because that would mean that he would be confronting too much. You should thus change his idea of what he should be able to confront. If you change that idea, he will then adjust the machinery of sight. But if you attack the machinery of sight directly, you are just forcing him to confront and you get this phenomenon of a person turning up his vision and turning it down again at once.

You get the person capable of being able to get beautiful scenes and visio in the bank and then going totally black. You get a person cleared up tonight and tomorrow morning he is a psychotic wreck. That is all under the heading of HAVINGNESS and CONFRONTINGNESS. When you remedy havingness and confrontingness, he will remedy the rest of it.

There is no reason why a thetan couldn't stand in the middle of the room and look at everything just as clear and flat and hard as it ever was. He doesn't need any mechanics. He certainly has to be able to be it, and have it. In other words, he has to be able to occupy the middle of something, and he has to be able to do a lot of things before he can even see something. But all of these things adjust on straight havingness.

Havingness will change vision and special perception. That is something nobody can argue with, but the whole problem of glasses is the problem of confronting.

I once had a bomb go off in my face with some authority some time or another, because I was standing in a place where I shouldn't have been standing at all, a total miscalculation on my part. The startlement that I could miscalculate to this degree did me in. After that I couldn't see. Finally my eyesight turned on a bit and got way up to 3120, 4/20—that in the Service is “what wall?” I was doing combat service and navigation and every other thing I was supposed to do, with that kind of eyesight, clear through until 1946. After the war was over I was still wearing black glasses. I was trying to write books, and “what piece of paper” in “what typewriter.”

My instincts are very good and I was perceptive enough and wasn't unwilling to confront things to such a degree that I ran into doors or did embarrassing things, but I was rather upset because my marksmanship was way off. I shot too many bullets into too many forbidden directions, I guess, or something of the sort—that used to be a great hobby of mine.

So I wore glasses, contact lenses, trying to increase my vision. I found out that vision increased only when you diminutivized the subjects you were looking at. In other words, the more powerful the glasses become, the smaller they make the objects you look at appear. Think that over for a moment in terms of confrontingness and it will amuse you. Of course, the world isn't quite as formidable if it gets that small.

A very high-powered pair of glasses reduces the size of the face you are looking at by about half. People who are wearing glasses are very often not aware of this. But if you put a new pair of glasses on somebody's nose and put him in a car and tell him to drive, he does some of the most fantastic things. In other words, confrontingness is altered by glasses. I don't know that sight or lines or clarity of vision is altered, but certainly confrontingness is altered by a pair of lenses.

The moment I found that out, I was vastly amused because I didn't want things to be that small, and my eyes were simply recovering from having been torn up, which was an interesting state of affairs. I got some processing, ran out a lot of these things, and my eyes came back up and flickered all over the place—they got anywhere from 15/20 to 25/20, which means they were above normal sometimes and way below normal at other intervals. I found

one day whilst reading a report that I couldn't make out anything. The printing was all blurry and going askew. There were ghost letters riding above every line and I just couldn't make head or tail of the report. I was thinking that I'd better use a monocle or a magnifying glass. I suddenly realized that I was reading an AMA report with a total unwillingness to confront it. I threw it aside, picked up a novel and the print was perfect.

So I can sympathize with those who wear glasses because I have been over the jumps. I have been all the way at the bottom of not even being able to find the door, to almost being able to find the door, on up to being able to find two doors.

Where is the havingness of the person located in terms of the body? A scholar has a fixed vision point at a certain distance from his eyes. He has had havingness in that point and then he hasn't had havingness. If you make somebody **"keep a book from going away"** at that distance his eyesight will change all over the place. Just have him **"open a book and keep it from going away,"** **"Now leave it uncontrolled,"** **"Now keep it from going away."** He gets headaches, eyeburn, his eyes practically bleed before you get through because you are restoring the havingness at the exact distance where it was fixed and lost.

You get all sorts of phenomena of this character, but it isn't really a problem of how good are the optic nerves. Of course, you shove an icepick through a person's eyes like the psychiatrists do—he is not going to be able to see well because he has already got "now I am not supposed to see with the thing."

I have an awfully hard time with blind people on this "Now I am supposed to." I can get them to see, get them to do everything. Then they suddenly realize that they were not supposed to be able to see—and they shut off their sight again, but you process some more, and so on. But any time you have a vagary in the adjustment of sight, it is a vagary in the adjustment of havingness.

There must be something there to observe. The havingness goes by quantity. Don't get the idea that people are afraid of seeing anything. You're figuring right along with the type of figure-figure that has never worked for anybody in any time or place. He is just afraid to look at things, so we will take him out and make him confront things. If, by some necromancy, he is able to have that thing or some part of it, then he will be able to see it and will not be afraid of it. If we can get him to confront, then his fears will change. People know this. But this other thing, that people are afraid of things, that they have irrational terrors and all that, is all pretty well resolved on just this one basis. There is something there to confront, then there isn't anything there to confront. This is a loss of havingness. If their havingness goes down far enough, i.e. their idea of quantity falls far enough out of adjustment, they will begin to detest seeing it. They won't quite like to see it. Now there can be too much of it or too little of it. In either case the scarcity or importance or responsibility factors alter and they get so that they cannot confront it. They are perfectly willing to listen to a radio, but are they willing to listen to a radio 24 hours a day? They finally say, "This is too much, I cannot confront it," and they turn off their hearing in some fashion.

You can actually fool your considerations to this degree. You say, "Look at all the books I've got to write or read. Look at that—a tremendous number of them there." You got one little book which is not going to last you two hours. Actually, you can have much too little to read. It is quite fascinating. The variations in confronting are a tremendous study.

Astigmatism, a distortion of image, is only an anxiety to alter the image. You get an astigmatic condition when a person is trying to work it over into a substitute, if he possibly can. Here again it is a case of not enough—he didn't have enough.

Some men's wives just disappear right in front of their faces. Just a black statue will be standing there. That's visual occlusion, or the woman will disappear entirely. She will have no midriff or something like that. Only they don't tell anybody about it, for this means, of course,

that they are mad—or something wrong there with his havingness of his wife and his willingness to confront or not to confront that girl.

There is another factor that enters in. He would actually be in love with Martha but be married to Jane. So Jane gets blurry because he is trying to see Martha and he will do it on an axis. He will twist all things over.

There is another whole class of sight disabilities which are not allowed by or listed by the bulk of ophthalmologists. These people do not really go in for these things. They say these are bizarre effects and they doubt that anybody really sees them, which is a fascinating way of dodging out from presented phenomena.

A thetan with a buffer in front of him feels that he cannot receive various wavelengths and he knows there are some dangerous ones. He thinks they are dangerous to him and he has a tremendous number of considerations about this.

The considerations are utterly fabulous in quantity concerning the amount of protection one has to have, the conditions under which one can do things. This degenerates to a point where a man can only see well when he is wearing a certain pair of carpet slippers. It can get this far removed—I got this from a writer once—he could only write when he was wearing a certain pair of carpet slippers. I talked this over with him and all of a sudden discovered that he could only see when he was wearing that pair of carpet slippers.

"THE RIGHTS OF THE FIELD AUDITOR"

The Field Auditor has a right:

- 1 *To his own group.*
- 2 *To the Loyalty of the people in his group.*
- 3 *To send any of his group to a Central Organization for training, coaching or special processing and have them returned with their group loyalty and attachment undisturbed.*
- 4 *To express his needs and desires for co-operation to a central organization, other groups or auditors without fear of retribution or reprimand.*
- 5 *To place his name and address on the title pages of publications from the Central Organization and circulate them in his area.*
- 6 *To publications from a central organization at a discount in proportion to the number he distributes.*
- 7 *To respect for his training and experience.*
- 8 *To respect for his certificates.*
- 9 *To have and to hold his certificates without cancellation by anyone forever.*
- 10 *To communicate Scientology and to bring about a civilization for mankind.*

*by my hand this
21st Day of April 1957.*

DEFINITIONS

A CONSULTANT is an instructor who is on duty sporadically or from time to time but not routinely in any one place.

AN INSTRUCTOR is one who has regular classes and who is assigned to places at specific times.

A COACH is a student who is standing in the role of “pc”.

HCO TRAINING BULLETIN OF 20 MAY 1957

INTERIM PROCESS

While auditors are learning to handle CCH this learning process is recommended.

Objective Show Me is as workable as any old-time process and is very easy to run. Therefore, all HGC preclears until further notice in Washington shall be run on Objective Show Me as follows.

Objective Show Me is first run as simple Locational and is run in this way until it is flat as simple Locational:

Commands: "Show me that (object)."

The second stage is run alternately between body and room objects. The commands are: "Show me that (object)," then "Show me your (body part)," "Show me that (object)," "Show me your (body part)."

The third stage of Objective Show Me is run similar to Opening Procedure by Duplication. Two objects such as a chair and a table near together are selected and one part of the preclear's body such as the head, the eyes, the right hand, etc, is selected. The preclear is asked to show the auditor the table, the body part, the chair, the body part, the table, the body part, the chair, etc.

Care should be taken in running this process not to use body parts which will embarrass the preclear. The target of the process is actually the engram bank and it will be found that at great long length the preclear will come clear of facsimiles. The target of the process is not the second dynamic and in running it any specialization toward second dynamic aberration defeats the process thoroughly.

This process actually will produce a clear if it is carefully and completely run.

It is not a Tone 40 process, which means that you acknowledge the originations of the preclear.

L. RON HUBBARD

LRH: md.nm
May 20, 1957

This Bulletin applies to outside preclears. CCH should be used on Staff.

DIANETICS and SCIENTOLOGY
from
Washington, D.C.

The Radiation Picture and Scientology

L. Ron Hubbard

The country has become very involved with radiation in the past year or so and as we in Scientology have achieved a much clearer understanding of this I think I owe you a rundown on Scientology and radiation.

At the outset let me assure you that our total interests in radiation at this time are two only: *that radiation can create hysteria, and Scientology handles hysteria, and secondly that hysteria, because of radiation, puts people in rather poor condition and Scientology can rehabilitate them.* We have no political or international interest in radiation.

As you can remember, the HASI in Phoenix, Arizona, was there at the time when a great deal of bomb testing was being done in Nevada only 250 miles away. At that time we had some vague interest in radiation, but it was more in the direction of locating any deposits of uranium which might have escaped notice. Being in possession of instruments which could measure radiation, we were quite shocked to discover that the atmosphere and the grand pianos began to count somewhat alarmingly. This was immediately after an H-bomb had been buried under nine feet of dirt and had been exploded. These radioactive dust particles swirled around the Southwest for quite a while before they separated themselves out.

We were worried. We were worried because the amount of radiation was obviously alarmingly great and I was as worried as the rest, perhaps even more so because of my responsibility for our people in the Phoenix area. I felt that we could not go on in the immediate vicinity of a great deal of testing and so I came East to give a Congress and establish offices somewhere away from that area. There were other local reasons but this radiation reason was more or less primary.

Back East we made no further tests but we continued to be impressed. We read about radiation in the public press, we read how the government was saying how it was not dangerous, and we read apparently responsible scientists on the subject saying that it was very dangerous. But because we had seen grand pianos counting like uranium mines, we were, of course, of the opinion that radiation was an extremely dangerous thing.

Without further examination of this subject and paying attention only to what was printed in the public presses, we saw no reason to change our attitude concerning radiation. But some things have happened recently which have brought about a considerable change.

I have just completed a Congress in London and was in communication with Members of Parliament through a HASI representative on the subject of radiation. It was clearly and cleanly stated by an authoritative Member of the British Government that Russia was making full use of the hysteria factors inherent in radiation in order to stop England from constructing H-bombs and to impede her defenses in other ways. He had incontrovertible proof that the hysteria campaign being conducted by Russia inside England *and* the United States was totally an effort to impede their national defense.

Russian campaigns you must understand are of the mental, brainwashing type. Radiation is tailor-made to their agent provocateur tactics.

When I returned to America two things became very obvious. The first of these was that only the press of Russia and the United States did not report my remarks made at the Nuclear Radiation and Health Congress at the Royal Empire Society Hall in London. Other newspapers the world around carried the remarks as headline news. These remarks were to the effect that the greatest danger of radiation was hysteria. At the Congress I said that the H-bomb was not a weapon because it was far too powerful, it would not coerce obedience but only terror. These remarks are more or less complete in a book now being published called *All About Radiation*, for the British market only.

Another thing that happened is that I remembered why I left the Author's League of America some years ago. Its Board had begun to offer prizes to deify minorities and it was taking other party-line data and trying to foist it off on American writers. The Newspaper Guild, so far as I know, is not entirely clear of this influence.

The other thing I did was to take a Geiger counter and make a test of Washington. A little earlier this Geiger counter had been giving false evidence because the stick used with the counter, as will happen, evidently had some uranium stuck to it. But with the counter in good operating order and clean, it was discovered that *the background count of Washington, D.C., was the same as it was in 1932 when I was going to George Washington University and studying radiation*. In other words, there has apparently been no general increase of count in London or Washington because of bomb testing. I did more than this. I made a calculation of the amount of gamma and cosmic rays which fall on Earth's surface daily and compared this to the amount of test radiation waste which would be thrown into the atmosphere yearly. The figures do not compare. The added man-made radiation will probably never add up to your luminous dial watch.

On the whole track, radiation was dangerous for the good reason that there was more radiation in those times that could be exploded. However, radiation is a half-life matter and the older the universe gets the less radiation there is available to throw at people. And a good thing, too.

While we have no doubt whatsoever of the actual dangers of a bomb dropping on a city, we are now in a position to doubt rather thoroughly the vaunted harm from test bombing which is being sold the populations of Earth, evidently by the Communist propagandists.

The U.S. population is being stampeded by Russia toward leaving the U.S. defenseless. Already this has accomplished a defective U.S. civil defense and is gaining momentum toward a public demand for no bombs. This is how Russia works. Russia works on the population imagination. Russia uses any knowledge of the mind she has to instill fear and bring about destruction. She is an unworthy purveyor of scientific information.

Russia has already succeeded rather well in this field of seizing control of the mind. There is no essential difference between dialectic materialism and Wundtian psychology. Yet, Wundtian psychology is taught in all the universities of the United States. England, being an older and more mature government than the United States Government, has already awakened to this and is taking active government steps to halt this matter of public panic. England, for instance, is not buying Wundtian psychology. England is buying Scientology in rather large

amounts. But this is not yet true of the United States. That it will come about in the future is more or less a certain thing, but that it does not exist at the time is a fact. Only the better IQs of the U.S. as yet buy Scientology.

We can be assured on the score of fallout—it isn't dangerous at this time. It does not compare to the amount of "natural radiation" with which we are being bombarded. If you went down to Florida to live you would increase your radiation count much more than it would be increased if you stayed well North and the government blew off ten thousand more test bombs. In other words, just exposure to a clearer view of the sun will give you more radiation than you could be hit with in the near future because of test bombs. It's just a fact that there isn't enough uranium around to actually thoroughly contaminate the atmosphere at this time. I know that this is in controversy to my own statements on the subject—which is very interesting. My own statements were made in the light of our earlier experience. We had experienced test fallout in Phoenix and I had not made further tests or calculations. In other words, I myself had been swept up in this campaign to frighten the populace half to death.

The reaction to radiation is thus entirely, completely, and wholly mental!

Dianazene depends for its reaction upon whole-track radiation incidents, and x-ray and sunburn in the current life. By taking away the engram which can react to the worry about radiation, worry about radiation is then made non-painful.

If you add all this up you will clearly see that scare talk about radiation is the source of radiation sickness in our present world. The Atom Bomb is too powerful a weapon to be used for control of human beings and is therefore not a weapon. But it does promise the population no future, and so promising, it damps out efforts toward survival. This itself can bring on sickness.

But we should not delude ourselves in thinking that actual radiation in dangerous quantities is adrift in this atmosphere at this time. It is not. All I invite you to do is to get a Scintillometer or Geiger counter and test around.

There is probably an ionospheric flash which gives a tiny sudden shock of radiation for the briefest instant of time—less than the amount you would get from a simple x-ray—and this acts as a restimulator to whole-track incidents. But it isn't true that radiation is drifting around biting you at this time.

On the subject of strontium-90 it is interesting to note that a sufficient intake of calcium renders a person completely immuned to any effects of strontium-90. A child should be made to drink more milk and probably should have his diet fortified a little bit with calcium if anybody is truly worried about it.

This fight, then, is in the propaganda field. It is not in the field of actual science. I am extremely surprised at some of the scientists who are saying that radiation is dangerous. These men professionally should know their business and they are not expressing the true data. On the other hand, neither is the government making actual data available. The government is seeking to convince the public on the score of opinion. Opinion has no validity in science. If you want to know about radiation, why, go and look for some radiation in the atmosphere and if you cannot find more than the usual background count then you must assume that there isn't any extra radiation in the atmosphere. I am not saying that the scientists who have been beating the drum on the dangers of radiation are Communist-inspired. I am not saying that these men are Communists. I am merely saying that they are aiding and assisting a Communist campaign.

We *will not* assist Commie propaganda aimed at stampeding the U.S. public into revolt against U.S. defense. The U.S. can bargain her way out of this. I am very hopeful that a general control of radiation the world around will be achieved and I am sure that if it is not achieved, national governments are dead. I am also fairly sure that there will never be such a

thing as an atomic war. I have looked this over rather carefully and I personally don't believe that national governments will last long enough at their present rate of non-survival activity.

Our cue is to make nothing out of radiation, if we mention it at all. People who are worried about radiation are worried because enough talk about it has thrown enough engrams into restimulation to make them actually quite ill. We *can* do something about restimulation. But we have no business aiding this public hysteria in any way. We are the people who take care of hysteria and not the people who stir it up. What we are doing is a bit bigger than one of Man's new destructive toys.

Our campaign is to sell Scientology. If we sell it well, psychiatry and psychology will collapse. For instance, one of the most unfortunate things that psychiatry and psychology have ever engaged upon has been this mental health campaign of this spring. These people are not capable of withstanding public scrutiny. Their general activities are sufficiently harmful to their patients that if they stick their head up just a little bit further, even people in the government will be able to see that there is a swindle involved there. I expect within the next two or three years to see a complete and thorough congressional investigation of "charity rackets" and would expect to see psychiatry and psychology leading the van in those who are being investigated. Before you begin to advertise that you can do something, you should be able to do it. We ourselves are suffering from a comm lag of seven years. Not for seven years were we able to train auditors uniformly up to a level to get the maximum possible results out of Dianetics and Scientology. We, accordingly, experienced a considerable public kickback. Now we are making our promises good. It is possible for us to withstand the most minute and searching scrutiny on the subject of what we are doing and how we are doing it. The Validation Program of all Certificates which we are now entered upon is a very worthwhile step in this direction. We can today train an auditor. We can train him very very well. We have the processes which make an auditor able to audit. And this will accrue into our attaining dominance in the field of the human mind rather easily. All psychiatry and psychology need to do is to fight us a little harder, to advertise themselves a little more strongly, and the public and the government will see to it that they collapse. Furthermore, psychiatry and psychology are playing it too close to the government. And if people begin to turn away from the government because of the government's promise to extinguish them with an H-bomb, they will also turn away from anybody who supported the government in the field of brainwashing.

We have gone a little off track here with radiation, danger of; with politics, the need to do something about; and we are not off track any more. We are in the business of Scientology. And Scientology rises considerably above the tinkering of a few somewhat deranged scientists and the bickerings of a few misanthropic men wearing political crowns for the moment.

We have today very easily the most powerful "weapon" extant in the fourth dynamic. That weapon is Scientology. We are not using it for evil, we are using it for good. Therefore, we will win with it.

The answer to all this is to sell Scientology to individuals. Don't try to sell it to groups. One doesn't easily talk to a group. One should sell it to individuals and he should use the skills of Scientology to bring about a better understanding on the part of individuals of themselves and of himself.

I am not saying that the various governments might *not* do something dangerous with testing. I am not saying that H-bombs are good weapons. I am only saying we *can* survive it. I am only saying that we have one case—me—who has had 502 times the "allowed" amount and is surviving nicely, thank you, and other cases that are in like condition because of good processing. I *am* saying that with good, modern auditing a Scientologist *can* survive it—so why worry about it. As an organization and as individuals we're going up-tone faster than others are going down. And Man faces many enemies more dangerous than Radiation.

I am giving you all this in explanation of what you will now begin to see come from the central organization and that will be Scientology—good auditors—validation of old

certificates—good processing—bona fide clears—other things which we have waited to see all these years. We are making the grade now rather easily. We are doing things that we never thought were possible before. We are living up to any optimism which I ever gave out. I knew I could do it. I am afraid that I was over-confident in some other directions, but there is one thing that I have never done. I have never told you other than what I believed implicitly and completely. I have been as honest with you as I knew how to be and I have been as honest about my shortcomings as I have been about my victories. You can count on that, you know you can—for you always

I invite your cooperation in this new campaign of ours—a brand-new campaign:

To sell Scientology, Sanity and Survival to the individuals alive on Earth today. Thank you.

STABLE DATA FOR INSTRUCTORS

1. Keep students busy at all times. Do not let them have unassigned work while at the Academy.
2. The Director of Training is not the Director of Processing. If after the student intensive and a week's Comm Course a student's case is not in condition so the student can be trained, the Director of Training or the Instructor should send the student to the Registrar and should not attempt a patch-up by another student. When the Director of Training constitutes himself the Director of Processing he not only denies the organization income but most usually continues the agony of the student and does not get training done.
3. Answer the student's questions.
4. The stability of the Director of Training and his Instructors depends upon the apparency of their agreement with me on what should be trained and how it should be trained. When they innovate in disagreement with organized schedules they lower the appearance of stability and deprive themselves usually of the cooperation of students.
5. It is not the place of the Director of Training or an Instructor to defend the organization, LRH, or the past track of Dianetics and Scientology. Any new subject combating vested interests develops some randomness. Rather than defend against critical attacks by students it is much more productive to look over the student's case with an eye to sending him to the Registrar.
6. The Director of Training and his Instructors are there to give service. Service is always harder to give on an individualized basis and easier to give on a wide group basis. However, we are training individuals and even though it is difficult, service must be given.
7. On the head of the Director of Training and his Instructors rests any future failure the student may have in processing preclears. Quality of training is to the level of Staff Auditor HGC.

*IF A STUDENT CANNOT BE TRUSTED UPON GRADUATION
WITH AN HGC PRECLEAR, HE SHOULD NOT BE GRADUATED
OR CERTIFIED.*

HCO BULLETIN OF 3 JUNE 1957

EXPLANATION OF ABERRATIVE CHARACTER OF RADIATION

As cosmic rays, gamma, x-rays, et al, apparently move through solids without encountering resistance, they then invalidate solids. This is a direct invalidation of the solidity of anything including a mock-up. Thus it tends to say a thing is not there—thus that a creation has not been made.

This then has been used as a means of discounting creativeness or of discounting solids. For example, any child being x-rayed has been baffled as to how “he wasn’t there” when the picture was made. The rays went straight through. This made him feel he wasn’t solid—was not real.

When a body is over x-rayed it ceases to create sexually and creates on a cellular level in a highly irresponsible way. This is cancer.

Radiation ills stem from the not-thereness of creations. Mental Image Pictures, mock-ups, are apparently vanished.

“Making things solid” remedies all such Radiation ills easily. Show Me objective and subjective does as well.

Radiation, then, is the proof that a solid thing is not solid. This is an invalidation that one has created. Thus Radiation is seen to hit at all creativeness. Its irresponsibility factor is also this—one cannot be responsible for things which are proven not to exist.

This also tells us that time began on an invalidation of solids.

In actual proof Procedure CCH, run with this understanding and Problems of Incomparable or Comparable Magnitude to Radiation, resolves Radiation.

HCO BULLETIN OF 3 JUNE 1957

AUDITING A 10-YEAR OLD CHILD

Herbie Parkhouse over in London sent me the following report on his session with a 10-year old child.

“I knew her mother had been messing her up by telling her how much she was like Mama, and how weak Mama was. So I ran a Present Time Problem on Solid Terminals, then Give Me Your Hand—Thank You. The PTP was ok. GMYH produced immediate change by the girl using all the normal childish ways of trying to stop the Auditor. After about II/2 hours she went Anaten, but good, for 1 hour and then came out of it. I carried on for 1/2 hour—everything seemed ok so we had lunch.

“After lunch I went back on to GMYH, but only just checked PTP (not very thoroughly). Within a very short period—10 minutes—pc was Anaten. This lasted for approximately 1 hour when pc rallied into present time, changed her body position to that of a ‘lady reclining in a chair’—just like Mama—and doped off. This also lasted about 1 hour, then pc came up to present time—then into enthusiasm which lasted well after I ended the session. After tea I gave her another 1 hour on GMYH with no apparent change at an enthusiasm. When I say Anaten on this case, I mean the pc was doing the process, not even mechanically most of the time, but eyes shut and doped.

“After this she felt good. I then sent her home to her father and step-mother-both of whom have had lots of auditing. They couldn’t believe the difference, especially after only six hours. The child is now in better condition than she has ever been before.”

TRAINING AND CCH PROCESSES

(Originally issued as an HCO Training Bulletin
from Hubbard Communications Office, Washington, D.C.)

NOTE.. The variations and some of the most potent processes are not included in this Training Bulletin but will appear in the Student Manual when published in September 1957.

NUMBER: Training 0

NAME: Confronting Preclear.

COMMANDS: None.

POSITION: Student and coach sit facing each other a comfortable distance apart— about five feet.

PURPOSE: To train student to confront a preclear with auditing only or with nothing.

TRAINING STRESS: Have student and coach sit facing each other, neither making any conversation or effort to be interesting. Have them sit and look at each other and say and do nothing for some hours. Student must not speak, fidget, giggle or be embarrassed or anaten. Coach may speak only if student goes anaten (dope off). Student is confronting the body, thetan and bank of the preclear.

HISTORY: Developed by L. Ron Hubbard in Washington in March 1957, to train students to confront preclears in the absence of social tricks or conversation and to overcome obsessive compulsions to be “interesting”.

NUMBER: Training 1

NAME: Dear Alice.

COMMANDS: A phrase (with the “he said” omitted) is picked out of the book “Alice in Wonderland” and read to the coach. It is repeated until the coach is satisfied it arrived where he is.

POSITION: Student and coach are seated facing each other a comfortable distance apart .

PURPOSE: To teach the student to send an intention from himself to a preclear in one unit of time without vias.

TRAINING STRESS: The command goes from the book to the student and, as his own, to the coach. It must not go from book to coach. It must sound natural, not artificial. Diction and elocution have no part in it. Loudness may have.

HISTORY: Developed by L. Ron Hubbard in London, April 1956, to teach the communication formula to new students.

NUMBER: Training 2

NAME: Acknowledgments.

COMMANDS: The coach reads lines from “Alice in Wonderland” omitting “he said” and the student thoroughly acknowledges them. The coach repeats any line he feels was not truly acknowledged.

POSITION: Student and coach are seated facing each other a comfortable distance apart.

PURPOSE: To teach student that an acknowledgment is a method of controlling preclear communication and that an acknowledgment is a full stop.

TRAINING STRESS: Teach student to acknowledge exactly what was said so that preclear knows it was heard. Ask student from time to time what *was* said. Curb over and under acknowledgment. Let student do anything at first to get acknowledgments across, then even him out. Teach him that an acknowledgment is a stop, not beginning of a new cycle of communication or an encouragement to the preclear to go on.

HISTORY: Developed by L. Ron Hubbard in London in April 1956, to teach new students that an acknowledgment ends a communication cycle and a period of time, that a new command begins a new period of time.

NUMBER: Training 3

NAME: Duplicative Question.

COMMANDS: “Do fish swim?” or “Do birds fly?” Communication bridge between.

POSITION: Student and coach seated a comfortable distance apart.

PURPOSE: To teach a student to duplicate without variation an auditing question, each time newly, in its own unit of time, not as a blur with other questions; and to teach him how to shift from one question to another with a communication bridge rather than an abrupt change.

TRAINING STRESS: One question and student acknowledgment of its answer in one unit of time which is then finished. To keep student from straying into variations of command. To insist on communication bridge when question is changed. Even though the same question is asked, it is asked as though it had never occurred to anyone before. To teach students that a communication bridge consists of getting three agreements—one agreement to end this question, second agreement to continue session in general and maintain ARC, third agreement to begin a new question. Teach student that preclear is part of these agreements. To teach student never to vary question or shift question or command without a bridge.

HISTORY: Developed by L. Ron Hubbard in London, April 1956, to overcome variations and sudden changes in session.

NUMBER: Training 4

NAME: Preclear Originations.

COMMANDS: The student runs “Do fish swim?” or “Do birds fly?” on coach. Coach answers but now and then makes startling comments from a prepared list given by instructor. Student must handle originations to satisfaction of coach.

POSITION: Student and coach sit facing each other a comfortable distance apart.

PURPOSE: To teach a student not to be tongue-tied or startled or thrown off session by originations of preclear and to maintain ARC with preclear throughout an origination.

TRAINING STRESS: The student is taught to hear origination and do three things: (1) Understand it; (2) Acknowledge it; and (3) Return preclear to session. If the coach feels abruptness or too much time consumed or lack of comprehension, he corrects the student into better handling.

HISTORY: Developed by L. Ron Hubbard in London in April 1956, to teach auditors to stay in session when preclear dives out.

NUMBER: Training 5

NAME: Hand Mimicry.

COMMANDS: All commands are by motions of one or two hands. The auditor makes a simple hand motion, holding his hand or hands in the final position. The coach bobs his head as having received it. The coach then, mirror-wise, makes the same motion with his hand or hands. The student then acknowledges. If the motion was not correctly done by coach the student acknowledges doubtfully, then repeats the motion to the coach. If the coach does it well, student thanks coach by shaking own two hands together (prize fighter fashion). Keep motions simple. Student must always be able to duplicate own motions.

POSITION: Student and coach are seated facing each other at a short distance, coach's knees inside student's.

PURPOSE: To educate student that *verbal* commands are not entirely necessary. To make student physically telegraph an intention. To show student necessity of having preclear obey commands.

TRAINING STRESS: Accuracy of student repeating own commands. Teaching student to give preclear wins. Teaching student that an intention is different from words.

HISTORY: Developed by L. Ron Hubbard in London, April 1956, from the principles of body mimicry developed by LRH in Camden, N.J., in 1954.

The following group of processes are usually taught in Upper Indoctrination Course:

NUMBER: Training 6

NAME: Plain 8-C.

COMMANDS: "Look at that wall." "Walk over to that wall." "With your right hand, touch that wall." "Turn around." All with acknowledgments. Not Tone 40. (Preclear is acknowledged when he originates, no physical contact.)

POSITION: Student and coach both ambulant in a room with no center obstacles. Student walks with coach who does process for student.

PURPOSE: To give preclear reality on environment, control in following directions and havingness. Not all effects fully explored.

TRAINING STRESS: Precision in repetition of commands by student and experience on a gradient scale in directing another body than own. Handling of originations. Acknowledging execution of commands by preclear. When this process develops somatics on a preclear it must be continued until flat.

HISTORY: Developed by L. Ron Hubbard in Camden, 1953. Originally called “Opening Procedure of 8-C”, 8-C being a full auditing procedure aimed at negative thought. The only surviving part of this is now called 8-C and means the above process. Original intention was to place preclear within the control of the auditor so auditing could occur. Proved so successful became an end-all in itself. Nominated in Summary Research Project 1956 as responsible all by itself for approximately 50% of results achieved by auditors across the world.

NUMBER: Training 7

NAME: Hi-School Indoc.

COMMANDS: Same as 8-C but with student in physical contact with coach, student enforcing commands by manual guiding. Coach has only three valid statements to which student must listen: these are “Start” to begin process, “Flunk” to call attention to student error, and “That’s it” to end session. No other remark by coach is valid on student. Coach tries in all possible ways, verbal, covert and physical, to stop student from running 8-C on him. If the student falters, comm lags, fumbles a command or fails to get an execution on coach, coach says “Flunk” and they start at beginning of command cycle in which error occurred. Coach falling down is not allowed.

POSITION: Student and coach ambulant. Student handling coach physically.

PURPOSE: To train a student never to be stopped by a preclear. To train him to run fine 8-C in any circumstances. To teach him to handle rebellious people.

TRAINING STRESS: Stress is on accuracy of student performance and persistence by student. Start gradually to toughen up resistance to student. Don’t kill him off at once.

HISTORY: Developed by L. Ron Hubbard in London, 1956.

NUMBER: Training 8

NAME: Tone 40 on an Object.

COMMANDS: “Stand up.” “Thank you.” “Sit down on the table.” “Thank you.” These are the only commands used. (If student has trouble with Training 9, have him do Tone 40 on an Object with 8-C commands.)

POSITION: Student standing beside table holding ashtray which he manually makes execute the commands he gives.

PURPOSE: To make student clearly achieve Tone 40 command. To clarify intentions as different than words. To start student on road to handling objects and preclears with postulates. To obtain obedience not wholly based on spoken commands.

TRAINING STRESS: have student give orders for a while alone. Then begin to nag him to get them up to Tone 40 commands. Have student silently permeate object with command and an expectancy that it will do it. When student can “see” his intentions going in accurately, when he wonders why object doesn’t instantly obey, when he is not stumbling through energy or depending on his voice, the training process is flat. This process usually takes the most time in training of any process and time on it is well spent. Objects can be ashtrays or rag dolls.

HISTORY: Developed by L. Ron Hubbard in Washington, D.C., 1957, for the 17th ACC.

NUMBER: Training 9

NAME: Tone 40 on a Person.

COMMANDS: Same as 8-C. This is not Tone 40 8-C (CCH 12). Student runs fine, clearcut intentions and verbal orders on a coach. Coach tries to break down Tone 40 of the student. Coach commands that are valid are “Start” (to begin), “Flunk” to tell student he has erred and must return to beginning of cycle, and “That’s it” to take a break or stop session for the day. No other statement by coach in session is valid on student and is only an effort to make student come off Tone 40 or in general be stopped.

POSITION: Student and coach ambulant. Student in manual contact with coach as needed.

PURPOSE: To make student able to maintain Tone 40 under any stress of auditing.

TRAINING STRESS: The exact amount of physical effort must be used by student plus a compelling unspoken intention. No jerky struggles are allowed since each jerk is 3 stop. Student must learn to smoothly increase effort quickly to amount needed to make coach execute. Stress is on *exact* intention, exact strength needed, exact force necessary, exact Tone 40. Even a slight smile by student can be a flunk. Too much force can be a flunk. Too little definitely is a flunk. Anything not Tone 40 is a flunk.

HISTORY: Developed by L. Ron Hubbard in Washington, D.C., for the 17th ACC.

The following processes are taught in the Communication-Control-Havingness Course:

NUMBER: CCH 0

NAME: Rudiments, Goals and Present Time Problem.

COMMANDS: Establishing session beginning by calling attention to room, auditor and the session to begin. Discussing the preclear’s goals for the session. Auditor asks for present time problem and settles it with problems of comparable magnitude or incomparable magnitude or by Locational Processing. In general, remarks and commands enough to bring about ARC at session’s beginning but not enough to run down havingness of the preclear.

POSITION: Auditor and preclear seated at a comfortable distance apart.

PURPOSE: To make known the beginning of a session to a preclear and the auditor so that no error as to its beginning is made. To put the preclear into a condition to be audited.

TRAINING STRESS: To *begin* sessions, not just let them happen. To educate the student into the actual elements of a session and condition of preclears. To stress the inability to audit something else when present time problem is not flat. To demonstrate what happens when preclear doesn’t know session has begun or has no goals for it or what happens when present time problem only half flat when other things are engaged upon. Stress that it is done each session. Explain closure mechanism of problem with preclear, the solution of “the liability of solutions”.

HISTORY: Developed by L. Ron Hubbard in Elizabeth, N.J., 1950; Goals in Wichita, Kansas in 1951; Present Time Problem, London, 1952; Rudiments, Phoenix, 1955.

NUMBER: CCH 1.

NAME: * Give Me Your Hand, Tone 40.

COMMANDS: “Give me your hand.” Physical action of taking hand when not given and then replacing it in preclear’s lap. And “Thank you” ending cycle. All Tone 40 with clear intention, one command in one unit of time, no originations of preclear acknowledged in any way

verbally or physically. May be run on right hand, left hand, both hands, each one flattened in turn.

POSITION: Auditor and preclear seated, in chairs without arms, close together. Auditor's knees both to auditor's left of preclear's knees, outside of auditor's right thigh against outside of preclear's right thigh. This position reversed for left hand. In both hands preclear's knees are between auditor's knees.

PURPOSE: To demonstrate to preclear that control of preclear's body is possible, despite revolt of circuits, and inviting preclear to directly control it. Absolute control by auditor then passes over toward absolute control of his own body by preclear.

TRAINING STRESS: Never stop process until a flat place is reached. To process with good Tone 40. Auditor taught to pick up preclear's hand by wrist with auditor's thumb nearest auditor's body, to have an exact and invariable place to carry preclear's hand to before clasp, clasp hand with exactly correct pressure, replacing hand (with auditor's left hand still holding preclear's wrist) in preclear's lap. Making every command (1 and cycle separate. Maintaining Tone 40. Stress on intention from auditor to preclear with each command. To leave an instant for preclear to do it by own will before auditor does it. Stress Tone 40 precision. To keep epicenters balanced. CCH I (b) should also be flattened.

HISTORY: Developed by L. Ron Hubbard in the 17th ACC, Washington, D.C., 1957.

* The name and command for CCH 1 has since been revised to, "Give me that hand."

NUMBER: CCH2

NAME: * Tone 40 8-C.

COMMANDS: "Look at that wall." "Thank you." "Walk over to that wall." "Thank you." "With the right hand, touch that wall." "Thank you." "Turn around." "Thank you." Run without acknowledging in any way any origin by preclear, acknowledging only preclear's execution of the command. Commands smoothly enforced physically. Tone 40, full intention.

POSITION: Auditor and preclear ambulant, auditor in physical contact with preclear as needed.

PURPOSE: To demonstrate to preclear that his body can be directly controlled and thus inviting him to control it. Finding present time. Havingness. Other effects not fully explained.

TRAINING STRESS: Absolute auditor precision. No drops from Tone 40. No flubs. Total present-time auditing. Auditor turns preclear counterclockwise then steps always on preclear's right side. Auditor's body acts as block to forward motion when preclear turns. Auditor gives command, gives preclear a moment to obey, then enforces command with physical contact of exactly correct force to get command executed. Auditor does not check preclear from executing commands.

HISTORY: Developed by L. Ron Hubbard in Washington, D.C., 1957, for the 17th ACC.

* The name and command for CCH 2 has since been revised to, "You look at that wall."

NUMBER: CCH 3

NAME: Book Mimicry.

COMMANDS: Auditor makes a simple or complex motion with a book. Hands book to preclear. Preclear makes motion, duplicating auditor's mirror image-wise. Auditor asks preclear if he is satisfied that the preclear duplicated the motion. If preclear is and auditor is also

fairly satisfied, auditor takes book and goes to next command. If preclear says he is and auditor fairly sure preclear isn't, auditor takes back book and repeats command and gives book to preclear again for another try. If preclear is not sure he duplicated any command auditor repeats it for him and gives him back the book. Tone 40 only in motions. Verbal two-way quite free.

POSITION: Auditor and preclear seated facing each other a comfortable distance apart.

PURPOSE: To bring up preclear's communication with control and duplication. (Control + duplication = communication.)

TRAINING STRESS: Stress giving preclear wins. Stress auditor's necessity to duplicate his own commands. Circular motions are more complex than straight lines.

HISTORY: Developed by L. Ron Hubbard for the 16th ACC in Washington, D.C., 1957. Based on duplication developed by LRH in London, 1952.

NUMBER: CCH 4

NAME: Hand Space Mimicry.

COMMANDS: Auditor raises two hands, palms facing preclear's and says, "Put your hands against mine, follow them and contribute to their motion." He then makes a simple motion with right hand, then left. "Did you contribute to the motion?" "Good." "Put your hands in your lap." When this is flat the auditor does this same thing with a half inch of space between his and preclear's palms. When this is flat auditor does it with a wider space and so on until preclear is able to follow motions a yard away.

POSITION: Auditor and preclear seated, close together facing each other, preclear's knees between auditor's.

PURPOSE: To develop reality on the auditor using the reality scale (solid comm line). To get preclear into comm by control + duplication.

TRAINING STRESS: That auditor be gentle and accurate in his motions, giving preclear wins. To be free in two-way comm.

HISTORY: Developed by L. Ron Hubbard in Washington, 1956, as a therapeutic version of Dummy Hand Mimicry. Something was needed to supplant "Look at me. Who am I?" and "Find the Auditor" part of rudiments.

NUMBER: Training 10

NAME: Locational Processing.

COMMANDS: "You notice that (indicated object)." "Thank you." Auditor enforces command when needed by turning preclear's head toward object. Run inside an auditing room or outside. Auditor indicates obvious objects, naming them and pointing to them.

POSITION: Auditor and preclear seated side by side or facing each other or seated or walking outside.

PURPOSE: To control attention. Since attention is being controlled by facsimiles, an unknown control, supplanting with a known control brings preclear up to present time. See also Pre-Logics. A highly therapeutic process. Can be substituted for Present Time Problem to some degree in cases that cannot run a Present Time Problem as a process.

TRAINING STRESS: That coach (or preclear) always looks in direction of object.

HISTORY: Developed by L. Ron Hubbard in Elizabeth, N.J., in June 1950, to bring preclears into auditing room after they had been “brought up to present time”.

NUMBER: CCH 5

NAME: Location by Contact.

COMMANDS: “Touch that (indicated object).” “Thank you.”

POSITION: Auditor and preclear may be seated where the preclear is very unable, in which case they are seated at a table which has a number of objects scattered on its surface. Or auditor and preclear may be ambulant, with the auditor in manual contact with the preclear as is necessary to face him toward and guide him to the indicated object.

PURPOSE: The purpose of the process is to give the preclear orientation and havingness and to improve his perception.

TRAINING STRESS: Training stress is upon gentleness, ARC and the raising of the preclear’s certainty that he has touched the indicated object. It should be noticed that this can be run on blind people.

HISTORY: Developed by L. Ron Hubbard from Locational Processing in 1957.

NUMBER: CCH 6

NAME: Body-Room Contact.

COMMANDS: “Touch your (body part).” “Thank you.” “Touch that (indicated room object).” “Thank you.”

POSITION: Auditor and preclear move about together as needed, the auditor enforcing the commands by manual contact using the preclear’s hands to touch objects and touch body parts.

PURPOSE: To establish the orientation and increase the havingness of the preclear and to give him in particular a reality on his own body.

TRAINING STRESS: Training Stress is upon using only those body parts which are not embarrassing to the preclear as it will be found that the preclear ordinarily has very little reality on various parts of his body. Impossible commands should not be given to the preclear in any case.

HISTORY: Developed by L. Ron Hubbard in 1957 in Washington, D.C., as a lower step than Body-Room Show Me.

NUMBER: CCH 7

NAME: Contact by Duplication.

COMMANDS: “Touch that table.” “Thank you.” “Touch your (body part).” “Thank you.” “Touch that table.” “Thank you.” “Touch your (same body part).” “Thank you.” “Touch that table.” “Thank you.” “Touch your (same body part).” “Thank you,” etc., in that order.

POSITION: Auditor may be seated. Preclear should be walking. Usually auditor standing by to manually enforce the commands.

PURPOSE: Process is used to heighten perception, orient the preclear and raise the preclear's havingness. Control of attention as in all these "contact" processes naturally takes the attention units out of the bank which itself has been controlling the preclear's attention.

TRAINING STRESS: Training stress is on precision of command and motion, with each command in its unit of time, all commands perfectly duplicated. Preclear to continue to run process even though he dopes off. Good ARC with the preclear, not picking one body part which is aberrated at first but flattening some non-aberrated body part before aberrated body part is tackled.

HISTORY: Developed by L. Ron Hubbard in 1957 in Washington, D.C., as a lower level process than Opening Procedure by Duplication, or Show Me by Duplication. All contact processes have been developed out of the Pre-Logics.

NUMBER: CCH 8

NAME: Trio.

COMMANDS: "Look around the room (environment) and tell me something you could have." Run until flat. "Look around the room and tell me something the body (body part) can't have." Valence form: "Look around the room and tell me something mother (or other valence) can't have." Long form: "Look around the room and tell me what you could have." Run flat. "Look around the room and tell me something you would permit to remain." Run flat. "Look around the room and tell me what you could dispense with." Dispense in long form is sometimes run first when preclear is set on wasting.

POSITION: Auditor and preclear seated at a comfortable distance both facing toward majority of the room.

PURPOSE: To remedy havingness objectively.

TRAINING STRESS: Run it smoothly without invalidative questions. One of the most effective processes known when thinkingness can be controlled somewhat. Run when havingness drops or for a full intensive.

HISTORY: Developed by L. Ron Hubbard in London in 1955. Name derived from the three questions of the long form. Originally called the "Terrible Trio".

NUMBER: CCH 9

NAME: Tone 40 "Keep it from going away."

COMMANDS: "Look at that (indicated object)." "Thank you." "Walk over to that (indicated object)." "Thank you." "Touch that (indicated object)." "Thank you." "Keep it from going away." "Thank you." "Did you keep it from going away?" "Thank you," and so forth.

POSITION: Auditor and preclear ambulant. Auditor assisting by manual contact.

PURPOSE: The purpose of the process is to increase havingness of the preclear and bring about his ability to keep things from going away, which ability lost, accounts for the possession of psychosomatic illnesses.

TRAINING STRESS: The training stress is on precision and accuracy and finding out that this is actually Tone 40 8-C with a thinkingness addition. This is the first step on to the route of making things solid.

HISTORY: Developed in 1956 in London, England, by L. Ron Hubbard.

NUMBER: CCH 10

NAME: Tone 40 "Hold it still."

COMMANDS: "Look at that (indicated object)." "Thank you." "Walk over to that (indicated object)." "Thank you." "Touch that (indicated object)." "Thank you." "Hold it still." "Thank you." "Did you hold it still?" "Thank you," etc., in that order.

PURPOSE: To improve an individual's ability to make things more solid and to assert his ability to control his environment.

TRAINING STRESS: Same as CCH 9.

HISTORY: Developed by L. Ron Hubbard in London, England, in 1956.

NUMBER: CCH 11

NAME: Tone 40 "Make it a little more solid."

COMMANDS: "Look at that (indicated object)." "Thank you." "Walk over to that (indicated object)." "Thank you." "Touch that (indicated object)." "Thank you." "Make it a little more solid." "Thank you." "Did you make it a little more solid?" "Thank you," etc., in that order.

POSITION: Auditor and preclear ambulant.

PURPOSE: To assert control over the preclear and increase the preclear's havingness. To increase the preclear's reality on the Pre-Logics. To reverse the flow of solids.

TRAINING STRESS: Complete precision of performance, a stress 011 all the CCH 9, CCH 10 and CCH 11, that they include a control of thinkingness of the preclear and therefore should not be run with a tremendous amount of auditor trust of the preclear and should not be run until the lower levels of CCH are to some degree flat as they will give the preclear losses.

HISTORY: Developed in 1956 in London, England, by L. Ron Hubbard.

NUMBER: Training 11

NAME: ARC Straight Wire.

COMMANDS: "Recall something that was really real to you." "Thank you." "Recall a time when you were in good communication with someone." "Thank you." "Recall a time when you really liked someone." "Thank you." The three commands are given in that order and repeated in that order consistently.

POSITION: Auditor and preclear seated facing each other at a comfortable distance.

PURPOSE: To give the student reality on the existence of a bank. This is audited on another and is audited until the other student is in present time. It will be found that the process discloses the cycling action of the preclear going deeper and deeper into the past and then more and more shallowly into the past until he is recalling something again close to present time. This cyclic action should be studied and understood and the reality on the pictures the preclear gets should be thoroughly understood by the student. The fact that another has pictures should be totally real to the student under training.

HISTORY: Developed by L. Ron Hubbard in 1951 in Wichita, Kansas. This was once a very important process. It has been known to bring people from a neurotic to a sane level after only a short period of application. It has been run on a group basis with success but it should be

noted that the thinkingness of the individuals in the group would have to be well under the control of the auditor in order to have this process broadly beneficial. When it was discovered that this process occasionally reduced people's havingness, the process itself was not generally run thereafter. It is still, however, an excellent process with that proviso, a reduction of havingness in some cases.

NUMBER: CCH 12

NAME: Limited Subjective Havingness.

COMMANDS: "What can you mock up?" "O.K. (to preclear's answer)." "Mock up (what preclear said he could mock up)." "O.K." "Shove it in to yourself." "O.K." When this is relatively flat, "Mock up (whatever preclear said he could)." "O.K." "Let it remain where it is." "O.K." When this is relatively flat enter on the third part. "Mock up (whatever the preclear said he could mock up)." "O.K." "Throw it away." "O.K." If the preclear cannot throw the object away at once, have him duplicate it many times and move one of them slightly further away from him until he has at last thrown one away. If the preclear cannot mock anything up, remedy his havingness with blackness. If the preclear's "field" is invisibility, have him put glass objects of many sorts and sizes on a table and one after the other "keep them from going away". If mock-up disappears have preclear keep on trying at it because he will eventually be able to get it back.

POSITION: Auditor and preclear seated facing each other.

PURPOSE: To Remedy the Havingness of the preclear's bank.

TRAINING STRESS: Not to give the preclear any losses. He must successfully complete each step and the auditor must do things on a gradient scale until the preclear has successfully completed each command given.

HISTORY: These and other creative processes were developed by L. Ron Hubbard in London in the fall of 1952.

NUMBER: CCH 13

NAME: Subjective Solids.

COMMANDS: "What can you mock up?" "O.K. (to preclear's answer)." (This is asked once every time one changes the type of mock-up.) "Mock up (whatever the preclear said)." "O.K." "Now make it a little more solid." "O.K." "Did you do that?" "Thank you." Various objects are mocked up and made a little more solid. The preclear can be told to do what he pleases with these. This is not a Tone 40 process.

POSITION: Auditor and preclear seated.

PURPOSE: To make it possible for the preclear to mock up subjective objects and make them a little more solid, preparatory to running "Then and Now Solids".

TRAINING STRESS: On knowing what the preclear is doing, how he is doing it, where he is putting the mock-ups, so that the preclear is certainly policed and is certainly doing the process. If the preclear neglects to do the process, even though he receives the command and nods his assent, he is, of course, going out of control of the auditor.

HISTORY: Developed by L. Ron Hubbard in 1956 in London.

NUMBER: CCH 14

NAME: Then and Now Solids.

COMMANDS: “Get a picture—and make it a little more solid.” “Thank you.” “Look at that (auditor indicates object)—and make it a little more solid.” “Thank you.” These commands are given with a tiny pause between the first and second phrase as it will be found that the glance of the preclear at the object tends to give him the impression that he has already made it a little more solid before the auditor gives the command if this auditing command is broken into two commands.

POSITION: Auditor and preclear seated facing each other a comfortable distance apart.

PURPOSE: To straighten out the time track of the preclear. To clear up his bank. To disclose his life computation. To show up the whole track. To give preclear practice in handling time. To get rid of unwanted facsimiles. And in general to handle in its totality the reactive mind.

TRAINING STRESS: On leading up with gradients toward any failure that the preclear may have in making something a little more solid. In keeping the auditor from chasing all over the bank every time the preclear has a second picture show up or a third or a fourth or a fifth on the same command. The auditor wants one picture and wants one thing or the picture itself to be made a little more solid. We do not do two or three pictures and then a room object. The preclear can get easily lost on the track unless this is obeyed. Furthermore, it will be noted that the preclear goes out of present time further and further and then less and less and then further and further and then less and less and this cycle of further into the past and then less into the past finally winds up with bringing the preclear wholly into present time.

HISTORY: Developed from Over and Under Solids, which was developed by L. Ron Hubbard in late 1955 and improved by him in 1956. The process more or less completes the work begun on the reactive mind in 1947. It will be noted that many earlier processes and effects are woven into Then and Now Solids.

NUMBER: Training 12

NAME: Think a Thought.

COMMANDS: “Think a thought.” “Thank you.”

POSITION: Auditor and preclear seated a comfortable distance apart.

PURPOSE: To give the student some reality on the thinkingness of other people and demonstrate that the control of thinkingness is possible.

TRAINING STRESS: Should be on the fact that after the control of the body has been asserted and control of attention flattened, control of thinkingness can take place. There is really nothing wrong with the preclear except that he cannot control his thinkingness, thus he cannot change considerations at will because he is stopped by the bank. This is the most permissive of such processes since the preclear cannot really help to think a thought and we do not much care whether he thought it or the bank thought it.

HISTORY: Developed in 1955 in Phoenix, Arizona, by L. Ron Hubbard.

NUMBER: CCH 15

NAME: Rising Scale Processing.

COMMANDS: The Chart of Attitudes is employed, the top and bottom buttons of which are: DEAD-SURVIVE, NOBODY-EVERYBODY, DISTRUST-FAITH, LOSE-WIN, WRONG-RIGHT, NEVER-ALWAYS, I KNOW NOT-I KNOW, STOP-CHANGE-START, NO

RESPONSIBILITY-FULLY RESPONSIBLE, STOPPED-CAUSES MOTION, FULL EFFECT-CAUSE, IDENTIFICATION-DIFFERENTIATION, OWNS NOTHING-OWNS ALL, HALLUCINATION-TRUTH, I AM NOT-I AM, NO-GAME-UNLIMITED GAMES. The auditing commands in this process are “Get the idea of (bottom button).” “Do you have that idea?” “All right.” “Now change that idea as nearly as you can to (top button).” “O.K.” “How close did you come?” “Thank you.” This is run many times on the one set of buttons until the preclear has a certainty that he can maintain the upper scale idea.

POSITION: Auditor and preclear seated a comfortable distance apart.

PURPOSE: To give the preclear drills in changing his mind and to demonstrate that he can maintain higher levels of certainty and that he can alter his considerations. And incidentally to probably change his glandular structure to the better until they have a better performance which is of no great importance to the process and has little to do with Scientology.

TRAINING STRESS: The training stress is on maintaining ARC with the preclear, yet being definite about what idea the preclear is supposed to get. The prerequisites demand that the thinkingness of the preclear be to some degree under the control of the auditor. The auditor must not be impatient with the preclear, but let the preclear try again and again to get these two ideas, one a low-scale idea and change that idea into an upper-scale idea. The preclear must be in fairly good condition with regard to havingness or the process can fail.

HISTORY: This process was developed in the fall of 1951 by L. Ron Hubbard in Wichita, Kansas, and is taken from *Scientology 8-8008* as published in England and as given in *The Creation of Human Ability*, page 129, as R2—51. This is probably the oldest purely Scientology process in existence. It was not entirely workable in the past because it was not understood that the body has to be brought under the auditor’s control and that the attention has to be brought under the auditor’s control before the thinkingness of the preclear can be brought under the auditor’s control. The process, however, run on preclears who were not in too bad condition, has been continually successful both in changing their physical beingness and abilities, the latter being in the sphere of interest of Scientology. The first preclear on which this and Opening Procedure by Duplication were run was Mary Sue Hubbard.

NUMBER: Training13

NAME: Fishing a Cognition.

COMMANDS: This is a general ARC, answering the preclear's origin process. When the preclear experiences a somatic, when he sighs, when he gives a reaction to a Tone 40 process, the auditor repeats the process two or three more times (random number) and then pausing the process asks the preclear, "How are you doing now?" or "What is going on?" and finds out what happened to the preclear just as though the auditor has not noticed that the preclear had a reaction. The auditor does not point out the reaction but merely wants a discussion in general. During this discussion he brings the preclear up to at least a cognition that the preclear has had a somatic or a reaction and then merely continues the process without further bridge. This is done randomly. It is not always done every time the preclear experiences a reaction.

POSITION: Whatever position the preclear and auditor are in as directed by the process they are running. But usually with the auditor touching the preclear. For example, in “Give Me Your Hand” the auditor continues to hold the preclear’s hand after he has said “Thank you” and asks the preclear how he is doing.

TRAINING STRESS: Is that the fishing of a cognition is an art and it cannot be taught by general command, that the auditor must not as-is the preclear’s havingness by asking him, “How are you feeling now?”, that the preclear must not be placed in possession of the knowledge that he can stop the auditor from auditing by having a reaction or experiencing a reaction to the processing, otherwise he will begin to experience them simply to stop the auditor. Thus the use of Training 13 is not routine and regular but is random. It should be stressed that this can be used while running any and all Tone 40 processes. It should be stressed that the Tone 40 is run as itself and that fishing a cognition is run into the process between cycles of command and acknowledgment and command and acknowledgment. After a thorough acknowledgment one can fish for a cognition thus pausing momentarily in the process, get things straightened out, maintain ARC with the preclear and then go on with the Tone 40 process. One does not enter fishing a cognition between the command and the acknowledgment. One never reacts to what the preclear is doing the instant that the preclear does it, otherwise one educates the preclear to stop one. Training stress here is that a Tone 40 process is not run on an automaton basis.

HISTORY: Developed by L. Ron Hubbard in Washington, D.C., in 1957 while developing CCH on the following notes from LRH’s notebook: “I use processes to restimulate thought or action and when this happens I fish out a cognition and either continue the process or bridge to the next process.” It was developed basically to keep auditors in communication with the preclear since Tone 40 processes give some auditors, when they are studying them, the idea that they are supposed to go out of communication with the preclear.

THE REHABILITATION OF ABILITIES

In this PAB I want to discuss a question which many field auditors have confronted me with—i.e. that of increasing the preclear's willingness in practicing a musical instrument, or to keep writing, or just to regain a lost ability.

If you take an individual and *make* him play a musical instrument (as parents and schools do), his ability to play that instrument will not improve. We would first have to consult with him as to what his ambitions are. He would eventually at least have to agree with the fact that it is a good thing to play an instrument.

Once in a while we find a bad boy. He cannot be put in school and has to be sent to a military school. They are going to force him in order to change him. Occasionally this bad boy is sent to a school which simply thinks the best way to handle such cases is to find something in which he is interested and to allow him to do it. Such a school once existed in California and consecutively produced geniuses. The roster of World War II's scientists practically marched from that particular school. They figured that it must have been the example set by the professor, his purity in not smoking cigars or something like that.

What actually happened was this. They took a boy with whom nobody got any results and said, "Isn't there anything you would like to do?" The boy said "No," and they answered, "Well, fuss around in the lab or grounds or something and someday you may make up your mind." The boy thought this over and decided that he wanted to be a chemist. Nobody ever sent him to a class and told him to crack a book, and nobody ever complained very much when he blew up something in the laboratory, and the next thing you knew the boy was an excellent chemist. Nobody interrupted his desire to be a chemist. It existed then, and from that point on he was not himself interrupting his willingness to be a chemist. Educationally this is a very interesting point.

Supposing we had only a few minutes as a coach on a football team and we wanted to pick out the number of men who were going to be the first squad and quickly put them in good shape so that they could win a special game; we would only have to ask this question: "Now I want any one of you people whose desire to be a football player stems from the age of ten to step forward." Maybe half of the squad would step forward. Here would be your first team.

What about the little runt that has only been the water boy? He is the best quarterback in the world because he *wanted* to be a football player. But the man who was merely qualified and who thought it was a good way to get through school, get a scholarship, some coaching or make a couple of dollars, or perhaps only really wanted lots of women because he knew that women gyrated around football players, will utterly pulverize the team because he is an unsupportable person. He is doing this on a via, and he isn't really willing to be a member of a football team. His willingness is missing.

Now let's have this ordinary team play against a team of all-stars and they will make the all-stars look like a bunch of punks. It is too simple a method of selection for anybody ever to have used.

You could by a series of almost straightwire questions ask a fellow who has difficulty in playing a trumpet, **“Can you recall a time when somebody told you it was a bad thing to play a trumpet?”** This limited process might stand up for two or three questions and you might be able to key out the lock he has against being a person who plays a trumpet and his ability to play a trumpet goes up. Then somebody else walks up to him and tells him something about how bad it is to be a trumpeter and he goes right back to where he was. It is not a permanent improvement at all.

It is possible that a person who was very good on the piano in his last life is born into a family who didn't have a piano. Why? Because he cannot confront one. There isn't one now because he cannot have one. Now he starts to learn something about this and he goes along fine until he thinks that he ought to have an upright piano to practice on. This has been restimulated a little and his parents say to him, “Oh, I don't know. That's much too expensive. You'll have to pick something else.” Somebody has raised an objection to it.

Well, his willingness at that time is exerted in the direction of trying to be a part of this new team called the family and this is being subordinate, and so is his idea of playing the piano. He doesn't force the matter but that confirms to him the scarcity of pianos. He is liable from then on not to be able to play a note or even learn how to read music. He is just as liable to be stopped again.

The willingness to write is systematically killed in American universities. I have lectured on writing to Harvard university students many times, and they have asked me how one develops style. Personally, as far as style was concerned, all one had to do was express what he wanted to say and that was style. It is no more complicated than this and sometimes, just for gags, why, write in the valence of Shakespeare or other literary figure. I have said to these students, “Style—well, I can tell you how you would find out whether you had a style or not, or how to develop one. Just sit down and write a hundred thousand words.”

The class fainted. One hundred thousand words. Nobody could write one hundred thousand words. From there on out that killed it. What was this all about? We obviously had a class of writers that had been carefully trained to be very good in every line they wrote. That isn't how you write at all. You write! That is all you do, write for lots of people about lots of things. These students were looking for some magic sesame and the professor there is carefully monitoring them of quality, quality, quality, correcting their ideas, punctuation marks, their schematics and so on, correct, correct, correct, chop, chop, chop, for there isn't going to be a writer in this class, you dogs. The final result of this is a complete unwillingness to write.

It is true that a person can be quantitatively coaxed into doing something that he apparently couldn't do before. But it is only when you carelessly or accidentally tripped over this having, confronting, contribute to, mechanism. Writing lies in the band of “contribute to.” If you have to write in order to have, you rather suffer for it because an art is almost totally in Create, Contribute To, and it goes between those two lines. And when those are fallen away from, you get fouled up.

If a person keeps writing or talking pointlessly, like making out government forms to be sent to the State Department or Internal Revenue, you know nobody is ever going to read any part of them. And you could make these forever and your willingness to do so would go by the boards eventually because there is no communication formula involved. There is no havingness, no confrontingness, no contributing-to-ness. People get so bad about this that they cannot fill out reports. The Revenue down here deprives itself of billions of dollars of revenue every year, not because people are unwilling to pay their income tax, but because they are no longer capable of confronting a form. Then after that the effort is not to fill out the form.

People will permit you to take things away from them if you do it gracefully and don't upset their willingness too much. The way you make a greedy or a selfish child is to *make* him, against his will, give up things to other children. You will eventually drive him into the only-one category. Parents usually never consult the child's willingness. They consult his havingness, handle it and they have a spoiled child.

It is interesting to watch a child that has been around somebody who always consulted him but didn't take very good care of him as opposed to a child who had the best of care but who never was consulted.

A little boy is sitting on the floor playing with blocks and balls and is having a good time. Along comes the nurse and picks him up and takes him into the other room and changes his diapers and he screams bloody murder the whole way. He doesn't like it. She keeps on doing this to him, placing him around, never consulting his power of choice and he will eventually grow up obsessed with the power of choice. He has to have his way. He becomes very didactic. He is trying to hold down the last rungs of it, and his ability will be correspondingly poor, particularly in the handling of people.

Now this is quite different. You know the child is hungry or this or that, and you know he ought to eat. The child will eat if he is kept on some sort of routine. Supper IS at 6:00 and he will get used to eating at 6:00, the willingness never quite overwhelmed him. He finds out the food is there at 6:00 and so he makes up his mind to eat at 6:00. You provide the havingness and he provides the willingness. If you don't override that he will never have any trouble about food.

Then somebody comes along and talks to him and says, "Hey, wouldn't you like to go into the other room and change your clothes?" and the answer is "No." I am afraid that you are making a horrible mistake if you proceed from that point on the basis of "Well, I'll give you a piece of candy," persuade, seduce, coax, etc. That is psychology, the way psychologists handle situations, and it doesn't really work.

You take one of two courses. Either you run expert 8-C with lots of two-way communication and so on, or you just let him grow. There is no other choice. Kids don't like to be mauled and pulled around and not consulted. You can talk to a child and if your ARC is good with him, you can make him do all sorts of things. He will touch the floor, his head, point you out and find the table. He will fool around for a while and after that you can just say do so and so and "Let's go and eat" and he will do it. He has found out that your commands are not necessarily going to override the totality of his willingness. So your commands are therefore not dangerous. You have confronted him and he can confront you. Therefore you and he can do something.

Suzie always gets a kick out of this because I am always having my children bring me slippers, and caps and other things and they sometimes bring me some of the most outrageous errors and I always thank them very much, take it, and as a brand-new thought say, "Go and put these in the closet now," and they do, very happy about it. They never get the idea it is wrong just because they have made a mistake. It is quite amazing because when I say to one of them, "Well, how about going to bed, huh?" the answer is "Okay."

A child sometimes says "I want to stay up with you" and they insist on doing so, exerting their power of choice. Just letting a child do what he is doing and not interfering with him and not running any 8-C on him is psychology. You might as well shoot a child as to let his circuits run away with him. They are never going to be in communication with anybody; they won't grow or get experience in life for they didn't change their havingness. They didn't have to change their mind, work, exercise or do anything. But they respond very readily to good 8-C and communication, but it certainly takes good communication to override this—not persuasion but good communication.

People think that persuasion works with children. It doesn't. It's communication that does the trick. You say, "Well, it's time for you to go to bed now," and he says, "No." Don't stay on the subject. Leave it alone and just talk about something else, "What did you do today?" "Where?" "How?" "Oh, did you? Is that a fact?" "Well, how about going to bed?" and the answer will be "Okay."

One doesn't have to use force. Go into communication with the child, and control follows this as an inevitability. Omit control from the beginning when bringing up a child and he who looks to you for a lot of his direction and control is gypped. He thinks you don't care about him.

However, as in the case with the playing of musical instruments, learning of languages or the arts and abilities, consult the preclear's or child's *willingness*.

To restore an ability run this technique from SLP 8:

Rehabilitation of abilities. For any ability the preclear always wanted to have, lost and couldn't do. For example, for the speaking of Arabic: "**Mock up (Arabic objects).**" "**Keep it from going away.**" Then, "**Mock up (Arab men, women, children).**" "**Stop (him, her) from talking.**" "**Start (him, her) talking.**"

Should it be a particular musical instrument the preclear wants to play, have him mock up the instrument, make it solid, keep it from going away, stop and start it playing, and this will rehabilitate his ability—if Procedure CCH has been run before.

ADDITION TO THE AUDITOR'S CODE

17. Never use Scientology to obtain personal and unusual favors or unusual compliance from the preclear for the auditor's own personal profit.

L. RON HUBBARD

5707C15 18ACC-1 What is Scientology

Scientology is aimed at a total know. Since no other “know” is total, it is hard to describe scientology, since there is no other datum of comparable magnitude. Only one other organization of knowledge on earth has had a similar goal: Buddhism. It squirreled when it went into Tibet as Lamaism. But there was no faith in Buddhism. It was analytical. The best refuge to take, when asked what scientology is, would be a refuge into incomprehensibility, by saying that it is epistemology. Buddhism and scientology both try to select out the importance’s of life and fill Man’s void of knowledge with accurate observation. Buddha could be called the first scientist. “Authority has nothing to do with knowledge. Those things I tell you are true, are not true because I tell you they are true. And if anything I tell you, or have ever told you, is discovered to differ from the individual observation, be it a good observation, then it isn’t true.”

We have certain positive procedures. As valuable as they are, if they incline us to lock at them, not at what they help us to look at; if they lead us to believe that they are a thing, not a means to doing another thing, we will be in the same blind condition as present-day religions and social sciences, and we will have to rediscover our blindness on the way up. Wherever we develop an area of special knowledge, such as TR’s and processes, we must understand that they are a means to an end, not an end in themselves. Someone who forgot what TR’s were could, in theory, do them all beautifully but be unable to use them in session, because he had forgotten what they were for: to create the proper communication atmosphere for the session.

There is an enormous wonderland below blindness. This keeps people from seeing their blindness. Using Alice in Wonderland in TR’s is a joke based on this imagined knowledge. The wonderland is the dispersal that results from the individual’s reaction to being kicked in the teeth when he looks at something. He won’t look again. Eventually he decides not to look at anything. But if he catches sight of something, he will go on a via and look at something else instead. This is how the wonderland of the social sciences was created. Someone couldn’t confront Man, so he turned around and created a myth about Man. He must have been blind never to have noticed exteriorization or to have recorded the existence of the phenomenon somewhere. A thetan has the ability to create form, to create universes. When the ability dims out, when he is not doing it very intelligently, he begins to see things in the universe that he doesn’t want to look at. Then he disperses and combines his ability to create and to not-is. The universe he then builds is below the level of the universe he is in. You have to bring him up North for him to discover that he is in a trap.

SOLIDS AND CHRONIC SOMATICS

I am giving you in this PAB my latest findings in the handling of chronic somatics. However, I would like to point out that before this technique can be run on a given preclear, you must have him thoroughly under control—i.e. the person, his attention and thoughts. It is a way of running Problems of Comparable Magnitude to a chronic somatic.

Not all people can do this immediately if they cannot make things solid. It may even be very dangerous to run, but it does handle the chronic somatic, providing you have already run the preclear on CCH (Communication, Control, Havingness). When you have done this you can come back again, substituting this process for Problems of Comparable Magnitude to the chronic somatic.

The preclear must be able to make things solid. He has got to have his attention under your control and have his body under control. He must also be able to make things solid objectively (i.e. **“Look at the wall and make it a little more solid”**) and subjectively (i.e. having the preclear make **“the mock-ups a little more solid”**), which is to say that you would have to take the preclear through Procedure CCH before this would work, but on the next time through you could kill his chronic somatic deader than a mackerel. You would simply omit running Problem of Comparable Magnitude to the chronic somatic and run the intensive in this manner:

1. Present time problem.
2. Control in *all* its facets.
3. 8-C: **“Keep it from going away.”**
4. 8-C: **“Hold it still.”**
5. 8-C: **“Make it a little more solid.”**
6. Subjective Havingness: **“Make the mock-ups a little more solid.”**
7. Then and Now Solids.

Then go right back to wondering if he had any problems about auditing, which is now the present time problem—if people are very low on havingness the auditing always becomes a present time problem. Go up again into control and make sure that you have the preclear thoroughly under control. Run through the 7 steps again. Only then would it be safe to run this technique.

This process joins up a phenomenon which has been around for years and which was never known to be turned on at will. This phenomenon is: “He knew about it all the time.”

All auditors know this phenomenon. The preclear has sinusitis—it is from Johnny punching him in the nose when he was five—and he says: “Yes, but I knew it all the time.” Well, he never knew it all the time, because he had sinusitis. It is only after he realizes that he knew it all the time that he gets well. That is the recovery of the game which underlies the game he has been playing. That is the hidden game.

The most disturbing thing in the world is to have a preclear that you have been working on cognite. He says, “Well, yes, my mother was actually a prostitute.” He never realized that before. And you say, “What do you know about that!” and he says, “I knew it all the time.” He knew it all the time, but he couldn’t identify what it was that he knew all the time.

When we talk about cognitions, we are actually looking for the master cognition, which is “I knew it all the time.” Only he didn’t know it all the time; in other words, he recovered the hidden game. It is the other game that we have suddenly got sight of. Football made him sick, but all of a sudden we spotted Lacrosse, or vice versa. He knew all the time that it was Lacrosse that made him this sick, or football that made him this sick. He knew it all the time, but only now is he well.

How do we trigger this at will?

The postulate of change is “ought to be—should be.” Limited, just as change is on any other level, but awfully effective.

The postulate which underlies havingness is “enough.” Havingness is quantitative. So you cannot run this without running the whole works evidently. He would have to be able to mock up, hence the first pass at this in CCH. He would have to be able to make things a little more solid, otherwise you wouldn’t be able to risk this one. But it evidently turns on rather at will this “I knew it all the time,” in other words, the hidden game.

You run the process this way: Tell the preclear to **“Mock up enough _ (whatever the chronic somatic is)”** and **“Make it a little more solid.”**

For example, take a case of obnosis—if you are not good at observing, you will miss on this every time. This is one of the reasons why we have more or less unconsciously been stressing obnosis. The auditor has to be able to look at somebody—and it is not the fellow’s belief that all women are bad. He is sitting there with a chronic sore throat, complete glandular arrest, with a club in his hands and you are trying to read his thoughts. Out of all these things, take the one thing he is complaining about—a sore throat.

The first thing you do is run the bad condition. Then just run the condition, after that the terminal, and you will shift his attention and turn off this “I knew it all the time. I knew my mother used to choke me.” Only he didn’t because before that he told you, “Well, mother’s a very sweet girl, very nice to me. I don’t know why I never turned out all right.”

Have him **“Mock up enough sore throats”** and **“Make it a little more solid.”** Then **“Mock up enough sore throat (singular)”** and **“Make it a little more solid”** and **“Good. Mock up enough sore throat”** and by this time he will say, “Well, yes, so and so and so, probably.” His attention shifted and this is a method of doing it. It has shifted his attention from the badness of the condition to the condition. **“Mock up enough throat.”** He has a condition known as a throat, and this oddly enough in this particular instance becomes the solid for the terminal—enough throat. Only it will mean two different things to the preclear and you want the preclear to duplicate your commands exactly, which he will only do if he is thoroughly under your control.

Let us take “bad eyesight” for an example, although this is not necessarily the process you would use. The preclear came to you to be audited because he had shooting pains in his right kneecap. He has never been able to work because of it, draws compensation. As a result of the compensation he has an easy life and this is a control mechanism. If you take this away from him against his better “judgments” the difficulty you will have in keeping him in session thereafter is absolutely zero.

He has bad eyesight and you have him **“Mock up enough bad eyesight” and “Make it a little more solid”**—a few times **“Enough eyesight,”** a condition or circumstance, **“Make it a little more solid.” “Enough eyes,”** and **“Make them a little more solid.”** There is his chronic somatic.

I have no guarantee whatsoever that this will work in all cases at all times, because I cannot guarantee that you will have him in condition whereby he can execute the commands when given. He must be in a condition whereby he can execute the auditing commands, and if the auditing commands are “mock it up,” which means he has got to be able to get mock-ups—which you can turn on with CCH—he has to be in a condition where you have some guarantee that you can control his thoughts. You can say, “Put an emotion in the wall.” He will feel the wall mentally but he didn’t do what you said, therefore you don’t have his thoughts under control.

In other words, the person’s attention and thoughts must be under your control before this works, but when you have accomplished this, this process works with a thud.

L. RON HUBBARD

5707C17 18ACC-3 Theory and Definitions of Auditing

The PC is less than or equal to the bank and the auditor is less than or equal to the bank, but the PC + auditor is greater than the bank. A person cannot audit himself because the basic ingredient of all auditing is communication, and a person cannot really talk to himself, especially in P.T., because talking to oneself puts half the cycle out of PT. Someone could mock up a circuit that talks back or assume a valence that feeds the past back to him, where he thinks something is feeding him an effect from the past or talking to him. When a person self-audits, he uses these circuits to feed stuff back to him; it gets him nowhere. The best he could do would be to handle a mental image picture which was seeking to handle him, or to handle the environment.

The only things in the bank that give the PC trouble are the moments he didn't handle, the worst moments. When he gets pictures of these moments, he tends to go out of control and backs off or boils off. An auditor would acknowledge; get him to confront it. Only communication got him into his mess; only communication can get him out. Therefore, there has to be another terminal for him to communicate to.

In 1952, we got scientology, a different approach to the problem of the bank. Instead of erasing the bank, we put the person himself in good enough condition, so that he can handle anything. That's a real clear, not someone with a blank bank. The things that are right with a person are the things that are wrong with the person. What is wrong with a being is what the being can do, and what the being is. Any scale in scientology could be drawn as a "V"-actually as a flare [exponential, perhaps?]:

Distance tolerance is the key to the affinity scales. Distance narrows as a person gets into worse condition. He has to be closer and closer to things to know they are real. High on the scale, tremendous distances can be tolerated; here there is also lots of trust. At the bottom, no distance is tolerable. A person's ability to handle things depends on his ability to handle distance; he interiorizes into those things that he can't trust, until he is the thing he distrusts. A person can control at a distance with comm; as control diminishes, he loses reach, can't project intention, can't trust, etc. Tone goes down with competence going down. Auditing is an expansion of distance. A PC starts with inverted distance (trying to escape), or with close distance (solid comm line, as in CCH-1). However, running away from things tends to make them stay with them. A body of soldiers running away from the enemy goes to pieces. They don't reform, regroup; can't sustain discipline. When you run away, part of you stays there. Also, when running away, or being unable to tolerate proximity, a being has no concept of distance: there's "no place to hide. "Anyhow, the part that stay there is the M.I.P. If one can't occupy some part of the universe, the only recourse is dispersal, which closes actual distance. [The thetan never gives up.] Running, "What part of that incident could you confront?" loosens it up; unsticks the person from it. People never have trouble with situations they have confronted, only with those from which they ran away. This is an example of "That which you resist, you become." The sub-zero tone scale shows the distance going inverted as one tries to run.

One thing establishes distance: communication. But it has to be real communication, not inval and eval. It has to be to the person. Space is a viewpoint of dimension, i.e. lookingness, i.e. communication. Communication can have a closure factor if it is just looking; but two thetans in real two way communication can hold their distance and go upscale. If you find that when two people talk, the longer they talk, the closer they get smashed together, then one of them isn't communicating.

When people don't know what something is, they have trouble communicating with it.

When someone tries to communicate with the bank, it kicks back and thus gives the thetan the idea that he is punished for communicating. But his facsimiles aren't real. In dianetics, we thought a person somehow took and stored all these pictures. But there is not really a

mechanism, like the file clerk, of taking and storing these pictures. No. The object is still there, grown thin. That's a picture! Every consecutive moment of the universe from its beginning until now is potentially as solid as it was then. The only reason it isn't as solid is that you don't confront it, so you thinned it down. The only serious reactive pictures are the "thinies" one made before or as one way from something unfrontable. This sounds complex, but it's only a problem in change of space. You don't carry the pictures. You left a viewpoint there when you didn't totally confront something, and it is still looking. All you need to do is to get someone to be willing to confront old universes he wouldn't confront before, and you will have a clear.

Summary: Auditing is to raise the ability of another person so that he can handle the bank, the body, others, etc. It is a communication process.

CO file

HCO TRAINING BULLETIN OF 17 JULY 1957

CHANGES IN TRAINING DRILLS

The 18th ACC, which is being conducted with a goal of refining training, is furnishing some vital data. This will be published from time to time and finally summarized in Training Bulletins.

Training 5, Hand Mimicry, becomes Training 5(b) Hand Mimicry.

The new Training 5 is "Sit in that Chair". It is used on Saturdays in Washington supervised and London unsupervised.

NUMBER: Training 5.

NAME: Sit in that Chair.

COMMANDS: Sit in that Chair, comm bridged occasionally to Touch that Chair and back to Sit in that Chair.

POSITION: Auditor and pc seated a comfortable distance apart.

PURPOSE: To give student an actual process that integrates all earlier steps in the Communication Course (TR 0 to TR 4) as an actual process so that he will not be faced with doing this integration on 8c while in motion. Summates the things learned in Comm Course.

TRAINING STRESS: Process is not coached save by instructor. It is actually run on a fellow student. The student pc is not *manually* forced to do process. Only the earlier TR skills are used. Student's confidence in being able to audit should be raised.

HISTORY: Developed by LRH for the 18th Advanced Clinical Course in Washington, D.C., July 1957.

Training 6, 8c, remains itself but is changed as follows:

NUMBER: Training 6.

NAME: 8c.

COMMANDS: First half of session period student silently steers coach's body around room, not even to walls, quietly starting, turning and stopping coach's body. Second part of session commands are "Look at that wall." "Thank you." "Walk over to that wall." "Thank you." "With your right hand touch that wall." "Thank you." "Turn around." "Thank you." Student may touch coach's body.

POSITION: Student and coach walking side by side. Student always on coach's right except when turning coach.

PURPOSE: First part: To accustom student to moving another body than his own without verbal communication. Second part: To accustom student to move another body by and while giving auditing commands and to accustom student to proper commands of 8c.

TRAINING STRESS: Complete, crisp precision of movement and commands. Student as in any other TR except TR 5 is flunked only for current and preceding TRs. Thus in this case the coach flunks student for every hesitation or nervousness in moving body, for every flub of command, for poor confronting, for bad communication of command, for poor acknowledgment, for poor repetition of command, and for failing to handle origins by coach.

HISTORY: Developed by LRH in Camden, New Jersey, for the 2nd ACC, in October 1953 and modified for the 18th ACC, July 1957, in Washington, D.C.

The Adventure of Communication

L. Ron Hubbard

The success level of a person *is* his communication level.

One can *have* only those things with which he can communicate. To *have it is* necessary to communicate.

One can *do* only those things with which he can exchange communication.

One can *be* whatever he feels will assist him to carry out his ideas of communication itself.

It has been three years since we first isolated communication as the dominant corner of the Affinity-Reality-Communication triangle.

Now when one realizes that *have* and the Reality corner of the triangle are the same and when one understands that *control is* possible only in the presence of maximal Affinity, one sees in Control-Communication-Havingness theory the *working* aspects of the Affinity-Reality-Communication theory.

We have always known A-R-C was *true*. We now know its best-working aspects in the Control-Communication-Havingness theories of processing.

Communication continues its dominance. Affinity gives us the only working mood of Control. Reality gives us the reward of Communication.

Thus one can BE—one can DO, one can HAVE only as well as one can communicate.

At the intensely successful Freedom Congress, just held, a number of Training drills were presented which have as their goal communication betterment.

Doing these drills betters one's communication ability.

Thus these drills can be seen as an opening door to better beingness, better doingness, better havingness.

While, as everyone recognized at the Congress, there is no substitute for Academy training in these drills, doing them yourself at home can result in enormous improvement.

We have found the level from which to live successfully—Tone 40.

We have found the drills and processes by which to get us there.

High Adventure requires high communication.

Could there be anything so brash as to stop us now?

HUBBARD COMMUNICATIONS OFFICE

HCO BULLETIN OF 29 JULY 1957

STAFF AUDITORS WASHINGTON ONLY

WITHHOLDS AND COMMUNICATION

A Preview of a book to be called "The Handling of Human Problems. A Scientology Text by L. Ron Hubbard," a paperbacked booklet.

The book explains the parts of man, ARC, and states that the ability to communicate on 8 dynamics must be regained in order to lead a successful Spiritual life.

The book will then give a process to rehabilitate Communication. It is based on our old "Recall a Secret". The version is entirely straight wire.

The reason secrets cannot be dredged up in people is because they will not *tell* them. This process by-passes divulgence of data and works well without informing on oneself.

The Process.

The auditor explains to the pc that he is not looking for hidden data to evaluate it. He is only asking the *pc* to look at the data.

The auditor then makes a list of valences, paying great attention to those the pc considers "unimportant" or is very slow to divulge.

Then the auditor takes this list and runs repetitive straight wire (1951) as follows:

"Think of something you might withhold from (valence)."

He repeats this question over and over until no comm lag is present. He *never* says "*Something else you might withhold*" because auditor wants pc to think of some of these many times.

Before selecting another valence, auditor runs a little Locational or Trio.

He then takes next valence the same way.

The list is covered once, then the same list is covered again.

The object is *speed* . Cover *many* people.

Given time the auditor can do the same thing on all dynamics.

VARIATION

Instead of a valence, body parts may be used.

"Think of something you might withhold about your (body part)."

Leave sexual parts or obvious psychosomatic difficulties until *last*. Don't begin on a withered arm. Pc can't cut it.

SUMMARY

It is amusing to realize that this process overlords all early psychotherapies. But they, using this effort to locate secrets, thought that divulgence and confession were the therapeutic agents. These have no bearing on the workability.

Further, early efforts naively thought there was one secret per case. Actually there are billions.

It is easy to get into past lives on this. A basic secret is that one lived before.

This can be E-Metered with great success if the auditor realizes that the meter is only useful to find out if a valence or a dynamic is hot or flat. Locating actual data for the auditor to know about is useless to the process itself.

Eight or eight thousand or eight billion secrets later will discover the pc in better communication. This is our only goal.

WARNING

The invasion of privacy-horror of-can stop the process cold if the auditor is too noseey.

The auditor will strike a data gusher sooner or later in the pc. It is unimportant.

The process may run down havingness. The “secret mechanism” is also used by pc to keep body from going away. (Some address to this last with “Keep [body part] from going away” may be needed.)

PURPOSE OF THIS RELEASE

To put HGC pcs into high communication.

To gain know-how for the above book—therefore report any changes needed or problems met while running this.

CONFRONTING PRESENT TIME

We all know about the unreality of processes too high for a preclear. You ask him to do something too high for him and he, oddly enough, can do it. He can get the idea of doing it, and he will even tell you he is doing it. Some preclears can actually walk around and touch the walls for as long as you want them to and it doesn't affect them. It means that a particular preclear who is doing this has no responsibility whatsoever for walking around and touching the walls. It doesn't affect him except that irresponsibility is running out all the time. I don't know if there is such a thing as a technique that is thoroughly above the preclear's ability to run. It is only a much longer reach.

I have taken a very bad-off case and told him to mock up a scene which everybody could see. I told him to do this over and over and over and I turned his mock-ups on brilliantly.

I have said in a Congress "**Create that wall,**" etc. The funny part is that it almost killed the audience, and they didn't even spot what it was during the congress that almost mowed them down. They thought something else was responsible for it. They complained about two or three other processes which, if run on individuals, would hardly affect them at all. But they didn't complain about this one. We were making them confront the wall, create the wall, take ownership of the wall, take ownership of the universe, and it was so far from them that they were unaware that they couldn't do it.

When you can imagine people walking up and down the street out here being unaware of the fact that they are unable to confront the street, you have got aberration really nailed. Their irresponsibility has grown to the point of not even knowing they cannot, to the point of doing it all the time. You process them for a while and they will just become aghast at confronting the street. It feels all right to them for a while, and all of a sudden they will get a somatic and flinch here, and they are not sure that they want to touch that tree. They are actually coming upscale toward this action. People evidently get interiorized into a universe, and then don't ever exteriorize. It is because they find more and more in it that they are unwilling to confront. So their awareness of its existence drops. All blindness is an extreme unawareness.

For instance, if one were all wound up with some other person and that other person died or disappeared, there was too much absent in present time. But this is not factual. As a writer in the New York area, I used to go down to the Village with some of the boys and used to have some knock-down-drag-out arguments, discussions, personal feuds, brawlings, etc. We were always doing something wild or weird. A crowd of us went up to Sing Sing one time just to see how it felt to sit in an electric chair. We were always having criminals and things electrocuted in stories. In order to know how they felt we walked through the green door. We were always doing something like this and life looked very alive and full, and it seemed impossible to reach through it or to it or to exhaust it in any way. Looking back after a long time and at a long distance it seems to me very much like New York and the Village—dull, and

it is all tame and a long time ago. But that is merely because I am not in contact with it. The same dramas still go on.

To give you an idea of short circuits, an artist, Hannes Bok's next-door neighbor, was walking past a thrift shop and bought a painting because she wanted the frame. When she got home she wiped off some of the dust and found out that the painting was a submission to the New York World's Fair in 1939. It had the artist's name on it. So Hannes Bok took a look at it and said, "That's Ron," wrote to me to find out about this, and that was right. She wants to give the painting to me and is sending it here.

In other words, there are all kinds of wild little actions, randomities, short circuits and so forth going on in the world. This one was intimately enough connected with me that I would be alerted to it. But if I were in the scene, there would be all kinds of actions that would only vaguely come close to this in which I would be vitally interested. Why? They also concern ME now, because I am part of the scene. So at this distance I am aware of New York because something intimately concerned me, but in New York everything would concern me, so I would be intimately interested in it.

People become rather easily convinced there isn't much in present time. I have seen race drivers talking about their humdrum lives. It is wild. You talk to these T.W.A. and American airline pilots. They think their life is a little bit humdrum.

I was down at the airport the other evening to meet a couple coming in from Ireland, and the snow was coming down thickly. A quarter of a century ago, any wooden propellor trying to chew through that much snow would have just been torn into splinters at once. Well, evidently a steel propellor isn't affected. The leading edges don't gather ice any more, and a lot of other things don't occur. I *know* that airplanes have been made totally proof.

But pilots were flying through this snow on schedule and landing and taking off and continuing airline schedules, and I could hardly see the length of the administration building. And I imagine that if I'd gone into the pilot's shack where they were checking in, they would have been saying, "Aw, it's just another darned night," and they would wish they could do something interesting.

In such a case man has disconnected himself to some degree from present time, and therefore not much in present time affects him. (Connectedness as a process will help to remedy this condition: "**Look around here and find something you wouldn't mind making connect with you,**" and see that he makes it connect with him, and not him with the object.) You might say that there is so much danger in present time that he must disconnect most of the present time from himself.

As I was saying, the personal interest factor extends from New York to Washington, D.C. when something personal occurs. Well, if you were in New York, there would be a lot of personal things occurring—what a cab driver said to another cab driver would become a personal matter—on a higher dynamic. This is, by the way, the dwindling scale of the dynamics you are looking at when you look at a distance from.

Time itself seems to strip away from us our adventures and objects and havingness. But havingness is only an awareness of existence. Why we so readily consent to have present time stripped away at this mad rate is quite interesting because we are to a marked degree in control of it.

For instance, I had time shift on me the other day rather inexplicably and startlingly and it upset me for a little while. As I was traveling through time at the usual routine rate of speed which would be my rate of passage through time, and I had a lot of things to get done, I accidentally extended time on some kind of an automaticity I hadn't been aware of. I got a lot of things done and came back and found that five minutes had passed, and it upset me because about two-and-a-half hours should have passed.

So concept of time is something which is quite variable, it sometimes changes on us when we skid or take our fingers off it. Our machinery which is carefully saying “one second, one second, one second” slips over into the old machine which we had which said “one—second—one—second—” without at the same time impeding our motion.

Motion is not necessarily related to the abstract *time*, it only appears to be. But why are people so anxious, why do people have so little time as they go downscale? It is quite interesting, but they do have less and less time the further downscale they go. Well, they are just that anxious to have present time stripped away, and they are counting on this mechanism of the universe which will take this present time away and dispose of the walls, space, and in just a little time they hope not to be there any longer.

Some part of them is very frantic although they appear to be very calm. Therefore they avidly consent to this thing, and then one day they complain (second postulate) that they haven’t enough time to do anything. Therefore they cannot do anything. Quite a fascinating enigma.

If you said “total responsibility” you would be saying to admit the authorship of, be willing to admit the authorship of, any created thing anywhere whether yours or another’s, and “mis-responsibility” would be the miscalling of authorship. In other words, those things which you, yourself, had done or made, you would say, “I did or made these things.” And those things which other people had made, you would say you had made them. You thus get this mis-responsibility.

Now total responsibility would come out of not just the assignment of the correct authorship to everything and would be the fact, act or final consequence of being willing to do so. Only willingness is necessary. One has to be willing to do that and that is the state of mind you should bring your preclear into—only willing to do that.

As far as anchor points are concerned, if a person made them and said that he made them, all will be well, but if he said he didn’t make them when he actually made them, that would be horrible. That is a mis-responsibility.

For instance, if you have a preclear mock up an anchor point and actually fit it into some point in his skull, in contradistinction to the others, he will get a headache. Why should he get a headache since the anchor point belongs there? Because he didn’t make those anchor points. Now he makes one and he puts one in and he is assuming ownership of the others. He didn’t find the anchor point that belonged there and put it there, and then say, “Well, I put it there but I didn’t make it.” If he had done that he wouldn’t have had a headache and the anchor point would be there.

A mishandling of life, however, is not as serious as the desire to mishandle it. An anxiety to mishandle life, a willingness to mishandle it, or an unawareness that one is unwilling to handle it properly are the aberrative factors, not the actual mishandling of it.

Any thetan can play the game of saying, “Well, I made these body anchor points.” He did it consciously and he can play that game. But to have to admit that from some exterior compulsion would be something else.

Take for an example you having to take charge of the mimeograph machine which is running badly. It is not your department. You don’t desire to take it over but you have to, and the next thing you know is that you have busted the mimeograph machine. What happened here? One sees people do this in offices all the time. One thinks one is being forced to take a responsibility and one is unwilling to take that responsibility, thinking it belongs to someone else. So that correction under duress— that is to say misownership and misresponsibility under duress—always has grave consequences.

This works in many fields. For example, a traffic cop stops you for speeding and comes up alongside of the wheel and says that you were speeding, and you say, "Yes, I was speeding." He says you have been doing 65 miles an hour, and you correct him and say, "68, Officer," and he says, "Well, it is pretty slippery today," and you say, "I know it." It unnerves him. He may or may not give you a ticket, but the chances of his giving you one are much cut down. You are not buttering him up or telling him that you have learned better now or anything of the sort, but saying the exact facts of the case tends to as-is them. You have knocked out his first postulate.

CCH 18

This is CCH 18, named after the 18th ACC.

The following process is to be run by students on students in the evening sessions of the coming week:

Commands: “Look around here and find something you would be unwilling for that body (or psychosomatic body part) to have.”

“Look around here and find something you would be willing to have.”

Interspersed with Locational—”Notice that (indicated object).”

Formal auditing.

Process may be run inside seated, or outside ambulatory.

Auditor-pc teams are to be assigned by their instructor of next week.

Confronting

L. Ron Hubbard

This begins a series of training processes aimed at raising the communication level.

In subsequent issues I'll give you others, so don't fail to do this one in the next two weeks.

This is taken from the new Student Manual.

Training 0.

Name: Confronting Preclear.

Commands. None.

Position: Student and coach sit facing each other a comfortable distance apart—about five feet.

Purpose: To train student to confront a preclear with auditing only or with nothing.

Training Stress: Have student and coach sit facing each other, neither making any conversation or effort to be interesting. Have them sit and look at each other and say and do nothing for some hours. Student must not speak, fidget, giggle or be embarrassed or anaten. Coach may speak only if student goes anaten (dope off). Student is confronting the body, thetan and bank of preclear.

History: Developed by L. Ron Hubbard in Washington in March 1957 to train students to confront preclears in the absence of social tricks or conversation and to overcome obsessive compulsions to be "interesting."

We used to say, the way out is the way through.

Now we say,

If you can't stand it, Confront it.

And that, I think you'll find, is much more satisfactory.

Definition of a Scientology Clear

A Scientology Clear would be able to confront the physical universe, other bodies, his own body, other minds, his own mind and other beings—without trimmings.

The first step on this road is the drill called Training 0—Confronting.

Do it for at least 25 hours and you'll never have trouble with a preclear.

No systems allowed. Both feet flat on the floor. No twitches, no squirms, no talk.

If you have difficulty, feel the floor and your chair back as you sit. That adds confronting the universe.

Confronting isn't just looking—so don't try to confront with your eyeballs only.

Do it and may you never be the same again.

Nothing like Training 0 to raise Communication level.

VALIDATION COMMITTEE

The following statement and recommendations concerning U.S. Validation of Certificates were made by the Validation Committee of the Freedom Congress, held July 4 through 7 at the Shoreham Hotel in Washington, D.C., and accepted by the Congress and myself for the U.S.

“Scientologists *play* the game of life. They put *life* into living. Homo sapiens lets life live him and this planet has a large lack of people who knowingly play the game of life. The reality of the game of life can only be communicated by those who play it. Scientologists do play the game. Our ability as players determines how well and how swiftly we win at making life a game for all men, and this is one of the goals of Scientology. Our direct ability to control, to communicate and to have men, women, groups and governments determines the degree to which we can create a game of life and a knowledge of livingness to all men. Your ability as a Scientologist to play and to communicate playingness and livingness will determine how soon and how well we can win. The Validation Program can better enable you to play and live on all dynamics, no matter how well you are doing now. Truthfully, *can you* be more able? Yes! No man will ordinarily light a fire by rubbing dry sticks together when he can use a match; the match is obviously a better tool. The Validation Program will sharpen your old tools and provide you with better ones. We have today in Scientology better communication, control and havingness on ability than ever before. The Validation Program is intended to give *every* professional Scientologist the basic tools of livingness and the ability to use them. These are his by right of his own very existence, by right of the fact that he helped build the better bridge that Ron Hubbard asked him to help build, and by right of the fact that he cannot help but want to play the game better once he realizes that there *really is* a better level of game now in existence through his participation in this program. Toward this end, we, the Validation Committee, propose and recommend the following procedures dedicating them to mankind and the creation of human ability:

- “1. That there be two classifications of validation:
 - (a) The professional auditor of any grade coached in training drills and CCH processes and passed by the HCO Board of Review; and
 - (b) Doctors of Scientology coached and trained in the use and coaching of these skills and validated by the HCO Board of Review, to both use CCH processes and coach others in their use subject to approval by the HCO Board of Review.
- “2. We further recommend that a travelling HCO Board of Review be organized to sit in major cities for the purpose of validating for the use of CCH processes those professional auditors coached by Doctors of Scientology in the field.

- “3. That Notification be sent to every professional auditor in the field that his professional certificate of whatever grade is as valid today and as honored as it was upon the day it was issued.
- “4. That Doctors of Scientology authorized to coach other professional auditors in training drills and CCH processes take responsibility for their areas in seeing to it that *all* professional auditors (those holding professional certificates) in their respective areas are *personally* contacted and the purposes of the 1957 Validation Program are thoroughly and carefully communicated and received.

“We of this Committee deem ourselves highly honored at having been selected for this recommending committee. We pledge our cooperation in this 1957 Validation Program and urge the fullest cooperation by all auditors everywhere that we may have for the first time in earth’s recorded history true sanity and civilization for all mankind.”

THE BIG AUDITING PROBLEM

If you were to take a mediumly good race driver and you wanted to make out of him a championship race driver, I'm afraid you would have to train him from scratch. And you would have to train him with a great deal more ardor than you would have to train just a kid that just walked in from Kokomo with an interest in motors.

Nevertheless, if you were successful in training a mediumly good race driver with a lot of races behind him, straight from scratch and all the way through, you would have a championship race driver—there would be no doubt about this whatever. Whereas the kid from Kokomo might or might not.

I will tell you at once the first and foremost factor, and that is, auditing does require a certain amount of stamina. It takes a certain amount of what it takes just to stay around Scientology—there is that, you see. It takes a certain amount of—to use a technical term—”guts.” You know that. In the first place, the problem of living is complicated by the fact that you know what the other fellow is doing, and he doesn't. You go down to the bank and your communication is disturbed by the degree that you know the fellow behind the teller's window is a 1.5, the like of which you've never seen before, and he thinks he's just a good average human being doing a job, and you count your change more carefully than you would on some other bank teller.

Now there is a tremendous advantage in this. You don't walk around all the time in a figure-figure wondering what's wrong with you because you don't always get along invariably with other people uniformly well. Now you realize that the bulk of the human race is walking around with the belief that there is something wrong somewhere, but they don't quite know what it is and it worries them. Now when you get up to a degree where you have some idea of this worry, you are aware of the factors which exist, the fact that your awareness has increased is all in your favor.

One of the great truths of Scientology is that **INCREASED AWARENESS IS THE ONLY FACTOR WHICH OFFERS ANY ROAD OUT**. That is an awfully simple truth, but you'll find out that people don't know that. They think that **LESS** awareness is the road out—and that is the road down into the basement.

All right—you live in a world that is trying right now to commit suicide on the grandest scale it has ever attempted, although I will say that when they dug up that last cave down in the Middle East and found seven civilizations, they did find under the shreds of the seventh civilization green glass, which looked awfully like the green glass from an atomic explosion out in the middle of the New Mexican desert. In other words, tens of thousands of years ago there was evidently another atomic blast, and perhaps everybody has been coming forward through barbarism and so on up the line.

It is quite amusing to notice that atomic radiation DOES reverse the genetic line. It gives a throwback. It produces the more original forms.

So you would expect the human race at this time to be walking toward greater and greater individual survival and less and less group survival. And here you are with some kind of a notion of the fact that the third dynamic exists and you are able to march out a bit on the third dynamic and the rest of the world is retreating back to the first dynamic—probably an inverted first.

I just had a report from our Public Relations Unit concerning the amount of attention being paid to injured persons alongside the road and on the street, and the report summed up that practically no attention was being paid now to anybody who was injured. That is quite interesting, because it has suffered, according to Public Relations, a considerable shift in attitude during the last two months. You are quite well aware of the fact that there might be just a tiny amount of radiation in the air which would never really damage anybody physically at all, yet which would restimulate people into a heavy unknowing games condition. So they would begin to act more and more hectic and on the first dynamic. This would be one of the first symptoms that you would discover in a society—everybody takes out on the Only One classification. Now that is the road to death. It doesn't matter whether or not the society at large ever is atom-bombed, that point is not of any great interest to us. It IS of great interest to us, however, that the effects of radiation and its presence in the society drives people down the dynamics.

All right. So although it is pretty hard to live around Scientology very often— somebody tells me, “You know, that is awfully restimulative material which is in these lectures” (I've heard this said two or three times), “Oh, I don't know, I've sat through a lot of lectures and it just restimulated me and I'm in terrible shape now.” And I've also heard somebody in the organization look at a remark like this and laugh. They say, “Well, the only real difference is that you're in terrible shape, that's sure, but now you know it.” And if you're in bad shape, it's better to know it than not know it, that's for sure.

What happens to Scientology and Scientologists in a world of this character? What happens to us? Why should we know what we know and know it well, and so on? That's because your basic attitude toward the world at large will have to be more and more an auditor's attitude toward a preclear if you are going to accomplish any survival at all. To get anybody to do anything will probably require an auditor here in the near future. I will give you an idea of this.
